SECTION 00010 - TABLE OF CONTENTS

INTRODUCTORY INFORMATION

00001	Project Title Page
00007	Seals Page
00010	Table of Contents

DIVISION 1 - GENERAL REQUIREMENTS

01100	Summary
01230	Alternates
01255	Request For Information
01310	Construction Management and Coordination
01311	Project Meetings
01320	Construction Progress Documentation
01330	Submittal Procedures
01351	Regulatory Compliance
01452	Contractor's Quality Control
01454	Architect-Engineer Quality Assurance
01457	Testing and Inspection by Owner
01500	Temporary Facilities and Controls
01600	Product Requirements
01700	Execution Requirements
01731	Cutting and Patching
01740	Cleaning
01770	Contract Closeout

DIVISION 2 - SITE CONSTRUCTION

02251	Shoring
02361	Termite Control
02821	Chain Link Fences and Gates (Building Related)

DIVISION 2.1 - CIVIL SITE CONSTRUCTION

The Sections within this Division and other Divisions listed within the Sitework Specifications Table of Contents page are the responsibility of the Civil Engineer. The Engineering Consultant, the seal and license number of the Professional Engineer registered in the State where the project is located, are also shown on the Sitework Specifications Table of Contents page.

DIVISION 3 - CONCRETE

03310	Structural Concrete and Exterior Concrete Slabs
03314	Cast-in-place Concrete Slabs (Interior)
03363	Polished Concrete Floor Finishes for Interior Slabs
03410	Plant Precast Structural Concrete Panels

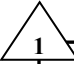

DIVISION 4 - MASONRY

NOT APPLICABLE

DIVISION 5 - METALS

05090	Post-Installed Concrete and Masonry Anchors
05120	Structural Steel
05300	Metal Deck
05400	Cold Formed Metal Framing

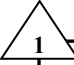

00010-1

- 05500 Metal Fabrications
- 05510 Metal Stairs with Handrails
- 05513 Guardrail Protection
-  05520 Metal Pipe and Tube Railings

DIVISION 6 - WOOD AND PLASTICS

- 06065 Plastic Materials
- 06100 Rough Carpentry
- 06150 Wood Deck Panels
- 06165 Fiberboard Panels
- 06200 Finish Carpentry
- 06400 Architectural Woodwork
- 06610 Glass Fiber Reinforced Plastic
- 06616 Simulated Stone Fabrications

DIVISION 7 - THERMAL AND MOISTURE PROTECTION

- 07210 Building Insulation
-  07252 Fluid-Applied Membrane Air Barrier

- 07421 Exterior Insulated Metal Wall Panels

-  07430 Aluminum Faced Composite Wall Panels (ACM)

- 07500 Membrane Roofing

- 07611 Metal Soffit

- 07620 Sheet Metal Flashing and Trim

- 07711 Gutters and Downspouts

- 07721 Manufactured Curbs

- 07722 Roof Hatches

-  07815 Mineral Fiber Fireproofing

- 07840 Firestopping

- 07900 Joint Sealers

- 07950 Expansion Control

DIVISION 8 - DOORS AND WINDOWS

- 08110 Steel Doors and Frames

- 08311 Access Doors and Frames

- 08335 Overhead Coiling Doors

- 08360 Sectional Overhead Doors

- 08411 Aluminum Framed Storefronts

- 08462 Automatic Sliding Entrance Doors

- 08560 Sliding Transaction Windows

- 08565 Aluminum Bullet Resistant Transaction Window

- 08710 Door Hardware

- 08800 Glazing

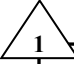

DIVISION 9 - FINISHES

- 09250 Gypsum Board

- 09310 Ceramic Tile

- 09511 Acoustical Panel Ceilings

- 09655 Resilient Base and Accessories

-  09722 ~~Presentation Dry Erase Wallcovering~~

- 09900 Paints and Coatings

DIVISION 10 - SPECIALTIES

- 10160 Metal Toilet Compartments

- 10220 Operable Panel Partitions

- 10260 Wall and Corner Guards

- 10350 Flagpoles

00010-2

10511 Metal Lockers
10520 Fire Extinguishers and Cabinets
10810 Toilet Accessories

DIVISION 11 - EQUIPMENT

11025 Lock Boxes
11060 Loading Dock Equipment

DIVISION 12 - FURNISHINGS

12490 Security Film Window Laminate
12492 Aluminum Horizontal Blinds
12500 Furniture and Accessories

DIVISION 13 - FIRE SUPPRESSION

13220 (213220) Water Storage Tank
13900 (210010) General Fire Suppression Requirements
13905 (210500) Common Work Results For Fire Suppression
13907 (210515) Basic Fire Suppression Piping Materials And Methods
13911 (210553) Identification For Fire Suppression Piping And Equipment
13917 (210548) Seismic Controls For Fire Suppression Systems
13925 (211100) Fire Suppression Water Service Piping
13930 (211313) Water Based Fire Suppression Systems
13940 (213116) Diesel-Drive, Centrifugal Fire Pumps

DIVISION 14 - CONVEYING SYSTEMS

14210 Electric Traction Elevators

DIVISION 15 - MECHANICAL

15010 (230010) General Mechanical Requirements
15030 (230015) Coordination
15050 (230500) Common Work Results for HVAC
15058 (230513) Common Motor Requirements for HVAC Equipment
15140 (230529) Hangers and Supports for HVAC Piping and Equipment
15190 (230553) Identification for HVAC Piping and Equipment
15200 (230550) Vibration Isolation for HVAC
15250 (230700) HVAC Insulation
15520 (230548) Seismic Controls for Mechanical
15531 (238127) Variable Refrigerant Flow (VRF) Split AC Systems
15532 (232300) Refrigerant Piping
15534 (232313) VRF Refrigerant Piping
15782 (237413) Outdoor Packaged Heating and Cooling Units
15789 (237433) Dedicated Outdoor Air Units
15792 (238126) Split System Air Conditioners
15865 (233413) Axial HVAC Fans
15870 (233423) HVAC Power Ventilators
15891 (233113) Metal Ducts
15892 (233117) Fabric Ducts
15910 (233300) Air Duct Accessories
15932 (233713) Diffusers, Registers & Grilles
15990 (230593) Testing, Adjusting, and Balancing for HVAC
15991 (230800) Commissioning of HVAC Systems
15992 (230913) Instrumentation and Control Devices for HVAC
15996 (230923) Direct-Digital Control for HVAC

DIVISION 15 - PLUMBING

15011 (220010)	General Plumbing Requirements
15031 (220015)	Coordination
15051 (220500)	Common Work Results for Plumbing
15055 (220515)	Basic Piping Materials and Methods
15100 (220523)	General Duty Valves for Plumbing Piping
15125 (220516)	Expansion Fittings and Loops For Plumbing Piping
15135 (220519)	Meters and Gauges For Plumbing Piping
15140 (220529)	Hangers and Supports for Plumbing Piping
15191 (220553)	Identification for Plumbing Piping and Equipment
15201 (220550)	Vibration Isolation for Plumbing Piping and Equipment
15251 (220700)	Plumbing Insulation
15411 (221100)	Water Distribution Piping & Specialties
15412 (221123)	Domestic Water Pumps
15420 (221300)	Sanitary Drainage & Vent Piping & Specialties
15430 (221400)	Storm Drainage Piping and Specialties
15440 (224000)	Plumbing Fixtures
15445 (220548)	Seismic Controls for Plumbing Systems
15452 (221328)	Condensate Pumps for HVAC Equipment
15460 (223300)	Electric Domestic Water Heaters
15481 (221500)	General Service Compressed Air Systems

DIVISION 16 - ELECTRICAL

16010 (260010)	General Electrical Requirements
16050 (260500)	Common Work Results For Electrical
16055 (260573)	Overcurrent Protective Device Coordination Study
16071 (260548)	Seismic Controls for Electrical Systems
16072 (260529)	Hangers And Supports For Electrical Systems
16075 (260553)	Identification For Electrical Systems
16125 (260923)	Lighting Control Devices
16135 (260536)	Cable Trays For Electrical Systems
16140 (262726)	Wiring Devices
16150 (262813)	Fuses
16152 (260533)	Raceways And Boxes For Electrical Systems
16155 (260543)	Underground Ducts and Raceways For Electrical Systems
16180 (260502)	Grounding And Bonding For Electrical Systems
16170 (260526)	Equipment Wiring Systems
16241 (263600)	Transfer Switches
16251 (264113)	Lightning Protection
16264 (264313)	Surge Protective Devices
16321 (262413)	Switchboards
16402 (260519)	Low-Voltage Electrical Power Conductors And Cables
16410 (262816)	Enclosed Switches and Circuit Breakers
16412 (260504)	Provisions for Electric Utility Service
16426 (260510)	Common Work Results For Communications
16442 (262416)	Panelboards
16450 (262200)	Low-Voltage Transformers
16455 (211200)	Medium Voltage Transformers
16460 (261323)	SF – Medium-Voltage-Enclosed Switchgear
16465 (260513)	Medium Voltage Cables
16511 (265100)	Interior Lighting
16521 (265600)	Exterior Lighting

SECTION 05510 (05 5100) – METAL STAIRS WITH HANDRAILS – Revise Entire Section

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Service-type stairs with concrete pan treads.
 - 2. Industrial-type stairs with steel grating treads.
 - 3. Steel tube handrails and railings attached to metal stairs.
 - 4. Steel tube handrails attached to walls adjacent to metal stairs.
 - 5. Railing gates at the level of exit discharge.
- B. Stairs and stair components may be manufactured and pre-assembled (drop-in) or shop-fabricated or assembled in the field at Contractor's option.
- C. Related Requirements:
 - 1. Section 03310 - Cast-In-Place Structural Concrete. Field-poured treads and landings.
 - 2. Section 05120 - Structural Steel: Attachments to building framing.
 - 3. Section 05500 - Metal Fabrications: Building support structure and miscellaneous framing fabrications.
 - 4. Section 05520 - Metal Pipe and Tube Railings: Stair railings.
 - 5. Section 09900 - Paints and Coatings. Field-applied finishes.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American National Standards Institute (ANSI):
 - 1. ANSI A 117.1 - Standard for Accessible and Usable Buildings and Facilities.
- C. ASTM International (ASTM):
 - 1. ASTM A 36 - Carbon Structural Steel.
 - 2. ASTM A 53 - Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
 - 3. ASTM A 366 - Commercial Steel (CS) Sheet, Carbon (0.15 Maximum Percent) Cold-Rolled.
 - 4. ASTM A 500 - Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
 - 5. ASTM A 513 - Electric-Resistance-Welded Carbon and Alloy Steel Mechanical Tubing.
 - 6. ASTM A 570 - Steel, Sheet and Strip, Carbon, Hot-Rolled.
 - 7. ASTM A 569 - Commercial Steel (CS), Sheet and Strip, Carbon (0.16 Maximum to 0.25 Maximum Percent), Hot-Rolled.
- D. American Welding Society (AWA):
 - 1. AWS D1.1 - Structural Welding Code - Steel.
 - 2. AWS D1.3 - Structural Welding Code - Sheet Steel.
- E. Americans with Disabilities Act (ADAAG).
- F. Steel Structures Painting Council (SSPC):
 - 1. SSPC-SP3 - Power Tool Cleaning.

1.3 SUBMITTALS

- A. Comply with the requirements of Section 01330.

05510-1

- B. Shop Drawings: Stair plans, elevations, details, methods of installation and anchoring.
 1. Show members, sizes and thickness, anchorage locations and accessory items.
 2. Furnish setting diagrams for anchorage installation as required.
 3. Provide calculations stamped by a structural engineer registered in the jurisdiction in which the project is located.
- C. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Arrange for metal stairs specified in this Section to be installed by firm with minimum of 5 years consecutive metal stair erection experience.
- B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of metal stairs (including handrails and railing systems) that are similar to those indicated for this Project in material, design, and extent.
- C. Fabricator Qualifications: A firm experienced in producing metal stairs similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- D. Design and Fabrication Standards:
 1. Fabricate stairs in accordance with the recommendations of "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP-510, for class of stair designated, unless more stringent requirements are indicated.
 - a. Preambled Stairs: Service class.
 - b. Industrial-Type Stairs: Industrial class.
 2. Fabricate railings in accordance with the recommendations of ANSI/NAAMM AMP-521. Finish joints in railings accordance with the following National and Ornamental & Miscellaneous Metal Association (NOMMA) standards:
 - a. Service Stairs, Guard Rails in Non-Public Spaces: Type 3
 - b. Industrial Stairs and Non-public Use Stairs: Type 4
 3. Provide same level of quality for railings guarding floor openings as railings connected to stairs serving opening.
 4. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," for class of stair designated, unless more stringent requirements are indicated.
 - a. Service class, unless otherwise indicated.
- E. Welding Qualifications: Qualify procedures and personnel according to the following:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.3, "Structural Welding Code - Sheet Steel."

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.
- B. Packing and Shipping: Deliver stair and rail components in manufacturer's pre-bundled protective wrapping, clearly labeled for stair type and location in building.
- C. Storage and Protection: Store stair and rail components above ground, protected from exposure to the elements and from physical damage caused by other construction activities.

1.6 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Coordinate locations of hanger rods and struts with other work so that they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.

PART 2 - PRODUCTS

2.1 PERFORMANCE AND REGULATORY REQUIREMENTS

- A. Structural Performance of Stairs: Stairs shall withstand the following structural loads without exceeding the allowable design working stress of materials, including anchors and connections. Apply each load to produce the maximum stress in each component:
 - 1. Treads and Platforms of Metal Stairs: Capable of withstanding a uniform load of 100 lb/sf and concentrated load of 300 lbf applied on an area of 4 square inches. Concentrated and uniform loads need not be assumed to act concurrently.
 - 2. Stair Framing: Capable of withstanding stresses resulting from loads specified in addition to stresses resulting from railing system loads.
 - 3. Limit deflection of treads, platforms, and framing members to L/240 or 1/4 inch, whichever is less.
 - 4. Seismic Performance: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- B. Structural Performance of Handrails and Railings: Handrails and railings shall withstand the following structural loads without exceeding the allowable design working stress of materials, including handrails, railings, anchors and connections.
 - 1. Top Rail of Guardrail: Capable of withstanding a concentrated load of 200 lbf applied in any direction and a uniform load of 50 lbf/ft applied in any direction. Concentrated and uniform loads need not be assumed to act concurrently.
- C. Regulatory Requirements: Comply with applicable provisions of local building code, ADAAG and ANSI A117.1 as applicable for stairs and handrails.

2.2 MATERIALS

- A. Steel Shapes and Plates: ASTM A 36.
- B. Steel Pipe: ASTM A 53, Type E or S, Grade B.
- C. Steel Tubing:
 - 1. Structural Use: ASTM A 500, Grade C.
 - 2. Non-Structural Use: ASTM A 513, hot rolled or coiled rolled (mill option).
- D. Steel Sheet:
 - 1. Structural Use: ASTM A 570 (hot rolled) or A 366 (cold rolled).
 - 2. Non-Structural Use: ASTM A 569 (hot rolled) or A 366 (cold rolled).
- E. Fasteners and Accessories: Provide anchor bolts, clip angles, hanger rods and other hardware, accessories and incidental materials required for complete installation of stairs and rails.
- F. Welding Materials: Conform to AWS code and AWS filler metal specifications for material being welded.

- G. Primer: Acrylic Latex rust-inhibitive primer containing less than 1.0 lb/gal volatile organic compounds (VOC), certified to be compatible with finish coats specified in Section 09900.
- H. Concrete Materials and Reinforcement: Comply with the applicable requirements of Division 3.

2.3 FABRICATION

- A. Use same material and finish as parts being joined, except use stainless steel between dissimilar metals and non-corrosive fasteners at exterior connections or joints.
- B. Provide fasteners of sufficient strength to support connected members and loads, and to develop full strength of parts fastened or connected.
- C. Construct stairs and rails with all components necessary for support and anchorage, and to provide a complete installation.
- D. Shop welding and joining shall conform to AWS D1.1 and AWS D1.3 requirements.

2.4 STANDARD STAIR AND RAIL SYSTEM

- A. Stairs and Landing: Manufacturer's standard prefabricated, pre-assembled stair and landing system, consisting of hot rolled steel sheet treads, risers, and landings. Stringers shall be steel channel with side mounted prefabricated railings.
 - 1. Stringers: Minimum thickness or gauge as determined by structural design calculations, structural grade steel channel.
 - 2. Risers: Closed riser, minimum 14-gauge hot-rolled mild steel sheet, sloped maximum 1-1/2 inches and conforming to ADAAG nosing requirements.
 - 3. Treads: Manufactures standard concrete pan system (Field Poured). Tread pans shall be minimum of 14 gauge, or as determined by design calculations. Pan depth 1-1/2 inches. Welds shall be exposed and visible after installation for subsequent inspections.
 - 4. Refer to Division 3 for concrete and field finish of treads.
 - 5. Mid Landings: Minimum of 11 gauge hot-rolled mild steel sheets, formed for a minimum 3 inches concrete fill, with 12 gauge channel supports and bracing welded to perimeter frame at 12 inches o.c.
 - 6. Fasteners and Supports: Sized by manufacturer to meet the structural design criteria.
- B. Railing: Manufacturer's standard welded steel tube handrail complying with the following requirements:
 - 1. Rails: 1-1/2 inches diameter by minimum 13 gauge round steel tube, continuous multi strand type, equally spaced not more than 3-15/16 inches clear between strands, and with a minimum extension per code at top and bottom risers. Wrap rail continuously past space between fights to form guardrail as required by building code. Terminate rail ends with radiused returns, newel posts, or safety terminations approved by local code. Provide brackets as required to attain clear distance between rail and wall as shown on the drawings.
 - 2. Rail Posts: 1-1/2 inches square by 11-gauge tubing. Rail posts to fasten to side of plate stringers per manufactures shop drawings. Manufacture to pre-weld erection aid to rail post for proper height to aid stair erector. Erection aid (setting block) to be removed and weld ground smooth after installation.
 - 3. Fabrication:
 - a. Use preformed or prefabricated bends.
 - b. Butt weld tee and cross intersections in tubing; cope and weld intersections in pipe. Miter elbows.
 - c. Mechanically fasten internal sleeves and fittings.
 - d. Provide minimum 3/16-inch welded steel plate closures or hemispherical closure fittings on all exposed rail ends.

2.5 SHOP CLEANING AND FINISHING

- A. Rails and Stair Components: Completely remove oil, grease, dirt, mill scale, rust, corrosion products, oxides, paint or other foreign matter from surface of steel in accordance with SSPC-SP3.

- B. Shop Primer: Immediately after shop fabrication and cleaning, spray apply one coat of anti corrosive primer to a minimum dry film thickness as recommended by primer manufacture, but not less than 2.0 mils.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Do not begin installation until substrates and adjacent construction have been properly constructed. Verify structural framing, enclosures, weld plates, blocking, and size and location of pockets.
- B. If unsatisfactory conditions are encountered, notify Architect in writing. Do not proceed until unsatisfactory conditions have been corrected.
- C. Notify Manufacturer of any detail, design or tolerance deviations as noted or drawn on stair shop drawing.

3.2 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.

3.3 INSTALLING METAL STAIRS WITH GROUTED BASEPLATES

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of baseplates.
- B. Set steel stair baseplates on wedges, shims, or leveling nuts. After stairs have been positioned and aligned, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
 - 1. Use nonmetallic, non-shrink grout unless otherwise indicated.
 - 2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.4 INSTALLING RAILINGS

- A. Adjust railing systems before anchoring to ensure matching alignment at abutting joints. Space posts at spacing indicated or, if not indicated, as required by design loads. Plumb posts in each direction. Secure posts and rail ends to building construction as follows:
 - 1. Anchor posts to steel by welding directly to steel supporting members.
 - 2. Anchor handrail ends to concrete and masonry with steel round flanges welded to rail ends and anchored with post installed anchors and bolts.

3.5 ADJUSTING AND CLEANING

- A. Touch-up field welds and abraded areas by application of same coating used for shop primer.
- B. After stairs are completely installed, clean surface of exposed rail and stairs with wet cloth or mop. Leave stair system ready for finish painting.

3.6 CONCRETE FILL TREATMENTS

- A. Concrete Placement: Place concrete in accordance with Section 03310. Provide steel trowel finish.

END OF SECTION

SECTION 01230 - ALTERNATES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Alternate submission requirements of work included in Alternates.
- B. Related Sections:
 - 1. Contract Between Owner and Contractor: Acceptance of Alternates in award of a Contract.

1.2 DEFINITIONS

- A. Alternate: An amount proposed by bidders and stated and defined on the Bid Form for certain work that may be added to or deducted from the base bid amount if Owner decides to accept a corresponding change either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.
 - 1. Alternates will be a part of the Work only if enumerated in the Agreement.
 - 2. The cost or credit for each alternate is the net addition to or deduction from the Contract Sum to incorporate alternate into the Work. No other adjustments are made to the Contract Sum.

1.3 PROCEDURES

- A. Notification: Immediately following award of the Contract, notify each party involved, in writing, of the status of each alternate. Indicate if alternates have been accepted, rejected, or deferred for later consideration. Include a complete description of negotiated modifications to alternates.
- B. Execute accepted alternates under the same conditions as other work of the Contract.

1.4 SUBMISSION REQUIREMENTS

- A. Alternates quoted on Bid Forms will be reviewed and accepted or rejected at the Owner's option. Accepted alternates will be identified in the Contract between Owner and Contractor.

1.5 SCHEDULE OF ALTERNATES AND DESCRIPTION OF WORK INCLUDED IN ALTERNATES.

- A. Schedule of Alternates, when applicable, and descriptions thereof are shown on the Bid Form.

PART 2 - PRODUCTS

Not Used.

PART 3 - EXECUTION

Not Used.

01230-2

SECTION 01255 - REQUEST FOR INFORMATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Requests for Information (RFI) procedures.

1.2 DEFINITIONS

- A. Requests for Information: A formal online process used during the construction phase to facilitate communication between the Contractor, the Owner Construction Manager (CM), and the Professional of Record (POR) with regard to requests for additional information and clarification of the intent of the Contract Documents (Drawings and Specifications).
- B. Professional of Record (POR): The Architect of Record (AOR) or the Civil Engineering Consultant (CEC).
- C. Architect of Record (AOR): The prime consultant in charge of overall design and coordination of the project. The AOR will be the administrator for all construction RFIs classified as "BLDG".
- D. Civil Engineering Consultant (CEC): The Registered Engineer in responsible charge of the civil design for the project. The CEC will be the administrator for sitework RFIs classified as "SITE".
- E. Owner's Construction Manager (CM): The Owner's building and sitework Construction Manager for the Project.

1.3 REQUEST FOR INFORMATION SUBMITTAL

- A. Submit requests for information for conditions requiring clarification of the Contract Documents on Owner's approved website platform. POR will not respond to requests for information unless this format is utilized and all appropriate information is provided. Faxed or e-mailed RFIs will not be reviewed.
- B. Submit in accordance with procedure as follows: (See Process Flow Chart at the end of this Section)
 - 1. Subcontractors, manufacturers, and suppliers shall submit request for additional information and clarification to Contractor.
 - 2. Contractor shall contact Owner's CM with requests for additional information or clarification. Owner's CM will not accept requests for information or clarification submitted directly from subcontractors, manufacturers, or suppliers.
 - 3. As Directed by the Owner's CM, the Owner's CM will provide response to Contractor or will direct Contractor to submit a formal Request for Information.
 - a. Submit a formal RFI only if authorized by the Owner's CM. Submittal to Construction RFI website signifies authorization has been given.
 - b. Generate Requests for Information by one source per project.
 - c. Submit one request for information per website entry.
 - 4. POR will review formal requests from Contractor and provide response within 3 working days.
 - 5. POR's response shall not be considered as a Change Order or Change Directive, nor does it authorize changes in the Contract Sum or Contract Time.
- C. Scheduling, Costing, and Owner Provided Equipment Coordination: Direct to the Owner's Construction Manager.

1.4 PENALTY FOR FAILURE TO FOLLOW PROCEDURE

- A. A \$250 administrative cost will be assessed to the Contractor for each Request for Information submitted which does not follow the procedure specified above.

1.5 REIMBURSEMENT FOR ARCHITECTURAL AND ENGINEERING FEES

- A. The Contractor shall be charged administrative costs and professional fees incurred by Owner for additional Architectural and Engineering services associated with the correction of completed Work which is not in accordance with the Contract Documents. Refer to Paragraph 8.7 of the Construction Contract between Owner and Contractor for provisions relating to correction of Work.

PART 2 - PRODUCTS

Not Used.

PART 3 - EXECUTION

Not Used.

END OF SECTION

SECTION 01310 - CONSTRUCTION MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Project Management and Coordination:
 - a. Definitions
 - b. Construction Manager
 - c. Project Coordination

B. Related Requirements:

1. Contract between Owner and Contractor: Owner's Construction Manager's rights and scope of authority.

1.2 DEFINITIONS

- A. Separate Contractor: A contractor (subcontractor, specialty contractor or vendor) hired separately by Owner and outside of General Contractor's Contract.
- B. Owner Construction Manager (CM): The Owner's representative in all matters relating to the Work of the Project. The person responsible for all approvals with the General Contractor. This person also coordinates with the Separate Contractors.

1.3 OWNER'S CONSTRUCTION MANAGER

- A. Owner will assign this project to a staff Owner's Construction Manager. The Owner's Construction Manager is the Owner's representative in all matters relating to the Work.
- B. Cooperate with the Owner's Construction Manager in all matters relating to the Work on this project.
- C. During construction, coordinate use of site and facilities through the Owner's Construction Manager.
- D. Comply with Owner's Construction Manager's procedures for project communications, reports and records, and coordination with drawings, and comply with recommendations and resolution of ambiguities and conflicts.
- E. Comply with instructions of the Owner's Construction Manager for use of temporary utilities and construction facilities.

1.4 RESPONSIBILITIES OF GENERAL CONTRACTOR AND SEPARATE CONTRACTORS

- A. The General Contractor shall provide necessary forces and subcontractors to complete the Work of the Project as described in the Contract Document (Drawings, Specifications, Addenda, and other modifications to the Contract). He is responsible for the supervision, quality control and costs for his employees and subcontractors.
- B. The General Contractor and Separate Contractors will provide a Construction Schedule to the Owner's Construction Manager for review and approval. The Contractors shall immediately contact the Owner's Construction Manager if the Work does not progress as scheduled. It is imperative that the Contractors keep close communication with the Owner's Construction Manager regarding the progress of the Project.
- C. At the commencement of construction, the Owner's Construction Manager, facility General Manager, General Contractor, and Separate Contractors will review the Construction Schedule. The Construction Schedule is set up on a weekly basis and must be followed unless deviations are authorized by the Owner's Construction Manager. (Refer to Section 01500 for posting of schedule.)

- D. The General Contractor and Separate Contractors shall communicate at all times with the facility General Manager, and other Subcontractors to facilitate the construction and ensure it is completed within the approved time schedule.
- E. Upon completion of a portion of the Work (Item, Trade, etc.), that portion of the Work must be 100% complete prior to proceeding to the next phase or portion of Work.
- F. The General Contractor shall be responsible for the coordination of the Remodel work of all Separate Contractors with the Owner's Construction Manager and the facility General Manager.
- G. The Construction Manager will determine what work shall be done during normal operating hours.
- H. The General Contractor shall also be responsible for coordinating the location of storage trailers/containers for Contractor-supplied materials and equipment. (Refer to Section 01500). The General Contractor shall be responsible for permits required for temporary storage facilities (trailers/containers).
- I. The Owner will not be responsible for the loss of any tools or equipment. The Owner will also not be responsible for the cost of any rental tools. This is each Contractor's responsibility and should be included in his price proposal.
- J. Contractors shall comply with Owner's policy regarding gratuities. No Contractor may receive any gratuities from any company providing services or materials for any of Owner's Projects.
- K. The General Contractor shall be responsible for timely removal of the construction trailer as directed by the Owner's Construction Manager.
- L. The Owner may provide Facility Associates as required to assist the General Contractor and Separate Contractors in the remodeling. The Owner's associates shall not be allowed to operate power equipment, be used as carpenters, or perform work from scaffolds, ladders or hoists.
- M. The General Contractor and Separate Contractors are responsible for obtaining a final inspection from the appropriate Building Official or Authority Having Jurisdiction (AHJ). If a Certificate of Occupancy is required, obtain it from the proper authorities. A copy of all final inspection documentation or Certificates of Occupancy shall be included in the final Closeout Documents (Maintenance Book/Closeout Book).

1.5 PROJECT COORDINATION

- A. Coordinate scheduling, submittals, and work of the various Sections of specifications to ensure efficient and orderly sequence of installation of interdependent construction elements, with provisions for accommodating items installed at a later date and under separate contracts.
- B. Obtain necessary drawings, manufacturer's product data, and other necessary data to provide a complete and proper installation.
 - 1. Check field dimensions prior to installing equipment and furnishings. Verify necessary clearances and means of access from equipment storage to final position.
 - 2. Make shop drawings and manufacturer's rough-in requirements available to trades involved.
- C. Verify that utility requirements of operating equipment are compatible with building utilities. Coordinate work of various specification Sections for installation and final connection of equipment.
 - 1. Verify that mechanical, plumbing, and electrical rough-ins have been properly located.
- D. Coordinate space requirements and installation of mechanical and electrical Work which are indicated diagrammatically on Drawings. Follow routing shown for pipes, ducts, and conduits as closely as practicable. Make runs parallel with lines of building. Utilize spaces efficiently to maximize accessibility for other installations, for maintenance, and for repairs.

- E. In finished areas, conceal pipes, ducts, and wiring in the construction. Coordinate locations of fixtures and outlets with finish elements.
- F. Coordinate completion and clean up of work of separate Sections in preparation for Substantial Completion and for portions of Work designated for Owners partial occupancy after possession.
- G. After Owner occupancy of premises, coordinate access to site for correction of defective work and work not in accordance with Contract Documents, to minimize disruption of Owner's activities.

SECTION 01311 - PROJECT MEETINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Progress and quality control meetings.

1.2 PROJECT MEETINGS

- A. Conduct project meetings, as a part of the overall project coordination effort, to coordinate construction activities and Work.

1.3 ATTENDEES' AUTHORITY

- A. Persons designated by Contractor, subcontractors, and suppliers to attend project meetings: Possess authority to commit entities they represent to items agreed upon in project meetings.

1.4 PROGRESS AND QUALITY CONTROL MEETINGS

- A. Schedule and conduct progress meetings throughout the progress of the Work at intervals determined by the Owner's Construction Manager.
- B. Attendance Required: Owner's Construction Manager, Owner's Representative, Contractor Project Coordination Administrator, Contractor Quality Control Representative, and Contractor Project Field Superintendent.
- C. Minimum Agenda: Review items of significance that may affect project progress, including the following:
 - 1. Minutes of previous meetings.
 - 2. Work progress in relation to Contractor's construction schedule.
 - 3. Status of required submittals.
 - 4. Payment request status. Documentation of information for payment requests.
 - 5. Field observations, Requests for Information, discussions of problems, and agreement on solutions.
 - 6. Quality of materials and workmanship.
 - 7. Corrective measures to regain quality of materials and workmanship; status of products, assemblies, or systems requiring replacement.
 - 8. Status of change orders.
 - 9. Corrective measures to regain projected schedules.
 - 10. Planned progress for period prior to next scheduled Progress Meeting.
 - 11. Effect of proposed project changes (if any) on construction schedule and coordination.
 - 12. Temporary facilities and services.
 - 13. Jobsite housekeeping and cleanliness.
- D. Documentation: Record minutes of conference and distribute copies to Owner's Construction Manager, participants, and those affected by decisions made, 2 working days after conference date. Recording, producing, and distributing by Contractor.
- E. Construction Schedule Update: Revise construction schedule after each progress meeting where schedule revisions have been made or recognized. Issue updated schedule concurrently with report of meeting.

PART 3 - EXECUTION

Not Used.

END OF SECTION

SECTION 01320 - CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Progress Schedules and Reports
- B. Related Requirements:
 - 1. Contract Between Owner and Contractor. Requirements for construction schedules and reports.

1.2 CONSTRUCTION SCHEDULE

- A. Using the Milestone Completion Dates identified in the Contract; the Contractor shall develop the detailed CPM Construction Schedule with activity time duration in calendar days further describing his method for performing the Work.
 - 1. The Milestone Completion Dates identified in the Contract shall not be construed as an indication by the Owner as to means, methods, or techniques of construction to be employed by the Contractor.
 - 2. Critical path activities shall be indicated on the Contractor's detailed construction schedule.

1.3 CONSTRUCTION PROGRESS CHART

- A. Progress of the Project will be monitored using charts produced from the CPM Schedule. Requirements herein provide for planning and execution of the Work and are to assist the Owner's Construction Manager in evaluating progress of the Work economically and chronologically.
- B. The Contractor shall be familiar, in detail, with the Milestone Completion Dates identified in the Contract. By submitting his bid, the Contractor acknowledges that the Construction milestones are feasible, reasonable, and are a workable schedule for the Work.
- C. Delivery conditions and lead times for Owner Furnished Items are specified in the Delivery Schedules in Section 01600. Coordinate delivery of these items with progress of the Work.
- D. Prior to construction, the Contractor may request reasonable changes to the Construction Progress Schedule Chart, provided delivery dates specified in Section 01600 and the contract completion date are not changed. The Owner's Construction Manager will review requested changes. Upon approval by the Owner, Progress Schedule Chart shall become the "Approved Construction Progress Chart" by which the Contractor shall plan, organize, direct, coordinate, and execute the Work, and the basis of evaluating progress of the Work.
- E. If, in the opinion of the Owner's Construction Manager, any of the dates specified in Section 01600 are not completed by the Contractor on or before the stated time period and after 48 hours written notice to the Contractor, the Owner may proceed to carry out the work in accordance with the Contract.
- F. The Contractor shall perform work directed by the Owner's Construction Manager to meet the Owner's contract completion date and shall maintain the original management and supervision team to continue their office and job site duties on a full-time basis through final completion and/or any other time the Contractor has any work being performed on the project regardless of the date or condition of project completion.

1.4 SCHEDULE UPDATES

- A. The Contractor shall provide to the Owner's Construction Manager regular updated reports on the Construction Schedule as determined by the Owner's Construction Manager. The Contractor shall maintain a current weekly updated detailed construction schedule in the site construction field office.

1. Construction Schedule Updating: Progress information to be included in schedule updates includes actual start and finish dates, percentage complete, remaining duration or projected finish dates for all activities in progress during reporting period. Schedule updates may also include approved added activity descriptions.

1.5 RECOVERY PLAN

- A. Should the updated approved Construction Schedule show the Contractor to be behind schedule, the Contractor shall immediately devise a plan for recovery of lost time and submit it to the Owner's Construction Manager for approval. Once approved by the Owner's Construction Manager, the Contractor shall immediately put the recovery plan into action.

END OF SECTION

SECTION 01330 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Submittal procedures prior to and during construction.
- B. Related Sections:
 - 1. Section 01600 - Product Requirements: Requirements for product selection and product options.
 - 2. Section 01770 - Contract Closeout: Closeout submittals.

1.2 PROCESS AND RESPONSIBILITIES

- A. Contractor Responsibilities:
 - 1. Submit required submittals to Architect unless otherwise specified.
 - 2. Submit required submittals in hard copy or electronically by email. Electronic documents shall be in PDF format. Hard copy documents submitted to the Contractor by suppliers and subcontractors shall be scanned by the Contractor to PDF prior to electronic submittal.
 - 3. Comply with submittal requirements defined within individual Sections. Submittals procedures described herein shall apply unless otherwise stated in individual Sections.
 - 4. Package each submittal appropriately for transmittal and handling.
 - 5. Identify Project, Contractor, subcontractor or supplier, pertinent Drawing sheet and detail numbers, and Specification Section number, as applicable.
 - 6. Assemble, coordinate, and review submittals of subcontractors, suppliers, and manufacturers.
 - 7. Review submittal for verification of products required, field dimensions, adjacent construction, and coordination of information.
 - 8. Apply Contractor's Submittal Review stamp, signed or initialed and dated, certifying compliance with Contract Documents.
 - 9. Identify email transmittal of submittals in the subject line as follows:
 - a. DC #, City, State, Facility type RDC, GDC, etc.), submittal name (e.g. concrete mix design, sieve analysis, etc., including Section number).
 - 10. Forward executed copy of Submittal Review Form to supplier within 5 days after receipt of submittal with copies to Architect and the Owner's Construction Manager.
 - 11. Schedule submittals to expedite the Work. Coordinate submission of related items into single submittal, unless otherwise specified.
 - 12. Submit submittals items required within an individual Specification Section into a single submittal.
 - 13. Identify variations from Contract Documents and limitations of product and system which may be detrimental to successful performance of the completed Work.
 - 14. Provide space on submittal for Contractor, Architect, and Architect's Consultant review stamps.
 - 15. Allow 10 working days for review.
 - 16. Revise and resubmit submittals when required. Identify changes made since previous submittal.
 - 17. Notify Vendor or Subcontractor of approval by Authority Having Jurisdiction of Deferred Submittal package.
 - 18. Distribute copies of reviewed submittals to concerned parties and to Record Documents file. Instruct parties to promptly report inability to comply with provisions.
- B. Supplier Responsibilities - Owner Furnished Products:
 - 1. Subcontractors, vendors, and suppliers (including suppliers of Owner furnished products) shall forward copies of submittals to the Contractor.
 - 2. Prepare submittals in accordance with requirements in individual Specification Sections and Contractor responsibilities specified herein.
- C. Architect Responsibilities: Review submittals and take appropriate action as follows.
 - 1. Shop Drawings and Product Data: Architect will mark submittals to indicate appropriate action.

2. Return Architect reviewed Submittals to Contractor by email or mail carrier service providing delivery tracking.
3. Submittals for Information: Architect will not return submittals sent for information only.
4. Forward submittals to proper sub-consultant for review as necessary.

D. Unrequested Submittals: Submittals transmitted to Architect or Architect's Consultants that are not indicated or requested will not be reviewed. Architect will dispose of unrequested submittal items.

1.3 TRANSMITTAL

A. Transmit each submittal using a transmittal form. Submit to Architect.

1. Transmit submittals to be reviewed by Architect to:

DC REMODEL TEAM
Submittal Reviewer
BRR Architecture
8131 Metcalf Avenue, Suite 300
Overland Park, KS 66204

2. Transmit submittals to be reviewed by Structural Engineer of Record to:

Structural Consultant
Johnston Burkholder Associates
930 Central Street
Kansas City, MO 64105
(816) 421-4200
wmshopdrawings@jbaengr.com

3. Transmit 3 copies of fire protection submittals to the Owner's Fire Protection Consultant listed below within 21 days of prime contract award. Send one copy of the submittal transmittal to the Architect listed above.

Fire Protection Engineer of Record
Henderson Engineers, Inc.
8345 Lenexa Drive, Suite 400
Lenexa, Kansas 66214
fireSOR@hei-eng.com

4. Transmit sitework submittals directly to Civil Engineer of Record.

B. In addition to recipients stated above, transmit submittals to those parties as may be required in the individual specification section.

1.4 DEFERRED SUBMITTALS

A. Definition: Deferred Submittal are submittals required by the AHJ for code compliance but which, rather than being submitted at the time of permit application, have been allowed by the AHJ to be deferred until after Contract award to enable the successful Contractor, Subcontractor, or Supplier to submit the applicable submittals.

B. Submit the deferred submittals to the extent indicated on the Deferred Submittal Table located on the Drawing Cover Sheet.

C. Prepare submittals in accordance with requirements stated in the applicable individual Specifications Sections and the applicable requirements herein

1. Storage Rack System (Owner Vendor): Storage Rack System is not specified in an individual section. Requirements are as follows:
 - a. Coordinate with the Owner's Construction Manager to obtain copy of approved submittal package.
 - b. Shop Drawings:
 - 1) Floor plan showing locations and types of rack systems.
 - 2) Details of each type of rack construction showing configuration, dimensions and materials.

01330-2

- 3) Details of rack connection to building floor or structure.
- 4) Seismic bracing and connections (where required).
- c. Calculations: Structural calculations for rack connections to building floor or structure and seismic provisions.

D. Process:

1. Immediately after award of the Contract, the Contractor shall contact the AHJ to coordinate and determine the AHJ requirements for deferred submittals. Information obtained shall include such requirements as number of copies; extent of detail of information to be submitted; review, if required, by Professional of Record (Architect or Engineer); and other necessary process and procedural requirements.
2. The Contractor, or other entity, responsible for the submittal shall submit, track, and report submittal status to the Owner's Construction Manager through final approval and issue of permit.
3. Communicate with vendors, suppliers, and Subcontractors the AHJ requirements for deferred submittals. Receive, review, and stamp submittals in accordance with submittal requirements herein.
4. Transmit deferred submittals directly to AHJ unless otherwise requested by AHJ to obtain prior review and approval by Professional of Record.
5. Upon approval by AHJ, obtain permits and pay permit fees and other fees required by the AHJ.
6. Attach approved deferred submittals to the approved "Permit Set" documents at the project site.
7. Do not install deferred submittals until corresponding submittal documents have been approved by the AHJ.

1.5 SUBMITTAL REQUIREMENTS

A. Shop Drawings

1. Submit Drawings with graphic information at accurate scale. Show dimensions and note which dimensions are based on field measurement. Identify materials and products in Work shown. Indicate compliance with specified standards and special coordination requirements. Do not use reproductions of Contract Drawings as Shop Drawings.
2. Include on each Shop Drawing the drawing title, number, original issue date, and revision numbers and dates, in addition to other required identifying information.
3. Identify details by reference to sheet, detail, schedule, or room names shown on the Contract Drawings.
4. Identify numerical values in English units.
5. Size: Not less than 8-1/2 by 11 inches nor more than 30 by 42 inches.
6. Number of Copies Required: Submit one PDF file. Submit additional copies to AHJ for approval if required. Comply with requirements of AHJ with regard to signing and sealing of submittals by Registered Professional licensed in the State in which project is located.
 - a. One PDF copy will be returned to the Contractor through approved web platform.
 - b. Bar Joists and Joist Girders, and Steel Roof Deck: Submit Shop Drawings and bills of materials directly to Structural Engineer of Record via email.

B. Product Data

1. Manufacturer's standard schematic drawings and diagrams:
 - a. Clearly mark to identify pertinent products.
 - b. Show performance characteristics and capacities.
 - c. Show dimensions and clearances required.
 - d. Show wiring or piping diagrams and controls.
 - e. Modify drawings and diagrams to delete information not applicable to this work.
 - f. Supplement standard drawings and diagrams to provide complete information applicable to this work.
2. Mark each copy to identify applicable products, models, options, and other data. Supplement Product Data with material prepared for the Work to satisfy submittal requirements for which Product Data does not exist. Note that the material is developed specifically for this Contract.
3. Submit Product Data for each Section in one complete submittal. Include table of contents listing page and catalog item numbers for Product Data.
4. Indicate, by prominent contrasting color notation on each product being submitted, the Specifications Section and paragraph numbers to which it pertains.
5. Where printed Product Data includes information on several products, some of which are not required, mark copies to indicate information applicable to Work and clearly cross out other information not applicable to Work. Include the following information:

- a. Manufacturer's printed recommendations or instructions.
 - b. Compliance with referenced standards.
 - c. Application of testing agency labels and seals.
 - d. Notation of dimensions verified by field measurement.
 - e. Notation of coordination requirements.
6. Product Data For Information: Written information not requiring action by Owner's Construction Manager or Architect; for verification of compliance with requirement. Submittal not complying with requirements will be rejected.
- C. Engineering Calculations
1. Submit calculations signed and sealed by a Registered Professional Engineer licensed in the State where project is located. Comply with requirements of Authority Having Jurisdiction with regard to signing and sealing of submittals.
- D. Certifications
1. Certify manufacturer or installer's qualifications, compliance with tests or specified criteria, or other factors as required in individual Specification Sections.
 2. Submit supporting reference data, affidavits, and certifications as required.

PART 2 - PRODUCTS

END OF SECTION

SECTION 01351 – REGULATORY COMPLIANCE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Contractor’s regulatory compliance requirements and responsibilities.
 - 2. Owner’s compliance performance standards and expectations.

- B. Related Requirements and Sections:
 - 1. Contract Between Owner and Contractor (Contract).
 - 2. Owner’s Compliance Performance Standards (CPS) for Major projects as specified in the contract addendum.
 - 3. Owner’s Environmental, Health and Safety Manual (EHS) for minor projects as specified in the contract addendum.
 - 4. Section 01500 - Temporary Facilities and Controls.
 - 5. Section 01550 - Tension Pole Dust Barrier Systems.
 - 6. Section 01740 - Cleaning and Trash Disposal.
 - 7. Section 02023 - Selective Site Demolition.
 - 8. Section 02370 - Erosion and Sedimentation Control (Including SWPPP).

1.2 PROCESSES, PROCEDURES AND RESPONSIBILITIES

- A. Comply with all compliance obligations, federal, state, and local laws described in the Contract Documents including: Contract, Specifications, Drawings, applicable Owner’s Compliance Performance Standards (CPS) or Environmental, Health and Safety (EHS) manuals.

- B. Do not use Owner’s CPS or EHS in place of or as a substitute for developing and implementing the Contractor’s own compliance programs.

- C. Create and maintain a hard-copy site-specific “Compliance Binder,” including all associated documents in accordance with the requirements in the Owner’s CPS manual.

- D. Do not create conditions that would cause harm to Owner’s associates or members or prevent Owner’s compliance with applicable laws.

- E. Follow and uphold the applicable Owner’s compliance standards including responsibilities, processes and procedures, compliance acknowledgements, training, documentation, forms, tracking and reporting.

- F. Comply with all requirements set within the Contract Documents, including but not limited to: references and definitions, document management, safety requirements and safety plans, hazard safeguards, dust walls and barricades, hazardous materials and safety data sheets, respirable crystalline silica, hot work, fire watch, electrical work and supervision, lockout tagout, fuel storage, crane operations, confined spaces, edge protection netting, emergency exits, toxic and hazardous substances, asbestos, mold, site security and protection, labor work verification programs, badging and access control, waste management and disposal, hazardous waste management, waste container access restrictions, spills, construction stormwater permitting, sanitary waste water and sewage management.

01351-2

SECTION 01452 - CONTRACTOR'S QUALITY CONTROL

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Administrative and procedural requirements for Contractor quality assurance and quality control.

B. Related Requirements:

1. Contract between Owner and Contractor: Inspections, testing, and approvals required by public authorities.
2. Section 01770 - Contract Closeout: Project Record Documents.
3. Appendix B - Testing, Inspection, and Observation by Owner.
 - a. Quality Requirements of Owner's Construction Testing laboratory (CTL) and services.
 - b. Architect-Engineer Site Observation: Site observation by Owner's Architect and Engineer Consultants.
 - c. Civil Engineering Consultant Site Observation: Site observation by Owner's Civil Engineering Consultant.

C. Contractor testing and inspection are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.

1. Contractor testing and inspection includes testing or inspection to be performed by and under the responsibility of the General Contractor as well as that required by the manufacturer, manufacturer's representative, product supplier, or other party under the responsibility of the Contractor.
2. Requirements in this section are independent of testing and inspection specified for the Owner's Construction Testing Laboratory (CTL) specified in Appendix B. Testing and inspection by the CTL will be paid for by the Owner at no cost to the Contractor.
3. Specific quality-assurance and -control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
4. Requirements for Contractor to provide quality-assurance and -control services required by Architect, Owner's CTL, Owner's Construction Manager, or authorities having jurisdiction are not limited by provisions of this Section.

1.2 DEFINITIONS

A. Testing: Evaluation of systems, primarily requiring physical manipulation and analysis of materials, in accordance with approved standards.

B. Inspection: Evaluation of systems primarily requiring observation and engineering judgement.

C. Quality Assurance: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will substantially comply with construction documents.

D. Quality Control: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction substantially comply with construction documents.

E. Quality assurance and quality control may be performed by either the Contractor or the Construction Testing Laboratory employed by the Owner.

F. Mockups: Full-size, physical assemblies that are constructed on-site. Mockups are used to verify or demonstrate aesthetic effects and, where indicated, qualities of materials and execution, and to review construction, coordination,

testing, or operation; they are not Samples. Approved mockups establish the standard by which the Work will be judged.

- G. Architect of Record (AOR): The prime consultant in charge of overall design and coordination of the building.
- H. Engineer of Record (EOR): The Registered Engineer in responsible charge of engineering design for the project.
- I. Structural Engineer of Record (SER): The Registered Engineer in responsible charge of the structural design for the project.
- J. Civil Engineering Consultant (CEC): The Registered Engineer in responsible charge of the civil design for the project.
- K. Architect - Engineer (A/E): A collective term to include the AOR, CEC, SER, and the Mechanical, Electrical, and Fire Protection EOR.
- L. Construction Testing Laboratory (CTL): The independent testing and inspection agency employed by the Owner.
- M. Test and Balance Agent (TBA): The HVAC testing and balancing agency employed by the Owner.
- N. Special Inspector (SI): The Special Inspector under the direct supervision of a registered civil/structural engineer (unless otherwise specified) regularly engaged in inspection, and experienced with the type of work requiring related testing and inspection. The categories of special inspector are specified in Appendix B:
- O. Building Official: The Officer or his duly authorized representative charged with the administration and enforcement of the local building code.
- P. Deviation: A deviation is any item or component of work that does not substantially conform to the requirements of the construction documents and which has not been corrected by the end of business on the day it is identified.

1.3 CONFLICTING REQUIREMENTS

- A. General: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer uncertainties and requirements that are different, but apparently equal, to Architect/Engineer for a decision before proceeding.
- B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. Refer uncertainties to Architect/Engineer for a decision before proceeding.

1.4 SUBMITTALS

- A. Submit Test and Inspection Reports within three working days of T&I occurrence.
- B. Submit required reports and other items to the following:
 - 1. AOR: (Construction Administration Leader).
 - a. Site work T&I.
 - b. Bldg T&I. AOR will transmit copy of Bldg T&I to SER.
 - c. Report of non-conforming work.
 - 2. CEC: Site work T&I only
 - 3. Contractor
 - 4. Building Official: Quantities as required by Jurisdiction.

1.5 REPORTS

- A. Submit reports as required herein and conduct and interpret tests and inspections.
- B. Testing and Inspection Report: Submit test and inspection reports including the following information:
 - 1. Date issued.
 - 2. Project title and number.
 - 3. Distribution Center number.
 - 4. Firm name and address.
 - 5. Name and signature of tester or inspector.
 - 6. Name and seal of registered engineer in responsible charge (as applicable).
 - 7. Date and time of sampling.
 - 8. Date of test or inspection.
 - 9. Identification of product and specification section.
 - 10. Location in project, including elevations, grid location and detail.
 - 11. Type of test or inspections.
 - 12. Results of tests or inspections and interpretation of same.
 - 13. Observations regarding compliance with Contract Documents or deviations therefrom.
- C. Submit a separate final signed report stating whether the work requiring inspection is, to the best of the inspector's knowledge, in conformance with the approved plans, specifications, and the applicable workmanship provisions of the building code.
- D. Reports shall be made on 8-1/2 by 11 white paper, suitable for photocopying and binding in booklet form. Sheets shall have the CTL letterhead (including phone number and address). Larger sheets shall be folded and bound into the booklet.
- E. Tests and inspections reports indicating non-conformance (deviations) to the Contract Documents shall be brought to the attention of the A/E within 24 hours upon discovery.
- F. Contractor shall send an RFI to the A/E on the same day of non-conformance (deviation) notification.

PART 2 - PRODUCTS

Not Used.

PART 3 - EXECUTION

3.1 QUALITY CONTROL

- A. Quality control shall be the responsibility of the Contractor.
- B. The Owner will perform testing and inspection (T & I) but only as a means of verification to the Owner of Contractor quality control performance. Owner T & I shall not be considered Quality Control or Quality Assurance as defined herein. Owner T & I and Contractor obligations with respect to Quality Control shall be pursuant to related provisions of the Contract between Owner and Contractor.
 - 1. Owner will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspecting they are engaged to perform.
 - 2. Costs for retesting and re-inspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Contractor, and the Contract Sum will be adjusted by Change Order.
- C. T & I by the Owner will be conducted by the Owner's Construction Testing Laboratory at no cost to the Contractor in accordance with Appendix B, except that costs for failing tests will be deducted from the sum due to the Contractor.
- D. Owner T & I results and reports will be available as information to Contractor.

- E. Owner's T & I shall not be relied on by the Contractor as an indication of conformance or nonconformance of work nor shall the Contractor be dependent on the Owner's CTL test results for verification of satisfactory work in place.
- F. Work found by the Owner's CTL to be defective or in non-compliance with Contract Documents shall be corrected based on the CTL T&I results except when proven otherwise by subsequent CTL or Contractor conducted tests.
- G. In-place work will be subject to testing and inspection by the Owner's CTL at any time during the progress of the work.
- H. Test reports conducted by and at the discretion of the Contractor shall be provided to the Owner upon request when reason exists to suspect non-compliance or when used for comparison to CTL conducted tests.
- I. Any testing agency, if employed by the Contractor for purposes of Contractor Quality Control, shall not be the same entity engaged by the Owner.
- J. Contractor shall pay for:
 - 1. Tests and inspections at the source or prior to incorporation into the Work of materials, products, or equipment to certify compliance with Contract Documents.
 - 2. Tests, samples, inspection, or engineering services the Contractor determines appropriate for performance of Work or for Contractor's convenience.
 - 3. Tests and inspections when initial tests or inspections indicate Work does not comply with Contract Documents.
 - 4. Tests and inspections required or conducted by public authorities as part of permits or inspection fees.
 - 5. Other tests and inspections indicated to be "by Contractor."
- K. Provide incidental labor and facilities to provide access to Work to be tested, to obtain and handle samples at the site or at source of products to be tested, to facilitate tests and inspections, and to provide storage and curing of test samples. Provide lift equipment as required for inspection personnel of the Owner or the Owners's representatives.
- L. Provide 14 days written notice to A/E prior to expected time for operations requiring observation, inspecting, and testing. If work to be observed is covered prior to notification, uncover work as required.
- M. Notify in writing the Owner's Construction Manager three working days prior to expected time for operations requiring inspecting and testing services.
- N. Repair and protect the work regardless of assignment of responsibility for inspection, testing, or similar services.
 - 1. Protect work exposed by or for quality assurance and quality control service activities.
 - 2. Upon completion of inspection, testing, sample-taking, and similar services, restore constructed areas to conform to Contract Documents.
- O. Costs, including without limitation additional professional fees and expenses, of any required redesign or re-engineering required by non-conforming tests and inspections will be deducted from the sum due the Contractor.
- P. Provide a Letter of Conformance at the completion of the Project to the Owner's Construction Manager, with copy to the AOR, stipulating that the Project has been built per the Contract Documents. An example is attached at the end of this Section.
- Q. Maintain a copy of Contract Drawings and Specifications with all Addenda and Change Orders. Use the Contract Documents supplemented by the approved shop drawings and applicable material and workmanship provisions of the Code for testing and inspection of the work.
- R. Provide qualified personnel at site to comply with schedule and submit reports for each test and inspection as defined in Part 3 of this Section.
- S. Perform specified inspection, sampling, and testing of products in accordance with specified standards.
- T. Ascertain compliance of materials and mixes with requirements of Contract Documents.

- U. Perform testing and inspection in a timely manner to avoid delay of work.
- V. Notify Owner's Construction Manager and CEC or AOR, as applicable of observed non-conformance of Work or Products. If observed deviations from the Contract Drawings, Specifications, or building code will be probable cause of subsequent rejection of work or material, notify the Owner's Construction Manager and, CEC or AOR sufficiently in advance for determination to continue operations or take corrective measures before continuing.
- W. The Owner's Construction Manager in conjunction with the CTL and/or SI will determine when to involve the AOR or EOR for remedial action.
- X. If additional A/E site or FPT visits are required beyond those described in Section 01454 as determined by the Owner to determine correction to non-conforming work, the Contractor shall reimburse the Owner for each additional visit to cover A/E expenses. Additional A/E site observations or FPTs will be performed as required until all deviations have been corrected by the Contractor and closed by the A/E consultant.
- Y. Cooperate with CTL/SI personnel and provide access to the Work and to Contractor's facilities.
- Z. Submit test and inspection reports to the A/E consultant and other designated persons as specified in individual sections. Submit test and inspection reports to the Building Official as required.
- AA. Testing and inspection by the Building Official does not preclude the normal field involvement and site observations by the A/E consultant, nor shall it relieve the Contractor of any responsibility to complete the work in accordance with the approved drawings and specifications.
- BB. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Division 1 Section "Submittal Procedures."

3.2 PRODUCTION TESTING

- A. General Requirements:
 - 1. Testing shall be conducted as specified in the individual specification sections.
 - 2. If inspection of fabricators work is required, the Owner's representative may require testing and inspection of the work at the plant, before shipment. Owner, Architect, and Structural Engineer of Record (SER) reserve the right to reject material not complying with the Contract Documents.
 - 3. Testing and inspection shall be performed in accordance with the industry standard used as the reference for the specific material or procedure unless other criteria are specified. In the absence of a referenced standard, tests shall be accomplished in accordance with generally accepted industry standards.
 - 4. Work shall be checked as it progresses, but failure to detect any defective work or materials shall in no way prevent later rejection if defective work or materials are discovered, nor shall it obligate Owner to accept such work.

[Example Conformance Letter from Contractor. Text in parentheses are to be edited for each individual project]

[Date]

[Mr. Construction Manager]
Wal-Mart Construction
2608 SE J ST
Bentonville, Arkansas 72716

[Re: Distribution Center (Facility #xxx) – City, State]

[Dear Construction Manager:]

The purpose of this letter is to state to Wal-Mart Stores, Inc. that, to the best of our knowledge, the construction on the above referenced project has been completed in substantial conformance with the approved Contract Documents.

We performed construction testing, observation, and testing as required by the Contract Document. To our knowledge, no outstanding items exist except as may be otherwise entered and shown on the Wal-Mart Observation Log.

Sincerely,

[GENERAL CONTRACTOR]

01452-6

SECTION 01454 - ARCHITECT-ENGINEER QUALITY ASSURANCE

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Quality assurance site observation of construction by Architect and Engineers of Record.
- B. Related Requirements:
 - 1. General Conditions: Inspections, testing, and approvals required by public authorities.
 - 2. Section 01452 – Contractor Quality Control: Administrative and procedural requirements for Contractor quality assurance and quality control.
 - 3. Appendix B – Testing, Inspection and Observation by Owner
 - a. Site observation by Architect-Engineer.
 - b. Civil Engineering Consultant Site Observation: Site observation by Owner’s Civil Engineering Consultant.
 - c. Construction Laboratory Testing Services: Testing and Inspection by Owner’s Construction Testing Laboratory (CTL) and services.

1.2 SELECTION AND PAYMENT

- A. Employment and payment for services of Architects and Engineers to perform specified site observation of construction will be by Owner.

1.3 CONTRACTOR RESPONSIBILITIES

- A. The Contractor shall:
 - 1. Cooperate with A/E personnel and provide access to the Work and to Contractor’s facilities.
 - 2. Provide incidental labor and facilities to provide access to Work to facilitate observation and testing. Provide lift equipment as required for A/E personnel.
 - 3. Provide A/E 14 day’s written notice prior to expected time for activities requiring observation services.
 - 4. Maintain a copy of Contract Drawings and Specifications with all Addenda and Change Orders supplemented by the approved shop drawings and applicable material and workmanship provisions of the Code for use by the A/E.

PART 2 - PRODUCTS

Not Used.

PART 3 - EXECUTION

3.1 SITE OBSERVATION

- A. Site observation by Owner’s Architects and Engineers is specified in Appendix B.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

01454-2

SECTION 01457 - TESTING AND INSPECTION BY OWNER

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Administrative and procedural requirements for Owner provided testing and inspection services.

B. Related Requirements:

1. Contract Between Owner and Contractor: Inspections, testing, and approvals required by public authorities. Contractor obligations to perform work in accordance with Contract Documents.
2. Section 01452 – Contractor Quality Control: Administrative and procedural requirements for Contractor quality assurance and quality control.
3. Section 01770 - Contract Closeout: Project Record Documents.
4. Appendix B - Testing, Inspection, and Observation by Owner:
 - a. Architect-Engineer Site Observation: Site observation by Owner's Architect and Engineer Consultants.
 - b. Civil Engineering Consultant Site Observation: Site observation by Owner's Civil Engineering Consultant.
 - c. Owner furnished Construction Laboratory (CTL) tests and inspections.
5. Section 13900 – Fire Suppression – Fire Sprinkler Site Observation and Acceptance Test (FPAT)

- C. General requirements for testing and inspection to be performed by the Contractor is specified in Section 01452.

1.2 OWNER RESPONSIBILITIES

- A. Employment and payment for services of a Construction Testing Laboratory (CTL) and/or Special Inspector (SI) to perform specified testing and inspecting will be by the Owner under separate contract except for specified testing required to be selected and paid for by the Contractor as may be required by individual specification sections.

1.3 CONTRACTOR RESPONSIBILITIES

- A. Cooperate with CTL/SI personnel and provide access to the Work and to manufacturer's facilities.
- B. Provide incidental labor and facilities to provide access to Work to be tested, to obtain and handle samples at the site or at source of products to be tested, to facilitate tests and inspections, and to provide storage and curing of test samples. Provide lift equipment as required for inspection personnel of the Owner or the Owner's representatives.
- C. Provide CTL 24 hour notice prior to expected time for operations requiring inspecting and testing services.
- D. Owner to provide the CTL/SI with access to approved web platform.

PART 2 PRODUCTS

Not Used.

PART 3 EXECUTION

Not Used.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

01457-2

SECTION 01500 -TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Temporary Utilities: Electricity, lighting, heat, ventilation, telephone service, water, and sanitary facilities.
 - 2. Temporary Controls: Barriers, enclosures and fencing, signage protection of the Work, and water control.
 - 3. Construction Facilities: All-weather access roads, parking, progress cleaning, temporary buildings, and staging areas.
- B. Related Requirements:
 - 1. Section 01351 – Regulatory Compliance:
 - a. Non-hazardous waste storage fencing.
 - b. Work practice control methods for airborne respirable dust.

1.2 REFERENCES

- A. Occupational Safety and Health Administration (OSHA)
 - 1. OSHA 1926.1153 Respirable Crystalline Silica.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Provide protective fencing, and safety signage.
- B. Provide enclosures for dust emitting interior work as specified herein and in Section 01550.
- C. Protect properties and water resources from contaminant damage until construction activities are complete.
- D. Do not use methods that would cause flooding, ponding, or other damage to Owner's property or property of others.

1.4 TEMPORARY ELECTRICITY

- A. Connect to existing power service. Owner will pay cost of electricity used. Power consumption shall not disrupt Owner's need for continuous service. Exercise measures to conserve energy.
- B. Coordinate location and method of connection to existing electrical service with Owner's Construction Manager. Do not connect to electrical panels serving rack houses.
- C. Provide adequate distribution equipment, wiring, and outlets to provide single-phase branch circuits for power and lighting. Provide temporary feeders to limit voltage loss to 5% overall from local utility power lines to provide electric requirements for project during construction.

1.5 TEMPORARY LIGHTING

- A. Provide and maintain lighting for construction operations. Provide minimum of 20 footcandles illumination for work areas.
- B. Permanent building lighting may be utilized during construction.

1.6 TEMPORARY HEAT

- A. Provide and pay for heat devices and heat as required to maintain specified conditions for construction operations.

01500-1

- B. Prior to operation of permanent equipment for temporary heating purposes, verify that installation is approved for operation, equipment is lubricated and filters are in place. Provide and pay for operation, maintenance, and regular replacement of filters and worn or consumed parts.
 - C. Maintain minimum ambient temperature of 50 degrees F in areas where construction is in progress, unless indicated otherwise in specifications.
- 1.7 TEMPORARY VENTILATION
- A. Ventilate enclosed areas to assist cure of materials, to dissipate humidity, and to prevent accumulation of dust, fumes, vapors, or gases.
- 1.8 TELEPHONE SERVICE
- A. Provide, maintain and pay for telephone service to field office.
- 1.9 TEMPORARY WATER SERVICE
- A. Connect to existing water source. Owner will pay cost of water used. Exercise measures to conserve water.
- 1.10 TEMPORARY SANITARY FACILITIES
- A. Provide and maintain required chemical toilet facilities.
 - B. Locate as directed by Owner's Construction Manager. Maintain facilities clean and serviced as necessary and in compliance with local health code requirements.
 - C. Existing facilities shall not be used by construction personnel.
- 1.11 TEMPORARY STORAGE CONTAINERS
- A. General Requirements:
 - 1. If required by Authority Having Jurisdiction, obtain all permits necessary for usage and placement of temporary storage container.
 - 2. Coordinate with Facility Manager to locate temporary storage container as approved by Authority Having Jurisdiction, when applicable.
- 1.12 BARRIERS AND CONSTRUCTION TRAFFIC SAFETY
- A. Protect non-owned vehicular traffic, stored materials, site and structures from damage.
 - B. Provide barriers to prevent unauthorized entry to construction areas to allow for Owner's use of site, and to protect existing facilities and adjacent properties from damage from construction operations.
 - C. Provide barricades and covered walkways required by governing authorities for public rights-of-way, to allow for Owner's use of site, and for public access to existing building.
 - 1. Erect barricades using 1/2" plywood on 2x4 framing. Supports shall be as required to uphold barricade. Verify requirements with Owner's Construction Manager.
 - 2. Construct 8'-0" high unless otherwise directed by owner.
 - D. When operating any motorized construction equipment in areas where Associates are present, provide a spotter (or signal person) whose sole job responsibility shall be to ensure safe operation, including directing traffic and keeping area of traffic clear of people.

1.13 TEMPORARY FENCING FOR CONSTRUCTION/DEMOLITION WASTE CONTAINERS

A. General:

1. Provide commercial grade temporary chain link fencing around general non-hazardous waste storage and sorting areas as specified in Section 01351.
2. Fencing shall be 8 feet high.
3. Maintain access to fire hydrants and hose connections, emergency vehicles, and other site specific conditions as required by Authority Having Jurisdiction.
4. Obtain permits required by AHJ for usage and placement of temporary chain link fencing.

B. Materials:

1. Posts: Galvanized steel pipe. Posts shall be suitable for setting in concrete footings or driving into ground as required by local conditions.
2. Fabric: Commercial-grade 2"-mesh chain-link fencing with full fence screening. Screening must be woven plastic cloth or plastic screening slats. No substitutions are allowed for fencing or screening material.
3. Gates: Provide personnel and vehicle gates of the quantity and size required for functional access to waste container storage area.
 - a. Fabricate gates and screening of same material as used for fencing.
 - b. Equip with locks.

C. Installation: Comply with manufacturer's recommendations.

1. Post and Fabric: Set posts in concrete footings, drive posts in ground, or set in holes and backfill to accommodate local conditions. Stretch fabric taut and attach to posts.
2. Gates: Install gates with required hardware.

D. Removal: After use of fenced areas and waste/recycling containers by Owner as specified in Section 01351, remove fencing and patch paving. Refer to Section 01731 for general patching requirements.

1.14 WATER CONTROL

A. Grade site to drain. Maintain excavations free of water. Provide, operate, and maintain pumping equipment.

B. Protect site from puddling or running water. Provide water barriers as required to protect site from soil erosion.

C. The Contractor shall at all times protect all activities of his construction, excavations, fill areas, embankments, trenches structures or building from damage from rainwater, spring water, ground water, backing up of drains, sewers and all other water encountered during his operations. He shall provide all pumps, equipment and enclosures necessary to provide adequate protection.

1.15 EXTERIOR ENCLOSURES

A. Provide temporary weather-tight closure of exterior openings to provide acceptable working conditions and protection for Products, to allow for temporary heating and maintenance of required ambient temperatures identified in individual specification Sections, and to prevent entry of unauthorized persons.

B. Provide access doors with locks.

1.16 INTERIOR ENCLOSURES

A. As shown on Drawings, provide sealed temporary partitions as specified herein and in Section 01550 to separate construction work areas from Owner occupied areas, to prevent penetration of dust and moisture into Owner occupied areas, and to prevent damage to existing materials and equipment.

B. Temporary Stud Framed Barrier / Dust Partitions: Installation and removal of temporary dust partitions shall be scheduled with a minimum of 3 days prior notification to Owner's Construction Manager and/or Facility Manager. Maintain temporary dust partitions to seal openings to Owner-occupied areas with closed joints and sealed edges at intersections with existing surfaces. These shall be scheduled, installed, and removed as required and directed

by the Owner's Construction Manager and may not be indicated on the Drawings. Install partitions prior to demolition of existing walls and maintain in dust tight condition until the completion of the new construction. It is the Contractor's responsibility to prohibit dust and debris from entering any Owner-occupied areas and to obtain approval from AHJ for materials/construction configuration and phasing of temporary enclosures.

1. Dust Wall Partitions:
 - a. Framing: (same as Type A below).
 - b. Covering: 6 mil. clear poly sheeting (if allowed by the Authority Having Jurisdiction); otherwise use Griffolyn type 55 ASFR, anti-static, fire retardant sheeting. Overlap sheeting at joints a minimum 2'-0" and continuously tape joints. Attach sheeting from ceiling to finish floor for dustproof condition. If attachment to ceiling is impossible, light framing shall be installed with sheeting attached all around to prohibit dust penetration.
 - c. Plywood (where required): Install 1/2" C-D plywood over 6 mil poly. Install 4'x8' sheets horizontally from finish floor to bottom of roof deck. Insure that blocking is provided behind each joint. Provide sealant at bottom of plywood at finish floor and continuous sealant against plate on other side.
2. Type A Partition / Dust Drape (no ceiling present):
 - a. Framing: Light gauge metal framing (refer Section 05400) or framing material approved by Authorities Having Jurisdiction (AHJ). Provide continuous 2x4 top and bottom plates and continuous bridging and bracing. Continue top plate to bottom side of roof deck.
 - 1) Walls up to 14'-0" may use 3-5/8" - 22 gauge metal studs at 24" o.c. or 2x4's at 16" o.c.
 - 2) Walls higher than 14'-0" may use 6" - 20 gauge metal studs at 24" o.c. or 2x6's at 16" o.c.
 - b. Covering: Install continuous 6 mil clear poly sheets (if allowed by the Authority Having Jurisdiction); otherwise use Griffolyn type 55 ASFR, anti-static, fire retardant sheeting. Install from finish floor to roof deck. Tape all joints. Install 1/2" C-D plywood over 6 mil poly. Install 4'x8' sheets horizontally from finish floor to bottom of roof deck. Insure that blocking is provided behind each joint. Provide sealant at bottom of plywood at finish floor and continuous sealant against plate on other side.
3. Type B Partition / Dust Drape (ceiling grid to remain in place):
 - a. Framing: (same as Type A above).
 - b. Covering: Install continuous 6 mil clear poly sheets (if allowed by the Authority Having Jurisdiction); otherwise use Griffolyn type 55 ASFR, anti-static, fire retardant sheeting. Install from finish floor to roof deck. Tape all joints. Install 1/2" C-D plywood over 6 mil poly. Install 4'x8' sheets horizontally to bottom of finish ceiling. Extend 6 mil poly to bottom of roof deck. Insure that blocking is provided behind each joint. Provide sealant at bottom of plywood at finish floor and continuous sealant against plate on other side.
4. Type D Security Partitions (exterior):
 - a. Framing: (same as Type A above).
 - b. Covering: At interior face of partition, install continuous 6 mil clear poly sheets (if allowed by the Authority Having Jurisdiction); otherwise use Griffolyn type 55 ASFR, anti-static, fire retardant sheeting. Install from finish floor to roof deck. Tape all joints. Install 1/2" C-D plywood over 6 mil poly. Install 4'x8' sheets horizontally to bottom of roof deck. Insure that blocking is provided behind each joint. At exterior face of partition, install 30 gauge, 24" wide corrugated metal panels as shown on the Drawings. Fill wall cavities with R-13 batt insulation. Provide sealant at bottom of plywood at finish floor and continuous sealant against plate on other side.
5. Doors:
 - a. Single acting doors, opening out, with sturdy closer, closing against gasketed stops on frame to reduce passage of dust.
6. Sealing:
 - a. Seal perimeter of partitions and doors to prevent passage of dust. At Type A and B partitions, tape fastener depressions, joints between panels and joints between panels and floors, ceiling and columns with 2 in. wide pressure sensitive tape.
7. Mats:
 - a. Provide mats at doors to reduce tracking of dust. Replace or clean daily.

1.17 FIELD OFFICES AND SHEDS

- A. Contractor's Office: (Not required for projects with a duration of less than 4 weeks, or as stated otherwise in Bid documents.)
 - 1. Size as required for Contractor's use and to provide space for project meetings.
 - 2. Adequate electrical power, lighting, heating, and cooling to maintain human comfort.
 - 3. Office space with desk and chair, layout table, plan rack, and facilities for storage of Project Record Documents.
 - 4. Furnishings in meeting area:
 - a. Conference table and chairs for at least eight persons.
 - b. Racks and files for Project Record Documents in, or adjacent to, the meeting area.
 - c. Other furnishings: Contractor's option.
 - 5. Contractor's office and sheds not to be used as living accommodations.
- B. Storage Sheds: Structurally sound, weathertight, on proper foundations, with floors raised above ground.
- C. Locate office and sheds minimum 30 feet from structures.

1.18 CONSTRUCTION AIDS

- A. Provide construction aids required to facilitate execution of Work, including stairs, ladders, ramps, staging, platforms, railings, cranes, scaffolds, hoists, chutes, runways, and other required facilities and equipment.
- B. Such apparatus, equipment and construction shall meet requirements of applicable OSHA (Federal), State and Local Safety and Labor Laws.
- C. Facility employees shall not be allowed access to scaffolds, ladders, and hoists.
- D. Coordinate crane service required for erection of structural steel, installation of HVAC Rooftop Units, and other crane services as required to accommodate the Owner's needs.

1.19 PROTECTION OF EXISTING WORK

- A. The existing building shall be protected from moisture, dust and debris. Install dust partitions or drapes as shown or as required to keep dust and moisture from the building premises.
- B. Provide suitable temporary watertight coverings over openings as required to protect interior work from inclement weather and related/adjacent construction areas.
- C. Maintain benchmarks, monuments and other reference point. If disturbed or destroyed, replace as directed.
- D. Protect existing adjacent streets, sidewalks, curbs, buildings and property, including trees, lawns and plants.

1.20 PROTECTION OF INSTALLED WORK

- A. Protect installed Work; provide special protection where specified in individual specification Sections.
- B. Provide temporary and removable protection for installed Products. Control activity in immediate work area to minimize damage.
- C. Provide protective coverings at walls, projections, jambs, sills, and soffits of openings.
- D. Protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.
- E. Minimize traffic and storage on roofed surfaces. If traffic or storage is necessary, obtain recommendations for protection from roofing material manufacturer.

01500-5

- F. Do not operate cranes or other heavy equipment on concrete floor slabs if damage could result from such operations.
- G. Prohibit traffic from landscaped areas.

1.21 SECURITY

- A. Maintain the integrity of the existing building security and security systems at all times. Provide security and facilities to protect Work and Owner's operations from unauthorized entry, vandalism, and theft.
- B. Obtain permission and coordinate with Owner's security program through the Owner's Construction Manager at least 12 hours prior to the modification of any existing security system.
- C. Provide continuous security at openings cut into existing exterior walls and roofs.

1.22 ACCESS ROADS AND PARKING

- A. Construct and maintain temporary all weather roads accessing public thoroughfares to serve building pad and construction staging area.
- B. Extend and relocate as Work progress requires. Provide detours necessary for unimpeded traffic flow.
- C. Provide and maintain access to fire hydrants, free of obstructions.
- D. Provide temporary parking areas to accommodate construction personnel.

1.23 NOISE CONTROL

- A. Demolition and other Work that disturbs surrounding the Facility areas shall only be allowed in the following categories and time restrictions:
 - 1. Low Level Noise: Assembling trades such as electricians, ceiling installers, painters, tapers, etc.. Excludes all hammering and impact drilling. Low-level noise operations are allowed during Facility operational hours.
 - 2. Moderate Level Noise: Trades include gypsum board installers, stud partition installers, duct installers, etc. Includes occasional and intermittent hammering, screw drilling, etc.. Excludes impact drilling and concrete sawing. Moderate level noise operations may be allowed during Facility operational hours upon approval of the Owner's Construction Manager or Store Manager.
 - 3. High Level Noise: Constant loud and high pitched noise produced by impact drilling, concrete saw cutting, hammering of ductwork, and all demolition work. High-level noise operations shall be restricted to the Facility off-shift (evening) hours and as coordinated with Facility Operations.

1.24 PROGRESS CLEANING

- A. Refer to requirements specified in Section 01740.

1.25 SIGNAGE

- A. Temporary Construction Signage: Provide temporary signage for identification as required due to obscurity caused by construction. Provide signage for traffic control and safety information. Provide temporary pavement striping for traffic control and pedestrian safety. Provide temporary handicap parking spaces if existing spaces are at a non-accessible location to the building entrance.

1.26 INFORMATION/SAFETY BOARD

- A. Provide 4'x8'x3/4" C/D exterior glue plywood to be attached on the existing exterior wall at a location designated by the Owner's Construction Manager.

- B. Information/Safety Board shall be used to communicate safety, state & federal, hiring, OSHA and EPA requirements, bulletins and other information required for the construction of this Project.
- C. The board shall contain but not be limited to the following:
 1. OSHA Safety Requirements
 2. Federal and State Hiring Regulations
 3. Pertinent State, Local, and Federal Employment Regulations
 4. Building Permits
 5. Emergency telephone numbers
 6. Job Site Safety Meeting notifications
 7. EPA Permits or Notification regarding Asbestos or other Toxic or Hazardous Materials
 8. Other information required to comply with applicable OSHA, EPA and Federal safety laws
- D. Protect posted information with either plastic sleeves stapled to the board or 6 mil clear plastic sheathing over entire board providing access for posting of additional information.

1.27 POSTED CONSTRUCTION SCHEDULE

- A. Provide names/telephone numbers of the Owner's Construction Manager, General Contractor Project Manager, Superintendent and Phase I Supervisor. Maintain most recent and updated version of schedule.

1.28 STORAGE OF CONSTRUCTION MATERIALS AND EQUIPMENT

- A. The Work area may be used to store materials and equipment as approved by the Owner's Construction Manager. Provide storage trailers as required for storage of other materials. The Contractor shall not use Facility trailers or storage warehouses for materials/equipment storage.
- B. Storage of flammable/volatile liquid and paint materials within building is prohibited. Remove flammable materials, volatile liquids and paint daily from Facility.
- C. The Contractor may not store materials on site except for what is in use for the current work.
- D. Cover and protect material in transit.
- E. Stored materials shall be available for inspection by Owner at all times.
- F. The Owner is NOT responsible for the loss of any construction materials or the Contractors' loss of equipment or tools.

1.29 TEMPORARY FIRE PROTECTION

- A. Contractors and sub-contractors and their agents and employees shall comply with local fire protection codes and OSHA Regulations.
 1. Provide a minimum of one U.L. listed 2A:20BC dry chemical fire extinguisher, or one standard U.L. listed 2-1/2 ga. Water (E-10) and one U.L. listed 10BC carbon dioxide fire extinguisher mounted together, in each of the following areas:
 - a. Each 3000 sq. ft. of work area or fraction thereof with minimum of two extinguishers.
 2. Contractor's superintendent, or other assistant superintendents, shall be appointed as project fire warden for entire construction period.
 3. Train workmen in proper use of each type fire extinguisher.
 4. Post telephone number of fire department, specific information on location of on-site fire fighting equipment and procedure to be followed in event of fire.
 5. Maintain free access at all times to fire extinguisher equipment, street fire hydrants, and outside connections for standpipe hose systems.

- B. Maintain exit facilities and access thereto free of material and other obstructions. If any exits are rendered inoperative during remodeling, provide the same number of temporary exits and maintain a sufficient number of required exits and exit width as required by the adopted building code and AHJ.

1.30 NON-SMOKING POLICY

- A. Smoking will not be allowed within the building or associate traffic areas at any time.

1.31 REMOVAL OF UTILITIES, FACILITIES, AND CONTROLS

- A. Remove temporary above grade or buried utilities, equipment, facilities, materials, prior to Final Walk-Thru inspection.
- B. Clean and repair damage caused by installation or use of temporary work.
- C. Restore existing facilities used during construction to original condition. Restore permanent facilities used during construction to specified condition.
- D. At completion of construction, remove fencing, guardrails, barricades, temporary signage and temporary coverings.

PART 2 - PRODUCTS

Not Used.

SECTION 01600 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Basic Product Requirements.
 - 2. Product Options.
 - 3. Product Substitution Requirements.
 - 4. Direct Purchase Products.
 - 5. Product Delivery Requirements.
 - 6. Product Storage and Handling Requirements.
 - 7. Contractor's Product Selection Checklist.

1.2 DEFINITIONS

- A. Products: Defined as new material, machinery, components, equipment, fixtures, and systems forming the Work. Does not include machinery and equipment used for preparation, fabrication, conveying and erection of the Work. Products may also include existing materials or components required for reuse.

1.3 BASIC PRODUCT REQUIREMENTS

- A. For products or workmanship specified by association, trade, or other consensus standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.
- B. Conform to reference standard by date of issue current on date of Contract Documents.
- C. Obtain copies of standards when required by Contract Documents.
- D. Should specified reference standards conflict with Contract Documents, request clarification from Architect before proceeding.
- E. The contractual relationship, duties, and responsibilities of the parties to the Contract shall not be altered from the Contract Documents by mention or inference otherwise in any reference document.

1.4 PRODUCT OPTIONS

- A. Products Specified by Naming a Single Manufacturer and/or Model Number: Provide specified product only unless otherwise specifically permitted in the specifications.
- B. Products Specified by Naming Two or More Manufacturers: Provide specified products of manufacturers and models named only, meeting specifications and specified requirements unless otherwise specifically permitted in the specifications.
- C. Products Specified by Reference Standards or by Description Only: Provide any product meeting specified reference standard or description.
- D. Complete Contractor's Product Selection Checklist specified herein and submit to Architect of Record per requirements of Section 01330 no later than 30 days after construction completion date.
 - 1. Submit checklist in PDF format.

1.5 PRODUCT SUBSTITUTION REQUIREMENTS

- A. No substitutions permitted. Provide specified products only unless otherwise specified.

01600-1

1.6 DIRECT PURCHASE PRODUCTS

- A. Direct purchase products shall be purchased directly by the General Contractor from the Manufacturer or the Pre-Negotiated Supplier as specified in the individual Specifications Sections. Direct purchased products shall not be purchased by any subcontractor regardless of the discipline or subcontract involved in the installation.

1.7 PRODUCT DELIVERY REQUIREMENTS

- A. Transport and handle products in accordance with manufacturer's instructions. Deliver materials and equipment at such stages of work in order to expedite the Work and minimize storage requirements.
- B. Promptly inspect shipments to assure that products comply with requirements, quantities are correct, and products are undamaged.
- C. Provide equipment and personnel to handle products by methods to prevent soiling, disfigurement, and damage. Do not use damaged materials and equipment.

1.8 PRODUCT STORAGE AND HANDLING REQUIREMENTS

- A. Provide safe storage of products.
- B. Store and protect products in accordance with manufacturer's instructions, with seals and labels intact and legible. Store sensitive products in weather-tight, climate controlled enclosures.
- C. For exterior storage of fabricated products, place on sloped supports, above ground.
- D. Provide off-site storage and protection when site does not permit on-site storage or protection.
- E. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to prevent condensation.
- F. Store loose granular materials on solid flat surfaces in a well-drained area. Prevent mixing with foreign matter.
- G. Provide equipment and personnel to store products by methods to prevent soiling, disfigurement, or damage.
- H. Arrange storage of products to permit access for inspection. Periodically inspect to assure products are undamaged and are maintained under specified conditions.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Provide interchangeable components of the same manufacturer, for components being replaced.
- B. Do not use materials and equipment removed from existing premises, except as specifically permitted by the Contract Documents.

PART 3 - EXECUTION – not used

END OF SECTION

SECTION 01700 - EXECUTION REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Examination of existing conditions.
 - 2. General construction requirements.

1.2 EXAMINATION

- A. Verify existing conditions prior to bidding and commencement of Work. If discrepancies are found between what is shown on the Drawings and existing field conditions, notify the Owner's Construction Manager and the Architect to determine action to be taken to resolve differences.
- B. Existing utility locations shown are approximate. Field verify the exact location and depths of existing utilities (whether shown or not) prior to the submission of bid or the commencement of construction. Notify the Owner's Construction Manager of the discovery of existing utilities not shown or noted on Drawings.
- C. Field locate and verify property lines, easements, setbacks and restrictions. Obtain services of a Registered Surveyor to establish property lines and setbacks prior to the commencement of construction and flag property lines and setbacks.
- D. Verify grades and proposed final grades. If ramps, stoops, or stairs are installed, verify final grades surrounding the new construction and adjust stair risers, ramp lengths, limits of paving, etc., to accommodate the required ramp slope, riser heights, or paving areas. Conform to ADA requirements for ramps and stairs unless otherwise specifically noted.

1.3 GENERAL CONSTRUCTION REQUIREMENTS

- A. Perform work in a safe and workmanlike manner and in strict accordance with the local governing Building Code, National Electric Code, U.S. Dept of Justice Americans with Disabilities Act (ADA), and all applicable codes, regulations and ordinances having jurisdiction.
- B. Subcontractors shall be familiar with drawings and specifications in their related field. Failure to be acquainted with this knowledge will not relieve subcontractors the responsibility for performing the work properly. No additional compensation will be allowed due to conditions that occur through to failure to familiarize workers.

SECTION 01731 - CUTTING AND PATCHING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Requirements and limitations for cutting and patching Work.
 - 2. Products for patching and extending Work.
 - 3. Transitions and adjustments.
 - 4. Repair of damaged surfaces, finishes and cleaning.

- B. Related Requirements:
 - 1. Contract Between Owner and Contractor: Additional requirements for cutting and patching.
 - 2. Section 01351 – Regulatory Compliance:
 - a. Disposal and removal of hazardous construction and universal waste.
 - b. Work practice control methods for airborne respirable dust.
 - 3. Section 01500 - Temporary Facilities and Controls: Temporary barriers.
 - 4. Section 02023 - Selective Site Demolition: Procedures for removing existing materials and equipment.

1.2 REFERENCES

- A. Occupational Safety and Health Administration (OSHA):
 - 1. OSHA 01926.1153 Respirable Crystalline Silica

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Minimize dust emissions or provide equipment that suppresses dust.

1.4 PERFORMANCE REQUIREMENTS

- A. Cutting and patching shall be performed as required for cutting into existing construction to provide for installation or performance of other work and subsequent fitting and patching required for restoration of surfaces to their original condition.

- B. Cut into or partially remove portions of the existing building as required for new construction. Include such work as:
 - 1. Cutting, moving or removal of items shown to be cut, moved or removed.
 - 2. Cutting, moving or removal of items not shown to be cut, moved, or removed, but which must be cut, moved, or removed to allow for new construction. Work or items which are to remain in the finished work shall be patched or reinstalled after cutting, moving, or removal, and joints and finishes shall match adjacent or similar work.
 - 3. Removal of existing surface finishes as needed to install new work and finishes.
 - 4. Removal of abandoned items and removal of items rendered no longer required resulting from alterations such as abandoned piping and electrical conduits to nearest J-boxes.
 - 5. Repair or removal of dangerous or unsanitary conditions resulting from alterations work.

- C. Structural Work:
 - 1. Do not cut and patch structural work in manner resulting in reduction of load-carrying capacity or load and deflection ratio.

- D. Operational Limitations:
 - 1. Do not cut and patch in manner resulting in decreased performance, shortened useful life, or increased maintenance.

- E. Quality Limitations: Do not cut and patch work exposed to view (exterior and interior) in manner resulting in noticeable reduction of aesthetic qualities and similar qualities, as determined by the Owner's Construction Manager.
- F. Limitation on Acceptance: Owner's Construction Manager's acceptance to proceed with cutting and patching shall not waive right to later require removal or replacement of work found to be cut and patched in unsatisfactory manner as determined by the Owner's Construction Manager.
- G. Obtain all required inspections and approvals from authorities having jurisdiction for Temporary Certificate of Occupancy for Offices and Stockroom at least seven calendar days prior to Owner's scheduled move into new Office and Warehouse areas.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Use materials for cutting and patching that are identical to existing materials. If identical materials are not available or cannot be used, use materials that match existing adjacent surfaces to fullest extent possible with regard to visual effect. Use materials for cutting and patching that will result in equal or better performance characteristics.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces to be cut and patched and conditions under which work is to be performed before cutting. Take corrective action before proceeding with work if unsafe or otherwise unsatisfactory conditions are encountered.

3.2 PREPARATION

- A. Temporary Support: Provide temporary support of work to be cut to prevent failure.
- B. Protection:
 1. Protect other work during cutting and patching to prevent damage.
 2. Provide protection from adverse weather conditions for that part of project that may be exposed during cutting and patching operations.
 3. Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.
 4. Take precautions not to cut existing pipe, conduit, or duct serving building but scheduled to be relocated until provisions have been made to bypass them.

3.3 CUTTING AND PATCHING

- A. Remove, cut and patch work in a manner to minimize damage and to provide means of restoring products, materials, and finishes to match original condition.
- B. Cutting and removal work shall be performed so as not to cut or remove more than is necessary and that are least likely to damage work to be retained or adjoining work.
- C. Conduct work in such a manner as to minimize noise and to minimize accumulation and spread of dirt and dust.
- D. Use hand tools or small power tools designed for sawing or grinding. Avoid hammering and chopping.
- E. Where cutting cured concrete or masonry is required, use saws equipped with integrated water delivery systems that continuously feed water to the blade, or a HEPA-rated filter dust collection vacuum system recommended by the manufacturer to maintain dust emissions below the permissible level.

- F. Where core drilling or grinding concrete is required, use power tools equipped with HEPA-rated filter dust collection vacuum system recommended by the manufacturer to maintain dust emissions below the permissible level.
- G. To avoid marring existing finished surfaces, cut and drill from exposed or finished side into concealed surfaces. Temporarily cover openings when not in use.
- H. Cut holes and slots neatly to size required with minimum disturbance of adjacent work. Use HEPA-rated filter vacuums to clean holes and slots.
- I. Dispose of construction waste in accordance with the requirements of Section 01351.
- J. Patch with seams that are durable and as invisible as possible. Comply with specified tolerances for work.
- K. If the surrounding surface cannot be matched, repaint or recoat the entire surface to nearest corner or transition point.

3.4 TRANSITIONS

- A. Where new work abuts or aligns with existing work, provide a smooth and even transition. Patched work shall match existing adjacent work in texture and appearance.
- B. Where finished surfaces are cut in such a way that a smooth transition with new work is not possible, terminate the existing surface along a straight line at a natural line of division.
- C. Where two or more spaces are indicated to become one space, reconstruct ceilings to provide horizontal planes without breaks, steps or bulkheads.
- D. In cases of extreme change of ceiling or floor, obtain instructions from the Owner's Construction Manager as to method of making an acceptable transition.

3.5 REPAIR OF DAMAGED SURFACES

- A. Patch or replace portions of existing surfaces which are damaged, discolored, or showing imperfections. Repair substrate prior to patching finish.
- B. Restore existing work that is damaged during construction to a condition equal to its condition at the time of the start of the Work.
- C. At locations in existing areas where partitions are removed, patch the floors, walls and ceilings with finish materials to match new finishes.
- D. Where plumbing is removed and capped below finish floor, core drill concrete floor as required using proper dust control methods as specified herein. Cap a minimum of 8" below floor. Patch hole with new concrete to match existing floor.

3.6 REMOVAL AND REPLACEMENT OF EXISTING WORK

- A. Remove existing items, services, finishes or surfaces as required for installation of new construction.
- B. Repair, re-route, and extend services, piping and conduit of existing items and equipment as required during construction operations for installation and operation of new items and equipment. When existing equipment to remain is removed or relocated, re-install as required for proper operation.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

01731-4

SECTION 01740 - CLEANING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Cleaning and maintenance of site premises.
- B. Related Requirements:
 - 1. Section 01351 – Compliance:
 - a. Construction demolition waste management and disposal.
 - b. Disposal and removal of hazardous construction and demolition waste.

1.2 REGULATORY REQUIREMENTS

- A. Codes and Standards: Comply with applicable Federal, State and Local codes and regulations relative to environmental safety regulations.
- B. Hazards Controls: Store volatile waste in covered metal containers and remove from premises daily. Prevent accumulation of wastes which create hazardous conditions.
- C. Pollution Control:
 - 1. Do not burn or bury rubbish and waste materials on the project site.
 - 2. Do not disposal of volatile fluid wastes (such as mineral spirits, oil or paint thinner) in storm or sanitary sewer systems or into streams or waterways.
 - 3. Do not disposal of any toxic chemicals in storm or sanitary sewer systems. Comply with EPA requirements regarding disposal.

PART 2 - PRODUCTS

2.1 CLEANING MATERIALS

- A. Use only cleaning materials recommended by manufacturer of surface to be cleaned.
- B. Use cleaning materials only on surfaces recommended by cleaning material manufacturer.
- C. Cleaning materials shall be clearly labeled and safely stored when not in use. Maintain control of cleaning materials while in use. Do not leave unattended. No flammable materials or liquids may be stored in the building.

PART 3 - EXECUTION

3.1 GENERAL CLEANING REQUIREMENTS

- A. Oversee cleaning and ensure that building and grounds are maintained free from accumulations of waste materials and rubbish.
- B. In exterior work, sprinkle dusty debris with fine water mist to control accumulation of dust. Avoid puddling.
- C. Clean interior office areas when ready to receive finish painting and continuous floor cleaning until building is ready for occupancy as Directed by WMCM.
- D. Schedule cleaning operations so that dust and other contaminants resulting from cleaning process will not fall on wet, newly-painted surfaces.

- E. After building is enclosed, clean interior premises at frequency as directed by Construction Manager prior to construction start.
- F. After 28 day cure of warehouse concrete floor slabs, or as soon as allowed by any proprietary slab design engineer, provide continuous cleaning of floor slabs via floor scrubbers.
 - 1. For cleaning of completed slab areas greater than 200,000 SF, utilize a minimum of two scrubbers.
 - 2. Continue continuous daily cleaning of warehouse slabs to prevent build-up of dust and debris.
 - 3. Reduce cleaning to daily cleaning for any areas occupied early by Walmart. Continue daily cleaning of areas occupied early by Owner, coordinating exact extents with Walmart, until final cleaning is complete.

3.2 TRASH REMOVAL

- A. On a daily basis, clean work areas and access, and dispose of waste materials, rubbish and debris.
- B. Perform segregation of waste materials into the various classification and segregated materials.
- C. Do not allow waste materials, rubbish and debris to accumulate and become an unsightly or hazardous condition.
- D. Keep streets and access to site free of rubbish and debris.

3.3 FINAL CLEANING

- A. Execute final cleaning prior to final inspection as follows:
 - 1. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
 - 2. Clean all exterior and interior surfaces, whether exposed or not to a dirt-free condition, free of stains, films, and similar foreign substances. Restore reflective surfaces to their original condition.
 - 3. Remove tools, construction equipment, and surplus material from Project site.
 - 4. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency. Replace burned-out bulbs, and those noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures.
 - 5. Leave Project clean and ready for occupancy.
 - 6. Remove labels that are not permanent.
 - 7. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.
 - 8. Wipe surfaces of mechanical and electrical equipment and similar equipment. Remove excess lubrication, paint, and mortar droppings, and other foreign substances.
- B. Execute final cleaning of the site prior to final inspection as follows:
 - 1. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
 - 2. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
 - 3. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
 - 4. Remove tools and machinery from Project site.
 - 5. Power wash all exterior patio slabs and entrance walks.
- C. Execute final cleaning of the building exterior prior to final inspection as follows:
 - 1. Clean debris from roofs, gutters, downspouts, and drainage systems.
 - 2. Clean all exterior wall surfaces to remove dirt.
 - 3. Clean all louver screens via manufacturer recommendations.
 - 4. Clean dirt and accumulated dust from all exterior surfaces.
 - 5. Clean both sides of transparent materials, including glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Clean frames as part of glass cleaning.
- D. Execute final cleaning of the office interior prior to final inspection as follows:
 - 1. Clean all interior floor surfaces.

2. Clean all interior doors and frames.
 3. Polish mirrors and glass with glass cleaner, taking care not to scratch surfaces.
 4. Clean all counters and transaction tops per manufacturer recommendations
 5. Immediately prior to possession, clean toilets thoroughly including each toilet fixture to a sanitary conditions free of stains.
 6. Clean all ceramic wall and floor tile surfaces using cleaning solutions compatible with any grout sealers and wipe dry to prevent surface film or residue.
 7. Clean water closets and sinks with scrubbing cleansers to remove stains and deposits.
 8. Clean and polish stainless steel accessories and toilet partitions to a spotless luster using soap, ammonia, or mild detergent and water. Apply with sponge or soft cloth, rinse with clear water, and wipe dry. As an alternate, use a commercial stainless steel cleaner and polish.
- E. Execute final cleaning of the warehouse interior prior to final inspection as follows:
1. Wipe all horizontal surfaces in the warehouse including, but not limited to, the bottom chord/flanges of roof structure, racking beams, girts, conveyor and other material handling equipment, hand railing, stair stringers, etc.
 2. Wipe top side of all fixtures and permanently installed equipment including but not limited to light fixtures, transformers, panelboards, dock equipment, etc.
 3. Commence final cleaning of slabs after completion of all overhead cleaning.
 4. Final clean all interior slabs with floor scrubbers where possible. Where floor scrubbers are not practical (i.e. under racks and around other obstructions), final clean with hand-operated scrubbers.
 5. Remove all debris from dock leveler pan. Sweep leveler plate broom clean then wet mop leveler plate. Sweep leveler pits broom clean.
 6. Vacuum all elevated resin deck slabs to remove dust and debris. After vacuum, lightly wet-mop with manufacturer recommend cleaning agent.
- F. In addition to cleaning requirements noted in the Mechanical and Electrical specifications, also execute final cleaning of mechanical and electrical systems prior to final inspection as follows:
1. Replace disposable air filters and clean permanent air filters of equipment operated during construction. Clean exposed surfaces of diffusers, registers, and grills.
 2. Clean ducts, blowers, and coils if units were operated without filters during construction.
- G. Employ skilled workmen for final cleaning.
- H. Prior to final completion or Owner possession, conduct an inspection of sight-exposed interior and exterior surfaces and all work areas with the Owner's Construction Manager to verify that entire Work is clean.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

01740-4

SECTION 01770 - CONTRACT CLOSEOUT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes
 - 1. Closeout Procedures.
 - 2. Final Closeout Submittals.
 - 3. Closeout Document Submission.
 - 4. Record Letters of Conformance.
 - 5. Letters of Certification.
 - 6. Project Record Documents.
 - 7. Operations and Maintenance Data.
 - 8. Warranties and Bonds.
- B. Related Sections:
 - 1. Section 01740 – Cleaning. Requirements for final cleaning.

1.2 CLOSEOUT PROCEDURES

- A. Comply with closeout submittal requirements defined within individual Sections. Submittals procedures described herein shall apply unless otherwise described in individual Sections.
- B. When Contractor considers Work to be Substantially Complete, submit written certification to Owner’s Construction Manager as follows.
 - 1. Contract Documents have been reviewed.
 - 2. Work has been inspected.
 - 3. Work is complete in accordance with Contract Documents.
 - 4. Work is ready for inspection.

1.3 FINAL CLOSEOUT SUBMITTALS

- A. Definition: Closeout submittals are submittals specified in the individual sections as “Closeout” and shall not be otherwise considered a closeout document regardless of the type of submittal. Submittals not classified as a closeout submittal shall be considered a regular submittal under the provisions of Section 01330. For example: Maintenance Data may, or may not, be classified as a closeout unless specifically identified as a closeout in the individual section Part 1 SUBMITTAL paragraph.
- B. Unless otherwise specified in the individual sections, submit closeout submittals to the Owner within 90 days after Substantial Completion of the Work.
- C. All closeout documents specified in the individual sections shall be submitted. Specific documents listed below shall be included separately in an Electronic Closeout Document Submission as specified hereinafter.
- D. Final closeout submittals shall be received and approved by Owner before final application for payment will be approved.

1.4 ELECTRONIC CLOSEOUT DOCUMENT SUBMISSION

- A. Submit closeout documents electronically through Owner’s online system. Documents included in Electronic Closeout Document Submission shall consist only of the items in the following numbered list. Note that all closeout documents are not necessarily included in the Electronic Closeout Document Submission. If any item is not applicable, include a “Not Applicable” sheet within the uploaded section of the Electronic Closeout Document Submission. The Electronic Contract Document Submission shall not be compiled based only on the brief

description of each item in the following list. It is compulsory that the individual sections and references be examined to comprehend the full description of the specific item to be included. Include the following:

1. Contractor's Statement of Warranty.
2. Copy of Certificate of Occupancy: Submit as Electronic Closeout Document by uploading an electronic file of the C of O to the [Walmart Quickbase Certificate of Occupancy Tracking Application](#).
3. Subcontractor Assignment: Submit a final list of Subcontractors used. Include the following information for each Subcontractor:
 - a. Daytime and after-hours telephone numbers.
 - b. Address.
 - c. Quarterly expenditure detail.
4. Signed and notarized lien waivers from Contractor and all Subcontractors on the Owner's form. The waivers shall have no modifications or changes made thereon.
5. Copies of Performance and Payment Bond.
6. Consent of Surety to Final Payment: From Bonding Company.
7. Substantial Completion Punchlist: Building, Civil, and HVAC/refrigeration punch lists showing items completed and approved by Owner. (Reference Article 5.2 of the Contract.)
8. Verification of transmittal to Facility Manager of all Project Record Documents specified hereinafter and Operations and Maintenance Manuals. This shall be in the form of a Letter of Transmittal with a statement signed by the Facility Manager verifying that the O&M manuals have been placed in the Maintenance Area by the Contractor and the placement witnessed by the Facility Manager and the Maintenance Operations Manager.
9. Letters of Certification: Include separate letter for each certification required within the sections listed below.
 - a. Polished Concrete Floor Finish (Existing Floors) (Section 03363)
10. Record Letters of Conformance: Include separate letter for each item listed below.
 - a. Contractor Quality Control (Section 01452)
 - b. Construction Testing Laboratory (Appendix B)
11. Warranties. Include warranties for the following as applicable when the specified Section is included in the project.
 - a. Termite Control: (Section 02361).
 - b. Membrane Roofing. Submit Roofing Warranty included at the end of Roofing Section (Section 07500). Manufacturer's standard warranty will not be considered as a substitute for the warranty included herein.
12. Inspection Reports: Include separate report for each required item listed below.
 - a. Building Automation Systems: (Section 13810)
 - 1) Pre-Checkout Forms.
 - 2) Checkout Forms.
 - b. Building Services Piping: (Section 15100)
 - 1) Video Inspection Report.
 - 2) Dye Testing Report (If specified).
 - c. Refrigeration Equipment (Section 15600).
 - 1) Start-up Report.
 - 2) Building Performance Report.
 - 3) Refrigerant Data Collections Forms.
 - 4) Documents will be distributed by Walmart Mechanical Services.
13. Copy of Notice of Termination of NPDES Construction General Permit with proof of submittal to appropriate agency. This is only applicable for those permits issued to the General Contractor. (See Section 02370, if specified).

- B. If Contractor fails to provide a fully completed Electronic Closeout Document Submission within 90 days after Substantial Completion of the Work, then Contractor agrees to pay Owner the sum of \$250.00 per day, as liquidated damages and not as a penalty, until the fully completed Electronic Closeout Document Submission is received and approved by Owner Contract Administration.

1.5 RECORD LETTERS OF CONFORMANCE

- A. Submit Record Letters of Conformance as a Closeout Submittal. By submitting Record Letter of Conformance, the Contractor declares that the product identified by manufacturer's name and model number is the product specified

and is suitable for the intended use as defined within the Contract Documents and has been provided and placed in operational condition in accordance with the manufacturer's published instructions and the Contract Documents.

1. Submit completed Record Letter of Conformance for each product selected as indicated within each Section.
2. Fill-in required information on form and sign in ink by person authorized to sign on behalf of the Contractor.
3. No modifications shall be made to the form.
4. Record Letters of Conformance, when required, are located at the end of the respective Section.

1.6 LETTERS OF CERTIFICATIONS

- A. Certify manufacturer's or installer's qualifications, conformance with tests or specified criteria, or other factors as required in individual specification sections.
- B. Submit supporting reference data, affidavits, and certifications as required.
- C. Number of Copies Required: Two.

1.7 PROJECT RECORD DOCUMENTS:

- A. Maintain on site, one set of the following record documents. Record actual revisions to the Work.
 1. Contract Drawings. (Building and Civil)
 2. Specifications.
 3. Addenda.
 4. Change Orders and other Modifications to the Contract.
 5. Reviewed shop drawings, product data, and samples.
- B. Maintain Record Documents separate from documents used for construction.
- C. As-built Record Documents and Shop Drawings: Record as-builts shall be maintained and submitted for the primary purpose of recording the locations for concealed interior and exterior underground utilities as specified in the individual specifications. Legibly record actual measured horizontal and vertical locations of interior and exterior underground utilities and appurtenances, referenced to permanent surface improvements.
- D. Record required as-built information concurrent with construction progress. Do not permanently conceal work until required information has been recorded.
- E. At Project completion, the Contractor shall place the Record Documents (including Building and Civil Record Drawings, Specifications, Addenda, and Change Orders) enclosed in a plastic pipe tube (fixed cap at one end and a threaded-cap on the other end) for storage in the Electrical Room unless otherwise specified to be located in another location in the individual Sections. Placement shall be in the presence of and witnessed by the Facility Manager.

1.8 OPERATION AND MAINTENANCE DATA

- A. Operation and Maintenance data shall include a suitably bound set of descriptive literature, maintenance and operation data, and parts lists for each item of equipment provided under this Contract that will require maintenance or special operation procedures, including drawings, instructions, or manuals supplied with equipment furnished by others and installed under this Contract. Submittal of O&M data shall be in the form of placement by the Contractor of the bound set of O&M data in the Electrical Distribution Center (EDC) within the building. Do not include O&M data in the Closeout Document Book or submit to Walmart Contract Administration. Placement of documents shall be witnessed by the Facility Manager and shall be at least 14 days prior to final inspection.

1.9 WARRANTIES AND BONDS

- A. Prior to Final Application for Payment, submit required warranties and bonds in Closeout Document Submission.
 1. Assemble documents from Subcontractors, suppliers, and manufacturers.
 2. For equipment put into use with Owner's acceptance during construction, submit within ten days after first operation, listing date of acceptance as start of warranty period.

3. For items of Work delayed materially beyond Date of Substantial Completion, provide updated submittal within ten days after acceptance, listing date of acceptance as start of warranty period.

[CONTRACTOR'S LETTERHEAD]

CONTRACTOR'S STATEMENT OF WARRANTY

DATE:

PROJECT:

LOCATION:

OWNER: Walmart Stores, Inc.
702 SW 8th Street
Bentonville, AR 72712

CONTRACT: Construction Agreement Between Walmart and Contractor, dated _____ 20____.

General Contractor hereby: (1) warrants that the Work for Project complies with Article 3.4 of the Construction Contract; (2) acknowledges that its warranty obligations under such Article 3.4 extends one year beyond the actual date of Substantial Completion of the Project; and (3) affirms, and acknowledges the enforceability of, all other warranties made by Contractor in the Contract.

Terms used but not defined herein shall have the meanings given to them in the above referenced Contract.

The undersigned Contractor hereby makes the certifications set forth herein to Walmart as of the _____ day of _____, 20____.

Witness: _____ Contractor: _____

_____ By: _____

Print Name: _____ Name: _____

Title: _____

STATE OF _____
COUNTY OF _____

On this the _____ day of _____, 20____
before me, a Notary Public, within and for the State and County aforesaid, personally appeared, to me well know (or proved to me on the basis of satisfactory evidence), who stated upon oath that (s)he had executed the foregoing instrument for the consideration set forth therein.

SECTION 02230 - SITE CLEARING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Cleaning site of debris, grass, trees, and other plant life in preparation for site or building earthwork.
 - 2. Protection of existing structures, trees, or vegetation indicated on the Construction Drawings to remain.
- B. Related Requirements:
 - 1. Section 02220 – Site Demolition: Demolition and removal of structures, paving, utilities and other improvements.
 - 2. Section 02300 – Earthwork: Stripping and removal of topsoil.
 - 3. Section 02370 - Erosion And Sedimentation Control (Including SWPPP)

1.2 ENVIRONMENTAL REQUIREMENTS

- A. Construct temporary erosion and sediment control systems as shown on Construction Drawings and as directed by the "Storm Water Pollution Prevention Plan" (SWPPP) to protect adjacent properties and water resources from erosion and sedimentation.
- B. In event
that sitework on this project will disturb one or more acres, starting work shall be strictly governed by the sequence of construction as specified in Section 02370 and SWPPP site maps. Contractor shall not begin construction without "National Pollution Discharge Elimination System" (NPDES) permit governing discharge of storm water from site for entire construction period. NPDES permit requires SWPPP to be in place during construction.
- C. Clearing and grubbing shall commence in the proper sequence as stated in the Phase I of the Best Management Practice Sequence specified in Section 02370 and on the SWPPP site map and subsequent to the halt in construction for performance of the inspection and certification of BMPs as stated.
- D. Contractor shall conduct storm water management practices in accordance with the project SWPPP and applicable NPDES permit and shall enforce action taken or imposed by Federal or State agencies, including cost of fines, construction delays, and remedial actions resulting from Contractor's failure to comply with provisions of NPDES permit.

1.3 PROJECT CONDITIONS

- A. Conditions existing at time of inspection for bidding purposes will be maintained by Owner as reasonably practical.

PART 2 - PRODUCTS

Not Used

PART 3 - EXECUTION

3.1 PREPARATION

- A. Identify existing plant life that is to remain and verify clearing limits are clearly tagged, identified, and marked in such manner as to ensure their protection throughout construction operations.

3.2 PROTECTION

- A. Locate, identify, and protect existing utilities that are to remain.
- B. Protect trees, plant growth, and features designated to remain as part of final landscaping.
- C. Conduct operations with minimum interference to public or private accesses and facilities. Maintain ingress and egress at all times and clean or sweep roadways daily as required by SWPPP or governing authority. Dust control shall be provided with sprinkling systems or equipment provided by Contractor.
- D. Protect benchmarks, property corners, and other survey monuments from damage or displacement. If marker needs to be removed it shall be referenced by a licensed land surveyor and replaced, as necessary, in kind.
- E. Provide traffic control as required, in accordance with the US Department of Transportation's "Manual on Uniform Traffic Control Devices" and applicable state highway department requirements.

3.3 EQUIPMENT

- A. Material shall be transported to and from the project site using well-maintained and operating vehicles. Transporting vehicles operating on site shall stay on designated haul roads and shall not endanger improvements by rutting, overloading, or pumping.

3.4 CLEARING

- A. Clear areas required for access to site and execution of work.
- B. Unless otherwise indicated on Construction Drawings, remove trees, shrubs, grass, other vegetation, improvements, or obstructions interfering with installation of new construction. Removal includes digging out stumps and roots. Depressions caused by clearing and grubbing operations shall be filled to subgrade elevation to avoid ponding of water. Satisfactory fill material shall be placed in accordance with Section 02300.
- C. Remove grass, trees, plant life, stumps, and other construction debris from site to dump site that is suitable for handling such material according to state laws and regulations.
- D. Cut heavy growths of grass from areas before stripping and topsoil removal and remove cuttings with remainder of cleared vegetative material.

END OF SECTION

SECTION 02251 - SHORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Shoring at excavations and building structural and non-structural elements required to provide temporary support during excavating, demolition, and construction operations.
2. Temporary protection including without limits for construction workers, materials, existing construction other adjacent properties, and public.

B. Related Sections:

1. Section 01700 - Execution Requirements: Requirements and limitations for cutting and patching Work.
2. Section 01731 - Cutting and Patching.
3. Section 02023 - Selective Site Demolition: Procedures for demolition and removal of existing building elements.

1.2 DESIGN REQUIREMENTS

- A. Design and provide shoring to safely prevent collapse of materials and structures and to permit construction operations to proceed in conformance with construction sequence phases indicated on Drawings.

1.3 QUALITY ASSURANCE

- A. Provide design of shoring by professional civil or structural engineer licensed in State in which project is located. Send design to Owner's Construction Manager for documentation of this service.
- B. Coordinate shoring design and construction with:
 1. Soil Investigation Report prepared for this project (if applicable).
 2. Building structural system, including without limits to locations of footings, columns, pilasters, walls, and other related structural elements.
- C. Comply with pertinent requirements of Authorities Having Jurisdiction (AHJ).
- D. The Contractor shall be responsible for means and methods of shoring and temporary support and for the sequences and procedures to be used.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Provide materials as required for shoring system design.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and adjacent areas where Work under this Section will be performed. Do not proceed with Work until unsatisfactory conditions have been corrected.
- B. Starting Work constitutes acceptance of existing conditions. Be responsible for correcting unsatisfactory and defective Work encountered after starting Work.

3.2 INSTALLATION

- A. Install shoring system in accordance with shoring design drawings.
- B. Coordinate placement of shoring system elements with existing Work and approved demolition procedures as specified in Section 02023.
- C. Perform cutting and patching required by installation of shoring in accordance with approved Cutting and Patching Procedures and Sequencing Plan as specified in Section 01731.

3.3 FIELD QUALITY CONTROL

- A. Shoring Design Engineer: Inspect and approve shoring materials and installation prior to start of any demolition work.
- B. Submit inspection report to Owner's Construction Manager.

END OF SECTION

SECTION 02361 - TERMITE CONTROL

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Soil treatment for termite control.
 - 2. Application below grade and at interior and exterior foundation perimeter.

1.2 REFERENCES

- A. Environmental Protection Agency (EPA):
 - 1. EPA - Federal Insecticide, Fungicide and Rodenticide Act.

1.3 DEFINITIONS

- A. Termiticide: EPA-Registered product complying with requirements of authorities having jurisdiction, in a soluble or emulsible, concentration that dilutes with water or foaming agent, and formulated to prevent termite infestation.

1.4 QUALITY ASSURANCE

- A. Applicator Qualifications: Company specializing in performing the Work of this Section and licensed in accordance with regulations of authorities having jurisdiction for application of termiticide.
- B. Materials: Provide certification that termiticide is EPA approved and conforms to requirements of authority having jurisdiction.
- C. Regulatory Requirements: Conform to applicable requirements for application licensing and authority to use termite control chemicals.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 01600 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver Products in manufacturer's original unopened containers with labels intact, identifying Product and manufacturer, application instructions, and EPA federal registration number.
- C. Do not store Products on site. Deliver Products to site at time of application.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements: Do not apply termiticide to frozen or wet soils or during rain or snow.

1.7 WARRANTY

- A. Submit written warranty signed by termite control applicator and Contractor certifying that applied chemical termiticide treatment will prevent infestation of subterranean termites.
 - 1. State that application was made at concentration, rates, and methods recommended.
 - 2. State that if subterranean termite activity is discovered during warranty period, Contractor will retreat soil and repair damage caused by termite infestation at no additional cost to Owner.
- B. Cover against invasion or propagation of subterranean termites, damage to building or building contents caused by termites; repairs to building or building contents so caused.

- C. Provide for inspection of Work annually; report in writing to Owner.
- D. Warranty Period: 5 years.
 - 1. Owner reserves right to renew warranty for an additional 5 years.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. EPA and local authority having jurisdiction approved chemical termiticide; water based emulsion, uniform composition, with synthetic dye to permit visual identification of treated soil, bearing Federal registration number of the EPA.
 - 1. Do not use fuel oil as diluent.
- B. Specially formulated to prevent infestation by termites.

2.2 MIX DILUTION

- A. Dilute and mix chemical termiticide to manufacturer's published instructions.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine surfaces and adjacent areas to be treated. Report conditions that may adversely affect satisfactory execution of Work to Construction Manager. Do not proceed with Work until unsatisfactory conditions have been corrected.
 - 1. Verify the soil surfaces are unfrozen, sufficiently dry to absorb termiticide, ready to receive treatment.
- B. Beginning of application means acceptance of existing soil conditions.

3.2 PREPARATION

- A. Remove foreign matter, loosen, rake, and level soil to be treated, except previously compacted areas under slabs and foundations.

3.3 APPLICATION

- A. Apply termiticide within 12 hours before installation of vapor retarder under slab-on-grade or finish grading outside foundation walls.
- B. Apply termiticide to soil using metered applicator. Apply at rates and concentration recommended by the chemical manufacturer's written instruction.
- C. Apply at the following locations:
 - 1. Under Floor Slabs-On-Grade.
 - 2. Both Sides of Foundation Wall.
 - 3. Exterior Foundation: Apply along outside edge of building.
 - a. Dig trench 6 inches to 8 inches wide along outside of foundation to minimum depth of 12 inches and apply termiticide.
 - b. Mix termiticide with soil as it is being backfilled.
 - 4. Foundation Penetrations.
- D. Apply as a coarse spray; provide uniform distribution.
- E. Post signs in areas of application to indicate termite-treated areas. Remove signs after areas are covered by other construction.

- F. Reapply termiticide to areas disturbed by subsequent excavation, landscape grading, or other construction activities occurring after initial termiticide application.

3.4 CONSTRUCTION

- A. Interface with Other Work:

- 1. Coordinate application of termiticide at foundation perimeter with finish grading and landscaping work to avoid disturbance of treated soil.

3.5 FIELD QUALITY CONTROL

- A. Inspect and test soil areas where termiticide was applied to determine the presence of any remaining termites before covering with subsequent construction.
- B. Reapply termiticide to areas where inspection or testing identifies the presence of termites. Use same termiticide as for original treatment.

3.6 CLEANING

- A. Execute in accordance with termiticide manufacturer's instructions and current environmental regulations.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

02361-4

SECTION 02220 (02 4100) - SITE DEMOLITION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Demolition of structures, paving, and utilities.
 - 2. Filling voids created as a result of removals or demolition.
- B. Related Requirements:
 - 1. Section 01351 – Regulatory Compliance:
 - a. Construction demolition waste management and disposal. (Formerly included in Section 01742)
 - b. Disposal and removal of hazardous construction and demolition waste. (Formerly included in Section 01743)
 - c. Work practice control methods for airborne respirable dust.
 - d. Removal and Recycling of Vinyl Composition Tile (VCT) (Formerly included in Section 02223).
 - e. Removal and Recycling of Acoustical Ceiling Tile (ACT) (Formerly included in Section 02224).
 - 2. Section 02230 - Site Clearing: Clearing of trees and other plant vegetation
 - 3. Section 02300 - Earthwork: Placement of fill material
 - 4. Section 02370 - Erosion and Sedimentation Control (Including SWPPP): Erosion protection during demolition operations.
 - 5. Appendix B – Testing, Inspection, and Observation by Owner (includes 01456 CEC Site Observation Requirements).

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. Occupational Safety and Health Administration (OSHA):
 - 1. OSHA 01926.1153 Respirable Crystalline Silica.

1.3 REGULATORY REQUIREMENTS

- A. Conform to applicable State and local codes for demolition of structures, safety of adjacent structures, dust control, runoff control, and pollution prevention.
- B. Obtain required permits and licenses from appropriate authorities. Pay associated fees including disposal charges.
- C. Notify affected utility companies before starting work and comply with their requirements.
- D. Do not close or obstruct public or private roadways, sidewalks, or fire hydrants without appropriate permits or written authorization.
- E. If hazardous, contaminated materials or other environmental related conditions are discovered, stop work immediately and notify the Walmart Construction Manager for action to be taken. Do not resume work until specifically authorized by the Construction Manager.
- F. Comply with the requirements of Section 01351 Regulatory Compliance Supplement for hazardous construction and demolition waste management and disposal.
- G. Test soils around buried tanks for contamination. Coordinate notification for mobilization to site and required observation of tank removal with Walmart Civil Engineering Consultant.

02220-1

1.4 SUBMITTALS

- A. Project Record Documents: Accurately record actual locations of capped utilities and subsurface obstructions that will remain after demolition. Submit record as part of closeout submittals.

1.5 PROJECT CONDITIONS

- A. Structures to be demolished will be discontinued in use and vacated prior to start of work.
- B. Owner assumes no responsibility for condition of structures to be demolished.
- C. Conditions existing at time of inspection for bidding purposes will be maintained by Owner as reasonably practical. Variations within structures may occur by Owner's removal and salvage operations prior to start of demolition work.
- D. Unless otherwise indicated in Contract Documents or specified by the Owner, items of salvageable value to Contractor shall be removed from site and structures. Storage or sale of removed items on site will not be permitted and shall not interfere with other work specified.
- E. Explosives shall not be brought to site or used without written consent of authorities having jurisdiction. Such written consent will not relieve Contractor of total responsibility for injury to persons or for damage to property due to blasting operations. Performance of required blasting shall comply with governing regulations.

PART 2 - PRODUCTS

2.1 FILL MATERIALS

- A. Fill material shall be aggregate fill materials as specified in Section 02300.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Provide, erect, and maintain erosion control devices, temporary barriers, and security devices at locations indicated on Construction Drawings.
- B. Protect existing landscaping materials, appurtenances, and structures, which are not to be demolished. Repair damage to existing items to remain caused by demolition operations.
- C. Prevent movement or settlement of adjacent structures. Provide bracing and shoring as necessary.
- D. Mark location of utilities. Protect and maintain in safe and operable condition utilities that are to remain. Prevent interruption of existing utility service to occupied or used facilities, except when authorized in writing by authorities having jurisdiction. Provide temporary services during interruptions to existing utilities as acceptable to governing authorities and Owner.
- E. Notify adjacent property owners of work that may affect their property, potential noise, utility outages, or other disruptions. Obtain written permission from adjacent property owners when demolition equipment will traverse, infringe upon, or limit access to their property. Coordinate notice with Owner.

3.2 GENERAL DEMOLITION REQUIREMENTS

- A. Conduct demolition to minimize interference with adjacent structures or pavements to remain.
- B. Cease operations immediately if adjacent structures appear to be in danger. Notify authority having jurisdiction. Do not resume operations until directed by authority.

- C. Conduct operations with minimum of interference to public or private access. Maintain ingress and egress at all times.
- D. Sprinkle work with water to minimize dust. Provide hoses and water connections for this purpose.
- E. Comply with governing regulations pertaining to environmental protection.
- F. Clean adjacent structures and improvements of dust, dirt, and debris caused by demolition operations. Return adjacent areas to condition existing prior to start of work.

3.3 DEMOLITION

- A. Demolish site improvements designated to be removed as shown on the drawings. Site improvements shall include but not be limited to structures, retaining walls, foundations, pavements, curbs and gutters, drainage structures, utilities, signage or landscaping.
- B. Disconnect and cap or remove utilities to be abandoned as shown on the drawings.
- C. Fill or remove underground tanks, piping, and appurtenances as shown.
- D. Demolish buildings completely and remove from site using methods as required to complete work within limitations of governing regulations. Small structures may be removed intact when acceptable to Owner and authorities having jurisdiction.
- E. Locate demolition equipment and remove materials to prevent excessive loading to supporting walls, floors, or framing.
- F. Demolish concrete and masonry in small sections. Break up concrete slabs-on-grade that are 2-feet or more below proposed subgrade to permit moisture drainage. Remove slabs-on-grade and below grade construction within 2-feet of proposed subgrade. Use proper dust control methods to maintain dust emissions below the permissible level.

3.4 FILLING BASEMENTS AND VOIDS

- A. Completely fill below grade areas and voids resulting from demolition or removal of structures, underground fuel storage tanks, wells, cisterns, etc., using aggregate fill materials consisting of stone, gravel, or sand free from debris, trash, frozen materials, roots, and other organic matter.
- B. Areas to be filled shall be free of standing water, frost, frozen or unsuitable material, trash, and debris prior to fill placement.
- C. Place fill materials in accordance with Section 02300 unless subsequent excavation for new work is required.
- D. Grade surface to match adjacent grades and to provide flow of surface drainage after fill placement and compaction.

3.5 DISPOSAL OF DEMOLISHED MATERIALS

- A. Remove from site debris, rubbish, and other materials resulting from demolition operations. Leave areas of work in clean condition.
- B. No burning of any material, debris, or trash on-site or off-site will be allowed except when allowed by appropriate governing authority and Owner. If allowed as stated above, burning shall be performed in manner prescribed by governing authority. Attend burning materials until fires have burned out and have been completely extinguished.
- C. Transport materials removed from demolished structures with appropriate vehicles and dispose off-site to areas that are approved for disposal by governing authorities and appropriate property owners.

02220-3

3.6 CIVIL ENGINEERING CONSULTANT (CEC) OBSERVATION

- A. Civil Engineering Consultant Observation: The Owner's Civil Engineering Consultant (CEC) will perform special observations as specified in Appendix B (Section 01456).

END OF SECTION

SECTION 02821 - CHAIN LINK FENCES AND GATES (BUILDING RELATED)

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Building related chain link fence.
 - 2. Chain link gates.
- B. Related Requirements: The following list is intended to aid in locating work related to or dependent on the scope of Work in this Section. The list is included for information only and is not intended to be inclusive of all project requirements.
 - 1. Section 03310 - Structural Concrete and Exterior Concrete Slabs: Concrete anchorage for posts.
 - 2. Section 05090 - Post-installed Concrete and Masonry Anchors: Anchors for interior fence posts.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM A 392 - Specification for Zinc-Coated Steel Chain-Link Fence Fabric.
- C. Chain Link Fence Manufacturers Institute (CLFMI): Product Manual.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements: Fencing system and installation engineered to withstand 93 mph windload assuming 50 percent coverage with hanging plastic banners and signage.

1.4 QUALITY ASSURANCE

- A. Chain link fabric, posts, and components, and installation shall conform with the requirements of the CLFMI Product Manual unless otherwise shown or specified.
- B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum 3 years documented experience.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Steel Posts: Type I or II or roll formed "C" Section steel conforming to CLFMI and as specified hereinafter.
- B. Fabric: No. 9 gage galvanized steel wire mesh; ASTM A 392, height as shown.
 - 1. Mesh Size: 2 inch.
 - 2. Mesh Size: Security fabric where noted on Drawings: 1 inch.
 - 3. Fabric height less than 72 inches: Top and bottom selvages knuckled.
 - 4. Fabric height 72 inches and greater: Top selvage twisted, bottom selvage knuckled.

2.2 COMPONENTS

- A. End, Corner, and Pull Posts: Minimum sizes and weights as follows unless otherwise shown.
 - 1. Up to 13 Foot Fabric Height: Type I or II in accordance with CLFMI Product Manual.

02821-1

2. 13 foot and over Fabric Height:
 - a. Type I Posts: Round; 4.0 inch outside diameter pipe, 9.10 lbs/lin ft.
 - b. Type II Posts: 4.0 inch outside diameter pipe, 6.56 lbs/lin ft.
- B. Line (Intermediate) Posts: Minimum sizes and weights as follows unless otherwise shown.
 1. Up to 8 Foot Fabric Height: Type I, II, or "C" Section in accordance with CLFMI Product Manual.
 2. Over 8 Foot Fabric Height:
 - a. Type I Posts:
 - 1) Round: 2.875 inch outside diameter pipe, 5.79 lbs/lin ft.
 - 2) Square: 2.5" x 2.5" outside dimension, 5.10 lbs/lin ft.
 - b. Type II Posts: 2.875 inch outside diameter pipe, 4.64 lbs/lin ft.
- C. Gate Posts: Type I or II in accordance with CLFMI Product Manual unless otherwise shown.
- D. Top, Bottom, and Intermediate Rails: Manufacturer's longest lengths.
 1. Type I or II in accordance with CLFMI Product Manual.
 2. Couplings: Expansion type, approximately 6 inches long.
 3. Attaching Devices: Means of attaching top rail securely to each gate, corner, pull, and end post.
 4. Do not install bottom rail at truck well fence which shall receive tension wire instead.

2.3 ACCESSORIES

- A. Sleeves: Galvanized steel pipe with inside diameter not less than 1/2 inch greater than outside diameter of fence posts. Provide steel plate closure welded to bottom of sleeves of width and length not less than 1 inch greater than outside diameter of sleeve.
 1. Up to 6 Foot Fabric Height: Provide sleeve not less than 12 inches long.
 2. Over 6 Foot Fabric Height (Not for Partitions Tight to Roof Deck): Provide sleeve not less than 24 inches long.
 3. Fabric Installed Tight to Roof Deck (Posts Braced to Roof Structure): Provide sleeve not less than 12 inches long.
- B. Tension Wire: 7 gage steel, metallic-coated coil spring wire, located at bottom of fence fabric.
- C. Wire Ties: 11 gage galvanized steel.
- D. Post Brace Assembly: Manufacturer's standard adjustable brace at end and gate posts and at both sides of corner and pull posts, with horizontal brace located at mid-height of fabric. Use same materials as top rail for brace, and truss to line posts with 0.375 inch diameter rod and adjustable tightener.
- E. Post Tops: Galvanized steel, weather tight closure cap for tubular posts, one cap for each post. Furnish cap with openings to permit passage of top rail as required.
- F. Stretcher Bars: Galvanized steel, one piece lengths equal to full height of fabric; with minimum cross section of 3/16 x 3/4 inch. Provide one stretcher bar for each gate and end post, and two for each corner and pull post.
- G. Stretcher Bar Bands: Manufacturer's standard.
- H. Gate Cross-Bracing: 3/8 inch diameter galvanized steel adjustable length truss rods.
- I. Gate Hardware:
 1. Swinging Gate Hardware:
 - a. Hinges:
 - 1) Size and material to suit gate size; offset to permit 180 degree gate opening. Provide 1-1/2 pair of hinges for each leaf over 6'-0" nominal height.
 - 2) Auto Center Service Area Gate: Hinges shall be Tru-close self closing round post gate hinges by D&D Technologies USA, Costa Mesa, CA (800) 716-0888.

- b. Latch:
 - 1) Exterior: Forked type or plunger-bar type to permit operation from both sides of gate, with padlock eye.
 - 2) Interior: Forked type to permit operation from both sides of gate. Omit any type of padlock device and substitute standard pin bracket for attachment of forked latch (gates are not to be padlocked).
 - 3) Auto Center Service Area Gate: Butterfly gate latch No. 17307 by Master-Halco or No 5552 by Merchant Metals.
- 2. Double Gate Hardware: In addition to the above, provide gate stops for double gates, consisting of mushroom type flush plate with anchors set in concrete to engage center drop rod or plunger bar. Configure for use of one padlock to lock both gate leaves on exterior gates.
- 3. Cantilever Sliding Gate Hardware: Manufacturer's standard heavy duty cantilever sliding gates including the following:
 - a. Track/rail and guide assembly.
 - b. Gate hangers, latches, brackets, bracing, and stops.
 - c. Bottom wheel assemblies.

2.4 SETTING MIXES

- A. Concrete: See Section 03310.
- B. Grout: Premixed, factory-packaged, non-staining, non-corrosive grout. See Section 03310. Provide type specially formulated for exterior application.

2.5 GATE FABRICATION

- A. Fabricate gate frames of min. 1.90 inch outside diameter galvanized steel pipe. Provide horizontal and vertical members to ensure proper gate operation and for attachment of fabric, hardware, and accessories. Space frame members maximum 8'-0" apart.
- B. Assemble gate frames rigidly by welding or with special fittings and rivets. Use same fabric as specified for fence. Install fabric with stretcher bars at vertical edges. Bars may also be used at top and bottom edges. Attach stretchers to frame at not more than 15 inches on center. Install diagonal cross-bracing on gates as required to ensure frame rigidity without sag or twist.
- C. Attach fabric on sliding gates to maintain bottom clearance as specified below in Installation.
- D. Attach hardware to provide security against removal or breakage.

2.6 FINISH

- A. Fabric and Framing: Zinc coated in accordance with CLFMI Product Manual.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install chain link fence in accordance with CLFMI Product Manual unless otherwise specified herein.
- B. Space line posts 10'-0" on center maximum, except as otherwise indicated.
 - 1. Space line posts at 8'-0" on center maximum if plastic slats are indicated to be installed in fence fabric.
 - 2. Space interior line posts 8'-0" on center maximum.
- C. Set posts as close to building walls as practical. Gaps greater than 1 inch between wall and posts shall be closed with a metal closure panel attached full height to post with Tek screws as shown. Hem edges and corners of sheet metal to eliminate sharp or rough edges.

- D. Methods for Setting Posts:
1. Grade-Set Posts:
 - a. Drill or hand excavate to a depth approximately 3 inches lower than post bottom. Set post bottom at depth indicated on Drawings.
 - b. Excavate each post hole to 12 inch diameter, or not less than four times diameter of post.
 - c. Hold post in position while placing, consolidating, and finishing concrete.
 - d. Post shall be set plumb within 1/4" in 10 feet.
 2. Sleeve-Set Posts In Slabs: Anchor posts in concrete by means of pipe sleeves preset into concrete to depth not less than 24 inches below finish slab, and anchored into concrete. Insert posts into sleeves and fill annular space between post and sleeve solid with grout. Mix and place grout in accordance with manufacturer's published instructions.
- E. Intermediate Rails: Provide center and bottom rails where indicated. Install in one piece between posts and flush with post on fabric side, using offset fittings where necessary. Place intermediate rails a maximum of 6 feet on center.
- F. Brace Assemblies: Install braces so posts are plumb with rod in tension.
- G. Tension Wire: Install tension wires through post cap loops before stretching fabric and tie to each post cap with not less than 6 gage galvanized wire. Fasten fabric to tension wire using 11 gage galvanized steel hog rings spaced 24 inches on center.
- H. Fabric: Space between bottom of fabric and finish grade shall be not greater than 2 inches. Space between bottom of fabric and finish grade shall not be greater than 1/2-inch on sliding gates. Pull fabric taut and tie to posts, rails, and tension wires. Install fabric on security side of fence, and anchor to framework so fabric remains in tension after pulling force is released.
- I. Stretcher Bars: To secure end, corner, pull, and gate posts, thread through or clamp to fabric 4 inches on center and secure to posts with metal bands spaced 15 inches on center.
- J. Tie Wires:
1. Use U-shaped wire conforming to diameter of pipe to which attached, clasping pipe and fabric firmly with ends twisted two full turns. Bend wire ends to minimize hazards to persons or clothing.
 2. Tie fabric to line posts with wire ties spaced 12 inches on center. Tie fabric to rails and braces with wire ties spaced 24 inches on center. Manufacturer's standard procedure will be accepted if of equal strength and durability.
- K. Fasteners: Install nuts for tension bands and hardware bolts on side of fence opposite fabric side. Peen ends of bolts or score threads to prevent removal of nuts.
- L. Gates: Install gates plumb, level, and secure for full opening without interference. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation.

3.2 ERECTION TOLERANCES

- A. Maximum Variation from Plumb: 1/4 inch.
- B. Maximum Offset from True Position: 1 inch.

END OF SECTION

SECTION 03310 (03 3100) – STRUCTURAL CONCRETE AND EXTERIOR CAST-IN-PLACE CONCRETE SLABS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cast in place structural concrete for concrete structures including the following:
 - a. Footings.
 - b. Foundation stem walls.
 - c. Retaining walls.
 - d. Column pedestals.
 - e. Monument sign foundations.
2. Cast in place non-structural concrete including the following:
 - a. Dock leveler pit slab.
 - b. Door stoops.
 - c. Exterior sidewalks adjacent to building and entry slab.
 - d. Exterior slabs shown on the architectural and structural drawings.
 - e. Exterior concrete equipment pads shown on the architectural and structural drawings
 - f. Interior concrete curbs and equipment pads.
 - g. Exterior concrete stairs.
 - h. Exterior steel column encasement.
3. Aggregate base below slab.
4. Formwork, shoring, bracing, and anchorage.
5. Reinforcement and accessories.
6. Curing and finishing.

B. Related Requirements:

1. Section 01351 – Regulatory Compliance:
 - a. Disposal and removal of hazardous construction and universal waste.
 - b. Work practice control methods for airborne respirable dust.
2. Section 02715 - Base Course: Base for exterior concrete slabs except as otherwise specified herein.
3. Section 03314- Cast-In-Place Concrete Slabs: Concrete for interior slabs on ground except as specified above.
4. Section 05120 - Structural Steel: Column anchor bolts.
5. Section 05500 - Metal Fabrications: Other metal components cast into concrete.
6. Section 07210 – Building Insulation: Foundation insulation.
7. Section 07900 - Joint Sealers: Expansion, Contraction, and Construction Joint Fillers and Sealants.
8. Appendix B – Testing, Inspection and Observation by Owner: Procedures for inspection, testing, and documentation by Owner furnished testing laboratory.

1.2 REFERENCES

5. ASTM A706 - Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement
6. ASTM C33 - Concrete Aggregates.
7. ASTM C94 - Ready-Mixed Concrete.
8. ASTM C136 - Sieve Analysis of Fine and Coarse Aggregates
9. ASTM C150 - Portland cement.
10. ASTM C171 - Sheet Materials for Curing Concrete.
11. ASTM C260 - Air-Entraining Admixtures for Concrete.
12. ASTM C309 - Liquid Membrane-Forming Compounds for Curing Concrete.
13. ASTM C 403 - Time of Setting of Concrete Mixtures by Penetration Resistance
14. ASTM C494 - Chemical Admixtures for Concrete.
15. ASTM C618 - Fly Ash and Raw or Calcined Natural Pozzolan for use as a Mineral Admixture in Portland Cement Concrete.
16. ASTM C989 - Ground Granulated Blast-Furnace Slag for Use in Concrete and Mortars
17. ASTM C881 - Epoxy-Resin-Base Bonding Systems For Concrete
18. ASTM C1107 - Packaged Dry, Hydraulic-Cement Grout (Non-Shrink).
19. ASTM C 1218 - Water-Soluble Chloride in Mortar and Concrete.
20. ASTM C1315 - Liquid Membrane Forming Compounds Having Special Properties for Curing and Sealing Concrete.
21. ASTM D 98 - Calcium Chloride.
22. ASTM D 698 - Moisture-Density Relations of Soils and Soil-Aggregate Mixtures Using 5.5 lb (2.49 Kg) Hammer and 12-in (305 mm) Drop.
23. ASTM D1241 - Materials for Soil-Aggregate Subbase, Base and Surface Courses
24. ASTM D1751 - Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types).
25. ASTM D1752: Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction.
26. ASTM D2628 - Preformed Polychloroprene Elastomeric Joint Seals for Concrete Pavements.
27. ASTM D3575: Standard Test Methods for Flexible Cellular Materials Made From Olefin Polymers.
28. ASTM E96 - Water Vapor Transmission of Materials
29. ASTM E154 - Water Vapor Retarders Used in Contact with Earth under Concrete Slabs, on Walls or as Ground Cove.

F. America Plywood Association (APA):

1. Grading Rules.

G. American Welding Society (AWS):

1. AWS D1.4 - Structural Welding Code Reinforcing Steel.

H. Concrete Reinforcing Steel Institute (CRSI):

1. CRSI Manual of Standard Practice.

2. CRSI Placing Reinforcing Bars.

- I. Department of Commerce (National Institute of Standards and Technology) – Product Standard (DOC):
1. DOC PS 1 - Construction and Industrial Plywood.

- J. International Code Council, Inc.:
1. International Building Code (IBC).

- K. National Concrete Ready-Mix Association:
1. NCRMA Inspection Standards

- L. Occupational Safety and Health Administration (OSHA):
1. OSHA 01926.1153 Respirable Crystalline Silica.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Minimize dust emissions or provide equipment that suppresses dust.

1.4 SUBMITTALS

- A. Submittal Procedures: Unless otherwise specified herein, submit in accordance with procedures specified in Section 01330.
- B. Submit all submittals electronically in PDF format via email, unless otherwise specified, to Architect of Record.
- C. Submit submittal items required within this section concurrently. Do not submit submittals of this section together with submittals in section 03314 or any other section. Identify submittals explicitly in accordance with Procedures paragraphs in Section 01330.
- D. Sieve Analysis for Aggregate Base: Submit current sieve analysis report, sampled and tested within the last 60 days of submittal date, for aggregate base and choker material.
- E. Concrete Batch Plant Certifications: Submit name and address of the concrete supplier's batch plant and plant certification(s) by National Ready-Mix Concrete Association and/or State Department of Transportation.
- F. Shop Drawings: Submit shop drawings within 5 working days of Contract Date. Do not use reproductions of Contract Documents as shop drawings. Prepare shop drawings in accordance with Part B, Chapter 3, ACI 315.
1. Reinforcement:
 - a. Include concrete notes on shop drawings that relate to proper placing of reinforcing.
 - b. Show all reinforcing steel including dowels, embedded steel items, and anchor bolts.
 - c. Include number, grade, size, length, mark, location, splice lengths, and bending diagrams for reinforcing steel and related products.
 2. Placement Drawings:
 - a. Submit reinforcement placement drawings with bar lists. Include walls, grade beams, and plans of footings and slabs.
 - b. Show section cuts, details with piece marks, and control joint locations. Show reinforcing size, quantity, spacing, location, length, and required schedules.
- G. Mix Design: Submit Concrete Mix Design Submittal Form included at end of this Section.
1. Submit separate mix design for concrete to be placed by pumping in addition to the mix design for concrete to be placed directly from the truck chute.
 2. Submit mix design by email to Architect and the Owner's Construction Testing Laboratory (CTL). Include applicable information shown on the Mix Design Submittal Form including the following:
 - a. Proportions of cementitious materials, fine and coarse aggregate, and water.
 - b. Water-cementitious material ratio, 28-day compressive design strength, slump, and air content.
 - c. Type of cement, fly ash, slag, and aggregate.
 - d. Individual aggregate gradation.

- e. Type and dosage of admixtures.
 - f. Special requirements for pumping.
 - g. Range of ambient temperature and humidity for which design is valid.
 - h. Special characteristics of mix which require precautions in mixing, placing, or finishing techniques to achieve finished product specified.
 - i. Materials and methods for curing concrete
- H. Attachments to Concrete Mix Design: Submit the following as attachments to be included with the Concrete Mix Design:
- 1. Cementitious materials mill test reports for the following:
 - a. Portland cement.
 - b. Fly ash.
 - c. Slag.
 - 2. Designation, type, quality, and source (natural or manufactured) of coarse and fine aggregate materials.
 - 3. Sieve Analysis Reports for Concrete Aggregate: Provide separate reports of particle distribution, calculating cumulated percentages passing for all individual aggregates required on the mix form. Sieve analysis sampling and testing for each aggregate source shall be conducted within 60 days of concrete submittal date.
 - 4. Aggregate Supplier Statement:
 - a. Stating if aggregate is possibly alkali-reactive based on tests or past service.
 - b. Stating if aggregate can possibly cause pop-outs, "D" cracking, or other disruptions due to moisture gain, freezing, or other mechanisms, based on tests or past service.
 - 5. Product data for the following concrete materials admixtures:
 - a. Air entraining.
 - b. Water reducing.
 - c. Water reducing and retarding.
 - d. Accelerating.
 - e. Evaporation retarding.
 - f. High-range water reducing.
 - g. Chloride ion content for each admixture.
 - 6. Chloride-Ion Content: Measured water-soluble chloride-ion content (percent by weight of cementitious materials) in accordance with ASTM C 1218.
 - 7. Concrete compressive strength data as required by ACI 301.
 - 8. Past compression test reports on each mix as required by ACI 301.
 - 9. Time of Initial Setting: Initial setting time in accordance with ASTM C403.
- I. Product Data: Submit certified laboratory test data or manufacturer's certificates and data for the items listed below certifying that materials are in conformance requirements specified herein. Submit to the Architect of Record and the Construction Testing Laboratory for review and approval and within 5 working days of Contract.
- 1. Portland cement concrete mix design(s).
 - 2. Type and source of Portland cement, fly ash, and/or slag
 - 3. Aggregate gradations
 - 4. Soft preformed joint filler
 - 5. Pavement joint sealant
 - 6. Dowel bars
 - 7. Tie bars
 - 8. Reinforcing steel bars
 - 9. Welded wire fabric
- J. Pumped Concrete Supplier Statement: Submit statement as described in Quality Assurance paragraph below.
- K. Delivery Tickets:
- 1. Copies of delivery tickets for each load of concrete delivered to site.
 - 2. Indicate information required by ASTM C 94 on each ticket including additional information required for slabs.
 - 3. Information on ticket shall include quantities of material batched including the amount of free water in the aggregate and the quantity of water that can be added at the site without exceeding the maximum water

- cementitious ratio of the approved mix design. Aggregate moisture corrections shall be based on ASTM definitions of aggregate moisture content and absorption.
4. Mix identification number on ticket shall match number on submitted and approved mix design.
 5. Submit copies to Owner Testing Laboratory with each concrete delivery.

1.5 QUALITY ASSURANCE

- A. Codes and Standards: Comply with provisions of following codes, specifications, and standards, except where more stringent requirements are shown or specified:
1. ACI 301 - Specifications for Structural Concrete for Buildings.
 2. CRSI - Manual of Standard Practice.
- B. Pumped Concrete:
1. Perform mix design, proportioning, and placement in accordance with ACI 304.2R.
 2. Submit documented evidence of experience in placing concrete by pumping on not less than three projects of similar size and complexity. List available pump size, standby pump size, piping, and other equipment.
 3. Submit documented evidence of concrete supplier's ability to dedicate sufficient mixing and delivery equipment to supply the concrete continuously for the volumes to be placed by pumping.
- C. Chemical Admixtures: Set control admixtures may be used only when adverse weather conditions are anticipated. Use of admixtures is subject to Owner approval.
1. Notify Owner Construction Manager at Pre-Bid Conference if admixtures will be used in concrete.
 2. Provide Owner Construction Manager with proposed Construction Schedule identifying anticipated adverse weather conditions justifying use of admixtures.
 3. Notify Owner Construction Manager prior to installation for which admixtures will be used in concrete.
 4. Mix design shall indicate ingredients including the admixtures to be used and the slump and air content range for the project.
- D. Concrete Truck Inspection:
1. Conform to ASTM C94, NRMCA, and Department of Transportation standards in state where project is located.
 2. Perform inspections immediately before starting concreting operations.
 3. Record acceptable truck numbers.
 4. Record the identification numbers of those trucks found to be acceptable on the basis of inspections.
 5. Do not bring on site for concreting operations, any truck whose identification numbers are not recorded as acceptable. Notify Owner Testing Lab if non-conforming trucks are used to deliver concrete for slabs and pavements.
- E. Concrete Supplier Approval:
1. The concrete supplier shall be fully approved and acceptable by the concrete subcontractor as the producer of concrete for which the subcontractor is to place and finish. Prepare Statement of Approval of Concrete Supplier stating project name, name of concrete supplier, along with the statement of approval and the signatures of the Contractor and concrete pavement subcontractor. Submit statement as specified in Submittals paragraph above.
- F. Workmanship:
1. When directed by the Owner, remove and replace or repair concrete and related Work which does not conform to specified requirements including strength, tolerances and finishes.
 2. Bear cost of corrections or delays to other work affected by, or resulting from, corrections to concrete Work.
 3. If results of compressive strength tests reveal deficiencies in concrete, meet requirements of ACI 301.
 4. Establish and maintain required lines and elevations.
 5. Check surface areas at intervals necessary to eliminate ponding areas.

1.6 ADMINISTRATIVE REQUIREMENTS

- A. Pre installation Meeting: Convene Pre-installation Meeting at Site at least two weeks prior to commencing work of this Section.

1. Require attendance of parties directly affecting work of this Section, including, but not limited to, the following:
 - a. Owner's Representative. (Attendance optional)
 - b. CTL's Representative and Inspector.
 - c. Contractor.
 - d. Concrete sub-contractor.
 - e. Concrete job foreman.
 - f. Concrete supplier.
 - g. Base fine grading contractor.
2. Contact Owner's Construction Manager 30 days prior to pre installation conference to confirm schedule.
3. Review foreseeable methods and procedures related to paving work, including the following:
 - a. CTL's testing and inspection procedures.
 - b. Concrete finishes and finishing.
 - c. Cold- and hot-weather concreting procedures.
 - d. Curing procedures.
 - e. Concrete design mixture and examine procedures for ensuring quality of concrete materials.
 - f. Proposed sources of concrete materials, including capabilities and location of plant that will manufacture concrete.
 - g. Tour, inspect and discuss condition of subgrade, drainage structures, and other preparatory work.
 - h. Requirements for protecting concrete work, including restriction of traffic during installation period and for remainder of construction period.
 - i. Review and finalize construction schedule and verify availability of materials.
 - j. Concrete paving requirements (drawings, specifications and other contract documents).
 - k. Required submittals, both completed and yet to be completed.
 - l. Weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
 - m. Safety precautions relating to placement of concrete.
4. Record discussions of meeting and decisions and agreements reached. Submit in accordance with the requirements of Submittals paragraph.
5. Changes to Contract Documents from recommendations or discussions at the Pre-installation Meeting shall be approved in writing by Owner's Construction Manager prior to implementation.

1.7 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Deliver materials in unopened containers with labels identifying contents. Keep containers closed and upright to prevent leakage.
- B. Mark reinforcing, accessories and embedded items for proper identification and placement location.
- C. Store materials, except aggregate, off ground in dry area and in manner to prevent damage. Protect liquid materials from freezing.
- D. Stockpile aggregate in manner to prevent contamination with other materials or with other sizes of aggregates. Conduct tests for determining conformance to requirements at point of batching. Do not use bottom 6" of aggregate piles in contact with ground. Allow sand to drain until it has reached a uniform moisture content before it is used.
- E. Store admixtures in manner to prevent contamination. Protect admixtures from extreme temperatures which would adversely affect their characteristics.

1.8 PROJECT CONDITIONS

- A. Hot and cold weather concreting shall be in accordance with ACI 305.1 (hot weather) and 306.1 (cold weather).
- B. Concreting in Hot, Dry, or Windy Weather:
 1. Determine rate of evaporation in accordance with ACI 305.1.
 2. Employ precautions as required to protect fresh concrete before and during finishing when the concrete rate of evaporation exceeds 0.1 pounds per square foot per hour or when any combination of concrete materials and weather conditions are favorable for the formation of plastic shrinkage cracks.

- a. Cool ingredients before mixing to reduce concrete temperature at time of placement. Mixing water may be chilled, or chopped ice may be used to control the concrete temperature provided the water equivalent of the ice is calculated to the total amount of mixing water.
 - b. Dampen subgrade and forms.
 - c. Cover reinforcing steel with water soaked burlap so the steel temperature will not exceed the ambient air temperature immediately before embedment in concrete.
3. Maintain an accurate reading thermometer at the Site to check temperature of concrete.
 4. Temperature of concrete at time of placing: Not to exceed 95 degrees F.
 5. Reject concrete if more than one slump adjustment, as defined in ASTM C 94, is required.
 6. Do not place concrete when forms, subgrade, aggregate base, or reinforcing bars are more than 120 degrees F or the temperature differential between the forms, aggregate base, or reinforcing bars and concrete will create conditions favorable for settlement cracks or thermal cracking.
 7. When high temperature and placing conditions dictate, the concrete supplier may request use of water-reducing retarding admixture (Type D) in lieu of water-reducing admixture (Type A), subject to approval from the Owner's Construction Manager.

C. Concreting in Cold Weather:

1. Thaw subgrade to depth of 12 inches immediately before placing concrete.
2. Measure and record concrete temperature during protection period in each placement at regular time intervals, but not less than 3 times per 24 hour period.
3. Minimum temperature requirements for concrete delivered to Site:
 - a. Air Temperature 30 to 45 degrees F: Concrete temperature 60 degrees F minimum.
 - b. Air Temperature 0 to 30 degrees F: Concrete temperature 65 degrees F minimum.
 - c. Air Temperature below 0 degrees F: Concrete temperature 70 degrees F minimum.
 - d. Maximum concrete temperature: Not to exceed the minimum required temperature by more than 10 degrees F.
4. Do not place slabs on subgrade or base that is more than 20 degrees F cooler than concrete. Warm subgrade or base to decrease temperature differential to 20 degrees F or less
5. When temperatures of 40 degrees F or lower occur during the placing and curing of concrete, maintain temperature of concrete at not less than 50 degrees F for at least 7 days for conventional concrete or at least 3 days for high early strength concrete.
 - a. Make arrangements before placement to maintain required temperature without damage from excessive heat.
 - b. Do not use combustion heaters during first 48 hours without precautions to prevent exposure of concrete to exhaust gases containing carbon dioxide and carbon monoxide.
 - c. Provide temporary housings or coverings including tarpaulins or plastic film. Keep protection in place and intact at least 24 hours after artificial heat is discontinued. Avoid rapid drying of concrete due to overheating, and avoid thermal shock due to sudden cooling or heating.
6. Protect concrete work from physical damage or reduced strength which could be caused by frost, freezing actions, or low temperatures, in compliance with the requirements of ACI 306R and 306.1 and as specified in this Section.
7. Do not use frozen materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials. Verify that forms, reinforcing steel, and adjacent concrete surfaces are free of frost, snow, and ice and that temperature of these materials is above 32 degrees F before placing concrete.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, provide products as manufactured by the following to the extent as specified hereinafter for the specific product:
1. American Colloid Company, (800) 527-9948.
 2. [Ardex Engineered Concrete](#), Aliquippa, PA (888) 512-7339. Contact: Linda Zigman.
 3. A.W. Cook Cement Products, (706) 654-3677.
 4. [BASF Admixture Systems](#), Cleveland, OH (800) 628-9990.
 5. [BASF Building Systems](#), Shakopee, MN (800) 433-9517 or (952) 496-6000.
 6. [Chase Construction Products](#), Bridgewater, MA (781) 332-0764.

03310-7

7. [ChemTec International, Inc.](#), Cincinnati, OH (513) 474-2090. Contact: James Sist.
8. [Colloid Environmental Technologies Co. \(CETCO\)](#), Hoffman Estates, IL (800) 527-9948.
9. Conspec Marketing & Manufacturing, (800) 348-7351.
10. CTS Cement Manufacturing Corp., (800) 929-3030.
11. [Dayton Superior/Conspec](#), Dayton, OH (888) 977-9600
12. DRC Inc., Carrollton, KY (502) 732-1001.
13. E-Poxy Engineered Materials, (800) 833-3400.
14. [Euclid Chemical Co.](#), Cleveland, OH (800) 321-7628.
15. [GCP Applied Technologies](#) (formerly GCP Applied Technologies and Co.), (713) 223-8353.
16. [Henry Company \(Synko-Flex Products Division\)](#) (800) 231-4551.
17. Permagile Industries, Inc., (800) 645-7546.
18. Reef Industries, (800) 231-6074.
19. [Sika Corp.](#), (800) 933-7452.
20. [Unitex](#), Kansas City, MO (816) 231-7700 or (800) 821-5846.
21. W.R. Meadows, Inc., (800) 342-5976.
22. [Vexcon Chemicals, Inc.](#), Philadelphia, PA (888) 839-2661.

B. Substitutions: Comply with the requirements of Section 01600 unless specified otherwise in this Section.

2.2 EXTERIOR PAVEMENT AGGREGATE BASE MATERIALS

A. Exterior pavement areas shown on the Drawings referencing the “Foundation Subsurface Preparation” for base preparation shall receive aggregate base materials as specified herein unless otherwise shown on the Foundation Subsurface Preparation.

B. Aggregate Base: Use one of the following gradations:

1. Any state DOT approved road base material meeting the following gradation:
 - 1)

Standard Sieve Size	% Passing
No. 1-1/2	100
No. 4	15-55
No. 200	5-12

2. Material conforming to the General Requirements and of the Gradation “A”, ”C”, or “D” requirements (with the modified allowance of 5% to 12% passing the No. 200 sieve) as defined by ASTM D 1241.
3. Material passing the No. 200 shall be clean granular fill with less than 3% clay and/or friable particles.

C. Aggregate Choker Course: Clean granular fill with less than 3% clay and/or friable particles. Use one of the following gradations:

1. ASTM D 448 No. 10 with 6% to 12% passing No. 200 sieve.
2. Material that meets the following gradation:
- 3.

Standard Sieve Size	% Passing
No. 4	85-100
No. 8	75-95
No. 16	55-75
No. 50	22-45
No. 100	10-30
No. 200	6-12

D. Refer to Section 02715 for base materials not subject to the Foundation Subsurface Preparation requirements.

2.3 FORMWORK

- A. Forms: Design, engineer, and construct forms, shores, bracing, and other temporary supports to support loads imposed during construction in accordance with ACI 347. Design under the direct supervision of a licensed Professional Engineer experienced in design of this Work.
 - 1. Plywood: APA Plyform Class 1, complying with DOC PS 1, exterior-grade plywood panels, suitable for concrete forms, 5/8 inch minimum thickness unless otherwise shown or specified, and as follows.
 - a. Plywood for concrete surfaces to be exposed after construction is complete: APA HDO plyform (High Density Overlay) with straight, sealed edges.
 - b. Plywood for concrete surfaces not to be exposed after construction is complete: APA B-B Plyform .
 - 2. Lumber: Dressed, tongue and grooved, free from loose knots.
 - 3. Metal: Smooth, clean, corrosion-free, without dents or holes and with closely-matching edges.
 - 4. Fiberglass: Smooth, clean, without dents or holes and with closely-matching edges.
 - 5. Laminated Round Fiber Tubes: Spirally laminated paper fiber, wax impregnated on exterior surfaces and interior ply allowing uniform moisture penetration.
- B. Form Release Agents:
 - 1. 100% biodegradable, non-toxic, 100% natural organic chemical release agent that will not cause surface imperfections, and is non-staining and compatible with field applied paints, toppings, curing compounds and other coatings.
 - 2. Use same brand form release agent for all forms.
 - 3. Products:
 - a. [Clean Strip J1EF](#) by Dayton Superior.
 - b. [Star Seal EF V Release](#) by Vexcon.
 - c. [Farm Fresh](#) by Unitex.
 - d. [BioStrip WB](#) by SpecChem.
- C. Ties and Accessories:
 - 1. Provide form ties, anchors, and hangers of sufficient strength to resist displacement of forms due to construction loads and depositing of concrete.
 - 2. Provide ties and spreader form ties designed so no metal will be within 1 inch of surface when forms are removed.
 - 3. Where concrete surfaces are exposed to view, use form ties that will leave a depression not more than 1 inch in diameter when removed.
- D. Waterstops: Provide one of the following.
 - 1. [Volclay Waterstop RX-101](#) Bentonite Waterstop by CETCO (Colloid Environmental Technologies Co.).
 - 2. [SF302-Synko-Flex Waterstop](#) by Henry Co.

2.4 REINFORCEMENT

- A. Reinforcing Bars:
 - 1. ASTM A615, deformed, Grade 60.
 - 2. ASTM A706, deformed, Grade 60.
- B. Joint Dowel Bars: ASTM A 615, Grade 40 minimum, or ASTM A36, smooth round plain-steel bars, cut bars true to length with ends square and free of burrs. Epoxy coat per State Highway Department Standard Specifications.
- C. Welded Wire Mesh: Welded plain cold-drawn steel wire fabric, ASTM A185. Furnish in flat sheets.

2.5 REINFORCEMENT ACCESSORY MATERIALS

- A. Tie Wire: Minimum 16 gage annealed type.
- B. Reinforcing Support Devices:
 - 1. Manufacturer support devices of metal (wire bar), concrete, or recycled plastic devices conforming to CRSI Manual of Standard Practice.
 - 2. Plastic accessories shall have a minimum of 50% recycled content.
 - 3. Do not use wood, brick and other devices that can expand due to moisture gain.

03310-9

4. Precast concrete chairs shall have minimum compressive strength of 3,500 psi.
5. For concrete surfaces exposed to view where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.
6. When precast concrete bar supports are used over aggregate base, or over waterproof membranes and vapor retarders, properly embed tie wires to prevent penetration of substrate.
7. Properly size foot of bar supports or similar devices to prevent settlement on base material or prevent puncture on vapor barrier.
8. When supporting multiple layers of reinforcement, provide the proper size and spacing of bar supports or similar devices to prevent deformation of plastic and to retain rebar within position tolerances.

2.6 CONCRETE MATERIALS

- A. Cement: ASTM C 150 – If reactive aggregates are present in the area, use low alkali cement containing less than 0.6 percent alkalis. Use only one brand throughout project.
1. Required Cement Type based on ACI Exposure Category and Class as noted on Drawings.
 - a. Sulfate Exposure Class S0 – Type I, II, or III.
 - b. Sulfate Exposure Class S1 – Type II or Type III with C₃A content less than 8%.
 - c. Sulfate Exposure Class S2 – Type V or Type III with C₃A content less than 5%.
 - d. Sulfate Exposure Class S3 – Type V plus pozzolan or slag cement.
- B. Concrete Aggregate:
1. Conform to ASTM C33.
 2. Aggregate shall contain no coal or lignite in concrete that will not be covered by soil.
 3. Fine Aggregate:
 - a. Conform to fine aggregate grading requirements as defined in section 6.1 of ASTM C 33 unless approved by the Structural Engineer.
 - b. If manufactured sand is used, blend with minimum 25% natural sand unless otherwise approved by the Structural Engineer.
 4. Coarse Aggregate:
 - a) Nominal maximum coarse aggregate size shall be 1 inch.
 - b) The nominal maximum size of an aggregate is the smallest sieve size through which the major portion of the aggregate must pass, with a minimal amount retained on the maximum sieve size. Maximum 4% shall be retained on the nominal maximum size sieve.
 5. Exterior Slabs: Adjust proportions of combined coarse, intermediate, and fine aggregates to provide the following particle size distribution characteristics, unless otherwise approved:
 - a. Coarseness Factor of 60 to 75%.
 - 1) The Coarseness Factor (CF) is the percent of combined aggregate retained on the #8 sieve that is also retained on the 3/8" sieve.
 - 2) The Coarseness Factor is calculated as follows:
 - 3) $CF = \text{Aggregate retained on } 3/8'' \text{ sieve} / \text{Aggregate retained on } \#8 \text{ sieve.}$
 - b. Adjusted Workability Factor
 - 1) The Workability Factor (WF) is the percent of combined aggregate that passes the #8 sieve.
 - 2) The Adjusted Workability Factor (Adj-WF) is calculated as follows:
 - 3) $\text{Adj-WF} = WF + [(\text{Cementitious Material} - 564 \text{ lbs}) / 37.6]$
 - 4) The range of accepted Adj-WF for a given CF is as follows:
 - 5) $\text{Adj-WF} = [(11.25 - .15 \text{ CF}) + 36] \pm 2.5$
 - 6) Combined percent retained on any given sieve size shall not exceed 24%.
 - c. Gradation requirement of ASTM C33 may be waived in order to meet ranges specified.
- C. Fly Ash: ASTM C618, Type C or F. Use only one type and source throughout the project.
- D. Slag: ASTM C989, Grade 100 or 120. Use only one type and source throughout the project.
- E. Water: Clean potable water, not detrimental to concrete.

2.7 CHEMICAL ADMIXTURES

- A. Air Entrainment: ASTM C 260.
 - 1. [Air-Mix](#) or [AEA-92](#) by Euclid.
 - 2. [MasterAir VR 10](#), [MasterAir AE 90](#), or [MasterAir AE 200](#) by BASF Admixtures.
 - 3. [Daravair or Darex Series](#) by GCP Applied Technologies.
 - 4. [Sika Air Series or AEA Series](#) by Sika.
 - 5. Equivalent approved products.

- B. Water Reducing Admixture: ASTM C494, Type A.
 - 1. Eucon or Plastol Series by Euclid.
 - 2. [MasterPozzolith](#), [MasterPolyheed](#), or [MasterGlenium](#) Series by BASF Admixtures.
 - 3. WRDA, Daracem, Mira-59, Zyla or Adva Series by GCP Applied Technologies.
 - 4. Plastiment, Plastocrete, or Sikament Series by Sika Corp.
 - 5. Equivalent approved products.

- C. Water Reducing and Retarding Admixture: ASTM C494, Type B or D.
 - 1. [Eucon Retarder 75](#) by Euclid.
 - 2. [MasterPozzolith](#) or [MasterSet DELVO](#) Series by BASF Admixtures.
 - 3. [Recover](#), [ZYLA-R](#), or [Daratard 17](#) by GCP Applied Technologies.
 - 4. [Plastiment or Plastocrete Series](#) by Sika Corp.
 - 5. Equivalent approved products.

- D. Accelerating Admixture: ASTM C494, Type C or E.
 - 1. [Accelguard 80](#) by Euclid.
 - 2. Daraset Series, Daracel, Lubricon, Polarset, or DCI by GCP Applied Technologies.
 - 3. [MasterSet](#) Series by BASF Admixtures.
 - 4. [Plastocrete 161 FL](#), [Plastocrete 161 HE](#), [Sikaset NC](#), or [Sikaset HE](#) by Sika Corp.
 - 5. Calcium Chloride (Type L) in solution form.
 - 6. Equivalent approved products.

- E. Evaporation Retardant: Water-based polymer, sprayable.
 - 1. [EucoBar](#) by Euclid.
 - 2. [MasterKure ER 50](#) by BASF Admixtures.
 - 3. Conspec [Aquafilm](#) by Dayton Superior.

- F. High-Range Water Reducing Admixture: ASTM C 494, Type F or G.
 - 1. Type F:
 - a. [Eucon 37](#) by Euclid.
 - b. [Daracem 100](#) by GCP Applied Technologies.
 - c. [MasterRheobuild 1000](#) or [MasterGlenium Series](#) by BASF Admixtures.
 - d. [ViscoCrete](#), [Sikament](#), or [Sikaplast](#) by Sika.
 - e. Equivalent approved products.
 - 2. Type G:
 - a. [Eucon 537](#), by Euclid.
 - b. [Daracem 100](#) by GCP Applied Technologies.
 - c. Equivalent approved products.

- G. Other Admixtures: Additional admixtures including retarding, accelerating, and evaporation retardant are specified in Section 03314.

2.8 RELATED MATERIALS

- A. Joint Materials: Specified in Section 07900.
- B. Foundation Perimeter Insulation: Specified in Section 07210.
- C. Epoxy Bonding Agent: ASTM C881
 - 1. [Euco #452](#) by Euclid.

2. [EVA-POX Epoxy Paste No. 22](#) by Chase Construction Products.
3. [MasterEmaco ADH 326](#) by BASF Building Systems.
4. [Sikadur 32 Hi-Mod LPL](#) by Sika.

D. Patching Mortar:

1. FDM by Ardex for vertical or horizontal placement, formed and poured.
2. B20 by Ardex for vertical or overhead placement, hand packed.
3. ERM by Ardex for exterior horizontal applications.
4. Approved equivalent products.

E. Bond Breaker: ASTM D226, No. 15, unperforated asphalt saturated felt.

F. Leveling Compound:

1. Ardex V-1200, by Ardex. Contact: Linda Zigman.
2. Flo-Top or Super Flo-Top, by Euclid.
3. SikaTop Overlay System, by Sika.
4. Thoro Underlayment Self-Leveling including Thoro Primer #800, by Thoro.
5. Certi-Vex SLU TC including EnvioBond A Primer, by Vexcon.
6. Conflow including Primeflow, by Conspec.
7. MASTERTOP 110 UNDERLAYMENT, by Master Builders.

G. Concrete Sealer for Imprinted Concrete Areas: Provide the following:

1. Solvent based concrete sealer having a minimum 25% solids: High Solids Clear Seal by Increte Systems Inc. or equivalent.
2. Solvent based concrete sealer low VOC (<100 g/L): Clear Seal-100 by Increte Systems, Inc.

2.9 CONCRETE CURING MATERIALS

A. Water: Clean, clear, and potable, not detrimental to concrete finish.

B. Concrete Curing Cover:

1. AquaCure, by DRC.
 - a. Exclusive Distributor: Greenstreak Group, Inc., St. Louis, MO (800) 325-9504.
2. Ultracure by McTech Group.

C. Liquid Membrane Curing and Sealing Compound: ASTM C 1315, Type I, Class A or B, 25% minimum solids content, clear non-yellowing with no styrene-butadiene.

1. Water Based, VOC less than 350 g/l:
 - a. [Super Aqua Cure](#) by Euclid Chemical Corp.
 - b. [MasterKure CC 1315WB](#) by BASF Building Systems.
2. Solvent Based:
 - a. [Super Rez-Seal](#) by Euclid Chemical Corp.
 - b. [MasterKure CC 300 SB](#) by BASF Building Systems.

D. Dissipating Curing Compound: ASTM C 309 Type 1, Class A or B, solvent or water base, VOC less than 350 g/l.

1. [Certi-Vex EnvioCure 100](#) by Vexcon. (Solvent base).
2. [Day Chem REZ Cure \(J-11-W\)](#) or [Safe Cure & Seal \(J19\)](#) by Dayton Superior. (Water Base).
3. [Kurez DR VOX](#), by Euclid. (Water Base).

2.10 CONCRETE MIX

A. Mix and deliver concrete in accordance with ASTM C94. Prepare design mixes for each type and strength of concrete by the laboratory trial batch or the field experience method as specified in ACI 301.

B. ACI Exposure Category and Class: ACI freeze/thaw and sulfate exposure category and class shall be as indicated on Drawings. Exposure class with highest compressive strength and lowest maximum water cementitious material ratio shall take precedence for each mix.

- C. Structural Concrete Footings:
1. Compressive Strength: Strength at 28 days shall be as follows unless otherwise indicated on the Drawings:
 - a. Exposure Class F0, F2, F3, or S0: 3,000 psi
 - b. Exposure Class S1: 4,000 psi
 - c. Exposure Class S2 or S3: 4,500 psi
 2. Maximum Water-Cementitious Material Ratio (Cement Quantity Includes Fly Ash or slag):
 - a. Exposure Class F0, F2, F3, S0 or S1: 0.50 by wt.
 - b. Exposure Class S2 or S3: 0.45 by wt.
 3. Slump: Slump at the point of placement shall not exceed 5 inches and shall be of a consistency to be worked readily into forms and around reinforcement without segregation, voids, or excessive bleeding. Maximum slump variance shall be 2 inches.
 4. Air Content: Do not air-entrain unless required for concrete workability. Not to exceed 5.0 percent.
- D. Structural Concrete Formed Walls:
1. Compressive Strength: Strength at 28 days shall be as follows unless otherwise indicated on the Drawings:
 - a. Exposure Class F0 or S0: 3,500 psi
 - b. Exposure Class S1: 4,000 psi
 - c. Exposure Class F2, S2 or S3: 4,500 psi
 - d. Exposure Class F3: 5,000 psi
 2. Maximum Water-Cementitious Material Ratio (Cement Quantity Includes Fly Ash or slag):
 - a. Exposure Class F0, S0 or S1: 0.50 by wt.
 - b. Exposure Class F2, S2 or S3: 0.45 by wt.
 - c. Exposure Class F3: 0.40 by wt.
 3. Slump: Slump at the point of placement shall not exceed 5 inches and shall be of a consistency to be worked readily into forms and around reinforcement without segregation, voids, or excessive bleeding. Maximum slump variance shall be 2 inches.
 4. Air Content: As specified in the Table below.
- E. Non-Structural Exterior Concrete Pavement and Slabs on Grade:
1. Compressive Strength: Strength at 28 days shall be as follows unless otherwise indicated on the Drawings:
 - a. Exposure Class F0 or S0: 3,500 psi
 - b. Exposure Class S1: 4,000 psi
 - c. Exposure Class F2, F3, S2 or S3: 4,500 psi
 2. Maximum Water-Cementitious Material Ratio (Cement Quantity Includes Fly Ash or slag):
 - a. Exposure Class F0, S0 or S1: 0.50 by wt.
 - b. Exposure Class F2, F3, S2 or S3: 0.45 by wt.
 3. Slump Range: 2"- 4" for hand placed concrete, 1-1/4" to 3" for machine placed (slipform) concrete. Maximum slump variance shall be 2 inches.
 4. Air Content: As specified in the table below.
- F. Non-Structural Interior Concrete Curbs and Equipment Pads:
1. ACI Exposure Class: All Classes.
 2. Compressive Strength: Strength at 28 days shall be 3500 psi unless otherwise shown or specified.
 3. Maximum Water-Cementitious Material Ratio (Cement Quantity Includes Fly Ash or slag): 0.55 by wt.
 4. Slump: Slump at the point of placement shall not exceed 5 inches subject to the requirement that concrete shall be of a consistency to be worked readily into forms and around reinforcement without segregation, voids, or excessive bleeding. Maximum slump variance shall be 2 inches.
 5. Air Content: Do not air-entrain interior concrete.
- G. Other Structural Concrete (Applies to concrete structures not listed in sections above):
1. Where concrete is not in contact with soil, backfill or base material, the sulfate exposure requirement can be disregarded.
 2. Compressive Strength: Strength at 28 days shall be as follows unless otherwise indicated on the Drawings:
 - a. For Concrete Not Exposed to Weather: Min 3,500 psi
 - 1) Exposure Class S0: 3,500 psi
 - 2) Exposure Class S1: 4,000 psi
 - 3) Exposure Class S2 or S3: 4,500 psi

- b. For Concrete Exposed to Weather:
 - 1) Exposure Class F0 or S0: 3,500 psi
 - 2) Exposure Class S1: 4,000 psi
 - 3) Exposure Class F2, S2 or S3: 4,500 psi
- 3. Maximum Water-Cementitious Material Ratio (Cement Quantity Includes Fly Ash or slag):
 - a. For Concrete Not Exposed to Weather: Min 0.50 by wt.
 - 1) Exposure Class S0 or S1: 0.50 by wt.
 - 2) Exposure Class S2 or S3: 0.45 by wt.
 - b. For Concrete Exposed to Weather:
 - 1) Exposure Class F0, S0 or S1: 0.50 by wt.
 - 2) Exposure Class F2, S2 or S3: 0.45 by wt.
 - 3) Exposure Class F3: 0.40 by wt.
- 4. Slump: Slump at the point of placement shall not exceed 5 inches subject to the requirement that concrete shall be of a consistency to be worked readily into forms and around reinforcement without segregation, voids, or excessive bleeding. Maximum slump variance shall be 2 inches.
- 5. Air Content:
 - a. For Concrete Not Exposed to Weather: Not to exceed 5.0 percent.
 - b. For Concrete Exposed to Weather: As specified in the Table below plus or minus 1.5 percent.

H. Concrete Mix Air Entrainment: Where an exterior concrete mix is noted to be air entrained, the air entrainment shall be as follows:

Nominal Maximum Size Aggregate (Inch)	Average Air Content (%) +/- 1.5% By Exposure Class	
	Class F0	Class F2 & F3
3/8	4.5	7.5
1/2	4.0	7.0
3/4	3.5	6.0
1	3.0	6.0
1-1/2	2.5	5.5

- I. Concrete to be Placed by Pumping Methods:
 - a. The minimum quantity of constituent materials passing the No. 50 sieve (fine aggregate and cementitious materials) shall be 600 pounds per cubic yard.
 - b. The particle size distribution of the combined fine and coarse aggregate shall be uniform from the largest to the smallest particles.
- J. Admixtures:
 - 1. Use water-reducing admixture or high-range water-reducing admixture (Superplasticizer) in concrete as required for placement and workability. Unless otherwise permitted herein, chemical admixtures shall be dispensed at the batch plant. Use high-range water-reducing admixture (HRWR) in pumped concrete.
 - 2. Use air-entraining admixture in exterior concrete exposed to weather. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having total air content specified above.
 - 3. Use admixtures for water reduction and set control (accelerators and retarders) in strict compliance with manufacturer's directions.
 - 4. Verify with the admixture manufacturer the following:
 - a. The compatibility of the individual admixtures when combined in the concrete mix.
 - b. The compatibility of the individual admixtures with the concrete materials.
- K. Supplementary Cementitious Materials (SCM):
 - 1. Concrete mix shall contain SCM at the amounts specified unless other amounts are approved by the Structural Engineering Consultant. Either fly ash or ground granulated blast furnace slag (GGBFS) may be used for the SCM but shall not be used together to form a ternary mix. Use of fly ash or GGBFS in the concrete mix is mandatory.

2. Fly Ash: Substitute fly ash for Portland cement at 20% of the total cementitious content.
 - a. If used to mitigate potential aggregate reactivity, up to 25% fly ash substitution for Portland cement may be used. Only Type F fly ash may be used and shall have the following maximum properties: 1.5% available alkali and 8.0% CaO. When a maximum of 25% replacement is used, up to 10.0% CaO is permitted.
3. Ground Granulated Blast Furnace Slag (GGBFS): Substitute GGBFS for Portland cement at 25% of the total cementitious content.
 - a. If required to mitigate potential sulfate exposure or aggregate reactivity, up to 50% GGBFS substitution for Portland cement may be used.
4. Maintain air-entrainment at specified levels.
5. In cold weather, provide adequate concrete strength gain so concrete will not be damaged from traffic and loads of use.

L. Calcium Chloride Admixture:

1. Calcium chloride (Type L) conforming to ASTM D98 may be used in solution form as part of the mixing water to accelerate concrete setting and early-strength development.
2. Amount of calcium chloride added shall not be more than necessary to produce the desired results and shall not exceed 2% by weight of cement.
3. The dosage range for the calcium chloride for the entire project shall not vary by more than 1%. Range is defined as the difference between the maximum and minimum dosages of calcium chloride for the entire project.
4. Calcium chloride shall not be used in the following applications unless approved by the Structural Engineer:
 - a. Concrete containing embedded dissimilar metals or aluminum
 - b. Exterior concrete slab on grade
 - c. Slabs supported on permanent galvanized steel forms
 - d. Concrete exposed to deicing chemicals
 - e. Prestressed or post-tension concrete
 - f. Concrete containing aggregates with potentially deleterious reactivity and concrete exposed to soil
 - g. Concrete exposed to soil or water containing sulfates.
5. Use calcium chloride in accordance with manufacturer's recommendation.
6. Chloride-ion Concentration: Maximum water-soluble chloride-ion concentrations in hardened concrete at ages from 28 to 42 days contributed from the ingredients including water, aggregates, cementitious material, and admixtures shall not exceed the following limits unless approved by the Structural Engineer:

Type of Member	Maximum water-soluble chloride ion (Cl-) content in concrete (percent by weight of cement)
Prestressed Concrete	.06
Reinforced concrete exposed to chloride in service	.15
Reinforced concrete that will be dry or protected from moisture in service	1.00
Other reinforced concrete construction	.30

7. When using calcium chloride or other admixtures containing chlorides, measure water-soluble chloride-ion content (percent by weight of cementitious materials) per ASTM C 1218. Sample shall be from concrete representing the submitted mix design and maximum chloride dosage anticipated for the project.

2.11 MIXING

A. Ready-Mixed Concrete:

1. Mix and transport in accordance with ASTM C 94 and ACI 301 except as specified.
2. Reset drum revolution counter to zero on ready mix concrete truck when water is added to drum.

B. Site-Mixed Concrete:

03310-15

1. Conform to ACI 301.
 2. Use central-mix type batch plant.
- C. Proportion concrete materials on basis of field experience or by laboratory trial batches.
- D. Ready-mix concrete supplier may proportion materials by field experience.
- E. Proportioning by Water-Cement ratio is not acceptable.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verify anchors, seats, plates, reinforcement, and other items to be cast into concrete are accurately placed, held securely, and will not cause hardship in placing concrete.

3.2 PREPARATION

- A. Prepare previously placed concrete by cleaning with steel brush and applying bonding agent. Use proper dust control methods. Apply bonding agent in accordance with manufacturer's instructions.
- B. Preplacement Inspection: All trades and participants involved shall verify that preparations are in conformance with Contract documents. Inspect reinforcement, inserts, and embedded parts before beginning concrete placement to ensure accurate size and location. Use approved sign-off forms.
- C. Notify Owner Testing Laboratory minimum 48 hours prior to commencement of concreting operations
- D. Cleaning Equipment: Remove hardened concrete and foreign materials from mixing and conveying equipment.
- E. Ensure that all work is properly coordinated:
 1. Structural Drawings and Specifications with those of other disciplines.
 2. Use final corrected Shop Drawings, placing Drawings and material / equipment Drawings

3.3 INSTALLATION - GENERAL

- A. Establish and maintain required lines and elevations.
- B. Check surface areas at intervals necessary to eliminate ponding areas.

3.4 AGGREGATE BASE PLACEMENT

- A. Where exterior pavement areas are shown on the drawings referencing the "Foundation Subsurface Preparation" for base preparation, place aggregate base in accordance with requirements herein.
- B. Aggregate Base:
 1. Install aggregate base where shown on Drawings.
 2. Compact to final thickness shown in layers not exceeding 6 inches with minimum of 2 passes per layer with vibratory compactor.
 3. Compact fill to 98% of aggregate's Standard Proctor as determined by Method D of ASTM D698.
 4. Leave pad up to 2 inches low until just prior to concrete placement.
- C. Aggregate Base Fine Grading:
 1. Compact to final thickness noted with 2 passes minimum vibratory compactor to produce smooth, flat, dense surface.
 2. Aggregate choaker coarse or top 2" DOT approved road base shall be place dry immediately before placing concrete.
 3. Do not allow excess moisture or soft soil beneath vapor retarder at time of placing concrete.

4. Thickness shall not exceed 2 inches.
 5. Level off aggregate base top surface with aggregate chocker coarse material as necessary as follows:
 - a. to reduce surface friction and to meet specified fine grade tolerances specified below. Typically required up to 3/4" thick in areas exposed to rain, traffic, or excavation for pits and buried utilities.
 - b. where aggregate base material does not have sufficient fine particles to produce a surface that is free of exposed aggregate or surface voids greater than 3/8" in size at time of slab installation.
 6. Use laser guided equipment used to establish specified base elevation.
 7. Provide dry, smooth, flat, dense surface
 8. Proofroll 48 hrs maximum prior to concrete placement. Depression under a fully loaded ready mix truck shall not exceed 1/2 inch.
- D. Pavement Aggregate Base Fine Grade Tolerance: +0 inch, -3/4 inch with transition no greater than 3/4 inch vertically to 8 inches horizontally for level slab.

3.5 FORMWORK

- A. Form vertical surfaces of concrete work.
- B. Design, construct, erect, support, and remove formwork and related items in accordance with most stringent requirements of ACI 117, 301, 304R, and 347R
 1. Camber forms to allow for deflection due to weight of fresh concrete.
- C. Formwork for concrete surfaces to be painted or exposed to view after completion of project shall conform to the following:
 1. Do not use forms with dents, holes or patches.
 2. Individual formwork elements shall be as large as possible.
 3. Position individual formwork elements in regular, uniform pattern with joints aligned.
 4. Uniformly space and align form ties in horizontal and vertical rows.
 5. Construct forms for removal without hammering or prying against concrete.
 6. Temporary formwork openings (for cleaning, inspecting, etc) shall be placed on unexposed side or constructed so that concrete surface at opening will match adjacent concrete in appearance.
- D. Form Preparation
 1. Clean formwork.
 2. Remove rust from steel formwork.
- E. Erecting Forms:
 1. Solidly butt joints and provide backup at joints as required to prevent leakage of cement paste.
 2. Do not tape formwork joints.
 3. Just before placing concrete, clean forms and adjacent surfaces again as necessary. Remove wood, sawdust, chips dirt and other debris.
 4. If necessary to grease tie threads, do not allow grease to contact remainder of tie when wall will be exposed to hydrostatic pressure.
- F. Form Release Agent
 1. Before placing reinforcing steel, thoroughly coat contact surfaces of forms with an approved form release agent.
 2. Apply form release agent evenly without excess drip.
 3. Do not allow form release agent to come into contact with concrete surfaces against which fresh concrete will be placed.
 4. Moisten wood forms immediately before placing concrete where form release agents are not used.
- G. Form Construction for Paving:
 1. Set forms to required grades and lines, rigidly braced and secured.
 2. Install sufficient quantity of forms to allow continuance of work and so that forms remain in place minimum of 24 hours after concrete placement.
 3. Check completed formwork for grade and alignment to following tolerances:

- a. Top of forms not more than 1/8-inch in 10'-0".
 - b. Vertical face on longitudinal axis, not more than 1/4-inch in 10'-0".
4. Clean forms after each use and coat with form release agent as often as required to ensure separation from concrete without damage.

3.6 PLACING REINFORCEMENT

- A. Place reinforcing in accordance with most stringent requirements of ACI 117, 301 and 308 and CRSI Manual of Standard Practice and Placing Reinforcing Bars.
- B. Accurately place and secure reinforcement against displacement by firmly wiring at intersections and splices with not less than No. 18 U.S. Standard Gauge annealed wire.
- C. Perform concrete reinforcement work in accordance with CRSI Manual of Standard Practice, Documents 63 and 65. Detailing practices and fabrication shall conform to ACI SP66.
 - 1. Place and secure saddle ties at every other intersection with wire; hold in place with metal chairs or spacers during placing of concrete.
 - 2. Hold bars in beams and slabs to exact location during concrete placement. Use spacers, chairs, or other necessary supports with the following tolerances:
 - a. Bars in Slabs and Beams:
 - 1) Members 8 Inches Deep or Less: $\pm 1/4$ inch.
 - 2) Members 8 Inches to 2 Feet Deep: $\pm 1/2$ inch.
 - 3) Members more than 2 Feet Deep: ± 1 inch.
 - b. Lengthwise of Member: ± 2 inches.
 - c. Concrete Cover to Formed Surfaces: $\pm 1/4$ inch.
 - d. Minimum Spacing Between Bars: $\pm 1/4$ inch.
- D. Turn wire ends away from concrete exterior.
- E. Ensure reinforcing is clean, free from defects and kinks, loose mill or rust scale or coatings that will reduce bond.
- F. Protect exposed reinforcing bars, inserts and plates intended for bonding with future expansion from corrosion.
- G. When welding of reinforcement is specified, comply with AWS D1.4. Do not tack weld crossing bars for assembly of reinforcement, supports or embedded items.
- H. Exterior Slab on Ground and Pavement Dowels:
 - 1. Install round smooth dowels within $\pm 1/4$ inch alignment in vertical and horizontal planes.
 - 2. Secure dowels and sleeves perpendicular to joint and parallel to finished concrete surface.
 - 3. Use prefabricated dowel supports at ends of dowels to maintain alignment.
 - 4. Dowel alignment shall be within specified tolerances.
 - 5. Lightly grease round smooth dowels to prevent bond to concrete.
 - 6. Do not grease plate dowels.

3.7 EMBEDMENTS

- A. Install anchor bolts and embedded bearing devices provided by others.
- B. Provide other anchor bolts and bearing devices shown on Drawings or anchor bolt setting plans or required equipment installation.
- C. Use templates as required for spacing between anchor bolts and set elevations with surveying equipment.
- D. Position and anchor steel shapes, anchor bolts, casings, conduit sleeves, masonry anchorages and other materials embedded in concrete.

- E. Place and secure against displacement miscellaneous steel, pipe sleeves, inserts, anchors, stair abrasive nosings, preformed joint fillers, vapor retarders and miscellaneous embedded items.
- F. Secure embedments to formwork when possible.
- G. Install clean embedments. After concrete placement, clean embedment exposed surfaces of concrete splatter and other foreign substances.
- H. Unless noted otherwise on the Drawings, ensure corner protection angles, bars and other similar embedded metal items are continuous between concrete joints. If shorter lengths are required for metal items, connect the ends by butt-welding entire joint and grinding smooth exposed surface. Ensure embedded metal items are discontinued at construction, contraction and isolation joints.
- I. Temporarily fill voids in sleeves and inserts with easily removable materials.
- J. Before placing concrete on grade, piping and other utilities under concrete shall be inspected, tested, and excavations backfilled and properly compacted to solid bearing.
- K. Allow sufficient time between erection of forms and placing concrete for other trades to install and test their work.

3.8 JOINTS

- A. Joints
 - 1. Provide construction, isolation and contraction joints as indicated on Drawings and as noted below.
 - 2. Bulkheads for construction joints shall be 1-1/2 inch minimum lumber. Do not use permanent preformed metal bulkheads.
 - 3. Provide bulkheads full depth of member.
 - 4. Space joints to allow one continuous placement between bulkheads.
 - 5. Unless otherwise shown on the Drawings, do not extend reinforcement, corner protection angles, bars or other fixed metal items through construction joints or contraction joints in slabs on ground or pavements or through joints between slabs on ground and vertical surfaces.
 - 6. Match joints in walls and curbs with joints in slabs on ground and pavements.
 - 7. Extend joints across tops of walls and curbs unless noted otherwise on Drawings.
 - 8. Ensure saws are equipped with HEPA-filtered dust collection vacuum systems as specified herein.
- B. Contraction Joints:
 - 1. Unless otherwise shown on the Drawings, do not extend reinforcement, corner protection angles, bars or other fixed metal items through construction joints or contraction joints in slabs on ground or pavements or through joints between slabs on ground and vertical surfaces.
 - 2. Match joints in walls and curbs with joints in slabs on ground and pavements.
 - 3. Extend joints across tops of walls and curbs unless noted otherwise on Drawings.
- C. Pavement Joint Construction: Construct weakened-plane control (contraction), and construction joints straight with face perpendicular to concrete surface. Construct transverse joints perpendicular to centerline, unless otherwise detailed.
 - 1. Weakened-Plane Control or Contraction Joints: Provide joints at spacing of 12'-0" on centers, maximum each way. Construct control joints for depth equal to at least 1/4 of the concrete thickness, as follows:
 - a. Form tooled joints in fresh concrete by grooving top with recommended tool and finishing edge with jointer.
 - b. Sawed Contraction Joints:
 - 1) Use saws, blades, skid plates, and accessories by Soff-Cut International, Inc., (800) 288-5040, or approved equal.
 - 2) Provide at least two Soff-Cut saws with blades capable of achieving the required depth of saw cut.
 - 3) Start cutting sawed joints as soon as concrete has hardened sufficiently to prevent raveling or dislodging of aggregates. This will typically be from 1 hour in hot weather to 4 hours in cold weather after completing finishing of slab in that joint location.

- 4) Extend sawed joint to the slab boundaries and abutments, including columns, drains, and other penetrations in the path of a defined joint. Implement methods and timing of the saw cut beyond the limits of the Soff-Cut saw reach to provide a consistent depth of cut with minimal raveling of joint edges.
- c. Saw-Cut Control Joint Dust Collection: Connect one of the following dust collection systems directly to each Soff-Cut saw being used. Select collection system model recommended by the manufacturer to maintain dust emissions at the lowest permissible level for the size of the Soff-Cut blade.
 - 1) Pulsevac Dust Collector by E. G. Enterprises
 - 2) ProVac Dust Collection System by [GladTech, Inc.](#), (614) 251-8111.
 - 3) SoffVac by Soff-Cut International, Inc.
2. Construction Joints: Place construction joints at end of placements and at locations where placement operations are stopped for period of more than 1/2 hour. Construct joints in accordance with details shown.
 - a. Soft Preformed Joint Fillers: Extend preformed joint fillers full-width and depth of joint, and not less than 1/2-inch or more than 1-inch below finished surface. Furnish preformed joint fillers in 1-piece lengths for full width being placed, wherever possible. Where more than 1 length is required, lace or clip preformed joint filler sections together in a single plane.
 - b. Joint Sealants: Install joint sealants in accordance with manufacturer's recommendations.
- D. Doweled Joints: Install dowel bars and support assemblies at joints as indicated. Make provision to prevent concrete bonding to one side of joint by methods shown on the drawings.
- E. Joint filling and sealing is specified in Section 07900.

3.9 CONVEYING

- A. Handle concrete from mixer to place of final deposit as rapidly as practicable and in manner which will assure obtaining specified quality of concrete.
- B. Retempering: Discard concrete which has already begun to set. Do not retemper with water.
- C. Equipment: Provide mixing and conveying equipment of proper size and design to ensure a continuous flow of concrete to delivery end. Do not use aluminum pipe or equipment in contact with concrete.
 1. Mixers, agitators and non-agitating units: Conform to ASTM C 94 and current certification requirements of Department of Transportation in state where concrete plant is located.
 2. Belt Conveyers:
 - a. Use only types which will not cause segregation.
 - b. Discharge runs over 30 feet into hopper.
 3. Chutes: Metal or metal lined not to be installed at slopes greater than 1 vertical to 3 horizontal.
 4. Runways:
 - a. Provide runways or other means above finished concrete level for wheeled conveying equipment.
 - b. Do not support runways on reinforcing.
 - c. Do not wheel equipment directly over reinforcing or metal deck.
 5. Pumps:
 - a. Submit to Testing Lab Agency for review, changes to concrete mix to necessitate pumping.
 - b. Use pump hoses and other slickline components with 5 inch minimum inside diameter.
 - c. For slickline reducers, reduction in diameter shall not exceed 1 inch over a 5 foot length.

3.10 PLACING CONCRETE

- A. Place concrete in accordance with ACI 301; including hot and cold weather placement procedures.
- B. Inspect reinforcement, inserts, and embedded parts before beginning concrete placement to verify accurate size and location.
- C. Ensure reinforcement, inserts, embedded parts and formed joints are not disturbed during concrete placement.

- D. Place concrete in uniform layers, horizontal, 12 to 18 inches thick, exercising care to avoid vertical joints or inclined planes. Place concrete continuously between predetermined construction joints shown on structural drawings. Piling up of concrete in forms to cause separation or loss of ingredients is not permitted.
- E. Do not deposit concrete which has partially set or hardened. Do not deposit initial lubricating mortar when pumping concrete. Remove hardened or partially hardened concrete which has accumulated on forms or reinforcement. Do not place concrete on previously deposited concrete which has hardened sufficiently to cause formation of seams or planes of weakness within respective member or section except as specified.
- F. Deposit concrete as nearly in final position as practical to avoid rehandling. Exercise care to prevent splashing forms or reinforcing with concrete. Do not permit concrete to drop freely a distance greater than 3 feet. Where longer drops are necessary, use chute, tremie, or other conveyance to help avoid separation.
- G. Do not deposit concrete into excavation where water is standing. If place of deposit cannot be successfully pumped dry, place through tremie with outlet end near bottom of place of deposit.
- H. Deliver concrete from only one concrete batch for any given days placement. The same concrete plant shall be used for the entire interior slab placements unless approved in writing prior to change
- I. Do not place concrete over standing water, mud, frost, ice or snow.
- J. Do not use wet screeds.
- K. Consolidation:
 1. Consolidate concrete complying with ACI 301 by vibrating, spading or rodding so that concrete is thoroughly worked around reinforcing.
 2. Do not insert vibrator into portions of concrete that have begun to set.
 3. Keep spare vibrator on job site during concrete operations.
 4. Consolidate and screed slabs to allow construction joint pattern as indicated on Structural Drawings and as specified. Consolidate concrete by vibrating laser screeds. Other vibratory screeding methods are acceptable only in areas where laser screed is not accessible.
 - a. Check laser screed level head a minimum of 3 times during each pour. Use feeler gauge to measure deviations. If deviations are present, replace head with a new straight one.
 5. Use internal vibration along construction joints at both formed and slab abutments. Vibrate under plate dowels. Mark forms before concreting to properly locate dowels after concreting.
 6. Do not use grate tampers, jitterbugs, or mesh rollers.
- L. Do not deposit concrete when plasticity, measured by slump test, is outside specified limits. The addition of water to increase slump will not be permitted.
- M. Vibration: As soon as concrete is deposited, thoroughly agitate with mechanical vibrators and suitable hand tools to work mixture into corners of forms and around reinforcing and embedded items. Use mechanical vibrators with minimum frequency of 9000 revolutions/minute. Do not over vibrate or use vibrators to transport concrete within forms. Insert and withdraw vibrators at approximately 18 inches apart. At each insertion, vibrate generally 5-15 seconds, sufficient to consolidate concrete but not long enough to cause segregation. Keep spare vibrator on job site during concrete placement operations. Do not insert vibrator into lower coarses that have begun to set.
- N. Excessive honeycomb or embedded debris in concrete is not acceptable. Notify Owner Construction Manager upon discovery.
- O. Pumping: Maintain controls for proportioning, mixing, adjustment of mix, and placement in accordance with ACI 301 and ACI 304.2R

3.11 FINISHING PROCEDURE

- A. Formed Surfaces:
 1. Rough-Form Finish:

- a. Patch tie holes and defects. Clip or rub off fins exceeding 1/2 inch in height. Leave surfaces with texture imparted by forms.
 - b. Apply on concrete surfaces not exposed to public view and where noted on Drawings.
 - 2. Smooth-Form Finish:
 - a. Patch tie holes and defects. Remove fins exceeding 1/8 inch in height.
 - b. Apply on concrete surfaces exposed to public view and where noted on Drawings.
- B. Initial Finishing:
 - 1. Re-straighten surface irregularities with a 10 ft highway screed in two directions as close to perpendicular as possible before water appears on concrete surface.
 - 2. Do no further working of surface until time for floating; do not work surface while water is present.
 - 3. "Dry Sprinkle" method finishing is not acceptable and will be cause for rejection
- C. Floating:
 - 1. Begin float operations when bleed water sheen has disappeared and concrete has stiffened sufficiently to allow walking on surface without leaving heel prints more than 1/4 inch deep. Check and level the surface lane to an initial tolerance not exceeding 1/4 inch in ten feet when tested with a ten foot straight edge. Immediately after leveling, refloat surface to a uniform smooth granular surface. Use magnesium or aluminum power float unless otherwise specified.
 - 2. Avoid premature finishing that brings excessive fines to surface causing finished slab to have soft surface which will dust.
- D. Troweling:
 - 1. Delay troweling as long as possible to prevent working excess fines and water to surface. Do not begin until surface moisture film and shine remaining after floating have disappeared. Trowel in alternate pass directions.
 - 2. Power trowel using riding trowel where possible. Use hand trowel in inaccessible areas.
 - 3. Do not over-trowel floors scheduled to receive curing/sealing compound unless specified otherwise.
 - 4. Do not re-wet surface to trowel.
 - 5. Final hand finish passes shall be done in the same direction. Finish all surfaces within a reasonable time period to provide uniformity of appearance.
- E. Broom Finish:
 - 1. Provide a floated finish, then finish with broom.
 - a. Heavy Broom Finish: Steel wire or stiff, coarse, fiber broom.
 - b. Light Broom Finish: Soft-bristled fiber broom.
 - 2. Allow surface to harden sufficiently to retain scoring or ridges.
 - 3. Broom transverse to traffic or at right angles to slope of slab.
- F. Sealing: Apply concrete sealer where noted on the Architectural drawings.
- G. Finish Schedule:
 - 1. Unexposed Exterior Formed Surfaces: Rough form finish.
 - 2. Exposed Exterior Formed Surfaces: Smooth form finish, stone rubbed.
 - 3. Equipment Pads: Troweled
 - 4. Exterior and Interior Curbs: Troweled
 - 5. Sidewalks: Light broom.
 - 6. Ramps and Steps: Heavy broom.
 - 7. Exposed exterior slabs, unless otherwise noted in this Section or on Drawings: Light Broom Finish.

3.12 CURING

- A. General:
 - 1. Cure concrete in accordance with ACI 301, ACI 308R and ACI 308.1, except as noted.
 - 2. Start curing as soon as concrete surface will not be damaged by curing operations.
 - 3. Continuously cure concrete for at least 7 consecutive days.
 - 4. During curing period, do not allow any part of the concrete to become dry.

5. If using forms for curing, keep forms in contact with concrete wet during curing period unless type of form is impervious to water, such as metal or fiberglass.
6. If forms are removed before curing period is complete, continue curing immediately with other approved methods

B. Methods of Curing:

1. Impervious Sheet Cure: Wet exposed surfaces of concrete after completing finishing and then apply prewetted sheet with edges lapped 6 inches minimum and sealed & secured in such manner as to prevent moisture from escaping from concrete from laps or edges. Remove sheets after a 7 day curing period.
2. Curing Compound:
 - a. Apply liquid curing compounds by spraying or rolling uniformly in a single coat on surfaces immediately following final finishing operation.
 - b. Apply curing compound in accordance with manufacturer's recommendations.
 - c. Do not use liquid curing compound on surface against which additional concrete, other finishing materials, or coatings are to be bonded if their bond will be affected by curing compound.
 - d. Spraying shall be by power sprayer.
 - e. Immediately recoat, at the rate specified above, surfaces subjected to rainfall within 3 hours after compound has been applied or surfaces damaged by subsequent construction operations within the curing period.
 - f. Use solvent based curing compounds when compound is applied below 40 F.
 - g.
3. Curing Schedule:
 - a. Unformed surfaces shall receive an impervious sheet cure or curing compound as appropriate except as follows:
 - b. Use impervious sheet cure for exterior color textured finished surfaces.
 - c. Protect and cure finished concrete paving using curing compound.

3.13 JOINT FILLING AND SEALING

- a. Joint filling and sealing is specified in Section 07900

3.14 FORM REMOVAL

- A. Do not remove forms until concrete has hardened sufficiently to support its own weight and imposed construction loads.
- B. Remove forms in manner to avoid damage to concrete.
- C. Formwork for slabs and pavements, curbs and other parts not supporting vertical load of concrete may be removed as soon as concrete has hardened sufficiently to resist damage from removal operations, but in no case sooner than 12 hours.
- D. Remove wood forms from under floors, ramps, steps, and similar places (through temporary openings if necessary) so no material will be left to rot or to be infested by termites.

3.15 TOLERANCES

- A. Conform to requirements of ACI 117 and ACI 301 except as specified herein.
- B. Conform to ACI 117 thickness tolerances for slabs-on-ground.

3.16 FIELD QUALITY CONTROL

- A. Field quality control shall be the responsibility of the Contractor in accordance with Section 01452. Except as specified as mandatory, field quality control testing and inspection shall be at the discretion of the Contractor as necessary to assure compliance with Contract requirements. Owner T&I specified in Appendix B shall not preclude Contractor's responsibility to perform similar routine, necessary, and customary testing and inspection of the methods and frequency suitable for the type of work involved.

- B. Contractor shall collect and certify each delivery ticket of concrete. Verify that tickets indicate type of concrete delivered, amount of water added and time at which cement and aggregate were loaded into truck, and time at which concrete was discharged from truck.
- C. Responsibilities and Duties of Contractor Relative to Owner T&I:
 - 1. Notify CTL not less than 3 working days prior to placing concrete to allow time for site visit.
 - 2. Assist CTL in securing field specimens.
 - 3. Provide and maintain for sole use of CTL, facilities for safe storage and proper curing of concrete test cylinders at project site as required by ASTM C 31 and acceptable to CTL.

3.17 OWNER TESTING AND INSPECTION (T&I)

- A. The Owner will perform testing and inspection as specified in Appendix B (03310).

3.18 NON-CONFORMING WORK

- A. When directed by Owner, repair concrete and related Work which does not conform to specified requirements including strength, durability, tolerances and finishes. Remove and replace defective concrete if repair cannot be accomplished to the satisfaction of Owner's Construction Manager.
- B. Notify Owner's Construction Manager immediately upon discovery of non-conforming Work. Excessive honeycomb or embedded debris in concrete is not acceptable.
- C. Patching: Cut out honeycomb, rock pockets, voids over 1/4 inch in any dimension, surface imperfections and holes left by tie rods and bolts down to solid concrete, but in no case, to a depth of not less than one inch. Make edges of cut perpendicular to the concrete surface. Thoroughly clean, dampen with water and brush-coat the area to be patched with specified bonding agent. Place patching mortar after bonding compound has dried.
- D. Work on which tests have failed shall be corrected as directed by Owner's Construction Manager.

3.19 PROTECTION

- A. Protect finished work.
- B. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and damage.
- C. Patch or replace damaged portions of concrete.
- D. Protect wet cured or impervious sheet cured surfaces as follows:
 - 1. Barricade concrete surfaces immediately after finishing
 - 2. Do not allow light traffic, except for curing purposes, on concrete surfaces until concrete has attained 1800 psi (approx 3 days).
 - 3. Do not allow heavy traffic on concrete surface until concrete has attained, by test, its design strength as noted on drawings, but not sooner than 9 days after placement.
 - 4. Permit concrete to dry minimum of 2 additional days after curing is completed before removing barricades.
- E. Protect surfaces cured with curing compound as follows:
 - 1. Barricade Concrete surfaces immediately after application of curing compound.
 - 2. Do not allow traffic on concrete surfaces sooner than 3 days after placement.

3.20 CLEANING

- A. Remove forms, equipment, protective coverings, and rubbish resulting from concreting operations. Leave finished concrete surfaces in clean conditions. Use vacuum with HEPA-rated filter to remove loose dirt and mud. Do not dry sweep. Remove mortar and concrete droppings. Wash concrete floors and platforms with soapy water and rinse with clean water.

B. Dispose of construction and universal waste in accordance with the requirements of Section 01351.

SECTION 03311 (03 3110) – SITEWORK STRUCTURAL CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Selected cast-in-place structural concrete for concrete structures related to civil sitework including the following:
 - a. Exterior light pole bases.
 - b. Drainage structures including manholes, inlets, catch basins, collars, support blocks, headwalls and paved ditches.
- B. Related Requirements:
1. Section 02630 – Storm Drainage: Materials and installation of storm drainage structures.
 2. Section 02715 - Base Course: Base for exterior concrete slabs except as otherwise specified herein.
 3. Section 03310 – Structural Concrete and Exterior Concrete Slabs: Materials, quality assurance, and standards publications for concrete, excluding administrative requirements, submittals, and testing.
 4. Appendix B – Testing, Inspection, and Observation by Owner. Testing for concrete light pole bases and CEC site observation requirements for drainage structures.
 5. Section 05500 - Metal Fabrications: Other metal components cast into concrete.
 6. Section 16525 – Site Lighting: Accessories for light pole.

1.2 REFERENCES

- A. The publications listed below and included in Section 03310 form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. Mandatory Provisions: In publications referred to herein, advisory provisions shall be considered to be mandatory.
- C. American Association of State Highway and Transportation Officials (AASHTO): Standard Specification For Transportation Materials And Methods Of Sampling and Testing :
1. AASHTO T318 - Water Content of Freshly Mixed Concrete Using Microwave Oven Drying (Formerly AASHTO TP 23)
- D. Concrete Reinforcing Steel Institute (CRSI):
1. CRSI Manual of Standard Practice.
 2. CRSI Placing Reinforcing Bars.
- E. International Code Council, Inc.:
1. International Building Code (IBC).
- F. National Ready Mixed Concrete Association:
1. NRMCA Inspection Standards

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Comply with ACI 301, ACI 318, and CRSI Manual of Standard Practice provisions except where more stringent requirements are shown or specified in Section 03310:

1.4 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and Section 03310.

1.5 ENVIRONMENTAL REQUIREMENTS

- A. Hot and cold weather concreting shall be in accordance with ACI 305.1 (hot weather) and 306.1 (cold weather) as specified in Section 03310.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Refer to the requirements of Section 03310 for the following materials for concrete in light pole bases and drainage structures:
 - 1. Forms.
 - 2. Aggregate Base and Choker Materials.
 - 3. Reinforcement unless otherwise specified herein.
 - 4. Aggregate Base.
 - 5. Cementitious Materials.
 - 6. Water.
 - 7. Fly Ash.
 - 8. Slag.
 - 9. Air Entrainment.
 - 10. Evaporation Retardant.
 - 11. Bonding agent, patching mortar, and joint materials where required.

2.2 CONCRETE MIX

- A. Mix and deliver concrete in accordance with ASTM C 94 and the requirements of Section 03310 for structural concrete for air entrainment, pumping, admixtures, SCM, and calcium chloride.
- B. Drainage structures including manholes, inlets, catch basins, collars, support blocks, headwalls and paved ditches:
 - 1. ACI 301.
 - 2. Compressive Strength: 3500 psi at 28 days.
 - 3. Reinforcement: ASTM A 615, grade 60 deformed reinforcing bars, and ASTM A 185 for wire fabric.
 - 4. Refer to the requirements of Section 03310 for maximum water-cementitious material ratio, slump range, and air content.
- C. Concrete cradles:
 - 1. Compressive Strength: 3000 psi mix with a minimum thickness of 6 inches.
 - 2. Refer to the requirements of Section 03310 for ACI exposure, maximum water-cementitious material ratio, slump range, and air content

2.3 MIXING

- A. Refer to the requirements of Section 03310 for ready-mixed or site-mixed concrete.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Remove loose material from compacted base material surface to produce firm, smooth surface immediately before placing concrete.
- B. Pre-placement Inspection: All trades and participants involved shall verify that preparations are in conformance with Contract Documents. Inspect reinforcement, inserts, and embedded parts before beginning concrete placement to ensure accurate size and location. Use approved sign-off forms.
- C. Drainage Structures: Notify CTL minimum 48 hours prior to commencement of concreting operations
- D. Cleaning Equipment: Remove hardened concrete and foreign materials from mixing and conveying equipment.
- E. Ensure that all work is properly coordinated:
 - 1. Drawings and Specifications with those of other disciplines.

3.2 INSTALLATION - GENERAL

- A. Construct cast-in-place drainage structure sections as shown on the drawings and in accordance with Section 03310.
 - 1. Form bottom of excavation clean and smooth to correct elevation.
 - 2. Form and place cast-in-place concrete base pad, with provision for storm sewer pipe to be placed at proper elevation.
 - 3. Form and place cast-in-place concrete walls, sleeved at proper elevation to receive storm sewer pipe in accordance with details shown on Drawings.
- B. Refer to the requirements of Section 03310 for additional form construction and removal, reinforcement, aggregate base, embedments, placement, finishing, and curing.
- C. Check surface areas at intervals necessary to eliminate ponding areas.

3.3 TOLERANCES

- A. Conform to requirements of ACI 117 and ACI 301 except as specified herein.
- B. Conform to ACI 117 thickness tolerances for slabs-on-ground.

3.4 FIELD QUALITY CONTROL

- A. Field quality control shall be the responsibility of the Contractor in accordance with Section 01452. Except as specified as mandatory, field quality control testing and inspection shall be at the discretion of the Contractor as necessary to assure compliance with Contract requirements. Owner T&I specified below shall not be considered a substitute for the Contractor's responsibility to perform similar routine, necessary, and customary testing and inspection of the methods and frequency suitable for the type of work involved.
- B. Contractor shall collect and certify each delivery ticket of concrete. Verify that tickets indicate type of concrete delivered, amount of water added and time at which cement and aggregate were loaded into truck, and time at which concrete was discharged from truck.
- C. Responsibilities and Duties of Contractor Relative to Owner T&I:
 - 1. Notify CTL not less than 3 working days prior to placing concrete to allow time for site visit.
 - 2. Assist CTL in securing field specimens.
 - 3. Provide and maintain for sole use of CTL, facilities for safe storage and proper curing of concrete test cylinders at project site as required by ASTM C 31 and acceptable to CTL.

3.5 OWNER TESTING AND INSPECTION (T&I)

- A. Owner's testing and inspection (T&I) is specified in Appendix B (03311).
- B. Civil Engineering Consultant Observation: The Owner's Civil Engineering Consultant (CEC) will perform special observations as specified in Appendix B (Section 01456).

3.6 NON-CONFORMING WORK

- A. Refer to the requirements of Section 03310 for procedures for non-conforming work.

3.7 PROTECTION AND CLEANING

- A. Refer to the requirements of Section 03310 for procedures for protection and cleaning of concrete.

END OF SECTION

SECTION 03314 (03 3014) – INTERIOR CAST-IN-PLACE CONCRETE SLABS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cast-in-place concrete slabs including the following:
 - a. Interior floor slabs on ground.
 - b. Interior suspended slabs on metal deck.
2. Aggregate base below slab on ground.
3. Slab reinforcement and accessories.

B. Related Requirements:

1. Section 01351 – Regulatory Compliance:
 - a. Disposal and removal of construction and universal waste.
 - b. Work practice control methods for airborne respirable dust.
2. Section 03310 - Structural Concrete and Exterior Concrete Slabs:
 - a. All concrete not included in this Section including structural concrete work and exterior slabs including exterior sidewalks, door stoops, equipment pads.
3. Section 03362 - Burnished Concrete Floor Finishes: Cleaning, application of densifier and burnishing of floor slabs.
4. Section 03363 – Polished Concrete Floor Finishes for Interior Slabs – Requirements for polished floor finish.
5. Section 05120 - Structural Steel: Column anchor bolts.
6. Section 05500 - Metal Fabrications: Metal components cast into concrete.
7. Section 07900 - Joint Sealers: Joint fillers and sealants for floor slabs.
8. Section 09650 - Resilient Flooring:
 - a. Joint subfloor filler for contraction and construction joints concealed by floor finish material.
 - b. Concrete slab moisture & pH testing.
9. Section 09675 - Resinous Flooring:
10. Appendix B – Testing, Inspection, and Observation by Owner: Procedures for inspection, testing, and documentation by Owner furnished testing laboratory.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American Association of State Highway and Transportation Officials (AASHTO):
 1. Standard Specification For Transportation Materials And Methods Of Sampling and Testing:
 - a. AASHTO T318 - Water Content of Freshly Mixed Concrete Using Microwave Oven Drying (Formerly AASHTO TP 23).
 - b. AASHTO M147 – Materials for Aggregate and Soil-Aggregate Subbase, Base, and Surface Courses
- C. American Concrete Institute (ACI):
 1. ACI 117 - Tolerances for Concrete Construction and Materials and Commentary.
 2. ACI 301 - Structural Concrete.
 3. ACI 305.1 - Hot Weather Concreting.
 4. ACI 306.1 - Cold Weather Concreting.
 5. ACI 308.1 - Standard Specification for Curing Concrete.
 6. ACI 347 - Formwork for Concrete.
 7. ACI SP66 - ACI Detailing Manual.
- D. ASTM International (ASTM):
 1. ASTM A 36 - Carbon Structural Steel.
 2. ASTM A 615 - Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
 3. ASTM A 706 - Low-Alloy Steel deformed and Plain Bars for Concrete Reinforcement.

03314-1

4. ASTM C 31 - Making and Curing Concrete Test Specimens in the Field.
5. ASTM C 33 - Concrete Aggregates.
6. ASTM C 39 - Concrete Specimens, Compressive Strength of.
7. ASTM C 42 - Standard Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete.
8. ASTM C 94 - Ready-Mixed Concrete.
9. ASTM C 138 - Standard Test Method for Density (Unit Weight), Yield, and Air Content (Gravimetric) of Concrete.
10. ASTM C 143 - Standard Test Method for Slump of Hydraulic Cement Concrete.
11. ASTM C 150 - Portland Cement.
12. ASTM C 171 - Sheet Materials for Curing Concrete.
13. ASTM C 172 – Sampling Freshly Mixed Concrete.
14. ASTM C 173 - Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method.
15. ASTM C 231 - Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method.
16. ASTM C 403 - Time of Setting of Concrete Mixtures by Penetration Resistance.
17. ASTM C 494 - Chemical Admixtures for Concrete.
18. ASTM C 618 - Fly Ash and Raw or Calcined Natural Pozzolan for use as a Mineral Admixture in Portland Cement Concrete.
19. ASTM C 881 - Epoxy-Resin-Base Bonding Systems for Concrete.
20. ASTM C 989 - Ground Granulated Blast-Furnace Slag for Use in Concrete and Mortars.
21. ASTM C 1064 - Standard Test Method for Temperature of Freshly Mixed Hydraulic-Cement Concrete
22. ASTM C 1218 - Water-Soluble Chloride in Mortar and Concrete.
23. ASTM C 1602 - Mixing Water used in the Production of Hydraulic Cement Concrete.
24. ASTM D 448 - Classification for Sizes of Aggregate for Road and Bridge Construction.
25. ASTM D 698 - Moisture-Density Relations of Soils and Soil-Aggregate Mixtures Using 5.5 lb (2.49 Kg) Hammer and 12-in (305 mm) Drop.
26. ASTM D 1241 - Materials for Soil-Aggregate Subbase, Base and Surface Courses
27. ASTM E 1155 - Determining Floor Flatness and Levelness Using the F-Number System (Inch-Pound Units).
28. ASTM E 1643 - Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.
29. ASTM E 1745 - Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs.

E. American Welding Society (AWS):

1. AWS D1.4 - Structural Welding Code Reinforcing Steel.

F. Concrete Reinforcing Steel Institute (CRSI):

1. CRSI Manual of Standard Practice.
2. CRSI Placing Reinforcing Bars.

G. National Ready-Mixed Concrete Association:

1. NRMCA Inspection Standards.

H. Occupational Safety and Health Administration (OSHA):

1. OSHA 01926.1153 Respirable Crystalline Silica.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Minimize dust emissions and provide equipment that suppresses dust.

1.4 ADMINSTRATIVE REQUIREMENTS

- A. Pursuant to Article 2.7 of the Construction Contract Between the Owner and Contractor, the Owner has the right to perform construction work and to award separate contracts on the Site.

- B. The construction work and separate contracts on the Site associated with the floor slab construction may include but are not limited to Building Automation System (BAS) cabling, LP cabling, CCTV cabling, HVAC testing and balancing, telecommunications, data cabling, alarms, and refrigeration.

- C. Owner or Separate Contractor Responsibilities: The following provisions are provided as information to Contractor with respect to the responsibilities of the Owner or separate contractors doing work on, or related to, the building floor slab construction. The Owner or separate contractors must:
1. Notify Contractor's superintendent 1 week prior to the start of the work at Site. Provide names and contact phone numbers to Contractor's superintendent.
 2. Coordinate work and schedule activities with floor slab construction to avoid interference and to minimize detrimental effects to floor finish.
 3. Comply with floor protection measures as specified in this Section and as described in Contractor's Concrete Floor Protection Plan.
 4. Damage to concrete floor finish determined by the Owner to be the responsibility of Owner or separate contractor will be repaired in accordance with approved methods, materials, and personnel at the expense of Owner or separate contractor.
- D. Pre-Slab Installation Meeting:
1. Plan, host, and attend Pre-slab Installation Meeting to be conducted at Site by Owner's Concrete Consultant via teleconference.
 2. Schedule meeting between 7 and 14 days prior to first concrete slab placement.
 3. Obtain Pre-slab Installation Meeting agenda from Concrete Consultant (Structural Services, Inc. (SSI), (877) 774-2677.
 4. Require responsible representatives of each party involved with the interior concrete slab work to attend the meeting. Representatives to be present shall include personnel who are directly involved in overseeing the work for each placement and who have authority to control the concreting work.
 5. Notify all required attendees in writing of scheduled time and place at least two weeks in advance of meeting. Include copy of agenda with invitation.
 6. The meeting shall convene only when all parties are present.
 7. Attendees shall include, but not be limited to the following:
 - a. Owner's Construction Manager.
 - b. Owner's Concrete Consultant.
 - c. Contractor.
 - 1) Project Manager.
 - 2) Superintendent.
 - d. Concrete Subcontractor
 - 1) Project Manager.
 - 2) Finish Foreman.
 - e. Concrete Supplier.
 - 1) Quality Control Representative.
 - f. Base Fine Grading Contractor
 - g. Owner's Construction Testing Laboratory.
 - h. Densifier Manufacturer's Representative.
 - i. Densifier Applicator and Burnished Floor Surface Installer.
 - j. Joint Filler Manufacturer's Representative.
 - k. Joint Filler Subcontractor.
 8. Meeting Minutes: Record on the agenda document, discussions of meeting and decisions and agreements reached. Submit in accordance with the requirements of Submittals paragraph.
 9. Changes to Contract Documents from recommendations or discussions at the Pre-slab Installation Meeting shall be approved in writing by Owner's Construction Manager prior to implementation.

1.5 SUBMITTALS

- A. Submittal Procedures: Unless otherwise specified herein, submit in accordance with procedures specified in Section 01330.
- B. Submit submittal items concurrently for submittals shown with the same submittal date specified in the Concrete Submittal Register included at the end of this Section. Do not submit submittals of this section together with submittals in Section 03310 or any other Section. Identify submittals explicitly in accordance with the requirements of Section 01330.
- C. Submit all submittals electronically in PDF format via email, unless otherwise specified, to designated parties in the Concrete Submittal Register at the end of this Section.

- D. Sieve Analysis for Aggregate Base System: Submit current sieve analysis report for aggregate base and choker material.
- E. Concrete Finishing Sub-contractor's Qualification Statement: Submit Concrete Finishing Sub-Contractor's Qualifications Statement form included at the end of this Section including Floor Finisher Qualifications as required in Quality Assurance paragraph.
 - 1. Provide ACI certification documents for at least three finishers who will install all interior slab placements.
- F. Slab Reinforcing Bar Shop Drawings:
 - 1. Complete information for installing reinforcing, including placement plans, bar bending diagrams, splice lengths and locations, bar spacing, concrete cover, and support devices and accessories.
 - 2. Detail in accordance with ACI SP 66.
 - 3. Perimeter foundation tie reinforcing submittals is specified in Section 03310.
- G. Steel Fiber Reinforcement:
 - 1. Submittals for Review:
 - a. Product Data: Steel fiber reinforcement manufacturer's standard product description and dosage and mixing instructions.
 - 2. Informational Submittals:
 - a. Test Reports: Uniform Evaluation Service (UES) certified test results for steel fiber reinforcement.
 - b. Batch Tickets: When steel fiber reinforcement is added at a ready-mix plant, furnish batch tickets indicating:
 - 1) Information required by ASTM C94.
 - 2) Type and amount of steel fiber reinforcement added to concrete mix.
- H. Mix Design: Submit Concrete Slab Mix Design Submittal Form at the end of this Section.
 - 1. Submit only one form indicating same mix design proportions for all interior slab concrete.
 - 2. Include applicable information shown on the Mix Design Submittal Form including the following:
 - a. Proportions of cementitious materials, fine and coarse aggregate, and water.
 - b. Water cementitious material ratio, 28-day compressive design strength, slump, and air content.
 - c. 28-day flexural design (tensile) strength.
 - d. Type of cement, fly ash, slag, and aggregate.
 - e. Individual aggregate gradation.
 - f. Type and dosage of admixtures.
 - g. Special characteristics of mix which require precautions in mixing, placing, or finishing techniques to achieve finished product specified.
- I. Attachments to Concrete Mix Design: Submit the following with the Concrete Mix Design:
 - 1. Cementitious materials mill test reports for the following:
 - a. Portland cement.
 - b. Fly ash or slag. (If approved for ASR or corrosive soils mitigation)
 - 2. Designation, type, quality, and source (natural or manufactured) of coarse and fine concrete aggregate materials.
 - 3. Sieve Analysis Reports for Concrete Aggregate: Provide separate reports of particle distribution, calculating cumulated percentages passing for all individual aggregates required on the mix form. Sieve analysis sampling and testing for each aggregate source shall be conducted within 60 days of concrete submittal date.
 - 4. Concrete Aggregate Supplier Statement:
 - a. Stating if aggregate is possibly alkali-reactive, based on tests or past service
 - b. Stating if aggregate can possibly cause pop-outs, "D" cracking, or other disruptions due to moisture gain, freezing, or other mechanisms, based on tests or past service.
 - 5. Product data for the following concrete materials admixtures:
 - a. Water reducing.
 - b. Water reducing and retarding.
 - c. Accelerating.
 - d. Chloride ion content for each admixture.
 - 6. Chloride-Ion Content: Measured water-soluble chloride-ion content (percent by weight of cementitious materials) in accordance with ASTM C 1218.
 - 7. Concrete compressive strength data as required by ACI 301.
 - 8. Past compression test reports on each mix as required by ACI 301.

9. Time of Initial Setting: Initial setting time in accordance with ASTM C 403 if supplementary cementitious material (SCM) mix is to be used.
- J. Product Data: Brand name, chemical composition, installation directions and certificates of compliance with required standards for the following products:
 1. Vapor retarder and tape.
 2. Curing compound.
- K. Slab Joint and Placement Plan:
 1. Develop and submit slab joint and placement plan.
 2. Plan shall identify the following:
 - a. Exterior walls and column grid locations.
 - b. Extent of pours including width, length, slab placement area and volume.
 - c. Sequence of placement.
 - d. Locations of construction joints.
 - e. Location of sawn contraction joints if different from those shown on the structural drawings.
- L. Concrete Floor Protection Plan. Submit Concrete Floor Protection Plan addressing procedures specified in Part 3 of this Section.
- M. Pre-Slab Installation Meeting Documents:
 1. Record of Notification of pre-slab meeting including company name, persons contacted, and date and method of contact.
 2. Meeting Agenda.
 3. Meeting Minutes. Submit meeting minutes including attendance record to participants and Owner's Construction Manager. Minutes of the meeting shall be distributed to parties in attendance by the Contractor within 5 days of the meeting. One copy of the minutes shall also be transmitted to the Owner Construction Manager for information purposes.
- N. Delivery Tickets:
 1. Submit delivery tickets for each load of concrete delivered to site.
 2. Indicate information required by ASTM C 94 on each ticket including additional information required for slabs.
 3. Information on ticket shall include quantities of all material batched including the amount of free water in the aggregate and the quantity of water that can be added at the site without exceeding the maximum water cement ratio of the approved mix design. Aggregate moisture corrections shall be based on ASTM definitions of aggregate moisture content and absorption.
 4. Mix identification number on ticket shall match number on submitted and approved mix design.

1.6 QUALITY ASSURANCE

- A. Tolerances:
 1. Conform to most stringent requirements of ACI 117 and ACI 301 except as specified herein.
 2. Slab on grade dowels:
 - a. Install dowels within plus or minus (+/-) 1/8" in dowel alignment in vertical and horizontal planes.
 - b. Install dowels horizontally on the bulkhead at the greater depth of either mid-slab or 2-1/4 inch from slab surface to center line of the plate.
- B. Penetrating Hardener/Densifier Installer Qualifications:
 1. Minimum of 15 concrete finish applications within last 3 years similar in type and size to Work of this Contract.
 2. Provide letter of certification from the penetrating hardener/densifier manufacturer stating that installer is a certified applicator of the specified concrete finish material and is familiar with proper procedures and installation requirements required by manufacturer.
- C. Workmanship:
 1. Remove and replace or repair concrete related Work which does not conform to specified requirements including strength, tolerances and finishes as directed by Owner.
 2. Bear cost of corrections or delays to other work affected by, or resulting from, corrections to concrete Work.

03314-5

3. If results of compressive strength tests reveal deficiencies in concrete, meet requirements of ACI 301.

D. Concrete Truck Inspection:

1. Conform to ASTM C 94, NRMCA and Department of Transportation standards in state where project is located with respect to truck mixer requirements.
2. Perform inspections immediately before starting concreting operations.
3. Record the identification numbers of those trucks found to be acceptable on the basis of inspections.
4. Do not bring on site for concreting operations, any truck whose identification numbers are not recorded as acceptable. Notify CTL if non-conforming trucks are used to deliver concrete for interior.

E. Concrete Supplier Approval: Concrete Supplier and materials provided shall be fully approved by and acceptable to Concrete Subcontractor as the producer of concrete which Sub-contractor is to place and finish. Prepare Statement of Approval of Concrete Supplier stating project name, name of concrete supplier, along with the statement of approval and signatures of the Contractor and Concrete Floor Sub-contractor. Submit statement as specified in Submittals paragraph.

F. Floor Finisher Qualifications:

1. The concrete floor finishing subcontractor lead finisher and at least two additional members of the finishing crew shall be certified under the Concrete Flatwork Finisher Training and Certification Program as granted by the American Concrete Institute and shall be present during finishing of interior floor slab concrete. Certified individuals executing finish operations shall have documentation of current certification available for inspection on Site at all times.
2. The concrete floor finisher subcontractor shall be a subcontractor directly under the General Contractor and shall have experience in finishing interior floors of similar size and scope in at least 5 previous projects.

G. Owner's Concrete Consultant: The Concrete Consultant is a consultant hired by and contracted by the Owner for the purpose of reviewing proposed concrete mix design and other submittals specified herein. Testing and inspection by the Concrete Consultant is specified in Appendix B (Section 03314). The Owner's Concrete Consultant is as follows:

1. [Structural Services, Inc. \(SSI\)](#), (877) 774-2677.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.
- B. Deliver materials in unopened containers with labels identifying contents. Keep containers closed and upright to prevent leakage.
- C. Mark reinforcing, accessories and embedded items for proper identification and placement location.
- D. Store Steel Fiber reinforcement in protected, dry location until used; prevent contamination by other materials.
- E. Store materials, except aggregate, off ground in dry area and in manner to prevent damage. Protect liquid materials from freezing.
- F. Stockpile aggregate in manner to prevent contamination with other materials or with other sizes of aggregates. Do not use bottom 6 inches of aggregate piles in contact with ground. Allow sand to drain until it has reached uniform moisture content before it is used.
- G. Store loose granular materials on solid flat surfaces in a well-drained area. Prevent mixing with foreign matter.
- H. Store admixtures in manner to prevent contamination. Protect admixtures from extreme temperatures which would adversely affect their characteristics.

1.8 PROJECT CONDITIONS

A. Air Quality:

1. Provide adequate ventilation to work area at all times.
 2. Do not operate combustible fuel equipment, with the exception of propane powered equipment found in this specification, within building perimeter walls.
 3. Do not use unvented combustion heaters during concrete placement so as to prevent exposure of concrete to excessive exhaust gases containing carbon dioxide (CO₂) or carbon monoxide (CO). During slab placement and curing periods, maximum CO₂ levels shall be 4,500 parts per million and maximum CO levels shall be 15 parts per million at concrete surface within 5 feet of any source of exhaust gases to minimize potential damage to concrete.
- B. Hot and cold weather concreting shall be in accordance with ACI 305.1 (hot weather) and 306.1 (cold weather) except as otherwise specified herein. In case of conflict, provisions stated herein shall prevail over the ACI standard specifications.
- C. Concreting in Hot, Dry or Windy Weather:
1. Determine rate of evaporation in accordance with ACI 305.1.
 2. Employ precautions as required to protect fresh concrete before and during finishing when the concrete rate of evaporation exceeds 0.1 pounds per square foot per hour or when any combination of concrete materials and weather conditions are favorable for the formation of plastic shrinkage cracks.
 - a. Cool ingredients before mixing to reduce concrete temperature at time of placement. Mixing water may be chilled, or chopped ice may be used to control the concrete temperature provided the water equivalent of the ice is calculated to the total amount of mixing water.
 - b. Dampen subgrade and forms.
 - c. Cover reinforcing steel with water soaked burlap so the steel temperature will not exceed the ambient air temperature immediately before embedment in concrete.
 3. Maintain an accurate reading thermometer at the Site to check temperature of concrete
 4. Temperature of concrete at time of placing: Not to exceed 95 degrees F.
 5. Reject concrete if more than one slump adjustment, as defined in ASTM C 94, is required.
 6. Do not place concrete when forms, subgrade, aggregate base or reinforcing bars are more than 120 degrees F or the temperature differential between the forms, aggregate base, or reinforcing bars and concrete will create conditions favorable for settlement cracks or thermal cracking.
- D. Concreting in Cold Weather:
1. Minimum base surface temperature and ambient building air temperature shall be 55 degrees F during placement and throughout curing period except as otherwise specified herein. In case of conflict, provisions stated herein shall prevail over the ACI standard specifications.
 2. Measure and record concrete temperature during protection period at regular time intervals, but not less than 3 times per 24 hours.
 3. Do not place slabs on subgrade, or base that is more than 20 degrees F cooler than concrete. Warm subgrade, or base to decrease temperature differential to 20 degrees F or less.
 4. Minimum concrete temperature as measured at the point of discharge shall be 60 F.(65 F for approved SCM mix)
 5. Do not use unvented combustion heaters during concrete placement so as to prevent exposure of concrete to excessive exhaust gases containing carbon dioxide (CO₂) or carbon monoxide (CO). During slab placement and curing periods, maximum CO₂ levels shall be 4,500 parts per million and maximum CO levels shall be 15 parts per million at concrete surface within 5 feet of any source of exhaust gases to minimize potential damage to concrete.
- E. Placing Environment:
1. Slab on ground concrete and concrete over metal deck shall be placed within a completely enclosed structure after the roof membrane is completely installed and watertight.
 - a. Roof construction, overhead painting, and roof drainage system shall be complete and weather tight prior to placement of concrete slabs.
 - b. Lighting: Permanent lighting or equivalent temporary lighting shall be operational during all slab placements.

PART 2 PRODUCTS

2.1 MATERIALS

03314-7

- A. Subject to compliance with project requirements, provide products as manufactured by the following to the extent as specified hereinafter for the specific product:
1. [BASF Admixture Systems](#), (800) 628-9990.
 2. [BASF Building Systems](#), (800) 433-9517.
 3. [BW Manufacturing, Inc.](#), (616) 447-9076.
 4. [Commercial Metals Company](#) (214) 689-4300.
 5. [Dayton Superior](#) (877) 416-3439.
 6. [DBB \(Dowel Bars and Baskets\) Co.](#) 816.994.9090.
 7. [Dustless Technologies](#), (435) 637-5885.
 8. [Euclid Chemical Co.](#), (877) 438-3826.
 9. [Fortifiber Building Systems Group](#), (800) 773-4777.
 10. [L.M. Scofield](#), (800) 800-9900.
 11. [L&M Construction Chemicals](#), (402) 453-6600
 12. McTech Group, (866) 913-8363.
 13. [PNA Construction Technologies](#), (800) 542-0214.
 14. [Raven Industries, Inc.](#), Sioux Falls, SD (800) 635-3456.
 15. [Sika Corp.](#), (Sika and Greenstreak products), (800) 933-7452.
 16. [Husqvarna](#), (800) 288-5040.
 17. [SpecChem](#) (866) 791-8700.
 18. [Stego Industries, LLC](#), (877) 464-7834.
 19. [GCP Applied Technologies](#) (formerly W.R. Grace and Co.), (713) 223-8353.
 20. [W.R. Meadows, Inc.](#), (847) 214-2100.
 21. [Vexcon Chemicals, Inc.](#), (888) 839-2661.
- B. Substitutions: Comply with the requirements of Section 01600 unless specified otherwise herein.

2.2 AGGREGATE BASE AND CHOKER MATERIALS

- A. Aggregate Base Material:
1. Gradation: Conform to requirements shown on the Structural Drawings.
 2. Material passing the No. 200 sieve shall be clean granular fill with less than 3% clay and/or friable particles.
- B. Aggregate Choker Material: Clean granular fill with less than 3% clay and/or friable particles. Use one of the following gradations:
1. ASTM D 448 No. 10 with 6% to 12% passing No. 200 sieve.
 2. Material meeting the following gradation:

Standard Sieve Size	% Passing
No. 4	85-100
No. 8	75-95
No. 16	55-75
No. 50	22-45
No. 100	10-30
No. 200	6-12

2.3 FORMWORK

- A. Forms:
1. Plywood, metal, metal-framed plywood faced, or other acceptable panel-type materials to provide continuous, straight, smooth, exposed surfaces.
 2. Furnish forms in largest practicable sizes to minimize number of joints and to conform to joint system shown on Drawings.
 3. Provide lumber dressed on at least two edges and one side for tight fit.
 4. Bevel top outside edge of form.
 5. Do not use partial depth forms.

- B. Form Release Agent:
1. 100% biodegradable, non-toxic, 100% natural organic chemical release agent. Will not cause surface imperfections, non-staining, and compatible with field applied paints, toppings, curing compounds, and other coatings. Use same brand form release agent for all forms. Provide one of the following:
 - a. [Form-EZE Natural](#) by Euclid.
 - b. [Bio-Release EF](#) by Dayton Superior.
 - c. [Star Seal EF V Release](#) by Vexcon.
 - d. [BioStrip WB](#) by SpecChem.

2.4 REINFORCEMENT

- A. Reinforcing Bars:
1. ASTM A 615, deformed, Grade 60.
 2. ASTM A 706, deformed, Grade 60.
- B. Welded-Wire Reinforcement: ASTM A 1064:
1. Plain, fabricated from as-drawn steel wire into flat sheets.
 2. Deformed steel wire, flat sheet.
- C. Steel Fiber Reinforcement:
1. Standard Fiber:
 - a. Description: High-carbon, galvanized, cold-drawn steel wire conforming to ASTM A820, Type 1, free from surface contaminants.
 - b. Tensile strength: 50 KSI (345 MPa).
 - c. Galvanized coating thickness: Minimum 3 grams per square meter.
 2. Micro-Fiber Reinforcement (Alternate Option):
 - a. Source: **Helix 5-25 by Helix Steel** (www.helixsteel.com) or approved substitute
 - b. Description: High-carbon, galvanized, cold-drawn steel wire conforming to ASTM A820, Type 1, continuously twisted about its axis, free from surface contaminants.
 - c. Tensile strength: 268.3 KSI (1850 MPa).
 - d. Galvanized coating thickness: Minimum 3 grams per square meter.
 - e. Length: 1.0 inch (25 mm).
 - f. Equivalent diameter: Maximum 0.02 inch (0.50 mm).
- D. Tie Wire:
1. Minimum 16 gage annealed type.
- E. Reinforcing Support Devices:
1. Manufactured support devices of metal (wire bar), concrete, or recycled plastic devices conforming to CRSI Manual of Standard Practice.
 2. Precast concrete bar supports shall have minimum compressive strength of 3500 psi.
 3. Plastic accessories shall have a minimum of 50% recycled content.
 4. Do not use wood, clay brick, and other devices that can expand due to moisture gain.
 5. For concrete surfaces exposed to view where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.
 6. When precast concrete bar supports are used over aggregate base, or over waterproof membranes and vapor retarders, properly embed tie wires to prevent penetration of substrate.
 7. Properly size foot of bar supports or similar devices to prevent settlement on base material or prevent puncture of vapor retarder on vapor barrier.
 8. When supporting multiple layers of reinforcement, provide the proper size and spacing of bar supports or similar devices to prevent deformation of plastic and to retain rebar within position tolerances.
- F. Plate Dowels – Typical Formed Construction Joints:
1. Provide plate dowels consisting of smooth steel plate bars, ASTM A 36 or ASTM A 108 steel. Do not grease dowels. Provide the following:
 - a. **Diamond Dowel System** by PNA Construction Technologies,
 - 1) Slab thickness 4 inches to 6 inches: size 1/4 inch x 4-1/2 x 4-1/2 inch dowels.
 - a) Spacing: 18 inches on center.
 - 2) Slab thickness 7 inches to 8 inches: size 3/8 inch x 4-1/2 x 4-1/2 inch dowels.

03314-9

- a) Spacing: 18 inches on center.
 - 3) Slab thickness 9 inches to 12 inches: size 3/4 inch x 4-1/2 x 4-1/2 inch dowels.
 - a) Spacing: 18 inches on center.
- G. Joint Edge Protection – Formed Construction Joints where noted on drawings:
 - 1. Provide permanent joint edge protection and plate dowels. Provide the following:
 - a. **Armor-Edge System** by PNA Construction Technologies
 - 1) Diamond Dowels: size 3/4 inch x 4-1/2 x 4-1/2 inch dowels.
 - a) Dowel Spacing: 18 inches on center.
 - 2) Order with joint filler support plate at bottom of vertical plates.
- H. Plate Dowel Baskets – Sawed Contraction Joints:
 - 1. Dowels shall be suspended at mid-slab depth with welded wire, “A” frame, side supports.
 - a. Minimum diameter wire for side frames shall be 0.306 inch.
 - b. Side frames shall consist of a minimum of two longitudinal wires running parallel with the joint to insure proper suspension of dowel during construction over base material.
 - c. Dowels are to be welded to the frame at alternating ends.
 - 2. Dowel shall be smooth ASTM A 36 steel plate as follows:
 - a. Plate bar dowels: 2 inches x 3/8 inch x 12 inches at 24 inches on center.
 - 3. Dowels must be sawed or laser cut, not sheared.
 - 4. Subject to specified requirements, provide dowel basket systems by the following manufacturers:
 - a. Plate Dowels:
 - 1) **PD3 Basket Assembly** by PNA Construction Technologies,
 - a) Slab thickness 7 inches to 8 inches: size 3/8 inch x 2 inch dowels.
 - b) Slab thickness 9 inches to 12 inches: size 3/4 inch x 2-1/2 inch dowels.
 - c) Dowel Spacing: 24 inches on center.
- I. Round Dowels – Formed Construction Joints only where noted on plan:
 - 1. Dowels shall be installed at mid-slab depth.
 - 2. Dowel shall be smooth ASTM A 615 (Grade 40) round bars as follows:
 - a. Round bar dowels: 5/8 inch diameter x 14 inches long at 18 inches on center.
 - 3. Provide bond break between concrete and entire dowel length with manufacturer applied Tektyl 506 coating or approved equal.
 - 4. Dowels must be drilled or cast in place.
 - 5. Subject to specified requirements, provide dowel basket systems by the following manufacturers:
 - a. Round Dowels:
 - 1) Commercial Metals Co.
 - 2) Dayton Superior Paving Products.
 - 3) DBB (Dowel Bars and Baskets) Co.
 - 4) Equivalent approved products.

2.5 CONCRETE MATERIALS

- A. Cement: ASTM C 150, Type I or II. Use only one brand throughout project.
- B. Fly Ash: ASTM C 618, Class C or F. Use only one type and source throughout project.
- C. Slag: ASTM C 989, Grade 100 or 120. Use only one type and source throughout project.
- D. Concrete Aggregate:
 - 1. Conform to ASTM C 33:
 - a. No coal or lignite in concrete that will not be covered by building materials or soil.
 - b. Fine aggregate grading requirements as defined in Section 6.1 of ASTM C 33 shall be strictly met without deviation.
 - 2. If manufactured fine aggregate is used, blend with minimum 50% natural materials.
 - 3. Coarse Aggregate:
 - a. Nominal maximum coarse aggregate size shall be 1 inch for slabs > 5-1/2 inch thick.
 - b. Nominal maximum coarse aggregate size shall be 3/4 inch for slabs ≤ 5-1/2 inch thick.

03314-10

- c. The nominal maximum size of an aggregate is the smallest sieve size through which the major portion of the aggregate must pass, with 1% to 5% retained on the nominal maximum size sieve.
 4. Adjust proportions of combined coarse, intermediate, and fine aggregates to provide the following particle size distribution characteristics, unless otherwise approved:
 - a. Coarseness Factor of 60 to 75%.
 - 1) The Coarseness Factor (CF) is the percent of combined aggregate retained on the #8 sieve that is also retained on the 3/8 inch sieve.
 - 2) The Coarseness Factor is calculated as follows: $CF = \frac{\text{Aggregate retained on } 3/8'' \text{ sieve}}{\text{Aggregate retained on } \#8 \text{ sieve}}$.
 - b. Adjusted Workability Factor:
 - 1) The Workability Factor (WF) is the percent of combined aggregate that passes the #8 sieve.
 - 2) The Adjusted Workability Factor (Adj-WF) is calculated as follows:
 - a) $\text{Adj-WF} = \text{WF} + \left[\frac{\text{Cementitious Material} - 564 \text{ lbs}}{37.6} \right]$
 - 3) The range of accepted Adj-WF for a given CF is as follows:
 - a) $\text{Adj-WF} = [(11.25 - .15 \text{ CF}) + 36] \pm 2.5$.
 - c. Combined percent retained on any given sieve size shall not exceed 24%.
 - d. See Coarseness Factor Chart at the end of this Section.
 5. Aggregate gradation requirements of ASTM C 33 may be waived in order to meet ranges specified
- E. Water: ASTM C 1602.

2.6 CHEMICAL ADMIXTURES

- A. Provide admixture products as specified below. Within each product listing, provide one of the products specified. When specifically allowed within each product listing, equivalent admixture products by other manufacturers meeting the specified ASTM standards may be used upon submittal of product data and approval by SER.
- B. Water Reducing Admixture: ASTM C 494, Type A.
 1. Eucon or Plastol Series by Euclid.
 2. [MasterPozzolith](#), [MasterPolyheed](#), or [MasterGlenium](#) Series by BASF Admixtures.
 3. WRDA, Daracem, Mira, Zyla or Adva Series by GCP Applied Technologies.
 4. Plastiment, Plastocrete, ViscoCrete, Sikaplast, or Sikament Series by Sika Corp.
 5. Equivalent approved products.
- C. Water Reducing and Retarding Admixture: ASTM C 494, Type B or D.
 1. [Eucon Retarder 75](#) by Euclid.
 2. [MasterPozzolith](#) or [MasterSet DELVO](#) Series by BASF Admixtures.
 3. Recover or [Daratard 17](#) by GCP Applied Technologies.
 4. [Plastiment or Plastocrete Series](#) by Sika Corp.
 5. Equivalent approved products.
- D. Accelerating Admixture: ASTM C 494, Type C or E.
 1. [Accelguard 80](#) by Euclid.
 2. Daraset Series, Daracel, Lubricon, Polarset, or DCI by GCP Applied Technologies.
 3. [MasterSet](#) Series by BASF Admixtures.
 4. [Plastocrete 161 FL](#), [Plastocrete 161 HE](#), [Sikasent NC](#), [Sika Rapid 1](#), or [Sikasent HE](#) by Sika Corp.
 5. Equivalent approved products.
- E. Water Reducing Admixture: ASTM C 494, Type F. Do not use high range, Type F, or all range water reducing admixture at Type F dosage rates.
- F. Evaporation Retardant: Water-based polymer, sprayable.
 1. [EucoBar](#) by Euclid
 2. [MasterKure ER 50](#) by BASF Admixtures.
 3. Conspec [Aquafilm](#) by Dayton Superior.
 4. E-Con by L&M.
 5. SpecFilm RTU by SpecChem.

2.7 RELATED MATERIALS

- A. Screed Chairs: Metal.
- B. Vapor Retarder: ASTM E 1745, Class A, sheet membrane material, rolled, as noted below:
 - 1. Top Layer (Vapor Retarder):
 - a. Thickness (Standard Concrete Placement): Not less than 15 mils.
 - b. Thickness (Pumped Concrete Placement): Not less than 10 mils.
 - 2. Bottom Layer (Slip Sheet):
 - a. Thickness: Not less than 6 mils.
 - 3. Approved Suppliers:
 - a. [Stego Wrap](#) by Stego Industries.
 - b. [Moistop Ultra](#) by Fortifiber.
 - c. [Perminator](#), by W.R. Meadows.
 - d. [Yellow Guard](#) by Poly-America.
 - 4. Do not use folder sheets.
- C. Vapor Retarder Tape and Adhesive: Tape and adhesives for sealing laps, punctures, tears and penetrations shall be pressure-sensitive, waterproof adhesive tape, 2 inches minimum width and compatible with retarder.
- D. Pre-Densifier Floor Cleaner: As recommended by densifier manufacturer.
- E. Densifier: Concrete lithium based chemical densifier specifically for concrete surface treatment which reacts chemically to the concrete surface forming a clear, dense, durable, hard, abrasion-resistant surface. Product shall be a colorless, odorless, water-based solution that is less than 50 VOC.
 - 1. SureLock, by American Decorative Concrete.
 - 2. Pentra-Sil (NL) by Convergent.
 - 3. Ashford Formula by Curecrete.
 - 4. Consolideck LS by Prosoco.
 - 5. MasterKure HD 300WB, by BASF (if approved for carbonated or dusting slab).

2.8 CONCRETE CURING MATERIALS

- A. Curing Compound:
 - 1. [SC Cure 500](#) by SpecChem.
 - 2. Penetrating Curing Agent (PCA) by Ameripolish.

2.9 CONCRETE MIX

- A. General:
 - 1. Use only materials and their proportions included in approved Concrete Mix Design.
 - 2. Maintain same source of cementitious materials, chemical admixtures, coarse and fine aggregates for the entire floor slab.
 - 3. Measure and mix ingredients in accordance of ASTM C 94.
 - 4. Concrete supplier may proportion materials by field experience or proportion concrete materials by laboratory trial batches for strength compliance.
- B. Strength: As indicated on Drawings
- C. Workability: Concrete shall be of a consistency to be worked readily into forms and around reinforcement without segregation, voids, or excessive bleeding.
- D. Supplementary Cementitious Materials (SCM):
 - 1. Use SCM in the concrete mix only for mitigation of potential aggregate reactivity.
 - 2. Ternary blended materials are not acceptable. Concrete mix shall contain either fly ash or ground granulated blast furnace slag (GGBFS) but not both.
 - 3. Fly Ash: If used to mitigate potential aggregate reactivity, only Type F fly ash may be used and shall have the following maximum properties: 1.5% available alkali and 8.0% CaO.
 - 4. Ground Granulated Blast Furnace Slag (GGBFS): If required to mitigate potential sulfate exposure or

03314-12

aggregate reactivity, up to 50% GGBFS substitution for Portland cement may be used.

- E. Portland Cement: Use 520 pounds minimum for all interior slab mixes.
- F. Water/Cementitious Materials Ratio: Interior Floor Slabs: 0.53 maximum.
- G. Air-Entraining Admixture: Do not air-entrain interior floor slabs with troweled finish.
- H. Slump: Slump at the point of placement shall not exceed 5 inches subject to the requirement that concrete shall be of a consistency to be worked readily into forms and around reinforcement without segregation, voids, or excessive bleeding. Maximum slump variance shall be 2 inches.
- I. Admixtures:
 - 1. Water-reducing admixture may be added to improve workability only beyond 3 inches of initial water slump. Mix shall have adequate water to produce consistent plastic material properties.
 - 2. Concrete slab mix shall contain only one water reducing admixture.
 - 3. Use admixtures in accordance with manufacturer's recommendation.
- J. Calcium Chloride Admixture:
 - 1. Not permitted in slab applications.
- K. Steel Fiber Reinforcement:
 - 1. Add to concrete mix in accordance with ASTM C1116.
 - 2. Dosage rate: As indicated on Drawings and in accordance with manufacturer's instructions.

2.10 MIXING

- A. Ready-Mixed Concrete:
 - 1. Mix and transport in accordance with ASTM C 94 and ACI 301 except as specified.
 - 2. Reset drum revolution counter to zero on concrete truck when water is added to drum.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Conform to manufacturer's printed instructions for materials and equipment.
- B. Verify anchors, seats, plates, reinforcement, and other items to be cast into concrete are accurately placed, held securely, and will not cause difficulty in placing concrete.

3.2 PREPARATION

- A. Preplacement Inspection: All trades and participants involved shall verify that preparations are in conformance with Contract Documents.
- B. Cleaning Equipment: Remove hardened concrete and foreign materials from mixing and conveying equipment.
- C. Ensure that all work is properly coordinated:
 - 1. Structural Drawings and Specifications with those of other disciplines.
 - 2. Use final corrected submittals.
- D. Roof construction, RTUs, overhead painting, and roof drainage system shall be complete and weather tight prior to placement of slabs.

3.3 AGGREGATE BASE PLACEMENT

- A. Unless otherwise indicated on the Drawings, place aggregate base as specified herein.

- B. Aggregate Base:
 1. Install aggregate base where shown on Drawings.
 2. Compact to final thickness shown on Drawings in layers not exceeding 6 inches with minimum of 2 passes per layer with vibratory compactor.
 3. Compact fill to 98% of aggregate's Standard Proctor as determined by Method D of ASTM D 698.
 4. Leave top of base up to 2 inches low until just prior to concrete placement.

- C. Aggregate Base Fine Grading:
 1. Compact to final thickness noted with 2 passes minimum vibratory compactor to produce smooth, flat, dense surface.
 2. Do not allow excess moisture or soft soil beneath vapor retarder at time of placing concrete.
 3. Level off aggregate base top surface with aggregate choker material as necessary as follows:
 - a. To reduce surface friction and to meet specified fine grade tolerances specified below. Typically required in areas exposed to rain, traffic, or excavation for pits and buried utilities.
 - b. Where aggregate base material does not have sufficient fine particles to produce a surface that is free of exposed aggregate or surface voids greater than 3/8 inch in size at time of slab installation.
 - c. Choker material is not required in aggregate base with adequate surface fines and may only be installed from a dusting to up to 3/4 inch maximum thick.
 4. Use laser guided equipment to establish specified base elevation.
 5. Provide dry, smooth, flat, dense surface. Take corrective action if rutting or pumping is evident during the preparation of the soil support system.
 6. Proof-roll 48 hrs maximum prior to concrete placement. Depression under a fully loaded concrete truck shall not exceed 1/2 inch.

- D. Slab on Ground Aggregate Base Fine Grade Tolerance: +0 inch, -3/4 inch with transition no greater than 3/4 inch vertically to 8 inches horizontally for level slab.

3.4 FORMWORK

- A. Design, construct, and remove formwork and related items in accordance with most stringent requirements of ACI 117 and 347.
- B. Install wood forms in largest practicable sizes to minimize number of joints and to conform to joint system shown on Drawings.
- C. Provide slab side forms, of form materials specified, full depth, with beveled, level, and smooth top surface for all slabs on ground where SOV is greater than FF 35 / FL 25.
- D. Provide slab side forms such that by placing a 10-foot straightedge, form does not exceed 1/8 inch variation.
- E. Prefabricated Access Pit Form: Install in accordance with manufacturer's instructions.

3.5 VAPOR RETARDER INSTALLATION

- A. Install vapor retarder in accordance with ASTM E 1643
 1. Exception: Paragraph 10 – Slab Moisture Content provisions shall not apply.
- B. Sequence installation of vapor retarder no more than 40 feet in advance of laser screed strike-off.
- C. Install slip sheet and vapor retarder layers directly under slabs only where shown on Drawings.
- D. Bottom Layer (Slip Sheet):
 1. Following leveling and tamping of prepared base for slabs, place slip sheeting with longest dimension perpendicular to direction of placement.
 2. Lap joints 6 inches minimum. Do not tape joints or penetrations.
- E. Top Layer (Vapor Retarder):
 1. Following placement of slip sheeting, place vapor retarder sheeting with longest dimension parallel with direction of placement.

2. Lap joints 6 inches minimum and seal continuously with specified tape.
3. Seal punctures and tears in membrane caused by bar chair feet, screed anchors, or utility penetrations with specified tape.

3.6 PLACING REINFORCEMENT

- A. Place reinforcing in accordance with of ACI 117, ACI 301 and CRSI Manual of Standard Practice and Placing Reinforcing Bars.
- B. Accurately place and secure reinforcement against displacement by firmly wiring at intersections and splices.
- C. Turn wire ends away from concrete exterior.
- D. Ensure reinforcing is clean, free from defects and kinks, loose mill or rust scale or coatings that will reduce bond.
- E. Protect exposed reinforcing bars, inserts and plates intended for bonding with future expansion from corrosion.
- F. When welding of reinforcement is specified, comply with AWS D1.4. Do not tack weld crossing bars for assembly of reinforcement, supports or embedded items.
- G. Slab on Ground and Pavement Dowels:
 1. Secure dowels and sleeves (if required) perpendicular to joint and parallel to finished concrete surface.
 2. Use prefabricated dowel supports at ends of dowels to maintain alignment, if necessary.
 3. Dowel alignment shall be within specified tolerances.
 4. Dowels shall be manufactured to provide bond break between steel and concrete.
 5. Do not grease dowels.
 6. Install dowels at construction joints in accordance with manufacturer's recommendations.
 7. Install slab on ground plate dowels within +/- 1/8 inch in dowel alignment in vertical and horizontal planes.
 8. Install slab on ground plate dowels horizontally on the bulkhead at the greater depth of either mid-slab or 2-1/4 inch from slab surface to center line of the plate.
 9. Center slab on ground dowels in baskets at contraction joints horizontally within +/- 2 inches of the saw cut joint.
 10. Install plate dowel baskets at contraction joints in accordance with manufacturer's recommendations and specified requirements.

3.7 CONVEYING

- A. Handle concrete from mixer to place of final deposit as rapidly as practicable and in manner which will assure obtaining specified quality of concrete.
- B. Concrete materials for interior slabs on ground shall be directly deposited from the concrete ready mix truck tailgate or conveyed or transported by buggy to point of placement. Pump placement of materials shall not be performed for interior slabs unless approved in writing for access inside a previously existing structure.
- C. Re-tempering: Discard concrete which has already begun to set. Do not re-temper with water.
- D. Equipment: Provide mixing and conveying equipment of proper size and design to ensure a continuous flow of concrete to delivery end. Do not use aluminum pipe or equipment in contact with concrete.
 1. Mixers, agitators and non-agitating units: Conform to ASTM C 94 and current certification requirements of Department of Transportation in state where concrete plant is located.
 2. Belt Conveyers:
 - a. Use only types which will not cause segregation.
 - b. Discharge runs over 30 feet into hopper
 3. Chutes: Metal or metal lined not to be installed at slopes greater than 1 vertical to 3 horizontal.
 4. Runways:
 - a. Provide runways or other means above finished concrete level for wheeled conveying equipment.
 - b. Do not support runways on reinforcing.
 - c. Do not wheel equipment directly over reinforcing or metal deck.
 5. Pumps:

- a. Use pump hoses and other slickline components with 5 inch minimum inside diameter.
- b. For slickline reducers, reduction in diameter shall not exceed 1 inch over a 5 foot length.

3.8 PLACING CONCRETE

- A. Unless otherwise specified, place concrete in accordance with the requirements of ACI 301.
- B. The following personnel shall be present during all slab placements: Contractor's Superintendent, Concrete Subcontractor's Finish Foreman, Concrete Supplier's Quality Control Representative, and Owner's Construction Testing Laboratory.
- C. Deliver concrete from only one concrete batch for any given days placement. The same concrete plant shall be used for the entire interior slab placements unless approved in writing prior to change.
- D. Depositing:
 1. Place concrete in one continuous placement up to a maximum of 50,000 square feet.
 2. Placement panels shall be rectangular without "L" or "T" shapes.
 3. Do not deposit concrete which has partially hardened or has been contaminated by foreign matter.
 4. Deposit concrete continuously in layers of such thickness that no concrete will be deposited on concrete which has hardened sufficiently to cause seams or planes of weakness.
 5. Between construction joints, place concrete in a continuous operation such that concrete is plastic at all times and flows readily into spaces between reinforcement.
 6. Use placement procedures to avoid segregation.
 7. Deposit concrete as near as possible to its final position.
 8. Do not place concrete over standing water, mud, frost, ice or snow.
 9. Do not use wet screeds.
- E. Consolidation:
 1. Consolidate concrete complying with ACI 301 by vibrating, spading or rodding so that concrete is thoroughly worked around reinforcing.
 2. Do not insert vibrator into portions of concrete that have begun to set.
 3. Keep spare vibrator on job site during concrete operations.
 4. Consolidate and screed slabs to allow construction joint pattern as indicated on Structural Drawings and as specified. Consolidate concrete by vibrating laser screeds. Other vibratory screeding methods are acceptable only in areas where laser screed is not accessible.
 - a. Check laser screed level head a minimum of 3 times during each pour. Use feeler gauge to measure deviations. If deviations are present, replace head with a new straight one.
 5. Use internal vibration along construction joints at both formed and slab abutments. Vibrate under plate dowels. Mark forms before concreting to properly locate dowels after concreting.
 6. Do not use grate tampers, jitterbugs, or mesh rollers.

3.9 FLOOR SLAB FINISHING

- A. Equipment:
 1. Provide a minimum of five, eight foot or larger, properly operating, ride-on finishing machines on site and available for slab placements. Provide a minimum of six finishing machines on slab placements over 20,000.
- B. General:
 1. Do not add water to any slab surface during finishing operations.
 2. Do not add cement to any slab surface during finishing operations.
 3. Perform no finishing operation while water is present on slab surface.
- C. Initial Leveling:
 1. Complete bull floating, darbying and straight-edging before any bleed water is present on slab surface.
 2. Use a 10 feet wide minimum channel float for initial and later leveling instead of bull float where overall floor tolerances specified are greater than FF 20 / FL15.
- D. Hand and Power Floating:
 1. Do not start floating until following conditions are met:

03314-16

- a. Bleeding is complete and water is gone, including water sheen on slab surface.
- b. Mortar is not thrown by rotating blades of power float.
2. The finisher shall determine the proper time to start finishing procedures for interior slab placements on the basis the above conditions. It is noted for advisory purposes, however, that typical setting characteristics of concrete materials will allow for initial power floating to begin 3-1/2 hour's \pm 1 hour after initial strike-off (screeding), at which time the concrete should support a finisher on foot without more than approximately a 1/4 inch indentation in the slab surface. Variations in concrete materials, nature, and concrete temperature will cause setting behavior to vary.
3. Do not use following tools for floating:
 - a. Power troweling machines with trowel blades.
 - b. Fresno or other type of wide metal trowel.
 - c. Power floating machine with water attachment for wetting concrete.
4. Float three times minimum with each floating at right angles to previous floating, and final pass at 45 degrees to previous pass.

E. Troweling for Interior Slabs:

1. Hand or power float floor before starting troweling.
2. For first troweling, keep blade as flat as possible and use low speed, minimizing "washboard" or "chatter marks" and "pitting".
3. Trowel two times minimum with first two trowelings at right angles. Some burn marks are acceptable as determined in review of the test slab. Cease troweling before trowel blades scratch surface.
4. Allow time between trowelings for concrete to stiffen and water sheen to disappear.
5. Do not add water to slab surface during troweling.
6. Do not ride trowels on existing hardened concrete slabs. Trowels shall be carried off of slab surfaces. When parking power trowels on fresh concrete, place on top of plywood or spray area with evaporation retarder before placing trowel on top of slab.
7. Ensure kneeboard impressions, trowel marks or chattered areas are not evident after floor is finished.
8. Provide dense, smooth trowel surface, uniform in texture. Random, mottled burn marks are desired and acceptable. Refer to approved permanent test panel.
9. Finish surface to produce maximum sheen free of scratches and trowel marks.

F. Scratch Finishing: After floating lightly scratch surface with stiff brush.

G. Broom Finishing:

1. Draw flexible bristle broom across surface to produce non-slip texture.
2. Broom in direction transverse to traffic or at right angles to slope of surface unless otherwise shown.

3.10 CONCRETE FINISHES

A. Troweled Finish:

1. Use for exposed interior walking surfaces and surfaces to be covered with carpet, resilient flooring and other thin film finish coating systems.
2. Densification and burnishing finish of interior slabs is specified in Section 03362.
3. Use for other locations where shown or scheduled on the drawings.
4. Use for exposed interior warehouse walking surfaces.
5. Use for exposed interior office walking surfaces.
 - a. Polish concrete floor in accordance with Section 03363.

B. Scratched Finish: Use for surfaces to receive mortar setting beds for tile and other bonded applied cementitious finish flooring materials, except bonded concrete floor toppings..

C. Broom Finish: Use where indicated on drawings.

D. Do not disturb surface paste covering Steel Fiber reinforcement during finish operations.

3.11 JOINTS

A. Provide construction, isolation, and contraction joints as indicated on Drawings and as noted below.

1. Bulkheads for construction joints shall be 1-1/2 inch minimum lumber with top outside edge beveled 30

03314-17

degrees minimum, leaving 1/2 inch to 3/4 inch level surface. Do not use permanent preformed metal bulkheads.

2. Provide bulkheads full depth of slab section.
3. Space joints to allow one continuous placement between bulkheads but not greater than 140 lineal feet.
4. Maximum length-to-width ratio for concrete panels defined by walls or joints shall be 1-1/2:1.
5. Do not locate longitudinal construction joints in action alleys.
6. Unless otherwise shown on the Drawings, do not extend reinforcement, corner protection angles, bars, or other fixed metal items through joints in slabs or through joints between slabs on ground and vertical surfaces.
7. Match joints in walls and curbs with joints in slabs on ground and pavements.
8. Extend joints across tops of walls and curbs unless noted otherwise on Drawings.
9. Isolation Joints: Form isolation joints in accordance with Section 07900.
10. Verify joint cleanout methods include HEPA-rated filter systems as specified herein.

B. Provide contraction slab joints as indicated on Drawings for slab on ground only.

1. Use saws, blades, skid plates, and accessories by [Soff-Cut](#) (800) 288-5040 or approved equal.
2. Provide at least two Soff-Cut saws with blades capable of achieving the required depth of saw cut. Employ number of saws and workers sufficient to complete cutting saw joints before shrinkage produces cracking.
3. Start cutting sawed joints as soon as concrete has hardened sufficiently to prevent raveling or dislodging of aggregates. This will typically be from 1 hour in hot weather to 4 hours in cold weather after completing finishing of slab in that joint location.
4. Adhere felt or similar material to the bottom of the saw base plate as necessary to minimize surface scratching and debris build up.
5. Saw cut to width of 1/8 inch by 1/4 the slab depth, unless noted otherwise on Drawings.
6. After saw cutting immediately clean slab surface of all sawing residues using a vacuum with HEPA-rated filter.
7. Extend sawed joint to the slab boundaries and abutments, including columns, drains, and other penetrations in the path of a defined joint. Implement methods and timing of the saw cut beyond the limits of the Soff-Cut saw reach to provide a consistent depth of cut with minimal raveling of joint edges.
8. Contraction slab joints are NOT required for slab on metal deck.
9. See Drawings for additional requirements.

C. Saw-Cut Control Joint Dust Collection: Connect a one of the following dust collection systems directly to each Soff-Cut saw being used. Provide collection system model recommended by the manufacturer to maintain dust emissions below the permissible level. Immediately clean remaining debris after cutting and prior to cure.

1. PulseVac by BW Manufacturing.
2. SoffVac by by Husqvarna USA.
3. DustDroid by Dustless Technologies.
4. Substitutions: Not permitted.

D. Joint filling and sealing of concrete floors is specified in Section 07900.

E. Joint filling of concrete floors under resilient tile and carpet floor covering is specified in Sections 09650 and 09680 respectively.

3.12 CURING

A. Curing Compound (Temporary Film Forming):

1. Apply curing compound prior to saw cutting joints and as soon as concrete surface will not be damaged by curing operations.
2. Clean slab surface and joints using a vacuum with HEPA-rated filter and remove loose or compacted saw debris prior to curing compound application.
3. Apply compound at a rate of 700 to 1200 square feet per gallon with high volume, low pressure, atomized sprayer in accordance with manufacturer recommendations. Prevent over-application in excess of specified rate.
4. Spread compound evenly using mopping pads. Mopping pads shall be Rubbermaid 24 inch Microfiber Wet Room Pad or equivalent.
5. If whitening from over application occurs, consult manufacturer for removal of product with hot water and aggressive scrubbing.
6. Do not allow compound to accumulate and puddle.

7. Do not use polyethylene sheets or other impervious covers on exposed interior floors.

3.13 FORM REMOVAL

- A. Do not remove forms until concrete has hardened sufficiently to support its own weight and imposed construction loads.
- B. Remove forms in manner to avoid damage to concrete.
- C. Formwork for slabs, curbs and other parts not supporting vertical load of concrete may be removed as soon as concrete has hardened sufficiently to resist damage from removal operations, but in no case sooner than 12 hours.

3.14 DENSIFIER TREATMENT

- A. Densifier for concrete floor slabs is specified in Section 03362.

3.15 CONCRETE FLOOR POLISHING (BURNISHING)

- A. Burnishing concrete floor slabs which have received densifier is specified in Section 03362.

3.16 TOLERANCES

- A. Conform to most stringent requirements of ACI 117 and ACI 301 except as specified herein.
- B. Floor Flatness (FF) and Floor Levelness (FL): Unless noted otherwise on the Drawings tolerances for concrete slabs shall be in accordance with ACI 117 as follows:
 - 1. The minimum local area shall be bound on each side by column lines.
 - 2. Interior Slabs on Ground:
 - a. Specified Overall Value (SOV) FF 35 / FL 25 and Minimum Local Value (MLV) FF 25 / FL 20.
 - 3. Elevated Slabs on Steel Deck:
 - a. Specified Overall Value (SOV) FF 35 and Minimum Local Value (MLV) FF 25.

3.17 FIELD QUALITY CONTROL

- A. Field quality control shall be the responsibility of the Contractor in accordance with Section 01452. Except as specified as mandatory, field quality control testing and inspection shall be at the discretion of the Contractor as necessary to assure compliance with Contract requirements. Owner T&I specified in Appendix B shall not be considered a substitute for the Contractor's responsibility to perform similar routine, necessary, and customary testing and inspection of the methods and frequency suitable for the type of work involved.
- B. Responsibilities and Duties of Contractor Relative to Owner Testing:
 - 1. Notify CTL not less than 3 working days prior to placing concrete.
 - 2. Assist Owner's agency in securing field specimens
 - 3. Concrete Supplier and Aggregate Supplier shall have representatives available to assist CTL in obtaining representative samples.

3.18 OWNER TESTING AND INSPECTION (T&I)

- A. The Owner will perform testing and inspection as specified in Appendix B (Section 03314).

3.19 NON-CONFORMING WORK

- A. When directed by Owner, remove and replace or repair concrete related Work which does not conform to specified requirements including strength, tolerances and finishes.
- B. When directed by Owner, remove and replace slabs-on-ground with surfaces measuring below either specified F_F and/or F_L minimum local values.

- C. At option of Owner, Contractor may be allowed to submit alternatives for remediation to slabs-on-ground measuring below either or both specified F_F and F_L minimum local values.
- D. Costs for corrective work, remedies for out-of-tolerance work, and extra testing as required by defective work shall be borne by Contractor.

3.20 PROTECTION

- A. Slab Protection:
 - 1. Protect slabs from staining prior to application of densifier specified in Section 03362.
 - 2. Protect finished floors to prevent damage including staining, gouges and scratching by construction traffic and activities until Owner possession.
 - a. Barricade concrete surfaces immediately after placing and finishing.
 - b. 3 days after placement: Foot traffic permitted. No construction materials in contact with slab surface.
 - c. 5 days after placement: Scissor lift traffic permitted.
 - 3. Keep slabs free from dirt and grime.
 - 4. Provide impact protection to slab with approved sheet materials. Remove or consolidate impact protection materials on a regular basis to prevent discoloring. The use of plastic sheets for impact protection is prohibited.
 - 5. Prohibit foot traffic by workers and others not involved in floor construction or finishing operations in areas where floor construction or finishing operations are being performed.
 - 6. Vehicles and equipment may be driven on concrete surface within building line only if the slab is protected by the following:
 - a. Diaper hydraulically-powered equipment.
 - b. Place non-absorbent drop cloths or other breathable slab protection that will not stain slab surface under parked vehicles.
 - c. Vehicles and equipment are equipped with non-marking tires.
 - d. Tire treads are inspected for debris prior to use on slab and a least once per day. Remove embedded items which may cause damage to floor slab.
 - 7. Clean up spills on slab immediately. Provide cleaning chemicals and absorptive materials.
 - 8. Pipe cutting machinery is prohibited on concrete surface within building line.
 - 9. Adequately protect concrete inserts and other embedded items from movement, mechanical injury, or from damage by elements.
 - 10. Provide access ramps of compacted earth or other means along exposed concrete edges of floor slabs to prevent equipment and machinery from impacting edges. Barricade other exposed edges to vehicular traffic which may damage edges.
- B. Concrete Floor Protection Plan: Develop Concrete Floor Protection Plan that addresses the following procedures:
 - 1. Communication of protection plan to subcontractors and vendors, including those directly contracted by the Owner.
 - 2. Procedures for compliance with slab protection requirements specified in this Section.
 - 3. When and how floor covering protection will be provided in high traffic areas.
 - 4. Condition, inspection, and operational procedures for construction equipment allowed on the slab surface.
 - 5. Procedures for cleaning up slab spills, including use of and availability of cleaning chemicals and absorptive materials at Site.
- C. Submit Concrete Floor Protection Plan as specified in Part 1 of this Section. Comply with the requirements of approved Concrete Floor Protection Plan.

3.21 CLEANING

- A. Provide daily scrubbing of the entire exposed concrete slab surface with fuel powered riding equipment that utilizes only pads and water. Daily scrubbing shall continue from time of dried initial application of surface densifier until time of area turnover, or as directed by the Owner's Construction Manager. Use white or red pads, cleaned or replaced daily, and avoid using excessive downward head pressure that may damage the slab surface.
- B. Dispose of construction waste in accordance with the requirements of Section 01351 Regulatory Compliance Supplement.

D. ATTACHMENTS: Include the following with this Mix Design Report.

- Mill test reports for Portland cement.
- Mill test reports for fly ash, and ground granulated blast furnace slag materials if used in approved SCM mix.
- Designation, type, quality, and source (natural or manufactured) of coarse and fine aggregate materials
- Mill test reports for Portland cement, fly ash, and ground granulated blast furnace slag materials
- Separate aggregate gradation reports including all required sieve sizes
 - Gradation sieve report tests dated within 60 days of this report
 - Report for each coarse and fine aggregate material in mix
- Statement if possible reactivity of aggregate, based on tests or past service
- Statement if possible aggregate pop-outs or their disruptions, based on tests or past service
- Product data for the following admixtures:
 - Chloride ion data and related calculations
 - Water reducing
 - Water reducing and retarding
 - Accelerating
- Concrete compressive strength data used for standard deviation calculations.
- Measured water-soluble chloride ion content. (percent by weight of cement)
- Time of initial setting per ASTM C 403 if approved SCM mix is used.

CONCRETE FINISHING SUBCONTRACTOR'S QUALIFICATION STATEMENT

03314-24

SECTION 03314
CAST-IN-PLACE CONCRETE SLAB

Project Location: _____ Date: _____

Project Number: _____ Store Number: _____

By signing below Contractor confirms that the concrete finishing subcontractor meets the following requirements:

The concrete finishing subcontractor lead finisher and two additional members of the finishing crew are certified under the Concrete Flatwork Finisher Training and Certification Program as granted by the American Concrete Institute.

The concrete floor finishing subcontractor has experience in finishing floors of similar size and scope in at least 5 previous projects. The names and locations of these projects are as follows:

1. _____
2. _____
3. _____
4. _____
5. _____

Concrete Finishing Subcontractor Company Name and Address:

Signature of Responsible Officer: _____

Typed Name and Title of Officer: _____

Telephone Number: (_____) _____

Contractor Company Name and Address:

Signed by: _____ Date: _____

Attach certificates from the Concrete Flatwork Finisher Training and Certification Program for lead finisher and two additional members of the finishing crew.

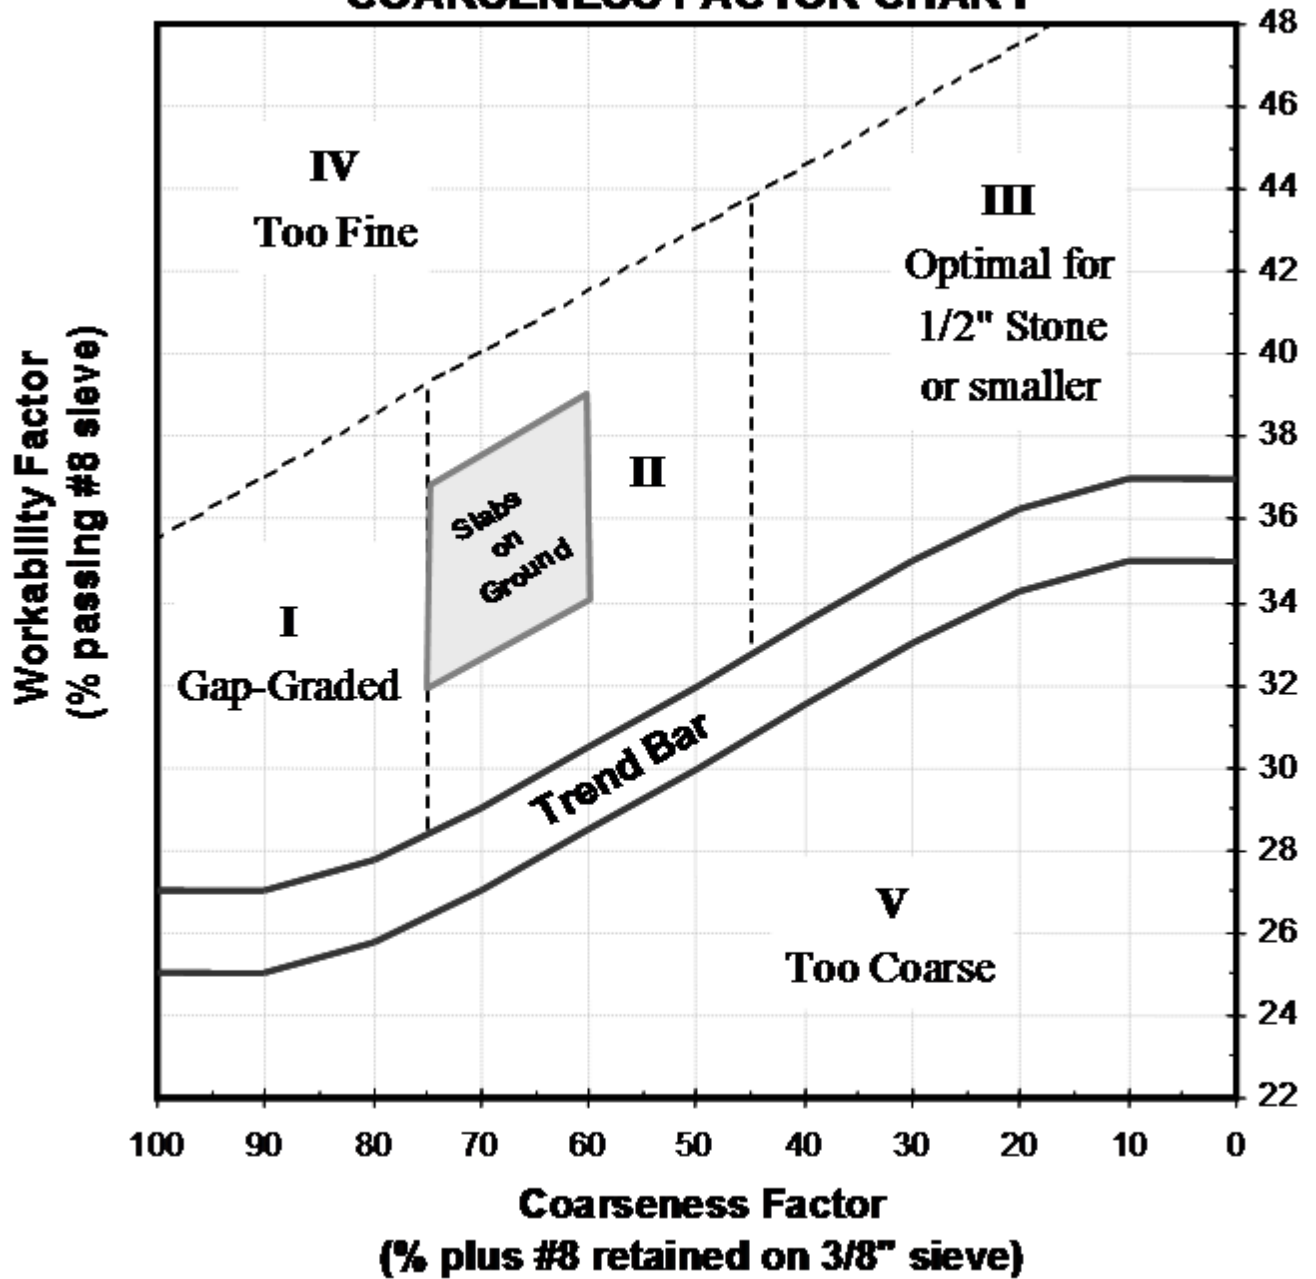

Submit one copy of this Statement to the Architect.

COARSENESS FACTOR CHART

SECTION 03363 - POLISHED CONCRETE FLOOR FINISHES FOR INTERIOR SLABS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. For interior slabs placed under Section 03314: Progressive wet polishing and burnishing of slab surface, including application of penetrating stain protector, to specified Finish Requirements.

B. Related Requirements:

1. Section 01500 - Temporary Facilities and Controls: Requirements for control of substances that have the potential for polluting surface and/or groundwater. Requirements for storage of materials and equipment at the project site.
2. Section 01700 - Execution Requirements: Requirements for use of electrical and propane powered equipment.
3. Section 01770 - Contract Closeout.
4. Section 03314 - Cast-in-Place Concrete Slabs (Interior).

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.

B. American Society for Testing and Materials:

1. ASTM D 1455 - Test Method for 60° Specular Gloss of Emulsion Floor Polish.

C. Concrete Polishing Association of America (CPAA).

1. Guideline for levels of aggregate exposure.

1.3 CLOSEOUT SUBMITTALS

- A. Comply with the requirements of Section 01770.

B. Product and Equipment Data: Submit the following manufacturer's data for products and equipment used in the specified enhancement process:

1. Manufacturer's technical product data and literature.
2. Storage and handling requirements and recommendations.
3. Manufacturer's safety data sheets and related safety requirements.
4. Product and equipment manufacturer's recommendations for slab maintenance.

C. Floor Polishing Plan and Schedule as specified in Part 1 hereafter.

D. Maintenance recommendations including:

1. Maintenance schedule and frequency.
2. List of approved cleaning and stain removal products and procedures.
3. Precautions for cleaning materials and methods that could be detrimental to burnished slab finish.

E. Completion Quality Control Test Results as specified in Part 3 herein.

1.4 ENVIRONMENTAL REQUIREMENTS

- A. Comply with current Federal, state and local air quality regulations and with Federal requirements on concrete silica dust emissions. Do not dry grind slab surface.

- B. Comply with current Federal, state and local toxicity and air quality regulations and with Federal requirements on content of lead, mercury, and other heavy metals. Do not use solvents in floor polish products that contribute to air pollution.
- C. Refer to Section 01700 for requirements related to acceptable power sources specified hereinafter.
- D. Limit and control dust and moisture created by concrete surface enhancement work to meet all local, state, and Federal ordinances, codes and laws.
- E. Limit and control damage from slurry caused by surface preparation and polishing.
- F. Comply with manufacturer's written instructions for substrate temperature and moisture content, ambient temperature and humidity, ventilation and other conditions affecting chemical performance.
- G. Close finished slab area to traffic during application and after application for a time as recommended by manufacturer.
- H. Define affected area with orange plastic construction fencing.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Owner's Division 1 specifications and manufacturer's recommendations.
- B. Deliver materials to site in original, factory sealed, unopened, new containers (drums) bearing manufacturer's name and label intact and legible, with the following information:
 1. Name or title of material.
 2. Manufacturer's standard container (drum) numbers.
 3. Application instructions.
- C. Storage:
 1. Store materials in protected and well-ventilated area at temperatures between 40 and 90 degrees F unless otherwise required by manufacturer.
 2. Keep containers sealed until ready for use.
 3. Do not use materials beyond manufacturer's shelf life limits.
- D. Handling: Protect materials during handling and application to prevent damage or contamination.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, provide products and equipment by the following:
 1. Advanced Blending (817) 477-8022 www.advancedblending.com
 2. Ameripolish, Inc. (800) 592-9320 www.ameripolish.com
 3. Brulin & Company (800) 776-7941 www.brulin.com
 4. Concrete Polishing Solutions (877) 472-8200 www.go2cps.com
 5. Onyx Environmental Solutions (800) 858-3533 www.onyxolutions.com
 6. Pioneer Eclipse (800) 367-3550 www.pioneer-eclipse.com
 7. Prosoco (800) 255-4255 www.prosoco.com
 8. SASE Company, Inc. (800) 522-2606 www.sasecompany.com
 9. Substrate Technology, Inc. (815) 941-4800 www.substratetechnology.com
 10. Superabrasive, Inc., (800) 987-8403, <http://www.superabrasive.com/>
 11. Superior Surface Solutions, (888) 471-5227 www.superiorsurfacesolutions.com
- B. Substitutions: Comply with the requirements of Section 01600.

2.2 EQUIPMENT

- A. Auto Scrubber Machines: Equipment used for cleaning operations shall be Clark Encore Max38 or L38 with a head pressure of 150 lbs. or similar equipment as required to achieve the specified Finish Requirements.
- B. Propane Polishing Equipment:
 - 1. Propane polishing machines shall be in full operating condition during the duration of the night's work as required to achieve specified Finish Requirements.
 - 2. Polishers shall have minimum 450 pounds down force.
- C. Diamond Segments:
 - 1. Diamond grinding heads shall be by one of the following manufacturers. Use heads from same manufacturer throughout entirety of project.
 - a. HTC.
 - b. SASE, Inc.
 - c. Substrate Technology, Inc.
 - d. Superabrasive, Inc.
 - e. Superior Surface Solutions.
 - 2. Diamond Segment Grit Sizes (or Manufacturer's Equivalent Designations):
 - a. Hybrid Style Diamonds: 100 and 200
 - b. Resin Bonded, Phenolic Diamonds: Progression of all polishing steps shall include sequential grit sizes that are not greater than twice the previous grit used.
- D. High speed propane burnisher: Equipment shall meet the specified minimum performance requirements.
 - 1. Head Size: 21 or 27 inch.
 - 2. Head Weight: 22 pound (40 pound maximum).
 - 3. Engine Size: 585 cc, generating 1,500 RPM or higher (as verified with tachometer).
 - 4. Dust skirt assembly.
- E. Burnishing Pads:
 - 1. Diamond Impregnated Pads (DIP): 1500 and 3000 grit.
 - 2. Dimashine Diamond Impregnated Pad by Superior Surface Solutions
 - 3. CASH Diamond Impregnated Pad by Substrate Technology, Inc.

2.3 PRODUCTS

- A. Joint Filler Products:
 - 1. Polyurea joint filler as specified in Section 07900.
 - a. Color: Match polished slab surface. Sample installed in mock-up shall be approved by Owner's Construction Manager.
- B. High pH Cleaner:
 - 1. Amodet Degreaser/Cleaner, by Advanced Blending.
 - 2. Brulin Deep Scrub Cleaner, by Brulin & Co.
 - 3. Cleaner/Degreaser, by Prosoco.
- C. Reactive Surface Densifier: Chemical densifier specifically for concrete surface treatment which reacts chemically to the concrete surface forming a clear, dense, durable, hard, abrasion-resistant surface. Product shall be a colorless, odorless, water-based solution that is less than 50 VOC.
 - 1. Provide one of the following:
 - a. 3D HS Densifier, by Ameripolish, Inc
 - b. SFS D2, by SASE Company
- D. Penetrating Stain Protector:
 - 1. Concrete stain protector specifically for concrete surface treatment which reacts chemically
 - 2. to the concrete surface maintaining a clear, dense, durable, hard, abrasion-resistant surface.
 - 3. Product shall be a solution that is less than 10 g/L VOC.

- a. SR2, by Ameripolish, Inc.
 - 1) Temporary Substitution: Provide [SR2 Plus](#) by Ameripolish as an acceptable substitution for any application of SR2 specified within the scope of this Section if Suppliers indicate SR2 is unavailable.
- b. SFS SPR3, by SASE Company

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine concrete slab with Owner's Construction Manager. Verify that floor is in substantially the same condition as described in the Floor Polishing Plan.
 - 1. Identify and mark additional repair locations not shown in Floor Polishing Plan.

3.2 PREPARATION

- A. Close areas to traffic during and after floor finish application for time period recommended by product manufacturer(s).
- B. Cover and protect merchandise and racking to prevent damage or contamination of stored products. Protect merchandise from concrete slurry or debris.
- C. Clean Substrate:
 - 1. Do not use hazardous materials or flammable, toxic, or solvent-based cleaning products.
 - 2. Remove curing or sealing compounds, paint, and wax.
 - 3. Remove surface contaminants such as oil, grease and general soiling with high pH cleaner/degreaser diluted as recommended by manufacturer using swing machine with red or black pads. Use appropriate pad to achieve desired results while not exposing coarse aggregate or excessive sand within paste layer.
 - 4. Thoroughly rinse floor surface with clean water to remove soap residue and contaminants. Vacuum with auto scrubber.
 - 5. Squeegee dry.
- D. Remove and replace deficient joint filler within the limits of required slab polishing and as shown on Drawings.
- E. Repair slab defects within the limits of required slab polishing.
- F. Verify concrete floors are free of excessive moisture and dusting.
- G. Verify that surfaces conform to the manufacturers' requirements for substrate conditions Do not proceed until unsatisfactory conditions are corrected.

3.3 GENERAL REQUIREMENTS

- A. Complete joint replacement and slab repair work at least 12 hours prior to commencement of any wet polishing.
- B. Use sequential progression of diamond pads limited to no more than double the grit value of the previous diamonds used.
- C. Allow concrete slab to achieve its 28 day design strength as documented by Owner' CTL. Approved compressive strength test report from CTL must be received by Owner's Construction Manager.
- D. Progressively wet diamond polish edges along and around all abutments. Use same progression of polishing segments throughout.
- E. Between and after final wet polishing passes, thoroughly scrub and rinse slab surface with clean water and vacuum with auto-scrubber.

3.4 DENSIFICATION & STAIN PROTECTION

- A. Areas to be treated: Provide Densification where shown on Drawings.
- B. Open slab surface by wet polishing with resin-bonded or hybrid, phenolic diamond heads.
 - 1. Perform initial polishing step and all polishing steps utilizing 200-grit and below twice at minimum.
 - 2. After completion of the above polishing steps, progressively wet polish slab surface.
 - 3. Overlap adjacent passes by 50%.
 - 4. Final polishing pass shall be with no less than 800-grit resin.
- C. Apply reactive surface densifier to dry slab surface after appropriate diamond polishing step, in accordance with manufacturer's instructions.
 - 1. Failure to consult with reactive surface densifier for proper dilution rate required to match adjacent concrete slab panels may result in additional cost to Contractor without an increase in Contract time.
 - 2. Apply reactive surface densifier one time after the appropriate polishing pass (typically after 200-grit and before 800-grit).
 - 3. Manufacturer's recommended application rate 400-600 SqFt per gallon and a minimum 20 minute dwell time.
 - 4. Densifier is to be back wiped utilizing the recommended micro-fiber pads and allow to dry.
 - 5. Polish slab surface in compliance with specified Finish Requirements.
 - 6. Use microfiber pad after burnishing to remove any laitance and debris from slab surface.
- D. Apply penetrating stain protector: Apply penetrating stain protector per manufacturer's recommendations. Allow to cure.

3.5 FINISH REQUIREMENTS:

- A. Appearance: Enhanced interior slabs areas that receive the specified slab enhancement process must consist of the following:
 - 1. Failure to comply with specifications to produce finish requirements may result in additional cost to Contractor without an increase in Contract time or additional disruption to Facility operations.
 - 2. Slab surface must have a consistent look and exhibit a hard polished appearance with no evidence of scratching from grinding/polishing.
 - 3. Exposure of aggregate beyond CPAA Class B - Fine Aggregate shall be considered non-conforming work.
 - 4. White residue, "orange peel", or hazy appearance in the finished surface will not be accepted.
- B. Gloss: Final surface gloss within Facility shall be between 30 and 55 as measured using a Horiba IG-320 Gloss Checker.
- C. Leave work complete and ready for final inspection by Owner's Construction Manager.

3.6 FIELD QUALITY CONTROL TESTING

- A. Gloss Measurements:
 - 1. Gloss shall be considered as a quantitative value that expresses the degree of reflection when light hits the concrete floor surface.
 - 2. Take gloss measurements independent of ambient lighting and within a sealed measurement window located beneath the testing equipment.
 - 3. Measure and report as follows:
 - a. Measure gloss values at five evenly but randomly distributed locations within each aisle for each night's work area. Record measurement locations on Floor Polishing Plan.
 - b. If samples fail to meet the specified value, continue burnishing operations until the specified gloss requirements are achieved.
 - c. Collect and certify final gloss measurements to Owner's Construction Manager and the Owner's Independent Concrete Consultant.

3.7 CLEANING

- A. Remove spilled, splashed, or splattered finish material from surfaces.

3.8 FINAL CLEANING AND PROTECTION

- A. Protect areas to receive polished concrete finish at all times during construction to prevent oils, dirt, metal, excessive water, paint, and other potentially damaging materials from contacting the finished concrete surface. Initiate the following protective measures immediately after completion of the polishing work as specified herein.
 - 1. Communicate to Facility Manager and all subcontractors, vendors, and trades the importance of maintaining slab protection.
 - 2. Protect slab surface from moisture for 24 hours.
 - 3. Each day, inspect equipment used over completed slab surface. Verify the following:
 - a. Equipment is without leaking hydraulic lines and is diapered to avoid staining. Remove all equipment with hydraulic fluid leaks from Facility site.
 - b. Equipment is without tire embedments (rocks, nails, screws, etc.) that will scratch or pit slab surface.
 - c. Equipment is clean and free of dust prior to start of work requiring equipment.
 - 4. Do not allow pipe cutting on the finished slab.
 - 5. Do not place steel on the finished slab to avoid rust staining.
 - 6. Prevent contact with acids and acidic detergents.
 - 7. Use breathable drop cloths during all painting. Immediately wipe clean spilled paint.
- B. Damage to finished slab resulting from lack of protection shall be repaired at no additional cost to Owner.

END OF SECTION

SECTION 03410 (03 4110) - PLANT-PRECAST STRUCTURAL CONCRETE PANELS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Precast, prestressed, insulated structural concrete wall panels.
 2. Precast, prestressed, non-insulated structural concrete wall panels.
 3. Precast, prestressed, structural concrete columns.
- B. Related Requirements:
1. Section 05090 - Post-Installed Concrete and Masonry Anchors.
 2. Appendix B – Testing, Inspection, and Observation by Owner.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
1. ASTM A 36 - Carbon Structural Steel.
 2. ASTM A 82 - Steel Wire, Plain, for Concrete Reinforcement
 3. ASTM A 185 - Steel Welded Wire, Plain, for Concrete Reinforcement.
 4. ASTM A 416 - Steel Strand, Uncoated Seven-Wire for Prestressed Concrete.
 5. ASTM A 497 - Steel Wire, Deformed for Concrete Reinforcement.
 6. ASTM A 615 - Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
 7. ASTM C 33 - Concrete Aggregates.
 8. ASTM C 150 - Portland Cement.
 9. ASTM C 260 - Air-Entraining Admixtures for Concrete.
 10. ASTM C 330 - Lightweight Aggregates for Structural Concrete.
 11. ASTM C 494 - Chemical Admixtures for Concrete.
- C. American Concrete Institute (ACI):
1. ACI 211.1 - Standard Practice for Selecting proportions for Normal, Heavyweight and Mass Concrete.
 2. ACI 306.1 - Cold Weather Concreting.
 3. ACI 318 - Building Code Requirements for Structural Concrete.
- D. American Association of State Highway and Transportation Officials (AASHTO):
1. AASHTO M 251 - Plain and Laminated Elastomeric Bridge Bearings.
- E. American Welding Society (AWS):
1. AWS D1.1 - Structural Welding Code - Steel.
- F. Precast / Prestressed Concrete Institute (PCI):
1. PCI MNL 116 - Manual for Quality Control for Plants and Production of Precast and Prestressed Concrete Products.
 2. PCI MNL 120 - Design Handbook - Precast and Prestressed Concrete.
 3. PCI MNL 124 - Design for Fire Resistance of Precast Prestressed Concrete
 4. PCI MNL 135 - Tolerance Manual for Precast and Prestressed Concrete Construction.
- G. National Precast Concrete Association (NPCA):
1. NPCA Quality Control Manual for Precast and Prestressed Concrete Plants.

1.3 SUBMITTALS

03410-1

- A. Submittal Procedures: Unless otherwise specified herein, submit in accordance with procedures specified in Section 01330. Submit all submittals electronically in PDF format via email, unless otherwise specified, to Architect of Record and Structural Engineer of Record.
- B. Shop Drawings:
 - 1. Plans, elevations, and details indicating panel locations, design loads, construction (including reinforcement, welding requirements, finish, and openings), anchorage, etc. Identify material provided by the manufacturer.
 - 2. Connection reactions where the EOR is responsible for the design of the main building support structure.
 - 3. Shop drawings shall be signed and sealed by a Structural Engineer licensed in the state in which the project is located.
- C. Product Design Criteria: Submit design load calculations signed and sealed by Structural Engineer experienced in precast, prestressed concrete design and licensed in the state in which the project is located.
 - 1. Initial handling and erection stresses, including transportation stresses.
 - 2. Dead, live, wind, and seismic loads as identified in Contract Documents and as required by applicable codes.
- D. Product Data: Submit design load calculations signed and sealed by Structural Engineer experienced in precast, prestressed concrete design and licensed in the state in which the project is located.
 - 1. Mix Designs
 - 2. Admixtures
 - 3. Erection Tolerance
 - 4. Grout
- E. Test Reports: Test reports on concrete and other materials used in fabrication. Do not submit reports but maintain reports on file to be available upon request.

1.4 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: The manufacturer's precast concrete manufacturing plant shall be certified by either NPCA or PCI Plant Certification Program prior to the start of production. Manufacturer shall have produced product similar to what is specified for a minimum of two years.
- B. Erector's Qualifications:
 - 1. Regularly engaged for a minimum of five years in the erection of precast structural concrete similar to the requirements of this project.
 - 2. Employed by the Manufacturer.
- C. Welders' Qualifications:
 - 1. Certified in accordance with AWS D1.1.
 - 2. Employed by the Manufacturer.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.
- B. Support panels during shipment on non-staining shock-absorbing material in same position as during storage.
- C. Store units with adequate bracing and protect units to prevent contact with soil, to prevent staining, and to prevent cracking, distortion, warping or other physical damage.
 - 1. Store units with dunnage across full width of each bearing point unless otherwise indicated.
 - 2. Place adequate dunnage of even thickness between each unit.
 - 3. Place stored units so identification marks are clearly visible and units can be inspected.
- D. Handle and transport units in a position consistent with their shape and design in order to avoid excessive stresses that would cause cracking or damage.

- E. Lift and support units only at designated points shown on Shop Drawings.

1.6 SITE CONDITIONS

- A. Environmental Requirements (Cold Weather): Comply with ACI 306.1 procedures for cold-weather concrete placement.
- B. Environmental Requirements (Hot Weather): Comply with PCI MNL 116 procedures for hot-weather concrete placement.

PART 2 - PRODUCTS

2.1 PRECAST CONCRETE WALL PANEL MANUFACTURER

- A. **CTU PRECAST**; 1260 Furneaux Rd, Olivehurst, CA 95961. www.ctuprecast.com

2.2 WALL PANELS

- A. Precast, Prestressed Concrete Wall Panels, locations as noted on the architectural drawings:
 - 1. Wall Panel Types:
 - a. 12 ½” thick insulated panels – 2 ½” exterior wythe, 2” insulation, and 8” interior structural wythe.
 - b. 10 ½” thick insulated panels – 2 ½” exterior wythe, 2” insulation, and 6” interior structural wythe.
 - c. 10” thick non-insulated panels
 - d. 6” thick non-insulated panels

2.3 DESIGN CRITERIA AND REGULATORY REQUIREMENTS

- A. Comply with the design recommendations in NPCA or PCI MNL 120. Comply with applicable building codes and ACI 318.
- B. Calculated Fire-Test-Response Characteristics: Provide architectural precast concrete units with fire-resistance rating indicated as calculated according to PCI MNL 124 and acceptable to authorities having jurisdiction.

2.4 MATERIALS

- A. Portland Cement: ASTM C 150, Type I or Type III of same type, brand and source.
- B. Admixtures:
 - 1. Air-entraining admixtures: ASTM C 260.
 - 2. Water reducing, retarding, accelerating, high-range water reducing admixtures: ASTM C 494.
 - 3. Fly ash as required by the manufacturer but not less than 10% of total cementitious material.
- C. Aggregates: ASTM C33 or C 330.
- D. Water: Potable and free of foreign materials in amounts harmful to concrete, aggregate, or imbedded steel.
- E. Steel Reinforcing:
 - 1. Reinforcing Bars: Deformed Billet Steel: ASTM A 615.
 - 2. Wire: Cold-Drawn Steel: ASTM A 82.
 - 3. Wire Fabric:
 - a. Welded Steel: ASTM A 185.
 - b. Welded Deformed Steel: ASTM A 497.
- F. Strand: Uncoated, 7-wire, stress relieved or low relaxation steel strand: ASTM A 416 (including supplement) Grade 250K or 270K.
- G. Anchors and Inserts: Structural steel, ASTM A 36, manufacturer’s standard finish .

03410-3

- H. Wythe Connectors: Use one manufacturer for the project using one of the following types:
 1. Polypropylene.
 2. Fiber Composite.
- I. Rigid Insulation: Expanded polystyrene board insulation.
- J. Bearing Pads: Elastomeric pads as recommended by precast concrete fabricator for application and the following:
 1. AASHTO M 251, plain, vulcanized, 100% polychloroprene (neoprene) elastomer.
 2. Molded to size or cut from molded sheet.
 3. 50 - 70 Shore, Type A durometer hardness, ASTM D 2240.
 4. Minimum tensile strength 2250 psi, ASTM D 412.
- K. Sand-Cement Grout:
 1. Portland Cement: ASTM C 150, Type I.
 2. Clean, natural sand: ASTM C 144 or ASTM C 404.
- L. Premixed Grout: SikaGrout-212 by Sika Corporation, (800) 933-7452 or (201) 933-8800.
One component ready mix grout.
- M. Joint Sealant: [Sikaflex 2c](#) NS by Sika Corporation, (800) 933-7452 or (201) 933-8800.
 1. Color to match adjacent precast concrete wall panel color.
- N. Fire Stopping Material:
 1. Provide one of the following:
 - a. Ultra Block by [Backer Rod Manufacturing, Inc.](#), (800) 595 2950 or (303) 308 0363. Mechanical expansion and construction joint fire stopping system consisting of a pre-engineered fiberglass roll material with a fiberglass matt facing containing unexpanded vermiculite.
 - b. Metacaulk Joint Strip by [Rectorseal](#) (800) 231-3345. Intumescent firestop material.
 2. Rating as indicated on the Drawings.
- O. Substitutions: Comply with the requirements of Section 01600.

2.5 CONCRETE MIXES

- A. Proportion mixes by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on project, to provide concrete with the following properties:
 1. Compressive Strength: 6000 psi min. at 28 days.
 2. Release Strength: 3500 psi min.
 3. Calcium chloride, chloride ions, and/or other salts are not permitted.
 4. Entrained Air: As determined by supplier.
- B. Color Formulation:
 1. Natural grey concrete.
 2. No color additives.

2.6 GROUT MIXES

- A. Mix Ratios:
 1. Site-mixed: Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.
 2. Pre-mixed: Per manufacturer's recommendations.

2.7 FABRICATION

- A. Manufacturing procedures shall be in general compliance with either NPCA or PCI MNL 116.

- B. Manufacturing tolerances shall comply with either NPCA or PCI plant certification for structural products.-Comply with camber and dimensional tolerances of NPCA or PCI MNL 135.
- C. Finishes:
1. Standard Underside: Backside of panel or interior face.
 - a. Provide finish produced by casting against approved forms using good industry practice in cleaning forms, design of concrete mix, placing and curing.
 - b. Small surface holes caused by air bubbles, normal color variation, normal form joints, minor chips and spalls shall be tolerated. No major or unsightly imperfections, honeycombs or other defects shall be permitted unless they are nonstructural in nature and are patched as approved by Owner.
 2. Standard Top: Exterior or exposed to view face (Architectural Finish):
 - a. Extent of finishes as indicated on the Drawings.
 - b. Match Architect's samples.
 - c. Provide finish resulting from vibratory screed and additional hand finishing.
 - d. Normal color variation, minor indentations, minor chips and spalls shall be permitted. No major imperfections, honeycombs or defects shall be permitted.
- D. Openings:
1. Plant Fabricate openings 14 inches round or square and larger as indicated on Drawings. Field cut openings smaller than 14 inches.
 2. Insulation held back 3 ½" at all perimeter of all opening locations.
- E. Patching:
1. Maintain structural integrity.
 2. Conform to panel fabricator's recommendations and directions.
 3. Patching of surfaces to receive paint shall be non-discernible in texture, although color may vary, when viewed at a distance of 20 feet in normal light.
 4. Patching of finished surfaces such as exposed aggregates shall be non-discernible in both texture and color when viewed at a distance of 20 feet in normal light.
- F. Fasteners: Cast in structural inserts, bolts, and plates as indicated on Drawings and Shop Drawings.
- G. Insulation: Place full length of panel and space across panel width between reinforcing strands.
- H. Identify pickup points of precast structural concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each precast structural concrete unit on a surface that will not show in finished structure.
- I. Cure concrete according to requirements in PCI MNL 116 by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.

2.8 SOURCE QUALITY CONTROL

- A. Quality-Control Testing: Manufacturer shall test and inspect precast concrete according to either NPCA or PCI MNL 116 requirements.
- B. Defective Units: Discard and replace precast structural concrete units that do not comply with requirements, including strength, manufacturing tolerances, and color and texture range unless repairs meet requirements in PCI MNL 116. Chipped, spalled, or cracked units may be repaired, subject to Architect's approval..

PART 3 - EXECUTION

3.1 PREPARATION (BY GENERAL CONTRACTOR)

- A. Provide suitable access to and around building with proper drainage and firm, level bearing for hauling and erection equipment to operate under its own power. Provide stable and drainable 40-foot wide all-weather aggregate surfacing to remain in place throughout panel erection. Coordinate with precast manufacturer for location.
- B. Provide true, level bearing surfaces on field placed bearing walls and other field placed bearing structures. Ensure that bearing surfaces are clean and ready for precast panel installation.
- C. Place and align anchor bolts, plates or dowels in column footings, grade beams and other field placed bearing structures.
- D. Install permanent control points for location of panels. Control points shall be at corners and gridlines and not less than 40 feet on center.

3.2 INSTALLATION

- A. Lift panels by means of suitable lifting devices at points provided by the manufacturer.
 - 1. Provide temporary shoring and bracing, if necessary, in compliance with the manufacturer's recommendations, applicable building codes, and PCI or NPCA design requirements. Temporary bracing design shall be signed and sealed by Structural Engineer licensed in the state in which the project is located.
- B. Seal joints between the precast panels and install fire stopping material as shown or as required in joints or openings in fire rated construction. Install in compliance with manufacturer's instructions and recommendations.
- C. Field Welding: Perform field welding by certified welders in accordance with AWS D1.1 using equipment and materials compatible to the base material.
- D. Round or square openings less than 14 inches in size, round or square, shall be located and field drilled or cut by the trade requiring the opening after the panels have been erected unless indicated otherwise on the Drawings. Coordinate with the precast concrete panel fabricator to locate field cut openings to avoid unnecessary cutting of panel reinforcement. Field cut openings shall be verified by the manufacturer to maintain structural integrity of the work.

3.3 ERECTION TOLERANCES

- A. Erect precast structural concrete units level, plumb, square, true, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 135.
- B. Minimize variations between adjacent slab members by jacking, loading, or other method recommended by fabricator and approved by Architect.

3.4 FIELD QUALITY CONTROL

- A. Field quality control shall be the responsibility of the Contractor in accordance with Section 01452. Except as specified as mandatory, field quality control testing and inspection shall be at the discretion of the Contractor as necessary to assure compliance with Contract requirements. Owner T&I specified below shall not be considered a substitute for the Contractor's responsibility to perform similar routine, necessary, and customary testing and inspection of the methods and frequency suitable for the type of work involved.

3.5 OWNER TESTING AND INSPECTION (T&I)

- A. The Owner will perform testing and inspection as specified in Appendix B (Section 03410).

3.6 CLEANING AND PROTECTION

- A. Clean mortar, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.

- B. Comply with manufacturer's instructions and recommendations for cleaning precast concrete panels when panel erection is complete. Clean soiled precast concrete surfaces with detergent and water, using stiff fiber brushes and sponges, and rinse with clean water. Remove weld marks, other markings, dirt and stains.
- C. Protect adjacent work from staining or damage due to cleaning operations.

END OF SECTION

SECTION 03905 – INTERIOR CONCRETE SLAB REPAIRS AND JOINT FILLER REPLACEMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Joint filler removal and replacement.
 - 2. Joint edge spall repair.
 - 3. Crack repair.
 - 4. Surface defect repair, including pop-outs, chips, spalls, and pitting.
 - 5. Removal and replacement of previously completed repairs not in compliance with this section.

- B. Related Requirements:
 - 1. Section 01330 – Submittal Procedures. Procedures for submittals.
 - 2. Section 01351 - Regulatory Compliance: Waste management and disposal.
 - 1) Disposal and removal of construction and universal waste.
 - b. Work practice control methods for airborne respirable dust.
 - 3. Section 01500 – Temporary Facilities and Controls. Requirements for control of substances that have the potential for polluting surface and/or groundwater.
 - 4. Section 01700 – Execution Requirements. Requirements for use of fuel powered equipment within the enclosed building.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.

- B. Occupational Safety and Health Administration (OSHA):
 - 1. OSHA 01926.1153 Respirable Crystalline Silica.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Minimize dust emissions and provide equipment that suppresses dust.

- B. Dispose of construction waste in accordance with the requirements of Section 01351 Regulatory Compliance Supplement.

1.4 SUBMITTALS

- A. Within 21 days after award of prime contract, submit in accordance with procedures specified in Section 01330. Unless otherwise specified herein, send submittals to Architect of Record as specified in Section 01330.
 - 1. Submit all submittal items required within this section in a single submittal via e-mail (maximum document size 10 Mb).
 - a. Do not submit submittals of this section together with submittals in any other section.
 - 2. If Contractor fails to submit a complete Concrete Slab Enhancement Submittal Package within 21 days after award of prime contract, the Contractor shall pay the Owner \$250.00 per day as liquidated damages and not as a penalty, until the fully completed Concrete Slab Enhancement submittal package is received by the Architect of Record.
 - 3. Submittals shall be complete, accurate, and in full compliance with contract requirements for proper and timely approval.
 - 4. Maintain one copy of approved documents on site.
 - 5. Identify submittals explicitly in accordance with Section 01330.
 - 6. Fill out and submit attached Concrete Slab Repair and Joint Filler Replacement Submittal Form attached at the end of this Section.

- B. Submittal Rejections:
1. Submittals which do not comply with Contract Documents will be rejected. If submittal is rejected for any reason, Wal-Mart Stores, Inc., will back-charge the Contractor \$200.00 via Change Order, to cover the processing costs of each subsequent review until submittal is approved. Reasons for submittal rejections include, but are not limited to, the following:
 - a. Incomplete Concrete Slab Enhancement Submittal Package.
 - b. Lack of required certifications.
 - c. Unspecified equipment.
 - d. Unspecified products.
 2. Rejected submittals shall be revised and resubmitted until approved. Extension of Contract time will not be allowed for rejected submittals.
 - a. The Contractor shall revise and resubmit rejected submittals within 7 days of receipt of rejected submittals.
 - b. The Contractor shall verify that the Slab Enhancement subcontractor has addressed all required revisions in the re-submittal.
- C. Product data and Material Safety Data Sheets (MSDS):
1. All products and primary equipment used for repair of existing concrete slab defects.
- D. Joint Filler and Slab Repair Subcontractor Requirements:
1. Joint Filler and Slab Repair Subcontractor Qualifications: Provide to General Contractor for submittal a list of minimum of 5 projects performed within the last 2 years of similar type, size and complexity as this contract. Provide project names, addresses, contact names, phone numbers, and scope of work for each project at time of Bid and within Slab Enhancement Submittal Package.
 2. Joint Filler and Slab Repair Subcontractor shall be a contractor possessing current certifications at time of Bid.
 - a. Joint filler installation and slab repair shall be performed by same subcontractor.
 - b. Joint filler and slab repair subcontractor personnel shall remain the same throughout the completion of specified work unless approved in writing by Owner.
 - c. Joint Filler and Slab Repair Subcontractor shall not sub-subcontract any work in this Section.
 3. Joint Filler and Slab Repair Subcontractor Certifications: Provide to General Contractor for submittal a letter of certification, identifying individuals that are currently certified installers of the following specified materials and are familiar with proper procedures and installation methods as required by the specified product manufacturers.
 - a. Polyurea Joint Filler.
 - b. Low Viscosity Rigid Urethane.

1.5 QUALITY ASSURANCE

- A. Environmental Requirements:
1. Comply with the requirements of Section 01351 for construction and demolition waste management and disposal.
 2. Comply with current Federal, state and local air quality regulations and with Federal requirements on concrete silica dust emissions. Do not dry grind or polish slab surface.
 3. Limit and control all noise and damage from excessive dust caused by demolition, preparation, and installation of specified work.
 4. Limit and control damage from moisture.
 5. Refer to Section 01500 for control of substances that have the potential for polluting surface and/or groundwater.
 6. All replaced concrete shall be cured a minimum of 28 days prior to joint filler installation.
 7. Close finished slab area to traffic during application and after application for a time as recommended by manufacturer.
 8. Upon completion of densifier application, dispose of excess materials. Refer to Section 01351.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Subject to compliance with project requirements, provide products as manufactured by the following to the extent as specified hereinafter:
1. Advanced Blending (817) 477-8022 www.advancedblending.com
 2. Brulin & Company (800) 776-7941 www.brulin.com
 3. Hi-Tech Structural Epoxy Systems (800) 454-5530 www.hitechpolyurea.com
 4. Metzger/McGuire (800) 223-6680 www.metzgermcguire.com
 5. Prime Resins, (800) 321-7212 www.primeresins.com
 6. Prosoco (866) 363-4567 www.prosoco.com
 7. Roadware, Inc. (800) 522-7623 www.concretemender.com
 8. SpecChem (866) 791-8700 www.specchemllc.com
 9. Superior Surface Solutions (888) 471-5227 www.superiorsurfacesolutions.com
 10. VersaFlex, Inc. (913) 321-1416 www.versaflex.com
- B. Polyurea Joint Filler: Rapid setting, two-component polyurea polymer liquid of 100% solids content, Shore hardness 85-90, compatible with construction materials in contact.
1. HT-PE85, High-Tech
 2. EP 80, by Metzger/McGuire.
 3. VersaFlex SL/85, by VersaFlex.
 4. Match color of adjacent exposed concrete slab surface.
- C. Structural Urethane (low viscosity):
1. 10 Minute Concrete Mender, by Roadware
 2. Spall TX, by High Tech
 3. Rapid ReFloor, by Metzger/McGuire.
 4. Quick Mender, by VersaFlex.
 5. Match color of adjacent exposed concrete slab surface.
- D. Silica Sand
1. Dry 00 Sandblasting sand.
- E. Structural Mortar
1. Armor-Hard Extreme, by Metzger/McGuire.
 2. Dimakrete Polish Mortar, by Superior Surface Solutions.
 3. RepCon 928, by SpecChem.
- F. Surface Pitting Grout
1. Dimakrete Polish Grout, by Superior Surface Solutions.
 2. Quick MenderX.O., by VersaFlex.
 3. Rapid ReFloor Pit Grout, by Metzger/McGuire.
 4. Approved equal
- G. High pH Cleaner:
1. Amodet Degreaser/Cleaner by Advanced Blending.
 2. Brulin Deep Scrub Cleaner by Brulin & Co.
 3. Cleaner/Degreaser by Prosoco.
 4. Equivalent approved products.

2.2 EQUIPMENT

- A. Refer to Section 01700 for requirements related to acceptable power sources specified herein.
- B. Subject to compliance with project requirements, provide equipment manufactured by the following:
1. Gator Finishing Products (800) 2554748, www.gatorfinishing.com

2. HTC (877) 482-8700, www.htc-america.com
 3. Joe Due Blades and Equipment, Mauston, WI, (877) 563-3833.
 4. Norton Abrasives (800) 331-3604, www.nortonabrasives.com
 5. Pullman-Ermator (800) 232-2635, www.pullman-ermator.com
 6. SASE Company, Inc., Kent, WA (800) 522-2606
 7. U.S. Saws, Santa Ana, CA (866) 987-7297.
 8. [OBHC, Inc. dba Gorilla Concrete Tools](http://www.obhc.com), Columbia Station, OH, (440) 236-5112.
- C. Dust Collection Vacuum System: Connect one of the following dust collection systems directly to each tool. Verify that collection system provided is equipped with HEPA-rated filter and is recommended by the manufacturer to maintain dust emissions below the permissible level. Verify air flow speed is acceptable for the size of the blade.
1. 26D, by HTC.
 2. S2400, by Pullman-Ermator.
 3. Bull 50, by SASE Company, Inc.
 4. Similar equipment as required to produce the specified results.
- D. Joint Filler Removal and Preparation
1. Humpback Cutter Complete, by Joe Due.
 2. Dust Buggy, by U.S. Saws.
 3. [Gorilla Concrete Tools](http://www.gorillaconcrete.com) GCT-10 or GCT-9 Silverback by OBHC, Inc.
 4. Similar equipment as required to produce the specified results.
- E. Crack Repair:
1. 5" Dust Mizer 005, by Joe Due.
 2. 7" Dust Mizer 007, by Joe Due.
 3. Crack Attacker, by Joe Due.
 4. 7" Handheld Crack Chaser, by Joe Due.
 5. SawTec 5" Tile Vac, by U.S. Saws.
 6. SawTec 7" Crac-Vac, by U.S.Saws.
 7. Similar equipment as required to produce the specified results.
- F. Surface Grinder: Handheld 5"-7" electric surface grinder with dustless shroud/housing.
1. Dust Avenger 5, by Joe Due.
 2. Dust Avenger 7, by Joe Due.
 3. SawTec 5" Grinder Vac, by U.S. Saws.
 4. SawTec 7" Grinder Vac, by U.S. Saws.
 5. Similar equipment as required to produce the specified results.
- G. Fiber Stripping Pads
1. Rapid Strip Disc, by Norton
 2. Gator Fiber Disc, by Gator Finishing Products
 3. Similar equipment as required to produce the specified results.

PART 3 - EXECUTION

3.1 GENERAL

- A. Concrete rehabilitation work specified shall be performed within the limits of the area of the Facility floor shown on Drawings.
- B. Installation of specified products shall be in accordance with product manufacturer's written instructions.
- C. Verify that sawing and grinding tools are equipped with a dust collection system as specified herein.
- D. For repairs of this Section requiring clean joints of loose concrete, joint filler, laitance, dust, and debris, use a HEPA-rated filter vacuum.

3.2 EXAMINATION

- A. An evaluation of the existing floor slab shall be conducted, identifying all defects. Scope of repairs shall be confirmed by the Owner Concrete Consultant prior to commencement of work. Identify scope of work on Floor Polishing Plan specified in other section(s) of Division 3 – Concrete.
- B. Repairs are not acceptable unless specifically approved on a case-by-case basis by the Owner Construction Testing Laboratory.

3.3 PREPARATION

- A. Close areas to traffic during and after floor finish application for time period recommended by product manufacturer(s).
- B. Cover and protect merchandise and racking to prevent damage or contamination of stored products. Provide dust drapes as required to protect merchandise from dust or debris.
- C. Protect surface of slab immediately adjacent to defect under repair.
- D. Do not proceed until Owner Construction Manager has approved repair material color match.

3.4 JOINT MILLING AND CAP FILLER REPLACEMENT

- A. If existing joint filler is sound and resting on top of saw cut shelf, mill top 1/2" of material and refill with specified polyurea joint filler:
- B. Re-saw the joint to a minimum depth of 1/2" with a dry-cut, vacuum-equipped saw using a slightly oversized blade. The blade width should be sufficient to encapsulate the widest spall along a given contraction joint segment to produce a sharp corner on each side of the joint with a minimum of two passes through the joint.
- C. Refill with polyurea joint filler material from the bottom up, taking care not to entrap large air bubbles per manufacturer's recommendation. Slightly overfill and shave flush to the surface, prior to grinding process.
- D. Ensure that after grinding, the joint is cut smooth and flush with the finish floor surface, without concave or intermittent, darkened profile.

3.5 FULL DEPTH JOINT FILLER REPLACEMENT

Note: if shelf width at base of saw cut is less than 1/4" on either side of joint, minimum required filler depth is 2" placed over compressibel backer rod or bagged silica sand.

- A. If existing joint filler is loose, easily removed, or able to be forced downward with a hand tool, remove all filler material from joint and refill.
- B. Re-saw joint full depth with a dry-cut, vacuum-equipped saw using a slightly oversized blade. The blade width should be sufficient to encapsulate the widest spall along a given contraction joint segment to produce a sharp corner on each side of the joint with a minimum of two passes through the joint. Remove all filler material, debris, and laitance.
- C. If shelf width at base of saw cut is less than 1/4 inch on either side of joint, fill joint with compressible backer rod to not more than 2 inches below slab surface.
- D. Refill with polyurea joint filler material from the bottom up, taking care not to entrap large air bubbles per manufacturer's recommendation. Slightly overfill and shave flush to the surface prior to grinding process.
- E. Ensure that after grinding, the joint is cut smooth and flush with the finish floor surface, without concave or intermittent, darkened profile.

3.6 CONTROL JOINT REPAIR (LESS THAN 1")

- A. For joints that are spalled or have radius tooled edges not exceeding 1" in width at slab surface.
- B. Re-saw the joint edge to a minimum depth of 3/4" with a dry-cut, vacuum-equipped saw allowing removal of the widest spall (or top of radius) along a given joint segment to produce a sharp corner on each side of the joint with a minimum of two passes through joint.

03905-6

- C. Clean joint of loose concrete, joint filler, laitance, dirt, debris, backer rod, etc.
- D. Joints must be free of all visible moisture.
- E. Ensure filler penetrates the irregular aggregate interlock portion of the sawn contraction joint as shown below, re-establishing the aggregate interlock that may have been lost due to shrinkage, curling, and lack of reinforcement.

- F. Gravity feed a trace amount (1/8") of silica sand into joint to prevent 3-sided bonding of joint filler. Use proper dust control methods in handling silica sand.
- G. Fill joint cavity per manufacturer's instructions, taking care not to entrap large air bubbles. Overfill joint slightly and shave flush to slab surface prior to grinding process.

3.7 CONTROL JOINT REPAIR (GREATER THAN 1")

- A. For control joints that exceed 1" in width at slab surface or where the slab displays height differential greater than 1/4" at either side of joint.

- B. Re-saw the control joint edge to a minimum depth of 3/4" with a dry-cut, vacuum-equipped saw allowing removal of the widest spall along a given joint segment to produce a sharp corner on each side of the joint with a minimum of two passes through joint. Maintain consistent width of repair to within 1/2 inch in 10 feet.
 - 1. For construction joints experiencing 1/4" or greater height differential at abutting joint edges, repair material should slope at 1/4" per foot at floor surface.
- C. Acceptable Patch Materials
 - 1. Structural Mortar installed in accordance with manufacturer's recommendations.
 - 2. Sand Modified Structural Urethane:
 - a. Place 1/2" layers of dry Silica Sand in bottom of spalled cavity.
 - b. Pour structural urethane material over sand until sand is slightly covered.
 - c. Repeat 1/2" blended layers of sand and structural urethane material until slightly overfilled above finished concrete surface.
- D. Allow patch material to dry (drying time will vary based on temperature).
- E. Overfill repair cavity with patch material per manufacturer's instructions and grind flush to slab surface.
- F. Use hand grinder with Fiber Stripping Pad to hone over -fill level to adjacent slab surface.
- G. After patch material has cured, and prior to any traffic on patched surface, re-saw original slab joint(s) and fill with polyurea joint filler per manufacturer's instructions.
- H. Polish or burnish repair material to match adjacent slab surface after material has properly cured.

3.8 CRACK REPAIR

- A. Crack width less than 1/32" without surface spalling.
 - 1. Do not repair.
- B. Cracks from 1/32" to 3/8" in width.
 - 1. Clean crack cavity.
 - a. Remove loose concrete, dirt and debris from crack with a wire brush or hand grinder with twisted wire wheel attachment, 1/2" minimum depth, insuring crack sidewall is clean.
 - b. Remove any loose segments, including islands formed by crack, with sharp tool.
 - c. Use methods that will not widen existing crack.
 - d. Vacuum crack to remove all dirt, debris and other laitance.
 - 2. Mask slab surface along crack as necessary to minimize overfill.
 - 3. Choose material color that closely matches the adjacent floor.
 - 4. Install low viscosity rigid urethane repair material in accordance with manufacturer's instructions.
 - 5. Repeat until all voids are filled and material crowns slab surface.
 - a. Do not flood area around crack.
 - b. Watch for bubble formation and out gassing.
 - c. Do not allow material to gel before adding additional material.
 - 6. Shave or grind material flush to surface as stipulated by manufacturer.

03905-8

- C. Cracks from 3/8" to 1" in width
1. Saw top or edge of crack to provide square edge, minimum 3/4" in depth.
 - a. Use small hand grinder with maximum 5" diameter blade, minimizing eventual crack width while maintaining uniformity of shape.
 2. Clean crack cavity.
 - a. Vacuum crack to remove all dirt, debris and other laitance.
 - b. Remove all visible moisture.
 3. Mask slab surface along crack as necessary to minimize overfill.
 4. Install polyurea joint filler.
 - a. Dispense sample into small bucket to test blending of material.
 - b. Prime crack with repair material.
 - c. Dispense material, dragging dispenser tip along crack, until it flows over the slab.
 5. Wait approximately 10 minutes, periodically checking for material cure.
 - a. Check condition of material by shaving with razor scraper.
 - b. Material will shave smooth when cured.
 - c. Proper timing is crucial.
 - 1) Too long and material will be difficult to shave
 - 2) Too soon and material will ravel.
 6. Shave material flush to slab surface per manufacturer's instructions.

3.9 SURFACE SPALLING REPAIR

- A. Route edge of spall to provide 1/2" deep square edge.
 1. Use small hand grinder with maximum 5" diameter dry diamond blade and vacuum system attachment.
 2. Do not overcut slots into existing slab surface.
- B. Clean and prep spalled cavity.
 1. Wire brush spalled surface to remove all dirt and laitance.
 2. Mask slab at perimeter of spall with tape.
- C. Install low viscosity rigid urethane repair material using tube cartridge without flow restrictor.
- D. Polish over repair area with diamond disks to blend surface.
 1. Feather filler material into the adjacent concrete floor surface.
 2. With 2000 grit disk and firm pressure, add a few burn marks to mottle surface to blend with adjacent floor surface.
- E. NOTE: For spalled joints, a form material may be needed to temporarily support vertical face of spalled joint edge. Ensure that the repair material will not adhere to the form.

3.10 BOLT HOLE/SPALL REPAIR

- A. Recess steel bolt a minimum of 1/2" below finish floor by either punching or cutting.
- B. For spall fracture edge less than 30 degrees, square edge to a minimum 3/8" depth with either a drill bit or chisel.
- C. For surface spalls resulting from removal of transition strips, use hollow core drill bit to remove surrounding concrete spall to nominal depth of 1/2". Adjacent repairs shall be of a consistent diameter (max repair size 1" nominal).
- D. Clean cavity of all debris and laitance with drill activated, brass wire wheel. Vacuum hole to remove all dirt, debris and other laitance.
- E. Dispense low viscosity rigid urethane at moderate pace using steady pressure. Dispense material into void, refilling as necessary to produce slight crown.
- F. Grind material flush to slab surface per manufacturer's instructions.

3.11 LARGE SURFACE REPAIR

- A. Edge perimeter with diamond masonry wheel to produce sharp edge, at least 3/8" deep.
- B. Roughen base surface and vacuum clean. Wire brush to remove any small loose material and vacuum again.
- C. Protect adjacent slab surface with tape at perimeter of repair area, width as required to prevent scratching during troweling operations.
- D. Mist floor surface until damp but without standing water.
- E. Prepare slurry prime coat of polymerized Portland cement compound and scrub into repair surface with stiff bristle brush. Do not allow to dry before placing pigmented repair material. Use of concrete bonding agent optional.
- F. Mix repair material in accordance with manufacturer's instructions.
- G. Place repair material in floor surface defect and float level. Use float on edge as using flat will cause material to stick and pull.
- H. Lightly mist floated repair material with the finishing aid once and perform first troweling pass to smooth surface without over-working; do not reapply finishing aid during any other troweling operations.
- I. Wait until material begins to set and can be indented with finger about 1/8" and perform second troweling pass, approximately two hours after initial placement.
- J. Using a fine sharp edged cutting tool, cut along edge of repair material and adjacent slab to prevent raveling of edge during tape removal, or remove tape earlier before material has set up all the way to prevent raveling or spalling.
- K. When material has become stiff and can be slightly indented with hard finger pressure, final trowel using firm pressure until mottling and a shine has become apparent. Surface should be tight, level and smooth without surface defects. Do not allow trowels to be positioned on surface flat, as surface will tear. Use circular sweeping motions. Final set should be around 4-5 hrs from time of placement.
- L. Keep surface clean during troweling operations to prevent any laitance from coming in contact with the repair material and marring surface.
- M. Check material set after 30 minutes to 1 hour. Surface should not dent with fingernail under hard hand pressure.
- N. Dye and polish or burnish repair material to match adjacent slab surface color after material has properly cured.

- O. Remove tape and clean area of all particles on repair surface and adjacent floor surface.
- P. Re-establish original concrete slab joints by sawing completely through patch and re-filling with polyurea joint filler prior to exposure to traffic.

3.12 SURFACE PITTING REPAIR

- A. This repair is to be used in areas where the number of minimum 1/4" size diameter slab pits exceeds eight per square foot.
- B. Using high pH cleaner, scrub slab surface using swing machine with stiff brush, to loosen ground in soils in all pits.
- C. Rinse slab surface with clean water and vacuum up with auto scrubber.
- D. Use specified "Surface Pitting Grout" material after first grind.
- E. Follow manufacturer's instructions regarding procedures.
- F. Repeat repairs in areas as required if repair material pulls out of defects. Allowing a longer curing time typically minimizes material pull out.

3.13 PROTECTION

- A. Protect surfaces of finished floor.
- B. Prohibit traffic until floor repairs have received final approval by Owner.

3.14 FIELD QUALITY CONTROL

- A. Field quality control shall be the responsibility of the Contractor in accordance with Section 01452. Except as specified as mandatory, field quality control testing and inspection shall be at the discretion of the Contractor as necessary to assure compliance with Contract requirements.

SUPPLY CHAIN FACILITIES

INTERIOR CONCRETE SLAB REPAIR AND JOINT FILLER REPLACEMENT SUBMITTAL FORM
Section 03905 – INTERIOR CONCRETE SLAB REPAIRS AND JOINT FILLER REPLACEMENT

Date _____

SUPPLY CHAIN FACILITY INFORMATION

FACILITY # _____
ADDRESS _____
CITY, ST _____
GENERAL CONTRACTOR _____
JOINT FILLER AND SLAB REPAIR _____
SUB-CONTRACTOR _____
JOBSITE PHONE _____

A. **ATTACHMENTS:** Include the following with this Submittal Package.

- Completed Interior Concrete Slab Repair and Joint Filler Replacement Qualification Statement of Conformance.
 - Letter of Certification for Joint and Slab Repair Material and Installation.
 - Product data.
 - Manufacturer and model of all equipment used relating to scope of work.
 - Anticipated Slab Enhancement Floor Polish Plan (Developed from Sheet A1.1) for the following:
 - Anticipated start and finish date of work.
 - Size, location and anticipated progression of individual nightly work areas, forecasted two weeks out from the current date of submittal.
 - Location of all joint filler replacement, cracks, spalls and other surface defects requiring repairs specified herein.
 - Electrical supply locations.
-

INTERIOR CONCRETE SLAB REPAIR AND JOINT FILLER REPLACEMENT QUALIFICATION STATEMENT OF CONFORMANCE
SECTION 03905

Project Location: _____ Date: _____

Project Number: _____ Facility Number: _____

By signing below as approved, the Contractor hereby confirms that the qualifications of the joint filler and slab repair subcontractor conforms to the qualifications as follows:

The joint filler and slab repair subcontractor has experience in finishing interior floors of similar size and scope in at least 5 previous projects. Projects name and location are identified as follows

1. _____
2. _____
3. _____
4. _____
5. _____

Concrete Joint Filler and Slab Repair Subcontractor Company Name and Address:

Signature of Responsible Officer: _____

Typed Name and Title of Officer: _____

Telephone Number: (_____) _____

General Contractor Company Name and Address:

Signed by: _____ Date: _____

Submit one copy of this Statement to the Architect of Record.

SECTION 05090 (05 0900) – POST-INSTALLED CONCRETE AND MASONRY ANCHORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Post-installed mechanical and adhesive type anchors for detailed structural connections and exterior signage.
2. Post-installed general use anchors not included in the above.

B. Related Requirements:

1. Section 01351 – Regulatory Compliance:
 - a. Disposal and removal of construction and universal waste.
 - b. Work practice control methods for airborne respirable dust.
2. Appendix B – Testing, Inspection and Observation by Owner: Procedures for inspection, testing, and documentation by Owner furnished testing laboratory.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. Occupational Safety and Health Administration (OSHA):
 1. OSHA 01926.1153 Respirable Crystalline Silica.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Minimize dust emissions and provide equipment that suppresses dust.
- B. Dispose of construction waste in accordance with the requirements of Section 01351 Regulatory Compliance Supplement.

1.4 SUBMITTALS

- A. Code approval reports showing evidence of published performance data for each structural anchor used shall be available for review by the Structural Engineer of Record (SER) or Architect of Record (AOR) upon request. Evidence may be in the form of current ICC-ESR report of UES-ER report, as noted below, or a report by an independent testing laboratory.
- B. Reports are not necessary for general use anchors, unless required by AHJ.

1.5 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 1. ASTM C 881 - Epoxy-Resin-Based Bonding Systems for Concrete

1.6 QUALITY ASSURANCE

- A. Reports showing evidence of published performance data for each anchor used shall be available for review by the Structural Engineer of Record upon request. Evidence may be in the form of current ICC-ER report or a report by an independent testing laboratory.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Provide products from one of the following manufacturers:
 - 1. Hilti, Inc. (800) 879-8000
 - 2. ITW Red Head (800) 899-7890
 - 3. Simpson Strong Tie Co. Inc. (800) 999-5099
 - 4. DeWalt/Powers Fasteners, Inc (800) 524-3244

2.2 MATERIALS

- A. Substitutions: Substitutions of products from manufacturers not listed are not permitted.
- B. Alternate Products: Alternate products from the manufacturers listed may be used upon approval based upon suitability for the installation involved as determined by the Structural Engineer of Record.
- C. Provide proprietary anchor products as specified below unless otherwise shown on the drawings or specified in other sections. Anchors may be any one of the products listed for the type specified unless otherwise shown or specified.
- D. Manufacturer's Instructions: Provide complete installation instructions with items furnished to the field.

2.3 STRUCTURAL MECHANICAL ANCHORS

- A. Interior Use Anchors: Zinc plated carbon steel anchors.
- B. Exterior Use Anchors: Stainless steel with stainless steel nuts and washers of matching alloy group and minimum proof stress equal to or greater than the specified minimum full-size tensile strength of the externally threaded fastener.
- C. Wedge Expansion Anchors: Torque-controlled, with impact section to prevent thread damage complete with required nuts and washers. Type and size as indicated on Drawings. Provide one of the following:
 - 1. Hilti:
 - a. Kwik Bolt 3.
 - 1) Grout Filled CMU (ESR 1385)
 - b. Kwik Bolt TZ.
 - 1) Concrete (ESR 1917)
 - 2) Grout Filled CMU (ESR 3785)
 - 2. ITW Red Head:
 - a. Trubolt+.
 - 1) Concrete (ESR 2427)
 - 3. DeWalt/Powers:
 - a. Power-Stud.+ SD1
 - 1) Concrete (ESR 2818)
 - 2) Grout Filled CMU (ESR 2966)
 - 4. Simpson:
 - a. Wedge All.
 - 1) Grout Filled CMU (ESR 1396)
 - b. Strong-Bolt 2
 - 1) Concrete (ESR 3037)
 - 2) Grout Filled CMU (ER 240)
- D. Sleeve Anchors: Torque controlled, exhibiting follow-up expansion under load, with provision for rotation prevention during installation. Provide one of the following:
 - 1. Hilti: HLC Sleeve Anchor.
 - a. Exterior signage connections only.
- E. Screw Anchors: Single piece anchor installed in a pre-drilled hole using a bit matching manufacturer tolerances. Anchors shall have 360-degree contact with the base material and shall not require oversized or undersized holes for installation. Provide one of the following:
 - 1. Hilti:

- a. KH-EZ
 - 1) Concrete (ESR 3027)
 - 2) Grout Filled CMU (ESR 3056)
- 2. ITW:
 - a. Tapcon+
 - 1) Concrete (ESR 3699)
 - b. Large Diameter Tapcon (LDT).
 - 1) Shelving fixture upright connection only.
- 3. DeWalt/Powers
 - a. Screw-Bolt+
 - 1) Concrete (ESR 3889)
 - b. Tapper+
 - 1) Grout Filled CMU (ESR 3196)
- 4. Simpson
 - a. Titen HD
 - 1) Concrete (ESR 2713)
 - 2) Grout Filled CMU (ESR 1056)

2.4 STRUCTURAL ADHESIVE ANCHORS

- A. Adhesive Anchor Bolts: Stud-type anchors consisting of threaded steel rod, nut, and washer or deformed reinforcing bar, and anchor adhesive. Use type and size as indicated on Drawings. Use stainless steel or zinc coated carbon steel for exterior exposure.
- B. Adhesive: Adhesive shall be a cartridge type, two-component, epoxy, acrylic, or hybrid based system dispensed and mixed through a static mixing nozzle supplied by the manufacturer. Acceptable installation and performance temperature ranges shall be verified with manufacturer's literature prior to installation. Provide one of the following:
 - 1. Hilti:
 - a. HIT-HY 200 (A/R)
 - 1) Concrete (ESR 3187)
 - 2) Grout Filled CMU (ESR 3963)
 - b. HIT-HY 70
 - 1) Hollow and Grout Filled CMU (ESR 2682)
 - c. HIT-RE 500 V3
 - 1) Concrete (ESR 3814)
 - 2. Simpson:
 - a. SET-XP
 - 1) Concrete (ESR 2508)
 - 2) Grout Filled CMU (ER 265)
 - b. AT-XP
 - 1) Concrete (ER263)
 - 2) Grout Filled CMU (ER 281)
 - 3. ITW Red Head:
 - a. Epcon C6+
 - 1) Concrete (ESR 3577)
 - b. Epcon A7+
 - 1) Concrete (ESR 3908)
 - 2) Grout Filled CMU (ESR 3200)
 - 4. DeWalt/Powers:
 - a. AC100+ Gold
 - 1) Concrete (ESR 2582)
 - 2) Grout Filled CMU (ESR 3200)
 - b. AC200+
 - 1) Concrete (ESR 4027)

2.5 GENERAL USE ANCHORS

- A. General use anchors shall be adequate for the loads they support.
- B. Testing and inspection are not required for general use anchors.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions and adjacent areas where products and materials will be installed and verify that conditions conform to product manufacturer's requirements. Verify that structural components are ready to receive Work. Do not proceed until unsatisfactory conditions have been corrected.
- B. Beginning of installation indicates acceptance of existing conditions.

3.2 INSTALLATION

- A. Post-installed anchors installed for missing or misplaced cast-in-place anchors shall be approved by the Structural Engineer of Record.
- B. Where manufacturer recommends use of special tools for installation of anchors, such tools shall be used, unless otherwise permitted specifically by the Structural Engineer of Record.
- C. Where holes are drilled in concrete or masonry, provide drills equipped with a HEPA-rated filter vacuum dust collection system recommended by the manufacturer to maintain dust emissions below the permissible level.
- D. Drill holes accurately and squarely and. Clean holes in accordance with the manufacturer's recommendations using HEPA-rated filter vacuum.
- E. Post-installed Anchor Installation (General):
 - 1. Install post-installed anchors where shown on the drawings.
 - 2. Perform anchor installation in accordance with manufacturer instructions. Install anchors at not less than the minimum embedment, edge distance, and spacing recommended by the manufacturer.
 - 3. Drill holes with rotary impact hammer drills using carbide-tipped bits. Drill bits shall be of diameters as specified by the anchor manufacturer. Unless otherwise shown on the Drawings, all holes shall be drilled perpendicular to the base material surface.
 - a. Cored Holes: Where anchors are to be installed in cored holes, use core bits with matched tolerances as specified by the manufacturer.
 - b. Embedded Items: Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Avoid damage to existing reinforcing or embedded items during coring or drilling. Avoid damaging electrical and telecommunications conduit and gas lines. Notify the Engineer if reinforcing steel or other embedded items are encountered during drilling.
 - c. Base Material Strength: Unless otherwise specified, do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 - d. Hollow Substrates: Where anchors are noted to be installed in hollow substrates, holes shall be drilled using rotation mode only.
 - 4. Use anchors of the same anchor manufacturer for anchors of the same type.
- F. Mechanical Anchor Installation: Protect threads from damage during anchor installation. Sleeve anchors shall be installed with sleeve fully engaged in part to be fastened. Set anchors to manufacturer's recommended torque, using a torque wrench.
- G. Adhesive Anchor Installation:
 - 1. When the base material temperature drops below 40-degrees F, use only acrylic adhesive. See manufacturer's instructions for additional minimum temperature requirements. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install under environmental conditions outside manufacturer's absolute limits.
 - 2. Hollow Substrates: Anchorage into hollow substrates is not allowed unless specifically indicated on the contract documents. Where applicable, the adhesive manufacturer's screen tubes shall be used for

- adhesive installation into hollow substrate applications.
3. Oversized Holes: Refer to manufacturer's information if drilled hole size is larger than what is recommended.
 4. Core Drilled Holes: Refer to manufacturer's information if holes are drilled with a core-drill bit.
 5. Clean holes per manufacturer instructions to remove loose material and drilling dust prior to installation of adhesive. Inject adhesive into holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive. Follow manufacturer recommendations to ensure proper mixing of adhesive components. Sufficient adhesive shall be injected in the hole to ensure that the annular gap is filled to the surface. Remove excess adhesive from the surface. Shim anchors with suitable device to center the anchor in the hole. Do not disturb or load anchors before manufacturer specified cure time has elapsed.

3.3 REPAIR OF DEFECTIVE WORK

- A. Remove and replace misplaced, defective, or malfunctioning anchors. Anchors that fail a sheer or pullout test, if directed or installation torque requirements shall be regarded as malfunctioning. Fill empty anchor holes and patch failed anchor locations with high-strength non-shrink, nonmetallic grout.

3.4 FIELD QUALITY CONTROL

- A. Field quality control shall be the responsibility of the Contractor in accordance with Section 01452. Except as specified as mandatory, field quality control testing and inspection shall be at the discretion of the Contractor as necessary to assure compliance with Contract requirements. Owner T&I specified in Appendix B shall not preclude Contractor's responsibility to perform similar routine, necessary, and customary testing and inspection of the methods and frequency suitable for the type of work involved.

3.5 OWNER TESTING AND INSPECTION (T&I)

- A. The Owner will perform testing and inspection as specified in Appendix B (Section 05090).

END OF SECTION

SECTION 05120 (05 1200) - STRUCTURAL STEEL

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Structural steel framing members, structural steel support members, struts, with required bracing, welds, and fasteners shown on the structural drawings.
 2. Structural steel columns.
 3. Base plates and headed shear stud connectors.
 4. Anchor bolts required for items included in this Section.
 5. Steel plates and angles shown on the structural drawings with anchor studs, sleeve anchors, expansion bolts, or adhesive anchors, which are embedded in or cast into concrete or masonry.
 6. Teflon coated slide bearing pads.
 7. Grout, for setting and anchoring items in masonry and concrete.
 8. Secondary structural framing for support of insulated metal panels.
- B. Related Requirements: The following list is intended to aid in locating work related to or dependent on the scope of Work in this Section. The list is included for information only and is not intended to be inclusive of all project requirements.
1. Section 03300 - Concrete: Anchorages cast in concrete.
 2. Section 03410 – Plant Precast Structural Concrete Panels: Attachments to precast panels.
 3. Section 05090 - Post-Installed Concrete and Masonry Anchors: Mechanical and adhesive type anchor studs, expansion bolts, sleeve anchors, adhesive anchors, and anchor bolts embedded in concrete and masonry for anchoring and supporting structural members.
 4. Section 05300 - Metal Deck: Support framing for floor or roof openings.
 5. Section 05500 - Metal Fabrications: Miscellaneous steel components.
 6. Appendix B – Testing, Inspection and Observation by Owner: Procedures for inspection, testing, and documentation by Owner furnished testing laboratory.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American Institute of Steel Construction (AISC):
1. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges.
 2. AISC 360 - Structural Steel Buildings.
- C. ASTM International (ASTM):
1. ASTM A 36 - Structural Steel.
 2. ASTM A 53 - Pipe, Steel, Black and Galvanized, Seamless and Welded.
 3. ASTM A 108 - Steel Bars, Carbon And Alloy, Cold- Finished,
 4. ASTM A 123 - Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 5. ASTM A 307 - Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength.
 6. ASTM A 325 - Structural Bolts, Heat Treated, 120/105 ksi Minimum Tensile Strength.
 7. ASTM A 490 - Structural Bolts, Alloy Steel, Heat Treated, 150 ksi Minimum Tensile Strength.
 8. ASTM A 500 - Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
 9. ASTM A 501 - Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.
 10. ASTM A 992 - Structural Steel Shapes.
 11. ASTM C 1107 - Packaged Dry, Hydraulic-Cement Grout (Non-Shrink).
 12. ASTM D 1187 - Asphalt-Base Emulsions for Use as Protective Coatings for Metal.
 13. ASTM E 709 - Standard Guide for Magnetic Particle Testing

- D. American Welding Society (AWS):
 - 1. AWS D1.1 - Structural Welding Code.
 - 2. AWS D1.3 - Structural Welding Code - Sheet Steel.
- E. Research Council on Structural Connections (RCSC):
 - 1. RCSC Specification for Structural Joints Using ASTM A 325 or A 490 Bolts.
- F. Steel Structures Painting Council (SSPC):
 - 1. SSPC-SP 2 - Hand Tool Cleaning.
 - 2. SSPC SP-3 – Power Tool Cleaning.

1.3 ADMINISTRATIVE REQUIREMENTS

- A. Pre-installation Meeting:
 - 1. Convene Pre-installation Meeting at Site one week prior to commencing work of this Section. Require attendance of parties directly affecting work of this Section, including, but not limited to, the Owner's representative, Contractor, steel erector sub-contractor and foreman, and Owner's Construction Testing Laboratory.
 - 2. Notify all attendees at least two weeks prior to the meeting.
 - 3. Review preparation and installation procedures and coordinating and scheduling required with related work.
 - 4. Review foreseeable methods and procedures related to the work, including the following:
 - a. Tour, inspect, and discuss condition of preparatory work performed by other trades.
 - b. Review structural loading limitations and bracing requirements.
 - c. Review drawings, specifications and other contract documents including submittals.
 - d. Review and finalize construction schedule related to work and verify availability of materials, installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - e. Review required inspections, testing, certifying, and material usage accounting procedures.
 - f. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
 - 5. Record discussions of the meeting and decisions and agreements (or disagreements) reached, and furnish copy of record to each party attending.

1.4 SUBMITTALS

- A. Submittal Procedures: Unless otherwise specified herein, submit in accordance with procedures specified in Section 01330. Submit all submittals electronically in PDF format via email, unless otherwise specified, to Architect of Record and Structural Engineer of Record. When available, a 3D file (.ifc or similar) shall be provided to the Architect of Record for reference.
- B. Shop Drawings:
 - 1. Indicate profiles, sizes, spacing, and locations of structural members, connections, attachments, and fasteners.
 - 2. Include supplementary parts and members necessary to complete structural steel work, regardless of whether parts are definitely shown or specified, and furnish bolts, gussets, plates, and related items as required for proper assembly of items.
 - 3. Include miscellaneous deck support angles as required for proper support of metal deck around columns, gussets, openings, and obstructions.
 - 4. Include profiles, sizes, spacing, and locations of secondary structural members, connections, attachments, and fasteners.
 - 5. Indicate welded connections using standard AWS welding symbols. Indicate net weld lengths.
 - 6. Provide setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed by other trades.
 - 7. Indicate top of bearing plate elevations, and elevations above finish floor to the centerlines of embedded plate, anchor bolts, and all control joint locations.
 - 8. Templates shall be furnished by fabricator with instructions for setting of anchor bolts and bearing plates.
 - 9. Prepare shop drawings for any structural items designed by the steel supplier under seal of a Professional Structural Engineer registered in the State in which Project is located.

10. Omission from shop drawings of materials required by Contract Documents does not relieve Contractor of responsibility of furnishing and installing such materials even though shop drawings may have been returned and reviewed.
- C. Calculations: Submit design calculations for structural steel connections not detailed on Contract Documents or proposed differently than as shown on Contract Documents, signed and sealed by Professional Structural Engineer registered in State in which Project is located.
- D. Delegated Design Submittal: Secondary Structural Framing
 1. Comply with design loads noted on the construction documents and the performance requirements listed in this specification.
 2. Include calculations signed sealed by the qualified Professional Structural Engineer, registered in the project state, responsible for their preparation.
- E. Primer Finish: Submit standard shop primer samples to Architect and Owner for review and approval.
 1. Type: Sherman Williams STEEL SPEC® 3002 UNIVERSAL PRIMER (B50AS200- Gray)
- F. Substitutions: Submit substitutions of sections or modifications of details, or both, and reasons for proposal, with shop drawings. Clearly identify substitutions as such. Accepted substitutions, modifications, and necessary changes in related portions of Work shall be coordinated by fabricator and shall be accomplished at no additional cost to Owner.

1.5 QUALITY ASSURANCE

- A. Welder Qualifications: Qualify welding operators in accordance with Standard Qualification Procedures as required by AWS D1.1.
- B. Comply with applicable provisions of the following specifications and documents:
 1. AISC 303.
 2. AISC 360.
 3. RCSC Specification for Structural Joints Using ASTM A 325 or A 490 Bolts.
- C. Design connections not detailed on Drawings under direct supervision of a Professional Structural Engineer experienced in the design of this Work registered in State in which the project is located.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Product Delivery: Structural Steel Supplier will deliver products to Site for Contractor to receive on delivery date established by Contractor.
- B. Product Packaging: Steel will be shipped with identification markings on each component or package. Identification markings will coordinate with identification markings for components indicated on Structural Steel Supplier setting drawings.
- C. Acceptance at Site:
 1. Verify quantity of products furnished with setting drawings and Bills of Lading provided by Structural Steel Supplier.
 2. Report discrepancies in product quantity delivered, or damage to products delivered to Owner's Construction Manager immediately. Note description of product quantity discrepancies and/or product damage on Bill of Lading.
- D. Manufacturing Defects: Report suspected product manufacturing defects to Owner's Construction Manager and the Structural Steel Supplier. Upon notification, Contractor will arrange for repair of product manufacturing defects.
- E. Transport, handle, store, and protect products in accordance with the requirements of Section 01600.

- F. Store materials to permit easy access for inspection and identification.
- G. Keep steel members off ground by using pallets, platforms, or other supports.
- H. Protect steel members and packaged materials from erosion and deterioration.
 - 1. Store fasteners in a protected place. Clean and relubricate bolts and nuts that become dry or rusty before use.
 - 2. Do not store materials on structure in a manner that might cause distortion or damage members or supporting structures.
 - 3. Remove salt residue from steel members by power spraying when present as a result of salted roads during winter weather transport.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Structural Steel:
 - 1. Wide Flange Steel Shapes: ASTM A 992 or A 572.
 - 2. Steel Channels and Angle Shapes:
 - a. ASTM A 36, Grade 36 as noted on the drawings.
 - b. ASTM A 572, Grade 50 as noted on the drawings
 - 3. Anchor Bolts:
 - a. ASTM F1554, Grade 36 as noted on the drawings.
 - b. ASTM F1554, Grade 55 (S-1), as noted on the drawings.
 - 4. Plates and Bars:
 - a. ASTM A 36, Grade 36 as noted on the drawings.
 - b. ASTM A 572, Grade 50 as noted on the drawings
- B. Hollow Structural Sections:
 - 1. Square and Rectangular HSS Shapes: ASTM A 500, Grade C.
 - 2. Round HSS Shapes: ASTM A 500, Grade C.
- C. Structural Steel Pipe: ASTM A 53, Grade B; ASTM A 500, Grade B; or ASTM A 501 as shown on the drawings.
- D. Secondary Steel Framing:
 - 1. Steel used to form girts, channels and other secondary framing must meet the requirements of ASTM A-1011 or ASTM A-1039 Grade 55 for primed material or ASTM A-653 Grade 55 for galvanized material with a minimum yield of 55 ksi.
 - 1. Steel used to form angles must meet the requirements of ASTM A-1011 or ASTM A-1039 Grade 55 for primed material; ASTM A-653 Grade 55 for galvanized material with a minimum yield of 55 ksi; or ASTM A 1003, Structural Grade, Type H, metallic coated, Grade: ST50H (50 ksi).
 - 2. Design Thicknesses – Gauge to be determined by design to meet specified loading conditions.

2.2 SECONDARY FRAMING

- 1. Girts: Girts shall be cold-formed "Z" sections with stiffened flanges. Flange stiffeners shall be sized to comply with the requirements of the latest edition of AISI and LGSI. They shall be pre-punched to provide for field bolting to the primary structure. They shall be simple or continuous span as required by design. Connection bolts will install through the girt webs, not girt flanges.
 - a. Web Depth: 12"
 - b. Minimum Flange Width: As recommended by insulated metal panel manufacturer.
 - c. Maximum Length: To be determined by design.
- 2. Channels: Cold-formed "C" sections with flanges.
 - a. Web Depth: 12"
 - b. Minimum Flange Width: As recommended by insulated metal panel manufacturer.
 - c. Maximum Length: To be determined by design.

05120-4

3. Angles: Cold-formed "L" sections.
 - a. Depth and Width: To be determined by design or as noted on the construction documents.
 - b. Maximum Length: To be determined by design.
4. Finish: Provide one of the following:
 - a. Primed: Sherman Williams STEEL SPEC® 3002 UNIVERSAL PRIMER (B50AS200- Gray)
 - b. Galvanized: Minimum coating G60 or equivalent.

2.3 ACCESSORIES

- A. Bolts, Nuts, and Washers: ASTM A 325 or A 307 as shown on Drawings.
- B. Primer Finish:
 1. Standard shop primer:
 - a. Sherman Williams STEEL SPEC® 3002 UNIVERSAL PRIMER (B50AS200- Gray)
- C. Welding Materials:
 1. AWS D1.1; type required for materials being welded or as shown on Drawings.
 2. E 7024 electrodes ("Jet Weld" rods) are not permitted; use only "All Position" rods. (7018LH)
- D. Headed Stud Anchors: ASTM A 108, Grades 1010 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1, Type B.
- E. Adhesive or Mechanical Anchors: Anchors associated with structural steel specified herein shall conform to requirements specified in Section 05090.
- F. Asphaltic Mastic: Cold-applied asphalt emulsion complying with ASTM D 1187.
- G. Teflon Coated Slide Bearing Pads: Provide one of the following products:
 1. Fluorogold by [Seismic Energy Products, LP](#) (formerly Furon), Athens, TX (903) 675-8571.
 2. Dura-Slide by [Tobi Engineering](#), Glenview, IL (847) 724-7880.
 3. Type CSA by [Con-Serv, Inc.](#), Georgetown, SC (843) 546-1044.
- H. Non-Shrink Grout: Pre-mixed non-shrinking, high strength grout, ASTM C 1107, Type A, B, or C; compressive strength of 5,000 psi in 28 days. Provide one of the following products:
 1. [NS Grout](#) by [Euclid Chemical](#), Cleveland, OH (800) 321-7628.
 2. [MasterFlow 100 General Construction Grout](#) by [BASF Building Systems](#).
 3. [Certi-Vex Grout 1000](#) by [Vexcon Chemicals](#), Philadelphia, PA (888) 839-2661.
 4. [1107 Advantage Grout](#) by [Dayton Superior](#), Miamisburg, OH (888) 977-9600.
- I. Framed Openings: Used to frame out doors, windows, louvers, and any other openings. Refers to the framing members and flashing which surround an opening and includes jambs, header and or sill, trim, and fasteners.
- J. Permanent Roof Tie-off Points: Locate where noted on the roof framing plans:
 1. [Kee Rigid Anchor](#) by Kee Safety (716) 896-4949.
 - a. Bolt On Anchors: KRA-BMC
 - b. Galvanized finish to ASTM A123
 - c. Attachment Point: Forged D-Ring
 - d. Height: 8" min above roof, 20" standard total height above top of steel.
 2. Deck Support Plate – Supplied by Steel Supplier
 - a. 1/8"x16"x16" plate placed above steel beam and below anchor plate.
 - b. Pre-drill 13/16" diameter holes in plate, coordinate locations with manufacturer information.

2.4 FABRICATION

05120-5

- A. Fabricate and assemble structural steel in shop to greatest extent possible. Fabricate according to AISC 360.
- B. Do not splice structural steel members unless otherwise shown on Drawings or without written approval from the Structural Engineer of Record.
- C. Secondary Steel Fabrication:
 - 1. Coordinate secondary steel framing required for support of insulated metal panels with structural steel shown on Drawings. Shop fabricate girts and related components complete with connection holes for attachment of primary and secondary framing members.
 - 2. Girts, channels, and miscellaneous steel members required for attachment of the secondary support steel to building structure to be roll formed members complying with ASTM A1008. Design, size, space and install members to meet job and loading conditions. Shop punch members with holes and furnished complete with angle clips and fastenings required for attaching to structure.
 - 3. Bolted Connections: Ribbed or high tensile steel bolts as appropriate for each connection.

2.5 FINISH

- A. Clean, prepare, and shop prime structural steel members.
- B. Do not paint surfaces in contact with concrete, or surfaces specified to be galvanized.
- C. Galvanized Finish: Minimum 1.25 oz/sq ft zinc (hot-dipped galvanized) coating complying with ASTM A 123. Galvanize the following items:
 - 1. Structural steel angles and plates, exposed to weather and/or in contact with or embedded in concrete or masonry.
 - 2. Anchor bolts exposed to weather and in contact with or embedded in concrete or masonry.
- D. Primer Finish: Prepare structural steel items scheduled to receive primer finish by SSPC-SP 2 (Hand Tool Cleaning) method. Prime steel with primer finish specified; minimum dry mil thickness of 2 mils.
 - 1. Apply primer finish to all structural steel items not specified as galvanized on the drawings.
 - 2. Do not apply primer finish to the top of structural steel beams that will receive headed stud anchors.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions and adjacent areas where products and materials will be installed and verify that conditions conform to product manufacturer's requirements. Verify elevations of concrete and masonry bearing surfaces and locations of anchorage. Verify that all conditions are ready to receive Work. Do not proceed until unsatisfactory conditions have been corrected.
- B. Proceed with erection only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Supply items required to be cast into concrete or embedded in masonry with setting diagrams.
- B. Clean surfaces thoroughly prior to installation.
- C. Provide temporary shores, guys, braces, and other supports during erection to keep structural framing secure, plumb, and in alignment against temporary construction loads equal in intensity to design loads. Remove temporary supports when permanent structural framing connections and bracing are in place, unless otherwise indicated.

3.3 ON-SITE STORAGE

- A. Steel shall be stored off the ground to keep dirt and other debris from collecting on the members.

05120-6

3.4 SURVEY

- A. Employ Professional Engineer or Land Surveyor registered in State in which Project is located, experienced in survey work, to establish permanent bench marks as shown and as necessary for accurate erection of structural steel. Check elevations of concrete and masonry bearing surfaces, and locations of anchor bolts and similar devices, before erection work proceeds, and report discrepancies to Owner's Construction Manager. Do not proceed with erection until corrections have been made, or until compensating adjustments to structural steel work have been agreed upon with Owner.
 - 1. During erection of the elevated floors, the top of steel elevations shall be measured at the column locations prior to the placement of concrete. Any elevations which exceed allowable tolerances shall be corrected prior to the placement of concrete. If the elevations cannot be corrected with standard field adjustments, and RFI shall be sent to the EOR.

3.5 SECONDARY STEEL FRAMING TOLERANCES

- A. Secondary steel supporting insulated metal panels: Install support members within the following tolerances:
 - 1. Plus or minus 1/8 inch in 5 feet in any direction along plane of framing.
 - 2. Plus or minus 1/4 inch cumulative in 20 feet in any direction along plane of framing.
 - 3. Plus or minus 1/2 inch from framing plane on any elevation.
 - 4. Plumb or level within 1/8 inch at changes of transverse for preformed corner panel applications.
 - 5. Verify that bearing support has been provided behind vertical joints of horizontal panel systems and horizontal joints of vertical panel systems.

3.6 ERECTION

- A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.
- B. Make provision for erection loads, and for sufficient temporary bracing to maintain structure safe, plumb, and in true alignment until completion of erection and installation of permanent bracing.
- C. Do not field cut or alter structural members.
- D. Anchor Bolts: Install anchor bolts and other connectors required for securing structural steel to foundations and other in-place work. Furnish templates and other devices as necessary for presetting bolts and other anchors to accurate locations. Provide post-installed anchors in accordance with Section 05090.
- E. Setting Bases and Bearing Plates: Clean concrete and masonry bearing surfaces of bond-reducing materials and roughen to improve bond to surfaces. Clean bottom surfaces of base and bearing plates.
 - 1. Set loose and attached base plates and bearing plates for structural members on adjusting nuts.
 - 2. Tighten anchor bolts after the supported members have been positioned and plumbed.
 - 3. Grout solidly between bearing surfaces and bases of plates. Finish exposed surfaces, protect installed materials, and allow to cure. For proprietary grout materials, comply with manufacturer's installation instructions.
 - 4. Slide Bearing Pads: Permanently affixed to member and support, respectively, by welding or bolting as indicated. Align and level member faces to maintain full contact between surfaces before completing installation.
- F. High-strength Bolting: Install high-strength bolts according to RCSC Specification for Structural Joints Using ASTM A 325 or A 490 Bolts for type of bolt and type of joint shown or specified.
- G. Erection Bolts:
 - 1. Comply with ASTM A 307.
 - 2. Hand tighten nut to minimum depth of nut.
- H. Field Welding: Perform field welding in accordance with AWS D1.1 or D1.3, as applicable.

- I. Touch-up Painting: Immediately after erection, clean exposed field welds, bolted connections, and abraded areas of shop paint and apply touch-up primer to exposed surfaces. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- J. Protective Coating: Field apply heavy coat of asphaltic mastic bituminous coating to anchor bolts, base plates, and columns below finished floor where shown on the drawings.
- K. Field Painting: Specified in Section 09900.
- L. Spray Foam Insulation – If spray foam insulation is used to seal openings prior to the placement of concrete, then all foam shall be removed upon the curing of the concrete. Foam that is exposed to view will not be acceptable.

3.7 FIELD QUALITY CONTROL

- A. Field quality control shall be the responsibility of the Contractor in accordance with Section 01452. Field quality control testing and inspection shall be at the discretion of the Contractor as necessary to assure compliance with Contract requirements. Owner T&I specified in Appendix B (Section 05120) shall not preclude Contractor responsibility to perform similar routine, necessary, and customary testing and inspection of the methods and frequency suitable for the type of work involved.

3.8 OWNER TESTING AND INSPECTION (T&I)

- A. The Owner will perform testing and inspection as specified in Appendix B (Section 05120).

3.9 REPAIRS AND PROTECTION

- A. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting for touching up shop-painted surfaces.
- B. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

3.10 CLEANING

- A. Clean exposed surfaces of primed or painted erected steel to remove stains, dust, dirt, grease, oil, and other surface contaminants.
- B. The appearance of the steel shall be approved by an Owner's Representative prior to the start of installation for any other trades.

END OF SECTION

SECTION 05300 (05 3000) - METAL DECK

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal roof deck.
2. Metal canopy deck.
3. Metal floor deck.
4. Metal platform deck.
5. Metal form deck.
6. Metal deck used for vertical smoke curtains.
7. Metal deck attachments and fasteners.
8. Deck accessories.
9. Installation of metal decking and accessories.

B. Related Requirements:

1. Section 05090 - Post-installed Concrete and Masonry Anchors: Mechanical and adhesive type anchor studs, expansion bolts, sleeve anchors, adhesive anchors, and anchor bolts embedded in concrete and masonry for anchoring and supporting steel deck.
2. Section 05120 - Structural Steel:
 - a. Structural steel for framed openings.
 - b. Support plates and angles.
3. Section 06150 – Mezzanine Deck Panels: ResinDek composite wood panels installed over metal platform deck.
4. Appendix B - Laboratory Testing Services: Procedures for inspection, testing, and documentation by Owner furnished testing laboratory.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American Iron and Steel Institute (AISI): Specification for the Design of Cold-Formed Steel Structural Members.
- C. ASTM International (ASTM):
 1. ASTM A 653 - Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 2. ASTM A 1008 - Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.
- D. American Welding Society (AWS):
 1. AWS D1.1 - Structural Welding Code.
 2. AWS D1.3 - Structural Welding Code - Sheet Steel.
- E. Steel Deck Institute (SDI):
 1. ANSI/SDI-RD Standard for Steel Roof Deck (SDI Standard).
 2. ANSI/SDI-NC Standard for Non-Composite Steel Floor Deck (SDI Standard).
 3. ANSI/SDI-C Standard for Composite Steel Floor Deck (SDI Standard).
- F. Steel Structures Painting Council (SSPC):
 1. SSPC SP-2 – Hand Tool Cleaning.
 2. SSPC SP-3 – Power Tool Cleaning.
 3. SSPC-Paint 20 - Zinc-Rich Coating Type I - Inorganic and Type II – Organic.

4. SSPC-Paint 25 - Red Iron Oxide, Zinc Oxide, Raw Linseed Oil, and Alkyd Primer.

1.3 SUBMITTALS

- A. Submittal Procedures: Unless otherwise specified herein, submit in accordance with procedures specified in Section 01330. Submit all submittals electronically in PDF format via email, unless otherwise specified, to Architect of Record and Structural Engineer of Record.
- B. Shop Drawings:
 - 1. Shop Drawings shall indicate:
 - a. Decking plan, deck profile dimensions, support type and locations, projections, openings and reinforcements, fastening method and installation accessories.
 - b. Locations, types, and sequence of connections.
 - c. Deck welds by standard welding symbols adopted by AWS.
 - d. Pour stop locations, dimensions, and gauge.
- C. Evaluation Reports: Submit to Architect of Record and Structural Engineer of Record approved hard copy of the most recent IAPMO-UES report.

1.4 QUALITY ASSURANCE

- A. Welder Qualifications: Qualify welding operators in accordance with Standard Qualification Procedures as required by AWS D1.1.
- B. Installer Qualifications: Powder and air actuated fasteners shall be installed by a tool operator licensed by the pin manufacturer.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Metal Deck Supplier will deliver products to site to be received by Contractor as specified in Section 01600.
- B. Project Packaging: Metal decking will be shipped in manufacturer's standard packaging with identification markings on each component or package. Identification markings will coordinate with identification markings for components indicated on Metal Deck Supplier installation final field use drawings.
- C. Receive and accept owner furnished products and report suspected defects and discrepancies in compliance with the requirements of Section 01600.
- D. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.
- E. Keep materials dry. Separate sheets and store deck on dry wood sleepers; slope for positive drainage. Protect with a waterproof covering and ventilate to avoid condensation.
- F. Prevent damage to edges, ends, and surfaces.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."
- B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- C. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

05300-2

2.2 APPROVED MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Canam United States; Canam Group Inc.
 2. Epic Metals Corporation.
 3. New Millennium Building Systems, LLC.
 4. Nucor Corp.; Vulcraft Group.
 5. Verco Manufacturing Co.
 6. ASC Steel Deck.

2.3 MATERIALS

- A. Metal Deck, General: Conforming to SDI standards, type, metal gage, and depth as shown on Drawings. Fabricate panels to comply with ANSI/SDI standards.

B. ROOF DECK

1. Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:
2. Galvanized and shop-primed steel sheet: ASTM A 653, Structural Steel (SS), Grade 50 minimum, G60 zinc coating:
 - a. Deck profile: **DGN-32, roof deck.**
 - b. Profile depth: As indicated on drawings.
 - c. Design uncoated-steel thickness: As indicated on drawings.
 - d. Span condition: Triple span or more.
 - e. Deck sheet end condition: **Lapped or Butted.**
 - f. Deck sheet sidelap condition: Interlocking seam.
 - g. Primary fasteners: As indicated on drawings.
 - h. Sidelap fasteners: As indicated on drawings.
 - i. Steel primer:
 - 1) Top: Un-primed.
 - 2) Bottom: Cleaned and pretreated surface primed with manufacturer's standard white baked-on, rust-inhibitive primer.

C. EXTERIOR CANOPY ROOF DECK

1. Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:
2. Galvanized and shop-primed steel sheet: ASTM A 653, Structural Steel (SS), Grade 50 minimum, G90 zinc coating:
 - a. Deck profile: **DGN-32, roof deck.**
 - b. Profile depth: As indicated on drawings.
 - c. Design uncoated-steel thickness: As indicated on drawings.
 - d. Span condition: Triple span or more.
 - e. Deck sheet end condition: **Lapped.**
 - f. Deck sheet sidelap condition: Interlocking seam.
 - g. Primary fasteners: As indicated on drawings.
 - h. Sidelap fasteners: As indicated on drawings.
 - i. Steel primer:
 - 1) Top: Un-primed.
 - 2) Bottom: Cleaned and pretreated surface primed with manufacturer's standard white baked-on, rust-inhibitive primer.

D. COMPOSITE FLOOR DECK

05300-3

1. Composite Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 31, with the minimum section properties indicated, and with the following:
 2. Galvanized and shop-primed steel sheet: ASTM A 653, Structural Steel (SS), Grade 50 minimum, G60 zinc coating:
 - a. Deck profile: **DG2WH-36, composite deck.**
 - b. Profile depth: As indicated on drawings.
 - c. Design uncoated-steel thickness: As indicated on drawings.
 - d. Span condition: Triple span or more.
 - e. Deck sheet end condition: **Butted.**
 - f. Deck sheet sidelap condition: Interlocking seam.
 - g. Primary fasteners: As indicated on drawings.
 - h. Sidelap fasteners: As indicated on drawings.
 - i. Steel primer:
 - 1) Top: Un-primed.
 - 2) Bottom: Cleaned and pretreated surface primed with manufacturer's standard white baked-on, rust-inhibitive primer.
- E. PLATFORM DECK (WITH RESINDEK COVERING)
1. Platform Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:
 2. Galvanized and shop-primed steel sheet: ASTM A 653, Structural Steel (SS), Grade 50 minimum, G60 zinc coating:
 - a. Deck profile: Deck profile: **DGBH-36, composite deck.**
 - b. Profile depth: As indicated on drawings.
 - c. Design uncoated-steel thickness: As indicated on drawings.
 - d. Span condition: Triple span or more.
 - e. Deck sheet end condition: **Butted.**
 - f. Deck sheet sidelap condition: Interlocking seam.
 - g. Primary fasteners: As indicated on drawings.
 - h. Sidelap fasteners: As indicated on drawings.
 - i. Steel primer:
 - 1) Top: Un-primed.
 - 2) Bottom: Cleaned and pretreated surface primed with manufacturer's standard white baked-on, rust-inhibitive primer.
- F. NON-COMPOSITE ROOF DECK
1. Non-Composite Deck: Fabricate panels to comply with "SDI Specifications and Commentary for Non-Composite Steel Deck," in SDI Publication No. 31, and with the following:
 2. Galvanized and shop-primed steel sheet: ASTM A 653, Structural Steel (SS), Grade 80 minimum, G60 zinc coating:
 - a. Deck profile: **2 ½" corrugated roof deck.**
 - b. Profile depth: As indicated on drawings.
 - c. Design uncoated-steel thickness: As indicated on drawings.
 - d. Span condition: Triple span or more.
 - e. Deck sheet end condition: **Lapped.**
 - f. Deck sheet sidelap condition: Lapped.
 - g. Primary fasteners: As indicated on drawings.
 - h. Sidelap fasteners: As indicated on drawings.
 - i. Steel primer:
 - 1) Top: Un-primed.
 - 2) Bottom: Un-primed.

G. INTERIOR SMOKE CURTAIN DECK

1. Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:
2. Galvanized and shop-primed steel sheet: ASTM A 653, Structural Steel (SS), Grade 50 minimum, G60 zinc coating:
 - a. Deck profile: **B-36, roof deck.**
 - b. Profile depth: 1 ½ inches.
 - c. Design uncoated-steel thickness: 0.0295 inches.
 - d. Span condition: Triple span or more.
 - e. Deck sheet end condition: **Lapped.**
 - f. Deck sheet sidelap condition: Lapped.
 - g. Primary fasteners: #12 self-drilling, self-tapping screws at 24" spacing.
 - h. Sidelap fasteners: #10 self-drilling, self-tapping screws at 36" spacing.
 - i. Steel primer:
 - 1) Top: Cleaned and pretreated surface primed with manufacturer's standard white baked-on, rust-inhibitive primer.
 - 2) Bottom: Cleaned and pretreated surface primed with manufacturer's standard white baked-on, rust-inhibitive primer.
 - j. Installation: Vertical, where noted on architectural drawings.

2.4 ACCESSORIES

- A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.
- B. Welding Materials: AWS D1.1.
- C. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.
 1. Screw Support Fasteners: Fasteners as noted on the Structural Drawings.
 - a. Self-drilling, self tapping No. 12 HWH3 Kwik-Seal Fasteners by [Hilti](#), Tulsa, OK (800) 879-8000
 - b. Self-drilling, self tapping No. 12 HWH Tek screws, by [ITW Buildex](#), Itaska, IL (800) 323-0720.
 - c. Self-drilling, self tapping No. 12 IHWH Dril-Flex screws, by [Elco Construction Products](#), Towson, MD (800) 435-7213.
 - d. Self-drilling, self tapping No. 12 HWH X metal screws, by [Simpson Strong Tie](#), Pleasanton, CA (800) 999-5099.
 2. High Capacity Screw Support Fasteners: Fasteners as noted on the Structural Drawings.
 - a. Self-drilling, self tapping No. 12 Strong Drive XL large head metal screws, by [Simpson Strong Tie](#), Pleasanton, CA (800) 999-5099.
 3. Powder Actuated or Air Actuated Support Fasteners: Fasteners as noted on the Structural Drawings.
 - a. X-HSN 24 or X-ENP 19 Powder Actuated Fasteners by [Hilti](#), Tulsa, OK (800) 879-8000
 - b. SDK-61075, SDK-63075 or K66062 Air Actuated Fasteners by [Pneutek, Inc.](#), Hudson, NH (800) 431-8665.
 4. DeltaGrip side seam attachment system: Fasteners as noted on the Structural Drawings.
 - a. 3/8" wide, 60-degree triangular tabs engaging all three layers of standing seam side lap.
 - b. Installed using ASC provided tools.
- D. Side-Lap Fasteners:
 1. Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.
 2. Interlocking seam, as noted on drawings.
- E. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.
- F. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 40,000 psi, not less than

05300-5

0.0295-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.

- G. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 40,000 psi, not less than 0.0295-inch design uncoated thickness, of same material and finish as deck, and of thickness and profile recommended by SDI Publication No. 31 for overhang and slab depth.
- H. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, minimum yield strength of 40,000 psi, not less than 0.0295-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.
- I. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, 0.0598 inch-thick, with factory-punched hole of 3/8-inch minimum diameter.
- J. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.
 - 1. For shop applied primer: SSPC 25.
 - 2. For galvanized surfaces: SSPC 20.
- K. Concrete Anchorage: Specified in Section 03310.
- L. Post-Installed Anchorage: Specified in Section 05090.
- M. Flashing and Counter Flashing: Specified in Section 07620.
- N. Gutters and Downspouts: Specified in Section 07711.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions and adjacent areas where products and materials will be installed and verify that conditions conform to product manufacturer's requirements. Verify that metal deck supporting framing components are ready to receive Work. Do not proceed until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Interface with Other Work:
 - 1. Coordinate locations and sizes of openings for skylights (if specified), smoke vents (if specified), roof top mechanical equipment and any other penetrations of metal deck.
 - 2. Verify steel support spacing, bracing, and layout.
 - 3. Coordinate structural steel support framing for metal deck openings.
- B. Erect metal decking and connect to structure in accordance with SDI standards. Coordinate attachment sequence and procedure with placing of units; show on final field use drawings.
- C. On steel support members provide SDI minimum bearing length.
- D. Align and level deck on supports.
- E. Attach welds, fasteners, and side lap connectors of size, spacing, and location as indicated on Drawings.
- F. Install Hilti powder actuated fasteners using DX 860 HSN, DX 460 SM, DX 860 ENP or DX 76 tools, by Hilti. Installed pin height shall be in accordance with manufacturer's recommendations and verified with manufacturer approved inspection gage. Determine power level by jobsite testing.
- G. Install Pneutek air actuated fasteners using decking system, by Pneutek. Install pins in accordance with manufacturer's recommendations. Pin head shall clamp deck tightly to supporting member without gaps between

05300-6

underside of head and top side of deck. Pin shall not cause excessive dimpling of the deck greater than 1/2 the thickness of the pin head.

- H. Welding: In accordance with AWS D1.1 and D1.3. Provide welding washers when welding 24 gauge or lighter steel in conformance with SDI standards. Install 6 inch wide sheet steel cover plates where deck changes direction. Spot weld in place 12 inches on center maximum. Install sheet steel closures and angle flashings to close openings between deck and walls, columns, and openings.
- I. After welding deck in place, touch-up welds, burned areas, and surface coating damage with prime paint.
- J. Smoke Curtains: Attach to building structure as indicated on Drawings. Cut to fit tight around penetrations. Seal gaps at penetrations, around roof deck to curtain, and at walled curtain perimeter.
- K. Metal Canopy Deck:
 - 1. Coordinate with work of other Sections to produce watertight assembly, capable of withstanding loading pressures and thermal and lateral loads.
 - 2. Install gutter and downspouts furnished under other Sections.
 - 3. Lap panels, set into sealant, and fasten at spacing indicated on Drawings.
 - 4. Coat welded connections with zinc-rich primer complying with SSPC-Paint 20.
 - 5. Isolate metals from dissimilar metals or corrosive substrates using bituminous coating.
 - 6. Fill space between metal panel and support beam and between metal panel and light fixtures with pre-molded closure accessory strip to eliminate nesting space for birds.
 - 7. Field Finish: Paint canopy supports, structural steel, metal fabrications and accessories on tops, bottoms, edges, and other weather-exposed surfaces as indicated on Drawings, in accordance with Section 09900.

3.3 FIELD QUALITY CONTROL

- A. Field quality control shall be the responsibility of the Contractor in accordance with Section 01452. Field quality control testing and inspection shall be at the discretion of the Contractor as necessary to assure compliance with Contract requirements. Owner T&I specified below shall not preclude Contractor responsibility to perform similar routine, necessary, and customary testing and inspection of the methods and frequency suitable for the type of work involved.
- B. Manufacturer's Field Services: Powder and air actuated fasteners.
 - 1. Inspection: Manufacturer's representative (not a distributor or agent) shall be on site to inspect and verify proper installation of 100% of fasteners.
 - 2. Report: Manufacturer representative (not a distributor or agent) shall submit inspection report indicating verification to Owner's Construction Manager.

3.4 OWNER TESTING AND INSPECTION (T&I)

- A. The Owner will perform testing and inspection (T & I) as specified in Appendix B.

3.5 PROTECTION

- A. Preparation for Repair Painting: Promptly after installation, clean and prepare rust spots, welds, and abraded surfaces of prime-painted deck with hand tools according to SSPC-SP 2, or power tools according to SSPC-SP 3.
- B. Final Cleaning:
 - 1. Thoroughly wet wipe or wash exposed surfaces of erected members to remove stains, dust, dirt, grease, oil, and other surface contaminants accumulated during storage or after installation.
 - 2. Do not proceed with repair painting until exposed surfaces are free of dirt and contaminants.
- C. Repair Painting: Apply repair paint of same color as adjacent shop-primed deck to bottom surfaces of deck exposed to view.

END OF SECTION

05300-7

SECTION 05400 - COLD FORMED METAL FRAMING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Exterior Load-Bearing, Non-Load Bearing, and Shear Wall Cold Formed Framing.
2. Interior Load-Bearing and Shear Wall Cold Formed Framing.
3. Interior Non-Load-Bearing Partition Wall Cold Formed Framing.
4. Floor Joist Cold Formed Framing.
5. Roof Rafter Cold Formed Framing.
6. Ceiling Joist Cold Formed Framing.
7. Cold Formed Framing Connections and Accessories.

B. Related Requirements:

1. Section 05090 - Post-installed Concrete and Masonry Anchors: Mechanical and adhesive anchors drilled into concrete or masonry.
2. Section 05120 - Structural Steel: Structural building framing.
3. Section 05300 - Metal Deck: Structural floor and roof deck.
4. Section 06100 - Rough Carpentry: Wood furring strips, plywood, and blocking.
5. Section 07210 - Building Insulation: Thermal insulation installed in exterior framing.
6. Section 09250 - Gypsum Board: Gypsum Board.
7. Appendix B – Testing, Inspection and Observation by Owner: Procedures for inspection, testing, and documentation by Owner furnished testing laboratory.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.

B. American Iron and Steel Institute (AISI):

1. North American Specification for the Design of Cold-Formed Steel Structural Members.
2. Standard for Cold-Formed Steel Framing

C. ASTM International (ASTM):

1. ASTM A 36 - Carbon Structural Steel.
2. ASTM A 123 - Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
3. ASTM A 1003 - Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members
4. ASTM C 955 – Standard Specification for Cold Formed Steel Structural Framing Members.
5. ASTM C 1007 - Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories.
6. ASTM C 1513 - Steel Tapping Screws for Cold-Formed Steel Framing Connections.

D. American Welding Society (AWS):

1. AWS D1.1 - Structural Welding Code - Steel.
2. AWS D1.3 - Structural Welding Code - Steel Sheet.

E. Steel Structures Painting Council (SSPC):

1. SSPC-Paint 20 Type I - Zinc Rich Primers - Inorganic.

F. Steel Framing Industry Association (SFIA):

1. Member listing.

G. Steel Stud Manufacturers Association (SSMA):

1. SSMA Product Technical Information.

05400-1

1.3 PRECONSTRUCTION MEETING

- A. Preconstruction Conference: Conduct conference at Project site with the General Contractor, Cold Formed Steel Framing Sub-Contractor, and the Testing Agency prior to the start of field installation.

1.4 ACTION SUBMITTALS

- A. Product Data: For the following
 1. Cold-formed steel framing materials.
 2. Load-bearing wall framing.
 3. Exterior non-load-bearing wall framing.
 4. Interior non-load-bearing wall framing.
 5. Vertical deflection clips.
 6. Single deflection track.
 7. Double deflection track.
 8. Drift clips.
 9. Post-installed anchors (per section 05090).
 10. Power-actuated anchors.
- B. Evaluation Reports: For cold-formed steel framing.
 1. Products to be certified under an independent third-party inspection program administered by an agency accredited by IAS to ICC-ES AC98 IAS Accreditation Criteria for Inspection Agencies.
- C. Shop Drawings
 1. Provide Shop Drawings prepared by cold-formed metal framing installer.
 2. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
 3. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
 4. Shop drawings shall be stamped by a qualified Specialty Structural Engineer (SSE) (SSE) registered in the jurisdiction of the project.
- D. Delegated Design Submittal
 1. Comply with design loads noted on the construction documents and the performance requirements listed in this specification.
 2. Include analysis data and calculations signed sealed by the qualified Specialty Structural Engineer (SSE) (SSE), registered in the project state, responsible for their preparation.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Member in good standing of the Steel Framing Industry Association (SFIA).
 1. Products to be certified under an independent third-party inspection program administered by an agency accredited by IAS to ICC-ES AC98 IAS Accreditation Criteria for Inspection Agencies.
- B. Installer Qualifications: Company specializing in the installation of cold formed metal framing components with minimum five years documented experience.
- C. Qualifications for Welding Work: Qualify welding operators in accordance with Standard Qualification Procedures as required by AWS D1.1.
- D. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Steel Framing Industry Association or the Steel Stud Manufacturers Association.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.

05400-2

- B. Protect metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.
- C. Store and protect metal framing products with waterproof covering; ventilate to avoid condensation.
- D. Where framing is stored outdoors, stack materials off ground, supported on level platform, fully protected from weather.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- 1. [ClarkDietrich](#), West Chester, OH (513) 870-1100.
- 2. [The Steel Network](#), Durham, NC (888) 474-4876.
- 3. [Cemco Steel](#), Ft. Worth, TX (817) 568-1525.
- 4. [Telling Industries, LLC](#) Willoughby, OH (866) 372-6384.
- 5. [Marino/WARE](#), South Plainfield, NJ (800) 627-4661.
- 6. Other manufacturers listed as members of SSMA, or SFIA.

2.2 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified Specialty Structural Engineer (SSE) (SSE) to design cold-formed steel framing and connections as indicated on the construction documents. The design professional, individual or organization shall have responsibility for the design of the specialty items. This responsibility shall be in accordance with the state's statues and regulations governing the professional registration and certification of architects or engineers.
- B. Structural Performance: Provide cold-formed steel framing capable of withstanding design loads within limits and under conditions indicated.
 - 1. Design Loads:
 - a. Exterior Load-Bearing, Non-Load Bearing, and Shear Wall Framing:
 - 1) Gravity Loads: As indicated on the Structural Drawings.
 - 2) Exterior Wind Loads: Calculated by the SSE based on wind speed and exposure from the Structural Drawings.
 - 3) Seismic Loads: Calculated by the SSE based on seismic site parameters on the Structural Drawings.
 - 4) Shear Wall Loads: As indicated on the Structural Drawings.
 - b. Interior Load-Bearing and Shear Wall Framing:
 - 1) Gravity Loads: As indicated on the Structural Drawings.
 - 2) Interior Wind Loads: 5 psf.
 - 3) Seismic Loads: Calculated by the SSE based on seismic site parameters on the Structural Drawings.
 - 4) Shear Wall Loads: As indicated on the Structural Drawings.
 - c. Interior Non-Load-Bearing Partition Wall Framing:
 - 1) Gravity Loads: Calculated by the SSE, 5 psf minimum.
 - 2) Interior Wind Loads: 5 psf.
 - 3) Seismic Loads: Calculated by the SSE based on seismic site parameters on the Structural Drawings.
 - d. Floor Joist Framing:
 - 1) Gravity Loads: As indicated on the Structural Drawings.
 - e. Roof Rafter Framing:
 - 1) Gravity Loads: As indicated on the Structural Drawings.
 - 2) Exterior Wind Loads: Calculated by the SSE based on wind speed and exposure from the Structural Drawings.
 - 3) Seismic Loads: Calculated by the SSE based on seismic site parameters on the Structural Drawings.
 - f. Ceiling Joist Framing:
 - 1) Gravity Loads: Calculated by the SSE, 5 psf minimum. Where indicated on the Architectural drawings, design ceiling joists for 20 psf roof live load.

- 2) Interior Wind Loads: 5 psf.
 - 3) Seismic Loads: Calculated by the SSE based on seismic site parameters on the Structural Drawings.
2. Deflection Limits: Design framing systems to withstand design loads without horizontal and vertical deflections greater than the following:
 - a. Exterior Load-Bearing, Non-Load Bearing and Shear Wall Framing: Horizontal out-of-plane deflection of 1/240 of the wall height.
 - b. Interior Load-Bearing and Shear Wall Framing: Horizontal deflection of 1/240 of the wall height under a horizontal load of 5 lbf/sq. ft.
 - c. Interior Non-Load-Bearing Partition Wall Framing: Horizontal out-of-plane deflection of 1/240 of the wall height under a horizontal load of 5 lbf/sq. ft.
 - d. Floor Joist Framing: Vertical deflection of 1/360 for live loads and 1/240 for total loads of the span.
 - e. Roof Rafter Framing: Vertical deflection of 1/240 of the horizontally projected span for live loads.
 - f. Ceiling Joist Framing: Vertical deflection of 1/240 for total loads of the span.
 3. SSE shall design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows, unless noted otherwise on the construction documents:
 - a. Below floor framing: Downward movement of 1 inch (25 mm).
 - b. Below roof framing: Upward and downward movement of 2 inches (51 mm).
 4. SSE shall design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.
- C. Cold-Formed Steel Framing Design Standards:
1. Floor and Roof Systems: AISI S210.
 2. Wall Studs: AISI S211.
 3. Headers: AISI S212.
 4. Lateral Design: AISI S213.
- D. AISI Specifications and Standards: Unless more stringent requirements are indicated, framing shall comply with AISI S100 and AISI S240.
- E. Fire-Resistance Ratings: Where fire-resistance rating requirements are shown on the Architectural drawings, framing shall comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.3 COLD-FORMED FRAMING MATERIALS

- A. Comply with AISI North American Specification for the Design of Cold-Formed Steel Structural Members and AISI Standard for Cold-Formed Steel Framing.
- B. Steel Sheet Minimum Requirements:
1. 22 gauge and 20 gauge (drywall) framing: ASTM A 1003, Structural Grade, Type H, metallic coated, Grade: ST33H (33 ksi), minimum coating G40 or equivalent.
 2. 20 gauge (structural) and 18 gauge framing: ASTM A 1003, Structural Grade, Type H, metallic coated, Grade: ST33H (33 ksi), minimum coating G60 or equivalent.
 3. 16 gauge framing ASTM A 1003, Structural Grade, Type H, metallic coated, Grade: ST50H (50 ksi), minimum coating G60 or equivalent.
- C. Material Thickness & Strength Requirements: Cold formed steel members shall have the following minimum base metal thickness and yield strength:
1. 22 gauge: 27 mils, 33 ksi
 2. 20 gauge (drywall): 30 mils, 33 ksi
 3. 20 gauge (structural): 33 mils, 33 ksi
 4. 18 gauge: 43 mils, 33 ksi
 5. 16 gauge: 54 mils, 50 ksi

2.4 COLD-FORMED FRAMING TYPES

- A. Exterior Load-Bearing, Non-Load Bearing, and Shear Wall Framing:
 - 1. Manufacturer's standard C-shaped steel studs, punched, with stiffened flanges.
 - 2. Web depths as indicated on the Structural construction documents.
 - 3. Flange width and metal gauge by the Specialty Structural Engineer (SSE) to meet design requirements.
 - 4. Stud spacing by the Specialty Structural Engineer (SSE) to meet design requirements, 16" maximum.
 - 5. Stud bridging type, size and spacing by the Specialty Structural Engineer (SSE) to meet design requirements.
- B. Interior Load-Bearing and Shear Wall Framing:
 - 1. Manufacturer's standard C-shaped steel studs, punched, with stiffened flanges.
 - 2. Web depths as indicated on the Structural construction documents.
 - 3. Flange width and metal gauge by the Specialty Structural Engineer (SSE) to meet design requirements.
 - 4. Stud spacing by the Specialty Structural Engineer (SSE) to meet design requirements, 16" maximum.
 - 5. Stud bridging type, size and spacing by the Specialty Structural Engineer (SSE) to meet design requirements.
- C. Interior Non-Load-Bearing Partition Wall Framing:
 - 1. Manufacturer's standard C-shaped steel studs, punched, with stiffened flanges.
 - 2. Web depths as indicated on the Architectural construction documents.
 - 3. Flange width and metal gauge by the Specialty Structural Engineer (SSE) to meet design requirements.
 - 4. Stud spacing by the Specialty Structural Engineer (SSE) to meet design requirements, 16" maximum.
 - 5. Stud bridging type, size and spacing by the Specialty Structural Engineer (SSE) to meet design requirements.
- D. Floor Joist Framing:
 - 1. Manufacturer's standard C-shaped steel joists, unpunched, with stiffened flanges.
 - 2. Web depths as indicated on the Structural construction documents.
 - 3. Flange width and metal gauge by the Specialty Structural Engineer (SSE) to meet design requirements.
 - 4. Stud spacing by the Specialty Structural Engineer (SSE) to meet design requirements, 16" maximum.
 - 5. Stud bridging type, size and spacing by the Specialty Structural Engineer (SSE) to meet design requirements.
- E. Roof Rafter Framing:
 - 1. Manufacturer's standard C-shaped steel rafters, unpunched, with stiffened flanges.
 - 2. Web depths as indicated on the Structural construction documents.
 - 3. Flange width and metal gauge by the Specialty Structural Engineer (SSE) to meet design requirements.
 - 4. Stud spacing by the Specialty Structural Engineer (SSE) to meet design requirements, 16" maximum.
 - 5. Stud bridging type, size and spacing by the Specialty Structural Engineer (SSE) to meet design requirements.
- F. Ceiling Joist Framing:
 - 1. Manufacturer's standard C-shaped steel studs, punched, with stiffened flanges.
 - 2. Web depths as indicated on the Architectural construction documents.
 - 3. Flange width and metal gauge by the Specialty Structural Engineer (SSE) to meet design requirements.
 - 4. Stud spacing by the Specialty Structural Engineer (SSE) to meet design requirements, 16" maximum.
 - 5. Stud bridging type, size and spacing by the Specialty Structural Engineer (SSE) to meet design requirements.

2.5 ACCESSORIES

- A. Fabricate steel-framing accessories from steel sheet, ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members.
- B. Provide accessories of manufacturer's standard thickness and configuration, required by design requirements.
 - 1. Cold-Formed Channels: Minimum 3/4 inch x 1/2 inch.
 - 2. Clip Angles: Minimum 2 inches x 2 inches x 16 gauge x 1/4 inch less than stud width
- C. Framing Attachment Angles: Galvanized sheet steel, size, shape and configuration as indicated on Structural Drawings or delegated design drawings.
- D. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened

05400-5

flanges, tight fit; solid web, and same minimum base-metal thickness as steel studs.

- E. Deflection (Capture) Track: Deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth as shown to contain studs while allowing free vertical movement, with flanges or legs as shown designed to support horizontal and lateral loads. Provide fasteners as indicated on Structural Drawings or delegated design drawings.
- F. Slotted Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; punched with vertical slots in both legs. Studs should be positively attached to deep-leg track using vertical slots while allowing free vertical movement. Legs designed to support horizontal and lateral loads and transfer them to the primary structure.
- G. Steel Shapes and Clips: ASTM A 36, zinc coated by hot-dip process according to ASTM A 123.
- H. Flat Metal Straps and Backing Plates: Galvanized sheet steel, gauge, shape, and configuration as indicated on Structural Drawings or delegated design drawings.

2.6 FASTENERS (minimum performance criteria)

- A. The Specialty Structural Engineer (SSE)'s drawings and design shall include the following anchors, clips and fasteners as required by the design requirements:
 - 1. Steel Shapes and Clips.
 - 2. Shear wall hold-downs.
 - 3. Post-Installed Anchors.
 - 4. Power-Actuated Anchors.
 - 5. Mechanical Fasteners, head type: low-profile head beneath sheathing, manufacturer's standard elsewhere.
 - 6. Welding Electrodes.
- B. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 10 times design load.
- C. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping steel drill screws.
- D. Framing to Framing: ASTM C 1513; 5/8 inch Type S-12 low-profile head corrosion-resistant self-drilling self-tapping steel screws.
- E. Framing to Attachment Structural Steel: #12 diameter pan head corrosion-resistant self-drilling self-tapping steel screws.
- F. Wall Floor Track Anchorage Device: Carbon steel wedge type expansion anchor; minimum 3/8 inch diameter x minimum 1-1/2 inch embedment unless noted otherwise on the Drawings. Refer to Section 05090 for approved anchors.
- G. Wall Furring to Concrete or Masonry Wall Fasteners: Hex head screw anchors; minimum 1/4 inch diameter x minimum 1-1/2 inch embedment into concrete or solid grouted masonry unless otherwise noted on the Drawings. Refer to Section 05090 for approved anchors.
- H. Furring Channel to Masonry or Concrete Surface Fasteners: Low velocity powder-actuated drive pins of size to suit application.
- I. Welding Materials: AWS D1.3.
- J. Wood Furring, Blocking, and Plywood, Attached to Framing Fasteners: Specified in Section 06100.

2.7 MISCELLANEOUS MATERIALS

- A. Galvanizing Repair Paint: ASTM A780, SSPC-Paint 20, Type II - organic.
- B. Cement Grout: Portland cement, ASTM C 150, Type I; and clean, natural sand, ASTM C 404. Mix at ratio of 1
05400-6

part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.

- C. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, and plasticizing and water-reducing agents, complying with ASTM C 1107/C 1107M, with fluid consistency and 30-minute working time.
- D. Shims: Load bearing, high-density multimonomer plastic, and nonleaching; or of cold-formed steel of same grade and coating as framing members supported by shims.
- E. Sealer Gaskets: Closed-cell neoprene foam, 1/4-inch thick, selected from manufacturer's standard widths to match width of bottom track or rim track members.

2.8 FABRICATION

- A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.
 - 1. Fabricate framing assemblies using jigs or templates.
 - 2. Cut framing members by sawing or shearing; do not torch cut.
 - 3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.
 - a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
 - b. Locate mechanical fasteners and install according to Shop Drawings, with screw penetrating joined members by no fewer than three exposed screw threads.
 - 4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.
- B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or permanent distortion.
- C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
 - 1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
 - 2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8 inch.

2.9 SUBSTITUTIONS

- A. Comply with the requirements of Section 01600.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine existing conditions and adjacent areas where products will be installed and verify that conditions conform to product manufacturer's requirements. Verify that building framing components are ready to receive work. Verify that rough-in utilities are in-place and located where required. Do not proceed until unsatisfactory conditions have been corrected.
- B. Beginning of erection indicates acceptance of existing conditions.

3.2 PREPARATION

- A. Install load bearing shims or grout between the underside of load-bearing wall bottom track and the top of foundation wall or slab at locations with a gap larger than 1/4 inch to ensure a uniform bearing surface on supporting concrete

05400-7

or masonry construction.

- B. Install sealer gaskets at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.

3.3 INSTALLATION - GENERAL

- A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.
- B. Install cold-formed metal framing in accordance with ASTM C1007, AISI S200 North America Standard for Cold-Formed Steel Framing and to manufacturer's written instructions unless more stringent requirements are shown or specified.
- C. Install shop or field-fabricated, cold-formed framing and securely anchor to supporting structure.
 - 1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.
- D. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.
 - 1. Cut framing members by sawing or shearing; do not torch cut.
 - 2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
 - a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
 - b. Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.
- E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.
- F. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.
- G. Do not bridge building expansion joints with cold-formed steel framing. Independently frame both sides of joints.
- H. Install system to provide for movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic day/night temperature ranges.
- I. Install system to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.
- J. Install insulation, specified in Section 07210 "Building Insulation," in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, which are inaccessible on completion of framing work.
- K. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.
- L. Erection Tolerances: Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
 - 1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.4 INSTALLATION - GENERAL STUD FRAMING

- A. Where optional framing products by the named manufacturers are specified in Part 2 above in lieu of conventional components specified, install in accordance with manufacturers recommendations.

- B. Erect studs one-piece full length. Splicing of studs not permitted.
- C. Erect studs, brace, and reinforce to develop full strength to meet design requirements.
- D. Install studs and fasteners in accordance with manufacturer's published instructions and, where gypsum board is attached to studs, install studs in accordance with GA-216 and ASTM C 1007.
- E. Place studs as indicated on Shop Drawings, minimum 2 inches from abutting walls.
- F. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar configurations.
- G. Align stud web openings horizontally.
- H. Construct corners using minimum three studs.
- I. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure as indicated on the shop drawings.
- J. Install continuous top and bottom tracks sized to match studs. Align tracks accurately and securely anchor at corners and ends, and at spacings as indicated on shop drawings.
- K. Install headers over wall openings wider than stud spacing. Locate headers above openings as indicated. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.
 1. Frame wall openings with not less than a double stud at each jamb of frame as indicated on Shop Drawings. Fasten jamb members together to uniformly distribute loads.
 2. Install runner tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.
- L. Install intermediate studs above and below openings to match wall stud spacing.
- M. Fasten studs adjacent to door and window frames, partition intersections, and corners to top and bottom runner flanges in double-stud fashion with metal lock fastener tools.
 1. Securely fasten studs to jamb and head anchor clips of door and borrowed-light frames.
 2. Place horizontally a cut-to-length section of runner with web-flange bent at each end, fasten with minimum one screw per flange.
 3. Position a cut-to-length stud (extending to top runner) at vertical panel joints over door frame header.
- N. Install horizontal bridging in stud system, spaced vertically as indicated on Shop Drawings. Fasten at each stud intersection.
 1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs with a minimum of two screws into each flange of the clip angle for framing members up to 6 inches (150 mm) deep.
 2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges, and secure solid blocking to stud webs or flanges.
 3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.
- O. Install steel sheet diagonal bracing straps to both stud flanges, terminate at and fasten to reinforced top and bottom tracks. Fasten clip-angle connectors to multiple studs at ends of bracing and anchor to structure.
- P. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.
- Q. Install supplementary framing, blocking, and bracing in stud framing indicated to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing. If type of

05400-9

supplementary support is not indicated, comply with stud manufacturer's written recommendations and industry standards in each case, considering weight or load resulting from item supported.

- R. Touch up field welds and damaged galvanized surfaces with galvanizing repair paint.

3.5 INSTALLATION - LOAD BEARING STUD FRAMING

- A. Squarely seat studs against top and bottom tracks with gap not exceeding of 1/8 inch between the end of wall framing member and the web of track. Fasten both flanges of studs to top and bottom tracks. Space studs as indicated on shop drawings.
- B. Align studs vertically where floor framing interrupts wall-framing continuity. Where studs cannot be aligned, continuously reinforce track to transfer loads.
- C. Align floor and roof framing over studs according to AISI S200, Section C1. Where framing cannot be aligned, continuously reinforce track to transfer loads.

3.6 INSTALLATION – FLOOR JOISTS

- A. Install joists and fasteners in accordance with manufacturer's published instructions.
- B. Make provisions for erection stresses. Provide temporary alignment and bracing.
- C. Place floor joists at locations and spacing as indicated on the Shop Drawings.
- D. Touch-up field welds and damaged galvanized surfaces with galvanizing repair paint.
- E. Fastening: Indicated on Shop Drawings.
- F. Install perimeter joist track sized to match joists. Align and securely anchor or fasten track to supporting structure at corners, ends, and spacings indicated on Shop Drawings.
- G. Install joists bearing on supporting frame, level, straight, and plumb; adjust to final position, brace, and reinforce. Fasten joists to both flanges of joist track.
 - 1. Install joists over supporting frame with a minimum end bearing indicated on Shop Drawings.
 - 2. Reinforce ends and bearing points of joists with web stiffeners, end clips, joist hangers, steel clip angles, or steel-stud sections as indicated on Shop Drawings.
- H. Space joists not more than 2 inches from abutting walls, and as indicated on Shop Drawings.
- I. Frame openings with built-up joist headers consisting of joist and joist track, or another combination of connected joists if indicated.
- J. Install joist reinforcement at interior supports with single, short length of joist section located directly over interior support, with lapped joists of equal length to joist reinforcement, or as indicated on Shop Drawings.
 - 1. Install web stiffeners to transfer axial loads of walls above.
 - 2. Install bridging at intervals indicated on Shop Drawings. Fasten bridging at each joist intersection as indicated on Shop Drawings.
- K. Secure joists to load-bearing interior walls to prevent lateral movement of bottom flange.
- L. Install bridging per the shop drawings.
- M. Install miscellaneous joist framing and connections, including web stiffeners, closure pieces, clip angles, continuous angles, hold-down angles, anchors, and fasteners, to provide a complete and stable joist-framing assembly.

3.7 INSTALLATION - CEILING JOISTS AND ROOF RAFTERS

05400-10

- A. Install joists and fasteners in accordance with manufacturer's published instructions and, where gypsum board is attached to joists, install joists in accordance with ASTM C 1007 and GA-216.
- B. Place ceiling joists or roof rafters at locations and spacing as indicated on the Shop Drawings.
- C. Install joists in direction of shortest span, parallel and level, with lateral bracing and bridging.
- D. Install joists in one-piece full length. Splicing of joists not permitted.
- E. Install perimeter joist runner track sized to match joists. Attach joist runner track to wall framing with minimum two screws per stud and at corners and ends.
- F. Attach joist ends to joist runner tracks with minimum one screw each side at each flange.
- G. Install bridging per the shop drawings.

3.8 INSTALLATION - FURRING

- A. Furring Channels: Attach vertically spaced at maximum 16 inches on center, unless otherwise shown on the drawings, to masonry and concrete surfaces with specified powder driven fasteners staggered 24 inches on center on opposite flanges.
- B. Wall Furring:
 1. Secure top and bottom runners to structure.
 2. Space metal furring at maximum 16 inches on center unless otherwise shown on the drawings.

3.9 INTERFACE WITH OTHER WORK

- A. Coordinate erection of studs with hollow metal door frames and overhead coiling door frames.
- B. Coordinate installation of anchors, supports, and blocking for mechanical, electrical, and building accessory items installed within framing.

3.10 REPAIRS AND PROTECTION

- A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

3.11 FIELD QUALITY CONTROL

- A. Field quality control shall be the responsibility of the Contractor in accordance with Section 01452. Except as specified as mandatory, field quality control testing and inspection shall be at the discretion of the Contractor as necessary to assure compliance with Contract requirements. Owner T&I specified in Appendix B shall not preclude Contractor's responsibility to perform similar routine, necessary, and customary testing and inspection of the methods and frequency suitable for the type of work involved.

3.12 OWNER TESTING AND INSPECTION (T&I)

- A. The Owner will perform testing and inspection as specified in Appendix B (Section 05400).

END OF SECTION

SECTION 05500 (05 50000) - METAL FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes:
 - 1. Shop fabricated ferrous metal items, galvanized and prime painted.
- B. Related Requirements:
 - 1. Section 03310 - Structural Concrete and Exterior Concrete Slabs: Grout for setting metal fabrications.
 - 2. Section 05090 - Post-installed Concrete and Masonry Anchors: Mechanical and adhesive anchors drilled into concrete or masonry.
 - 3. Section 05120 - Structural Steel: Connection of miscellaneous framing and supports to structural steel.
 - 4. Section 06065 - Plastic Materials: Plastic sleeves for steel pipe bollards.
 - 5. Section 09900 - Paints and Coatings: Field painted finishes.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American National Standards Institute (ANSI):
 - 1. ANSI A 14.3 - Ladders, Fixed, Safety Requirements.
- C. ASTM International (ASTM):
 - 1. ASTM A 36 - Carbon Structural Steel.
 - 2. ASTM A 53 - Pipe, Steel, Black and Hot-Dipped, Zinc-Coated Welded and Seamless.
 - 3. ASTM A 123 - Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - 4. ASTM A 153 - Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - 5. ASTM A 240 - Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications
 - 6. ASTM A 307 - Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength.
 - 7. ASTM A 325 - Structural Bolts, Heat Treated, 120/105 ksi Minimum Tensile Strength.
 - 8. ASTM A 500 - Cold-formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
 - 9. ASTM A 591 - Steel Sheet, Electrolytic Zinc-Coated, for Light Coating Mass Applications.
 - 10. ASTM A 653 - Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - 11. ASTM A 666 - Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
 - 12. ASTM A 1008 - Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, Baked Hardenable.
 - 13. ASTM A 1011 - Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability.
- D. American Welding Society (AWS):
 - 1. AWS D1.1 - Structural Welding Code.
 - 2. AWS D1.3 - Structural Welding Code - Sheet Steel.
- E. National Association of Architectural Metal Manufacturers (NAAMM):
 - 1. Metal Finishes Manual for Architectural and Metal Products.
- F. Steel Structures Painting Council (SSPC):
 - 1. SSPC-Paint 20 - Zinc-Rich Coating Type I - Inorganic and Type II - Organic.
 - 2. SSPC-Paint 25 - Zinc Oxide, Alkyd, Linseed Oil Primer for Use Over Hand cleaned Steel Type I and Type II.

3. SSPC-SP3 - Power Tool Cleaning
4. SSPC-PA1 - Shop, Field, and Maintenance Painting of Steel.

1.3 SUBMITTALS

- A. Submittal Procedures: Unless otherwise specified herein, submit in accordance with procedures specified in Section 01330. Submit all submittals electronically in PDF format via email, unless otherwise specified, to Architect of Record.
- B. Shop Drawings: Submit within 10 working days of Contract Date.
 1. Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.
 2. Include erection drawings, elevations, and details where applicable.
 3. Indicate welded connections using standard AWS welding symbols. Indicate net weld lengths.
 4. Prepare shop drawings under the supervision of a licensed structural Professional Engineer.

1.4 QUALITY ASSURANCE

- A. Qualifications for Welding Work: Qualify welding operators in accordance with Standard Qualification Procedures as required by AWS D1.1.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Product Delivery: Supplier will deliver products and equipment to site to be received by Contractor as specified in Section 01600.
- B. Product Packaging: Products will be delivered in manufacturer's standard packaging with identification markings on each component or package.
- C. Receiving: Receive and accept products, verify quantity, and report suspected defects or discrepancies in compliance with the requirements of Section 01600.
- D. Manufacturing Defects: Report suspected manufacturing defects to Owner's Construction Manager and product supplier.
- E. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Steel Plates and Shapes: ASTM A 36.
- B. Bolts, Nuts, and Washers: ASTM A 325 and ASTM A 307.
- C. Cold Rolled Steel Sheet: ASTM A 1008.
- D. Hot Rolled Steel Sheet: ASTM A 1011.
- E. Galvanized Steel Sheets:
 1. Structural: ASTM A 653 Structural Quality;
 - a. Exposed to Weather: G90.
 - b. Not Exposed to Weather: G60.
 2. Galvanized Sheet Steel: ASTM A 591, Class C.
- F. Stainless-Steel Sheet, Strip, and Plate: ASTM A 240 or ASTM A 666, Type 304 or 430 as shown or specified.

05500-2

- G. Steel Tubing: ASTM A 500, Grade C.
- H. Steel Piping: ASTM A 53.
- I. Welding Materials: AWS D1.1 and AWS D1.3 type required for materials being welded.
- J. Primers:
 1. Shop application and field touch-up: SSPC 25.
 2. Touch-up Primer for Galvanized Surfaces: SSPC 20.
 3. Color: To match primer used on steel roof deck and joists.
- K. Concrete Inserts: Cast steel or malleable bolts, washers, and shims; galvanized.
- L. Grout: Specified in Section 03310.

2.2 FABRICATION

- A. Verify dimensions on site prior to shop fabrication.
- B. Fabricate items with joints tightly fitted and secured.
- C. Fit and shop assemble in largest practical sections, for delivery to site.
- D. Grind exposed welds flush and smooth with adjacent finished surface. Ease exposed edges to small uniform radius.
- E. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Use exposed fasteners of type indicated or, if not indicated, Phillips flat-head (countersunk) screws or bolts. Locate joints where least conspicuous.
- F. Supply components required for anchorage of metal fabrications. Fabricate anchorage and related components of same material and finish as metal fabrication, except where specifically noted otherwise.

2.3 FINISHES

- A. Finish metal fabrications after assembly. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Shop prime ferrous-metal items not indicated to be galvanized.
- B. Prime Painting:
 1. Prime paint in shop as scheduled.
 2. Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 3, "Power Tool Cleaning."
 3. Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1," for shop painting.
 4. Do not prime surfaces in direct contact bond with concrete or where field welding is required.
 5. Prime paint items scheduled with one coat. Touch up with same primer.
- C. Galvanizing: Hot-dip galvanize items indicated to be galvanized to comply with ASTM A 123 or ASTM A 153 as applicable. Galvanize to minimum 2.0 oz/sq ft zinc coating, exterior items, and those items indicated on Drawings and specified herein, to be galvanized.
- D. Field Finish Painting: Finish paint after installation as shown on Drawings or specified herein in accordance with Section 09900.
- E. Factory Finish Coating: Where specified hereinafter to be factory finished, finish with manufacturer's standard factory finish suitable for the application.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Obtain Owner Construction Manager approval prior to site cutting or making adjustments not scheduled.
- B. Clean and strip site primed steel items to bare metal where site welding is scheduled.
- C. Make provision for erection loads with temporary bracing. Keep work in alignment.
- D. Use grout specified in Section 03310 for setting metal fabrications.

3.2 INSTALLATION

- A. Install items plumb and level, accurately fitted, free from distortion or defects.
- B. Perform field welding in accordance with AWS D1.1 or D1.3, as applicable. After installation, grind sight-exposed field welds smooth, touch-up welds, scratched, or damaged surfaces with primer.
- C. Use grout specified in Section 03310 for setting metal fabrications.

3.3 SCHEDULE

- A. Provide items as scheduled herein and as indicated on Drawings.
- B. Include related items and systems necessary to complete the Work including anchorages and attachments necessary for installation
- C. Concrete or Masonry Loose Bearing Plates and Lintels: Fabricate to sizes and configuration indicated on Drawings; galvanized finish except for items requiring field welding.
- D. Miscellaneous Framing and Supports: Furnish steel framing and supports not specified under Section 05120. Fabricate welded construction in as large units as possible. Drill and tap for hardware and other items. Include anchors required for building into work of other Sections.
 - 1. Interior: Prime paint finish, gray.
 - 2. Exterior: Galvanized.
- E. Rough Hardware: Custom fabricated bolts, plates, anchors, hanger, dowels, and other miscellaneous steel and iron shapes required for framing, supporting, and anchoring other construction. Galvanized unless otherwise indicated on Drawings.
- F. Steel Posts Bearing on Slab, not included in Section 05120: Provide steel columns, base plates, and attachment hardware bearing on floor slab where shown on Architectural Drawings or specifically noted on Structural Drawings.
 - 1. Interior: Prime paint finish.
 - 2. Exterior: Galvanized.
- G. Miscellaneous Steel Trim: Profiles and sizes as indicated on Drawings; continuous welded joints and smooth exposed edges. Use concealed field splices where possible. Provide cutouts, fittings, and anchorages; coordinate assembly and installation into work of other Sections.
 - 1. Interior: Prime paint finish.
 - 2. Exterior: Galvanized.
- H. Exterior Steel Pipe Bollards (Footing Mounted): ASTM A 53, Type E (electric-resistance welded) or Type S (seamless), Grade B, Schedule 40.
 - 1. Size: Height and diameter as shown on the drawings.
 - 2. Fill bollard with concrete or provide cap / plug at unfilled bollards as indicated on Drawings.
 - 3. Finish:
 - a. Painted Bollards: Field prime and finish coated in accordance with Section 09900.
 - b. Plastic Sleeve Covered Bollards: Galvanized.

05500-4

4. Plastic Sleeves: Install polyethylene thermoplastic pipe sleeves on bollards as specified in Section 06065 and at locations shown on the drawings.
 5. Installation: Install in concrete footing as shown on the drawings.
 6. Plastic Sleeves: Install polyethylene thermoplastic pipe sleeves on bollards as specified in Section 06065.
- I. Interior Steel Pipe Bollards (Core Drilled): ASTM A 53, Type E (electric-resistance welded) or Type S (seamless), Grade B, Schedule 40.
1. Size: Height and nominal diameter as shown on Drawings.
 2. Fill bollard as indicated on Drawings.
 3. Finish: Hot dip galvanized.
 4. Interior Bollards - Floor Mounted/Bolted:
 - a. Location: Where shown on Drawings.
 - b. Install as indicated on Drawings.
- J. Handrail Brackets: Cast iron with not less than 3-inch projection from wall surface to centerline of handrail. Finish as indicated below.
1. Interior: Prime paint finish.
 2. Exterior: Galvanized.
- K. Door Jambs: Fabricate metal door jambs, as indicated on Drawings, for use at traffic doors and overhead doors. Provide mitered and welded corners, ground smooth. Countersink fasteners, minimum six per jamb.
- L. Protector Angle: Provide continuous steel angles and fasteners, at locations indicated on Drawings. Fabricate angles for attachment to slab-on-grade with 1/2 inch, minimum 4-inch length expansion bolts at maximum 36 inch o.c.
- M. Dock Leveler Pit Angles and Channels: Provide perimeter steel angles with welded studs for dock leveler pits as shown on the drawings. Coordinate fabrication with respective section of work.
1. Galvanize after fabrications.
- N. Elevator Sump Pump Pit Grate:
1. Fiberglass 1 inch deep grate, 1 ½ inch x 1 ½ inch grid pattern. Size as required for pit opening.
 2. Manufacturer: [Delta Composites, LLC](#), Houston TX. Contact Amanda Alexander (281) 449-4900.
 3. Finish: Surface: Smooth. Color: Gray.
- O. Smoke Curtain: Provide continuous steel angles as indicated and required for the erection of overhead supported curtains. Coordinate work with Section 05300. Weld steel angles to roof support. Secure curtain in place with self-tapping metal screws, plumb and level with adjacent construction.
- P. Steel Supports for Overhead Doors, Closures, and Grilles: Channels, tubes, and angles as indicated on Drawings for overhead coiling doors, rolling closures, and overhead coiling grilles. Coordinate fabrication with respective section of work.
- Q. Steel Ladder (Interior):
1. Comply with ANSI A14.3 unless otherwise indicated.
 2. Side Rails: Steel bars size as shown.
 3. Rungs: Solid steel rods size and spacing as shown.
 4. Fit rungs in centerline of siderails. Plug-weld and grind smooth on outer rail faces.
 5. Provide nonslip surfaces on top of each rung by one of the following methods:
 - a. Coating rung with aluminum-oxide granules set in epoxy-resin adhesive.
 - b. Coating rung with abrasive material metallically bonded to rung.
 - c. Use of manufactured rung filled with aluminum-oxide grout.
 6. Finish: Prime paint finish.
 7. Attach ladder to structure with steel mounting brackets.
- R. Water Heater Support Framing: Fabricate support frames and floor-to-roof steel tube bracing as indicated on Drawings for overhead water heater platforms. Provide welded connections, ground smooth.

S. Jib Crane Hoist Arm and Railing:

1. Fabrication jib crane hoist and railings as shown on the drawings.
2. Seal threaded rod penetrations of wall using sealant. Provide a watertight condition. Set support bracket plate in full bed of sealant and seal edge of plate to prevent infiltration of moisture behind plate.

END OF SECTION

SECTION 05510 (05 5100) – METAL STAIRS WITH HANDRAILS – Revise Entire Section

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Service-type stairs with concrete pan treads.
 2. Industrial-type stairs with steel grating treads.
 3. Steel tube handrails and railings attached to metal stairs.
 4. Steel tube handrails attached to walls adjacent to metal stairs.
 5. Railing gates at the level of exit discharge.
- B. Stairs and stair components may be manufactured and pre-assembled (drop-in) or shop-fabricated or assembled in the field at Contractor's option.
- C. Related Requirements:
1. Section 03310 - Cast-In-Place Structural Concrete. Field-poured treads and landings.
 2. Section 05120 - Structural Steel: Attachments to building framing.
 3. Section 05500 - Metal Fabrications: Building support structure and miscellaneous framing fabrications.
 4. Section 05520 - Metal Pipe and Tube Railings: Stair railings.
 5. Section 09900 - Paints and Coatings. Field-applied finishes.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American National Standards Institute (ANSI):
1. ANSI A 117.1 - Standard for Accessible and Usable Buildings and Facilities.
- C. ASTM International (ASTM):
1. ASTM A 36 - Carbon Structural Steel.
 2. ASTM A 53 - Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
 3. ASTM A 366 - Commercial Steel (CS) Sheet, Carbon (0.15 Maximum Percent) Cold-Rolled.
 4. ASTM A 500 - Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
 5. ASTM A 513 - Electric-Resistance-Welded Carbon and Alloy Steel Mechanical Tubing.
 6. ASTM A 570 - Steel, Sheet and Strip, Carbon, Hot-Rolled.
 7. ASTM A 569 - Commercial Steel (CS), Sheet and Strip, Carbon (0.16 Maximum to 0.25 Maximum Percent), Hot-Rolled.
- D. American Welding Society (AWA):
1. AWS D1.1 - Structural Welding Code - Steel.
 2. AWS D1.3 - Structural Welding Code - Sheet Steel.
- E. Americans with Disabilities Act (ADAAG).
- F. Steel Structures Painting Council (SSPC):
1. SSPC-SP3 - Power Tool Cleaning.

1.3 SUBMITTALS

- A. Comply with the requirements of Section 01330.

05510-1

- B. Shop Drawings: Stair plans, elevations, details, methods of installation and anchoring.
 1. Show members, sizes and thickness, anchorage locations and accessory items.
 2. Furnish setting diagrams for anchorage installation as required.
 3. Provide calculations stamped by a structural engineer registered in the jurisdiction in which the project is located.
- C. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Arrange for metal stairs specified in this Section to be installed by firm with minimum of 5 years consecutive metal stair erection experience.
- B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of metal stairs (including handrails and railing systems) that are similar to those indicated for this Project in material, design, and extent.
- C. Fabricator Qualifications: A firm experienced in producing metal stairs similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- D. Design and Fabrication Standards:
 1. Fabricate stairs in accordance with the recommendations of "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP-510, for class of stair designated, unless more stringent requirements are indicated.
 - a. Preambled Stairs: Service class.
 - b. Industrial-Type Stairs: Industrial class.
 2. Fabricate railings in accordance with the recommendations of ANSI/NAAMM AMP-521. Finish joints in railings accordance with the following National and Ornamental & Miscellaneous Metal Association (NOMMA) standards:
 - a. Service Stairs, Guard Rails in Non-Public Spaces: Type 3
 - b. Industrial Stairs and Non-public Use Stairs: Type 4
 3. Provide same level of quality for railings guarding floor openings as railings connected to stairs serving opening.
 4. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," for class of stair designated, unless more stringent requirements are indicated.
 - a. Service class, unless otherwise indicated.
- E. Welding Qualifications: Qualify procedures and personnel according to the following:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.3, "Structural Welding Code - Sheet Steel."

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.
- B. Packing and Shipping: Deliver stair and rail components in manufacturer's pre-bundled protective wrapping, clearly labeled for stair type and location in building.
- C. Storage and Protection: Store stair and rail components above ground, protected from exposure to the elements and from physical damage caused by other construction activities.

1.6 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Coordinate locations of hanger rods and struts with other work so that they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.

PART 2 - PRODUCTS

2.1 PERFORMANCE AND REGULATORY REQUIREMENTS

- A. Structural Performance of Stairs: Stairs shall withstand the following structural loads without exceeding the allowable design working stress of materials, including anchors and connections. Apply each load to produce the maximum stress in each component:
 - 1. Treads and Platforms of Metal Stairs: Capable of withstanding a uniform load of 100 lb/sf and concentrated load of 300 lbf applied on an area of 4 square inches. Concentrated and uniform loads need not be assumed to act concurrently.
 - 2. Stair Framing: Capable of withstanding stresses resulting from loads specified in addition to stresses resulting from railing system loads.
 - 3. Limit deflection of treads, platforms, and framing members to L/240 or 1/4 inch, whichever is less.
 - 4. Seismic Performance: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- B. Structural Performance of Handrails and Railings: Handrails and railings shall withstand the following structural loads without exceeding the allowable design working stress of materials, including handrails, railings, anchors and connections.
 - 1. Top Rail of Guardrail: Capable of withstanding a concentrated load of 200 lbf applied in any direction and a uniform load of 50 lbf/ft applied in any direction. Concentrated and uniform loads need not be assumed to act concurrently.
- C. Regulatory Requirements: Comply with applicable provisions of local building code, ADAAG and ANSI A117.1 as applicable for stairs and handrails.

2.2 MATERIALS

- A. Steel Shapes and Plates: ASTM A 36.
- B. Steel Pipe: ASTM A 53, Type E or S, Grade B.
- C. Steel Tubing:
 - 1. Structural Use: ASTM A 500, Grade C.
 - 2. Non-Structural Use: ASTM A 513, hot rolled or coiled rolled (mill option).
- D. Steel Sheet:
 - 1. Structural Use: ASTM A 570 (hot rolled) or A 366 (cold rolled).
 - 2. Non-Structural Use: ASTM A 569 (hot rolled) or A 366 (cold rolled).
- E. Fasteners and Accessories: Provide anchor bolts, clip angles, hanger rods and other hardware, accessories and incidental materials required for complete installation of stairs and rails.
- F. Welding Materials: Conform to AWS code and AWS filler metal specifications for material being welded.

- G. Primer: Acrylic Latex rust-inhibitive primer containing less than 1.0 lb/gal volatile organic compounds (VOC), certified to be compatible with finish coats specified in Section 09900.
- H. Concrete Materials and Reinforcement: Comply with the applicable requirements of Division 3.

2.3 FABRICATION

- A. Use same material and finish as parts being joined, except use stainless steel between dissimilar metals and non-corrosive fasteners at exterior connections or joints.
- B. Provide fasteners of sufficient strength to support connected members and loads, and to develop full strength of parts fastened or connected.
- C. Construct stairs and rails with all components necessary for support and anchorage, and to provide a complete installation.
- D. Shop welding and joining shall conform to AWS D1.1 and AWS D1.3 requirements.

2.4 STANDARD STAIR AND RAIL SYSTEM

- A. Stairs and Landing: Manufacturer's standard prefabricated, pre-assembled stair and landing system, consisting of hot rolled steel sheet treads, risers, and landings. Stringers shall be steel channel with side mounted prefabricated railings.
 - 1. Stringers: Minimum thickness or gauge as determined by structural design calculations, structural grade steel channel.
 - 2. Risers: Closed riser, minimum 14-gauge hot-rolled mild steel sheet, sloped maximum 1-1/2 inches and conforming to ADAAG nosing requirements.
 - 3. Treads: Manufactures standard concrete pan system (Field Poured). Tread pans shall be minimum of 14 gauge, or as determined by design calculations. Pan depth 1-1/2 inches. Welds shall be exposed and visible after installation for subsequent inspections.
 - 4. Refer to Division 3 for concrete and field finish of treads.
 - 5. Mid Landings: Minimum of 11 gauge hot-rolled mild steel sheets, formed for a minimum 3 inches concrete fill, with 12 gauge channel supports and bracing welded to perimeter frame at 12 inches o.c.
 - 6. Fasteners and Supports: Sized by manufacturer to meet the structural design criteria.
- B. Railing: Manufacturer's standard welded steel tube handrail complying with the following requirements:
 - 1. Rails: 1-1/2 inches diameter by minimum 13 gauge round steel tube, continuous multi strand type, equally spaced not more than 3-15/16 inches clear between strands, and with a minimum extension per code at top and bottom risers. Wrap rail continuously past space between fights to form guardrail as required by building code. Terminate rail ends with radiused returns, newel posts, or safety terminations approved by local code. Provide brackets as required to attain clear distance between rail and wall as shown on the drawings.
 - 2. Rail Posts: 1-1/2 inches square by 11-gauge tubing. Rail posts to fasten to side of plate stringers per manufactures shop drawings. Manufacture to pre-weld erection aid to rail post for proper height to aid stair erector. Erection aid (setting block) to be removed and weld ground smooth after installation.
 - 3. Fabrication:
 - a. Use preformed or prefabricated bends.
 - b. Butt weld tee and cross intersections in tubing; cope and weld intersections in pipe. Miter elbows.
 - c. Mechanically fasten internal sleeves and fittings.
 - d. Provide minimum 3/16-inch welded steel plate closures or hemispherical closure fittings on all exposed rail ends.

2.5 SHOP CLEANING AND FINISHING

- A. Rails and Stair Components: Completely remove oil, grease, dirt, mill scale, rust, corrosion products, oxides, paint or other foreign matter from surface of steel in accordance with SSPC-SP3.

- B. Shop Primer: Immediately after shop fabrication and cleaning, spray apply one coat of anti corrosive primer to a minimum dry film thickness as recommended by primer manufacture, but not less than 2.0 mils.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Do not begin installation until substrates and adjacent construction have been properly constructed. Verify structural framing, enclosures, weld plates, blocking, and size and location of pockets.
- B. If unsatisfactory conditions are encountered, notify Architect in writing. Do not proceed until unsatisfactory conditions have been corrected.
- C. Notify Manufacturer of any detail, design or tolerance deviations as noted or drawn on stair shop drawing.

3.2 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.

3.3 INSTALLING METAL STAIRS WITH GROUTED BASEPLATES

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of baseplates.
- B. Set steel stair baseplates on wedges, shims, or leveling nuts. After stairs have been positioned and aligned, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
 - 1. Use nonmetallic, non-shrink grout unless otherwise indicated.
 - 2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.4 INSTALLING RAILINGS

- A. Adjust railing systems before anchoring to ensure matching alignment at abutting joints. Space posts at spacing indicated or, if not indicated, as required by design loads. Plumb posts in each direction. Secure posts and rail ends to building construction as follows:
 - 1. Anchor posts to steel by welding directly to steel supporting members.
 - 2. Anchor handrail ends to concrete and masonry with steel round flanges welded to rail ends and anchored with post installed anchors and bolts.

3.5 ADJUSTING AND CLEANING

- A. Touch-up field welds and abraded areas by application of same coating used for shop primer.
- B. After stairs are completely installed, clean surface of exposed rail and stairs with wet cloth or mop. Leave stair system ready for finish painting.

3.6 CONCRETE FILL TREATMENTS

- A. Concrete Placement: Place concrete in accordance with Section 03310. Provide steel trowel finish.

END OF SECTION

SECTION 05513 – GUARDRAIL PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Prefinished and Prefabricated metal guardrail protection systems.

1.3 PERFORMANCE REQUIREMENTS

- A. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
 - 1. Temperature Change: 120 deg F ambient; 180 deg F, material surfaces.

1.4 ACTION SUBMITTALS

- A. Product Data: For the following:
 - 1. Prefinished and Prefabricated metal guardrail systems.
- B. Shop Drawings: Show fabrication and installation details for metal fabrications.
 - 1. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.
 - 2. Provide templates for anchors and bolts specified for installation under other Sections.

1.5 QUALITY ASSURANCE

- A. Fabricator Qualifications: A firm experienced in producing metal fabrications similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify dimensions by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply for product selection:
 - 1. Products: Specifications for quality are based on Steel Guard Protective Railing system as manufactured by Steel King. Another listed manufacturer's product of a similar and equivalent nature will be acceptable when, in the Architect's sole judgment, differences do not detract from the design concept or intended performance.

2.2 FERROUS METALS

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
- B. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- C. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or ASTM A 283/A 283M, Grade C or D.
- D. Steel Tubing: ASTM A 500, cold-formed steel tubing.

2.3 FASTENERS

- A. General: Unless otherwise indicated, provide stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
- B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.
- C. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions required; with nuts, ASTM A 563; and, where indicated, flat washers.
- D. Machine Screws: ASME B18.6.3.
- E. Lag Screws: ASME B18.2.1.
- F. Plain Washers: Round, ASME B18.22.1.
- G. Lock Washers: Helical, spring type, ASME B18.21.1.
- H. Anchors, General: Anchors capable of sustaining, without failure, a load equal to four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
- I. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors .
 - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941 Class Fe/Zn 5, unless otherwise indicated.

2.4 MATERIAL

- A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Form exposed work with accurate angles and surfaces and straight edges.
- E. Post construction:
 - 1. Wall thickness: 1/4"
 - 2. Size: 4" x 4"

05513-2

3. Height: 42-5/8"
4. Post Cap: Stainless Steel
5. Base Plate: Centered, unless offset is indicated on drawings.
6. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

F. Rail construction:

1. Wall thickness: 11 ga.
2. Shape: Corrugated
3. Post Connection: Bolted
 - a. Utilize manufacturer standard removable rail sections with saddles bolted to the posts where indicated on drawings.

2.5 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish metal fabrications after assembly.
- C. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.
- D. Powder-Coated Finish: Prepare, treat, and coat metal to comply with resin manufacturer's written instructions and as follows:
 1. Prepare metal by thoroughly removing grease, dirt, oil, flux, and other foreign matter.
 2. Treat prepared metal with zinc-phosphate pretreatment, rinse, and seal surfaces.
 3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 1.5 mils.
 4. Prefabricate systems to greatest extent possible prior to finishing to reduce quantity of mechanical anchors used on-site.
 5. Color: Safety Yellow

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- B. Install per manufacturers written instructions.
- C. Coordinate final locations with owner prior to installation. Provide complete "dry" (not anchored in place) mock-up of each unique condition for owner approval in final location prior to final anchoring.

3.2 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Install per manufacturers' written instructions and requirements indicated on Shop Drawings.

3.3 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

05513-4

SECTION 05520 (05 5200) – METAL PIPE AND TUBE RAILINGS – Add Section

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel railings.

B. Related Requirements:

1. Section 05510 - Metal Stairs with Handrails: steel tube railings associated with metal pan stairs.

1.2 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Perforated metal infill panels.
2. Woven-wire mesh infill panels.
3. Fasteners.
4. Post-installed anchors.
5. Handrail brackets.
6. Shop primer.
7. Intermediate coats and topcoats.
8. Bituminous paint.
9. Nonshrink, nonmetallic grout.
10. Anchoring cement.
11. Metal finishes.
12. Paint products.

- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

- C. Delegated Design Submittal: For railings, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

05520-1

- B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
- C. Product Test Reports: For tests on railings performed by a qualified testing agency, in accordance with ASTM E894 and ASTM E935.
- D. Research Reports: For post-installed anchors, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.5 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Keep material off the ground using blocking or pallets prior to installation.

1.7 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design railings, including attachment to building construction unless noted otherwise on the drawings.
- B. Structural Performance: Railings, including attachment to building construction, to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
 - 1. Handrails and Top Rails of Guards:
 - a. Uniform load of 50 lbf/ft applied in any direction.
 - b. Concentrated load of 200 lbf applied in any direction.
 - c. Uniform and concentrated loads need not be assumed to act concurrently.
 - 2. Infill of Guards:
 - a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft.
 - b. Infill load and other loads need not be assumed to act concurrently.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes for exterior railings.
 - 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces

2.2 METALS, GENERAL

- A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
- B. Steel Handrail Wall Brackets: Center of rail 3 inches from face of wall with predrilled holes for exposed bolt anchorage.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide TrueNorth Steel; Model 00012 or comparable product by one of the following:
 - a. [Blum, Julius & Co., Inc.](#)
 - b. [The Wagner Companies., R&B Wagner, Inc.](#)
- C. Flanges and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.

2.3 STEEL RAILINGS AND GUARDS

- A. Source Limitations: Obtain each type of railing from single source from single manufacturer.
- B. Tubing: ASTM A500 (cold formed) or ASTM A513, Type 5.
- C. Pipe: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
 - 1. Provide galvanized finish for exterior installations and where indicated.
- D. Plates, Shapes, and Bars: ASTM A36/A36M.
- E. Perforated-Metal Infill Panels:
 - 1. Cold-Rolled Steel Sheet: ASTM A1008, or hot-rolled steel sheet, ASTM A1011/A1011M, commercial steel, Type B, 0.060 inch thick, with 1/4-inch holes in staggered rows.
 - 2. Galvanized-Steel Sheet, ASTM A653, G90 coating, commercial steel Type B, 0.064 inch thick, with 1/4-inch holes 3/8 inch o.c. in staggered rows.
- F. Woven-Wire Mesh Infill Panels: Intermediate-crimp, **square** pattern, 2-inch woven-wire mesh, made from 0.134-inch diameter steel wire complying with ASTM A510.

2.4 FASTENERS

- A. Fastener Materials:
 - 1. Ungalvanized-Steel Railing Components: Plated steel fasteners complying with **ASTM F194**, Class Fe/Zn 5 for zinc coating.
 - 2. Hot-Dip Galvanized Railing Components: Type 304 stainless steel or hot-dip zinc-coated steel fasteners complying with ASTM A153/A153M or ASTM F2329/F2329M for zinc coating.
 - 3. Finish exposed fasteners to match appearance, including color and texture, of railings.
- B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction and capable of withstanding design loads.
 - 1. Provide fastener's as shown when noted on the drawings.

05520-3

- C. Fasteners for Interconnecting Railing Components:
 - 1. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless exposed fasteners are unavoidable or are the standard fastening method for railings indicated.
- D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, in accordance with to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193.
 - 1. Refer to section 05090 for additional criteria.

2.5 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select in accordance with AWS specifications for metal alloy welded.
- B. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
- C. Galvanizing Repair Paint: High-zinc-dust-content paint, complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- D. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- E. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.
- F. Polyurethane Topcoat: Complying with MPI #72 and compatible with undercoat.
- G. Bituminous Paint: Cold-applied asphalt emulsion, complying with ASTM D1187/D1187M.
- H. Nonshrink, Nonmetallic Grout: Provide per section 03310.
- I. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.
 - 1. Water-Resistant Product: At exterior locations and where indicated on Drawings, provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.6 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.
- B. Shop assemble railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations.
 - 1. Clearly mark units for reassembly and coordinated installation.
 - 2. Use connections that maintain structural value of joined pieces.

- C. Cut, drill, and punch metals cleanly and accurately.
 - 1. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated.
 - 2. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that are exposed to weather in a manner that excludes water.
 - 1. Provide weep holes where water may accumulate.
 - 2. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with welded or bolted connections unless otherwise indicated.
- H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove flux immediately.
- I. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish #2 welds; good appearance, completely sanded joint, some undercutting and pinholes okay.
- J. Nonwelded Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
- K. Form changes in direction as follows:
 - 1. By bending. Bend members in jigs to produce uniform curvature for each configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- L. Close exposed ends of railing members using manufacturer's standard materials and procedures.
- M. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch or less.
- N. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
 - 1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.
- O. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work.
 - 1. Fabricate anchorage devices capable of withstanding loads imposed by railings.
 - 2. Coordinate anchorage devices with supporting structure.
- P. For railing posts set in concrete, provide steel sleeves not less than 6 inches long with inside dimensions not less than 1/2 inch greater than outside dimensions of post, with metal plate forming bottom closure.
- Q. For removable railing posts, fabricate slip-fit sockets from steel tube or pipe whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height.

05520-5

1. Provide socket covers designed and fabricated to resist being dislodged.
 2. Provide chain with eye, snap hook, and staple across gaps formed by removable railing sections at locations indicated. Fabricate from same metal as railings.
- R. Perforated-Metal Infill Panels: Fabricate infill panels from perforated metal made from steel.
1. Edge panels with U-shaped channels made from metal sheet, of same metal as perforated metal and not less than 0.043 inch thick.
 2. Orient perforated metal with pattern as indicated on Drawings.
- S. Woven-Wire Mesh Infill Panels: *Fabricate* infill panels from woven-wire mesh crimped into 1-by-1/2-by-1/8-inch metal channel frames.
1. Fabricate wire mesh and frames from same metal as railings in which they are installed.
 2. Orient wire mesh with as indicated on Drawings.
- T. Toe Boards: Where indicated, provide toe boards at railings around openings and at edge of open-sided floors and platforms. Fabricate to dimensions and details indicated.

2.7 STEEL FINISHES

- A. Galvanized Railings:
1. Comply with ASTM A123/A123M for hot-dip galvanized railings.
 2. Comply with ASTM A153/A153M for hot-dip galvanized hardware.
 3. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
 4. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by manufacturer's standard materials and procedures.
- B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.
- C. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner and as follows.
1. Comply with SSPC-SP 16.
- D. For nongalvanized-steel railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves; however, hot-dip galvanize anchors to be embedded in exterior concrete or masonry.
- E. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with requirements indicated below:
1. Exterior Railings: SSPC-SP 6/NACE No. 3.
 2. Other Railings: SSPC-SP 3.
- F. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1 for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.
1. Shop prime uncoated railings with universal shop primer.
 2. Do not apply primer to galvanized surfaces.
- G. Shop-Painted Finish:
1. Color: As indicated by manufacturer's designations and approved by Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements are clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

- A. Install railings in accordance with manufacturer's written instructions and approved Shop Drawings.
- B. Perform cutting, drilling, and fitting required for installing railings.
 - 1. Fit exposed connections together to form tight, hairline joints.
 - 2. Install railings level, plumb, square, true to line; without distortion, warp, or rack.
 - 3. Set railings accurately in location, alignment, and elevation; measured from established lines and levels.
 - 4. Do not weld, cut, or abrade surfaces of railing components that are coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
 - 5. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 ft.
- C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
- D. Adjust railings before anchoring to ensure matching alignment at abutting joints.
- E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

- A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws, using plastic cement filler colored to match finish of railings.
- B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article, whether welding is performed in the shop or in the field.
- C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve, extending 2 inches beyond joint on either side; fasten internal sleeve securely to one side; and locate joint within 6 inches of post.

3.4 ANCHORING POSTS

- A. Use steel baseplates anchored into concrete for installing posts. Where baseplate and anchorage are not specified on the drawing, manufacturer shall provide the design.
- B. Install removable railing sections, where indicated, in slip-fit steel sockets cast in concrete.

3.5 ATTACHING RAILINGS

- A. Anchor railing ends to concrete and masonry with flanges connected to railing ends and anchored to wall construction with anchors and bolts.
- B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and welded to railing ends.
- C. Attach handrails to walls with wall brackets, Provide brackets with 1-1/2-inch clearance from inside face of handrail and finished wall surface.
 - 1. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
- D. Secure wall brackets and railing end flanges to building construction as follows:
 - 1. For concrete and solid masonry anchorage, use LDT or screw anchors.
 - 2. For hollow masonry anchorage, use toggle bolts.
 - 3. For wood stud partitions, use hanger or lag bolts set into studs or wood backing between studs. Coordinate with carpentry work to locate backing members.
 - 4. For steel-framed partitions, use hanger or lag bolts set into wood backing between studs. Coordinate with stud installation to locate backing members.
 - 5. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements, using self-tapping screws of size and type required to support structural loads.

3.6 REPAIR

- A. Touchup Painting:
 - 1. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

3.7 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.
- B. Restore finishes damaged during installation and construction period, so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION

SECTION 06065 - PLASTIC MATERIALS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Plastic Sleeve: Thermoplastic polyethylene pipe sleeves for steel pipe bollards
- B. Related Sections:
 - 1. Section 01600 - Product Requirements: Contractor's Product Selection Checklist.
 - 2. Section 05500 - Metal Fabrications: Steel pipe bollards to receive plastic sleeves.

1.2 DELIVERY, STORAGE AND HANDLING

- A. Section 01600 - Product Requirements: Transport, handle, store, and protect Products.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, provide plastic bollard sleeves by one of the following manufacturers.
 - 1. Ideal Shield, Detroit, MI, Chris Parenti or Ashley Kozlowski, (866) 825-8659 or (313) 842-7290: email: cparenti@idealshield.com or info@idealshield.com.
 - 2. Post Guard, Farmington Hills, MI, Betty Steinke, (866) 737-8900; email: betty@postguard.com.
 - 3. Ultratech International, Inc., Jacksonville, FL, (800) 764-9563.

2.2 SUPPLIERS

- A. Specified products may be procured from the following suppliers.
 - 1. Bollard Sleeves:
 - a. Grainger Industrial Supply, Lake Forest, IL; Customer Service (800) 472-4643.
 - b. Uline, Pleasant Prairie, WI; Customer Service (800) 295-5510.
 - c. Fastenal, Winona, MN; Customer Service (877) 507-7555.
 - d. The Crowd Control Store, Fort Lauderdale, FL ((866) 304-2916.

2.3 PRODUCTS

- A. Polyethylene thermoplastic (LDPE or HDPE) molded plastic bollard sleeve.
 - 1. Size: 1/8-inch thickness, 52" high (field verify height) to fit 4-inch or 6-inch diameter pipe bollards as shown.
 - 2. Color: Provide color shown on Drawings.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Plastic Sleeves:
 - 1. Install (2) beads of clear 100% silicone sealant by starting beads at opposite sides of top of bollard and spiraling downward, making one complete revolution of bollard with each bead.
 - 2. Slide sleeve over bollard seating sleeve in sealant.
 - 3. Allow sealant to cure and verify sleeve holds fast to bollard.
 - 4. Repeat installation if sleeve can be removed easily from bollard.
 - 5. Do not install sleeves with manufacturer's double sided foam tape.

END OF SECTION

06065-2

SECTION 06100 - ROUGH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Preservative and fire resistive treatment.
2. Concealed blocking behind wall mounted items.
3. Non-structural panel products including the following:
 - a. Backing for electrical and telephone equipment.
 - b. Panels concealed within gypsum board and metal stud partitions.
 - c. Panels used as finish material; walls, ceilings, wainscots, and bases.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American Lumber Standards Committee (ALSC):
 1. Softwood Lumber Standards.
- C. American Plywood Association (APA):
 1. Grades and Standards.
- D. ASTM International (ASTM):
 1. ASTM A 123/A - Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 2. ASTM A 153 - Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 3. ASTM A 307 - Specification for Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength.
 4. ASTM A 653 - Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 5. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.
 6. ASTM B 117 - Standard Practice for Operating Salt Spray (Fog) Apparatus.
 7. ASTM E 1333 - Test Method for Determining Formaldehyde Concentrations in Air and Emission Rates from Wood Products Using a Large Chamber.
- E. American Society of Mechanical Engineers (ASME):
 1. ASME B18.6.1 - Wood Screws (Inch Series)
- F. American Wood Protection Association (AWPA):
 1. AWPA M4 - Care of Preservative Treated Wood Products.
 2. AWPA U1 - User Specification for Treated Wood.
- G. Department of Commerce (National Institute of Standards and Technology) - Product Standard (DOC):
 1. DOC PS 1 - Construction and Industrial Plywood.
 2. DOC PS 2 - Performance Standard for Wood Based Structural Use Panels.
 3. DOC PS 20 - American Softwood Lumber Standard.
- H. Southern Pine Inspection Bureau (SPIB):
 1. Grading Rules.
- I. Western Wood Products Association (WWPA):
 1. Western Lumber Grading Rules.

- J. Underwriters' Laboratories (UL):
 - 1. UL FR-S Classification - Fire Retardant Treated Wood with Flame Spread Ratings of 25 or less in accordance with ASTM E84.
 - 2. UL 723 - Test for Surface Burning Characteristics of Building Materials.

1.3 QUALITY ASSURANCE

- A. Lumber Grading Agency: Lumber to be grade stamped by an agency certified by the Board of Review of the American Lumber Standards Committee (ALSC).
- B. Plywood Grading Agency: Certified by APA.
- C. Regulatory Requirements: Conform to applicable codes for fire retardant treatment of wood surfaces for flame/smoke ratings.
- D. Composite Wood Products: Hardwood plywood, particleboard, and medium density fiberboard composite wood products specified herein for exterior or interior applications shall meet the requirements for formaldehyde as specified by the California Air Resources Board, Air Toxics Control Measure for Composite Wood as tested in accordance with ASTM E 1333, and Chap 5 of the CALGreen requirements.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.
- B. Provide proper facilities for handling and storage of materials to prevent damage to edges, ends and surfaces.
- C. Keep materials dry. Stack materials off ground a minimum of 12 inches or if on concrete slab-on-grade a minimum of 1-1/2 inches, fully protected from weather. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 MATERIALS AND PRODUCTS

- A. Lumber: DOC PS 20; S4S. Maximum of 19 percent moisture content, surfaced dry, No. 2 any species graded under WWPA grading rules or No. 3 Grade Southern Pine graded under SPIB grading rules.
- B. Plywood Backing Panels: DOC PS 1, Exposure 1, Grade C Plugged veneer, fire retardant treated, thickness indicated but not less than 1/2 inch nominal thickness.
- C. Nonstructural Panel: DOC PS 1 or PS 2, fire retardant treated plywood.
 - 1. Type 1 (Interior): Grade C-D Plugged veneer, Exposure I, locations and thickness indicated on the Drawings.
 - 2. Type 2 (Exterior): Grade B-B veneer, Exterior, locations and thickness as indicated on the Drawings.
- D. High Density Wood Fiber Panel Products: Provide one of the following panels with span rating as required to suit support spacing indicated on drawings. Thickness as indicated on drawings.
 - 1. EnergyGuard High Fiberboard, by GAF, (800) 766-3411.
 - 2. Huebert Fiberboard Roof Insulation, by Huebert Brothers Products, LLC; Booneville, MO (816) 882-2704.

2.2 FASTENERS

- A. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity: Comply with the treated lumber manufacturer's recommendations for fasteners and metal components in contact with treated lumber.
 - 1. Fasteners: ASTM A 153, class D for hot dip galvanized fasteners or type 304 or type 316 stainless steel.
 - 2. Other components: ASTM A 653, G-185, with minimum of 1.85 ounces of zinc coating per square foot coverage or type 304 or type 316 stainless steel.
- B. At no time shall any galvanized metal, stainless steel, or other dissimilar metals be in contact with one another.
- C. Nails, Brads and Staples:
 - 1. ASTM F 1667 Galvanized for exterior locations and high humidity areas, and for treated wood
 - 2. ASTM A123 plain finish for other interior locations.
 - 3. Size and type to suit application, unless otherwise noted.
- D. Bolts, Nuts, Washers, and Lag Screws: ASTM A307, Medium carbon steel; size and type to suit application; galvanized for exterior locations, high humidity areas, and treated wood; plain finish for other interior locations, of size and type to suit application, unless otherwise noted.
- E. Wood Screws: ASME B18.6.1
- F. Toggle Bolt Fasteners: For anchorage of non-structural items to hollow masonry.
- G. Expansion Shield Fasteners: For anchorage of non-structural items to solid masonry and concrete.
- H. Powder or Pneumatically Actuated Fasteners: For anchorage of non-structural items to steel.
- I. Fasteners for Wood and Plywood to Light Gage Metal Framing and Metal Deck (up to 10 gage, 0.1345 inch): Self-drilling flat head wood-to-metal screws.
 - 1. Manufacturers:
 - a. Hilti, Tulsa, OK (800) 879-6000.
 - b. ITW Buildex, Itasca, IL (800) 323-0720.
 - 2. Wood and Plywood Up to 3/4 Inch Thick:
 - a. Hilti: S-WD 8-18 x 1-15/16 PFH #3 Black Phosphated.
 - b. ITW: Traxx 10-16 #3 point.
 - c. Pre-drill wood if wood thickness is greater than 1/2 inch or use heavier fastener specified below.
 - 3. Wood less than or equal to 1-1/8 inch thickness to 18 Gage (0.0478 inch) and 20 Gage (0.0359 inch) Metal:
 - a. Hilti: S-WD 10-24 x 1-1/2 PWH #3 wafer head screw.
 - b. ITW: Traxx 10-16 #3 point.
 - c. Pre-drill wood if wood thickness is greater than 1/2 inch.
 - 4. Wood less than or equal to 1-3/4 inch thickness to 16 Gage (0.598 inch) and Heavier Metal (less than or equal to 0.232 inches):
 - a. Hilti: S-WW 12-24 x 2-1/2 PFH #4 Wings.
 - b. ITW: Traxx 12-24 #4 Point with Wings.
 - 5. Wood less than or equal to 2-inch thickness to 16 Gage (0.598 inch) and heavier metal (less than or equal to 1/4 inch):
 - a. Hilti: S-WW 1/4-20 x 2-3/4 PFH #4 Wings.
- J. Fasteners for Non-Structural Wood Members to Masonry: Masonry screw anchor with Phillips or Torx flat head, size and length as shown on the drawings.
 - 1. Hilti: Kwik-Con II fastener.
 - 2. ITW: Tapcon masonry anchor.

- K. Alternate Manufacturers: Subject to compliance with project requirements, fasteners by alternate manufacturers of equal types to those specified may be provided, except where substitutions are specifically prohibited.

2.3 WOOD TREATMENT

A. Preservative Pressure Treated Lumber Treatment:

1. Products and Manufacturers: Provide any of the following:
 - a. Wolman CCA, by Arch Wood Protection, Smyrna, GA, (770) 801-6600.
 - b. CCA Pressure Treatment by Hoover Treated Wood Products Inc., Thomson, GA, (800) .832-9663.
 - c. SupaTimber, by Viance, Charlotte, NC, (800) 421-8661.
2. Treat lumber in accordance with AWWA U1; Use Category UC2 for interior construction not in contact with the ground; Use Category UC3b for exterior construction not in contact with the ground; and Use Category UC4a for items in contact with the ground.
3. Preservative Chemicals shall be acceptable to Authorities Having Jurisdiction and contain no arsenic or chromium where prohibited.
4. Kiln dry lumber after treatment to 15-19 percent moisture content. Do not use warped material or materials that do not comply with requirements for untreated material. Material to be painted or stained shall have knots and pitch streaks sealed as with untreated wood.
5. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review and acceptable to Authorities Having Jurisdiction.

B. Field-Applied Lumber Preservative:

1. Provide the following:
 - a. Inorganic boron.
 - b. Copper naphthenate.

C. Fire Retardant Treatment:

1. Products and Manufacturers: Provide any of the following:
 - a. Dricon FRT (exterior and interior), by Arch Wood Protection, Smyrna, GA, (770) 801-6600.
 - b. Exterior X (exterior) and Pyro-Guard (interior) by Hoover Treated Wood Products, Inc.; Thomson, GA; (800)-832-9663.
 - c. D-Blaze (interior) by Viance, Charlotte, NC; (800) 421-8661.
2. Identify fire retardant treated wood with appropriate classification marking of testing and inspecting agency acceptable to Authorities Having Jurisdiction.
3. For exposed items indicated to receive a stained or natural finish, use chemical formulations that do not bleed through, contain colorants, or otherwise adversely affect finishes.
4. Kiln dry lumber after treatment, to an average moisture content of 19 percent or less.
5. Kiln dry plywood after treatment, to an average moisture content of 15 percent or less.
6. Chemicals used to treat material shall be free of halogens, sulfates, ammonium phosphate and formaldehyde.
7. Treatment material shall provide protection against termites and fungal decay and shall be registered for use as a wood preservative by the U. S. Environmental Protection Agency.

D. Wood Requiring Treatment:

1. Lumber, Preservative Treated:
 - a. Nailers, blocking, stripping, and similar items in conjunction with roofing, flashing, and other construction.
 - b. Sills, blocking, furring, stripping, and similar items in contact with masonry or concrete.
2. Lumber, Fire Retardant Treated:
 - a. Wood in concealed spaces.
 - b. Wood exposed within the roof/ceiling assembly.
3. Interior Plywood, Fire Retardant Treated:
 - a. Plywood used as finish material, walls, wainscots, and bases in fire-rated corridors.
 - b. Plywood backing for electrical and telephone equipment.
 - c. Plywood performing a structural function, such as a component of roof, floors or shear walls.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive rough carpentry work and verify following:
 - 1. That installation of building components to receive rough carpentry work is complete.
 - 2. That surfaces are satisfactory to receive work.
 - 3. That spacing, direction and details of supports are correct to accommodate installation of blocking, backing, stripping, furring and nailing strips.

3.2 SITE TREATMENT OF WOOD MATERIALS

- A. Wood Treatment at Site: Comply with AWWA M4 for applying field treatment to cut surfaces of preservative treated lumber.
 - 1. Use inorganic boron for items continuously protected from liquid water.
 - 2. Use copper naphthenate for items not continuously protected from liquid water.

3.3 INSTALLATION

- A. Set rough carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry to other construction; scribe and cope as needed for accurate fit. Locate furring, nailers, blocking, grounds, and similar supports to comply with requirements for attaching other construction.
 - 1. Construct members of continuous pieces of longest possible lengths.
 - 2. Do not splice structural members between supports, unless otherwise indicated.
- B. Provide blocking and framing indicated and necessary to support facing materials, fixtures, specialty items, and trim.
 - 1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches o.c.
- C. Secure members in place with specified fastener. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Do not countersink nail heads unless otherwise indicated.
- D. Wood Ground, Sleeper, Blocking, and Nailer: Install where indicated and where required for screeding or attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
 - 1. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces, unless otherwise indicated.
 - 2. Recess heads of fasteners below surface of wood members.
- E. Wood Furring: Install level and plumb with closure strips at edges and openings. Shim with wood as required for tolerance of finish work.
- F. Install firestopping complying with Section 07840 in concealed spaces with wood blocking, horizontally and vertically in accordance with drawings, minimum 2 inches thick where space is not blocked by framing members.
- G. Fasteners: Install fasteners with manufacturer's recommended power tool for each type of fastener.

3.4 PROTECTION

- A. Protect rough carpentry from weather throughout construction period.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

06100-6

SECTION 061500 (06 1500) – WOOD DECK PANELS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Mezzanine wood deck floor panels.
 - 2. Wood deck panel fasteners.
- B. Related Requirements:
 - 1. Section 05120 - Structural Steel:
 - a. Structural steel for framed openings.
 - b. Support plates and angles.
 - 2. Section 05300 – Metal Deck: Support decking for mezzanine flooring panels.
 - 3. Section 06100 – Rough Carpentry: Edge of panel support shims.

1.2 SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Indicate component materials and dimensions and include construction and installation details.
 - 2. Include data for fasteners.
 - 3. Include orientation of panels during installation.

1.3 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Metal Deck Supplier will deliver products to site to be received by Contractor as specified in Section 01600.
- B. Stack with spacers beneath and between each bundle to provide air circulation. Store inside building only after building is fully enclosed and protected from the elements. Provide for air circulation around stacks and under coverings.
- C. Panels to be stored flat and level.
- D. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.
- E. Keep materials dry. Separate sheets and store deck on dry wood sleepers; slope for positive drainage. Protect with a waterproof covering and ventilate to avoid condensation.
- F. Prevent damage to edges, ends, and surfaces.

1.5 WARRANTY

- A. Manufacturer's Durability Warranty: Manufacturer's standard form providing warranty against structural integrity and finish coating. Finish coating defects include peeling, cracking, and other indications of deterioration in coating.
 - 1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 APPROVED MANUFACTURERS:

- A. ResinDek; Cornerstone Specialty Wood Products, LLC.
- B. Source Limitations: Obtain each type of engineered wood product from single source from a single manufacturer.

2.2 MATERIALS

- A. Basis of Design: Engineered wood deck panels meeting the following criteria:
 - 1. Panel Type: ResinDek MD.
 - 2. Panel Finish: Gray Diamond Seal 2 with ESD coating.
 - 3. Panel Edges: Tongue and groove.
 - 4. Panel Thickness: $\frac{3}{4}$ inch.
 - 5. Panel Attachment: Fully countersunk color matched top side screws. Spacing per manufacturer's standard recommendation.
 - 6. Load limit: As indicated on drawings.
- B. Substitutions: Subject to compliance with requirements, another manufacturer's product of a similar and equivalent nature is to be approved in writing by Architect of Record and Structural Engineer of Record during Bidding. Equivalent is defined, in the Architect's and Engineer's sole judgment, as containing differences that do not materially or aesthetically detract from the design concept or intended performance.

2.3 MISCELLANEOUS ACCESSORIES

- A. General: Provide accessories as required by manufacturer to provide for a complete installation.
 - 1. Minimum 20 ga. steel shims as required to bridge deck flutes at panel joints.
 - 2. Color matched screws provided by manufacturer of wood floor covering panels.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions and adjacent areas where products and materials will be installed and verify that conditions conform to product manufacturer's requirements. Verify that wood deck supporting framing and metal deck components are ready to receive Work. Do not proceed until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install panels in strict accordance with manufacturers written instructions.
- B. Orient panels with long edges of panels running perpendicular to the steel deck ribs wherever possible.
- C. Provide a 3/8" gap/space on outer edges of panels and a 1/8" gap/space between panels.
- D. Insert metal spacers (2 along one long edge, 1 along a short edge) between all adjacent panels during panel installation. Remove after panels are firmly affixed.
- E. Attach panels to corrugated metal platform deck using manufacturer's recommended minimum number of fasteners per 4' x 8' sheet. Locate fasteners a minimum of 1" from tongue and groove edges and from square edges.
- F. Stagger panels so that joints break on different deck ribs wherever possible. Long joints to run perpendicular to steel decking below. Short joints to be staggered at least one-third of a panel.
- G. All panel joints should break on ribs. 6" wide x 20-gauge minimum steel shims must be used when panels break on a valley.
- H. Fasteners must be long enough to penetrate both the panel and securely into the deck. Secure each panel with a

06150-2

minimum of four fasteners before installing the next panel. Use only screw guns with a nose clutch to countersink screw heads. Drive fasteners so the countersunk head is just below the panel surface.

- I. Use carbide tipped saw blades to trim panels.
- J. Provide perimeter closure plates/strips at all perimeter gaps.
- K. Set rough carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry to other construction; scribe and cope as needed for accurate fit. Locate furring, nailers, blocking, grounds, and similar supports to comply with requirements for attaching other construction.

3.3 FIELD QUALITY CONTROL

- A. Field quality control shall be the responsibility of the Contractor in accordance with Section 01452. Field quality control testing and inspection shall be at the discretion of the Contractor as necessary to assure compliance with Contract requirements. Owner T&I specified below shall not preclude Contractor responsibility to perform similar routine, necessary, and customary testing and inspection of the methods and frequency suitable for the type of work involved.

3.4 PROTECTION

- A. Protect installed panels as recommended by the manufacturer against damage after installation.

SECTION 06165 - FIBERBOARD PANELS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Tack bulletin boards.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM C 209 - Test Methods for Cellulosic Fiber Insulating Board.
 - 2. ASTM C 954 - Steel Drill Screws for the Application of Gypsum Board or Metal Plaster Bases to Steel Studs From 0.033 inches to 0.112 inches in Thickness.
 - 3. ASTM C 1002 - Steel Self-Piercing Tapping Screws for The Application Of Gypsum Panel Products Or Metal Plaster Bases To Wood Studs Or Steel Studs.
 - 4. ASTM D 1037 - Test Methods of Evaluating Properties of Wood-Base Fiber and Particle Panel Materials.
 - 5. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.
- C. Occupational Safety and Health Administration (OSHA):
 - 1. OSHA 01926.1153 Respirable Crystalline Silica.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Minimize dust emissions and provide equipment that suppresses dust.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.

1.5 PROJECT CONDITIONS

- A. Acclimatize panels to existing moisture conditions and for not less than 24 hours before installation. Comply with manufacturer's recommendations.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Fiberboard: Molded, recycled post-consumer paper, cellulose fiber structural panel manufactured and constructed as acoustic board insulation.
 - 1. Thickness: 1/2 inch.
 - 2. Density: Minimum 15 pcf when tested in accordance with ASTM C209.
 - 3. Tensile Strength: Minimum 150 psi parallel and 600 psi perpendicular when tested in accordance with ASTM C209.
 - 4. Water Absorption by Volume: Not to exceed the maximum percent when tested in accordance with ASTM D 1037.
 - 5. Expansion: 50 to 90 percent relative humidity in accordance with ASTM C209.
 - 6. Thermal Resistance: When tested in accordance with ASTM C209 per ASTM C518:
 - a. R-value: 1.2

7. Flame Spread: 76 to 200 tested in accordance with ASTM E84, Class III or C.
8. Subject to compliance with requirements specified herein, provide fiberboard manufactured by one of the following:
 - a. [440 Sound Barrier](#) by Homasote Company, West Trenton, NJ (800) 257-9491.
 - b. [Soundstop](#) by Blue Ridge Fiberboard, (800) 535-4088 or (800) 233-8721.
 - c. Equivalent product by other manufacturers.

B. Trim: Casing as shown on Drawings.

2.2 ACCESSORIES

A. Panel Fasteners:

1. Fastening to sheathing: ASTM C 954 and C 1002, Type S-12 bugle head, corrosion-resistant self-drilling self-tapping steel screws; length as required to penetrate framing members 3/4" minimum.
2. Fastening to concrete masonry unit (CMU): Masonry screw anchor with Phillips or Torx flat head, 3/16 inch in diameter x 1-3/4 inch. Provide one of the following:
 - a. Kwik-Con II fastener by [Hilti](#), Tulsa, OK (800) 879-6000.
 - b. Tapcon masonry anchor by [ITW Buildex](#), Itasca, IL (800) 323-0720.

B. Trim Fasteners: As shown on Drawings.

C. Field Applied Paint Finish for Panel and Trim: Water-based acrylic enamel, semi-gloss, as specified in Section 09900 for wood substrates.

1. Color: Match color of adjacent wall as shown on Drawings.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Prepare substrate in accordance with fiberboard panel manufacturer's recommendations.
- B. Beginning of installation is acceptance of substrate.

3.2 INSTALLATION

- A. Install panel where noted on the Drawings in accordance with manufacturer's instructions.
- B. Install only clean, dry, undamaged panels.
- C. When fastening panel to CMU, provide drills equipped with a HEPA-rated filter vacuum dust collection system recommended by the manufacturer to maintain dust emissions below the permissible level.
 1. Drill pilot holes accurately and squarely. Clean holes in accordance with the manufacturer's recommendations using a HEPA-rated filter vacuum.
- D. Install panel trim pieces concurrently with installation of panels. Miter cut panel trim at corners to provide smooth transition. Ensure moldings are straight and correctly aligned.
- E. Prepare and paint installed trim as specified in Section 09900 for wood substrates.
- F. Apply continuous bead of sealant in corner seams.
- G. Sealant shall not be visible in completed system.

END OF SECTION

SECTION 06200 - FINISH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Interior standing and running trim.
 - 2. Shelving.
- B. Related Sections:
 - 1. Section 06100 - Rough Carpentry: Panel product used as finish material on walls, ceilings, wainscots, and bases.
 - 2. Section 06400 - Architectural Woodwork: Plastic laminate casework and wainscoting.
 - 3. Section 09900 - Paints and Coatings: Opaque and transparent finishes.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American Woodworking Institute (AWI):
 - 1. AWI - Quality Standards.
- C. American Plywood Association (APA):
 - 1. APA - Grades & Specifications.

1.3 DELIVERY, STORAGE AND HANDLING

- A. Section 01600 - Material and Equipment: Transport, handle, store, and protect products.

PART 2 - PRODUCTS

2.1 WOOD MATERIALS

- A. Interior Standing and Running Trim : AWI Custom Grade; plain sawn, Grade II lumber.
 - 1. Painted Finish: Closed-grain hardwood, any species
 - 2. Clear Sealed Hardwood: One of the following hardwood species. Use one species throughout
 - a. Ash.
 - b. Birch.
 - c. Oak.
- B. Shelving - Clear Sealer Finish: Fir or birch plywood with veneer core and sanded edges.
 - 1. APA 5-ply A/C, 3/4 inch thickness at Stockroom shelving.
 - 2. APA 5-ply A/B at other locations.
- C. Panel Product for Finish Material on Walls, Ceilings, Wainscots, and Bases: See Section 06100.

2.2 HARDWARE

- A. Fasteners: Size and type to suit application; galvanized for exterior and high humidity locations; plain finish at other locations.

2.3 FABRICATION

- A. Fabricate to AWI Standards.
 - 1. Standing and Running Trim: Custom Grade.
 - 2. Wood Shelving with Clear Sealer: Economy Grade.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install woodwork plumb, level, and straight without distortion; use concealed shims. Scribe and cut woodwork to fit adjoining work. Anchor woodwork items to nailers or blocking or directly to substrate using concealed fasteners.
- B. Standing and Running Trim: Install with minimum joints, using maximum lumber lengths possible. Cope at returns; miter at corner.
- C. Wood Shelving: Assemble units and install as indicated on Drawings.
- D. Site Finishing: Refer to Section 09900.

END OF SECTION

SECTION 06400 - ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Plastic Laminate Casework provided or modified by Contractor.
2. Architectural slat wall panel for installation by Contractor.

B. Related Sections:

1. Section 01600 - Product Requirements: Contractor's Product Selection Checklist.
2. Section 06100 - Rough Carpentry: Lumber and panel products used for wood and wire mesh doors.

1.2 REFERENCES

A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.

B. American National Standards (ANSI):

1. ANSI A208.1 - Particleboard
2. ANSI A208.2 - Medium Density Fiberboard For Interior Use

C. Architectural Woodwork Institute (AWI) / Architectural Woodwork Manufacturers Association of Canada (AWMAC) / Woodwork Institute (WI) - Joint Publication:

1. AWI/AWMAC/WI - Architectural Woodwork Standards.

D. Engineered Wood Association (APA): APA - Grades & Specifications.

E. National Electrical Manufacturer's Association (NEMA)

1. NEMA LD3 - High-Pressure Decorative Laminates

1.3 DELIVERY, STORAGE AND HANDLING

A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.

B. Inspect materials delivered and reject those not qualifying with requirements, those damaged in transit, or those that appear otherwise unsatisfactory.

C. Schedule delivery of items to installation areas that are in proper condition to receive them. Place items neatly and systematically to avoid damage, store in clean, dry, enclosed, and secure storage area.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. High Pressure Laminate (HPL): Provide products by one of the following as specified in the Color/Pattern Schedule below:

1. Formica Corporation; Indianapolis, IN; Contact: Megan Shaughnessy; (513) 786-3039.
2. Nevamar Decorative Surfaces (a subsidiary of Panolam Surface Systems) Shelton, CT. Contact: Tricia Rongitsch, (612) 618-4754, www.panolam.com/distributors
3. Panolam Surface Systems, Shelton, CT. Contact: Tricia Rongitsch, (612) 618-4754, or (877) 726-6526, www.panolam.com/distributors
4. Pionite Decorative Surfaces (a subsidiary of Panolam Surface Systems) Shelton, CT. Contact: Tricia Rongitsch, (612) 618-4754.

5. Wilsonart; Temple, TX; Contact: Marty Click (214) 502-4084.
 6. Omnova Solutions, (866) 332-5226, laminates@omnova.com
- B. Thermofused Melamine Panel (TFM): Provide products by one of the following manufacturers:
1. Panolam Surface Systems, Shelton, CT. Contact: Tricia Rongitsch, (612) 618-4754, or (877) 726-6526.
 2. [Funder America, Inc.](#), Mocksville, NC (336) 751-3501.
 3. [Roseburg Forest Products](#), Roseburg, OR (800) 245-1115.
- C. Panel Products (MDF and Particleboard): Provide products by one of the following manufacturers:
1. Arauco North America, Atlanta, GA, (800) 261-4890.
 2. Georgia Pacific Building Products, Atlanta, GA, (800) 284-5347.
 3. Homasote, West Trenton, NJ, (800) 257-9491.
 4. Roseburg Forest Products, Springfield, OR, (800) 245-1115.
- D. Accessories:
1. Metal trim:
 - a. Macklanburg-Duncan, Oklahoma City, OK (800) 654-8454.
 - b. Outwater Plastics Industries, Inc.
 - 1) East Coast: Bogota, NJ (800) 631-8375.
 - 2) West Coast: Phoenix, AZ (800) 248-2067.
 - c. Stylmark, Fridley, MN (800) 328-2495.
 2. Adhesives:
 - a. Wilsonart; Temple, TX; Contact: Marty Click (214) 502-4084.
 - b. ITW Polymers Sealants North America, Irving, TX, (800) 878-7876.
 - c. Franklin International, Columbus, OH, (800) 877-4583.

2.2 SUPPLIERS

- A. Specified products may be procured from the following suppliers.
1. McKillican American, Edmonton, AB Canada, (888) 252-7993. Multiple locations serving Western US, Hawaii and Texas.
 2. Sherwood Lumber Corp., Melville, NY, (800) 645-6226. Multiple locations across continental US.
 3. Wurth Baer Supply Company, Vernon Hills, IL, (800) 289-2237. Multiple locations serving Northeast and Midwest US.

2.3 LAMINATE MATERIALS

- A. High pressure laminate (HPL); NEMA LD3; color, pattern, and finish as indicated in this Section.
1. Exposed Horizontal Surfaces: GP-50.
 2. Exposed Vertical Surfaces: GP-50.
 3. Postformed Surfaces: PF-42.
 4. Thickness: Nominal 0.050 inch thick.
- B. Thermofused Melamine Panel (TFM): Particleboard or medium density fiberboard (MDF) finished with thermally fused, melamine impregnated decorative paper.

2.4 PANEL PRODUCT

- A. Medium Density Fiberboard (MDF), ANSI A208.2, Grade MD, made with binder containing no urea formaldehyde resin.
- B. Particleboard, density 45 lb., ANSI A208.1, Grade M-2, made with binder containing no urea formaldehyde resin.

2.5 ACCESSORIES

- A. Adhesives: Low VOC adhesive, as recommended by laminate manufacturer and suitable for shop or field application.
 - 1. Toxicity / IEQ:
 - a. Comply with applicable regulations regarding toxic and hazardous materials.
 - b. Comply with Green Seal Standard GS-36 for commercial aerosol adhesives.
 - c. Comply with California's South Coast Air Quality Management District (SCAQMD) Rule No. 1168 in areas where exposure to freeze/thaw conditions and direct exposure to moisture will not occur. In areas where freeze/thaw conditions exist or direct exposure to moisture can occur, then comply with California's Bay Area AQMD Regulation 8, Rule 51 for containers larger than 16 oz. and with California Air Resource Board (CARB) for containers 16 oz or less.
 - 2. Acceptable Products: Provide the following or equivalent as recommended by laminate manufacturer.
 - a. Wilsonart 3000 Adhesive Series.
 - b. [Sta'-Put SP80](#).
 - c. Titebond
- B. Fasteners: Unless otherwise recommended by the manufacturer, use size and type to suit application; galvanized or stainless for exterior and high humidity locations; plain finish at other locations.
- C. Edge Banding: Edge banding shall be 3 mm thick x 1-5/8 inch strip banding of ABS/PVC composition by Wilsonart, or equivalent.
 - 1. Color: PL-11 as described below.

2.6 ARCHITECTURAL SLAT WALL PANEL

- A. Description: As assembled by Owner's preselected supplier. EPVC substrates clad with machine-pressed vinyl to form rigid, preformed panel with linear wood-slat appearance. Dimensions as determined by supplier.
- B. Supplier: Architectural Slat Wall Panel: Procure slat wall from HJC as Owner's pre-selected supplier. Contact Haines, Jones & Cadbury, (800) 459-7099, WMT@hjcinc.com.
 - 1. Slat wall is a custom architectural panel, fully assembled off site and shipped as a panel unit by Owner's supplier.

2.7 COLOR/PATTERN SCHEDULE

- A. Provide one color where two or more are specified. Provide laminate specified below as applicable and as shown/scheduled on the Drawings. All PL designations are for HPL unless otherwise indicated. Colors shown in parentheses are generic color names.
 - 1. PL-11 (Medium Gray):
 - a. No. 928-58 Mouse (matte finish), by Formica.
 - b. No. D90-60 North Sea, by Wilsonart.
- B. Substitutions: Not permitted.

2.8 PLASTIC LAMINATE CASEWORK

- A. Fabricate using following materials for listed surfaces as defined in AWI/AWMAC/WI - Architectural Woodwork Standards.
 - 1. Plastic Laminates and Thermofused Melamine (TFM) panels with woodgrain patterns:
 - a. Grain direction to run vertical on vertical exposed millwork surfaces, including but not limited to cabinet faces, end panels, doors, drawer fronts, dividers and fillers, unless noted otherwise.
 - b. Grain direction to run parallel to face or exposed edges on horizontal surfaces including but not limited to cabinet bottoms, shelving and horizontal partitions.
 - 2. Exterior Exposed Surfaces (cabinet faces, ends and finished backs, doors, drawer fronts): High pressure or thermoplastic laminate as shown. Colors as indicated on Drawings.
 - 3. Interior Exposed Surfaces (open shelving storage or shelving areas): Thermofused Melamine (TFM), high

- pressure laminate, or thermoplastic laminate as shown. Color as indicated on the Drawings.
- 4. Semi-Exposed Surfaces (spaces behind doors, drawer boxes): Thermofused Melamine (TFM) , high pressure laminate, or thermoplastic laminate as shown. Color as indicated on Drawings.
- 5. Concealed Surfaces: Mill option using materials specified in this Section.
- 6. Base: 3/4" plywood or 2x wood blocking as indicated on Drawings.
- 7. Hardwood Edge Trim: Solid hardwood, optional species, for countertop edges as indicated on Drawings.
- 8. Panel Product Substrate for Laminate Clad Casework: Medium Density Fiberboard (MDF) or Particleboard as specified in Panel Product paragraph above.

B. Cabinet Hardware:

1. Base Cabinets:

- | | | | |
|----|-------------------------|------------------------------------|-------------|
| a. | Drawer Slides | Knape & Vogt (KV) | 1300 |
| b. | Drawer Lock | KV | 986 NP |
| c. | Drawer Gang Lock System | Selby Furniture Hardware Co., Inc. | L-3CTRDSK U |
| d. | Shelf Standards | KV | 255ZC |
| e. | Shelf Supports | KV | 239 |

2. Doors:

- | | | | |
|----|------------------|------------------|---------------------|
| a. | Wire Pull | EpcO | EPC-MC402-3-BRC 626 |
| b. | Door Lock | KV | 986 NP |
| c. | Hinges | Rockford Process | IH 860 |
| d. | Magnetic Catches | Ives | 325 (A 92) |

- C. Fasteners: Unless otherwise recommended by the manufacturer, use size and type to suit application; galvanized or stainless for exterior and high humidity locations; plain finish at other locations.

PART 3 - EXECUTION

3.1 GENERAL

- A. Install items specified herein where and as shown on the Drawings.

3.2 PLASTIC LAMINATE CASEWORK

- A. Where new plastic laminate is indicated for existing casework, remove existing laminate and/or finishes to base substrate prior to installation of new. Installation of new laminate over existing is not acceptable, no exceptions.
- B. Install woodwork plumb, level, and straight without distortion; use concealed shims. Scribe and cut woodwork to fit adjoining work. Anchor woodwork items to nailers or blocking or directly to substrate using concealed fasteners.
- C. Casework: Provide well fitting and smooth operating doors and drawers.
- D. Countertops: Anchor plastic laminate countertops securely to base units.
- E. Install laminate on vertical surfaces with directional pattern or grain oriented vertically. Install laminate on horizontal surfaces with directional pattern or grain oriented parallel to length of countertop.

3.3 ARCHITECTURAL SLAT WALL PANEL

- A. Examine surfaces and adjacent areas where slat wall panel will be installed and verify that substrates are flat, clean, dry, solid, and free from coatings and defects detrimental to installation.
- B. Remove existing rigid sheet wall coverings to base substrate prior to installation of slat wall panel.
- C. Download and use the [Slat Wall Panel Installation Guide](#).
 - 1. Begin with the starter edge and assemble overlapping panels as shown in the Installation Guide. Cut the final assembly to fit openings and wall requirements.

- D. Attach slat wall panel to flat building wall surface at location shown on Drawings.
1. Gypsum Board Substrate: Attach directly to gypsum wall using the Franklin construction adhesive specified herein. Use drywall screws to fasten in recesses of slats at panel joints and in pre-drilled holes in edge panels.
 2. Split Face CMU Substrate or Irregular Wall Surface: Vertical plain may vary. If necessary to achieve flat attachment surface, use 7/8-in. hat furring channel on building wall surface.

END OF SECTION

06400-6

SECTION 06610 - GLASS FIBER REINFORCED PLASTIC

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: FRP plastic coated panels and accessories.
- B. Related Requirements:
 - 1. Section 01600 - Product Requirements: Contractor's Product Selection Checklist.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.
 - 2. ASTM D 256 - Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.
 - 3. ASTM D 638 - Test Method for Tensile Properties of Plastics.
 - 4. ASTM D 790 - Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.

1.3 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.
- B. Store in clean, dry, enclosed, and secure storage area. Store flat on supplier's original shipping palettes and in accordance with manufacturer's published requirements.
- C. Protect adhesive from freezing temperatures, excessive heat, temperature fluctuations, humidity and moisture penetration.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers of FRP products and accessories specified herein shall be one of the following:
 - 1. Crane Composites, Inc, Channahon, IL, (800) 435-0080.
 - 2. Glasteel, Moscow, TN, (800) 238-5546.
 - 3. Franklin International, Columbus, OH, (800) 877-4583 (adhesive and sealants only).
 - 4. Marlite, Dover, OH, (800) 377-1221.
 - 5. Parkland Plastics, Inc., Middlebury, IN ((800) 835-4110 (adhesive only).
 - 6. Spray-Lock Premium Eco Adhesives, Chattanooga, TN ((423) 305-6151 (adhesive only).

2.2 SUPPLIERS

- A. Specified products may be procured from the following suppliers:
 - 1. Contractor Supply Network, Louisville, KY (888) 289-9950.
 - 2. Foundation Building Materials, Tustin, CA, (714) 380-3127. Multiple locations across US.
 - 3. Grainger.
 - 4. GTS Interior Supply, Kirkland, WA (425) 828-6761.
 - 5. Haines, Jones and Cadbury, Bentonville, AR, Customer Service: (800) 459-7099, wmt@hjcinc.com.
 - 6. The Home Depot.
 - 7. Kal-Lite (Division of Kalwall Corporation), Bow, NH, (800) 526-1609.

06610-1

- 8. True Value Hardware.
- 9. US FRP, Indiana, PA, (844) 698-7377.

2.3 FIBERGLASS REINFORCED PANELS (FRP)

- A. Description: Fiber reinforced plastic coated panels, 0.09 inch thick.
- B. Physical Characteristics: Meet the following minimum characteristics:
 - 1. Flexural Strength: 8,500 psi per ASTM D 790.
 - 2. Tensile Strength: 5,000 psi per ASTM D 638.
 - 3. Izod Impact Resistance: 4 ft-lb/sq inch per ASTM D 256.
 - 4. Surface burning characteristics in accordance with ASTM E 84 for Class C finish:
 - 5. Flame Spread: Less than 200.
 - 6. Smoke Density: Less than 450.
- C. United States Department of Agriculture (USDA): Approved for incidental food contact.
- D. Finish: Embossed.
- E. Color: Provide color specified below as shown on Drawings or equal by other manufacturer specified herein.

Designation	Crane Composites	Glasteel	Marlite
FRP 1	#85 White	WL White	P100 White

2.4 ACCESSORIES

- A. Adhesive: Pressure sensitive, low VOC adhesive.
 - 1. Titebond Greenchoice Advanced Polymer Panel Adhesive, by Franklin International.
 - 2. C-551 FRP Adhesive by Marlite.
 - 3. Parkland Panel Adhesive by Parkland.
 - 4. FRP Spray Adhesive, by Spray-Lock Premium Eco Adhesives.
- B. Wall Trim: Manufacturer’s standard matching wall trim including caps, division bars, inside and outside corners, edge, and other trim as required for a complete and finished installation.
- C. Sealant: Manufacturer's Silicone Construction Sealant.
 - 1. Product: MS 250 or MS 251 Silicone Sealant by Marlite or equivalent by any listed manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and adjacent areas where products will be installed and verify that surfaces conform to product manufacturer's requirements for substrate conditions. Do not proceed until unsatisfactory conditions have been corrected.
- B. Beginning of installation indicates acceptance of substrate conditions.

3.2 PREPARATION

- A. Where new FRP wall panels are to be installed, remove existing wall panels and/or finishes to base substrate prior to installation of new. Installation of new wall panels over existing is not acceptable, no exceptions.
- B. Prepare substrate for product installation in accordance with manufacturer's published instructions.

3.3 INSTALLATION

A. FRP Panels:

1. Install FRP wall panels in accordance with manufacturer's published instructions.
2. Prefit each wall panel before securing in place. Cut panels with carbide-tipped power saw or swivel-head shear.
3. Provide manufacturer's recommended spacing between abutting panel ends, edges and trim. Provide minimum 1/8 inch space around pipes, electrical fittings, obstructions and other items penetrating panels. Fill joints with sealant.
4. Install panels with edges vertical and plumb. Use maximum length pieces to provide minimum number of end joints.
 - a. Align panel to panel vertical joints at inside and outside corner conditions.
5. Substrate: Apply adhesive to substrate and to panel backs as recommended by manufacturer with V-notch spreader. Provide 100 percent coverage of adhesive.
6. Install accessory panel trim pieces concurrently with installation of panels. Miter cut accessory panel trim at corners to provide smooth transition. Set trim attached to adjacent panel ends and edges and seal with sealant.
7. Seal corner seams, base and ceiling junctures, and junctures between panels and wall with sealant. Remove excess sealant during installation.
8. Provide sealant around all openings, corners, and joints.

3.4 FIELD QUALITY CONTROL

- #### A. Inspect installation, accessories, and fastening to substrate.

06610-4

SECTION 06616 - SIMULATED STONE FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Simulated stone countertops, surfacing, and accessory materials.
 - 2. Substrate for simulated stone countertops.
- B. Related Requirements
 - 1. Section 01351 – Regulatory Compliance:
 - a. Disposal and removal of construction and universal waste.
 - b. Work practice control methods for airborne respirable dust.
 - 2. Section 06100 - Rough Carpentry: Fire retardant treatment for plywood countertop substrate.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM E84 - Test Method for Surface Burning Characteristics of Building Materials.
- C. Department of Commerce (National Institute of Standards and Technology) – Product Standard (DOC):
 - 1. DOC PS 1 - Construction and Industrial Plywood.
- D. Occupational Safety and Health Administration (OSHA):
 - 1. OSHA 01926.1153 Respirable Crystalline Silica.
- E. National Sanitation Foundation / American National Standards Institute (NSF/ANSI):
 - 1. NSF/ANSI 51 – Food Equipment Materials.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Minimize dust emissions and provide equipment that suppresses dust.

1.4 INSTALLER QUALIFICATIONS

- A. Installers of simulated stone countertops shall be factory-trained.
- B. Installers of simulated stone countertops shall have no less than 2 years of prior experience in the installation of simulated stone materials.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, protect, and handle products in accordance with provisions of Section 01600.
- B. Require simulated stone countertop supplier to provide Shipping List of countertops and related items shipped and including Facility number and project location (city and state) and installed location of each countertop (room name and number).
- C. Store simulated stone materials to prevent breakage and marring of surfaces in accordance with manufacturer's printed instructions.

- D. Provide protective coverings to prevent physical damage or staining following installation for duration of project.

PART 2 - PRODUCTS

- A. Provide simulated stone materials by the following manufacturer:
 - 1. LG Hausys USA, www.lghausysusa.com
- B. Substitutions: Comply with the requirements of Section 01600.

2.2 REGULATORY REQUIREMENTS

- A. Simulated stone countertops shall comply with the following requirements:
 - 1. ASTM E 84:Class A.
 - 2. United States Department of Agriculture (USDA): Approved for incidental food contact.
 - 3. NSF/ANSI 51.

2.3 COUNTERTOP SURFACING MATERIALS

- A. Type 1: HI-MACS Countertop Surfacing by LG Hausys USA: Classic Collection, Group B, solid surface material:
 - 1. Thickness: 1/2" inch
 - 2. Color: G015 Midnight Pearl.
- B. Countertop and Backsplash Profiles.
 - 1. Countertop: Solid slabs with 1 1/2" turn down with 1/4" rounded top edge at exposed front and sides, and overall counter size per Drawings,
 - 2. Backsplash: Separate solid units installed on top of counter, size and location per Drawings.

2.4 COUNTERTOP SUBSTRATE

- A. Provide the following substrate for simulated stone countertops at locations indicated on Drawings:
 - 1. Plywood DOC PS 1 Type 1 (Interior): Grade C-D Plugged veneer plywood, Exposure I.
 - 2. Thickness as indicated on the Drawings.
 - 3. Provide plywood treated with fire retardant specified in Section 06100.

2.5 ACCESSORIES

- A. Supply materials for installation of products as specified in manufacturer's printed installation instructions including color matched silicone sealant and adhesives where applicable.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and adjacent areas where products will be installed and verify that surfaces conform to product manufacturer's requirements for substrate conditions.

3.2 PREPARATION

- A. Prepare substrate surfaces to receive simulated stone materials in accordance with manufacturer's printed instructions.

3.3 INSTALLATION

- A. Use tools, techniques and procedures recommended by simulated stone countertop manufacturers specific to their materials for field fabrication and installation.
- B. Install components plumb and level in accordance with manufacturer's written recommendations.

06616-2

- C. Fabricate seams and fixture mounting in accordance with manufacturer's written recommendations.
- D. Form field joints using manufacturer's recommended adhesive, with joints inconspicuous in finished work.
- E. Lay out and field cut countertops using templates provided by component suppliers for field adaptation and as required for field cuts and holes for equipment shown on Drawings to be installed later.
- F. Use blades, saws and drill bits recommended by manufacturer. Provide blades and saws as recommended by manufacturer to maintain dust emissions below the permissible level.
- G. Clean dust and debris from cuts and holes using a HEPA-rated filter vacuum.
- H. Provide backsplashes and endsplashes as indicated on Drawings. Adhere to countertop using manufacturers standard color matched silicone sealant.
 - 1. Provide a smooth continuous cove of sealant free of voids and neat in appearance at bottom, top and vertical corners.

3.4 CLEANING

- A. Remove adhesives, sealants, and other stains upon completion of installation per manufacturers written instructions.
- B. Dispose of construction waste in accordance with the requirements of Section 01351 Regulatory Compliance Supplement.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

06616-4

SECTION 07210 - BUILDING INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Thermal Batt Insulation.
 - 2. Sound Attenuation Insulation (Sound Batts).
- B. Related Sections:
 - 1. Section 07500 – Membrane Roofing: Isocyanurate Foam Insulation.
 - 2. Section 09250 - Gypsum Board: Metal furring.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.
 - 2. ASTM C 665 - Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.
 - 3. ASTM C 991 - Specification for Flexible Glass Fiber Insulation for Pre-Engineered Metal Buildings (If Specified).
 - 4. ASTM E 136 - Behavior of Materials in a Vertical Tube Furnace at 750° C.

1.3 DEFINITIONS

- A. Concealed Insulation: Insulation concealed within framing system, both faces protected by finish material.
- B. Exposed Insulation: Insulation exposed within framing system, one or both faces unprotected.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Provide products from one of the following manufacturers as specified in the Materials paragraph below:
 - 1. CertainTeed Corporation, Valley Forge, PA (800) 523-7844.
 - 2. Guardian Fiberglass Incorporated, Albion, MI (800) 748-0035.
 - 3. Johns Manville Insulations, Denver, CO (800) 654-3103.
 - 4. Owens-Corning, Toledo, OH (800) 438-7465.

2.2 REGULATORY REQUIREMENTS

- A. Fire-Test-Response Characteristics: Provide insulation and related materials with the fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84 for surface-burning characteristics and other methods specified. Identify materials with appropriate markings of applicable testing and inspecting agency.

2.3 MATERIALS

- A. Batt Insulation: ASTM C 665 mineral fiber blanket insulation.
 - 1. Unfaced Glass Fiber: Type I (blankets without membrane facing); with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively passing ASTM E 136 for combustion characteristics.
 - 2. Faced, Glass-Fiber: Type III (blankets with reflective membrane facing), Class A (membrane-faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier), faced with vapor-retarder membrane on 1 face.
 - 3. Sound Attenuation Insulation (Sound Batts): Unfaced glass fiber insulation as specified above.
 - 4. Provide batt insulation by one of the following manufacturers:
 - a. CertainTeed Corporation.
 - b. Guardian Fiberglass, Inc.
 - c. Johns Manville.
 - d. Owens Corning.
- B. Substitutions: Comply with the requirements of Section 01600.

2.4 ACCESSORIES

- A. Tape: Polyethylene or polyester self-adhering type; two inches wide.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Batt Insulation:
 - 1. Verify adjacent materials are dry and ready to receive installation.
 - 2. Verify mechanical and electrical services within walls have been installed and tested.

3.2 INSTALLATION - BATT INSULATION

- A. Install batt insulation in accordance with manufacturer's instructions, without gaps or voids.
- B. Trim insulation neatly to fit spaces. Use batts free of damage. Fit insulation tight in spaces and tight to exterior side of mechanical and electrical services within the plane of insulation.
- C. Install insulation with factory applied membrane facing warm side of building spaces. Lap ends and side flanges of membrane. Attach insulation in place to framing; tape seal butt ends and lapped side flanges. Tape seal tears or cuts in membrane.

3.3 INSTALLATION - INSULATION AT EXTERIOR MASONRY WALLS

- A. Install insulation as shown on the Drawings.

3.4 SCHEDULES

- A. Provide insulation types as scheduled below and as indicated on Drawings.

CONDITION	TYPE OF INSULATION	THICKNESS
Exterior Wall, Soffits, & Ceiling	Faced Batt Insulation	3-1/2 inches (R=13) or 6 inches (R=19) as shown; or as required to fill cavity.
Interior Partitions	Unfaced Batt Insulation	3-1/2 inches or 6 inches as Shown.
Sound Attenuation	Unfaced Batt Insulation	3-1/2 inches or 6 inches as Shown.

END OF SECTION

SECTION 07252 (07 2726) - FLUID-APPLIED MEMBRANE AIR BARRIER – Add Section

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Fluid applied, vapor permeable air barrier membrane system for installation on substrate behind exterior wall panels.
- B. Related Requirements: The following list is intended to aid in locating work related to or dependent on the scope of Work in this Section. The list is included for information only and is not intended to be inclusive of all project requirements.
 - 1. Section 07430 – Composite Wall Panels: Aluminum-faced composite wall panels.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM C 920 - Elastomeric Joint Sealants.
 - 2. ASTM C 1193 - Joint Sealants.
 - 3. ASTM D 4258 - Surface Cleaning Concrete for Coating.
 - 4. ASTM D 4263 - Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.
 - 5. ASTM E 162 - Test Method for Surface Flammability of Materials Using a Radiant Heat Source.
 - 6. ASTM E 1186 - Air Leakage Site Detection in Building Envelopes and Air Retarder Systems.

1.3 QUALITY ASSURANCE

- A. Manufacturer's Qualifications: Air barrier systems shall be manufactured and marketed by a firm with a minimum of 20 years' experience in the production and sales of waterproofing and air barriers.
- B. Applicator Qualifications: A firm experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.
- B. Deliver materials and products in labeled packages. Protect products from damage due to sunlight, weather, excessive temperatures and construction operations.
- C. Do not double-stack pallets of fluid applied membrane components on the job site. Provide cover on top and all sides, allowing for adequate ventilation.
- D. Protect from freezing and extreme heat.

1.5 ENVIRONMENTAL REQUIREMENTS

- A. Do not apply air barrier to a wet substrate or during snow, rain, fog, or mist.

PART 2 - PRODUCTS

2.1 AIR BARRIER

- A. Air Barrier Membrane: Fluid-applied, fully-adhered, vapor-permeable, single component acrylic membrane air barrier. NFPA 285, ASTM E 2357. Provide the following or equivalent product by other manufacturers:
1. [Perm-A-Barrier VPL](#) by GCP Applied Technologies (formerly GPC), Cambridge, MA, (866) 333-3726.

2.2 MATERIALS

- A. Liquid Membrane for Details and Terminations: [Bituthene Liquid Membrane](#) by GPC.
- B. Wall Primer (for Use with Throughwall Flashing and Tapes Applied to Substrate): Liquid waterborne primer.
1. Product: [Perm-A-Barrier WB Primer](#) by GPC.
- C. Flexible Membrane Wall Flashing: 32 mils of self-adhesive rubberized asphalt integrally bonded to 8 mil of cross-laminated, high-density polyethylene film to provide a min. 40 mil thick membrane. Membrane shall be interleaved with disposable silicone-coated release paper until installed
1. Product: [Perm-A-Barrier Wall Flashing](#) by GPC.
- D. Joint Reinforcing Strip: Air barrier manufacturer's approved tape.
- E. Transition Membrane: 32 mils of self-adhesive rubberized asphalt integrally bonded to 8 mil of cross-laminated, high-density polyethylene film to provide a min. 40 mil thick membrane. Membrane shall be interleaved with disposable silicone-coated release paper until installed.
1. Product: [Perm-A-Barrier Wall Flashing](#) GPC.
- F. Substrate Patching Membrane: Manufacturer's standard trowel-grade substrate filler.
1. Product: [Bituthene Liquid Membrane](#) by GPC.
- G. Sprayed Polyurethane Foam Sealant: 1- or 2-component, foamed-in-place, polyurethane foam sealant, 1.5 to 2.0 lb/cu. ft density; flame spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.
- H. Joint Sealant: ASTM C 920, single-component, neutral-curing silicone; Class 100/50 (low-modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with installer present, for compliance with requirements and other conditions affecting performance.
1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
 2. Verify that concrete has cured and aged for minimum time period recommended by air barrier manufacturer.
 3. Verify that concrete is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
 4. Verify that masonry joints are struck flush and completely filled with mortar.
 5. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

- A. Refer to manufacturer's literature for requirements for preparation of substrates. Surfaces shall be sound and free of voids, spalled areas, loose aggregate and sharp protrusions. Remove contaminants such as grease, oil and wax from exposed surfaces. Remove dust, dirt, loose stone and debris. Use repair materials and methods that are acceptable to manufacturer of the fluid-applied air barrier system.

- B. Exterior Sheathing Panels: Stabilize panels with corners and edges fastened with appropriate screws. Pre-treat board joints with 2-3 in. wide, manufacturer's recommended self-adhesive tape. Fill gaps greater than 1/4 in. with mastic or caulk, allowing sufficient time to fully cure before application of the tape and fluid applied air barrier system.
- C. Masonry Substrates: Apply air barrier over concrete block and brick with smooth trowel-cut mortar joints, struck full and flush. Fill voids and holes, particularly in the mortar joints, with a lean mortar mix, non-shrinking grout, or parge coat.
- D. Treat construction joints and install flashing as recommended by manufacturer.
- E. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air barrier application.
- F. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- G. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- H. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate patching membrane.
- I. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- J. At changes in substrate plane, apply sealant or Bituthene Liquid Membrane at sharp corners and edges to form a smooth transition from one plane to another.
- K. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 JOINT TREATMENT

- A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and air barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces. Prime substrate as required.
- B. Gypsum Sheathing: Fill joints greater than 1/4 inch with sealant according to ASTM C1193 and with air barrier manufacturer's written instructions. Apply tape to joint prior to installing fluid air barrier membrane.

3.4 AIR BARRIER MEMBRANE INSTALLATION

- A. Apply air barrier membrane to achieve a continuous air barrier according to air barrier manufacturer's written instructions.
- B. Apply a continuous unbroken air barrier to substrates according to the following minimum thickness. Apply membrane in full contact around protrusions such as masonry ties.
 1. 90-mil wet film thickness, 45-mil dry film thickness.

3.5 TRANSITION MEMBRANE INSTALLATION

- A. Install strips, transition membrane, and auxiliary materials according to air barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.
 1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
 2. Install strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over both substrates.
 3. Install all flashings only after application of air barrier.

- B. Apply primer to substrates to receive transition membrane at required rate and allow to dry. Limit priming to areas that will be covered by transition tape in same day. Reprime areas exposed for more than 24 hours.
 - 1. Prime glass-fiber-surfaced gypsum sheathing not covered with air membrane material with number of prime coats needed to achieve required bond, with adequate drying time between coats.
- C. Connect and seal exterior wall air barrier membrane continuously to roofing membrane air barrier, concrete below-grade structures, floor-to floor construction, exterior glazing and window systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.
- D. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.
- E. Apply joint sealants forming part of air barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.
- F. Wall Openings: Prime concealed perimeter frame surfaces of storefronts, and doors. Apply transition strip so that a minimum of 3 inches of coverage is achieved over both substrates. Maintain 3 inches) of full contact over firm bearing to perimeter frames with not less than 1 inch of full contact.
 - 1. Transition Membrane: Roll firmly to enhance adhesion.
- G. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air barrier membrane with foam sealant.
- H. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches beyond repaired areas in strip direction.

3.6 CLEANING AND PROTECTION

- A. Protect air barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
- B. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. Remove and replace air barrier exposed for more than 150 days.
- C. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.
- D. Remove masking materials after installation.

END OF SECTION

SECTION 07421 – EXTERIOR INSULATED METAL WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Laminated steel insulated exterior metal wall panels.
 - 2. Accessories including fasteners and perimeter trim.

1.2 REFERENCES

- A. American Architectural Manufacturers Association (AAMA):
 - 1. AAMA 621 - Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Hot Dipped Galvanized (HDG) and Zinc-Aluminum Coated Steel Substrates.
- B. American Society of Civil Engineers (ASCE)
 - 1. ASCE 7: Minimum Design Loads for Buildings and Other Structures
- C. ASTM International
 - 1. ASTM A755: Steel Sheet, Metallic Coated by the Hot-Dip Process and Prepainted by the Coil-Coating Process for Exterior Exposed Building Products
 - 2. ASTM A792: Steel Sheet, 55 percent Aluminum-Zinc Alloy-Coated by the Hot-Dip Process
 - 3. ASTM A924: General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process

1.3 SUBMITTALS

- A. Submit in accordance with the requirements of Section 01330.
- B. Product Data: Submit manufacturer current technical literature for each type of product.
- C. Shop Drawings: Submit detailed drawings showing:
 - 1. Profile.
 - 2. Gauge of both exterior and interior sheet.
 - 3. Location, layout and dimensions of panels.
 - 4. Location and type of fasteners.
 - 5. Shape and method of attachment of all trim.
 - 6. Locations and type of sealants.
 - 7. Installation sequence.
 - 8. Coordination Drawings: Provide elevation drawings and building sections which show panels in relationship to required locations for structural support. Include panel details and details showing attachment to structural support.
 - 9. Other details as may be required for a weathertight installation.
- D. Manufacturer Erection Instructions: Provide manufacturer's written installation instructions including proper material storage, material handling, and maintenance instructions.
- E. Panel Analysis: Provide panel calculations to verify panels will withstand the design wind loads indicated by the AHJ without detrimental effects or deflection exceeding the specified limit. Include effects of thermal differential between the exterior and interior panel facings and resistance to fastener pullout.
- F. Quality Assurance Submittals
 - 1. Design Data, Test Reports: Provide manufacturer test reports indicating product compliance with the requirements of the AHJ.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Company approved and certified by the panel manufacturer and demonstrating a minimum 5 years' experience performing Work of this Section.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 01600 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver panel materials and components in manufacturer's original, unopened, undamaged packaging with identification labels intact.
- C. Store wall panel materials on dry, level, firm, and clean surface. Stack no more than two bundles high. Elevate one end of bundle to allow moisture run-off, cover and ventilate to allow air to circulate and moisture to escape.

1.1 WARRANTY

- A. Manufacturer's standard performance and finish warranties.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Provide Insulated Wall Panel System by Metal-Span (a Nucor company).

2.2 EXTERIOR WALL PANELS

- A. Panel Assembly: Steel exterior face structurally bonded to insulated foam core panels with integral vapor barrier; folded exterior face corners; attached by concealed fasteners and clips.
 - 1. Panel thickness: 3 inches thick.
 - 2. Exterior Face of Panel: Coil material in accordance with ASTM A755 Grade 33, G90 galvanized steel in accordance with ASTM A653 and A924, 26 gauge steel.
 - a. Profile: Flat. CF-Flute.
 - b. Exterior Texture: Smooth.
 - c. Exterior Finish: 1.0 mil. Fluoropolymer (PVDF) Two Coat system: 0.2 mil primer with 0.8 mil Kynar 500 (70 percent) solid color coat.
 - 1) Color: As indicated on Drawings.
 - 3. Interior Face of Panel: Coil material Grade 33, G90 galvanized steel in accordance with ASTM A653 and A924, 26 gauge steel.
 - a. Profile: Standard flat, non-profiled
 - b. Interior Texture: Smooth
 - c. Interior Finish: Modified polyester finish with a total minimum dry film thickness of 0.9 to 1.1 mil including primer.
 - 1) Color: White
 - 4. Insulating Core: Precured, profiled, sanded flat, polyisocyanurate core material.
 - 5. Structural Adhesive: Type II Class 2 Structural Urethane Adhesive.
- B. Provide CF-Flute Wall Panel System by Metal-Span (a Nucor company).
- C. Substitutions: Comply with the requirements of 01600.

2.3 ACCESSORIES

- A. Fasteners (by Panel Manufacturer): Fasteners as recommended by manufacturer.
- B. Clips (by Panel Manufacturer): Shall be minimum 14 gauge half-hard type 301 stainless steel with PVC or neoprene foam sealing pad adhered to underside of clip, designed to prevent water infiltration around fastener penetrations.

07421-2

- C. Perimeter Trim (by Panel Manufacturer):
 - 1. Fabricated perimeter trim and metal flashing: Shall be same gauge, material and coating color as exterior face of insulated metal wall panel.
- D. Butyl Weather Barrier Sealant (by Contractor): Non-skinning butyl tube sealant per panel manufacturer's recommendations compliant with AAMA 809.2.
- E. Sealants at exposed joints (by Contractor): Elastomeric polyurethane sealant compliant with ASTM C920.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Provide field verified measurements for installation tolerances and report deviations as necessary to the General Contractor and Designer of Record.
- B. Supporting Steel: By others, refer to Section 05120.
 - 1. Verify that bearing support has been provided behind vertical joints of horizontal panel systems and horizontal joints of vertical panel systems. Width of support as recommended by manufacturer.
- C. Examine individual panels upon removing from the bundle; notify manufacturer of panel defects. Do not install defective panels.

3.2 PREPARATION

- A. Broom clean substrate deck surfaces immediately before starting installation.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's written installation guidelines and recommendations.
- B. Install panels plumb, level, and true-to-line to dimensions and layout indicated on approved shop drawings.
- C. Cut panels prior to installing where indicated on drawings using a power circular saw with fine tooth carbide tip blade per manufacturer's instructions. Ventilate area where polyurethane dust is generated.
- D. Butyl Weather Barrier Sealant:
 - 1. Apply non-skinning butyl sealant as shown on shop drawings and manufacturer's installation instructions as necessary to establish the vapor barrier for the panels.
 - 2. Use non-skinning butyl tube sealant only for tight metal-to-metal contact.
 - 3. Do not use non-skinning butyl tube sealant to bridge gaps.
- E. Place panel fasteners through pre-punched holes in attachment clips, concealed within the joint of the panel. Secure units to the structural supports. Space clips as recommended by manufacturer or otherwise indicated on the approved shop drawings.

3.4 TRIM INSTALLATION

- A. Place trim and trim fasteners only as indicated per details on the approved shop drawings.
- B. Field drill weep holes where appropriate in horizontal trim; minimum 1/4 inch diameter at 24 inches on center.
- C. Place a continuous strip of butyl tape or butyl tube sealant on closure trims for the length of the panel to be covered by trim.

3.5 SEALANT INSTALLATION FOR EXPOSED JOINTS

- A. Clean and prime surfaces to receive exterior exposed sealants in accordance with sealant manufacturer's recommendations.
- B. Follow sealant manufacturer's recommendations for joint width-to-depth ratio, application temperature range, size and type of backer rod, and compatibility of materials for adhesion.
- C. Direct contact between butyl and silicone is not permitted.

3.6 CLEANING AND PROTECTION

- A. Remove protective film immediately after installation.
- B. Touch-up, repair or replace metal panels and trim that have been damaged.
- C. After metal wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

END OF SECTION

SECTION 07430 (07 7243) – ALUMINUM FACED COMPOSITE WALL PANELS (ACM) – Add Section

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Aluminum-faced composite wall panels.
- B. Related Requirements: The following list of items is intended to aid in locating work related to or dependent on the scope of Work in this Section. The list is included for information only and is not intended to be inclusive of all project requirements.
 - 1. Section 07252 – Fluid-Applied Membrane Air Barrier.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM B 209 - Aluminum and Aluminum-Alloy Sheet and Plate.
 - 2. ASTM D 2244 - Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.
 - 3. ASTM D 4214 - Standard Test Methods for Evaluating the Degree of Chalking of Exterior Paint Films.
 - 4. ASTM E 330 - Structural Performance of Exterior Windows, Curtain Walls and Doors under the Influence of Wind Loads.
 - 5. ASTM E 331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
- C. American Architectural Manufacturers Association (AAMA):
 - 1. AAMA 620 - Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Aluminum Substrates.

1.3 SUBMITTALS

- A. Comply with the requirements of Section 01330.
- B. Shop Drawings: Indicate layout, profiles, product components, and construction, include edge conditions, panel joints, anchorage, accessories, finish colors, patterns, and textures. Show manufacturer's recommended joint details providing watertight and structurally sound wall panel system that prevents uncontrolled water penetration on the inside face of the panel system as determined by ASTM E 331.
- C. Manufacturer's installation instructions.

1.4 QUALITY ASSURANCE

- A. Installer's Qualifications: Minimum 5 years' experience in architectural metal panel work similar in scope and size to this project.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide metal-faced composite wall panel assemblies capable of withstanding the effects of the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 330:
1. Wind Loads: Determine loads based on the following minimum design wind pressures: Uniform pressure of 20 lbf/sq. ft. acting inward or outward.
 2. Deflection Limits: Metal-faced composite wall panel assemblies shall withstand wind loads with horizontal deflections no greater than 1/175 of the span.

2.2 MANUFACTURER

- A. [Arconic Architectural Products LLC](#), Eastman, GA. Contact (800) 841-7774 or (478) 374-4746.

2.3 PRODUCTS

- A. Provide [Reynobond Aluminum Composite Material](#) panels and system (ACM) by Arconic.
- B. Panel Description: Two face sheets of fire-resistant aluminum over a solid core of extruded thermoplastic material formed in a continuous process.
1. Aluminum Sheet: 3000 series aluminum alloy.
 2. Surface: Smooth, flat finish.
 3. Core: Manufacturer's standard polyethylene (PE) core.
 4. Panel Thickness: RB160FR 4 mm.
 5. Finish: 2-coat, coil-coated polymer resin or Kynar finish, bottom side coated with manufacturer's standard wash coating.
 6. Color: Provide the following where shown:
 - a. PF-11: White: Reynobond Duragloss 5000 Brite White by Arconic.
 - b. PF-14: Walmart Blue: Match P76U Walmart Blue in Reynobond Duragloss 5000 by Arconic

2.4 WEATHER BARRIER

- A. Provide fluid-applied membrane weather resistive barrier as specified in Section 07252 and accessories as recommended by the manufacturer.

2.5 FABRICATION

- A. Provide ACM panel system fabricated and finished according to manufacturer's standard procedures and to the following requirements:
1. Joints formed to provide weathertight seals.
 2. Panel system fabricated to dimension, size, and profile indicated on the drawings allowing for field adjustment and thermal movement.
 3. Verify panel bow is limited to 0.8% of panel overall dimension in width or length.
- B. Apply strippable film to the top side of the painted coil to protect the finish during fabrication, shipping, and field handling.

2.6 ACCESSORIES

- A. Extrusion Formed Members, Sheet and Plate: Conform to ASTM B 209 and manufacturer's recommendations.
- B. Panel Stiffeners: Structurally fastened or restrained at the ends and secured to the rear face of the composite panel with silicone of sufficient size and strength to maintain panel flatness. Stiffener material and finish shall be compatible with the silicone.

- C. Joint Sealants: As required by panel system manufacturer.
- D. Flashing Materials: 0.040 inch minimum thickness aluminum sheet provided by panel manufacturer to match the adjacent panel system where exposed. Provide a lap strap under the flashing at abutted conditions and seal lapped surfaces with a full bead of non-hardening sealant.
- E. Fasteners: Concealed, non-corrosive fasteners as recommended by system fabricator and installer.

2.7 SUBSTITUTIONS

- A. Comply with the requirements of Section 01600.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Framing: Install miscellaneous wall panel support members and anchorage according to panel manufacturer's written instructions.

3.2 INSTALLATION

- A. Anchor panels securely per engineering recommendations and in accordance with shop drawings to allow for necessary thermal movement and structural support.
- B. Conform to panel fabricator's instructions for installation of concealed fasteners.
- C. Provide field adjustment and minimal fabrication only as necessary to adapt to field conditions.
- D. Maximum deviation from vertical and horizontal alignment of erected panels shall be 1/4 inch in 20 feet, non-accumulative.

3.3 ACCESSORY INSTALLATION

- A. Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
 - 1. Install components required for a complete metal-faced composite wall panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
- B. Flashing and Trim: Comply with performance requirements and manufacturer's written installation instructions.
- C. Weather Barrier: Install weather barrier and accessories in accordance with manufacturer's written instructions.

3.4 CLEANING

- A. Remove temporary protective coverings and strippable films as metal-faced composite wall panels are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of installation, clean finished surfaces as recommended by panel manufacturer.
- B. After metal-faced composite wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

SECTION 07500 (07 5000) - MEMBRANE ROOFING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. TPO Membrane Roofing System including insulation.
- B. Related Requirements: The following list is intended to aid in locating work related to or dependent on the scope of Work in this Section. The list is included for information only and is not intended to be inclusive of all project requirements.
 - 1. Section 06100 - Rough Carpentry: Wood blocking and nailers.
 - 2. Section 07620 - Sheet Metal Flashing and Trim: Sheet metal counter flashings, and other sheet metal.
 - 3. Section 07710 – Manufactured Roof Specialties: Roof edge fascia system.
 - 4. Section 07711 - Gutters and Downspouts: Interface of gutters with roofing and metal flashings.
 - 5. Section 07900 - Joint Sealers.
 - 6. Appendix B – Testing, Inspection, and Observation by Owner.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM C 578 - Rigid, Cellular Polystyrene Thermal Insulation.
 - 2. ASTM C 1177 - Glass Mat Gypsum Substrate for Use as Sheathing.
 - 3. ASTM C 1289 - Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board.
 - 4. ASTM C 1303 - Standard Test Method for Predicting Long-Term Thermal Resistance of Closed-Cell Foam Insulation.
 - 5. ASTM D 6878 - Thermoplastic Polyolefin Based Sheet Roofing.
- C. Factory Mutual Research Corporation (FM):
 - 1. FM Approvals Building Materials Approval Guide, Chapter 3 - Approved Combinations and Assemblies.
 - 2. FM Global Loss Prevention Data Sheet 1-28 - Design Wind Loads.
 - 3. FM Global Loss Prevention Data Sheet 1-29 - Roof Deck Securement and Above-Deck Components.
 - 4. FM Approval Standard 4450 - Class 1 Insulated Steel Deck Roofs.
 - 5. FM Approval Standard 4470 - Class 1 Roof Covers.
- D. Underwriters Laboratories, Inc. (UL):
 - 1. UL - Roofing Materials and Systems Directory.
 - 2. UL 1256 - Fire Test of Roof Deck Construction.

1.3 ADMINISTRATIVE REQUIREMENTS

- A. Pre-installation Conference:
 - 1. Plan, host, and attend Pre-Installation Meeting via teleconference.
 - 2. Schedule teleconference between 5 and 7 days prior commencing work of this Section.
 - 3. Attendees shall be parties and persons directly affecting work of this Section, are in the direct line of supervision, and who will be physically present at the site. Attendees shall include, but not be limited to the following:
 - a. Owner's Roofing Consultant.
 - b. Owner's Construction Manager.
 - c. General Contractor.
 - d. Roofing sub-contractor (Roofing Applicator and job foreman).

- e. Mechanical and Plumbing sub-contractors.
- f. Manufacturer's Technical Representative.
- g. Owner's Construction Testing Laboratory (CTL).
- 4. Notify all required attendees in writing of scheduled time and place at least two weeks in advance of meeting. Include copy of agenda with invitation.
- 5. The meeting shall be conducted by Owner's Roofing Consultant.
- 6. The meeting shall convene only when all parties are present.
- 7. Review foreseeable methods and procedures related to roofing work, including the following:
 - a. Discuss condition of substrate, roof drains, roof drain final locations, curbs, penetrations and other preparatory work performed by other trades.
 - b. Identify any conduits located beneath the roof deck so as to develop a work plan to prevent damage to the electrical wiring during insulation and membrane fastener installation.
 - c. Review structural loading limitations of deck as defined below and inspect deck for loss of flatness and for required mechanical fastening.
 - d. Review roofing system requirements (drawings, specifications and other contract documents including submittals).
 - e. Review preparation and installation procedures and coordinating and scheduling required with related work.
 - f. Review required submittals. Submittals shall be reviewed and approved by the Roofing Consultant prior to the Pre-Installation Conference.
 - g. Review and finalize construction schedule related to roofing work and verify availability of materials, installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - h. Establish lines of communication between Contractor, Roofing Consultant, and Store Manager.
 - i. Review required inspections, testing, certifying, and material usage accounting procedures.
 - j. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions, including possibility of temporary roofing (if not a mandatory requirement).
 - k. Review site specific conditions.
 - l. Review Contractor's safety and fall protection plans.
- 8. Meeting Minutes: Contractor shall record minutes of meeting including discussions, decisions and agreements reached, and attendance roster. Furnish a copy to each party attending.
- 9. Changes to Contract Documents from recommendations or discussions at the Pre-Installation Conference shall be approved in writing by Owner's Construction Manager prior to implementation.

B. Prior to the roofing subcontractor arriving on site, Contractor shall give notice in writing to the roofing subcontractor that the Owner's Construction Testing Laboratory (CTL) has completed its Testing and Inspections (T&I) of the roof deck and that the deck is in conformance with the contract documents.

C. Manufacturer' Inspection Reports:

- 1. Periodic Inspection Reports: Obtain manufacturer's technical representative's periodic inspection reports as specified in Part 3 herein and submit to Roofing Consultant prior to Consultant's inspection.
- 2. Comprehensive Final Roof Inspection Report: Obtain Manufacturer's Comprehensive Final Roof Inspection Report as specified in Part 3 herein and submit to the Roofing Consultant as soon as possible prior to Substantial Completion.

D. Upon completion of roofing construction, Contractor shall contact the Roofing Consultant to coordinate Consultant's inspection.

1.4 SUBMITTALS

- A. Comply with the requirements of Section 01330. Submit required submittals within 30 days after contract award. Submittals shall be available at all times to the Owner's Construction Manager.
- B. Submittal Packet: Submittal Packet shall include the following
 - 1. Fastener patterns to meet uplift requirements.
 - 2. Layouts for Crickets and saddles.
 - 3. Project or region-specific details required for completion but not shown on Drawings.
 - 4. Techniques for nighttime or weather tie offs.

07500-2

5. Completed Manufacturer's Pre-Installation Notice included at the end of this Section or Manufacturer Order Form.

- C. Closeout Submittals: Comply with the requirements of Section 01770.
1. Roofing System Warranty Form included at the end of this Section.

1.5 QUALITY ASSURANCE

- A. At the completion of Work, remove loose materials on the roof surface which may cause damage to the roof membrane or restrict water flow to roof gutters, drains, or scuppers.
- B. Roofing Consultant: The Roofing Consultant is a consultant hired by and contracted by the Owner for the purpose of assurance and verification of roofing installation in accordance with the Contract Documents. Testing and inspection by the Roofing Consultant is specified in Appendix B (Section 07500).

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.
- B. Deliver materials in manufacturer's original unopened containers, dry and undamaged with seals and labels intact.
- C. Store materials in weather-protected environment, clear of ground and moisture. Storage requirements for insulation are as follows:
1. Cover with tarpaulin, shield from moistures and ultraviolet rays.
 2. Elevate minimum of 4 inches above substrate.
 3. Secure to resist high winds.
 4. Distribute insulation stored on roof deck to prevent concentrated loads.
 5. Do not install wet insulation. Insulation shall be thoroughly dry prior to installation.
- D. Store cements, primers, and caulks in heated area above 40 degrees F during cold weather and in area below 80 degrees F in warm weather.
- E. Do not store materials on completed roofing.

1.7 PROJECT CONDITIONS

- A. Follow industry standards for environment requirements including, but not limited to, the following:
1. Do not apply roofing membrane during inclement weather. When air temperature is expected to fall below 40 degrees F, follow specified Cold Weather Application Procedures as specified herein.
 2. Do not apply finished roofing system to wet, damp or frozen deck surface or when precipitation is occurring.
 3. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed during same day.
 4. Maintain bonding adhesive at a min of 60 degrees prior to application.

1.8 WARRANTY

- A. Provide Warranty commencing at date of Project completion, on form provided at the end of this Section that includes cost of labor and materials for loss of weather tightness without financial limit for a period of 15 years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements and to the extent specified hereinafter, provide products by the following manufacturers:
1. [Carlisle SynTec](#), Steve Benjamin, Technical Manager, Strategic Accounts Group, (413) 262-8928
07500-3

2. steven.benjamin@syntec.carlisle.com.
2. [Firestone Building Products Company](#), Indianapolis, IN, Jason Flack, National Accounts Representative, (317) 816-3989, flackjason@firestonebp.com
3. [Johns Manville Roofing Systems](#), A. J. Maijala, Manager, Preferred Accounts (303) 978-2176 or (303) 898-0027, aj.maijala@jm.com.
4. [GAF](#), Rich Justinn, Strategic Accounts Manager, (678) 920-9237, richard.justinn@gaf.com.

2.2 SYSTEM DESCRIPTION

- A. Single Ply Membrane Roofing System: Single ply membrane roofing system consisting of insulation on metal deck with reinforced membrane mechanically fastened.
- B. Flashing and Waterproofing Membranes: Reinforced membrane and unreinforced, fully adhered, as defined herein and indicated on Drawings.

2.3 REGULATORY REQUIREMENTS

- A. Roof Assembly: Comply with Factory Mutual System Approval Guide or Underwriters Laboratories, Inc. Roofing Materials and Systems Directory as specified:
 1. Factory Mutual: Provide roofing assembly meeting Class 1A -60 requirements for fire resistance and wind uplift in accordance with Factory Mutual Approvals Standard 4470 and Factory Mutual Global Loss Prevention Data Sheet 1-28 and Factory Mutual Global Loss Prevention Data Sheet 1-29. 1A -90 requirements shall comply with the April 2010 version of Factory Mutual Approvals Standard 4470 in lieu of any later version.
 2. Provide roof assembly meeting requirements of UL 1256 for Flame Spread developed from underside of deck and roof assembly meeting requirements of Factory Mutual Approvals Standard 4450 for Class 1 Insulated Steel Deck Roofs (construction materials calorimeter).

2.4 ROOFING SYSTEMS

- A. Single Ply Mechanically Attached TPO Membrane Roofing System. Subject to compliance with requirements, provide one of the following products:
 1. Sure-Weld Roofing System by Carlisle.
 2. UltraPly TPO Roofing System by Firestone.
 3. JM TPO Mechanically Fastened Roofing System by Johns Manville.
 4. EverGuard TPO Roofing System by GAF.
- B. Substitutions: Comply with the requirements of Section 01600.

2.5 ROOF MEMBRANE

- A. Roof Membrane: Single ply membrane composed of thermoplastic polyolefin (TPO) sheet as specified for the specific product hereinbefore and reinforced with polyester scrim conforming to ASTM D 6878.
 1. Membrane Type: Reinforced, 60 mil thickness, white, 10 ft. maximum sheet width.
- B. Flashing Membrane: Reinforced and non-reinforced TPO membrane and pressure-sensitive flashing by Roofing System manufacturer, thickness to match roofing membrane, specifically designed for use in flashing at perimeters and around projections through roofing system.

2.6 WATERPROOFING MEMBRANE

- A. At Contractor's option, use TPO or EPDM waterproofing membrane and flashing as specified below.
- B. TPO System:
 1. Waterproofing Membrane: Membrane waterproofing composed of thermoplastic polyolefin (TPO) formed into uniform, flexible sheets by Roofing System manufacturer, thickness to match roof membrane.
 2. Waterproofing Flashing: Reinforced and non-reinforced TPO membrane and pressure-sensitive flashing by

07500-4

Roofing System manufacturer, thickness to match membrane, specifically designed for use in flashing at perimeters and wall, and around projections through roofing system.

- C. EPDM System:
 - 1. Waterproofing Membrane: Unreinforced cured single ply membrane composed of ethylene propylene diene monomer (EPDM) sheet as specified for the specific product hereinbefore.
 - a. Membrane Type: 60 mil thickness, black.
 - 2. Waterproofing Flashing: Reinforced and non-reinforced EPDM membrane and pressure-sensitive flashing by roofing system manufacturer, thickness to match membrane, specifically designed for use in flashing at wall.

2.7 ROOF INSULATION

- A. Isocyanurate Foam Insulation: Polyisocyanurate board insulation, ASTM C 1289, Type II, felt or glass-fiber mat facer on both major surfaces, with an LTTR (Long Term Thermal Resistance) value of 16.2 based on ASTM C 1303.
 - 1. Subject to compliance with requirements, provide one of the following products:
 - a. HPH by Carlisle.
 - b. ISO 95+ GL, by Firestone.
 - c. E'NRG'Y 3 or ISO 3 by Johns Manville.
 - d. EnergyGuard PolyIso Insulation by GAF.
 - e. Products meeting the specified requirements by other manufacturers as recommended by the roofing membrane manufacturer.
 - 2. Thickness: 2.8 inches min.
- B. Prefabricated EPS Tapered Insulation: Rigid expanded polystyrene (EPS) foam insulation, ASTM C 578, Type VIII (1.15 pcf minimum) or Type II (1.5 pcf minimum), flame retardant additive, with an LTTR (Long Term Thermal Resistance) value of 20.0 based on ASTM C 1303.
 - 1. Provide products meeting the specified requirements by one of the manufacturers specified above as applicable.
- C. Roof Curb Insulation: Polyisocyanurate Foam; both faces covered with glass fiber felt; thickness to match wood nailer.
- D. Contractor's Option: The following may be used:
 - 1. Hinged Target Sump: 8 ft x 8 ft, fabricated by roofing manufacturer, 0.5 – 2.5-inch panel thickness.

2.8 ROOF PENETRATION FLASHING

- A. Molded Pipe Flashing: Pre-molded flexible pipe flashing as recommended and supplied by the roofing manufacturer.

2.9 ACCESSORIES

- A. Provide accessories as shown on the drawings and manufacturer's system accessories for a complete and warranted Roofing System, including, but not limited to, the following:
 - 1. Weathered Membrane Cleaner.
 - 2. Lap Sealant.
 - 3. Bonding Adhesive.
 - 4. Termination Bar.
 - 5. Walkway / Isolation Pads.
 - a. Located around roof mounted equipment, roof hatches, cross-overs and at jib cranes.
 - 6. Preformed Accessories including pipe flashings.
 - 7. Preformed Corner Patching.
 - 8. Draw Bands.
 - 9. Foam Filler Insulation: Polyurethane Expanding Foam as specified in Section 07900.
 - 10. Pressure-sensitive Flashing.

07500-5

11. Primer.
12. Insulation and Membrane Fasteners.
13. In-seam Plates.
14. Splice Tape.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains, valleys, and eaves. Verify flutes of steel deck are evenly spaced at intersections. Defects in the substrate surface shall be reported and documented.
- B. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, nailing strips, and reglets are in place. Verify deck is supported and tightly secured.
- C. Verify deck surfaces are dry and free of water, snow, and ice.

3.2 PREPARATION

- A. Provide covers and other means of protection as necessary to protect building surfaces against damage during roofing work.
- B. Where Work shall continue over finished roof membrane, protect roof system from damage.

3.3 INSTALLATION

- A. Comply with membrane roofing system and insulation manufacturer's written instructions for installing roof insulation.

3.4 ROOF INSULATION INSTALLATION

- A. Mechanically fasten insulation, through fire resistive layer if specified, to deck with Factory Mutual approved fasteners and plates in accordance with requirements of Factory Mutual.
 1. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch with insulation.
 2. Lay insulation boards such that edges (sides or ends) of board running parallel to the direction of the metal deck flutes are fully supported on the top flange as close as practical to the center of the flange with a minimum bearing of 1 inch. Trim board edges if they veer off the flange center.
 3. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 3 inches or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction.
 4. Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
 5. Install fasteners using drill with torque clutch; other types of drills will not be permitted.
 6. In no case shall the number of fasteners be less than indicated in approved submittals.
- B. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly around protrusions through roof. At parapet walls, cope insulation around protrusions and embed plates; butt tight to wall, sealing conditioned building.
 1. Fill gaps over 1/4 inch wide with Foam Filler Insulation. After foam sets and before installation of membrane, trim foam flush with insulation surface.
- C. Tapered Insulation: Install tapered insulation in accordance with manufacturer's instructions and the following:
 1. Mechanical Unit Crickets and Saddles: Install field-fabricated tapered isocyanurate foam insulation to achieve slope as shown on Drawings but not less than 1/4 inch per foot finished slope.

2. Roof Counterslope: Where tapered insulation is indicated to counter roof slope, install field-fabricated tapered isocyanurate foam insulation to achieve 1/4 inch per foot min. finished slope.
 3. Edge Taper Insulation: Adjacent to gutter assembly, slope field-fabricated tapered isocyanurate foam insulation at minimum rate of 1/2 inch per foot. Provide insulation having a starting thickness of one inch, tapering insulation up to match nominal roof insulation thickness.
- D. Apply no more insulation than can be sealed with membrane in same day.
- E. Adhere a single layer of insulation to manufactured metal curbs with bonding cement.

3.5 ROOF MEMBRANE INSTALLATION

- A. Mechanically Fastened Membrane:
1. Run membrane perpendicular to steel deck flutes. Unroll membrane over prepared substrate, lapping adjoining sheets as recommended by manufacturer.
 2. Mechanically fasten membrane using manufacturer's fastening system. Install fasteners in accordance with submitted engineered layout pattern to resist specified wind uplift.
 3. Install fasteners using drill depth sensing or torque limiting screw guns to limit under / over drive of fasteners. Drill motors and other non-limiting drivers shall not be used.
 4. Seam Sealing: Heat-weld seams according to the system manufacturer's recommendations, and with a minimum weld width of 1-1/2 inches.
- B. Cold Weather Application Procedures: When air temperature is expected to fall below 40 degrees F, follow Cold Weather Application Procedures as follows:
1. Store materials in heated storage units prior to installation. Rotate adhesive, cement, and sealant containers to maintain their temperature above 40 degrees F.
 2. Allow membrane to relax until no wrinkles are visible.
 3. Allow adequate time for solvents in cements to flash off. Check dryness of applied cements before sealing joints.
 4. Verify that frost, dew, and other forms of moisture have evaporated prior to covering insulation with membrane to prevent entrapment of moisture within finished roof system.

3.6 WATER CUTOFFS AND WEATHER PROTECTION

- A. Install water cut-offs at end of day's operation to seal insulation and edge of roof membrane from moisture entry. If inclement weather appears imminent during roofing application, cease operations and protect deck, insulation, flashings, penetrations and membrane from moisture infiltration with water cutoffs. Insulation and roofing materials not so protected prior to inclement weather will be considered damaged and will be cause for rejection.
- B. Remove water cut-offs and other temporary weather protections prior to continuing roofing work. Remove materials that have been subject to moisture damage and return deck to a clean, dry condition before proceeding with roofing operations. Remove damaged materials from job site.
- C. The water cut-offs and weather protection shall not be considered a part of the final roof system specified.

3.7 FLASHING MEMBRANE AND ACCESSORIES INSTALLATION

- A. Flashing Membrane:
1. Apply flexible flashings to seal membrane to vertical elements using manufacturer's standard peel and stick flashing.
 2. Heat weld flashing in the field of the roof, along gutters, and in scuppers.
 3. Reinforced Flashing Membrane: Where conditions permit, flash penetrations and walls with reinforced flashing membrane.
 4. Uncured Flashing: Limit use of uncured flashing to overlay vertical seams as required at angle changes, to flash inside and outside corners, scuppers, and other penetrations or unusually shaped walls as approved by the manufacturer.

- B. Roof Penetrations:
 1. Molded Pipe Flashing: Install where shown and elsewhere whenever configuration of penetration will permit.
 2. Install flashings per manufacturer's application instructions.
 3. Comply with manufacturers recommendations for flashing for pipe penetrations larger than 6 inches.
- C. Seal flashings and flanges of items penetrating membrane.
- D. Fasten termination bars at 12 inches on center or less to maintain constant compression.
- E. Isolation Pads: Install isolation pads at pipe supports.
- F. Walkway Pads: Install walkway pads as shown on Drawings. Maximum pad section length shall be 10 ft with three inch spacing between pad sections, unless indicated otherwise on Drawings. Adhere pads to roofing system to prevent displacement in maximum anticipated design wind velocity and to allow drainage of moisture from beneath pads. Install pads to allow roof surface drainage without ponding water. Install pads after adjacent equipment installation.

3.8 WATERPROOFING MEMBRANE INSTALLATION

- A. Waterproofing Membrane: Install waterproofing membrane to be fully adhered to parapet using bonding adhesive as recommended by membrane manufacturer. Run membrane waterproofing over top of parapet and turn down front side of parapet 3 inches.
 1. Provide continuous weather tight seal from 3 inches below parapet cap, over parapet, down interior face, and onto roof surface.
 2. Conceal adhesive on exterior face of parapet with waterproofing.
 3. When EPDM waterproofing membrane is used, lap waterproofing membrane over roof membrane and secure with splice tape and pressure sensitive flashing as indicated on Drawings and as recommended by roofing system manufacturer.

3.9 WATERPROOFING FLASHING INSTALLATION

- A. Waterproofing Flashing: Apply waterproofing flashing to seal membrane to vertical elements using manufacturer's peel and stick flashing.
- B. Comply with the following requirements when using TPO waterproofing flashing:
 1. Reinforced Waterproofing Flashing: Where conditions permit, flash walls with reinforced waterproofing flashing or as required by the manufacturer.
 2. Uncured Flashing: Limit use of uncured flashing to overlay vertical seams as required at angle changes, to flash inside and outside corners, scuppers, and other penetrations or unusually shaped walls where use of reinforced waterproofing flashing is not practical or as required by the manufacturer.

3.10 INTERFACE WITH OTHER WORK

- A. Coordinate Work with installation of associated roof edge fascia system specified under other sections as the Work of this Section proceeds.
- B. Complete installation of base flashing at roof curbs prior to setting roof top equipment.

3.11 FIELD QUALITY CONTROL

- A. Core samples shall be taken when required to evaluate problems observed during quality control inspections of roofing membrane as follows:
 1. Cut samples shall be taken where and when as recommended by the RECC or the Manufacturer's Technical Representative when determined necessary for quality control validation or to determine the extent of deficiencies discovered during construction or during final roofing inspection. Except where cut samples are taken to investigate deficiencies, no more than two cut samples per 100 squares or one cut sample from each

- day's work shall be required
2. Submit core samples to the RECC or the Manufacturer's Technical Representative for examination depending on the source of the recommendation. Deficiencies shall be reported to the Architect by the RECC or the Manufacturer's Technical Representative.
- B. The Contractor shall be responsible for sampling and testing specified herein.
- C. Manufacturer Services:
1. Engage Manufacturer's Technical Representative to provide site inspection and reports.
 2. Inspection by the Manufacturer's Technical Representative shall include the following:
 - a. Periodic site visits during the roof installation as many times as necessary to ensure adequate observations and proper installation but at least at the following milestones.
 - (1) After 30% but prior to 50% of roof installation.
 - (2) At 100% completion of roof installation.
 - (3) Final Inspection: At possession.
 - b. Site inspection reports. Provide copies of Manufacturer's Technical Representative's periodic inspection reports as specified in Part 1 above.
 - c. Field testing recommendations.
 - d. Oversight of remedial repairs in the field.
 - e. Administration and maintenance of the online Owner's Observation Log with respect to roofing defects and repairs.
 - f. Verification of completion of magnetic sweeping prior to Project completion.
 - g. Conducting comprehensive roof inspection upon completion of roofing together with all parties to be signatories to Roof Inspection Checklist included at the end of this section.
 - h. Identification of defects on the Owner's Observation Log. (www.bldgportal.com, enter username and password, select Observation Log)
 - i. Conducting a final audit 10 months after acceptance with Owner's representative as scheduled by Owner.
- D. Owner's Roofing and Exterior Coatings Consultant (RECC) Services: Within two weeks prior to Project completion, the RECC will perform a roof construction inspection at no cost to the Contractor as specified in Appendix B.
- E. Comprehensive Final Inspection and Roof Inspection: Upon completion of roofing work at the time of three to five weeks prior to Project completion, a Comprehensive Final Roof Inspection shall be conducted by the Manufacturer's Technical Representative according to the Comprehensive Final Roof Inspection Instructions and Checklist included herein at the end of this Section, and as follows:
- a. Attendees of the final roof inspection shall include all signors to the checklist.
 - b. Checklist shall be completed by the Manufacturer's Representative and provided to all signors.
 - c. Checklist shall be used by the Contractor during construction as a tool to measure quality of roofing work as the work progresses.

3.12 CLEANING

- A. Replace defaced or disfigured finishes caused by Work of this Section.
- B. One week prior to Project completion, sweep entire roof surface with a magnetic sweeper to remove nails, screws and other metal items which may cause subsequent damage to the roof.

3.13 PROTECTION

- A. Where construction traffic must continue over finished roof installation, protect roof surfaces as recommended by roofing system manufacturer to protect manufacturer's warranty.

3.14 MAINTENANCE AND REPAIR DURING CONSTRUCTION

- A. Maintain roofing system and related work from time of roofing completion until Contract completion. Repair material or installation defects or damage resulting from any subsequent work on the roof or from any weather-related damage. Maintain roof system in watertight condition including repair of conditions that show signs of inferior workmanship that may result in potential leaks. Repair leaks occurring prior to Contract completion in accordance with good roofing practice and the requirements specified herein. Remove and replace wet insulation caused by water leaks and repair the roofing system.

3.15 OWNER TESTING AND INSPECTION (T&I)

- A. The Owner will perform testing and inspection as specified in Appendix B (Section 07500).

Contractor's Telephone: (____) _____ (no answering machines or message center)

Contact Name: _____

Upon completion of and after inspection by the Manufacturer of such Work, Manufacturer agrees to warrantee the aforesaid Roofing System for a limited period and subject to the conditions herein set forth:

Manufacturer Warrantees, subject to the conditions herein set forth, that during a period of 15 years from the date of Project completion, it will, at its own cost and expense, make or cause to be made such repairs to said Roofing System resulting solely from faults or defects in materials and/or workmanship applied by or through the Roofing System Contractor as may be necessary to maintain said Roofing system in watertight condition. Owner's remedies and manufacturer's liability shall include cost of labor and materials for loss of weather tightness without financial limit. In accordance with good roofing practice, the Manufacturer shall remove and replace all wet insulation (as defined in specifications) caused by water leaks covered under this Warranty (i.e. leaks resulting from circumstances other than those listed in the exclusions) and repair the Roofing System at no cost to the Owner. Should the investigation reveal that the leak is the result of something other than a defect in materials and/or workmanship applied by or through the Roofing System Contractor, the reasonable investigative work and reasonable repair costs shall be paid by the Owner. Failure by the Owner to pay these costs shall render this warranty null and void.

Warranty shall include materials and workmanship from the following items:

1. Membranes (including parapet waterproofing).
2. Membrane flashings including attachment to sheet metal flashings and trim.
3. Fasteners, cements, and adhesives.

This warranty is made subject to the following conditions:

1. The Owner shall notify Manufacturer within 24 hours of notice by the Owner's Roof Maintenance Department of leaks. The Manufacturer will respond with service within 24 hours of notice from owner (if not possible, than no later than 48 hours, however Owner retains the right to make repairs at Warrantor's expense to mitigate damages).
2. Specifically excluded from this Warranty is any and all damage to said roof system, the building, or contents caused by natural disasters, including, but not limited to: earthquake, hail, lightning, hurricane, tornado, strong gale wind force (72 MPH or greater), or structural failure of the building or of the roof deck (as defined by a licensed Structural Engineer and except that caused by the Manufacturer), fire, and acts of war. If the roof system is damaged by reason of any of the foregoing, this warranty shall become null and void (AFFECTED AREAS ONLY) for the balance of the warranty period unless such damage is repaired at the expense of the owner.
3. Manufacturer is not liable for consequential damages to the building or contents resulting from any defects in said roof system, including, but without limitation, any interruption of business experienced by Owner or occupants of the building.
4. All additions and/or alterations to the roof system shall be installed in accordance with the manufacturer's written recommendations and the manufacturer should provide prior to acceptance to said additions or alterations. Should

07500-11

unauthorized additions/alterations be discovered by the Owner's Roof Maintenance Department, the manufacturer will be notified in writing within fourteen days of such discovery. Provide at manufacturer's discretion an inspection of the unauthorized additions/alterations and notify the Owner in writing of any remedy required by the manufacturer within fourteen days. This Installation/Inspection by the Manufacturer is to be done at a cost to Owner of not more than \$500.00 to cover travel and time for the inspector. Provide inspection of said roof during business hours. Failure to notify the Owner of any required remedy shall deem the addition/alteration acceptable to the Manufacturer and the warranty will remain in effect.

5. The area of additions and/or alterations shall be the only area of the roof system where warranty is suspended. All other roof system areas will have continual coverage under the roof warranty.
6. This Warranty is transferable within the 15-year warranty period, subject to Manufacturer's inspection, written approval and transfer fee payment.
7. During the term of this warranty, the manufacturer, its agents and employees, shall have free and unlimited access to the roof during the hours of store operation.
8. The terms and conditions of this warranty are controlling. Any other warranty conditions attached or referenced that are in conflict with this warranty are ineffective and invalid.
9. This limited warranty shall be governed and construed in accordance with the laws of the State of Arkansas without regard to conflict of laws.
10. The Manufacturer does not warrant products incorporated or utilized in this installation that it has not furnished. The Manufacturer specifically disclaims liability under any theory of law arising out of the installation or performance of, or damages sustained by or caused by, products not furnished by the Manufacturer.

IN WITNESS WHEREOF, this instrument has been duly executed this ____ day of _____, _____.

By _____

END OF WARRANTY

COMPREHENSIVE FINAL ROOF INSPECTION

INSTRUCTIONS

TOOLS AND SUPPLIES: Provide the following during inspections:

- Copy of roof plan and copy and specifications.
- Tape measure, metal thickness gauge, paint for marking defects on roof, roof coring tools and repair materials, and seam probe (to be supplied by Roofing Contractor).

INSPECTION PROCEDURE

- The Manufacturer's Technical Representative shall arrange and conduct inspection and complete checklist and identify defects and enter into Owner's Observation Log.
- All undersigned parties shall accompany inspection.
- Inspect underside of decking from inside of building for proper insulation fastener spacing and sheet fastener spacing.
- Roof Inspection shall start at the parapet wall on the GM side of the building, at the back corner.
- Proceed around perimeter, (including Auto Center, Garden Center, etc).
- Continue across front wall and down sidewall at GR.
- Inspect metal flashings, roof edge fascia system, perimeter attachments, perimeter membrane sheet layout, parapet waterproofing membrane, and accessories.
- Inspect condition of paint on exterior walls. Inspect CMU for proper paint coverage.
- Inspect painted metals for proper coverage.
- Inspect back wall gutter or internal drainage system.
- Inspect field of roof system, beginning approx. 10 feet from back wall, walking side to side of building.
- Inspect roof area no more than 10 feet on each side of walking paths, from back, to front of building.
- Inspect checklist items at field seams, flashings, RTUs, mechanical equipment, skylights, refrigeration units, gas lines, expansion joints, crickets, walkpads, and other roof accessories.
- Mark defects on roof by paint markings and identify each defect using corresponding defect number.
- After roof inspection is complete, email signed inspection form to Owner's Construction Manager within 24 hours.

COMPLETION OF CHECKLIST AND DEFECTS FORM

- Answer each checklist item Yes or No.
- Mark "N/A" on checklist items which do not apply.
- Identify defects on the Owner's Observation Log. (www.bldgportal.com, enter username and password, select Observation Log)
- Number each defect as follows:
 - Identification Symbol-Checklist Item No.-Defect No. (E.g. MF-1-3)
 - Identification symbol and checklist item number shall correspond to the Roof Inspection Checklist. The defect number shall be numbered in sequence for each checklist item.
- Complete applicable information in the Observation Log including the resolution of each item.

ROOF INSPECTION CHECKLIST

(GI) GENERAL:

- 1. Is specified roof system installed? YES__ NO__ N/A__
2. Is construction materials, trash, and other debris removed from the roof? YES__ NO__ N/A__
3. Are all punch list items addressed and signed off? YES__ NO__ N/A__
4. Is there any visible physical damage to roof? YES__ NO__ N/A__
5. Are RTU's numbered so they can be seen from the roof hatch? YES__ NO__ N/A__
6. Is roof hatch painted? YES__ NO__ N/A__
7. Is there roofing mastic or other foreign substance on roof membrane? YES__ NO__ N/A__

(MF) MECHANICAL FASTENERS: (Check from inside building)

- 1. Is insulation attachment pattern installed per manufacturers required spacing and pattern? YES__ NO__ N/A__
2. Is membrane sheet attachment in the seams at minimum 12" inches o.c. or per manufacturers required spacing? YES__ NO__ N/A__
3. Are all seams mechanically attached? YES__ NO__ N/A__

(RE) ROOF EDGE FASCIA SYSTEM

- 1. At splice locations do the covers lap over one another by approximately 1-inch? YES__ NO__ N/A__
2. Are anchor bars installed with 1/2-inch spacing between bars? YES__ NO__ N/A__
3. Are anchor bar splice plates installed? YES__ NO__ N/A__
4. Does the leg of each miter measure minimum 15-inches from the corner to the splice? YES__ NO__ N/A__
5. Is the back leg of the cover embossed with either the ANSI/SPRI label or manufacturers name? YES__ NO__ N/A__
6. Has protective film been removed from the cover? YES__ NO__ N/A__
7. Has any damage been observed on the cover due to the installation? YES__ NO__ N/A__

(PW) PARAPET WALL MEMBRANE

- 1. Is membrane fully adhered in all areas to the parapet walls? YES__ NO__ N/A__
2. Are there any voids, wrinkles, or disbonded areas? YES__ NO__ N/A__
3. Is termination bar installed at the base flashing? YES__ NO__ N/A__
4. Is base flashing run onto the roof membrane and seam sealant used? YES__ NO__ N/A__
5. Are corner flashings installed? YES__ NO__ N/A__
6. Are there any open seams? YES__ NO__ N/A__
7. Is membrane terminated and sealed at parapet end wall conditions? YES__ NO__ N/A__
8. Are all parapet end walls fully painted or flashed? YES__ NO__ N/A__

(PA) PERIMETER MEMBRANE SHEETS ATTACHMENT

- 1. Are the required number perimeter sheets per system specification installed? YES__ NO__ N/A__
2. Are fasteners spaced per the manufacturers requirements? YES__ NO__ N/A__
3. Are T-Lap patches installed at all T-joints? YES__ NO__ N/A__
4. Are seams properly sealed? YES__ NO__ N/A__

(EW) EXTERIOR WALL PAINT (Inspect every 25' minimum.)

- 1. Is wall painted/sealed? YES__ NO__ N/A__
2. Are there visible voids in the paint? YES__ NO__ N/A__
3. Are there cracks in blocks or open mortar joints? YES__ NO__ N/A__
4. Are walls painted behind downspouts? YES__ NO__ N/A__

DRAINAGE SYSTEM (Check all that apply)

- [] Gutters and downspouts
[] Interior drains [] Overflow drains [] Overflow scuppers
[] Scuppers with leaders & downspouts [] Overflow scuppers

Specified gauge (Check all areas with gauge)

- Main roof area _____ gauge
• Auto Center _____ gauge
• Garden Center _____ gauge
• Receiving _____ gauge

- Other _____ gauge _____

(GD) GUTTERS AND DOWNSPOUTS

- | | | | |
|--|---------|--------|---------|
| 1. Is specified type of metal installed? | YES ___ | NO ___ | N/A ___ |
| 2. Is gutter sized as indicated on the drawings? | YES ___ | NO ___ | N/A ___ |
| 3. Is gutter holding water? | YES ___ | NO ___ | N/A ___ |
| 4. Is gutter painted inside? | YES ___ | NO ___ | N/A ___ |
| 5. Are gutter straps installed every 36" o.c.? | YES ___ | NO ___ | N/A ___ |
| 6. Are gutter expansion joints installed every 40' maximum? | YES ___ | NO ___ | N/A ___ |
| 7. Are gutter outlets soldered to the gutter? | YES ___ | NO ___ | N/A ___ |
| 9. Are gutter brackets installed every 36" o.c.? (Inspect from the ground level) | YES ___ | NO ___ | N/A ___ |
| 10. Are downspouts the specified size and configuration? | YES ___ | NO ___ | N/A ___ |
| 11. Are downspout straps installed at top, center, and bottom? | YES ___ | NO ___ | N/A ___ |
| 12. Are downspouts spaced as called out in the documents? | YES ___ | NO ___ | N/A ___ |
| 13. Are splash blocks installed? | YES ___ | NO ___ | N/A ___ |
| 14. Are downspouts properly tied to the storm sewer? | YES ___ | NO ___ | N/A ___ |
| 15. Are joints in gutter leaking? | YES ___ | NO ___ | N/A ___ |
| 16. Are outlets in gutter leaking? | YES ___ | NO ___ | N/A ___ |

(RE) ROOF EDGE

- | | | | |
|--|---------|--------|---------|
| 1. Is gravel guard properly installed? | YES ___ | NO ___ | N/A ___ |
| 2. Is gravel guard properly stripped into roof system? | YES ___ | NO ___ | N/A ___ |
| 3. Is gravel guard prefinished or painted? | YES ___ | NO ___ | N/A ___ |
| 4. Is gravel guard nailed at 3" o.c. staggered? | YES ___ | NO ___ | N/A ___ |
| 6. Is roof edge ponding water? | YES ___ | NO ___ | N/A ___ |

(DR) INTERIOR DRAINS

- | | | | |
|---|---------|--------|---------|
| 1. Are roof drains the specified diameter? | YES ___ | NO ___ | N/A ___ |
| 2. Are overflow drains the specified diameter? | YES ___ | NO ___ | N/A ___ |
| 3. Does the roof drain outlet diameter match the diameter of the leader pipe? | YES ___ | NO ___ | N/A ___ |
| 4. Is roof membrane properly trimmed inside the roof drain? | YES ___ | NO ___ | N/A ___ |
| 5. Is roof drain free of debris and draining properly? | YES ___ | NO ___ | N/A ___ |
| 6. Is insulation tapered around the roof drains? | YES ___ | NO ___ | N/A ___ |
| 7. Are roof drains checked for leaks inside the store? | YES ___ | NO ___ | N/A ___ |
| 9. Are roof drain strainers in place? | YES ___ | NO ___ | N/A ___ |
| 10. Does ponding exist? | YES ___ | NO ___ | N/A ___ |

(SC) SCUPPERS

- | | | | |
|---|---------|--------|---------|
| 1. Are scuppers the specified height and width? | YES ___ | NO ___ | N/A ___ |
| 2. Are scuppers located directly in line with the primary and over flow drains? | YES ___ | NO ___ | N/A ___ |
| 3. Are scuppers flush with the roof? | YES ___ | NO ___ | N/A ___ |
| 4. Does ponding exist? | YES ___ | NO ___ | N/A ___ |
| 5. Is scupper box installed and sealed to the wall? | YES ___ | NO ___ | N/A ___ |
| 6. Are scuppers properly flashed to roof system? | YES ___ | NO ___ | N/A ___ |

(JC) JIB CRANE

- | | | | |
|--|---------|--------|---------|
| 1. Is jib crane located with unobstructed clear space below? | YES ___ | NO ___ | N/A ___ |
| 2. Is jib crane usable in a safe manner? | YES ___ | NO ___ | N/A ___ |
| 3. Is safety chain installed? | YES ___ | NO ___ | N/A ___ |
| 4. Is ladder safety chain installed? | YES ___ | NO ___ | N/A ___ |
| 5. Is GFI outlet installed within 6' reach of the jib hoist arm? | YES ___ | NO ___ | N/A ___ |
| 6. Are walkway protection pads installed? | YES ___ | NO ___ | N/A ___ |
| 7. Is parapet door in place (on raised parapet projects)? | YES ___ | NO ___ | N/A ___ |

(RM) ROOF FIELD MEMBRANE:

(Seams should be checked in random areas for proper seals and voids. No wrinkles in seams will be acceptable.)

- | | | | |
|---------------------------------------|---------|--------|---------|
| 1. Is maximum width field sheet used? | YES ___ | NO ___ | N/A ___ |
|---------------------------------------|---------|--------|---------|

- | | | | |
|--|---------|--------|---------|
| 2. Are all seams properly lapped and sealed? | YES ___ | NO ___ | N/A ___ |
| 3. Are T-lap patches in place at all T-Laps? | YES ___ | NO ___ | N/A ___ |
| 4. Are all edges of cut sheet sealed? | YES ___ | NO ___ | N/A ___ |
| 5. Are there wrinkles in any laps? | YES ___ | NO ___ | N/A ___ |
| 6. Does any ponding exist in roof area? | YES ___ | NO ___ | N/A ___ |
| 7. Is membrane shingled properly with the slope of the roof? | YES ___ | NO ___ | N/A ___ |

(RI) ROOF INSULATION

- | | | | |
|---|---------|--------|---------|
| 1. Is insulation the specified thickness? (Verify by roof cores if necessary) | YES ___ | NO ___ | N/A ___ |
| 2. Are there visible gaps in the insulation boards? | YES ___ | NO ___ | N/A ___ |
| 3. Is there ponding along horizontal insulation joints? | YES ___ | NO ___ | N/A ___ |
| 4. Are there voids or missing insulation? | YES ___ | NO ___ | N/A ___ |

(RTU) ROOF TOP UNITS & REFRIGERATION UNITS FLASHINGS:

- | | | | |
|---|---------|--------|---------|
| 1. Are base flashings fully adhered to curb? | YES ___ | NO ___ | N/A ___ |
| 2. Are corner flashings on curbs installed? | YES ___ | NO ___ | N/A ___ |
| 3. Are seams to roof membrane sealed with no voids or wrinkles? | YES ___ | NO ___ | N/A ___ |
| 4. Are crickets installed to divert water around unit? | YES ___ | NO ___ | N/A ___ |
| 5. Are counterflashings installed and properly attached? | YES ___ | NO ___ | N/A ___ |
| 6. Are walkpads installed as per the documents? | YES ___ | NO ___ | N/A ___ |
| 7. Are condensation P-traps installed on all units? | YES ___ | NO ___ | N/A ___ |

(GL) GAS LINES:

- | | | | |
|---|---------|--------|---------|
| 1. Are gas lines painted? | YES ___ | NO ___ | N/A ___ |
| 2. Is blocking spaced under line at 8' o.c max.? | YES ___ | NO ___ | N/A ___ |
| 3. Is blocking located within 2' of RTU? | YES ___ | NO ___ | N/A ___ |
| 4. Is blocking located within 1'-6" of each corner? | YES ___ | NO ___ | N/A ___ |
| 5. Are protection pads under each block? | YES ___ | NO ___ | N/A ___ |
| 6. Are protection pads the correct size and fully adhered? | YES ___ | NO ___ | N/A ___ |
| 7. Are pipe clamps correct sizes and installed per the documents? | YES ___ | NO ___ | N/A ___ |
| 8. Are gas pipe dirt legs touching roof? | YES ___ | NO ___ | N/A ___ |

(EJ) ROOF EXPANSION JOINTS

- | | | | |
|--|---------|--------|---------|
| 1. Is expansion joint installed? | YES ___ | NO ___ | N/A ___ |
| 2. Is joint properly terminated at the parapet at the front? | YES ___ | NO ___ | N/A ___ |
| 3. Is joint properly terminated at the rear? | YES ___ | NO ___ | N/A ___ |
| 4. Is joint properly flashed to roof system? | YES ___ | NO ___ | N/A ___ |
| 5. Are there any open seams? | YES ___ | NO ___ | N/A ___ |

(MI) MISCELLANEOUS ITEMS

- | | | | |
|---|---------|--------|---------|
| 1. Are soil stacks properly flashed and clamps installed? | YES ___ | NO ___ | N/A ___ |
| 2. Are roof jacks properly flashed and collars sealed? | YES ___ | NO ___ | N/A ___ |
| 3. Are protection pads under support? | YES ___ | NO ___ | N/A ___ |

SECTION 07611 (07 4116) - SHEET METAL SOFFIT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Preformed metal soffit panels.
- B. Related Requirements: The following list is intended to aid in locating work related to or dependent on the scope of Work in this Section. The list is included for information only and is not intended to be inclusive of all project requirements.
 - 1. Section 05400 - Cold Formed Metal Framing: Steel framing supporting metal soffit.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American Architectural Manufacturer's Association (AAMA):
 - 1. AAMA 2605 - Specifications, Performance Requirements And Test Procedures For Superior Performing Organic Coatings And Aluminum Extrusions And Panels.
- C. ASTM International (ASTM):
 - 1. ASTM A 755/A - Steel Sheet, Metallic Coated by the Hot-Dip Process and Prepainted by the Coil-Coating Process for Exterior Exposed Building Products.
 - 2. ASTM A 792/A - Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process.

1.3 DELIVERY, STORAGE AND HANDLING

- A. Section 01600 - Product Requirements: Transport, handle, store, and protect products.
- B. Protect panels from accelerated weathering by removing or venting sheet plastic shipping wrap.
- C. Deliver panels to site in dry and undamaged condition. Unload and handle in accordance with manufacturer's published instructions.
- D. Store panels off ground protected from weather, to prevent twisting, bending, or abrasion, and to provide ventilation.

PART 2 - PRODUCTS

2.1 METAL SOFFIT

- A. Metallic-Coated Steel Sheet:
 - 1. Steel Sheet with Organic Coating Finish: Steel sheet metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755.
 - 2. Steel Sheet with Aluminum or Galvalume Finish: Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792, Class AZ50 coating designation, Grade 40; structural quality.
- B. Manufacturer: Subject to compliance with requirements, provide product equivalent to those specified by any one of the following manufacturers:
 - 1. AEP-SPAN; Dallas, TX; (800) 527-2503.
 - 2. Berridge Manufacturing Co., Houston, TX; (800) 231-8127.
 - 3. Fabral Metal Roof and Wall Systems, Lancaster, PA (800) 884-4484.
 - 4. MBCI; Houston, TX; (800) 861-6224

07611-1

5. McElroy Metal, Bossier City, LA, (800) 950-6531.
6. PAC-CLAD, Petersen Aluminum Corporation, Elk Grove Village, IL (800) 722--2523.

C. Description:

1. Exterior Soffit (Prefinished Metal Soffit Panels): L-Panel by Berridge, 24 gage steel grooved panels, concealed fasteners. Panel profile shall be approximately 12" panel width, 1" panel depth, 3" groove spacing or similar panel profile by any named manufacturer.

2.2 ACCESSORIES

- A. Provide manufacturer's standard accessories and other special items required and essential to completeness of soffit installation. Sight-exposed accessories shall match finish of metal soffit system.
1. Trim Items: Of same material and finish as soffit sheets.
 2. Fasteners: As recommended by soffit system manufacturer for intended purpose.
 3. Sealants: Color coordinated primerless silicone or high grade non-drying butyl, recommended by panel manufacturer.

2.3 FABRICATION

- A. Factory fabricate and finish panels and accessories ready for field assembly.
- B. Form sections true to shape, accurate in size, square, and free from distortion.
- C. Fabricate panels in one piece. In areas where one piece is impractical, fabricate panels in minimum number possible of equal lengths. Fabricate accessories in longest practicable lengths.

2.4 FINISHES

- A. Exterior Soffit: Factory finish surfaces with high performance pigmented organic coating. Prepare, pretreat, and apply coating to exposed metal surfaces in conformance with coating and resin manufacturer's instructions providing finish free of scratches and other blemishes.
1. Finish: Manufacturer's standard 2-coat, thermocured system composed of specially formulated inhibitive primer and fluoropolymer color topcoat containing minimum of 70 percent Penwalt Kynar 500 resin by weight with total minimum dry film thickness of 1.0 mil and 30 percent reflective gloss when tested in accordance with ASTM D 523 and complying with physical properties and coating performance requirements of AAMA 2605, except Humidity Resistance and Salt Spray Resistance shall be 2000 hours
 2. Color as indicated on Drawings:

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine building structure and adjacent areas where panels will be installed. Do not proceed with Work until unsatisfactory conditions have been corrected.
1. Examine soffit structure to verify that structure is ready for soffit panel installation.
 2. Verify field dimensions to determine compliance with panel manufacturer's tolerances.
- B. Beginning of installation indicates acceptance of existing conditions.

3.2 INSTALLATION

- A. Install soffit panels in accordance with manufacturer's published instructions.
- B. Secure panel in place with concealed fasteners.
- C. Interlock panels and secure in place to prevent warping and wracking.

D. Back paint surfaces in contact with dissimilar materials.

3.3 FIELD QUALITY CONTROL

A. Inspect soffit panel installation, alignment, attachments, trim, and accessories.

3.4 CLEANING

A. Wipe clean each soffit panel after erection.

B. Replace damaged panels and other components of Work which cannot be repaired by finish touch-up or similar minor repairs.

C. Remove from finished surface, filing caused by drilling and cutting of panels.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

07611-4

SECTION 07620 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fascia and roof edge trim.
 - 2. Counterflashing over base flashing.
 - 3. Metal parapet cap.
 - 4. Refrigeration line hood.
 - 5. Multiple vent hood.

- B. Related Sections:
 - 1. Section 06100 - Rough Carpentry: Wood blocking and nailers.
 - 2. Section 07500 - Membrane Roofing: Roof penetration flashing and seals.
 - 3. Section 07900 - Joint Sealers.
 - 4. Section 09900 - Paints and Coatings.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.

- B. American Architectural Manufacturers Association (AAMA):
 - 1. AAMA 621 - Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Hot Dipped Galvanized (HDG) and Zinc-Aluminum Coated Steel Substrates.

- C. ASTM International (ASTM):
 - 1. ASTM A 653 - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - 2. ASTM A 755/A - Steel Sheet, Metallic Coated by the Hot-Dip Process and Prepainted by the Coil-Coating Process for Exterior Exposed Building Products.
 - 3. ASTM A 792/A - Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process
 - 4. ASTM B 749 -Lead and Lead Alloy Strip, Sheet, and Plate Products
 - 5. ASTM D 226 - Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
 - 6. ASTM D 523 - Standard Test Method for Specular Gloss
 - 7. ASTM D 4586 - Specification for Asphalt Roof Cement, Asbestos Free.

- D. National Roofing Contractors Association (NRCA):
 - 1. NRCA - Low Slope Roofing Manual.

- E. Sheet Metal and Air Conditioning Contractors National Association (SMACNA):
 - 1. SMACNA - Architectural Sheet Metal Manual, Fifth Edition, 1993.

- F. Steel Structures Painting Council (SSPC):
 - 1. SSPC-Paint 12 - Cold-Applied Asphalt Mastic (Extra Thick Film).
 - 2. SSPC-Paint 20 Type II - Zinc Rich Primers - Organic.

1.3 QUALITY ASSURANCE

- A. Perform work in accordance with SMACNA "Architectural Sheet Metal Manual" and NRCA "Low Slope Roofing Manual" standard details and requirements.

- B. Supplier Certification: Provide certification from galvanized sheet steel supplier stating that materials conform to ASTM A 653, G90 hot-dipped galvanized steel.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Stack preformed material to prevent twisting, bending, or abrasion, and to provide ventilation.
- B. Prevent contact with materials during storage that may cause discoloration, staining, or damage.

PART 2 - PRODUCTS

2.1 SHEET MATERIALS

- A. Galvanized Steel: ASTM A 653 Commercial Quality and Lock-Forming Quality, G90 coating designation hot-dip galvanized, mill phosphatized for painting where exposed to view from ground level. Sheet metal gages shall be as shown or as follows where not shown:
 - 1. Flashing and Counter Flashing: 24 gage.
 - 2. Fascia and Edge Trim: 24 gauge.
 - 3. Curb-Mounted Refrigeration Line Hood: 22 gage.
 - 4. Multiple Vent Hood: 22 gage.

2.2 ACCESSORIES

- A. Fasteners: Galvanized steel finish exposed fasteners to match flashing metal. Furnish exposed fasteners with soft EPDM washers as manufactured by the following:
 - 1. Kwik-Pro Screws, by Hilti.
 - 2. Trugrip GT, by ITW Buildex.
- B. Sealant: Specified in Section 07900.
- C. Bituminous Coating: SSPC - Paint 12, solvent-type bituminous mastic, nominally free of sulfur, compounded for 15 mil dry film thickness per coat.
- D. Draw Band: Stainless steel.
- E. Underlayment:
 - 1. Asphalt Saturated Felt: ASTM D 266; No. 30 pound asphalt saturated organic roofing felt, nonperforated.
- F. Zinc-Rich Primer: SSPC-Paint 20 Type II.

2.3 FABRICATION

- A. Form sections true to shape, accurate in size, square, and free from distortion or defects.
- B. Fabricate cleats of same material as sheet, interlockable with sheet.
- C. Form pieces in longest possible lengths.
- D. Hem exposed edges on underside 1/2 inch; miter and seam corners.
- E. Fabricate corners to form one piece with minimum 18 inches long legs; rivet for rigidity.
- F. Fabricate vertical faces with bottom edge formed outward 1/4 inch and hemmed to form drip.
- G. Fabricate flashings to allow toe to extend 4 inches over roofing. Return and brake edges.
- H. Fabricate exposed sheet metal components with provisions for thermal expansion.

07620-2

2.4 FINISH

- A. Paint metal surfaces exposed to view from ground level in accordance with Section 09900, and as indicated on Drawings, unless otherwise shown to be prefinished.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set.
- B. Verify roofing membrane termination and base flashings are in place, sealed, and secure.
- C. Beginning of installation means acceptance of existing conditions.

3.2 PREPARATION

- A. Field measure site conditions prior to fabricating work.
- B. Install starter and edge strips, and cleats before starting installation.

3.3 INSTALLATION

- A. Install sheet metal flashing and trim in accordance with applicable details of SMACNA "Architectural Sheet Metal Manual" and NRCA "Low Slope Roofing Manual." Anchor units of work securely in place by methods indicated, providing for thermal expansion of metal units; conceal fasteners where possible, and set units true to line and level. Install work with laps, joints, and seams that will be permanently watertight and weatherproof.
- B. Bed flanges of metal flashings in plastic cement or sealing mastic where required for waterproof performance.
- C. Apply bituminous coating on surfaces in contact with dissimilar materials including the following:
 - 1. Dissimilar metals as defined in SMACNA Appendix A-3.
 - 2. Preservative treated wood.
- D. Roof Edge Trim:
 - 1. Install sheet metal edge trim in accordance with SMACNA Figure 2-1, profile as indicated on Drawings. Nail edge trim flange at 3 inches on center, in staggered pattern.
 - 2. Thermal Expansion Joints: Install roof edge trim in 10 foot lengths with a 1/4 inch gap joint with a 6 inch cover plate in accordance with SMACNA Figure 2-5A. Set the cover plate in sealant, nail through opening in edge trim, and loose lock to the drip edge.
 - 3. Corner Joints: Notch and lap. Set laps in sealant and rivet for rigidity. Space rivets at 1 inch on center.
- E. Parapet Cap Flashing – Option A:
 - 1. Install prefinished sheet metal fascia with cleat in accordance with SMACNA Figure 2-6, profiles and as indicated on Drawings.
 - a. Set cleat in full bed of sealant, overlaying and concealing continuous parapet waterproofing membrane.
 - b. Secure cleat to nailer at 6 inches on center.
 - c. Secure fascia to wood nailer with fasteners at 3" o.c. staggered per basic flange nailing pattern.
 - 2. Thermal Expansion Joints: Install parapet fascia in min 10 foot lengths with 4 inch lap joint in accordance with SMACNA Figure 2-5B. Set lap in sealant.
- F. Parapet Cap Flashing – Option B:
 - 1. Install prefinished sheet metal coping with continuous cleat in accordance with SMACNA requirements, profiles as indicated.
 - a. Set cleat in full bed of sealant, overlaying and concealing continuous parapet waterproofing membrane.

- b. Secure cleat at 6 inches on center to nailer.
 2. Install coping in accordance with SMACNA Figure 3-1 over shaped fiber board; secure roof side edge using washered screws in staggered pattern through slotted or oversized holes located at maximum 12" on-center.
 3. Provide coping in minimum 10 to maximum 25 foot lengths.
 4. Provide thermal expansion joints using joints in accordance with SMACNA Figure 3-3, Covered Plate Seam. Set lap in beds of sealant.
- G. Parapet Cap Flashing – Option C:
 1. Where short runs of wall allow for few joints or as otherwise elected, Contractor may provide the following system in lieu of site fabricated assembly:
 - a. [Perma-Tite Double Tapered Coping System](#) by [Metal Era, LLC](#). 20 gauge galvanized steel snap-on clip system.
 - b. Color: Refer to Drawings.
- H. Curb-Mounted Refrigeration Line Hood: Install galvanized sheet metal hood with gasketed fasteners at 8 inches on center and as indicated on Drawings. Seal all joints in hood and pipe penetrations to provide weatherproof enclosure.
- I. Curb-Mounted Multiple Vent Hood: Install galvanized sheet metal hood with gasketed fasteners at 8 inches on center and as indicated on Drawings. Seal all joints in hood and pipe penetrations to provide weatherproof enclosure.
- J. Reglet and Counterflashing System:
 1. Surfaced Mounted Reglet:
 - a. Set reglet parallel to roof line in full bed of sealant. Provide minimum 2 inch end lap at continuous elevations.
 - b. Secure to wall with neoprene/stainless steel washers and drive pins at maximum 16 inches on center.
 - c. Provide a continuous, full bead of sealant at top edge of reglet between flashing and wall. Sealant bead shall be of sufficient width to provide a 45 degree angle with vertical surface.
 2. Counterflashing: Provide counterflashing of the type indicated or required to match reglet system. Insert counterflashings into reglets to form tight fit. Counterflashing shall be installed in such a manner as to provide for continuous contact at base flashing with sufficient pressure at point of contact to prevent dislocation. Lap inside corners. Notch and hook-seam outside corners. Set laps and seams in sealant.
 - a. Provide minimum 2 inch end lap at continuous elevations.
 - b. Change in elevation of 4 inches, provide 8 inch end lap.
 - c. Change in elevation of 8 inches, provide 12 inch end lap.

END OF SECTION

SECTION 07711 (07 7113) - GUTTERS AND DOWNSPOUTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Gutters and downspouts, with expansion joints.
2. Downspout collectors.
3. Conductor heads.

B. Related Requirements:

1. Section 07620 - Sheet Metal Flashings and Trim.
2. Section 07710 – Manufactured Roof Specialties: Roof edge fascia system.
3. Section 07900 - Joint Sealers.
4. Section 09900 - Paints and Coatings: Field painting of metal surfaces.

1.2 REFERENCES

A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.

B. American Architectural Manufacturers Association (AAMA)

1. AAMA 621 - High Performance Organic Coatings on Coil Coated Architectural Hot Dipped Galvanized (HDG) & Zinc-Aluminum Coated Steel Substrates

C. ASTM International (ASTM):

1. ASTM A 653 - Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
2. ASTM A 755 - Steel Sheet, Metallic Coated by the Hot-Dip Process and Prepainted by the Coil-Coating Process for Exterior Exposed Building Products
3. ASTM A 792 - Steel Sheet, 55 % Aluminum-Zinc Alloy-Coated by the Hot-Dip Process

D. Sheet Metal and Air Conditioning Contractors National Association (SMACNA):

1. Architectural Sheet Metal Manual.

E. Steel Structures Painting Council (SSPC):

1. SSPC - Paint 12 - Cold-Applied Asphalt Mastic (Extra Thick Film).

1.3 QUALITY ASSURANCE

A. Nominal sizing of components for rainfall intensity determined by a storm occurrence of 1 in 5 years shall be as indicated on Drawings.

1.4 DELIVERY, STORAGE AND HANDLING

A. Stack preformed materials to prevent twisting, bending, or abrasion, and to aid ventilation. Slope to drain.

B. Prevent contact with materials during storage which may cause discoloration, staining, or damage.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Galvanized Steel Sheet: ASTM A 653 Structural Quality, Grade 33, G90 zinc coating, mill phosphatized for painting where exposed to view from ground level. Sheet metal components shall be galvanized steel sheet unless otherwise specified.
 - 1. Thermoplastic (TPO) Coated Sheet Metal for Through Wall Scuppers: ASTM A 653, Type B Commercial Steel, 24 gage, G90 zinc coating, with a layer of .035 inch min non-reinforced membrane flashing. Color shall match TPO roof color.
 - a. Sure-Weld Coated Metal by Carlisle or equivalent.

2.2 COMPONENTS

- A. Hanging Gutters: Fabricate to cross section indicated, complete with end pieces, outlet tubes, and other accessories as required. Fabricate in minimum 96-inch long sections. Furnish flat-stock gutter spacers and gutter brackets fabricated from same metal as gutters, of size recommended by SMACNA but not less than twice the gutter thickness. Fabricate expansion joints, expansion-joint covers, and gutter accessories from same metal as gutters. SMACNA rectangular profile, Figure 1-2, Style D, gauge as follows:
 - 1. 12 inches x 12 inches: 22 gauge.
 - 2. 10 inches x 10 inches: 22 gauge.
 - 3. 8 inches x 8 inches: 22 gauge.
 - 4. 6 inches x 6 inches: 24 gauge.
 - 5. 5 inches x 5 inches: 24 gauge.
 - 6. 4 inches x 4 inches: 24 gauge.
- B. Prefinished Metal Gutters: 24 gage; Aluminum-Zinc Alloy-Coated Steel Sheet, ASTM A 792/A, Class AZ50 coating designation, Grade 40, structural quality, UL90 rated panels, and prepainted by the coil-coating process to comply with ASTM A 755/A.
 - 1. Finish: Smooth panel with factory finished baked-on fluoropolymer 2-coat coating system consisting of manufacturer's standard 2-Coat Fluoropolymer conforming to AAMA 621. Fluoropolymer finish containing not less than 70 percent Kynar 500 PVDF resin by weight in color coat with a minimum of 0.9 mil dry film thickness. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 2. Color:
 - a. PF-4 (Dark Zinc): Match Lead-Cote Metallic by Berridge.
 - b. PF-14: Match Slate Gray by Metal Era.
- C. Downspouts: 22 gauge, Class AZ50 coating designation, Grade 40, SMACNA rectangular unless otherwise indicated, mitered elbows, fully enclosed profile, SMACNA Figure 1-32B.
 - 1. Finish: Factory finished baked-on fluoropolymer 2-coat coating system consisting of manufacturer's standard 2-Coat Fluoropolymer conforming to AAMA 621. Fluoropolymer finish containing not less than 70 percent Kynar 500 PVDF resin by weight in color coat with a minimum of 0.9 mil dry film thickness. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Color: PF-14: Match Slate Gray by Metal Era.
- D. Conductor Head: SMACNA Figure 1-25F.

2.3 ACCESSORIES

- A. Gutter Brackets: Galvanized steel plate, 3/16 inch thick by 2 inches wide bent plate.
- B. Gutter Spacer Strap: Galvanized steel sheet size and spacing as shown.
- C. Downspout/Gutter Connections: Match gauge and profile of gutter, SMACNA Figure 1-33B, Detail 1.

- D. Downspout Straps: Match downspout material, minimum 20 gauge, SMACNA Figure 1-35G.
- E. Bituminous Coating: SSPC - Paint 12, solvent-type bituminous mastic, nominally free of sulfur, compounded for 15 mil dry film thickness per coat.
- F. Sealant: Specified in Section 07900.
- G. Splash Blocks (if indicated on Drawings): Precast concrete units, minimum 3000 psi at 28 days, with 5 percent air entrainment, size and profile to suit application.
- H. Downspout Collectors (if indicated on Drawings): Pipe material, sizes, connections, dimensions and profiles to suit downspouts and underground storm drainage system as indicated on drawings.

2.4 FABRICATION

- A. Form gutters and downspouts of size as indicated on Drawings.
- B. Fabricate in accordance with SMACNA details unless otherwise shown.
- C. Provide gutter spacers at spacing shown. Fasten to front and back of gutter.
- D. Field measure site conditions prior to fabricating work.
- E. Form sections square, true, and accurate in size, in maximum possible lengths and free of distortion or defects detrimental to appearance or performance. Allow for expansion at joints.
- F. Hem exposed edges of metal.
- G. Field Finishing: Field paint gutters, downspouts, and accessories surfaces exposed to view from ground surface unless noted as prefinished or unpainted on Drawings. Paint in accordance with Section 09900.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that surfaces are ready to receive work and conditions are acceptable.
- B. Verify surfaces behind gutters and downspouts are painted prior to installation. Gutters, downspouts, and conductor heads shall not be in place while surfaces behind such items are being painted.

3.2 INSTALLATION

- A. Install gutters, brackets, and accessories in accordance with SMACNA Figure 1-12 and as shown on the Drawings.
 1. Install gutters level without sags or dips to prevent ponding.
 2. Gutter Brackets: Space alternately with gutter spacers at 36 inches on center.
 - a. Attachment to Masonry: Anchor to masonry bond beam as shown. Space anchor bolts minimum of 3 inches apart.
 - b. Attachment to Steel: Weld to steel tube section with 3/16 inch by 2 inches fillet weld, both sides of bracket. Begin weld at top of bracket.
 3. Lap gutter joints 2 inches, set laps in bead of sealant, and rivet at 1 inch on center.
 4. Provide lap type gutter expansion joint in accordance with SMACNA Figure 1-6. Locate joints at a maximum spacing of 40 feet with at least one expansion joints in each segment of gutter between ends and/or downspouts.
- B. Install downspouts in accordance with SMACNA Figure 1-35G, space straps at 48 inches on center.
- C. Install conductor heads and downspouts after application of exterior wall coating.

07711-3

- D. Apply bituminous coating on backside of conductor heads, gutters, and downspouts and on other gutter, downspout, and accessories surfaces in contact with dissimilar materials, masonry, and preservative treated wood.

END OF SECTION

SECTION 07721 - MANUFACTURED CURBS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Manufactured structural metal roof curbs.
2. Manufactured non-structural metal roof curbs.
3. Coordination with manufacturers and suppliers of roof mounted items and equipment.

B. Related Requirements:

1. Section 05120 - Structural Steel: Roof opening frames and headers.
2. Section 05210 - Steel Joists: Joists supporting roof curbs.
3. Section 07620 - Sheet Metal Flashing Trim: Sheet metal flashing installed in conjunction with roof penetration curbs.
4. Section 15700 - Heating, Ventilating and Air Conditioning Equipment.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American Welding Society (AWS): AWS D1.1 - Structural Welding Code.
- C. Steel Structures Painting Council (SSPC):
 1. SSPC-Paint 20 Zinc Rich Coating Type I - Inorganic and Organic.

1.3 DEFINITIONS

- A. Structural Roof Curb: Manufactured square or rectangular roof curb, bearing on structural steel joists or headers, designed to support equipment dead load and roof dead and live loads.
- B. Non-Structural Roof Curb:
 1. Deck Penetrations - 10 Inches by 10 Inches or Less: Manufactured square or rectangular roof curb, bearing on top of metal roof deck, designed to receive sheet metal flashing skirt, not used for support of equipment.
 2. Deck Penetrations - Greater Than 10 Inches by 10 Inches: Manufactured square or rectangular roof curb bearing on structural steel angle frame, designed to support equipment dead load. Roof dead and live load supported by structural angle frame.
 3. Expansion Joints: Manufactured linear roof curb, bearing on top of metal roof deck, designed to receive expansion joint cover.

1.4 QUALITY ASSURANCE

- A. Qualifications for Welding Work: Qualify field welding operators in accordance with AWS Standard Qualification Procedures. Provide certification that field welders have satisfactorily passed AWS qualification tests within previous 12 months.
 1. If recertification of welders is required, provide without additional cost to Wal-Mart.
- B. Structural Curbs: Provide manufactured metal roof curbs designed by a licensed engineer. Meet or exceed Live Loads and Dead Loads as specified in this Section and as indicated on Drawings. Coordinate curb dimensions with shop drawings of equipment to be supported.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.
- B. Ship curbs to site palletized and banded.
- C. Curb manufacturer shall furnish Curb Schedule to Contractor identifying curb "Type" and roof penetration for which curb is to be used. Curb Schedule shall identify identical curbs as single "Type" (i.e. Type A - 10 ton RTU's, Type B - 5 ton RTU's, etc.). Identify each curb with "Type" designation painted in 1 inch high letters on outside face of curb.
- D. Stack curbs at site to prevent twisting, bending or permanent deformation.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Sheet Steel: One of the following at Contractor's option:
 - 1. Galvanized Steel Sheet: ASTM A 653, SS (Structural Steel) Classification, Grade 33, G60 hot-dip zinc coating.
 - 2. Aluminum-Coated Steel Sheet: ASTM A 463, SS (Structural Steel) Classification, Grade 33, Type 2, T2 100 aluminum coating.
 - 3. Aluminum Zinc Alloy-Coated Steel Sheet (GAVALUME): ASTM A 792, AZ55 aluminum zinc alloy coating.
- B. Board Insulation: Specified in Section 07210, as applicable.
- C. Wood Nailers: CCA Pressure Treated Lumber Type C, "Standard" grade lumber of any species.
- D. Zinc-Rich Primer: SSPC-Paint 20 Type II.
- E. Deck Support Clip: Galvanized steel sheet, gauge as shown.

2.2 STRUCTURAL ROOF CURBS

- A. Fabrication, General: Coated 14 gauge steel sheet curb sections, corners fully mitered and welded; 2 inch by 4 inch (nominal dimension) pressure treated continuous wood nailers mechanically fastened with corrosion resistant fasteners at 12 inches on center to exterior face of curb. Shop prime welded connections with zinc-rich paint complying with SSPC-Paint 20.
- B. Adapter Curbs: Curbs shall be fully welded and insulated. Blank off open areas not used for supply and return air to prevent air mixing. Construct adapter curbs with the minimum height required to achieve proper airflow. Verify curb type, size, and unit prior to fabrication.
- C. Curb Height: Unless otherwise required by local codes, minimum curb height from top of bar joist to top of curb shall be as specified below but in no case less than 8 inches from top of roof membrane to top of curb:
 - 1. All Rooftop Unit Curbs Unless Otherwise Shown or Specified: 18 inches.
 - 2. Pre-fabricated Pump Package Curbs and Fluid Cooler Curbs: 14 inches.
 - 3. Refrigeration Line Curbs: 15 inches.
- D. Reinforce curb sections as required for design loads indicated on Drawings.
- E. Welding: AWS D1.1.
- F. Mechanical unit curbs: Label curbs with "FRONT" designating the curb orientation to the front of facility prior to shipment. Mechanical unit curbs will be provided as follows as applicable:

07721-2

1. Roof Top Unit (RTU) Curbs: Provide continuous height rail curbs. It is acceptable for units to follow roof slopes not exceeding 1/4 inch per foot, unless noted otherwise on structural drawings.
 2. Make-Up Air Unit (MAU) Curbs: Provide tapered rail curbs. Construct curb for MAU to be level (verify roof slope).
 3. Air Handling Unit (AHU) Curbs: Provide tapered rail curbs. Construct curb for AHU to be level (verify roof slope).
 4. Condensing Unit (CU/RCU) Curbs: Provide tapered rail curbs. Construct curb for CU/RCU to be level (verify roof slope).
- G. Refrigeration Line Curbs and Weather Hood: Provide continuous height rail curbs. It is acceptable to follow roof slopes not exceeding 1/4 inch per foot, unless noted otherwise on Structural drawings. Provide curb for required opening for refrigerant piping and electrical conduit. Provide 18 gauge weather hood sized to fit curb with pre-molded neoprene gasket and closure plates.
- H. Duct Opening Curbs at AHU on Structural Frame Above Roof: Provide tapered curb for required duct openings between bottom of elevated AHU on structural frame and roof. Construct curb for AHU to be level (verify roof slope).

2.3 NON-STRUCTURAL ROOF CURBS

- A. Coated 18 gauge steel sheet curb sections, corners fully mitered and welded; 2 inch by 4 inch (nominal dimension) pressure treated continuous wood nailers mechanically fastened at 12 inches on center to exterior face of curb. Shop prime welded connections with zinc-rich paint complying with SSPC-Paint 20. Profile and dimensions shall be as shown.
1. Web Height: Comply with local code requirements for minimum curb height, but in no case shall curb height be less than 18 inches for deck penetrations greater than 10 inches by 10 inches and not less than 14 inches for deck penetrations 10 inches by 10 inches or less as measured from top of steel roof deck to top of curb, nor shall curb height be less than 8 inches as measured from top of roof membrane to top of curb.
- B. Expansion Joints: Coated 14 gauge steel sheet curb sections; 2 inch by 4 inch (nominal dimension) pressure treated continuous wood nailers mechanically fastened at 12 inches on center to exterior face of curb.
1. Bottom Flange Width: 9 inches
 2. Web Height: Comply with local code requirements for minimum curb height, but in no case shall curb height be less than 16 inches as measured from top of steel roof deck to top of curb, nor shall curb height be less than 8 inches as measured from top of roof membrane to top of curb.

2.4 WIND/SEISMIC RESTRAINT BRACKETS

- A. When noted on the Mechanical Rooftop Unit or Air Handling Unit Schedules, furnish wind and seismic restraint brackets with curbs for anchorage of rooftop equipment to curbs.

2.5 STRUCTURAL ROOF CURB SCHEDULE

- A. Structural Curbs:
1. HVAC roof top units (RTU).
 2. Make-up Air Units (MAU).
 3. Air Handling Units (AHU).
 4. Condensing Unit Curb (RCU and CU).
 5. Refrigeration lines penetrating roof.
 6. Duct openings between bottom of elevated AHU on structural frame and roof.

2.6 NON-STRUCTURAL ROOF CURB SCHEDULE

- A. Provide non-structural roof curbs for the following items:
1. Exhaust fans, unless otherwise shown to be provided by others.
 2. Multiple vent pipe penetrations.

2.7 SUBSTITUTIONS

- A. Comply with the requirements of Section 01600.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install curbs in accordance with manufacturer's instructions and as indicated on Drawings. Coordinate installation with roof membrane installation requirements specified under other Sections.
- B. Roof Curbs Bearing on Steel Angles, Joists, and Headers:
 - 1. Set units in place and secure base to roof structure by welding to top chord of structural member or as otherwise indicated on Drawings.
 - 2. Secure metal deck to perimeter of curb as indicated on Drawings.
- C. Roof Curbs Bearing on Roof Deck:
 - 1. Set units in place and secure base to steel roof deck by self-tapping screw fasteners spaced at a maximum of 12 inches on center, staggered.
- D. Install wind/seismic restraint brackets prior to installation of rooftop equipment in accordance with manufacturer's recommendations.

3.2 COORDINATION

- A. Coordinate project requirements for custom adapting and connecting to roof curbs with manufacturers and suppliers of curb mounted items and equipment.

END OF SECTION

SECTION 07722 - ROOF HATCHES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Prefabricated roof hatch, with integral support curbs, operable hardware, and counterflashings.
- B. Related Requirements:
 - 1. Section 05500 - Metal Fabrications: Shop fabricated roof hatch ladders, Hatch Grip ladder safety extension, and other ferrous metal items.
 - 2. Section 05510 - Metal Stairs and Ladders: Requirements for manufactured or shop fabricated metal ships ladder access to roof hatch.
 - 3. Section 09900 - Paints and Coatings: Exterior field painting of roof hatch.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, provide specified items by one of the following manufacturers:
 - 1. [Babcock Davis](#), Brooklyn Park, MN (888) 412-3726.
 - 2. [The Bilco Company](#), New Haven, CT (800)366-6530.
 - 3. [Milcor](#), Carol Stream, IL (800) 624-8642.
 - 4. [Precision Ladders, LLC](#), Morristown, TN. (800) 225-7814.

2.2 ROOF HATCH – EQUIPMENT ACCESS

- A. Model:
 - 1. Model B-RHG 4848T (Galv) or B-RHA 4848T (Alum) by Babcock-Davis.
 - 2. Model F (Alum) by Bilco.
 - 3. Model M-7 (Galv) by Milcor.
 - 4. Model PSRH-G (Galv) or PSRH-A (Alum) by Precision Ladders.
- B. Description:
 - 1. Size: 4 feet by 4 feet.
 - 2. Curb: As shown; integral cap flashing to receive roof flashing system; extended flange for mounting.
 - 3. Cover: Aluminum or steel.
 - 4. Hardware: Manufacturer's standard manually operated type with compression spring operators, positive snap latch with turn handles inside and out and padlock hasps outside; automatic hold-open arm with vinyl covered grip handle for easy release; cadmium plated finish.
 - 5. Hinges: Heavy duty pintle type.
 - 6. Fasteners: Corrosive resistant fasteners recommended by roof hatch manufacturer. Provide neoprene sealing washers.

2.3 FABRICATION

- A. Fabricate roof hatches free of visual distortions and defects. Weld corners and joints.
- B. Fabricate roof hatches weathertight with integral capflashing, providing for removal of condensation.
- C. Finish:
 - 1. Galvanized Steel: Prime paint, one coat for field finish painting or shop powder coated.
 - 2. Aluminum: Unpainted mill finish.

- D. Spot weld hasp, latch and hinges to prevent removal from interior.

2.4 ROOF HATCH LADDER

- A. Steel Wall Ladder: As specified in Section 05500 - Metal Fabrications.
- B. Ladder Safety Extension: Hatch Grip safety extension as specified in Section 05500 - Metal Fabrications.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions. Coordinate with installation of roofing system and related flashings. Provide weathertight installation.
- B. Apply bituminous paint on metal surfaces of units in contact with cementitious materials and dissimilar metals.
- C. Field paint exterior exposed areas of hatch as specified in Section 09900.
- D. Interface with Other Work:
 - 1. Coordinate location and required clear dimensions of roof deck opening.
 - 2. Coordinate locations of steel roof structure members for attachment of roof hatch curbs.
 - 3. Coordinate with installation of roof insulation, roof membrane and related flashings.

3.2 FIELD QUALITY CONTROL

- A. Inspect roof hatch installation and attachment to structure.
- B. Adjust hatch hinge and hold-open arm for smooth operation.

END OF SECTION

SECTION 07815 - MINERAL FIBER FIREPROOFING – Add Section

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Mineral fiber blanket fireproofing.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
1. ASTM E84 - Test Method for Surface Burning Characteristics of Building Materials.
 2. ASTM E119 - Method For Fire Tests of Building Construction and Materials.
 3. ASTM E 2336 – Standard Test Methods for Fire Resistive Grease Duct Enclosure Systems.

1.3 SEQUENCING

- A. Sequence and coordinate installation of mineral fiber blanket fireproofing with other, related construction specified in other sections to comply the following requirements:
1. Avoid unnecessary exposure of mineral fiber blanket fireproofing to abrasion and other damage likely to occur during construction operations subsequent to its application.
 2. Do not install enclosing or concealing construction until after mineral fiber blanket fireproofing has been applied and inspected by authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with requirements of this Section, provide mineral fiber fireproofing as manufactured by one of the following:
1. Unifrax, Niagara Falls, NY, (716) 278-3800.
 2. Thermal Ceramics, Atlanta, GA, (706) 796-4200.
 3. 3M Corporation, Building and Commercial Services Division, St. Paul, MN, (800) 328-1687.

2.2 PERFORMANCE CRITERIA

- A. Fire Performance Characteristics:
1. Surface Burning Characteristics: ASTM E 84.
 - a. Flame Spread (Max): 25.
 - b. Smoke Developed (Max): 50
- B. Grease Duct Fire Resistance: Duct wrap shall meet the fire resistance standards for a two-layer grease duct enclosure system when tested in accordance with ASTM E2336.

2.3 MATERIALS

- A. Mineral Fiber Blanket Fireproofing: Ceramic or glass fiber blanket covered with polypropylene or fiberglass scrim foil facing. Provide one of the following products:
1. 3M Fire Barrier Duct Wrap 15A, by 3M.
 2. FyreWrap Elite 1.5, by Unifrax.

07815-1

3. FireMaster Fast Wrap XL, by Thermal Ceramics.
- B. System Thickness: 2 layers of 1-1/2 inch blanket.
 - C. Nominal Density/Thermal Resistivity: 8 pcf/4.15 at 70 deg F.
 - D. Anchorage Accessories: For each fire resistive assembly in which mineral fiber blanket serves as fireproofing, provide manufacturer's standard blanket-anchorage system complying with related design of UL or other testing and inspecting organization acceptable to authorities having jurisdiction.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and adjacent areas in which Work under this Section is to be performed. Report in writing to the Construction Manager prevailing conditions that may adversely affect satisfactory execution of Work. Do not proceed with Work until unsatisfactory conditions have been corrected.
- B. Starting Work constitutes acceptance of the existing conditions and this Contractor shall then, at his expense, be responsible for correcting all unsatisfactory and defective Work encountered.

3.2 INSTALLATION

- A. Comply with manufacturer's instructions for particular conditions of installation in each case. Consult with manufacturer's technical representative for conditions not covered by printed instructions.
- B. Install fireproofing blanket to comply with requirements for thickness, number of courses (layers), construction of joints and corners, and anchorage methods that apply to fire resistance systems specified.

3.3 PROTECTION

- A. Coordinate installation of fireproofing with other construction to minimize cutting into, or removal of, installed fireproofing. As other construction is successively completed, replace or repair fireproofing installations which have been cut away to facilitate this other construction. Maintain complete coverage of full thickness on members and substrates protected by fireproofing.
- B. Provide final protection and maintain conditions in a manner acceptable to Installer, Manufacturer, and authorities having jurisdiction that ensures mineral fiber blanket fireproofing being without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 07840 - FIRESTOPPING

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Firestopping in rated assemblies.
- B. Related Sections:
 - 1. Section 09250 - Gypsum Board.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM E814 - Test Methods for Fire Tests of Through Penetration Fire Stops.
- C. FM Global (FM):
 - 1. FM 4991 – Standard for the Approval of Firestop Contractors
- D. Underwriters' Laboratories, Inc. (UL):
 - 1. UL 1479 - Fire Tests of Through-Penetration Firestops.
 - 2. UL 2079 – Tests for Fire Resistance of Building Joint Systems.
 - 3. UL Fire Resistance Directory:

1.3 SUBMITTALS

- A. Submittals: Comply with the requirements of Section 01330.
- B. Certifications:
 - 1. Installer Qualifications. Submit documentation of Designated Responsible Individual (DRI) or letter from firestop manufacturer naming approved installer to Architect prior to commencement of firestop work.
 - 2. Manufacturer's Inspection. Submit written certification from firestop manufacturer that Manufacturer's Representative has visited Site as specified in Part 3 and Work is in accordance with manufacturer's requirements and published instructions.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Installation of firestopping shall be by a Designated Responsible Individual (DRI) in accordance with FM 4991 or shall be an approved installer by the Firestop Manufacturer.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with requirements, provide firestopping products as manufactured by one of the following:
 - 1. Nelson Firestop Products, (800) 331-7325.
 - 2. Hilti, Inc, (800) 879-8000.

3. RectorSeal Corporation, (800) 231-3345.
4. Specified Technologies, Inc. (STI), (800) 992-1180.
5. 3M Fire Protection Products, (800) 376-0964.
6. Tremco Firestop System, (800) 852-8173.

2.2 REGULATORY REQUIREMENTS

- A. Firestop materials shall have been tested with and shall be in compliance with the minimum requirements of ASTM E814, UL 1479, and UL 2079 as applicable. Products used shall be as listed below as suitable for the intended application and as required to produce the fire rating as shown on the drawings and to conform to the Firestopping Schedule of UL assemblies included at the end of this Section.

2.3 MATERIALS

- A. Intumescent Latex or Acrylic Sealant: Single-component, intumescent, latex or acrylic formulation.
 1. LBS, by Nelson Firestop Products.
 2. FS ONE or CP 606, by Hilti.
 3. Metacaulk 950 or 1000, by RectorSeal.
 4. SpecSeal SSS100, by STI.
 5. CP 25WB+, IC 15WB, or 3000WT by 3M.
 6. TREMstop Intumescent Acrylic (IA) or Acrylic (A), by Tremco.
- B. Intumescent Wrap/Strip: Single-component, elastomeric sheet with aluminum foil on one face.
 1. WRS, by Nelson Firestop Products.
 2. CP 648 Wrap Strip, by Hilti.
 3. Metacaulk Wrap Strip, by RectorSeal.
 4. SpecSeal SSWRED Wrapstrip, by STI.
 5. FS-195+ Wrap/Strip or Ultra GS, by 3M.
 6. TREMstop WS, by Tremco.
- C. Intumescent Putty: Single-component, non-hardening, dielectric, intumescent putty.
 1. FSP, by Nelson Firestop Products.
 2. CP 618 Putty Stick or CP 617/617L Putty Pad, by Hilti.
 3. CP 648 Wrap Strip, by Hilti.
 4. CFS-PL Firestop Plug, by Hilti.
 5. Metacaulk Fire Rated Putty, by RectorSeal.
 6. SpecSeal Putty, by STI.
 7. Moldable Putty+, by 3M.
 8. TREMstop MP (Moldable Putty) or Putty Stick by Tremco.
- D. Silicone Sealant: Single-component, moisture-curing, silicone-based elastomeric, non-sag grade.
 1. CLK N/S, by Nelson Firestop Products.
 2. CP 601S, by Hilti.
 3. Metacaulk 835, by RectorSeal.
 4. SpecSeal PEN 300, by STI.
 5. 2000+ Silicone, by 3M.
 6. FYRE SIL, by Tremco.
- E. Silicone or Polyurethane Foam: Two-Component, liquid elastomer that, when mixed, expands and cures in place to produce a flexible, nonshrinking foam.
 1. SpecSeal PEN 200, by STI.
 2. CP 620 Fire Foam, by Hilti.
- F. Intumescent Collar: Factory-fabricated, intumescent collar.
 1. PCS, by Nelson Firestop Products.
 2. CP 643 or CP 644, by Hilti.
 3. Metacaulk Pipe Collar, by RectorSeal.
 4. SpecSeal SSC Collars, by STI.
 5. Plastic Pipe Device, Ultra Plastic Pipe Device, Tuck In Wrap Strips, or RC-1 Collar by 3M.

07840-2

- 6. TREMstop D, by Tremco.
- G. Intumescent Composite Sheet, Pillows and Mortar, or Blocks: Products used to firestop large openings.
 - 1. CPS, by Nelson Firestop Products.
 - 2. CFS-BL Fireblocks, by Hilti.
 - 3. CP 637 Firestop Mortar, by Hilti.
 - 4. CP 675T Firestop Board, by Hilti.
 - 5. SpecSeal SSB Pillows and SpecSeal SSM Firestop Compound, by STI.
 - 6. CS-195+ Composite Sheet, by 3M.
 - 7. TREMstop PS, by Tremco.
- H. Sprayable Fire-Rated Mastic: Products used to firestop construction joints.
 - 1. CP672 Speed Spray, by Hilti.
 - 2. Specseal Elastomeric Spray, by STI.
 - 3. Firedam Spray 200, by 3M
 - 4. TREMstop Acrylic Spray (A-SP) by Tremco.
- I. Packing Material: Manufacturer's standard mastic, putty, ceramic fiber blanket, or mineral wool to be used as fill or backing material for firestopping.
 - 1. Mineral Wool, by Nelson Firestop Products.
 - 2. Mineral Wool, by Hilti.
 - 3. Fire Safing or Backer Rod, by RectorSeal.
 - 4. Mineral Wool, by STI.
 - 5. Fire Barrier 5A, 615+ Duct Wrap, or PM4 Packing Material by 3M.
 - 6. TREMstop FS Blanket, by Tremco.
 - 7. CP 767 Speed Strips and CP 777 Speed Plugs, by Hilti. (preformed mineral wool designed for top of wall fluted metal deck packing material)
- J. Substitutions: Comply with the requirements of Section 01600.

PART 3 EXECUTION

3.1 PREPARATION

- A. Remove loose dirt and oil from penetration surfaces.
- B. Place hangers or damming materials in penetration to hold firestopping materials, if necessary.

3.2 INSTALLATION

- A. Keep caulk and putty away from heat, open flame, sparks, or other sources of ignition during application and until product cures. Use only with adequate ventilation.
- B. Follow manufacturer charts for appropriate material to achieve required fire rating in various locations.
- C. Install firestopping at penetrations of fire rated wall materials in accordance with manufacturer's published instructions.
- D. Install firestopping at penetrations and construction joints of fire rated walls and floors in accordance with manufacturer's published instructions and in accordance with UL Fire Resistance Directory.

3.3 FIELD QUALITY CONTROL

- A. Site Inspection: Upon completion of installation, , Manufacturer's Representative shall inspect installed firestopping to verify work complies with the manufacturer's requirements.

3.4 FIRESTOPPING SCHEDULE

A. Provide firestopping complying with UL assemblies specified below.

Penetration	Assembly	Nelson	Hilti	RectorSeal	STI	3M	Tremco
Metal Pipe	CMU Wall 8" Thick or Less	CAJ1203	CAJ 1149 or CAJ1155 or CAJ1226	CAJ1114 or CAJ1115	CAJ1079 or CAJ1217	CAJ1001 or CAJ1009	CAJ1064 or CAJ1302

END OF SECTION

SECTION 07900 - JOINT SEALERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Joint sealants for exterior joints in vertical surfaces and horizontal nontraffic surfaces, except as otherwise specified.
 - 2. Joint sealants for interior vertical surfaces and horizontal nontraffic surfaces, except as otherwise specified.
 - 3. Joint sealants and fillers in interior concrete floor slab-on-grade joints.
 - 4. Joint sealant and fillers in exterior concrete sidewalks and pavement adjacent to building.
- B. Related Requirements: The following list is intended to aid in locating work related to or dependent on the scope of Work in this Section. The list is included for information only and is not intended to be inclusive of all project requirements.
 - 1. Section 01351 – Regulatory Compliance.
 - 2. Division 2: Joint fillers and sealants for joints in sidewalk and pavement not adjacent to building.
 - 3. Section 07500 - Membrane Roofing: Sealants associated with roofing.
 - 4. Section 07840 - Firestopping: Joint seals around penetrations of fire-rated assemblies.
 - 5. Section 09650 - Resilient Flooring: Joint filler for control/construction joints concealed by floor finish material.
 - 6. Section 09900 - Paints and Coatings: Protection of wall joints from painting prior to sealing.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM C920 - Specification for Elastomeric Joint Sealants.
 - 2. ASTM C1330 - Cylindrical Sealant Backing for Use with Cold Liquid Applied Sealants.
 - 3. ASTM D 1056 - Flexible Cellular Materials-Sponge or Expanded Rubber.
 - 4. ASTM E84 - Test Method for Surface Burning Characteristics of Building Materials
- C. Occupational Safety and Health Administration (OSHA):
 - 1. OSHA 01926.1153 Respirable Crystalline Silica.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Minimize dust emissions and provide equipment that suppresses dust.

1.4 QUALITY ASSURANCE

- A. Interior sealants in food preparation areas shall meet the compositional requirements for use in USDA regulated facilities, as required by FDA according to 21 CFR 177.2600, and local authorities having jurisdiction.

1.5 SCHEDULING

- A. Complete the exterior wall sealant manufacturer's Exterior Wall Sealant Order Form provided in Excel format by Walmart Facilities Maintenance. Contact Audrey Freeman, (501) 516-6815, audrey.freeman@walmart.com.
- B. Submit Order Form to Walmart Facilities Maintenance a minimum of 3 weeks prior to beginning exterior wall sealant work.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Transport, handle, store and protect products in compliance with the requirements of Section 01600.

- B. Supplier will deliver exterior wall joint sealants to site to be received by Contractor. Coordinate product delivery and installation in compliance with the delivery requirements of Section 01600.

1.7 PROJECT CONDITIONS

- A. Do not install solvent curing sealants in enclosed building spaces.
- B. Maintain temperature and humidity recommended by sealant manufacturer during and after installation.
- C. Do not proceed with installation of joint sealants under the following conditions:
 - 1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer.
 - 2. When joint substrates are wet.
 - 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 - 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

PART 2 - PRODUCTS

2.1 ELASTOMERIC SEALANTS - GENERAL

- A. Comply with ASTM C 920 and other requirements indicated for each liquid-applied chemically curing sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.

2.2 ELASTOMERIC SEALANTS (EXTERIOR WALL)

- A. Provide Sealant for Exterior Wall Control and Expansion Joint as follows:
 - 1. L1: Multi Component Sealant (for joint width not exceeding 1-1/2 inch and joint depth not exceeding 1/2 inch): Non-sag, Class 50. Provide the following:
 - a. [MasterSeal NP 100](#) by Master Builders Solutions.
 - b. Container Size and Color:
 - 1) Custom Color Sealants: 1.5 Gal Pail.
 - 2) Limestone (Stock Color Gray): 1.5 Gal Pail or 20 oz sausage (not typical for vertical wall).
 - 3) Match adjacent finish color if exterior color scheme is non-prototypical.

2.3 ELASTOMERIC SEALANTS (EXTERIOR APPLICATIONS OTHER THAN EXTERIOR WALL)

- A. Elastomeric Sealant for Concrete Sidewalk or Paving Joint at Building:
 - 1. L2: Multi-Component Sealant (for joint width not exceeding 3 inches and joint depth not exceeding 1/2 inch): Non-sag or self-leveling, Class 50: Provide the following:
 - a. MasterSeal NP 100, by Master Builders Solutions.
 - b. Color:
 - 1) Limestone (Stock Color Gray): 1.5 Gal Pail or 20 oz sausage.
 - 2) Match adjacent finish color if exterior color scheme is non-prototypical.

2.4 ELASTOMERIC SEALANTS (APPLICATIONS OTHER THAN EXTERIOR WALL)

- A. Suitability for Contact with Food: Where sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600. Sealants identified as (Non-USDA) shall not be used in food preparation areas.
- B. Manufacturers:
 - 1. [Sonneborn Products](#) by BASF Building Systems. (800) 433-9517 or (952) 496-6000.
 - 2. [Dap Products, Inc.](#), (800) 325-6180.
 - 3. [Dow Corning Corporation](#). Mary Altenburg, (989) 496-7767.
 - 4. [Euclid Chemical Co.](#), (877) 438-3826.
 - 5. [GE Silicones](#) & GE Sealants and Adhesives. (Momentive Performance Materials) (877) 943-7325.
 - 6. [HI-TECH Systems](#) (800) 454-5530.
 - 7. [Metzger/McGuire](#), (800) 223-6680.
 - 8. [Master Builders Solutions, LLC](#). Contact: Zach Duggan, (612) 590-3719, zachary.duggan@mbcc-group.com

07900-2

- or Chris Lebo, (216) 318-2529, chris.lebo@mbcc-group.com.
9. [Pecora Corporation](#), (215) 796-1401, Keith Waters.
 10. [Tremco Sealant](#)/Weatherproofing Division. (800) 841-3778.
 11. [VersaFlex Inc.](#), (913) 321-1416.
 12. [W. R. Meadows, Inc.](#), (847) 214-2100.

C. Polyurethane and Hybrid Sealants (USDA Certified, unless otherwise noted):

1. Hybrid Sealant #1 (P1): ASTM C920, Type S, Grade NS, Class 50, single component.
 - a. MasterSeal NP 100, by Master Builders Solutions.
 - b. Vulkem 116 or Dymonic FC by Tremco.
 - c. Dynatrol I-XL or Dynatrol I-XL Hybrid, by Pecora.
2. Polyurethane Sealant #2 (P2): ASTM C920, Type S, Grade P, Class 25, single component.
 - a. MasterSeal SL 1, by Master Builders Solutions.
 - b. Vulkem 45 (Non-USDA), by Tremco.
 - c. Urexpam NR-201, by Pecora.
3. Polyurethane Sealant #3 (P3): ASTM C920, Type M, Grade NS, Class 50, multi-component.
 - a. MasterSeal NP2, by Master Builders Solutions.
 - b. Dymeric 240FC, by Tremco.
 - c. Dynatrol II (Non-USDA) by Pecora.

D. Silicone Sealants: USDA compliant, unless otherwise noted.

1. Silicone Sealant #1 (S1): ASTM C 920, Type S, Grade NS, Class 25.
 - a. Spectrem 1, Spectrem 2 or Spectrem 3 by Tremco.
 - b. 791 Silicone Perimeter Sealant (Non-USDA) by Dow.
 - c. 864 or 890 by Pecora.
 - d. MasterSeal NP 150 by BASF - Sonneborn.
 - e. SilPruf SCS2000 (Non-USDA) by GE.
 - f. Titebond 100% Silicone Sealant by Franklin International.
2. Silicone Sealant #2 (S2): ASTM C 920, Type S, Grade NS, Class 25, mildew resistant.
 - a. Tremsil 200, by Tremco.
 - b. 898 by Pecora.
 - c. 786 Silicone Sealant (Non-USDA) by Dow.
 - d. Sanitary SCS1700 (Non-USDA) by GE.

E. Sealant Color:

1. In interior and exterior exposed areas, match color of adjacent paint color finish or other adjacent finish color if proprietary color is not otherwise specified herein.
2. In joints where plumbing fixtures meet adjacent floor and wall finishes, match color of plumbing fixture.
3. Use clear, colorless sealant where applied to stainless steel surfaces.

2.5 POLYURETHANE EXPANDING FOAM SEALANTS

- A. Polyurethane Expanding Foam Sealant #1 (EF1): Closed-cell foam and non-flammable propellant; urea formaldehyde-free, CFC-free; UL Class 1 Foam with flame spread of 20 and smoke developed of 25 as tested in accordance with ASTM E84.
- a. Touch'n Seal Quick Cure, by Dap Products.
 - b. Space Invader by GE Sealants & Adhesives, (877) 943-7325.

2.6 JOINT-SEALANT BACKING

- A. Sealant Backing (Backer Rod): Provide sealant backings of material and type that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
1. Cylindrical Sealant Backings: Closed or bi-cellular backer rod conforming to ASTM C 1330, Type B or Type C, as approved by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance. The use of ASTM C Type O open cell backer rod is prohibited.
 - a. Backer Rod for Exterior Masonry: Closed cell foam, oversized 50 percent; self-expanding.

2. Elastomeric Tubing Sealant Backings: Neoprene, butyl, EPDM, or silicone tubing complying with ASTM D 1056,
- B. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.

2.7 INTERIOR SLAB ON GRADE JOINT SEALANT MATERIALS

- A. Preformed Expansion (Isolation) Joint Filler Strips (PMEJ): Flexible closed-cell synthetic foam expansion joint strips, non-extruding, for full depth of concrete.
 1. Ceramar Flexibe Foam Expansion Joint, by W.R. Meadows.
 2. Deck-O-Foam Expansion Joint Filler, by W.R. Meadows
- B. Elastomeric Joint Materials:
 1. Sealant:
 - a. Polyurethane Sealant: No. 2 (P2) as specified above.
 - b. Color: Match color of adjacent exposed surface of concrete slab.
 - c. Sealant shall be compatible with construction material placed against it.
 2. Joint Back-Up Material:
 - a. Polyethylene Foam, 100% closed cell.
 - b. Material shall be compatible with construction material to be placed against it such as tile adhesive.
- C. Polyurea Joint Filler (PY1): Rapid setting, two-component polyurea polymer liquid of 100% solids content, Shore A Hardness 85 to 92, compatible with construction material placed against it. (USDA compliant, unless otherwise noted.)
 1. [MasterSeal CR 100](#), by Master Builders Solutions.

2.8 EXTERIOR PAVEMENT JOINT MATERIALS

- A. Joint Back-up Material: Polyethylene foam, 100% closed cell
- B. Sealant:
 1. Dow 888, by Dow Corning.
 2. 301 NS by Pecora.
 3. Spectrum 800 or 900 by Tremco.
- C. Preformed Expansion (Isolation) Joint Filler Strips (PMEJ): Flexible closed-cell non-extruding synthetic foam expansion joint strips.
 1. [Ceramar Flexibe Foam](#) Expansion Joint, by W.R. Meadows.
 2. [Deck-O-Foam](#) Expansion Joint Filler, by W.R. Meadows

2.9 ACCESSORIES

- A. Primer: Non-staining type, recommended by sealant manufacturer to suit application.
- B. Joint Cleaner: Non-corrosive and non-staining type, recommended by sealant manufacturer; compatible with joint forming materials.

2.10 SUBSTITUTIONS

- A. Comply with the requirements of Section 01600.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that surfaces and joint openings are ready to receive work and field measurements are as indicated on Drawings.
- B. Beginning of installation means installer accepts substrates.

3.2 EXTERIOR WALL JOINT PREPARATION

- A. Prepare exterior joints and install sealants in accordance with sealant manufacturer's recommendations:

English

Spanish

- B. Do not begin joint sealant work until wall painting work is complete. Sealed joints shall not be overcoated with paint.
- C. Clean and prime joints in accordance with manufacturer's instructions.
- D. Remove loose materials and foreign matter which might impair adhesion of sealant.
- E. Verify that new joint backing and release tapes are compatible with sealant.
- F. Protect elements surrounding work of this Section from damage or disfiguration
- G. Moving forward all joint sealant is to be installed after the painting is complete.

3.3 EXTERIOR WALL INSTALLATION

- A. Install new sealant in accordance with manufacturer's instructions.
- B. Measure joint dimensions and size materials to achieve required width/depth ratios.
- C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
1. Do not leave gaps between ends of sealant backings.
 2. Do not stretch, twist, puncture, or tear sealant backings.
 3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.
- D. Install bond breaker where joint backing is not used.
- E. Apply sealant within recommended temperature ranges. Consult manufacturer when sealant cannot be applied within recommended temperature ranges.
- F. Install sealant free of air pockets, foreign embedded matter, ridges, and sags.
- G. Tool joints concave.

3.4 INTERIOR SLAB ON GRADE JOINT SEALING AND FILLING

- A. General:
1. Seal/fill contraction, isolation and construction joints in floor slabs and pavements, unless otherwise indicated on Drawings or specified herein.
 2. Unless noted otherwise, use polyurea joint filler in floor slab contraction and construction joints.
 3. Use elastomeric joint sealant in isolation joints and textured concrete joints.
 4. Use pavement sealant in pavement's contraction, construction, and isolation joints.
 5. Do not seal joints with materials specified herein when below relatively impervious floor finish material, such as PVC flooring, sheet rubber, wood, epoxy topping; refer to floor finish specification for joint sealing requirements.
 6. Do not place polyurea joint filler under resilient flooring or carpet. Reference Section 09650 or 09680 for joint subfloor filler materials and placement under floor covering.

07900-5

- B. Cleaning:
1. Immediately prior to sealing/filling, clean joints to full depth of sealant/filler in accordance with manufacturer's recommendation.
 2. Use vacuum with HEPA-rated filter to remove loose dirt, debris, saw laitance, and other foreign material from joint.
 3. Clean inner joint walls mechanically using one of the following HEPA-rated filter tools as recommended by the manufacturer for maintaining dust emissions below the permissible level
 - a. Humpback Dustless Joint Saw by Joe Due Blades & Equipment, www.joedue.com.
 - b. [Dust Buggy](#) by U.S. Saws, Santa Ana, CA (866) 987-7297.
 - c. [Gorilla Concrete Tools](#) GCT-10 or GCT-9 Silverback by OBHC, Inc., Columbia Station, OH, (440) 236-5112.
 4. Clean joint walls to the full depth of saw cuts and 2 inch minimum depth in construction joints that may not have been saw cut to create a support shelf.
 5. Remove form release agent, curing compound, or other components.
- C. General Installation:
1. Commence placing floor joint sealant / filler no sooner than 30 days after first placement of concrete.
 2. If joint is wet or damp, allow joint to dry for 72 hours prior to filling.
 3. Delay floor joint sealing / filling operations until facility's environmental systems have been placed in operation for 14 days.
 4. Mix and install sealant and filler in accordance with manufacturer's recommendations. Use primer if recommended for specific application.
 5. Choke off shrinkage crack if necessary at bottom of contraction joint or void below construction joints by the following methods.
 - a. Saw Cut Contraction Joints:
 - 1) Place 1/8 inch to 1/4 inch (maximum) layer of dry-bagged silica sand in joint to be epoxy filled. Do not use compressible backer rod. Use methods in handling sand to maintain dust emissions below the permissible level.
 - b. Construction Joints Through Slab: Fill by inserting compressible backer rod to a minimum depth of 2 inches below slab surface.
 6. Do not allow sealant / filler to extend over joint edges in finished condition.
- D. Elastomeric Joint Sealant Installation:
1. Use joint back-up material.
 2. Tool surface to provide smooth, attractive appearance and geometry recommended by sealant manufacturer.
- E. Joint Filler Installation
1. Cleaning: Immediately prior to filling, clean and prepare joint bottom and sidewalls as specified herein for general cleaning.
 2. Do not use joint back-up material (i.e. backer rod, sand, etc.) except below bottom of saw cut in construction joints. Provide a minimum joint filler depth of 2 inches.
 3. Install test sample of the polyurea joint filler to determine if filler will leave a stain, shadow, or film on slab surface.
 4. If test sample reveals stain, shadow, or film, use joint filler stain preventing film at joints to receive polyurea joint filler.
 5. Fill joint using single pass method. Fill joint full depth from bottom to top, leave slight crown at slab surface.
 6. Add extra filler prior to filler set if needed to prevent depressed areas. If concave filler is already set, abrade with wire wheel or similar tool to minimum depth of 1/4" below surface prior to refilling.
 7. Razor off crowned filler flush with floor surface after filler has sufficiently set.
 8. Remove stain preventing film (if used). Film shall be removed by joint filler installer immediately after shaving joint filler.
 9. One week prior to Grand Opening, refill joints if:
 - a. Joint filler sidewall separation or splitting exceeds 1/32 in.
 - b. Joint filler surface profile is concave, crowned, or chattered or if voids occur.
 10. Follow manufacturer's requirements for joint preparation for proper adhesion.
- F. Isolation Joints: Form isolation joints of preformed joint-filler strips (PMEJ) where indicated.
1. Extend joint fillers full width and depth of joint.
 2. Terminate joint filler or otherwise provide joint sealant cavity of not less than 1/2 inch or more than 1 inch

- below finished surface if joint sealant is indicated.
3. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
 4. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
 5. Protect top edge of joint filler during concrete placement with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

3.5 EXTERIOR SIDEWALK AND PAVEMENT JOINT SEALING AND FILLING

- A. Fill and seal sidewalk and pavement joints in areas of pavement adjacent to the building. Joint filling and sealing of sidewalks and pavement not adjacent to building is specified in Division 2.
- B. Joint Fillers: Extend joint fillers full-width and depth of joint, and not less than 1/2-inch or more than 1-inch below finished surface where joint sealer is indicated. Furnish joint fillers in 1-piece lengths for full width being placed, wherever possible. Where more than 1 length is required, lace or clip joint filler sections together.
- C. Joint Sealants: Joints shall be sealed as shown and scheduled and shall be installed in accordance with manufacturer's recommendations.

3.6 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.7 SEALANT LOCATION SCHEDULE

- A. Provide sealants in accordance with the following schedule. Joint sealing required by the drawings or required for a complete and proper installation but not listed in the following schedule shall be sealed as necessary regardless of whether shown or scheduled. Such joints not shown or scheduled shall be sealed with sealants consistent with specified materials or as recommended by the manufacturer for the specific application.

END OF SECTION

SECTION 07950 (07 9500) - EXPANSION CONTROL

PART 1 - GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Exterior wall expansion control systems.
 - 2. Exterior roof expansion control systems.
 - 3. Exterior floor expansion control systems.
 - 4. Interior wall expansion control systems.
 - 5. Interior floor expansion control systems.

1.02 ACTION SUBMITTALS

- A. Product Data: Include manufacturer's product specifications, construction details, material and finish descriptions, and dimensions of individual components and seals.
- B. Samples for Initial Selection: For each type of expansion control system indicated.
 - 1. Include manufacturer's color charts showing the full range of colors and finishes available for each exposed metal and elastomeric seal material.

1.03 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each fire barrier provided as part of an expansion control system, for tests performed by a qualified testing agency.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers: Materials to be supplied by Inpro Corporation 'JointMaster' Regional Sales Manager, Justin Lofting, Mobile (760) 207-7666, jlofting@inprocorp.com, www.inprocorp.com. No substitutions allowed.
- B. Source Limitations: Obtain expansion control systems from single source from single manufacturer.

2.02 SYSTEM DESCRIPTION+

- A. General: Provide expansion control systems of design, basic profile, materials, and operation indicated. Provide units with capability to accommodate variations in adjacent surfaces.
 - 1. Furnish units in longest practicable lengths to minimize field splicing. Install with hairline mitered corners where expansion control systems change direction or abut other materials.
 - 2. Include factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion control systems.
 - 3. Frames for Strip Seals: Designed with semi-closed cavity that provides a mechanical lock for seals of type indicated.
- B. Nominal Joint Width: As indicated on drawings.

- C. Coordination: Coordinate installation of exterior wall expansion control systems with roof expansion control systems to ensure that wall transitions are watertight.

2.03 MATERIALS

- A. Elastomeric Seals: ASTM E 1783; preformed elastomeric membranes or extrusions to be installed in metal frames.
- B. Aluminum Extrusions: ASTM B221; Standard specifications for aluminum and aluminum-alloy extrusions.
- C. Accessories: Manufacturer's standard anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.

2.04 GENERAL FINISH REQUIREMENTS

- A. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.05 PERFORMANCE REQUIREMENTS

- A. Insulated Vapor Barrier, ASTM test reports created by a certified third party. Architectural product testing agency.
 - 1. ASTM C1363 Thermal Performance Test
 - 2. ASTM E283 Pressure Test for Rate of Air
 - 3. ASTM E330 Dynamic Structural Performance
 - 4. ASTM E331 Static Water Penetration Test
- B. Seismic Performance: Expansion control systems shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 - 1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified."

2.06 EXTERIOR EXPANSION CONTROL SYSTEMS

- A. Basis-of-Design Product (Building Shell Roof Applications): Subject to compliance with requirements, provide expansion joint by Inpro:
 - 1. Inpro: Models 651-A01 **EJ-10** & 651-A02 **EJ-11** with insulated vapor barrier.
 - a. Roof to Roof and Roof to Wall applications at building shell roof.
 - 2. Design Criteria:
 - a. Nominal Joint Width: As indicated on Drawings.
 - b. Maximum Joint Width: 18 inches.
 - c. Movement Capability: As indicated on structural drawings.
 - d. Type of Movement: Thermal and seismic.
 - 3. Type: Raised cover plate, continuous.
 - a. Cover-Plate Design: Thermal & Seismic
 - 1) Cant strip mounted, Self-Flashing base members.

- b. Metal: Aluminum.
 - 1) Finish: Mill.
 - 4. Accessories:
 - a. JL Series continuous Insulated Moisture Barrier.
- B. Basis-of-Design Product (Exterior Wall Applications): Subject to compliance with requirements, provide expansion joint by Inpro:
 - 1. Inpro: Model 612-A07/A09 **EJ-20** with insulated vapor barrier.
 - a. Wall to Wall applications at building shell and stair towers.
 - 2. Design Criteria:
 - a. Nominal Joint Width: As indicated on Drawings.
 - b. Maximum Joint Width: 18 inches.
 - c. Movement Capability: As indicated on structural drawings.
 - d. Type of Movement: Thermal and seismic.
 - 3. Type: Santoprene Face Seal
 - a. Cover-Plate Design: Flexible
 - 1) Flush Mounted: Provide flush joint surface with adjacent wall.
 - b. Metal: Aluminum.
 - 1) Finish: Mill
 - c. Santoprene Face Seal
 - 1) Finish: To be selected from manufactures standards
 - 4. Accessories:
 - a. JL Series continuous Insulated Moisture Barrier.
- C. Basis-of-Design Product (Exterior Wall Applications): Subject to compliance with requirements, provide expansion joint by Inpro:
 - 1. Inpro: Model 491E **EJ-25** with insulated vapor barrier.
 - a. Wall to Wall applications at building shell and stair towers.
 - 2. Design Criteria:
 - a. Nominal Joint Width: As indicated on Drawings.
 - b. Maximum Joint Width: 5 inches.
 - c. Movement Capability: As indicated on structural drawings.
 - d. Type of Movement: Thermal and seismic.
 - 3. Type: Santoprene Face Seal
 - a. Cover-Plate Design: Flexible
07950-3

- 1) Flush Mounted: Provide flush joint surface with adjacent wall.
 - b. Metal: Aluminum.
 - 1) Finish: Mill
 - c. Santoprene Face Seal
 - 1) Finish: To be selected from manufactures standards
 - 4. Accessories:
 - a. JL Series continuous Insulated Moisture Barrier.
- D. Basis-of-Design Product (Exterior Pedestrian Foot Traffic) Subject to compliance with requirements, provide expansion joint by Inpro:
- 1. Inpro: Model 806-A01/A02 **EJ-30**.
 - a. Floor to Floor and Floor to Wall applications at elevated walkway.
 - 2. Design Criteria:
 - a. ADA compliant
 - b. Nominal Joint Width: As indicated on Drawings.
 - c. Maximum Joint Width: 12 inches.
 - d. Movement Capability: As indicated on structural drawings.
 - e. Type of Movement: Thermal and seismic.
 - f. Load Capacity:
 - 1) Uniform Load: 150 lb/sq. ft.
 - 2) Concentrated Load: 2000 lb.
 - 3) Maximum Deflection: 0.25 inch.
 - 3. Type: Cover plate, surface mounted.
 - a. Cover-Plate Design: Thermal & Seismic.
 - 1) Surface Mounted: Provide walking surface.
 - b. Metal: Aluminum.
 - 1) Finish: Mill
 - 4. Accessories:
 - a. JL Series continuous Reinforced Moisture Barrier

2.07 INTERIOR EXPANSION CONTROL SYSTEMS

- A. Basis-of-Design Product (Material Handling Industrial Traffic): Subject to compliance with requirements, provide expansion joint by Inpro:
 - 1. Inpro: Model 797-G01 **EJ-35**
 - a. Floor to Floor applications at level 2 and level 3.

2. Design Criteria:
 - a. Nominal Joint Width: As indicated on Drawings.
 - b. Maximum Joint Width: 14 inches.
 - c. Movement Capability: As indicated on structural drawings.
 - d. Type of Movement: Thermal and seismic.
 - e. Load Capacity:
 - 1) Uniform Load: 250 lb/sq. ft.
 - 2) Concentrated Load: 3000 lb.
 - 3) Maximum Deflection: 0.25 inch.
 - f. Provide Finite Element Analysis Report for expansion joint cover materials and loading criteria of facility specific material handling industrial traffic.
 3. Type: Cover plate, recessed
 - a. Cover-Plate Design: Crowned separation cover with durometer sound and vibration dampening support
 - 1) Cover-Plate Recess Depth: As required to provide flush transition surface. Review Architectural and Structural plans for specific block-out dimensions and requirements.
 - b. Metal: Galvanized Steel.
 - 1) Finish: Galvanized
- B. Basis-of-Design Product (Pedestrian Traffic at Office): Subject to compliance with requirements, provide expansion joint by Inpro:
1. Inpro: Model 806SD-A01 **EJ-30** with reinforced vapor barrier as indicated on drawings.
 - a. Floor to Floor applications at level 2.
 2. Design Criteria:
 - a. ADA compliant.
 - b. Nominal Joint Width: As indicated on Drawings.
 - c. Maximum Joint Width: 9 inches.
 - d. Movement Capability: As indicated on structural drawings.
 - e. Type of Movement: Thermal and seismic.
 - f. Load Capacity:
 - 1) Uniform Load: 150 lb/sq. ft.
 - 2) Concentrated Load: 2000 lb.
 - 3) Maximum Deflection: 0.25 inch.
 3. Type: Cover plate, surface mount.
 - a. Cover-Plate Design: Plain.
 - 1) Surface Mounted: Provide walking surface.
 - b. Metal: Aluminum
 - 1) Finish: Mill

07950-5

- C. Basis-of-Design Product (Pedestrian Traffic at Shafts): Subject to compliance with requirements, provide expansion joint by Inpro:
1. Inpro: Model 806SD-A01/A02 **EJ-30** with reinforced vapor barrier as indicated on drawings.
 - a. Floor to Floor and Floor to Wall applications at level 2 and level 3.
 2. Design Criteria:
 - a. Nominal Joint Width: As indicated on Drawings.
 - b. Maximum Joint Width: 11 inches.
 - c. Movement Capability: As indicated on structural drawings.
 - d. Type of Movement: Thermal and seismic.
 - e. Load Capacity:
 - 1) Uniform Load: 150 lb/sq. ft.
 - 2) Concentrated Load: 2000 lb.
 - 3) Maximum Deflection: 0.25 inch.
 3. Type: Cover plate, surface mounted.
 - a. Cover-Plate Design: Plain.
 - 1) Surface Mounted: Provide walking surface.
 - b. Metal: Aluminum.
 - 1) Finish: Mill
- D. Basis-of-Design Product (Interior Wall Expansion Joint): Subject to compliance with requirements, provide expansion joint by Inpro:
1. Inpro: Model 355-A07 **EJ-50**
 - a. Wall to Wall applications - High Finish Office Areas
 2. Design Criteria:
 - a. Nominal Joint Width: As indicated on Drawings.
 - b. Maximum Joint Width: 14 inches.
 - c. Movement Capability: As indicated on structural drawings.
 - d. Type of Movement: Thermal and seismic.
 3. Type: Cover plate, flush mounted
 - a. Cover-Plate Design: Elastomeric Santoprene seal set in Aluminum Extrusion
 - b. Color: To be selected from manufactures standard
- E. Basis-of-Design Product (Interior Wall Expansion Joint): Subject to compliance with requirements, provide expansion joint by Inpro:
1. Inpro: Model 612-A07 **EJ-51**
 - a. Wall to Wall applications – Warehouse
07950-6

- b. Finish Floor to 8ft above Finish Floor.
 - 2. Design Criteria:
 - a. Nominal Joint Width: As indicated on Drawings.
 - b. Maximum Joint Width: 18 inches.
 - c. Movement Capability: As indicated on structural drawings.
 - d. Type of Movement: Thermal and seismic.
 - 3. Type: Santoprene Face Seal
 - a. Cover-Plate Design: Flexible
 - 1) Flush Mounted: Provide flush joint surface with adjacent wall.
 - b. Metal: Aluminum.
 - 1) Finish: Mill
 - c. Santoprene Face Seal
 - 1) Finish: To be selected from manufactures standards
- F. Basis-of-Design Product (Wall & Ceilings at Office): Subject to compliance with requirements, provide expansion joint by Inpro:
 - 1. Inpro: Model 353C-A24 **EJ-60**
 - a. Ceiling to Ceiling applications - High Finish Office Areas
 - 2. Design Criteria:
 - a. Nominal Joint Width: As indicated on Drawings.
 - b. Maximum Joint Width: 14 inches.
 - c. Type of Movement: Thermal and seismic.
 - 3. Type: Recessed Infill Pan system
 - a. Cover Plate Design: Infillable coverplate pan to be installed using magnetic security system
 - b. Color: mill finish

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine surfaces where expansion control systems will be installed for installation tolerances and other conditions affecting performance of work.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare substrates according to expansion control system manufacturer's written instructions.

- B. Coordinate and furnish anchorages, setting drawings, and instructions for installing expansion control systems. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of expansion control systems.
- C. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary to secure joint systems to in-place construction, including threaded fasteners with drilled-in expansion shields for masonry and concrete where anchoring members are not embedded in concrete. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of joint systems.

3.03 INSTALLATION

- A. Comply with manufacturer's written instructions for storing, handling, and installing expansion control systems and materials unless more stringent requirements are indicated.
- B. Coordinate installation of architectural joint assembly materials and associated work so complete assemblies comply with assembly performance requirements.
- C. Compression Seals: Apply adhesive or lubricant adhesive as recommended by manufacturer before installing compression seals.
- D. Terminate exposed ends of expansion control systems with field- or factory-fabricated termination devices.
- E. Provide continuous and sealed Insulated Vapor Barrier at all exterior expansion joint assemblies as per manufacture installation instructions to maintain ASTM tested assembly as specified.

3.04 PROTECTION

- A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.
- B. Protect the installation from damage by work of other Sections. Where necessary due to heavy construction traffic, remove and properly store cover plates or seals and install temporary protection over expansion control systems. Reinstall cover plates or seals prior to Substantial Completion of the Work.

END OF SECTION

SECTION 08110 - STEEL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Steel doors, panels, and frames.
 - 2. Glazed light frames.
- B. Related Sections:
 - 1. Section 01600 – Product Requirements: Contractor’s Products Selection checklist.
 - 2. Section 08710 - Door Hardware: Door hardware coordination.
 - 3. Section 08800 - Glazing: Glass in steel doors and frames.
 - 4. Section 09250 - Gypsum Board: Door frame attachment to metal wall framing.
 - 5. Section 09900 - Paints and Coatings: Field painting of doors and frames.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American National Standards Institute (ANSI):
 - 1. ANSI A117.1 - Specifications for Making Buildings and Facilities Accessible to and Usable by Physically Handicapped People.
 - 2. ANSI A250.8 (Formerly SDI-100) - Recommended Specifications for Standard Steel Doors and Frames.
 - 3. ANSI A250.11 (Formerly SDI-105) - Recommended Erection Instructions for Steel Frames.
- C. ASTM International (ASTM):
 - 1. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation
 - 2. ASTM A653 - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

1.3 DELIVERY, STORAGE AND PROTECTION

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.
- B. Receive and accept products and report suspected defects and shipping discrepancies in compliance with the requirements of Section 01600.
- C. Product Packaging: Doors will be shipped in manufacturer's standard packaging with identification markings on each component or package.
- D. Product Compliance Inspection: Inspect delivered products for compliance with product descriptions in Part 2 herein. Report discrepancies to the Architect.
- E. Protect doors and frames with resilient packaging. Break seal on-site to permit ventilation.

1.4 PROJECT CONDITIONS

- A. Field Measurements: Verify that field measurements are as indicated on shop drawings.
- B. Coordination: Coordinate the work with door opening construction, door frame and door hardware installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Doors and Frames: Subject to compliance with requirements specified herein, provide flush doors and frames by one of the following:
1. Amweld Building Products Division.
 2. [Ceco Door \(an Assa Abloy Company\)](#).
 3. [Curries \(an Assa Abloy Company\)](#).
 4. [Deansteel](#).
 5. [Door Components Inc \(DCI\)](#).
 6. [Hollow Metal Express \(HMX\)](#).
 7. [Mesker](#).
 8. [Metal Products Inc \(MPI\)](#).
 9. [Pioneer Industries \(an Assa Abloy Company\)](#).
 10. [Premier](#).
 11. [Republic](#).
 12. [Security Metal Products \(SMP\) \(an Assa Abloy Company\)](#).
 13. [Steelcraft \(an Allegion Company\)](#).
- B. Provide products by the manufacturers listed herein. No substitutions allowed.

2.2 SUPPLIERS

- A. Provide door hardware from one of the national or local suppliers.
1. [DH Pace, Inc.](#), Springfield, MO, Mark Lyons, (417) 831-5585, walmartdoors@dhpaces.com.
 2. [Trudoor](#), (844) 878-3667.
 3. [AB Supply \(Architectural Building\)](#), (844) 809-3667.
 4. [Felix Thompson Company](#) (AR, OK), (479) 646-7321.
 5. [CDF Distributors](#), (855) 769-9895.
 6. [Doormart USA](#), (877) 561-3667.
 7. [DKS Doors](#), (817) 275-3070.
 8. [The Hallgren Company](#), (806) 798-3999.
 9. This list of suppliers is not exhaustive. Contact manufacturers for additional authorized local or national suppliers not listed.

2.3 DOORS

- A. Interior Doors: ANSI 250.8, Level 1 and Physical Performance Level C (Standard-Duty), 1-3/4 inches thick, Model 1 (Full Flush) 0.032 min. thickness (20 gage), cold-rolled steel, optional core construction as specified below.
- B. Exterior Doors: ANSI 250.11, Level 2 and Physical Performance Level B (Heavy Duty), 1-3/4 inches thick, Model 1 (Full Flush) 0.042 inch min. thickness (18 gage), ASTM A 653, Commercial Steel (CS), Type B, with an A60 zinc-iron-alloy (galvannealed) coating cold-rolled steel, polyurethane or polystyrene foam insulated core construction
1. Fabricate head flush with top edge to exclude water.
- C. Core Construction:
1. Polyurethane core foamed in place or laminated, R=10; 1/2 inch maximum voids in any direction. Strength of bond between core and steel face sheet shall exceed strength of core so delamination will not occur during operating conditions.
 2. Rigid core of polystyrene foam board, R=7. Strength of bond between core and steel face sheet shall exceed strength of core so that delamination will not occur under operating conditions.
 3. Honeycomb Core: Kraft fiber honeycomb with nominal 1 inch cell size and crush strength of 45 psi.
 4. If laminated insulation is used, apply adhesive full coverage to door face.

2.4 FRAMES

- A. Interior Drywall Frames: 0.053 min. thickness (16 gage), cold-rolled steel, mitered welded units.
 - 1. Jamb depth: Sized to fit wall thickness.
- B. Exterior Frames: (16 gage steel), A60 galvanized coating (ASTM A 653), mitered and welded units.
 - 1. Jamb depth: 5-3/4", unless otherwise indicated on Drawings.

2.5 ACCESSORIES

- A. Rubber Silencers: Resilient rubber. Specified in Section 08710.
- B. Glazing Stops: Rolled steel channel shape, butted corners. Prepare for countersink style screws, located no more than 2 inches from each end, and spaced no more than 12 inches on center.
- C. Mullions For Double Doors: Removable type, specified in Section 08710.
- D. Astragals for Double Doors: Steel, specifically for double doors. For rated pairs of doors, provide astragal to meet UL rating requirement. If doors are provided that maintain rating without an astragal, submit door manufacturer's literature indicating UL rating. If U-shaped astragal is used that does not require a coordinator, omit double door coordinator from applicable hardware set in Section 08710.
- E. Board Insulation Blocking: ASTM C578, Type IV (density 1.6 pcf minimum), 1 inch thick. Provide one of the following:
 - 1. Greenguard CM by Pactiv Building Products, Smyrna, GA (800) 241-4402.
 - 2. Styrofoam Square, by Dow Chemical Co., Midland, MI (800) 232-2436.
 - 3. Foamular 250, by Owens Corning, Toledo, OH (800) 438-7465.

2.6 PROTECTIVE COATINGS

- A. Bituminous Coating: Fibered asphalt emulsion, field applied.
- B. Primer: Exposed surfaces shall be cleaned, treated with Bonderite chemical and given one baked-on shop coat of gray synthetic primer.

2.7 FABRICATION

- A. Fabricate doors and frames in accordance with ANSI A250.8.
- B. Fabricate doors with hardware reinforcement welded in place.
- C. Provide weep-hole openings in bottom of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.
- D. Fabricate frames with hardware reinforcement plates welded in place.
- E. For welded frames, weld face joints continuously; grind, fill, dress, and make smooth, flush, and invisible.
- F. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
- G. Silencers: Prepare frames for silencers.
 - 1. Single Doors: Provide 3 single rubber silencers on strike side.
 - 2. Double Doors with Mullions: Provide 3 single rubber silencers on each door, on strike side.
 - 3. Double Doors Without Mullions: Provide 2 single silencers on frame head.
 - 4. Do not install silencers until frames have received their final finish coat.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify substrate conditions, opening sizes and tolerances are acceptable for proper installation.

3.2 INSTALLATION

- A. Install frames in accordance with ANSI A250.11.
- B. Install doors in accordance with ANSI A250.8.
- C. Coordinate with adjacent wall construction for anchor placement.
- D. Coordinate installation of glass and glazing.
- E. Coordinate installation of doors with installation of hardware specified in Section 08710.
- F. Provide board insulation blocking at exterior hollow metal frames. Glue blocking in frame jambs (strike side and hinge side) at height indicated on Drawings.

3.3 ADJUSTING AND CLEANING

- A. Test for smooth operation through full range of swing; make necessary adjustments.
- B. Coordinate adjustment of doors with installation of hardware. Adjust doors and hardware for smooth and balanced door movement. Comply with ANSI A117.1.

END OF SECTION

SECTION 08311 - ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fire-rated and non-rated access doors and frames for walls and ceilings.
- B. Related Sections:
 - 1. Section 09250 - Gypsum Board: Openings in gypsum board ceilings.
 - 2. Section 09900 - Paints and Coatings: Field paint finish.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM A 653 - Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - 2. ASTM A 879 - Steel Sheet, Zinc Coated by the Electrolytic Process for Applications Requiring Designation of the Coating Mass on Each Surface.
 - 3. ASTM A 1008 - Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.
 - 4. ASTM E 119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
- C. National Fire Protection Association (NFPA):
 - 1. NFPA 80 - Fire Doors and Windows.
 - 2. NFPA 252 - Fire Tests for Door Assemblies.
- D. Underwriters Laboratories (UL):
 - 1. UL 10B - Fire Tests of Door Assemblies.
 - 2. UL 263 - Fire Tests Of Building Construction And Materials.

1.3 QUALITY ASSURANCE

- A. Perform Work in accordance with UL requirements.
- B. Fire-Rated Access Doors and Frames: Provide units complying with NFPA 80 that are identical to assemblies tested for fire-test-response characteristics per the following test method and that are listed and labeled by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. NFPA 252 or UL 10B for vertical access doors and frames.
 - 2. ASTM E 119 or UL 263 for horizontal access doors and frames.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Provide access doors by one of the following manufacturers:
 - 1. Milcor, Inc (Commercial Products Group) Bensenville, IL; Contact Don Fessendon (630) 595-7320.
 - 2. Acudor Products, Inc., Fairfield, NJ. (800) 722-0501.
 - 3. Nystrom Building Products, Minneapolis, MN. (800) 547-2635 or (612) 781-7850.

2.2 STEEL MATERIALS

- A. Steel Sheet: Uncoated or electrolytic zinc-coated, ASTM A 879 with cold-rolled steel sheet substrate complying with ASTM A 1008, Commercial Steel (CS), exposed.
- B. Metallic-Coated Steel Sheet: ASTM A 653, Commercial Steel (CS) with A60 zinc-iron-alloy (galvannealed) coating or G60 mill-phosphatized zinc coating.
- C. Drywall Beads: 0.0299-inch zinc-coated steel sheet to receive joint compound.
- D. Manufacturer's standard finish factory primed finish.

2.3 ACCESS DOORS AND FRAMES FOR WALLS AND CEILINGS

- A. Flush Access Doors and Frames:
 - 1. Fabricated from steel sheet
 - 2. Exposed Trim Type:
 - a. Model NT by Nystrom.
 - b. Model M 3202 by Milcor.
 - c. Model UF 5000 by Acudor.
 - 3. Trimless Frame:
 - a. Model MW by Nystrom.
 - b. Model DW 3203 by Milcor.
 - c. Model DW 5040 by Acudor.
 - 4. Locations: Wall and ceiling.
 - 5. Door: Minimum 0.060-inch- thick sheet metal.
 - 6. Frame: Minimum 0.060-inch- thick sheet metal with 1-1/4-inch- wide, surface-mounted trim.
 - 7. Hinges: Spring-loaded, concealed-pin type or continuous piano.
 - 8. Latch: Cam latch with interior release. Provide latch for all units unless specified to have locks.
 - 9. Lock: Cylinder with 2 keys. Provide lockable cylinders as follows:
 - a. Exterior locations.
 - 10. Units larger than 24 inches on the hinge side shall have two locks or latches.
- B. Fire-rated, Insulated, Flush Access Doors and Frames:
 - 1. Fabricated from steel sheet
 - 2. Exposed Trim or Trimless Type:
 - a. Model IT or IW by Nystrom
 - b. Model UFR 3218 by Milcor.
 - c. Model FW 5050 by Acudor.
 - 3. Locations: Wall and ceiling surfaces.
 - 4. Fire-Resistance Rating: Not less than that of adjacent construction.
 - 5. Temperature Rise Rating: 250 deg F at the end of 30 minutes.
 - 6. Door: Flush panel with a core of mineral-fiber insulation enclosed in sheet metal with a minimum thickness of 0.036 inch.
 - 7. Frame: Minimum 0.060-inch- thick sheet metal with 1-inch- wide, surface-mounted trim.
 - 8. Hinges: Concealed-pin type or continuous piano.
 - 9. Automatic Closer: Spring type.
 - 10. Latch: Self-latching device operated with interior release.
 - 11. Size: Minimum 24 x 36 inches except where otherwise shown on the drawings.
- C. Substitutions: Not Permitted.

2.4 FINISH

- A. Base Metal Protection: Factory prime coat units with electrostatic baked on electrostatic powder. For ceiling units, prime exposed edges with coat of white rust-inhibitive paint.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Verify rough openings for door and frame are correctly sized and located.
- B. Beginning of installation means acceptance of existing conditions.

3.2 INSTALLATION

- A. Install units in accordance with manufacturer's instructions.
- B. Install units plumb, square and flush with adjacent ceiling or wall surface. Secure rigidly in place.
- C. Position to provide convenient access to concealed work requiring access.
- D. Provide weather tight installation at exterior locations

3.3 ACCESS DOOR SCHEDULE

- A. Provide access door and frame suitable for the application.
- B. Install trimless access door and frame in interior gypsum board walls and ceilings and other locations suitable and adaptable for trimless installation
- C. Install exposed trim access door and frame where at exterior locations and where impractical to install trimless installation.
- D. Install access doors in ceilings and walls in locations as shown on the Drawings, at valves, controls, and manual dampers requiring access, and as required by code and governing authorities.
- E. For access doors adjacent to secure areas, coordinate location with Owner's Construction Manager.

END OF SECTION

08311-4

SECTION 08335 - OVERHEAD COILING DOORS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Exterior, non-fire rated overhead coiling doors.
- B. Related Requirements:
 - 1. Section 05500 - Metal Fabrications: Miscellaneous concealed structural support for overhead coiling door.
 - 2. Section 07840 - Firestopping: Installation of perimeter and penetration firestopping.
 - 3. Section 07900 - Joint Sealants: Installation of sealant at visible joints around frames and tracks.
 - 4. Section 09900 - Paints and Coatings: Application of field paint finish.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. National Fire Protection Association (NFPA)
 - 1. NFPA 80 - Standard for Fire Doors and Windows.
 - 2. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies
- C. UL - Underwriters Laboratories, Inc.
 - 1. 10b – Fire Test of Door Assemblies

1.3 DELIVERY, STORAGE AND HANDLING

- A. Product Delivery: Deliver products to jobsite to be received by the Contractor. coordinate product delivery and installation. in compliance with the owner products delivery requirements of Section 01600.
- B. Product Packaging: Deliver Overhead coiling doors in manufacturer's standard packaging with identification markings on each component or package.
- C. Receive and accept owner furnished products and report suspected defects or discrepancies in compliance with the requirements of Section 01600.
- D. Handle, store, and protect products in accordance with Section 01600.

PART 2 - PRODUCTS

2.1 OVERHEAD COILING DOORS

- A. [Overhead Door Corporation](#), Dallas, TX. National Account Sales Manager: John Blaskovich (800) 972-1730.

2.2 PERFORMANCE REQUIREMENTS

- A. Structural Performance, Exterior Overhead Coiling Doors: Doors shall meet performance requirements specified without failure due to defective manufacture, fabrication, installation, or other defects in construction and without requiring temporary installation of reinforcing components.
 - 1. Design doors to sustain wind load pressures shown on the drawings as calculated by the manufacturer in accordance with ASCE/SEI 7. (See Structural Drawing Sheet S0) Exterior coiling doors shall withstand the effects of gravity loads, and the loads and stresses within limits and under conditions, locations, and door sizes indicated when tested in accordance with ASTM E 330 or DASMA 108.

2. Design doors to withstand design wind loads without evidencing deformation or disengagement of door components, shall remain in the opening throughout the duration of the test, and shall be deemed fully operable at the conclusion of the test in accordance with test standards specified above.

2.3 QUALITY ASSURANCE

- A. Installer Qualifications: Installer shall be by a manufacturer's authorized representative or distributor who is trained and approved for both installation and maintenance of units required for this Project.

2.4 DESCRIPTION

- A. Provide the door models specified below as applicable and as shown on the drawings. Provide manufacturer's standard components except as otherwise specified.
- B. Exterior Insulated Door: Model: Series 625, Stormtite.
 1. Components:
 - a. Curtain: Flat profile, insulated, roll-formed, 24 gage galvanized slats.
 - b. Electric Motor Operation (where indicated on Drawings): Provide UL listed electric operator, size as recommended by manufacturer to move door in either direction at not less than 2/3 foot or more than 1 foot per second.
 - 1) Sensing Edge Protection: Electric sensing edge.
 - 2) Operator Controls: Push-button and key operated control stations with open, close, and stop buttons for surface mounting, for interior location.
 - c. Wall Mounting Condition: Face-of-wall mounting.
 2. Finish:
 - a. Galvanized Steel:
 - 1) Primer: 0.2 mils thick baked-on rust-inhibitive primer, roll coating process.
 - 2) Finish Coat: Factory applied 0.6 mils thick baked-on polyester powder coated top coat.
 3. Color: Factory White unless otherwise as shown on Drawings.

2.5 EXAMINATION

- A. Examine surfaces and adjacent areas. Do not proceed with Work until unsatisfactory conditions have been corrected.
 1. Openings shall be to the dimensions indicated.
 2. Headers shall be level and parallel with finish floor.
 3. Door support framing installed at locations indicated.

2.6 PREPARATION

- A. Interface with Other Work.
 1. Coordinate construction of door openings within fire rated partition. Ensure that door head is constructed parallel to floor.
 2. Coordinate installation and locations of structural supports for door assembly.

2.7 FIELD QUALITY CONTROL

- A. Site Tests: Upon completion of installation, test operation of door.
 1. Make all necessary adjustments as required and retest.
 2. After acceptance of test results, re-set door to original position.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install doors in accordance with manufacturer's published instructions.

- B. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.
- C. Fit and align assembly including hardware; level and plumb, to provide smooth operation.
- D. Install chain keeper at each door in accordance with manufacturer's instructions.

3.2 CONTRACTOR RESPONSIBILITY

- A. Provide openings, size as scheduled on Drawings, with head, jambs, and sill as detailed.
- B. Contractor shall field paint visible surfaces of curtain guides and framing when door is in open position as specified in Section 09900.
- C. Install metal fabrications for support and attachment of door assembly. Door structural supports shall be as specified in Section 05500.
- D. Provide sealants and backing materials at frame perimeter as specified in Section 07900.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

08335-4

SECTION 08360 - SECTIONAL DOORS

PART 1 - GENERAL

1.01 SUMMARY

- A. Section includes
 - 1. Manually operated sectional doors.
 - 2. Electrically operated sectional doors.

1.02 ACTION SUBMITTALS

- A. Product Data: For each type and size of sectional door and accessory.
 - 1. Include construction details, material descriptions, dimensions of individual components, profile door sections, and finishes.
 - 2. Rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.
 - 1. Include plans, elevations, sections, and mounting details.
 - 2. Include details of equipment assemblies. Indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
 - 4. Wiring Diagrams: For power, signal, and control wiring.
- C. Samples for Verification: For each type of exposed finish on the following components, in manufacturer's standard sizes:
 - 1. Flat door sections with attached perimeter gasket.

1.03 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Sample Warranties: For special warranties.

1.04 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sectional doors to include in maintenance manuals.

1.05 QUALITY ASSURANCE

- A. General: Provide each sectional door as a complete unit produced by one manufacturer, including frames, sections, brackets, guides, tracks, counterbalance mechanisms, hardware, operators and installation accessories, to suit openings and head room allowable.
- B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.

- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC A117.1.

1.06 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of sectional doors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Failure of components or operators before reaching required number of operation cycles.
 - c. Faulty operation of hardware.
 - d. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use; rust through.
 - e. Delamination of exterior or interior facing materials.
 - 2. Warranty Period: Two years from date of Substantial Completion.
- B. Special Finish Warranty: Manufacturer agrees to repair or replace components that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS, GENERAL

- A. Source Limitations: Obtain sectional doors from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. General Performance: Sectional doors shall comply with performance requirements specified without failure due to defective manufacture, fabrication, installation, or other defects in construction and without requiring temporary installation of reinforcing components.
- B. Structural Performance, Exterior Doors: Capable of withstanding the design wind loads.
 - 1. Wind Loading: Design and reinforce sectional doors to withstand wind loading pressures indicated on structural drawings and as required by local jurisdictions having authority on over the project.
 - 2. Testing: According to ASTM E 330.
 - 3. Deflection Limits: Design sectional doors to withstand design wind loads without evidencing permanent deformation or disengagement of door components.
 - a. Deflection of door sections in horizontal position (open) shall not exceed 1/120 of the door width.
 - 4. Operability under Wind Load: Design sectional doors to remain operable under design wind load, acting inward and outward.

- C. Seismic Performance: Sectional doors shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- D. Environmental Standards: Coating materials shall comply with provisions of the following:
 - 1. Environmental Protection Agency (EPA) National Volatile Organic Compound (VOC) Emission Standards for Architectural Coatings, unless more stringent standards are required by authorities having jurisdiction.
- E. Environmental Standards: Plastic foam insulation shall comply with provisions of the following:
 - 1. United National Environmental Program (UNEP) and Environmental Protection Agency (EPA) requirements on the elimination of chlorofluorocarbons (CFC's) blowing agent.
 - 2. Only plastic foam insulation using alternative blowing agent complying with Environmental Protection Agency (EPA) requirements on Volatile Organic Compounds (VOC) shall be used; unless the manufacturer is exempt.

2.03 DOOR ASSEMBLY

- A. Sectional Door: Sectional door formed with hinged sections and fabricated according to DASMA 102 unless otherwise indicated.
 - 1. Basis of Design: 4 Front Engineered Solutions, TKO CruiserWeight or WelterWeight as required to meet structural requirements.
 - 2. Approved Alternate: DL Manufacturing, PxV or MxV Energy-Absorbing Door as required to meet structural requirements.
- B. Operation Cycles: Door components and operators capable of operating for not less than 50,000. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
- C. Air Infiltration: Maximum rate of 0.4 cfm/sq. ft. (2.03 L/s per sq. m) at 15 and 25 mph (24.1 and 40.2 km/h) when tested according to ASTM E 283.
- D. Steel Sections: Zinc-coated (galvanized) steel sheet with G90 (Z275) zinc coating.
 - 1. Section Thickness: 1.75 inches (44 mm) minimum.
 - 2. Exterior-Face, Steel Sheet Thickness: 0.040-inch- (1.02-mm-) 20 gage, minimum, nominal coated thickness.
 - a. Surface: Flat.
 - 3. Insulation: Foamed in place.
 - 4. Interior Facing Material: Zinc-coated (galvanized) steel sheet with a nominal coated thickness of manufacturer's recommended dimension to comply with performance requirements.
- E. Track Configuration: Vertical-lift track.
- F. Weatherseals: Fitted to bottom and top and around entire perimeter of door.
- G. Windows: Approximately 6 by 20 inches and spaced apart the approximate distance as indicated on Drawings; in one row(s) at height indicated on Drawings; installed with glazing of the following type:

1. Clear Polycarbonate Plastic: 3-mm-thick, transparent, fire-retardant, UV-resistant, polycarbonate sheet manufactured by extrusion process.
 2. Set glazing in vinyl, rubber, or neoprene glazing channel for metal-framed doors, as required. Provide removable stops of same material as door-section frames.
 3. Window location to be coordinated on the side of door for visibility to outside trailers from the inside dock equipment control mounting location.
- H. Roller-Tire Material: Case-hardened steel.
- I. Locking Devices: Equip door with slide bolt for padlock.
1. Locking Device Assembly: Single-jamb side locking bars, operable from.
- J. Counterbalance Type: Weight counterbalance.
- K. Manual Door Operator: Push-up operation.
- L. Door Finish:
1. Baked-Enamel or Powder-Coat Finish: Color and gloss as selected by Architect from manufacturer's full range.
 2. Factory Prime Finish: Manufacturer's standard color.
 3. Finish of Interior Facing Material: Match finish of exterior section face.

2.04 POLYMER DOOR SECTIONS

- A. Exterior Section Faces and Frames: UV inhibited, weather resistant PVC. Insulation closed cell polyurethane r-16 (minimum). End cap injection molded plastic.
1. Fabricate section faces from single sheets to provide sections not more than 24 inches (610 mm) high and of indicated thickness. Roll horizontal meeting edges to a continuous, interlocking, keyed, rabbeted, shiplap, or tongue-in-groove weather-resistant seal, with a reinforcing flange return.
 2. For insulated doors, provide sections with continuous thermal-break construction, separating the exterior and interior faces of door.
- B. Section Ends and Intermediate Stiles: Enclose open ends of sections with channel end stiles formed from galvanized-steel sheet not less than 0.064-inch- (1.63-mm-) nominal coated thickness and welded to door section. Provide intermediate stiles formed from not less than 0.064-inch- (1.63-mm-) thick galvanized-steel sheet, cut to door section profile, and welded in place. Space stiles not more than 48 inches (1219 mm) apart.
- C. Reinforce bottom section with a continuous channel or angle conforming to bottom-section profile.
- D. Reinforce sections with continuous horizontal and diagonal reinforcement, as required to stiffen door and for wind loading. Provide galvanized-steel bars, struts, trusses, or strip steel, formed to depth and bolted or welded in place. Ensure that reinforcement does not obstruct vision lites.
- E. Provide reinforcement for hardware attachment.
- F. Foamed-in-Place Thermal Insulation: Insulate interior of steel sections with door manufacturer's standard polyurethane insulation, foamed in place to completely fill interior of section and pressure bonded to face sheets to prevent delamination under wind load, and with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84. En-

close insulation completely within steel sections and the interior facing material, with no exposed insulation.

- G. Interior Facing Material: Zinc-coated (galvanized), cold-rolled, commercial steel (CS) sheet, complying with ASTM A 653/A 653M, with indicated thickness.
- H. Fabricate sections so finished door assembly is rigid and aligned, with tight hairline joints and free of warp, twist, and deformation.

2.05 TRACKS, SUPPORTS, AND ACCESSORIES

- A. Tracks: Manufacturer's standard, galvanized-steel or synthetic track system of configuration indicated, sized for door size and weight, designed for lift type indicated and clearances indicated on Drawings, Provide complete system including brackets, bracing, and reinforcement to ensure rigid support of ball-bearing roller guides for required door type, size, weight, and loading.
 - 1. Galvanized Steel: ASTM A 653/A 653M, minimum G60 (Z180) zinc coating.
 - 2. Slot vertical sections of track at 2 inches o.c. for door drop safety device.
 - 3. Weld or bolt to track supports.
 - 4. Slope tracks at an angle from vertical or design tracks to ensure tight closure at jambs when door unit is closed.
 - 5. Track Reinforcement and Supports: Galvanized-steel members to support track without sag, sway, and vibration during opening and closing of doors. Slot vertical sections of track spaced 2 inches (51 mm) apart for door-drop safety device.
 - a. For Vertical Track: Continuous reinforcing angle attached to track and attached to wall with jamb brackets.
 - b. Provide Anti-drift Down Lock to hold door full opened without the ability to drift down.
- B. Weatherseals: Replaceable, adjustable, continuous, compressible weather-stripping gaskets of flexible vinyl, rubber, or neoprene fitted to bottom and top of sectional door unless otherwise indicated.
 - 1. Provide full perimeter combination bush/seal kit at jambs and head for a fully weather-tight installation.
 - 2. Provide manufacturers standard bottom brush kit to seal the door tightly to the floor

2.06 HARDWARE

- A. General: Heavy-duty, corrosion-resistant hardware, with hot-dip galvanized, stainless-steel, or other corrosion-resistant fasteners, to suit door type.
- B. Hinges: Heavy-duty, galvanized-steel hinges of not less than 0.079-inch- (2.01-mm-) nominal coated thickness at each end stile and at each intermediate stile, according to manufacturer's written recommendations for door size. Attach hinges to door sections through stiles and rails with bolts and lock nuts or lock washers and nuts. Use rivets or self-tapping fasteners where access to nuts is impossible. Provide double-end hinges where required, for doors more than 16 feet (4.88 m) wide unless otherwise recommended by door manufacturer.
- C. Rollers: Heavy-duty rollers with steel ball-bearings in case-hardened steel races, mounted with varying projections to suit slope of track. Extend roller shaft through both hinges where double hinges are required. Provide 3-inch- (76-mm-) diameter roller tires for 3-inch- (76-mm-) wide track and 2-inch- (51-mm-) diameter roller tires for 2-inch- (51-mm-) wide track.

1. Case-hardened steel tires, for normal installations.
- D. Push/Pull Handles: Equip each push-up operated door with galvanized-steel lifting handles on each side of door.
1. Color: As selected by Architect.
 2. Quantity: Two.

2.07 LOCKING DEVICES

- A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, unless otherwise required to achieve wind loading requirements, located on single-jamb side, operable from inside only.

2.08 COUNTERBALANCE MECHANISM

- A. Weight Counterbalance: Counterbalance mechanism consisting of filled pipe weights that move vertically in a PVC pipe. Connect pipe weights with cable to weight-cable drums mounted on torsion shaft made of steel tube or solid steel.
- B. Cable Drums and Shaft for Doors: Cast-aluminum or gray-iron casting cable drums mounted on torsion shaft and grooved to receive door-lifting cables as door is raised. Mount counterbalance mechanism with manufacturer's standard ball-bearing brackets at each end of torsion shaft. Provide one additional midpoint bracket for shafts up to 16 feet (4.88 m) long and two additional brackets at one-third points to support shafts more than 16 feet (4.88 m) long unless closer spacing is recommended by door manufacturer.
- C. Cables: Galvanized-steel, multistrand, lifting cables with cable safety factor of at least 7 to 1.
- D. Cable Safety(Cable Break) Device: Include a spring-loaded steel or spring-loaded bronze cam mounted to bottom door roller assembly on each side and designed to automatically stop door if either lifting cable breaks.
- E. Bracket: Provide anchor support bracket as required to connect stationary end of spring to the wall and to level the shaft and prevent sag.
- F. Bumper: Provide spring bumper at each horizontal track to cushion door at end of opening operation.

2.09 MANUAL DOOR OPERATORS

- A. General: Equip door with manual door operator by door manufacturer.
- B. Push-up Operation: Lift handles and pull rope for raising and lowering doors, with counterbalance mechanism designed so that required lift or pull for door operation does not exceed 25 lbf (111 N).

2.10 ELECTRIC DOOR OPERATORS

- A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and "operation cycles" requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
1. Comply with NFPA 70.

2. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6; with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.
- B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.
- C. Door-Operator Type: Unit consisting of electric motor, gears, pulleys, belts, sprockets, chains, and controls needed to operate door and meet required usage classification.
1. Jackshaft, Side Mounted: Jackshaft operator mounted on the inside front wall on right side of door and connected to torsion shaft with an adjustable coupling or drive chain.
- D. Electric Motors: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 11 05 13 "Common Motor Requirements for Equipment" unless otherwise indicated.
1. Motor Type and Controller: Reversible motor and controller (disconnect switch) for motor exposure indicated.
 2. Motor Size: Minimum size as indicated. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than 8 in./sec. (203 mm/s) and not more than 12 in./sec. (305 mm/s), without exceeding name-plate ratings or service factor.
 3. Operating Controls, Controllers (Disconnect Switches), Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
 4. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
 5. Use adjustable motor-mounting bases for belt-driven operators.
- E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
- F. Obstruction Detection Device: Equip motorized door with indicated external automatic safety sensor capable of protecting full width of door opening. Activation of device immediately stops and reverses downward door travel.
1. Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
 - a. Self-Monitoring Type: Four-wire configured device designed to interface with door-operator control circuit to detect damage to or disconnection of sensor edge.
- G. Remote-Control Station: Continuous-contact for down only, three-button control station with push-button controls labeled "Open," "Close," and "Stop."
1. Interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
 2. Provide second remote control unit located as directed by owner in Area 100 office.
- H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed 25 lbf (111 N).

- I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.
- K. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with regulatory requirements for accessibility.

2.11 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA's "Metal Finishes Manual for Architectural and Metal Products (AMP 500-06)" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.12 STEEL AND GALVANIZED-STEEL FINISHES

- A. Factory Prime Finish: Manufacturer's standard primer, compatible with field-applied finish. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
- B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install sectional doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
- B. Install to provide weather tight installation. Daylight not to be visible through the exterior envelope from inside the building.
- C. Tracks:
 - 1. Fasten vertical track assembly to opening jambs and framing, spaced not more than 24 inches (610 mm) apart.

- D. Accessibility: Install sectional doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.

3.03 STARTUP SERVICES

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Test and adjust controls and safety devices. Replace damaged and malfunctioning equipment.

3.04 ADJUSTING

- A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
- B. Lubricate bearings and sliding parts as recommended by manufacturer.
- C. Adjust doors and seals to provide weather-resistant fit around entire perimeter.
- D. Touch-up Painting: Immediately after welding galvanized materials, clean welds and abraded galvanized surfaces and repair galvanizing to comply with ASTM A 780/A 780M.

3.05 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain sectional doors.

08360-10

SECTION 08411 - ALUMINUM FRAMED STOREFRONTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Aluminum glazed framing systems.
- B. Related Sections:
 - 1. Section 01600 – Product Requirements: Contractor’s Products Selection checklist.
 - 2. Section 08462 - Automatic Sliding Entrance Doors: Coordination between components.
 - 3. Section 08800 - Glazing: Glass products.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. Architectural Aluminum Manufacturers Association (AAMA):
 - 1. AAMA 611 – Voluntary Specifications for Anodized Architectural Aluminum.
- C. ASTM International (ASTM):
 - 1. ASTM A 123 - Zinc (Hot-Dip Galvanized) Coatings On Iron And Steel Products
 - 2. ASTM E 283 - Standard Test Method For Determining Rate Of Air Leakage Through Exterior Windows, Curtain Walls, And Doors Under Specified Pressure Differences Across The Specimen
 - 3. ASTM E331 - Water Penetration Of Exterior Windows, Skylights, Doors, And Curtain Walls By Uniform Static Air Pressure Difference
 - 4. ASTM E 1886 - Standard Test Method for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Missile(s) and Exposed to Cyclic Pressure Differentials.
 - 5. ASTM E 1996 - Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Windborne Debris in Hurricanes.
- D. Americans with Disabilities Act (ADA), ADA-ADAAGS - 2010 ADA Standards for Accessible Design.
- E. American National Standards Institute (ANSI):
 - 1. ANSI A117.1 - Specifications for Making Buildings and Facilities Accessible to and Usable by Physically Handicapped People.

1.3 SYSTEMS DESCRIPTION

- A. Storefront System Performance Requirements:
 - 1. Air Infiltration: ASTM E 283. Air infiltration rate shall not exceed 0.06 cfm/ft² at a static air pressure differential of 6.24 psf.
 - 2. Water Penetration Under Static Pressure: Systems do not evidence water penetration through fixed glazing and framing areas when tested according to ASTM E 331 at a minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than 6.24 lbs/sq. ft.
 - 3. Structural Performance: Maximum deflection of L/175 of span under a windload pressure calculation by the manufacturer based on the design wind loads shown on the Structural Drawings but not less than 20 psf.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturer: [Kawneer Company, Inc.](#), National Accounts Contacts as follows:
 - a. Eastern Area: Bloomsburg, PA, (570) 784-8000 or Harrisonburg, VA, (540) 433-2711.
 - b. Southern/Central Area: Springdale, AR, (479) 756-2740.
 - c. Western Area: Visalia, CA, (559) 651-4000.
- B. Kawneer product designations are used within this Section to identify aluminum framed storefront types and associated products unless noted otherwise.
- C. Alternate Manufacturers: Subject to compliance with project requirements, equivalent storefront and accessories by the following manufacturers may be provided:
 - 1. [EFCO Corporation](#); Monett, MO; (800) 221-4169.
 - 2. [Tubelite, Inc.](#); Reed City, MI; (800) 866-2227.
 - 3. [Oldcastle Building Envelope](#).(Vistawall), Santa Monica, CA, (866) 653-2278.
- D. Provide products by the manufacturers listed herein. No substitutions allowed.

2.2 SUPPLIERS

- A. Storefront suppliers may be identified by selecting the following links to view distribution maps or by contacting the manufacturers directly:
 - 1. [Kawneer](#): Distributed from multiple proprietary service centers.
 - 2. [EFCO](#): Distributed from multiple independent distribution centers.
 - 3. [Tubelite](#): Distributed from multiple nationwide independent distributors.
 - 4. [Oldcastle](#): Distributed from one of 78 proprietary distribution centers among 23 states.

2.3 FRAMING

- A. Interior Framing System: TRIFAB VG 450, by Kawneer. 1-3/4 x 4-1/2 inch nominal dimension, extruded aluminum flush glazed framing system for un-insulated glazing systems.
- B. Exterior Framing System: TRIFAB VG 451, by Kawneer. 2 x 4-1/2 inch nominal dimension, extruded aluminum flush glazed framing system for insulated glazing systems.

2.4 FABRICATION

- A. Fabricate components with minimum clearances and shim spacing around perimeter of assembly, yet enabling installation and dynamic movement of perimeter seal.
- B. Rigidly fit and secure joints and corners. Make joints and connections flush, hairline, and weatherproof.
- C. Develop drainage holes with moisture pattern to exterior.
- D. Prepare components to receive anchor devices. Fabricate anchorage items. Arrange fasteners, attachments, and jointing to ensure concealment from view.
- E. Reinforce framing members for imposed loads.
- F. Accessories:
 - 1. Break Metal Closures: Minimum 0.040 inch thick aluminum x length required. Finish shall match adjacent related work.
 - 2. Provide clean sharp edges, uniform in appearance and consistent in shape. Secure in place with concealed fasteners where possible. Exposed fasteners shall match enclosure fabrication.

3. Sill Flashing: Fabricate to configuration indicated and required of minimum 0.040 inch aluminum having exposed edges hemmed. Finish to match adjacent related work.

2.5 FINISHES

- A. Exposed Aluminum Surfaces: Architectural Class I anodic coating AA-M12 C22 A41, conforming to AAMA 611, 0.018 mm minimum thickness #14 Clear, unless otherwise indicated on Drawings.
- B. Provide clear finish for all new storefront systems unless partial replacement or repair; then, verify and match existing storefront system color. Maintain same color range. Do not mix light and dark shades.
- C. Concealed Steel Items: Galvanized in accordance with ASTM A 123 to 2.0 oz/sq ft.
- D. Apply two coats of bituminous paint to concealed aluminum and steel surfaces in contact with cementitious or dissimilar materials.

PART 3 - EXECUTION

3.1 PREPARATION

- A. General Contractor shall provide rough openings including rough masonry openings and modifications to existing aluminum storefront components and glazing as shown on the drawings or as required for complete installation of work specified herein.

3.2 EXAMINATION

- A. Verify wall openings are ready to receive work of this Section. Verify dimensions, tolerances, and method of attachment with other work.
- B. Beginning of installation means acceptance of existing conditions.

3.3 INSTALLATION

- A. Install storefront system components in accordance with manufacturer's instructions.
- B. Use anchorage devices to securely attach frame assembly to structure.
- C. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.
- D. Break Metals:
 1. Set sill flashing in full bed of sealant. Provide riveted end laps of not less than 3 inches.
- E. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.
- F. Install perimeter sealant and backing materials in accordance with Section 07900.
- G. Install glass in accordance with Section 08800, to glazing method required to achieve performance criteria.
- H. Set thresholds in bed of mastic and secure.

3.4 TOLERANCES

- A. Variation from Plane: 0.03 inches per foot maximum or 0.25 inches per 30 feet, whichever is less.
- B. Misalignment of Two Adjoining Members Abutting in Plane: 0.015 inches.

3.5 FIELD QUALITY CONTROL

- A. Inspect storefront system installation and attachment to building structure.

3.6 CLEANING

- A. Wash down exposed surfaces using a solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.
- B. Remove excess sealant by moderate use of mineral spirits or other solvent acceptable to sealant manufacturer.

END OF SECTION

SECTION 08462 - AUTOMATIC SLIDING ENTRANCE DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Electric operated automatic sliding entrance doors and control systems, with transom assemblies, including frames, glazing, and hardware.

B. Related Requirements:

1. Section 07900 - Joint Sealers.
2. Section 08800 - Glazing: Storefront system glass.
3. Section 16100 - Wiring Methods: Power to automatic doors.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Conference:

1. Convene Pre-installation Conference at Site one week prior to commencing Work of this Section. Require attendance of parties directly affecting Work of this Section, including, but not limited to, Owner's Construction Manager, Contractor Project Field Superintendent, Aluminum Storefront job foreman, Automatic Entrance Door Manufacturer's Technical Representative, electrical subcontractor field supervisory personnel, and any subcontractor, supplier, or installer directly affecting, or affected by Work of this Section.
2. Contact Owner's Construction Manager two weeks prior to Pre-installation Conference to confirm schedule.
3. Review foreseeable methods and procedures related to automatic entrance door Work, including the following:
 - a. Tour, inspect, and discuss condition of door assembly openings, connections to building structure, electrical requirements, and other preparatory work performed by other trades.
 - b. Review automatic entrance door system requirements including drawings, specifications and other contract documents.
 - c. Review required submittals, both completed and yet to be completed.
 - d. Review and finalize construction schedule related to automatic entrance door Work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - e. Review required inspections, operational testing, and certifying procedures.
 - f. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
 - g. Review preparation and installation procedures and coordinating and scheduling required with related work.
4. Record discussions of conference and decisions and agreements (or disagreements) reached, and furnish copy of record to each party attending.

1.3 DELIVERY, STORAGE AND HANDLING

- A. Handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.

PART 2 - PRODUCTS

2.1 MANUFACTURER/INSTALLER

A. [Stanley Access Technologies](#), Farmington, CT.

1. Contact: Vanessa Lopez, National Accounts Project Manager, (860) 507-2509.

2.2 ADMINISTRATIVE REQUIREMENTS

- A. Pre-Installation Conference: Attend pre-installation conference at Site one week prior to commencing Work.
 - 1. Review foreseeable methods and procedures related to automatic entrance door Work, including the following:
 - 2. Tour, inspect, and discuss condition of door assembly openings, connections to building structure, electrical requirements, and other preparatory work performed by other trades.
 - 3. Review automatic entrance door system requirements including drawings, specifications and other contract documents.
 - 4. Review required submittals, both completed and yet to be completed.
 - 5. Review and finalize construction schedule related to automatic entrance door Work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - 6. Review required inspections, operational testing, and certifying procedures.
 - 7. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
 - 8. Review preparation and installation procedures and coordinating and scheduling required with related work.

2.3 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Automatic and barrier free door equipment shall be installed by the manufacturer's factory trained installers or shall be installers as recommended and approved by the automatic door operator manufacturer.
 - 2. Installers shall be certified and recognized by and in accordance with the AAADM Inspector Certification Program.

2.4 PERFORMANCE REQUIREMENTS FOR AUTOMATIC SLIDING ENTRANCE DOORS

- A. Design system to operate, hold open, and close doors under wind and suction loads calculated by the manufacturer based on the design wind loads shown on the Structural Drawings but not less than a wind load pressure of 20 PSF.
- B. Provide for dimensional distortion of components during operation.
- C. Provide for opening and closing operation of door panels in the event of power failure.
- D. Operating Temperature Range: -20 F to 130 F ambient.
- E. Air infiltration: Maximum air leakage through fixed glazing and framing of automatic sliding doors shall be in accordance with ASHRAE 90.1.
- F. Eliminate system performance interference by ambient light and radio frequencies.
- G. Provide sliding doors and side panels with break-away capability where scheduled or shown.

2.5 REGULATORY REQUIREMENTS FOR AUTOMATIC SLIDING ENTRANCE DOORS

- A. Conform to applicable code for automatic release of control drive unit to permit manual opening of doors.
- B. Comply with ANSI A156.10 and ANSI A117.1.
- C. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories, Inc., as suitable for the purpose specified and indicated.

2.6 AUTOMATIC SLIDING ENTRANCE DOORS

- A. Exterior Doors: Dura-Glide Series 3000 with Stan-Vision by Stanley. Overhead concealed slide door system with sidelights and transom where indicated, full breakout of doors and sidelights unless otherwise scheduled to be non-breakaway, and doorway monitoring device to control door opening, closing, and hold open functions, single or pair as indicated.
- B. Interior Doors: Dura-Glide Series 3000 with Stan-Vision as manufactured by Stanley. Overhead concealed slide door system with sidelights and transom (interior) where indicated, full breakout of doors and sidelights unless otherwise scheduled to be non-breakaway, and doorway monitoring device to control door opening, closing, and hold open functions, single or pair as indicated.
 - 1. Door and Transom Sizes: As shown on Drawings.

2.7 OPERATING SYSTEM COMPONENTS

- A. Visual Sensing System (Motion Detector): Stan-Vision Series as manufactured by Stanley.
 - 1. The system consists of the following major components:
 - a. Two CCD (Closed Circuit Digital) visual sensors with mounting templates, one visual sensor controller, a four-channel encoder, two RG-59 cables for connecting the visual sensors to the visual sensor controller.
 - 2. The system shall connect with the Stanley interface board, motor encoder assembly, and the Stanley Dura-Glide microprocessor control box.
 - 3. Provide one unit center mounted above doorway on each side of header.
- B. Power Requirements: Dedicated 120V AC, 5 Amp, 60 Hz, single phase power with solid earth ground connection.

2.8 DOOR COMPONENTS, HARDWARE AND ACCESSORIES

- A. Doors: Narrow stile aluminum doors.
- B. Top Rail: Manufacturer's standard.
- C. Bottom Rail: 10 inches high.
- D. Horizontal Muntins: Provide two muntins, locate at 24 inches and 42 inches above finish floor. Align with bumper guards and push bars on aluminum storefront system entrance door as indicated on Drawings.
- E. Stiles: 2-1/4 inches.
- F. Finish:
 - 1. Exposed Aluminum Surfaces: Architectural Class II anodic coating, AA-M12 C22 A31, conforming to AAMA 611, 0.010 mm minimum thickness. #17 Clear, unless otherwise indicated on Drawings.
- G. Door Hardware and Accessories:
 - 1. Pivots: Allows break-away sliding panel and sidelights to break away to full open position to provide immediate egress at any point in door movement.
 - a. Panic break-away shall be code approved, acceptable to Authorities Having Jurisdiction.
 - 2. Top Door Arm: Door holders for all break-away door panels.
 - 3. Quick disconnect wiring harness.
 - 4. Power Switch: 5 position "On/Off/Hold Open" switch; full automatic, reduced automatic, and exit only.
 - 5. Adjustable door sweeps (exterior doors only).
 - 6. Finger Protection: Provide finger protection between sidelight and sliding door when door is in open position.
 - 7. Deadlock: Manufacturer's standard deadbolt operated by keyed cylinders on interior and exterior with lock position indicator on the interior.
 - 8. Slide doors shall include two point lock securing lead edges of door stiles together and to hanger assembly.
 - 9. Keyed Cylinder (Exterior): Specified in Section 08710.
 - 10. Recessed Access Control Package.
 - 11. Electric Solenoid Locking System (Exterior Doors): Provide automatic locking mechanism to secure doors

08462-3

in closed position when the door is closed to outside entry (ENTER/NO). Provide fail-secure control. Provide door unit with exterior access by key control switch mounted at outside jamb to disengage electric solenoid locking system and open door.

12. "Watchdog" monitoring of microprocessor.
13. Perimeter pile weatherstripping.
14. Thresholds:
 - a. Provide aluminum threshold of profile shown for doors when scheduled in Section 08710.
 - b. Provide edge profile suitable for installation adjacent to entrance tile where applicable.
15. Length: Opening width plus 2 inches minimum.
16. Glass Guards (Crash Bars): Nominal 1/2 inch by 2 inch aluminum bar with 1 inch projection from mounting surface. Mount on doors where and as shown on Drawings

H. Doors shall be rendered non-breakaway when scheduled on Drawings.

2.9 GLASS

- A. Glass shall be type as specified below and conforming to the requirements specified in Section 08800.
- B. Interior Doors, Sidelites, and Transoms: Clear tempered glass.
- C. Exterior Doors, Sidelites, and Transoms.
 1. Tinted tempered glass, Reference 08800 for tint color

2.10 EXAMINATION

- A. Examine existing conditions with Contractor prior to start of door installation.
- B. Examine surfaces and adjacent areas in which Work is performed. Report conditions that may adversely affect satisfactory execution. Do not proceed with Work until unsatisfactory conditions have been corrected.

2.11 INSTALLATION

- A. Install products in accordance with manufacturer's published instructions.
- B. Use anchorage devices to securely fasten assembly to adjacent construction without distortion or stress.
- C. Install hardware in accordance with ANSI A117.1 requirements and local adopted disabled access requirements for hardware.
- D. Seal joints between door frames and walls in accordance with requirements specified in Section 07900.

2.12 TESTING AND INSPECTION

- A. Site Tests: Upon completion of installation, test operation of automatic entrance doors and operating system. Make all necessary adjustments as required and retest.
- B. Inspection:
 1. Inspect automatic entrance doors and operating system installation in accordance with AAADM requirements.
- C. Correct deficiencies in Work which inspection indicates are not in compliance with Contract Documents.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine existing conditions with Automatic Entrance Door Supplier prior to start of door installation.

3.2 PREPARATION BY CONTRACTOR

- A. Provide door openings to size indicated on Drawings.
- B. Provide door head level and parallel with floor at door opening. Size and configuration shall be as indicated on the Drawings.
- C. Provide door jambs parallel and plumb.
- D. Provide power to location at door required by door manufacturer ready for power connection.

3.3 INSTALLATION BY CONTRACTOR

- A. Install automatic entrance doors and operating systems with all components including glass, hardware, and accessories.
- B. Make final power connections to automatic entrance doors as specified in Section 16100.
- C. Furnish and install keyed cylinder and thumbturn if and where specified in Section 08710.
- D. Interface with Other Work:
 - 1. Coordinate locations of power connections and requirements.
 - 2. Coordinate locations of building management alarm connections and requirements.
 - 3. Coordinate requirements for door openings required for automatic entrance door installation.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

08462-6

SECTION 08560 – SLIDING TRANSACTION WINDOWS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Sliding, transaction windows.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for window units.
- B. Shop Drawings: For sliding transaction windows.
 - 1. Include plans, elevations, sections, and attachments to other work.
 - 2. Hardware for sliding window units.

1.3 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For special warranty.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Pack sliding transaction windows in wood crates for shipment. Crate glazing separate from frames unless factory glazed.
- B. Label sliding transaction window packaging with drawing designation.
- C. Store crated sliding transaction windows on raised blocks to prevent moisture damage. Store under cover in dry location.
- D. Inspect windows upon delivery for damage. Unless minor defects can be made to meet the Architect's specifications and satisfaction, damaged parts should be removed and replaced.

1.5 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication or hold required finish opening dimensions coordinated with installer. Show recorded measurements on shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of work.

1.6 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace sliding transaction windows that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including deflections exceeding 1/4 inch.
 - b. Failure of welds.
 - c. Faulty operation of sliding window hardware.
 - d. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
 - 2. Warranty Period: One year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SLIDING, TRANSACTION WINDOWS

- A. Provide horizontal-sliding, transaction windows.
 - 1. Basis of Design: CRLaurence Co., Inc., Aluminum DW Series, deluxe manual sliding "XX" service window without screens, No. DW4200A.
- B. Configuration: Two glazed panels that each slide horizontally, equally divided.
- C. Framing: Fabricate perimeter framing, mullions, and glazing stops from aluminum as follows:
 - 1. Head Profile: Manufacturer standard depth aluminum frame modules, constructed of 6063-T5 extruded aluminum. Window glides on top-hung heavy-duty ball bearing slides. Poly-pile weather stripping and self-latching handle.
 - 2. Depth: Manufacturer's standard.
 - 3. Finish: Clear anodized.
- D. Sliding Window Hardware: Provide roller track designed for overhead support of two- or four-wheel carriage supporting horizontal-sliding glazed panel. Provide manufacturer's standard pull and latch for each horizontal-sliding glazed panel.
 - 1. Omit continuous threshold or bottom track. Utilize 4" long "half track" where operable panels overlap.
- E. Glazing and Glazing Materials: Comply with requirements in Division 08 Section "Glazing."
 - 1. Thickness: ¼ inch, clear tempered.
- F. Materials:
 - 1. Aluminum Extrusions: ASTM B 221. Provide alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than 20,000-psi ultimate tensile strength.
 - 2. Aluminum Sheet and Plate: ASTM B 209.

2.2 FABRICATION

- A. General: Fabricate sliding transaction windows to provide a complete system for assembly of components and anchorage of window units.
 - 1. Provide units that are reglazable from the secure side without dismantling the nonsecure side of framing.
 - 2. Prepare sliding transaction windows for glazing unless preglazing at the factory is indicated.
- B. Framing: Miter corners the full depth of framing; weld and dress smooth.
- C. Glazing Stops: Finish glazing stops to match sliding transaction window framing.
 - 1. Nonsecure-Side (Interior) Glazing Stops: Removable, coordinated with glazing indicated.
- D. Welding: Weld components to comply with referenced AWS standard. To greatest extent possible, weld before finishing and in concealed locations to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- E. Preglazed Fabrication: Preglaze window units at factory, where required for applications indicated. Comply with requirements in Division 08 Section "Glazing."

2.3 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.4 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

2.5 ACCESSORIES

- A. Concealed Bolts: ASTM A 307, Grade A unless otherwise indicated.
- B. Embedded Plate Anchors: Fabricated from mild steel shapes and plates, minimum 3/16 inch thick; with minimum 1/2-inch-diameter, headed studs welded to back of plate.
- C. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- D. Miscellaneous Glazing Materials: Provide material, size, and shape complying with requirements of glass manufacturers and with a proven record of compatibility with surfaces contacted in installation.
 - 1. Cleaners, Primers, and Sealers: Type recommended by sealant or gasket manufacturer.
 - 2. Setting Blocks: Elastomeric material with a Type A Shore durometer hardness of 85, plus or minus 5.
 - 3. Spacers: Elastomeric blocks or continuous extrusions with a Type A Shore durometer hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
 - 4. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).
- E. Anchors, Clips, and Window Accessories: Stainless steel; hot-dip, zinc-coated steel or iron, complying with ASTM B 633; provide sufficient strength to withstand design pressures indicated.
- F. Sealants: For sealants required within fabricated windows, provide type recommended by manufacturer for joint size and movement. Sealant shall remain permanently elastic, nonshrinking, and nonmigrating.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of sliding transaction windows.
- B. Inspect anchoring substrates to verify that they are suitable for installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Removable Glazing Stops and Trim: Fasten components with fasteners.
- B. Fasteners: Install sliding transaction windows using fasteners recommended by manufacturer with head style appropriate for installation requirements, strength, and finish of adjacent materials.
- C. Sealants: Comply with requirements in Division 07 "Joint Sealants" for installing sealants, fillers, and gaskets.
 - 1. Seal frame perimeter with sealant to provide airtight construction unless otherwise indicated.

3.3 FIELD QUALITY CONTROL

- A. Inspect installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.

- B. Perform additional inspections to determine compliance of replaced or additional work. Prepare inspection reports.
- C. Prepare field quality-control certification that states installed products and their installation comply with requirements in the Contract Documents.

3.4 ADJUSTING

- A. Adjust horizontal-sliding, transaction windows to provide a tight fit at contact points for smooth operation and a secure enclosure.
 - 1. Ensure latches easily and automatically securely latch when sliding windows are closed.
- B. Remove and replace defective work, including sliding transaction windows that are warped, bowed, or otherwise unacceptable.

3.5 CLEANING AND PROTECTION

- A. Clean surfaces promptly after installation of sliding transaction windows. Take care to avoid damaging the finish. Remove excess glazing and sealant compounds, dirt, and other substances.
 - 1. Lubricate sliding window hardware.
- B. Clean glass of preglazed windows promptly after installation, complying with requirements in manufacturer's written instructions.
- C. Provide temporary protection to ensure that sliding transaction windows are without damage at time of Substantial Completion.

END OF SECTION

SECTION 08565 - ALUMINUM BULLET RESISTANT TRANSACTION WINDOW

PART 1 – GENERAL

1.1 SUMMARY

- A. This section includes:
 - 1. Aluminum bullet resistant transaction windows as indicated in drawings.
- B. The publication below forms a part of this specification:
 - 1. UNDERWRITERS LABORATORY UL 752 9th Edition Standard for Bullet Resisting Equipment dated Jan. 27, 1995.

1.2 SUBMITTALS

- A. Product Data: Submit Manufacturer's technical product data substantiating that products comply.
- B. Shop drawings: Submit for fabrication and installation of windows. Include details, elevations and installation requirement of finish hardware and cleaning.
- C. Certification: Provide printed data in sufficient detail to indicate compliance with the contract documents.

1.3 DELIVERY, STORAGE, AND HANDLING

- A. Deliver windows crated to provide protection during transit and job storage.
- B. Inspect windows upon delivery for damage. Unless minor defects can be made to meet the Architect's specifications and satisfaction, damaged parts should be removed and replaced.
- C. Store windows at building site under cover in dry location.

1.4 PROJECT CONDITIONS

- A. Field measurements: Check opening by accurate field measurement before fabrication. Show recorded measurements on shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of work.

1.5 WARRANTY

- B. All material and workmanship shall be warranted against defects for a period of one (1) year from the original date of purchase.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis of design: Design is based on aluminum bullet resistant transaction windows,
 - 1. N1EW12A Exterior Glazed Exchange Window by C.R. Laurence Co., Inc. (800) 421-6144

2.2 MATERIALS

- A. Frames: Aluminum bullet resistant frame modules shall be to the standards established by U.L. 752 Protection Level 1. Frames are to be constructed of 6063-T5 extruded aluminum. Replacement of glazing shall be from the secure side of the window or wall unit and does not require the removal of the frame from the opening. Shapes and sizes are to be in accordance with the contract drawings. FRAMES MUST UTILIZE TESTING

RECOGNIZED UNDER THE STANDARDS ESTABLISHED BY U.L. 752 FOR BULLET RESISTANT COMPONENTS.

- B. Finish: All aluminum to be clear anodized.
- C. Glazing: The glazing must be in accordance with U.L. 752 testing standards
- D. Level 1. Laminated, clear glass.

2.3 ACCESSORIES

- E. Shelf: Recessed, Nonricochet Deal Trays: Formed from stainless steel. fabricated with recessed bullet trap to ricochet bullets away from secure side, with exposed flanges for recessed installation into horizontal surface.
 - 1. Clear Opening Size: Nominal 10 inches wide by 7 inches deep by 1-1/2 inches high
 - 2. Bullet Trap Location: Secure side.
 - 3. Ballistics Resistance: Listed and labeled as bullet resisting according to UL 752 to same level as security window.
- F. Voice Transmission: Electronic talk-thru unit, circular shape, mounted in the glass with speakers facing both directions and adjustable snake-arm microphone and controls on the secure side of the assembly.
 - 1. Basis of Design: The design for Talk Thru Unit is TTU-1ABX-PTT-NC by Norcon Communications.
 - a. Power supply: 120V AC power routed thru 3/8" diameter tubing within glazing.
 - b. Ballistics Resistance: Listed and labeled as bullet resisting according to UL 752 to same level as security window.
 - c. Push to Talk: Requires a switch to be operated to activate internal microphone.
 - d. Noise Cancellation: Automatically lowers outside ambient noise.

PART 3 – EXECUTION

3.1 INSTALLATION

- A. Install frames and glazing in accordance with manufacturer's printed instructions and recommendations. Repair damaged units as directed (if approved by the manufacturer and the architect) or replace with new units.

3.2 CLEANING

- A. Clean frame and glazing surfaces after installation, complying with requirements contained in the manufacturer's instructions. Remove excess glazing sealant compounds, dirt or other substances.

3.3 PROTECTION

- A. Institute protective measures required throughout the remainder of the construction period to ensure that all the windows do not incur any damage or deterioration, other than normal weathering, at the time of acceptance.

END OF SECTION

SECTION 08710 - DOOR HARDWARE

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Hardware for doors.
 - 2. Thresholds.
 - 3. Weatherstripping, seals and door gaskets.

- B. Related Requirements:
 - 1. Section 01600 – Product Requirements: Contractor’s Products Selection checklist.
 - 2. Section 03310 - Cast-In-Place Structural Concrete: Non-shrink grout for thresholds.
 - 3. Section 06100 - Rough Carpentry: Blocking for miscellaneous hardware mounting.
 - 4. Section 06400 - Architectural Woodwork: Hardware for cabinetry and other finish carpentry.
 - 5. Section 08110 - Steel Doors and Frames: Hardware coordination.
 - 6. Section 08462 - Automatic Sliding Entrance Doors: Hardware coordination.
 - 7. Section 16100 - Wiring Methods: Electrified hardware coordination.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.

- B. Americans with Disabilities Act (ADA):
 - 1. 28 CFR Part 36 – ADA Standards for Accessible Design.

- C. American National Standards Institute (ANSI):
 - 1. ANSI A117.1 - Specifications for Making Buildings and Facilities Accessible to and Usable by Physically Handicapped People.
 - 2. ANSI A 156.2 - Bored and Preassembled Locks and Latches.
 - 3. ANSI A 156.6 - Architectural Door Trim.
 - 4. ANSI A 156.13 - Mortise Locks and Latches.
 - 5. ANSI A 156.15 - Release Devices – Closer Holder, Electromagnetic and Electromechanical.

- D. National Fire Protection Institute (NFPA):
 - 1. NFPA 80 - Fire Doors and Windows.
 - 2. NFPA 101 - Code for Safety to Life from Fire in Buildings and Structures.
 - 3. NFPA 252 - Fire Tests of Door Assemblies.

- E. Underwriters Laboratories (UL):
 - 1. UL 10B - Fire Tests of Door Assemblies.
 - 2. UL 305 - Panic Hardware.

1.3 SUBMITTALS

- A. Product Data: Include installation details, material descriptions, dimensions of individual components and profiles, and finishes.

- B. Shop Drawings: Details of electrified door hardware, indicating the following:
 - 1. Wiring Diagrams: Detail wiring for power, signal, and control systems and differentiate between manufacturer-installed and field-installed wiring. Include the following:
 - a. System schematic.
 - b. Point-to-point wiring diagram.

08710-1

- c. Riser diagram.
 - d. Elevation of each door.
 - 2. Detail interface between electrified door hardware and access control system.
- C. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
- 1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
 - 2. Content: Include the following information:
 - a. Type, style, function, size, label, hand, and finish of each door hardware item.
 - b. Manufacturer of each item.
 - c. Fastenings and other pertinent information.
 - d. Location of each door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
 - e. Explanation of abbreviations, symbols, and codes contained in schedule.
 - f. Mounting locations for door hardware.
 - g. Door and frame sizes and materials.
 - h. Description of each electrified door hardware function, including location, sequence of operation, and interface with other building control systems.
- D. Keying Schedule: Prepared by or under the supervision of supplier, detailing Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations.
- E. Maintenance Data: For each type of door hardware to include in maintenance manuals specified in Division 1

1.4 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.
- B. Product Packaging: Hardware will be shipped in manufacturer's standard packaging with identification markings on each component or package.
- C. Receive and accept products and report suspected defects and shipping discrepancies in compliance with the requirements of Section 01600.
- D. Product Compliance Inspection: Inspect delivered products for compliance with product descriptions in Part 2 herein. Report discrepancies to the Architect.
- E. Store products in unopened packages in protected dry area to prevent damage from environmental and construction operations.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Provide hardware as manufactured by those listed in the Hardware Manufacturer Designation schedule in this Part 2. Provide hardware components as Scheduled in the Hardware Schedule in Part 3 of this Section.
- B. Provide products by the manufacturers listed herein. No substitutions allowed.
- C. Product Designations: Hardware may be any of the products listed within the tables below for each specific type. Substitutions will not be permitted.

D. Hardware Manufacturer Designations:

ID	Manufacturer	Telephone
H	Hager Companies	(800) 325-9995
I	H. B. Ives (Allegion)	(877) 671-7011
LCN	LCN Closers (Allegion)	(877) 671-7011
L	Locknetics (Allegion)	(877) 671-7011
Mc	McKinney (Assa Abloy)	(800) 346-7707
Na	National Guard Products, Inc.	(800) 647-7874
P	Pemko Mfg. Co. (Assa Abloy)	West Coast (800) 283-9988 East Coast (800) 824-3018

ID	Manufacturer	Telephone
Po	Positive Lock	(800) 342-7670
Re	Reese Enterprises, Inc.	(800) 328-0953
Ro	Rockwood (Assa Abloy)	(814) 926-2026
Sc	Schlage (Allegion)	(888) 805-9837
S	Stanley Hardware	(855) 365-2407
T	Trimco (Triangle Brass Mfg.)	(323) 262-4191
VD	Von Duprin (Allegion)	(877) 671-7011

2.2 SUPPLIERS

- A. Provide door hardware from one of the following national or local suppliers.
1. [DH Pace, Inc.](#), Springfield, MO, Mark Lyons, (417) 831-5585.
 2. [Positive Lock](#) (Alarm Exit Device) - Contact: Kimbra White, (800) 342-7670.

2.3 REGULATORY REQUIREMENTS

- A. Perform work in accordance with the following standards:
1. ANSI A117.1
 2. NFPA 101.
 3. NFPA 80.
 4. NFPA 252.
 5. UL 10B.
 6. UL 305.
- B. Conform to applicable code for requirements applicable to fire rated doors and frames.
- C. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories, Inc. (UL), and acceptable to Authority Having Jurisdiction as suitable for the purpose specified and indicated.
- D. Conform to applicable local, State or Federal disabled access requirements for the installation and operation of door hardware.

2.4 FINISHES

- A. Provide finishes as specified in Part 2 of this Section unless otherwise indicated in the Hardware Schedule for the specific hardware item.

2.5 HINGES

- A. Material:
1. Mortise Butts: Provide full mortise-type hinges with stainless steel pins, except steel pins with steel hinges; non-removable pin (NRP) for exterior and public interior exposure, non-rising pin, flat button with matching plugs, 4-1/2 inches x 4-1/2 inches unless otherwise shown.
 2. Ball-bearing Type Hinges: Swaged, inner leaf beveled, square corners.
 3. Full-surface Reinforcing Pivot:
 - a. For 4-1/2 inch butts with standard 1/4-inch backset.
 - b. Install per manufacturer's written instructions using attachments furnished with pivot.

B. Hinges by types:

Type	Description	Finish	MANUFACTURER/MODEL		
			Stanley	Hager	McKinney
H-4	Butts: Medium weight door, average frequency, steel	652	FBB179	BB1279	TB2714

2.6 LOCKS, LATCHES, AND BOLTS

A. Materials:

1. Cylindrical Locks: ANSI A156.2, Series 4000 Grade 1, equipped with 6-pin tumbler; "keyed alike" to match keying system of existing locks to remain if compatible. Provide 2-3/4 inch backset. Provide two keys for each lock.
2. Mortise Locks: ANSI A156.13, Grade 1, equipped with 6-pin tumbler; "keyed alike" to match keying system of existing locks to remain. Provide 2-3/4 inch backset. Provide two keys for each lock.
3. Provide Schlage standard C123 keyway.
4. Master key, key alike or different as directed.
5. Quantity: In addition to two keys for each lock, provide the following:
 - a. Cylinder Change Keys: 6 change keys per change
 - b. Master Keys: 10.
6. Latch Sets: Provide push-button releases by turning lever, closing door, or turning emergency release key through hole in outside lever.
7. Strikes: ANSI Strikes, 1-1/4 inches x 4-7/8 inches, with curved lip. Wrought box strikes, with extended lip for latch bolts, except open strike plates may be used in wood frames. Provide dustproof strikes for foot bolts.
8. Tactile Warning: Provide locks with tactile warning for handicapped codes when required by local jurisdiction having authority.

B. Locks by types:

Type	Description	Finish	MANUFACTURER/MODEL
			Schlage
L-3	Rim Cylinder	626	20-022
L-4	Classroom Lock	626	ND70PD Rhodes
L-5	Storeroom Lock (F86)	626	ND80PD-Rhodes- 25
L-6	Office Lock (F82)	626	ND50PD-Rhodes-10-025
L-7	Passage Latch (F75)	626	ND10S - Rhodes- 10-025
L-8	Privacy Lock (F76)	626	ND40S - Rhodes- 10-025

2.7 EXIT DEVICES

A. Materials:

1. Provide exposed metal to match hardware.
2. Size and mount units indicated or, if not indicated, to comply with manufacturer's recommendations for exposure condition. Reinforce substrate as recommended.

B. Exit Devices by types:

Type	Description	Finish	MANUFACTURER/MODEL
			Von Duprin, unless otherwise noted.
E-16	Exit Device: Rim, lever trim,	626	99L-992L-NL

2.8 PULLS AND PUSHES

- A. Materials: ANSI A156.6 for 0.050 inch thickness.

B. Push and Pulls by types:

Type	Description	Finish	MANUFACTURER/MODEL		
			Ives	Trimco	Rockwood
P-1	Push 3-1/2 inches x 15 inches	630	8200	1001-2	70B
P-2	Pull 3-1/2 inches x 15 inches	630	8311-5	1012-2	137x70B

2.9 CLOSERS

A. Materials & Features:

1. ANSI A156.4, grade 1.
2. ADA/ANSI A117.1
3. UL listed.
4. Non-handed, non-sized; adjustable 1-6.
5. 180 degree door opening.
6. Standard cover.
7. Multiple backcheck location valve.
8. Extreme temperature fluid.
9. Sex nuts and bolts (SNBs).
10. Provide exposed metal to match hardware.
11. Size and mount units indicated or, if not indicated, to comply with manufacturer's recommendations for exposure condition. Reinforce substrate as recommended.

B. Closers by types:

Type	Description	Finish	MANUFACTURER/MODEL
			LCN
C-6	Closer: Regular Arm	689	4031-REG
C-7	Closer: Parallel Arm	689	4031-EDA
C-10	Closer: Regular Arm, HO	689	4031-H
C-11	Closer: Parallel Arm, positive stop	689	4031-CUSH

2.10 DOOR PROTECTION PLATES

- A. Materials: J100 Protection Plates conforming to ANSI 156.6, stainless steel, 0.050 inch (1.2 mm) minimum thickness. Mount centered, flush with bottom of door. Screws: Phillips head sheet metal screws plated to match plate.

B. Protection Plates by types:

Type	Description	Size	Finish	MANUFACTURER/MODEL		
				Ives	Trimco	Rockwood
K-2	Kick Plate	10 inch x (DW-2 inch)	630	8400	K1050	J102

2.11 STOPS, HOLDERS AND BUMPERS

A. Materials:

1. Door stop mounting: Methods to suit substrates encountered (plastic anchor, drywall anchor, expansion shield).
2. Provide gray rubber exposed resilient parts.
3. Do not furnish aluminum floor stops.
4. For most doors, the preferred door stop is Wall Stop type S-1 and is specified as such in the hardware schedule. However, if circumstances prevent a wall stop installation (door too far from perpendicular wall, door swing into adjacent glass, etc.) then substitute a type S-4 floor stop as indicated for use intended.
5. Adjust height of floor stops to suit undercut of adjacent door.

B. Stops, Holders and Bumpers by types:

Type	Description	Finish	MANUFACTURER/MODEL		
			Ives	Trimco	Rockwood
S-1	Wall Stop	630	WS407CVX	W1276CS	409
S-4	Floor Stop	626	FS438	1212 3/4ES	442

2.12 THRESHOLDS

A. Thresholds by types:

Type	Description	MANUFACTURER/MODEL		
		National Guard	Pemko	
T-1	Threshold: 5 inches x 1/2 inch, abrasive.	425HD-SIA 5"	1715AK 5"	

2.13 WEATHERSTRIPPING

A. Weatherstripping by types:

Type	Description	MANUFACTURER/MODEL		
		National Guard	Pemko	Reese
W-1	Jamb & Head Weatherstripping, aluminum, vinyl insert, screw-on type	155V	303AV	807A

2.14 MISCELLANEOUS HARDWARE

- A. Silencers: Provide in metal door frames, unless not permitted for fire rating, or unless bumper-type weatherstripping is provided; three for each single door frame, two for double-door frame.

B. Miscellaneous Hardware by types:

Type	Description	Size	Finish	MANUFACTURER/MODEL		
				Pemko		
M-1	Automatic Door Bottom		602	4131CRL-36		
				Ives	Trimco	Rockwood
M-5	Extension Flush Bolts (UL)	12 inches	626	458	3917	555
				Ives	Trimco	Rockwood
M-8	Silencers			SR64	1229-A	608
				National Guard	Pemko	Reese
M-9	Drip Cap			16AD	346CxFW	R201A
				Ives		
M-10	Foot Pull			FP100		
				Von Duprin	Securitron	
M-15	Electric Strike, grade 1, FSE (fail secure), 24 VDC unless noted otherwise in schedule		630	6211		
M-16	Electric Strike		626		UNL-24	
				HES	Locknetics	
M-20	Electric Strike, grade 1, FSE (fail secure), 24 VDC unless noted otherwise in schedule		630	8000 C	NC 450	

2.15 FABRICATION

- A. Finish and Base Material Designations: Number indicates Builders Hardware Manufacturer's Association (BHMA) Code or nearest traditional U.S. commercial finish.
- B. Where base material and quality of finish are not otherwise indicated, provide at least commercially recognized quality.

- C. Fasteners: Provide door hardware manufactured to comply with published templates prepared for machine, wood, and sheet metal screws. Provide screws that comply with commercially recognized industry standards for application intended, except aluminum fasteners are not permitted. Provide Phillips flat-head screws with finished heads to match surface of door hardware, unless otherwise indicated.
 - 1. Fire-Rated Applications:
 - a. Wood or Machine Screws: For the following:
 - 1) Hinges mortised to doors or frames.
 - 2) Strike plates to frames.
 - 3) Closers to doors and frames.
 - b. Steel Through Bolts: For the following unless door blocking is provided:
 - 1) Surface hinges to doors.
 - 2) Closers to doors and frames.
 - 3) Surface-mounted exit devices.
 - 2. Spacers or Sex Bolts: For through bolting of hollow-metal doors.
 - 3. Gasketing Fasteners: Provide noncorrosive fasteners for exterior applications and elsewhere as indicated.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verify that doors and frames are ready to receive Work and dimensions are as instructed by the manufacturer.
- B. Verify that electric power is available to power operated devices and of the correct characteristics.

3.2 INSTALLATION

- A. Hardware Mounting Heights: Door and Hardware Institute Recommended Locations for Builders Hardware for Standard Steel Doors and Frames, except as otherwise indicated.
 - 1. Conform to requirements of applicable local, State or Federal disabled access requirements for the installation and operation of door hardware.
- B. Install each hardware item to comply with manufacturer's instructions and recommendations, unless otherwise specified.
- C. Thru-bolt closers on doors.
- D. Vestibule Thresholds: Install as shown on Drawings.

3.3 ADJUSTING

- A. Hardware Adjustment: Adjust hardware for proper operation and function at construction completion. Instruct Owner personnel in proper maintenance and adjustment.

3.4 HARDWARE SCHEDULE

- A. The Door Schedule as shown on the drawings represent the full set of hardware for each door listed. Refer to the Door Schedule and Schedule Notes for actual hardware components required for each door in this project.
- B. For interior hollow metal doors and exterior building hollow metal doors which have a tactile exit sign installed on the door, install a door closer (C-7) if a closer does not exist on the door.
- C. Refer to Drawings for Hardware Schedule.

08710-8

SECTION 08800 - GLAZING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Glass and glazing for interior and exterior metal frames and doors.
2. Glass and glazing for standard storefront and manual swing entrance doors.
3. Window Hardware: Sliding glass track assembly.
4. Glazing for interior and exterior automatic sliding storefront doors, transoms, and sidelites as scheduled.

B. Related Requirements:

1. Section 08110 - Steel Doors and Frames: Glazed doors and fixed window frames.
2. Section 08411 - Aluminum Framed Storefronts: Aluminum storefront framing system.
3. Section 08462 - Automatic Sliding Entrance Doors: Glazed doors.
4. Section 08710 - Door Hardware: Hardware coordination.

1.2 REFERENCES

A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the test by these basic designations only.

B. American National Standards Institute (ANSI):

1. ANSI Z97.1 - Safety Performance Specifications and Methods of Test for Safety Glazing Material Used in Buildings.

C. ASTM International (ASTM):

1. ASTM C920 - Specification for Elastomeric Joint Sealants.
2. ASTM C1036 - Flat Glass.
3. ASTM C1048 - Heat-Treated Flat Glass - Kind HS, Kind FT Coated and Uncoated Glass.
4. ASTM D2000 - Classification System for Rubber Products in Automotive Applications.
5. ASTM E 1886 - Standard Test Method for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Missile(s) and Exposed to Cyclic Pressure Differentials.
6. ASTM E 1996 - Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Windborne Debris in Hurricanes.

D. Flat Glass Marketing Association (FGMA):

1. FGMA - Glazing Manual and Glazing Sealing Systems Manual.

E. Consumer Product Safety Standards for Architectural Glazing.

1. CPSC 16 CFR, Part 1201.

1.3 QUALITY ASSURANCE

A. Conform to FGMA Glazing Manual for glazing installation methods.

B. Provide permanent labeling for safety glass indicating conformance with specified standards.

PART 2 PRODUCTS

2.1 GLASS MATERIALS

A. Tempered Glass: ASTM C 1048, Kind FT (Fully Tempered), Condition A (Uncoated), Type I (Transparent Glass, Flat), Quality q3 (Glazing Select).

1. Conform to ANSI Z97.1 and CPSC 16CFR Part 1201.
2. Tempered glazing panels as specified in the Glass Schedule below (including doors, sidelights, storefronts, and transoms) shall comply with the CPSC 16CFR Part 1201 criteria for Category I or II as follows:
 - a. Glazing Panels 9 sq. ft. or less: Category I.
 - b. Glazing Panels more than 9 sq. ft.: Category II.
 - c. Thickness:
 - 1) Doors and Window Frames: 1/4 inch unless otherwise shown or specified.
3. Clear: Class 1 (Clear).
4. Tinted: Class 2 (Tinted Heat Absorbing and Light Reducing).
 - a. Color: Gray tint.

B. Insulated Units: Double pane units, with hermetically sealed air space between.

1. Clear: Both inner and outer panes of clear glass
2. Tinted: Inner pane of clear glass and outer pane of tinted glass.
3. Unit Thickness: 1 inch thick units; 1/4 inch thick tempered inner and outer panes, with 1/2 inch air space.

C. Identification:

1. Each unit of tempered glass shall be permanently identified by the manufacturer. The identification shall be etched or ceramic fired on the glass and be visible when the unit is glazed.

2.2 GLAZING COMPOUNDS

A. Polysulphide Sealant: Two component, chemical curing, non-sagging type; cured Shore A hardness of 15-25.

B. Silicone Sealant: Single component, chemical curing; capable of water immersion without loss of properties; non-bleeding, non-staining; cured Shore A hardness of 15-25.

1. Color: Clear.

C. Acrylic terpolymer compounded especially for glazing; non-hardening, non-staining, and non-bleeding.

2.3 GLAZING ACCESSORIES

A. Setting Blocks: Resilient blocks of 70 to 90 Shore A durometer hardness; compatible with glazing sealant.

B. Spacers: Resilient blocks of 40 to 50 Shore A durometer hardness; self adhesive on one side; compatible with glazing sealant.

C. Filler Rods: Closed cell or jacketed foam rods of polyethylene, butyl, neoprene, polyurethane, or vinyl; compatible with glazing sealant.

D. Joint Cleaners, Primers, and Sealers: As recommended by glazing sealant manufacturer.

E. Gaskets: ASTM D2000, SBC 415 to 3BC 620; extruded or molded neoprene or EPDM, black.

2.4 SLIDING WINDOW HARDWARE

A. Sliding Glass Track: Zinc-plated steel sliding glass window track assembly including upper channel, shoe, ball-bearing carrier, lower track, and nickel finish adjustable lock. Provide sliding glass window assembly Model No. KV P992 and Lock KV 965, as manufactured by Knappe & Vogt Manufacturing Company.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify surfaces of glazing channels or recesses are clean, free of obstructions, and ready for work of this Section.

B. Beginning of installation means acceptance of substrate.

08800-2

3.2 PREPARATION

- A. Clean contact surfaces; prime or seal where recommended by sealant manufacturer for intended application.
- B. Inspect glass edges immediately prior to setting; discard those with edge damage that will contribute to glazing failure.

3.3 GLAZING

- A. Locate setting blocks at quarter points of sill; set in sealant if heel or toe bead is required.
- B. Install spacers inside and out except where pre-shimmed tape or glazing gaskets are to be used.
- C. Set each piece in a series to other pieces in pattern draw, bow, or other visually perceptible characteristics.
- D. Provide glazing sealants and gaskets as required for particular glazing application. Coordinate with other Sections for material compatibility.
- E. Gaskets:
 - 1. Provide adequate anchorage, particularly for driven-in wedge gaskets.
 - 2. Miter and weld ends of channel gaskets at corners to provide continuous gaskets.
 - 3. Seal face gaskets at corners with sealant to close opening and prevent withdrawal of gaskets from corners.
- F. Do not leave voids in glazing channels except as specifically indicated or recommended by glass manufacturer. Force sealant into channel to eliminate voids. Tool exposed surfaces to slight wash away from joint. Trim and clean promptly.
- G. Do not allow sealant to close weeps of aluminum framing.
- H. Provide filler rod where sealants are used in the following locations:
 - 1. Head and jamb channels.
 - 2. Colored glass over 75 united inches in size.
 - 3. Clear glass over 125 united inches in size.

3.4 SLIDING WINDOW TRACK INSTALLATION

- A. Attach sliding window track assembly to hollow metal frame with double faced tape or adhesive as recommended by the manufacturer.

3.5 ADJUSTING AND CLEANING

- A. Immediately prior to Wal-Mart acceptance of Project, replace broken or otherwise damaged glass. Wash and polish glass inside and out.

3.6 GLASS SCHEDULE

- A. Provide type of glass specified for the applications scheduled as follows:

APPLICATION/LOCATION	TYPE OF GLASS
Interior Windows	Clear tempered glass unless otherwise shown or specified.
Interior Hollow Metal Doors	Clear tempered glass.
Interior storefront including storefront doors	Clear tempered glass
Exterior storefront	Insulating tinted tempered glass.

Automatic Sliding Doors and Transoms	Tinted tempered glass.
--------------------------------------	------------------------

END OF SECTION

SECTION 09250 - GYPSUM BOARD

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Interior non load-bearing steel stud partition framing 20 (30 mil) gage and lighter (designed for 5 pounds per square foot uniform load perpendicular to partition).
 2. Gypsum board.
 3. Backer materials: Backer panels for wall tile and plastic wall panels.
- B. Related Sections:
1. Section 01351 – Regulatory
 - a. Disposal and removal of construction and universal waste.
 - b. Work practice control methods for airborne respirable dust.
 2. Section 06100 - Rough Carpentry: Wood furring strips, plywood, blocking, and fasteners attached to partition framing.
 3. Section 07210 - Building Insulation: Thermal and acoustical insulation.
 4. Section 09900 - Paints and Coatings: Paint finish applied to gypsum board.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the test by these basic designations only.
- B. ASTM International (ASTM):
1. ASTM A 653 - Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 2. ASTM C 475 - Joint Compound and Joint Tape for Finishing Gypsum Board.
 3. ASTM C 557 - Adhesives for Fastening Gypsum Wallboard to Wood Framing.
 4. ASTM C 645 - Nonstructural Steel Framing Members.
 5. ASTM C 754 - Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.
 6. ASTM C 840 - Application And Finishing Of Gypsum Board.
 7. ASTM C 954 - Steel Drill Screws for the Application of Gypsum Board or Metal Plaster Bases to Steel Studs From 0.033 inches to 0.112 inches in Thickness.
 8. ASTM C 1002 - Steel Self-Piercing Tapping Screws For The Application Of Gypsum Panel Products Or Metal Plaster Bases To Wood Studs Or Steel Studs.
 9. ASTM C 1177 - Glass Mat Gypsum Substrate for Use as Sheathing.
 10. ASTM C 1178 - Coated Glass Mat Water-Resistant Gypsum Backing Panel.
 11. ASTM C 1278 – Fiber-Reinforced Gypsum Panel (Backer).
 12. ASTM C 1288 – Fiber-Cement Interior Substrate Sheets (Backer).
 13. ASTM C 1396 - Gypsum Board.
 14. ASTM C 1629 - Standard Classification for Abuse-Resistant Nondecorated Interior Gypsum Panel Products and Fiber-Reinforced Cement Panels.
 15. ASTM C 1658 - Glass Mat Gypsum Panels.
 16. ASTM D 3273 - Standard Test Method for Resistance to Growth of Mold on the Surfaces of Interior Coatings in an Environmental Chamber.
 17. ASTM D 3274 - Standard Test Method for Evaluating Degree of Surface Disfigurement of Paint Films by Microbial (Fungal or Algal) Growth or Soil and Dirt Accumulation.
- C. Gypsum Association (GA):
1. GA-214 - Levels of Gypsum Board Finish.
 2. GA-216 - Application and Finishing of Gypsum Board.
 3. GA-234 - Control Joints For Fire-Resistance Rated Systems.

4. GA-600 - Fire Resistance and Sound Control Design Manual.

D. Occupational Safety and Health Administration (OSHA):

1. OSHA 01926.1153 Respirable Crystalline Silica.

E. Steel Stud Manufacturer's Association (SSMA)

1. Member listing

F. Steel Framing Industry Association (SFIA)

1. Member listing

1.3 ENVIRONMENTAL REQUIREMENTS

A. Minimize dust emissions and provide equipment that suppresses dust.

B. Dispose of construction waste in accordance with the requirements of Section 01351 Regulatory Compliance Supplement.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in the installation of light gage metal framing components and gypsum wallboard with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect products.

B. Protect metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.

C. Store and protect metal framing with weatherproof covering, and ventilate to avoid condensation.

D. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.

E. Stack gypsum board flat to prevent sagging.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

A. Environmental Requirements:

1. Establish and maintain environmental conditions for applying and finishing gypsum board in conformance with GA-216.

PART 2 - PRODUCTS

2.1 GENERAL

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency. Products used in the assembly shall carry a classification label from a testing laboratory acceptable to Authority Having Jurisdiction.

2.2 GYPSUM BOARD MATERIALS

A. Manufacturer: United States Gypsum Company, Chicago, IL. (800) 874-4968.

1. American Gypsum Company, Dallas, TX (800) 545-6302.

2. [CertainTeed Corp](#), Tampa, FL. (800) 233-8990.

3. [Georgia-Pacific](#), Atlanta, GA. (800) 284-5347.

09250-2

4. [National Gypsum Company](#), Gold Bond Building Products, Charlotte, NC. (800) 628-4662.
 5. USG Corporation, Chicago, IL. (800) 850-3839.
 6. [The Steel Network](#), Raleigh, NC (888) 474-4876. (Accessories only)
 7. ClarkDietrich, West Chester, OH (513) 870-1100. (Accessories only).
 8. [Fry Reglet](#), (800) 237-9773. (Accessories only)
 9. Other manufacturers listed as members of SSMA, or SFIA.
- B. Standard Gypsum Board: Sheetrock, ASTM C 1396
1. Thickness: 5/8 inch thick
 2. Length, Long Edges, Cut: Maximum permissible length, edges tapered, ends square cut square.
 3. Provide one of the following:
 - a. Gypsum Wallboard by American Gypsum.
 - b. CertainTeed Regular Gypsum Board by CertainTeed.
 - c. ToughRock Gypsum Board by Georgia-Pacific.
 - d. Gold Bond Gypsum Board by National Gypsum.
 - e. Sheetrock Gypsum Panel by United States Gypsum.
- C. Water Resistant Gypsum Board: ASTM C 1396.
1. Thickness: 5/8 inch thick
 2. Length, Long Edges, Cut: Maximum permissible lengths, edges tapered, ends square cut square.
 3. Core: Moisture or mold resistant core.
 4. Mold Resistance: Score of 10 when tested in accordance with ASTM D 3273/3274.
 5. Provide one of the following:
 - a. M-Bloc Mold and Moisture Resistant by American Gypsum.
 - b. M2Tech Gypsum Board by CertainTeed.
 - c. DensArmor Plus by Georgia-Pacific.
 - d. Gold Bond Brand XP Gypsum Board by National Gypsum.
 - e. Sheetrock Brand Mold Tough Gypsum Panel by United States Gypsum.
- D. Fire Resistant Gypsum Board: ASTM C 1396, Type X
1. Thickness: 5/8 inch
 2. Length, Long Edges, Cut: Maximum permissible lengths, edges tapered, ends square cut.
 3. Provide one of the following products:
 - a. FireBloc Type X by American Gypsum.
 - b. CertainTeed Type X Gypsum Board by CertainTeed.
 - c. ToughRock Fireguard X by Georgia-Pacific.
 - d. Gold Bond Fire Shield by National Gypsum.
 - e. Sheetrock Firecode X Gypsum Panel by United States Gypsum.
- E. Water and Fire Resistant Gypsum Board: ASTM C 1396, Type X
1. Thickness: 5/8 inch.
 2. Length, Long Edges, Cut: Maximum permissible lengths, edges tapered, ends square cut.
 3. Core: Non-combustible fire-resistant and mold resistant core.
 4. Mold Resistance: Score of 10 in accordance with ASTM D3273/3274.
 5. Provide one of the following:
 - a. M-Bloc Mold Resistant Type C by American Gypsum.
 - b. Gold Bond Brand XP Fire-Shield C Gypsum Board, by National Gypsum.
 - c. Sheetrock Mold Tough Firecode Type X Gypsum Panel, by United States Gypsum.
 - d. ToughRock Fireguard X Mold-Guard Gypsum Board by Georgia Pacific.
 - e. M2Tech Type X Gypsum Board or Diamondback Glasroc Tile Backer Type X by CertainTeed.
- F. Gypsum Board Fasteners:
1. Metal Framing: ASTM C 954 and C 1002, Type S-12 bugle head, corrosion-resistant self-drilling self-tapping steel screws.
 - a. One Layer 1/2 Inch: 1 inch.
 - b. One Layer 5/8 Inch: 1-1/8 inch.
 - c. Two Layers: 5/8 Inch: 1-7/8 inch.

2. Wood Furring: ASTM C 1002, 1-1/4 inch, Type W bugle head, corrosion-resistant self-drilling steel screws.

G. Gypsum Board Accessories:

1. Corner Beads: Sheetrock Brand No. 104 Dur-A-Bead galvanized steel corner bead by United States Gypsum.
2. Edge Trim: Galvanized steel casing.
 - a. No. 200-B, L shape by United States Gypsum for tight abutment at edges.
 - b. No. 200-A, J shape by United States Gypsum at other locations.
3. Control Joint Accessory Piece:
 - a. No. 093 roll-formed zinc by ClarkDietrich.
4. Vertical Movement Joint Trim:
 - a. No DRMZ-625-200 aluminum Z shape trim by Fry Reglet.
5. Adhesive:
 - a. Commercial Adhesive complying with ASTM C 557.
6. Acoustical Insulation:
 - a. Unfaced fiberglass batts specified in Section 07210.

2.3 JOINT TREATMENT MATERIALS

- A. General: Comply with ASTM C 475.

B. Joint Tape:

1. Interior Gypsum Wallboard: Paper tape.
2. Backer Panels:
 - a. Glass-Mat Backer Material: 10/10 grid glass mesh tape.

C. Joint Compound

1. Interior Gypsum Wallboard:
 - a. Sheetrock Brand Ready-Mixed Lightweight All-Purpose Joint Compound with Dust Control, by United States Gypsum.
 - b. ProForm Lite Ready Mix Joint Compound with Dust-Tech by National Gypsum.
2. Backer Panels:
 - a. Glass-Mat Backer Materials: Use setting-type taping compound as recommended by backer panel manufacturer and that is rated 10 when tested in accordance with ASTM D 3273 and evaluated in accordance with ASTM D 3274.

2.4 BACKER MATERIALS

- A. Glass-Mat Backer Materials: Provide glass-mat moisture resistant gypsum core backer materials complying with ASTM C 1178. Glass-Mat Backer Material shall score a rating of 10 when tested according to ASTM D 3273. Thickness as shown on the Drawings. Provide Type X where required as shown on Drawings. Provide one of the following products:
1. GlasRoc Tilebacker by Certaineed.
 2. DensShield Tile Backer by Georgia Pacific.
 3. GreenGlass Tile Backer by Temple-Inland.
 4. Gold Bond e²XP Tile Backer by National Gypsum.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine existing conditions and adjacent areas where products will be installed and verify that conditions conform to product manufacturer's requirements. Verify that building framing components are ready to receive Work. Verify that rough-in utilities are in-place and located where required. Do not proceed until unsatisfactory conditions have been corrected.
- B. Examine panels to assure they are dry and free of moisture and mold damage as evidenced by discoloration, sagging, irregular shape, fuzzy or splotchy surface contamination, and discoloration.

- C. Beginning of erection and installation indicates acceptance of existing conditions.

3.2 INTERFACE WITH OTHER WORK

- A. Coordinate erection of studs with hollow metal door and window frames, sliding window, and overhead coiling door frames.
- B. Coordinate installation of anchors, supports, and blocking for mechanical, electrical, and building accessory items installed within framing.

3.3 INSTALLATION - STEEL FRAMING, GENERAL

- A. Installation Standards: Comply with ASTM C 754, and ASTM C 840 requirements that apply to framing installation and with further details and instruction by gypsum board manufacturer's written construction guidelines.
- B. Install supplementary framing, blocking, and bracing at terminations in gypsum board assemblies to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction. Comply, if none available, with United States Gypsum's "Gypsum Construction Handbook."

3.4 INSTALLATION - PARTITION FRAMING

- A. Install studs and fasteners in accordance with manufacturer's published instructions, ASTM C 754, GA-216, and GA-600.
- B. Install bracing at terminations in assemblies.
- C. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.
- D. Install studs so flanges within framing system point in same direction.
- E. Metal Stud Spacing: Unless otherwise noted on Drawings, provide interior framing at maximum spacing specified herein at 2.2C. Provide spacing of 16 inches on center maximum for walls to receive ceramic tile.
- F. Align stud web openings horizontally.
- G. Splice studs with minimum 8 inch nested lap, fasten each stud flange with minimum two screws.
- H. Construct corners using minimum three studs.
- I. Place studs as indicated on Drawings, minimum 2 inches from abutting walls.
- J. Install framing between studs for attachment of mechanical and electrical items.
- K. Install intermediate studs above and below openings to match wall stud spacing.
- L. Install tracks (runners) at floors and overhead supports. Refer to Drawings for indication of partitions extending to finished ceiling only and for partitions extending through ceiling to building structure above.
- M. Maintain clearance under structural members to avoid deflection transfer to studs.
 - 1. Where indicated, construct partition to accommodate vertical deflection.
 - 2. Install optional products specified in Part 2 above in accordance with manufacturer's printed instruction.
 - a. Install clip with step bushing in center of slotted hole.
 - b. Use a minimum of two fasteners per clip leg to connect clip to structure and partition framing.
 - c. Attach clip to each stud by screwing through the center of each step bushing.

- N. Fasten studs adjacent to door and window frames, partition intersections, and corners to top and bottom runner flanges in double-stud fashion with metal lock fastener tools.
1. Securely fasten studs to jamb and head anchor clips of door and borrowed-light frames.
 2. Place horizontally a cut-to-length section of runner with web-flange bend at each end, fasten with minimum one screw per flange.
 3. Position a cut-to-length stud (extending to top runner) at vertical panel joints over door frame header.
- O. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
- P. Lateral Bracing for Metal Studs:
1. In metal stud partitions and bulkheads where length of metal studs is over 8 feet, install lateral bracing using one of the following methods:
 - a. Install 1-1/2 inch cold-formed channel through stud web holes and screw attach in place with clip angles. Lap channels by nesting one inside the other to a depth of at least 8 inches and wire tie together.
 - b. Install optional products specified in Part 2 above in accordance with the manufacturers printed instructions.
 - c. Install field-cut runner for solid bridging at each end of wall, adjacent to wall openings, and 10 feet on center maximum. Install 1-1/2 inch wide, 20 (30 mil) gage strap bracing on both sides of stud. Fasten strap bracing to each solid bridging runner section with four screws.
 2. Gypsum Board Partitions: Space lateral bracing at the following intervals:
 - a. Partitions sheathed with gypsum board full height, each side: Provide bracing at mid-height.
 - b. Partitions sheathed with gypsum board partial height (one or both sides): Provide bracing at 48-inches on center for unsheathed height of partition.
 3. Wire Mesh Partitions: Space lateral bracing at the following intervals:
 - a. Stud Length Greater Than 8 Feet: Provide bracing at 60-inches on center.
- Q. Install braced framing of steel stud framing as indicated on Drawings. Use only screw attachments.
- R. Blocking: Screw attach wood blocking between studs. Install blocking for support of plumbing fixtures, toilet partitions, wall cabinets, toilet accessories and hardware.
- S. Framing Fastening: Fasten framing in accordance with manufacturer's published instructions and schedule below, unless indicated otherwise on Drawings.

Connection	Fastener
Floor Track to Concrete	1 - Pin at 32 inches on center
Partition Stud to Floor Track	1 - Screw each side at each flange
Stud Brace Web to Stud Web	2 - Screws
Plates and Straps to Studs	2 - Screws
Stud Web to Stud Web	2 - Screws
Stud Brace Web to Attachment Angle	2 - Screws
Lateral Bracing to Partition Stud Using Clip Angles	2 - Screws to stud and 2 - Screws to cold rolled channel
Runner to Header	1 - Screw at 16 inches on center, maximum 6 inches from each end

3.5 INSTALLATION - FURRING

- A. Furring Channels:
1. Attach vertically spaced at maximum 16 inches on center, to masonry and concrete surfaces with hammer set or powder driven fasteners staggered 24 inches on center on opposite flanges.
 2. Nest channels 8 inches at splices and anchor with 2 fasteners in each wing.
- B. Wall Furring:
1. Secure top and bottom runners to structure.
 2. Space metal studs at maximum 16 inches on center.

3. Furring for Fire Rating: Install metal furring as required for fire resistance ratings indicated on Drawings, and to GA-600 requirements.

3.6 INSTALLATION - ACOUSTICAL INSULATION

- A. Place acoustical insulation in partitions tight within spaces, around cut openings, behind and around electrical and mechanical items within or behind partitions, and tight to items passing through partitions as specified in Section 07210 where shown on Drawings.

3.7 INSTALLATION - GYPSUM BOARD

- A. Install gypsum board in accordance with manufacturer's published instructions, ASTM C 840, GA-216, and GA-600.
 1. Use water resistant gypsum board at wet areas including walls and ceiling in toilet rooms, janitor closets, and food prep areas as applicable and where shown.
 2. Use fire resistant gypsum board at locations of fire-resistive rated assemblies indicated on Drawings.
 3. Use water and fire resistant gypsum board at locations of fire-resistive rated assemblies where water resistant gypsum board is specified.
 4. Use standard gypsum board at locations not indicated to be fire resistant or water resistant type.
- B. Use proper dust control tools and methods when scoring, breaking, and otherwise handling gypsum board.
- C. Where applicable, install ceiling panels before the installation of wall panels.
- D. Erect single layer gypsum board in most economical direction in accordance with ASTM C 840, with attachment to firm bearing surfaces over framing members. Do not align panel joints with edges of openings.
- E. Double Layer Applications: Secure second layer to first with screws; apply second layer with screws, staggering joints with those of first layer. Use adhesive only to hold second layer until screwed in place. Use fire rated gypsum backing board for fire rated partitions.
- F. Treat cut edges, holes, fastener heads, and joints, including those at angle intersections, in water resistant gypsum board with specified joint compound. Treat prior to installation.
- G. Place gypsum panels over supporting framing members with panel ends aligning and parallel with framing members. Leave bottom edge spacing above floor in accordance with GA-216.
- H. Install fasteners spaced and located in accordance with GA-216 or ASTM C840.

3.8 INSTALLATION - BACKER MATERIALS

- A. Install glass-mat backer materials where indicated to receive glass-mat backer material. Install in accordance with manufacturer's instructions.

3.9 INSTALLATION - JOINT TREATMENT

- A. Install joint treatment in accordance with GA-216.
- B. Install corner bead, trim, and casing in accordance with GA-216.
- C. Install control joints full height of partition with 1/2 inch gap between board edges and between studs. Control joints shall be installed in accordance with the gypsum manufacturer's recommended guidelines for control joints or the Gypsum Association GA-234 for control joint in fire rated systems. Apply sealant at base of joint and control joint accessory piece at face. Install control joints at the following locations:
 1. Where a wall or partition runs in an uninterrupted straight plane exceeding 30 linear feet.
 2. At pairs of doors, install vertical control joint at each jamb. At single doors, install control joint at latch side of jamb.

09250-7

3.10 FINISH

- A. Apply gypsum board finish in accordance with manufacturer's published instructions and GA-214 Finish Levels.
- B. Provide gypsum board finish levels at locations as follows:
 - 1. Level 1 (GA-214): Joints and interior angles have tape embedment set in joint compound. Surface free of excess joint compound. Tool Marks and ridges are acceptable.
 - a. Areas above ceilings where required by drawings.
 - b. Concealed areas.
 - c. Interior exposed gypsum surfaces not indicated to be painted.
 - 2. Level 2 (GA-214): All joints and interior angles have tape embedded in joint compound and wiped with a joint knife leaving a thin coating of joint compound over all joints and interior angles. Fastener heads and accessories are applied with a coat of joint compound. Surface shall be free of excess joint compound. Tool marks and ridges are acceptable.
 - a. Areas receiving tile and not exposed to view and where required by drawings.
 - 3. Level 3 (GA-214): Joints and interior angles have tape embedded in joint compound and one additional coat of joint compound applied over all joints and interior angles and two separate coats of joint compound are applied over joints, angles, fastener heads, and accessories. Surface smooth and free of tool marks and ridges.
 - a. Areas receiving FRP
 - 4. Level 4 (GA-214): Joints and interior angles have tape embedded in joint compound and immediately wiped with a joint knife leaving a thin coating of joint compound over all joints and interior angles. Two separate coats of joint compound are applied over joints and interior angles. Fasteners and accessories are applied with three separate coats of joint compound. Surface smooth and free of tool marks and ridges.
 - a. Interior gypsum surfaces indicated to be painted.

3.11 FIELD QUALITY CONTROL

- A. Inspect metal framing erection, placement, spacing, fasteners, and connections to building.
- B. Inspect gypsum board installation, fastener type, spacing, and finish level.
- C. Inspect installation of firestopping penetrations of fire-restive rated partitions and at voids between top of partition and building structure.
- D. Correct deficiencies in Work which inspection indicates are not in compliance with Contract Documents.

3.12 PROTECTION

- A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces.
- B. Protect installed interior non load-bearing steel stud partition framing, gypsum board, and backer materials from damage until Substantial Completion.

END OF SECTION

SECTION 09310 - CERAMIC TILE

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Ceramic wall tile, floor tile, and accessories.
- B. Related Requirements: The following list is intended to aid in locating work related to or dependent on the scope of Work in this Section. The list is included for information only and is not intended to be inclusive of all project requirements.
 - 1. Section 01351 – Regulatory Compliance.
 - 2. Section 01600 - Product Requirements: Contractor’s Product Lead Time Schedule.
 - 3. Section 07900 - Joint Sealers: Sealant at tile penetrations and control/construction joints.
 - 4. Section 09250 - Gypsum Board Systems: Wall tile substrate.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American National Standards Institute (ANSI):
 - 1. ANSI A108/A118/A136.1 – Specifications for the Installation of Ceramic Tile.
 - a. A108 – Installation Standards:
 - 1) .02 – General Requirements: Materials, Environmental, and Workmanship.
 - 2) .5 – Installation of Ceramic Tile with Dry-Set Portland Cement Mortar or Latex-Portland Cement Mortar
 - 3) .15 – Alternate Method: Installation of Paper-Faced Glass Mosaic Tile.
- C. Occupational Safety and Health Administration (OSHA):
 - 1. OSHA 01926.1153 Respirable Crystalline Silica.
- D. Tile Council of America, Inc. (TCA):
 - 1. TCA Handbook for Ceramic Tile Installation.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Minimize dust emissions or provide equipment that suppresses dust.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Section 01600 - Product Requirements: Transport, Handle, Store, and Protect Products.
- B. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.
- C. Store packaged materials in original containers with seals unbroken and labels intact until time of use.
- D. Prevent damage or contamination to materials by water, freezing, foreign matter, and other causes.

1.5 SITE CONDITIONS

- A. Do not install adhesives in a closed, unventilated environment.
- B. Maintain 50 degrees F during installation of mortar materials.

09310-1

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Provide products by the following manufacturers to the extent specified hereinafter:
1. Dal-Tile Corporation, Dallas, TX, (214) 398-1411.
 2. Laticrete International, Bethany, CT. (800) 243-4788.
 3. Pemko (ASSA ABLOY):
 - a. West Coast: Ventura, CA (800) 283-9988.
 - b. East Coast: Memphis, TN (800) 824-3018.
 4. Schluter Systems, Plattsburg NY. Contact: Earl Maicus (800) 267-0817 Ext. 3410.

2.2 SUPPLIERS

- A. Specified ceramic tile products may be procured from the following suppliers.
1. Haines, Jones & Cadbury (HJC). Contact: Customer Service (800) 459-7099, WMT@hjcinc.com
 2. Products may be procured from distributor or supplier listed on tile manufacturers' website.
- B. Specified mortar, grout and other setting materials may be procured from the following suppliers:
1. Haines, Jones & Cadbury, Inc., Bentonville, AR, Customer Service (800) 459-7099, WMT@hjcinc.com
 2. The Home Depot.
 3. Koffler Sales Company, Lake Zurich, IL, (888) 727-5102.
 4. The Corner Guard Store, (800) 516-4036.
 5. Schluter Systems; Contact manufacturer at (800) 267-0817 for list of distributors.

2.3 CERAMIC TILE

- A. Provide Standard grade tile that complies with ANSI A 137.1 for types, compositions, and other characteristics indicated.
1. CT-3 (Grey):
 - a. Portfolio, 12x24, Ash Grey PF05, Unpolished, by Daltile.
 2. CT-4 (Grey):
 - a. Delegate, 3x24 base, Dark Grey DL27, Unpolished, by Daltile.
 3. CT-5 (Grey):
 - a. Delegate, 12x24, Dark Grey DL27, Unpolished, by Daltile.

2.4 SETTING MATERIALS

- A. Thin-Set Mortar: Multi-use, polymer fortified adhesive mortar for wall installations and as medium bed mortar for flooring installations:
1. 4-XLT, by Laticrete.
- B. Grout: SpectraLOCK PRO Grout, by Laticrete.
1. G-4 (Taupe): Dusty Grey #60.
- C. Grout Cleaning Additive: LATICRETE SpectraLOCK PRO Cleaning Additive.
- D. Floor Leveling Compounds and Primer:
1. Laticrete NXT Level Plus Self Leveling Underlayment by Laticrete.
 2. NXT Primer for Underlayment by Laticrete.

2.5 TRIM UNITS

- A. Stainless Steel Top and Corner Trim - C: Rondec RO, stainless steel, by Schluter.
1. Connector: V/RO, stainless steel, by Schluter.
- B. Stainless Steel Vertical Outside Corner Trim: Rondec EV/RO, stainless steel, by Schluter.

09310-2

- C. Stainless Steel Horizontal Inside Corner Trim: Rondec ID/RO, stainless steel, by Schluter.
- D. Stainless Steel Vertical Inside Corner Trim: Dilex EHK U11/011, stainless steel, by Schluter.
- E. Stainless Steel Corner Guard - A: Specified in Section 10260.
- F. Tile Edge Transition - D: Schluter Schiene, stainless steel, by Schluter.
- G. Stainless Steel Corner Trim - B: One of the following:
 - 1. ECK-K, 1-1/2 x 1-1/2, K32 V2A/200 with anchoring leg, stainless steel, by Schluter.
- H. Stainless Steel Trim Installation Accessories: Schluter ProCut Cutting Wheel #TSM 115/1, by Schluter.
- I. Transition Strips:
 - 1. Transition edge strip between concrete slab and ceramic tile: No. 8136 by National Guard Products, Inc., or equivalent by Pemko or Reese. 1-1/8"x 1/4" aluminum, smooth surface, beveled 1 side only.
 - 2. Transition edge strip between concrete slab and ceramic tile: Reno Ramp AERP-125B90 by Schluter Systems, Plattsburgh, NY. 3-1/2" x 1/2" satin anodized aluminum sloped transition ramp.
 - 3. Transition edge strip between concrete slab and flooring panels: Reno Ramp/-K by Schluter Systems, Plattsburgh, NY, satin anodized aluminum sloped transition ramp.
 - 4. Splashguard for showers: Showerprofile-WS+-WSL by Schluter Systems, Plattsburgh, NY, satin anodized aluminum support profile with straight lip insert as shown on Drawings.

2.6 MORTAR MIX AND GROUT

- A. Mix mortars and grouts to comply with requirements of referenced standards and manufacturers for proportioning of materials, water or additive content; type of mixing equipment, selection of mixer speeds, mixing containers, and mixing time to produce mortars and grouts of uniform quality with optimum performance characteristics for application indicated.

2.7 DUST EXTRACTION SYSTEM AND PRE-SEPARATOR

- A. Provide dust extraction system and pre-separator for use during mechanical slab preparation where required or specified.
 - 1. Heavy-duty industrial HEPA filtration vacuum system, suitable for extracting and containing large quantities of fine concrete dust (minimum 350CFM air flow) in conjunction with manufacturer recommended pre-separator.
 - 2. Provide one of the following:
 - a. 86D, by HTC.
 - b. T8600, by Pullman-Ermator.
 - c. Bull 1250, by SASE Company, Inc.
 - d. Approved equal.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and adjacent areas where products will be installed and verify that surfaces conform to product manufacturer's requirements for substrate conditions. Do not proceed until unsatisfactory conditions have been corrected.
- B. Beginning of installation indicates acceptance of substrate conditions.

3.2 PREPARATION

- A. Protect surrounding work from damage or disfiguration.

- B. Interior Concrete Slab:
 1. Vacuum clean existing substrate and damp clean.
 2. Seal substrate surface cracks with filler.
 3. Level existing substrate surfaces in accordance with TCA installation requirements and remove peaks or valleys using floor leveling compound specified. Prime, clean and prepare concrete surface as required by manufacturer and apply leveling compound in accordance with manufacturer's instructions.
- C. Prepare substrate surfaces which do not need joint repair with sealers or conditioners as recommended by adhesive manufacturer.

3.3 INSTALLATION

- A. ANSI Tile Installation Standards: Comply with parts of ANSI A108 Series "Specifications for Installation of Ceramic Tile" that apply to types of setting and grouting materials shown and specified.
- B. TCA Installation Guidelines: TCA's "Handbook for Ceramic Tile Installation." Comply with applicable TCA installation methods.
- C. Transition Strip: Install transition strip at transitions between ceramic tile and concrete. Install during tile placement in accordance with edge strip manufacturer's instructions.
- D. Lay tile to pattern indicated. Do not interrupt tile pattern through openings.
- E. Cut tile using saws equipped with integrated water delivery system that continuously feeds water to the blade.
- F. Fit tile tight to penetrations. Form corners and bases neatly. Align floor and base joints.
- G. Place tile joints uniform in width, subject to variance in tolerance allowed in tile size. Make joints watertight, without voids, cracks, excess mortar, or excess grout.
- H. Sound tile after setting. Replace hollow sounding units.
- I. Expansion Joints: Provide tile expansion joints at control/construction joints in concrete slab. Keep joints free of mortar or grout.
 1. Installation Method: TCA EJ171.
- J. Allow tile to set for a minimum of 48 hours prior to grouting.
- K. Grout tile joints.
 1. Grout space shall be 1/8-inch for all tile joints unless otherwise noted on Drawings.
- L. Apply sealant to junction of tile and dissimilar materials, at tile penetrations, and at tile expansion joints.

3.4 FIELD QUALITY CONTROL

- A. Inspect ceramic tile installation, joints, grout line alignment, and attachment to substrate.
- B. Correct deficiencies in Work which inspection indicates are not in compliance with Contract Documents.

3.5 CLEANING

- A. Remove excess mortar and grout from floor, base, and wall surfaces without damage.
- B. On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
 1. Initially clean and remove grout residue from tile as soon as possible according to tile and grout manufacturer's written instructions. Use cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned.

09310-4

- Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.
2. Begin final cleaning approximately 1 hour after initial cleaning of the grout. Mix cleaning additive to 2 gallons of clean, cool water. Use a white scrub pad to lightly scrub apart any of the leftover residue remaining on the surface of the tile. Drag a clean, damp sponge diagonally over the scrubbed surfaces to remove any froth and residue. Rinse sponge often and change water every 50 square feet of surface. Allow cleaned areas to dry and inspect entire surface of tile. Repeat if haze remains.
 3. If haze remains 24 hours after installation, clean surfaces using straight white vinegar or bleaching type cleanser by methods described in preceding paragraph.
- C. Dispose of construction waste in accordance with the requirements of Section 01351.
- D. Perform final cleaning of tile with cleaning materials recommended by tile manufacturer one day prior to Date of Substantial Completion.

3.6 PROTECTION

- A. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.
- B. Prohibit traffic from floor finish for 72 hours after installation.

SECTION 09511 - ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Suspended metal grid ceiling system.
 - 2. Acoustical panels.
 - 3. Perimeter trim.

- B. Related Requirements:
 - 1. Section 01351 - Regulatory Compliance: References to Contract Provisions for removal and recycling of acoustical ceiling tile.
 - 2. Section 13900 - Fire Suppression: Sprinkler heads in ceiling system.
 - 3. Section 15800 - Air Distribution: Air diffusion devices in ceiling system.
 - 4. Section 16500 - Lighting: Light fixtures attached to ceiling system.
 - 5. Appendix B – Testing, Inspection and Observation by Owner: Procedures for inspection, testing, and documentation by Owner furnished testing laboratory.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are reference within the text by these basic designations only.

- B. ASTM International (ASTM):
 - 1. ASTM C 635 - Specification for Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.
 - 2. ASTM C 636 - Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels.
 - 3. ASTM C 1858 – Direct Hung Suspended T-bar Type Ceiling Systems Intended to Receive Gypsum Panel Products in Areas Subject to Earthquake Ground Motions.
 - 4. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.
 - 5. ASTM E 580 - Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions.
 - 6. ASTM E 1264 - Acoustical Ceiling Products.

- C. American Society of Civil Engineers (ASCE):
 - 1. ASCE 7 - Minimum Design Loads for Buildings and Other Structures.

1.3 SUBMITTALS

- A. Comply with the requirements of Section 01330.

- B. Product Data. Provide manufacturer's product data for suspension systems, showing all components.

- C. Shop Drawings: Show the following:
 - 1. Layout of grid components and hanger spacing, including perimeter support wires.
 - 2. Locations and methods of attachment of grid to walls. Clearance where grid is not attached to walls.
 - 3. Connection of ends of main beams and cross tees.
 - 4. Locations and details of compression struts and horizontal restraint wires or rigid bracing.
 - 5. Locations and details of seismic separation joints.
 - 6. Bracing for changes in ceiling plane.
 - 7. Locations and support details for light fixtures, diffusers, and other items within the ceiling system.

- D. Evaluation Report: ICC-ES report verifying code compliance for systems with alternative materials, design or methods of construction not specifically prescribed by the building code.

1.4 SYSTEM DESCRIPTION

- A. Design Requirements:
 - 1. Rigidly secure acoustical ceiling system including integral mechanical and electrical components with maximum deflection of 1/360.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 01600 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver acoustical units in manufacturer's original unopened containers with brand name and type clearly marked.
- C. Store under cover in dry, watertight conditions.
- D. Prior to installation, store acoustical units for 24 hours minimum at same temperature and relative humidity as space where Work will be installed.

1.6 PROJECT CONDITIONS

- A. Environmental Requirements: Maintain uniform temperature range of 60-85 degrees F, and humidity of no more than 70 percent relative humidity prior to, during, and after installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Provide products by the following manufacturers as specified:
 - 1. Armstrong World Industries Incorporated, Lancaster, PA (800) 448-1405.
 - 2. CertainTeed Ceilings, Valley Forge, PA (800) 233-8990.
 - 3. [Rockfon](#), LLC (Formerly Chicago Metallic Corporation), Chicago, IL (800) 323-7164.
 - 4. Gold Bond Building Products, National Gypsum Company, Charlotte, NC (704) 365-7300.
 - 5. USG Interiors, Chicago, IL (800) 950-3839.

2.2 REGULATORY REQUIREMENTS

- A. Surface Burning Characteristics in Accordance with ASTM E 84 for Class A finish:
 - 1. Flame Spread: Less than 25.
 - 2. Smoke Density: Less than 50.
- B. Seismic Performance: Acoustical ceiling shall withstand the effects of earthquake motions determined according to ASCE 7.
- C. Food Serving and Preparation Areas where Scheduled:
 - 1. United States Department of Agriculture (USDA): Approved for incidental food contact.

2.3 SUSPENSION SYSTEM

- A. Provide suspension system specified herein for the corresponding ACT system as applicable as shown on the drawings. Provide suspension system compatible with acoustical panels selected.
- B. Grid: ASTM C635, heavy duty, steel exposed T; nominal 1 inch width; stab-in connections.
- C. Accessories: Stabilizer bars (Cat D, E, and F only), clips, and splices.

- D. Grid Finish:
 1. White, unless noted otherwise.
- E. Support System: Hot or cold rolled steel channels; galvanized hanger wire, minimum 12 gage.
- F. Edge Moldings: Metal channel with exposed flange to match suspension system.
 1. Minimum 2 inch wide horizontal leg.
- G. Compression Struts: Telescoping compression strut designed to attach to main tees at each splayed wire location, preventing upward movement of ceiling grid system. Provide either of the following:
 1. Donn Compression Post, by USG.
 2. Field fabricated compression struts as detailed on drawings.
- H. ACT-1; Non Fire-Rated Suspension System: Provide one of the following:
 1. Prelude 15/16 inch, XL #7300 Exposed Tee System, by Armstrong.
- I. ACT-2; Fire Rated - USDA Approved Suspension System: Provide one of the following:
 1. Prelude Plus Fire Guard, XL, HDA8200, by Armstrong.
 2. Environmental HDG Steel System, 1830 Fire Front, by Rockfon.
 3. Environmental System ZXLA, by USG.
- J. ACT-3 (**Black**); Non Fire-Rated Suspension System: Provide one of the following:
 1. Prelude 15/16 inch, XL #7300 Exposed Tee System, by Armstrong.
- K. Substitutions: Not Permitted.

2.4 ACOUSTICAL LAY-IN PANELS:

- A. Provide acoustical panels specified herein for the corresponding ACT system as applicable as shown on the drawings.
- B. ACT-1: Non Fire-Rated Panels, square edge, nonperforated, abuse-resistant vinyl film facing, size as shown. Provide one of the following:
 1. Cortega, 2' x 4', white, square edge, by Armstrong.
- C. ACT-2: Square edge, non-perforated vinyl-faced gypsum panels, which satisfy USDAFSSIS guidelines for sanitary applications. Size as shown. Provide one of the following:
 1. VinylRock, by CertainTeed.
 2. Sheetrock Lay-in Ceiling Panel ClimaPlus, by USG.
 3. Gridstone Brand Gypsum Ceiling Panels, by National Gypsum.
- D. ACT-3 (**Black**): Non Fire-Rated Panels, square edge, nonperforated, abuse-resistant vinyl film facing, size as shown. Provide one of the following:
 1. Cortega, 2' x 4', black, square edge, by Armstrong.
- E. Substitutions: Comply with the requirements of Section 01600.

PART 3 - EXECUTION

3.1 PREPARATION/DEMOLITION

- A. Examine surfaces and adjacent areas where products will be installed and verify that surfaces conform to product manufacturer's requirements for substrate conditions. Do not proceed until unsatisfactory conditions have been corrected.
- B. Verify that layout of hangers will not interfere with other Work.

- C. Beginning of installation indicates acceptance of conditions.

3.2 INSTALLATION – GENERAL

A. Interface with Other Work:

1. Do not install acoustical ceilings until building is enclosed, heating is provided, dust generating activities have terminated, and overhead work is completed, tested, and approved.
2. Schedule installation of acoustic units after interior wet work is completed.
3. Install after major above ceiling work is complete.
4. Coordinate location of hangers with other Work.

B. Site Tolerances:

1. Variation from Flat and Level Surface: 1/8 inch in 12 feet.

3.3 INSTALLATION - SUSPENSION SYSTEM

- A. Install System in accordance with ASTM C 636, ASTM E 580, ASCE 7 and manufacturer's published instructions.
- B. Rigidly secure acoustical ceiling system including integral mechanical and electrical components with maximum deflection of 1/360.
- C. If metal deck is not supplied with hanger tabs, coordinate installation of hanger clips during steel deck erection. Provide additional hangers and inserts as required.
- D. Hang system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members. Where ducts or other equipment prevent regular spacing of hangers, reinforce nearest affected hangers and related carrying channels to span extra distance.
- E. Locate system on room axis to a balanced grid design with edge units no less than 50 percent of acoustical panel size where Reflected Ceiling Plan not shown on Drawings.
- F. Do not support components on main runners or cross runners if weight causes total dead load to exceed deflection capability. Do not eccentrically load system, or produce rotation of runners.
- G. Install edge molding at intersection of ceiling and vertical surfaces using longest practical lengths. Miter corners. Provide edge moldings at junctions with other interruptions. Secure at 16 inches on center.
- H. Install compression struts and secure system with tie wires.
 1. Unless otherwise indicated on Drawings, provide four 12 gage wires secured to main runner within 2 inches of cross runner intersection and splayed 90 degrees from each other at angle not exceeding 45 degrees from plane of ceiling.
 2. Fasten strut to main runner, extend to and fasten to structural member supporting roof.
 3. Locate compression strut and splayed hanger wires at a maximum of 12-feet on center in both directions with first point within 6-feet from each partition.
 4. Fasten runner ends to perimeter enclosure on two adjacent walls.
 5. Do not fasten runners on two opposite ends and provide 3/4" clearance to vertical leg of perimeter enclosure.
 6. Prevent all terminal ends of runners not directly attached to perimeter enclosure from spreading.

3.4 INSTALLATION - ACOUSTICAL PANELS

- A. Fit acoustic units in place free from damaged edges or other defects. Install acoustic units level, in uniform plane, and free from twist, warp, and dents.
- B. Within any enclosed room, do not mix panels of different brands.

3.5 FIELD QUALITY CONTROL

- A. Field quality control shall be the responsibility of the Contractor in accordance with Section 01452. Except as specified as mandatory, field quality control testing and inspection shall be at the discretion of the Contractor as necessary to assure compliance with Contract requirements. Owner T&I specified in Appendix B shall not preclude Contractor's responsibility to perform similar routine, necessary, and customary testing and inspection of the methods and frequency suitable for the type of work involved.

3.6 OWNER TESTING AND INSPECTION (T&I)

- A. The Owner will perform testing and inspection as specified in Appendix B (Section 09511).

3.7 CLEANING

- A. Clean exposed surfaces of acoustical ceilings including trim, edge moldings, and suspension system members

09511-6

SECTION 09655 - RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Rubber or Vinyl Resilient Base (RB).
 - 2. Resilient Stair Treads and Accessories.
- B. Related Requirements:
 - 1. Section 01600 - Product Requirements: Contractor's Product Selection Checklist.
 - 2. Section 07900 – Joint Sealers: Sealant between bases and floor or wall surfaces.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM E 84 - Surface Burning Characteristics of Building Materials.
 - 2. ASTM F 710 – Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.
 - 3. ASTM F 1861 – Resilient Wall Base.
 - 4. ASTM F 2169 - Standard Specification for Resilient Stair Treads.

1.3 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Resilient Base:
 - 1. Armstrong Flooring, Lancaster, PA, (888) 276-7876.
 - 2. Flexco, Corp., Tuscumbia, AL, (800) 633-3151,
 - 3. Johnsonite, Solon, OH, (800) 899-8916.
 - 4. Roppe Rubber, Fostoria, OH (800) 537-9527.
 - 5. VPI Corp., Sheboygan, WI, (800) 874-4240
- B. Transition Strips:
 - 1. National Guard Products, Memphis, TN, (800) 647-7874.
 - 2. Ceramic Tool Company, Pewaukee, WI, (800) 236-5230.
 - 3. (Fasteners only) Hilti, (800) 879-8000.
- C. Resilient Stair Treads:
 - 1. Nora Systems, Inc., Salem, NH 03079 (603) 894-1021.
- D. Adhesives:
 - 1. Seal Bond, Spring Lake, MI, (800) 252-4144.
 - 2. Franklin International, Columbus, OH, (800) 877-4583.

2.2 SUPPLIERS

- A. Specified products may be procured from the following suppliers.
1. Haines, Jones & Cadbury. Contact: Customer Service (800) 459-7099, WMT@hjcinc.com
 2. B.R. Funsten & Co, Fairfield, CA, (800) 479-5671.
 3. J.J. Haines and Co., Glen Burnie, MD, (800) 922-9248.
 4. T & A Supply Co., Kent, WA (800) 562-2857.
 5. T & L Distributing, Houston, TX (800) 888-0601.
 6. Contact specified manufacturers for additional distributors.

2.3 RESILIENT BASE

- A. Resilient Base: In accordance with ASTM F 1861, color integrated Type TV (vinyl), TS (rubber, vulcanized thermoset), or TP (rubber, thermoplastic); 1/8 inch thickness unless noted otherwise, approximately 4 inches high. Provide matching end stops and preformed corner units where required, unless noted otherwise. Verify color prior to ordering.
1. RB1 – Black:
 - a. [Armstrong](#) Vinyl or Rubber: No. 60 Jet Black.
 - b. [Flexco](#) Rubber: No. WF-01 Black Dahlia.
 - c. [Johnsonite \(Tarkett\)](#) Vinyl or Rubber: No. 40 Black.
 - d. [Roppe](#) Vinyl or Rubber: No. 100 Black.
 - e. [VPI](#) Vinyl or Rubber: Jet.
- B. Resilient Base Accessories:
1. Adhesive: Water resistant type, VOC less than 50 g/l. Provide GREENchoice Professional Cove Base Adhesive, by Franklin International or equivalent product by another manufacturer.

2.4 RESILIENT STAIR TREADS

- A. One-Piece Nosing, Tread and Riser: Manufactured in accordance with ASTM F 2169, Type TS
1. Surface Design: Raised round pastilles.
 2. Color: R1 (Gray) – Stone Gray, by Nora Systems, Inc.
 3. Installation Tape: Nora Stepfix.
 4. Stair-Tread-Nose Filler: Two-part epoxy compound recommended by resilient tread manufacturer to fill nosing substrates that do not conform to tread contours.
- B. Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Resilient Stair Treads:
1. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
 2. Concrete Substrates for Resilient Stair Treads and Accessories: Prepare according to ASTM F 710.
 - a. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - b. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 - c. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer.
 - d. Moisture Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
 3. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
 4. Do not install resilient products until they are same temperature as the space where they are to be installed.
 - a. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

3.2 INSTALLATION

A. Resilient Base:

1. Install base in accordance with manufacturer's requirements using manufacturer's approved adhesive.
2. Fit joints tight and vertical. Maintain minimum measurement of 18 inches between joints. Use premolded corner units.
3. Install base on solid backing. Bond tight to wall surfaces.
4. Scribe to fit door frames and other interruptions.
5. Remove excess adhesive from floor, wall surfaces and base.

B. Resilient Stair Treads: Install resilient stair treads in accordance with manufacturer's written instructions.

3.3 CLEANING

- #### A. Remove excess adhesive from floor, base, and wall surfaces without damage.

THIS PAGE INTENTIONALLY BLANK

END OF SECTION

09655-4

SECTION 09722 - PRESENTATION DRY-ERASE WALLCOVERING

PART 1 – GENERAL

1.1 SUMMARY

- A. Division Includes:
 - 1. Dry Erase Wallcovering.
 - 2. Tray, Trim, and Presentation Rails.
 - 3. Accessories.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. E84 Test Method for Surface Burning Characteristics of Building Materials.
- B. Gypsum Association:
 - 1. GA-214-M-97 Recommended Levels of Gypsum Board Finish.

1.3 SUBMITTALS

- A. Manufacturer's product data and installation instructions for each type of dry erase wallcovering, adhesive, and accessories required.
- B. Manufacturer's written product data indicating compliance with specified materials required.
- C. Manufacturer's written installation instructions.
- D. Manufacturer's written instructions for recommended maintenance of each type of dry erase wall covering required.
- E. Samples:
 - 1. 7 inch (177.8mm) x 9 inch (228.6mm) samples of each dry erase material required.
 - 2. 6 inch (152.4mm) samples of trim, tray, and end caps required.

1.4 QUALITY ASSURANCE

- A. Manufacturer: Provide each type of dry erase wallcovering required produced by one manufacturer.
- B. Installer: Installation by skilled commercial wallcovering contractor with no less than three years of documented experience installing dry erase wallcovering of the types and extent required.
- C. Composition:
 - 1. EZ-Rite®: Provide non-woven backing, white pigmented vinyl capped with high-gloss, dry erase film.
- D. Surface Burning Characteristics Classification: Provide materials that meet Class I/A rating when tested in accordance with ASTM E84 for flame spread and smoke developed
- E. Field Samples: Prepare field samples for architect's review and establish requirements for seaming and finish trim.
 - 1. Install sample panel of each type presentation wallcovering specified in area designated by architect.
 - 2. Maintain corrected and approved samples to serve as a standard of performance for the project.

1.5 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Deliver presentation wallcoverings to the project site in unbroken and undamaged original factory packaging and clearly labeled with the manufacturer's identification label, quality or grade, and lot number.
- B. Store materials in a clean, dry storage area with temperature maintained above 55°F (13°C) with normal humidity.
- C. Store material within original packaging to prevent damage.

1.6 PROJECT CONDITIONS

- A. Do not apply presentation wallcoverings when surface and ambient temperatures are outside the temperature ranges required by the wallcovering manufacturer.
- B. Provide continuous ventilation and heating facilities to maintain substrate surface and ambient temperatures above 55°F (13°C) unless required otherwise by manufacturer's instructions.
- C. Apply adhesive when substrate surface temperature and ambient temperature is above 55°F (13°C) and relative humidity is below forty percent.
- D. Maintain constant recommended temperature and humidity for at least 72 hours prior to and throughout the installation period, and for 72 hours after wallcovering installation completion.
- E. Provide not less than 80-foot-candles per square foot lighting level measured mid-height at substrate surfaces.

1.7 WARRANTY

- A. Submit manufacturer's limited ten-year written warranty against manufacturing defects.

1.8 MAINTENANCE

- A. Maintenance instructions: Include precautions against cleaning materials and methods that may be detrimental to finishes and performance.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Wallcoverings: Walltalkers Wallcoverings manufactured by Koroseal Interior Products, LLC., Fairlawn, Ohio.

2.2 MATERIALS

- A. Walltalkers EZ-Rite: Non-woven backing, white pigmented vinyl capped with high-gloss, dry erase film
 - 1. ZP50: 49/50 inch (1.25/1.27m) width, non-woven backing.

2.3 TRIM & TRAY

- A. J Cap Wallcovering Trim:
 - 1. JC12-00: Clear satin, anodized aluminum, low profile trim

2.4 ACCESSORIES

- A. Adhesives: Heavy-duty clear or clay based premixed vinyl adhesive.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and installation conditions to ensure surface conditions meet or exceed a Level 4 finish, per GA-214-M-97: Recommended Levels of Gypsum Board Finish, and permanent lighting should be installed and operational.
- B. Test substrate with suitable moisture meter and verify that moisture content does not exceed four percent.
- C. Verify substrate surface is clean, dry, smooth, structurally sound, and free from surface defects and imperfections that would show through the finished surface.
- D. Evaluate all painted surfaces for the possibility of pigment bleed-through.
- E. Notify the contractor and architect in writing of any conditions detrimental to the proper and timely completion of the installation.
- F. Beginning of installation means acceptance of surface conditions.

3.2 INSTALLATION Wallcovering backing.

- A. Acclimate wallcovering in the area of installation a minimum of 24 hours before installation.
- B. Read and follow the manufacturer's installation instruction sheet contained in each roll of the dry erase wallcovering.
- C. Examine all materials for pattern, color, quantity and quality, as specified for the correct location prior to cutting.
- D. Primer: Use a quality pigmented acrylic wallcovering primer.
- E. Adhesive: Apply a uniform coat of heavy-duty pre-mixed clay-based or extra strength clear wallcovering adhesive.
- F. Install each strip horizontally and in the same sequence as cut from the roll.
- G. Install dry erase wallcovering sheets in exact order as they are cut from bolt. Reverse hang alternate strips (except lined products). Do not crease or bend the wallcovering when handling.
- H. Install dry erase wallcovering horizontally using a level line.
- I. Using a level or straight edge, double cut the seam with a seam-cutting tool (Ex: Double Seam-Cutter or Swedish Knife). Do not score drywall or plasterboard when cutting material.
- J. When covering the entire wall, seam the material out of the main writing and viewing areas of the wall.
- K. Apply wallcovering to the substrate using a wallcovering smoother, wrapped with a soft cloth, to remove air bubbles. Do not use sharp edged smoothing tools. Smooth material on the wall from the middle to the outside edge.
- L. Remove excess adhesive immediately after the wallcovering is applied. Clean entire surface with a warm mild soap solution, and clean soft cloths. Rinse thoroughly with water and let dry before using. Change water often to maintain water clarity.

- M. Stop installation of material that is questionable in appearance and notify the manufacturer's representative for an inspection.

3.3 CLEAN-UP

- A. Upon completion of installation, remove all exposed adhesive immediately using a soft cloth and a warm, mild soap solution and rinse thoroughly with water and dry with clean towel prior to using.
- B. Upon completion of the work, remove surplus materials, rubbish, and debris resulting from the wallcovering installation. Leave areas in neat, clean, and orderly condition.

END OF SECTION

SECTION 09900 - PAINTS AND COATINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Field applied paints and finishes for interior and exterior surfaces.
 - 2. Application of new coatings.
- B. Related Requirements:
 - 1. Section 01351 – Regulatory Compliance:
 - a. Disposal and removal of hazardous construction and demolition waste.
 - b. Work practice control methods for airborne respirable dust.
 - 2. Section 07900 - Joint Sealer

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. ASTM International (ASTM):
 - 1. ASTM D 1653 – Standard Test Methods for Water Vapor Transmission of Organic Coating Films (Wet Cup Method).
 - 2. ASTM D 2244 – Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.
 - 3. ASTM D 2370 – Standard Test Method for Tensile Properties of Organic Coatings.
 - 4. ASTM D 3273 – Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings.
 - 5. ASTM D 3359 – Measuring Adhesion by Tape Test.
 - 6. ASTM D 4214 – Evaluating the Degree of Chalking of Exterior Paint Films per Method A Cloth Tape Method
 - 7. ASTM D 4262 – Test Method for pH of Chemically Cleaned or Etched Concrete Surfaces.
 - 8. ASTM D 4263 - Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.
 - 9. ASTM D 6677 – Test Method for Evaluating Adhesion by Knife.
 - 10. ASTM D 6904 – Resistance to Wind-Driven Rain.
- C. Occupational Safety and Health Administration (OSHA):
 - 1. OSHA 01926.1153 Respirable Crystalline Silica.
- D. The Society for Protective Coatings (SSPC):
 - 1. SSPC-SP1 – Solvent Cleaning.
 - 2. SSPC-SP3 – Power Tool Cleaning.
 - 3. SSPC-SP15 - Commercial Grade Power Tool Cleaning.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Minimize dust emissions and provide equipment that suppresses dust.
- B. Apply paint to concrete surfaces only when moisture content is within manufacturer's acceptable range as described in Part 3 herein for type of specified coating.
- C. Maintain minimum surface temperatures or ambient air temperature as follows for the specified coatings unless otherwise recommended by the manufacturer or specified in the Paint Schedule herein:
 - 1. Alkyd, epoxy, polyurethane, and interior and exterior acrylic and latex finishes: 50 degrees F.
 - 2. Varnish and transparent finishes: 65 degrees F.
 - 3. All coatings: Surface temperature at least 5 degrees F above the dew point.

- D. Maintain maximum surface temperatures or ambient air temperatures and relative humidity as recommended by the manufacturer.
- E. If ambient temperatures are unacceptable, provide continuous ventilation and heating facilities to maintain temperatures above the minimum surface and air temperature specified above for 24 hours prior to, during, and 48 hours after application of finishes.
- F. If work area is enclosed, use fire retardant enclosure materials and indirect-fired heating equipment ventilated outside of the enclosure.
- G. Do not apply paint in areas where dust is being generated. Do not apply coatings in conditions that could result in overspray on vehicles or other property.
- H. Perform painting under lighting conditions of not less than 80 foot candles measured mid-height of the painter at substrate surface. Where artificial lighting is required, provide explosion-proof artificial lighting.
- I. Waste Management:
 - 1. Store, transport, and dispose of waste in accordance with local, state and federal regulations and the requirements of Section 01351 Supplement.
 - 2. Do not dispose of paint, containment materials, or project waste in Owner's dumpsters.
 - 3. Do not allow dry materials to enter storm drain inlets.
 - 4. Clear debris and waste from the site daily.
 - 5. Use HEPA-rated filter vacuum to clean surfaces of dirt, dust and debris.
 - 6. Obtain paint in containers of the largest size practical for each color, sheen, and type.
 - 7. Furnish disposal containers.
 - 8. Return reusable containers and totes to manufacturer.
 - 9. Clean and recycle containers that cannot be returned to manufacturer.
- J. Wastewater Management
 - 1. Collect wash wastewater and store, transport, manifest and dispose of according to local, state and federal regulations. Consult local wastewater treatment operator for direction.
 - 2. Do not allow wash wastewater to flow from the surface cleaning processes to a storm water drain or catch basin, street, roadway, sidewalk, gutter, landscape area, or any type of storm water structure.

1.4 ADMINISTRATIVE REQUIREMENTS

- A. Scheduling and Coordination:
 - 1. Scheduling requirements for Owner's independent and Manufacturer's Representative inspections is specified in Part 3 herein.

1.5 SUBMITTALS

- A. Closeout Documents:
 - 1. Submit closeout documents in accordance with Section 01770.
 - 2. Submit Manufacturer Inspection Report of post-installation site visit specified hereinafter.
 - 3. Photographic documentation: Upon Completion, submit a completion report including at least 10 wide-angle photos taken at work stages including but not limited to the following:
 - a. Before start of project.
 - b. During removal and replacement of sealants as specified in Part 3 herein.
 - c. During surface preparation of concrete and metal as specified in Part 3 herein.
 - d. During application of each coat, including spray and back roll application, as specified in Part 3 herein.
 - e. After completion of project.
 - f. Provide photos taken of each elevation from the same location in each work stage.
 - 4. Submit Manufacturer's Extended Material Performance Warranty and Contractor's Labor and Workmanship Warranty.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements:

1. VOC Content: Provide paint and coating materials that conform to Federal, State, and Local restrictions for Volatile Organic Compounds (VOC) content.
2. Toxicity/EQ: Comply with federal, state, and local toxicity and environmental quality regulations and with federal requirements on content of lead, mercury, and other heavy metals. Do not use solvents in paint products that contribute to air pollution.

B. Exterior Wall Coating Pre-Installation Conference:

1. Pre-Installation Conference:

- a. Plan and Convene a pre-installation conference to take place at the site one week prior to commencing Work of this Section. Confirm scheduling of conference with Owner's Construction Manager and Owner's Project Manager.
- b. At least two weeks in advance of the meeting, confirm scheduled time and place with all attendees. Make available the meeting agenda at the time of confirmation.
- c. Meeting Minutes:
 - 1) Record minutes of meeting including discussions, decisions and agreements reached, and attendance roster.
 - 2) Obtain signatures of all attendees.
 - 3) Furnish a copy to each party attending and to Owner's representatives.
- d. Attendance:
 - 1) Owner's Construction Manager.
 - 2) Owner's Project Manager or other Owner's authorized representative.
 - 3) Contractor.
 - 4) Coating subcontractor.
 - 5) Coating manufacturer's technical representative.
- e. Agenda:
 - 1) Substrate conditions, pre-installation testing results, and specified preparation requirements.
 - 2) Substrate preparation and repair details shown on drawings.
 - 3) Sequence and method of application of coating systems.
 - 4) Review of Coatings Systems Schedule, including Contractor's choice of exterior coatings systems where multiple manufacturers are listed as comparable.
 - 5) Review of Contractor's required photo documentation as specified herein.
 - 6) Scope of manufacturer's observations and reports.
 - 7) Manufacturer's performance warranty provisions.
 - 8) Workmanship warranty conditions.

C. Exterior Wall Coating Field Sample:

1. Test sample panel by applying exterior wall coating system 5 ft, 4 inches wide on full height of the wall at location on the building where shown on the drawings or established in the coating pre-installation meeting. Apply coating after the specified preparation and cleaning are completed.
2. Where more than one substrate preparation is recommended in a pre-installation assessment or shown on drawings, prepare sample panels using the coatings systems specified for each substrate condition.
3. Apply coatings in accordance with manufacturer's recommendations and specified colors, texture, workmanship, and application requirements.
4. Obtain approval of sample panel from the Owner's PM or other authorized inspection representative.
5. Maintain approved sample panel during construction as a standard for judging completed Work. Do not alter, move, or destroy panel until Work is completed.
6. Apply the scheduled final coat to the sample panel simultaneously with the application of the final coat to adjacent wall surfaces, resulting in the sample panel receiving one additional final coat.

D. Exterior Wall Coating Applicator Qualifications:

1. Contractor shall be solely responsible for the construction means, methods, techniques, sequences and procedures for completing the Work, shall be experienced in the preparation of surfaces and application of protective coatings to interior and exterior surfaces of in applications similar to this project.

- E. Independent Coatings Consultant (ICC): The Owner’s Independent Coatings Consultant (ICC) is a consultant hired and contracted by the Owner and may be included in the project for exterior coatings assessments and testing. Contractor is not typically required to coordinate with the ICC. As information to Contractor, the Owner’s ICCs are as follows:
 1. KTA-Tator, Inc., Dobson, NC. Contact: Kevin Brown, (336) 386-4000, kbrown@kta.com.
 2. Building Engineering-Consultants, Inc. (BE-CI), Destin FL. Contact: Josh Tatum (850) 650-2311 or (850) 461-4004, jtatum@be-ci.com.
 3. The ICC’s scope is separate from and does not relieve Contractor’s responsibility for conformance with the Contract Documents.
- F. Coating Manufacturer's Technical Representative: Maintain communications with a Manufacturer’s Representative who is qualified to provide site observations and recommendations. Upon completion of the painting, ensure that the Manufacturer’s Technical Representative provides recommendations for correction of any noted deficiency.
 1. Contractor’s requirements for coordinating Manufacturer’s Representative visits are specified in Part 3 herein.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.
- B. Verify manufacturers’ national accounts purchase order procedure in order to ensure timeliness of delivery and accuracy of products.
- C. Paint orders shall identify the store number, location, batch number and address of project.
- D. Delivery of paint materials shall be in sealed original labeled containers, bearing manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and/or reducing. Notify Supplier when delivered products are nonconforming.
- E. Store coating materials in a location conforming to the manufacturers specified ambient conditions for storage and away from direct sunlight. Unless otherwise required by the manufacturer, maintain storage at temperature between 45 and 95 F.

1.8 EXTERIOR COATINGS WARRANTY

- A. Manufacturer’s Extended Material Performance Warranty: The products and systems specified in the Coatings Systems Schedule in Part 3 herein have been selected by Owner as having met or exceeded Owner’s Extended Material Performance Warranty criteria.
- B. Performance requirements for the Manufacturers’ selected coatings are as follows:

STANDARD CONDITIONS	The standard system is used for new construction in normal climates and when substrate is not identified as having special conditions.
8-Year Minimum Coatings Performance for All Exterior Metal Ferrous, Non-Ferrous, SSMR Panels	
<ul style="list-style-type: none"> • Remains free from of peeling, blistering, flaking, cracking, rusting, or rust bleed-through. • Mold and mildew resistant in accordance with the criteria of ASTM D3273. • Maintains adhesion to the underlying substrate with a minimum adhesion rating of 8 in accordance with ASTM D 6677. • Demonstrates fading not beyond a 5 delta E value for neutral and bold brand color from the color at the time of initial installation as determined by ASTM D 2244 criteria. • Demonstrates chalking not less than a 9 from the time of initial installation as determined by ASTM D 4214 criteria. • Meets US VOC regulations 	
8-Year Minimum Coatings Performance for Concrete Substrates	
<ul style="list-style-type: none"> • Coating remains free from of peeling, blistering, flaking, and cracking. • Mold and Mildew resistant in accordance with the criteria of ASTM D 3273. 	

<ul style="list-style-type: none"> • Maintains adhesion to the underlying substrate with a minimum adhesion rating of 6 in accordance with ASTM D 6677. • Demonstrates fading not beyond a 7 delta E value for neutral colors and not beyond a 7 delta E value for the bold brand color from the color at the time of initial installation as determined by ASTM D 2244 criteria. • Demonstrates chalking not less than a 7 from the time of initial installation as determined by ASTM D 4214 criteria. • Passes the Wind-Driven Rain test for exterior coatings in accordance with ASTM D 6904. • Demonstrates a flat or low-sheen finish. 	
8-Year Minimum Coatings Performance for Water Repellents	Blended water repellent (Silane/Siloxane) for porous material.
<ul style="list-style-type: none"> • Appearance of substrate remains unchanged after application. • Demonstrates resistant to yellowing and efflorescence. • Demonstrates suitability to be re-coated with conventional paints. • Maintains at least 99% improvement in water repellency in accordance with ASTM E 514. • Maintains water vapor permeance of a minimum 40 perms as determined according to test method B (wet cup) of ASTM D 1653. 	

SPECIAL CONDITIONS	In addition to the minimum criteria, coatings shall perform to the following when installed on stores identified as demonstrating special conditions.
Elongation	For Building conditions with excessive cracking where crack bridging is necessary. <ul style="list-style-type: none"> • Material shall be capable of 300% elongation for crack bridging in accordance with ASTM D 2370.

REGIONAL CONDITIONS	In addition to the minimum criteria, coatings shall perform to the following when installed on stores subject to one of the following climate conditions.
Cold Temperature Installation	In situations when the Building coatings must be installed during cold weather. <ul style="list-style-type: none"> • Coatings shall be suitable for application down to 40 degrees F.

- C. Obtain a Statement of Intent to Warrant from the manufacturer for each exterior coating system used in the project. Submit the Intents to Warrant as closeout documents as specified in Part 1 herein.

1.9 EXTERIOR WORKMANSHIP WARRANTY

- A. Labor and Workmanship Warranty: Contractor shall provide an additional two years Labor and Workmanship Warranty beyond the Contractor’s one-year warranty period required in the Owner’s General Conditions. Contractor’s Labor and Workmanship Warranty shall warrant against loss of adhesion, cracking, peeling, blistering, shadow-through, splotch or non-continuous appearance, color fade, application of incorrect color, and any other surface preparation or application deficiency described herein or identified by either the coatings manufacturer or the Owner’s authorized inspection representative during its site observations.
- B. Uncorrected deficiencies identified by Owner’s Representative during the work or within two years after completion of the work may require complete recoating at Contractor’s expense with no cost to the Owner.
- C. Submit the two-year Exterior Labor and Workmanship Warranty as a closeout document as specified in in Part 1 above.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Coatings shall be the products of the following manufacturers:
1. Interior Coatings:
 - a. [Sherwin Williams Company](#). Contact: Kevin Behm, (216) 566-1558, kevin.c.behm@sherwin.com.
 - b. [Benjamin Moore](#), Contact: Andrew Theokas, (201) 747-1586, andrew.theokas@benjaminmoore.com.
 - c. [PPG Paints](#), Contact: Rick Garlin, (317) 318-5800, garlin@ppg.com.

2. Exterior Coatings:
 - a. [PPG Paints](#), Contact: Rick Garlin, (317) 318-5800, garlin@ppg.com.

- B. Method of Coatings Purchase: Manufacturers may require products to be purchased and distributed from national distribution centers as a warranty condition. Verify conditions of purchase with the manufacturer selected for project. Comply with manufacturer's national accounts purchase order procedure in order to ensure integrity of product and observance of warranty.
- C. Manufacturer's Approved Color Formulations: Provide only those coatings produced in accordance with the manufacturer's approved color formulations, including the following:
 1. Exterior Bold Brand Color: Bold brand Walmart blue with a urethane-like appearance shall be mixed and tinted only in the manufacturer's authorized factory facility. Do not order or permit bold brand color to be mixed and tinted either in the field or at a retail store.
 2. Exterior Neutral Colors: Some manufacturers permit neutral gray or tan color scheme coatings to be mixed and tinted in the retail store. Verify with manufacturer's authorized representative that neutral scheme coatings mixed and tinted in the retail store will receive the Manufacturer's Material Performance Warranty as described in Part 1 herein.
- D. Products Schedule: Owner's preselected coating products are listed in the Product Schedules in Part 3 herein.

2.2 ACCESSORY MATERIALS

- A. Accessory materials not specified herein but recommended by the manufacturer or required to meet the requirements herein.
 1. Paint Thinners: Type recommended by paint or coating manufacturer for paint or coating system, VOC compliant, first line commercial quality.
 2. Patching Materials: As specified under Part 3 - Execution.
 3. Masking.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and adjacent areas where products will be applied and verify that surfaces conform to product manufacturer's requirements for substrate conditions. Do not proceed until unsatisfactory conditions have been corrected.
- B. Beginning of application indicates acceptance of substrate conditions.

3.2 GENERAL PREPARATION

- A. Contain fugitive dust and debris from contaminating surrounding property. Protect personnel from airborne dust and abrasive media. Establish dust containment and safety zones with caution tape or barricades prior to beginning to isolate work in areas of facility operations.
- B. Do not schedule surface preparation and other dust generating work near areas which have wet, newly coated surfaces.
- C. Verify that all coats in the proposed system are produced by the same manufacturer.
- D. Protect other surfaces from paint and damage with protective coverings, shields, masking, etc. Maintain protective coverings throughout cleaning and painting operations.
 1. Adjacent work to be protected includes but is not limited to, merchandise inventory, vehicles, and vegetation.
 2. Remove or mask hardware, hardware accessories, machined surfaces, plates, lighting fixtures, and similar items in place and not to be painted. Reinstall removed items after completion of paint work.
- E. Protect the following items from water damage during pressure washing and overspray during application:
 1. Automatic door sensors.
 2. Exterior light sensors.

3. Store mounted electronic devices, switches, receptacles and security components.
 4. Fire Protection sprinklers.
- F. For any work specified herein requiring chemical strippers, use plastic, tape, or other means to protect areas that are not to be stripped. This includes prefinished metal such as gutters and downspouts, aluminum trim and storefront and glass.
- G. Sealants:
1. Exterior Fiber Cement Panels: Remove failing or moving sealants and any loose materials from joints. Replace removed sealants with new materials as specified in Section 07900.
- H. Do not schedule paint work when rain, snow, fog, or mist are present or forecasted to be present during the drying time of the coatings.
- I. If plants, moss, mildew, or other biological growth is present, thoroughly saturate the area with a mixture consisting of 1 quart bleach/3 quarts water, and 1 cup powdered detergent. Allow the mixture to remain on the surface until the biological growth is removed. Scrub the surface and repeat as necessary to assure complete removal. Thoroughly rinse with fresh water.
- J. If the manufacturer's written recommendations conflict with or do not address the unique project conditions, comply with the requirements of this specification unless otherwise directed.
- K. Verify product are within shelf life. Schedule application of multi-component materials prior to expiration of the pot life.
- L. Perform preparation and cleaning procedures as specified in this section and in accordance with paint manufacturer's and Owner's authorized representative's direction as necessary for unique project conditions. Work directed and performed in addition to that specified herein but deemed necessary by the Manufacturer's or Owner's Representatives to achieve a satisfactory substrate shall be by change order to the Contract.

3.3 SURFACE PREPARATION

- A. Do not begin surface preparation of exterior walls until the sample wall panel specified in Part 1 has been completed and approved.
- B. Where scraping, chiseling, sanding, or grinding of concrete surfaces is required, use proper dust control tools and methods to maintain dust emissions below the permissible level.
- C. Remove visible grease and oil by solvent cleaning in accordance with SSPC-SP1.
- D. Protect joints to be sealed by inserting caulking backer rods at face of wall.
- E. Pressure Washing:
1. Remove loose paint, chalk, efflorescence, oil, grease and surface contamination by pressure washing when specified in the following surface preparations.
 2. Use equipment with at a minimum 5,000 psi and a spinner tip.
 3. If removing heavy chalk, use a TSP and water solution. Add .5 lbs. of TSP per 1 gallon of water. Apply to the wall surface using a low pressure sprayer and allow 20-30 minutes before rinsing.
 4. Thoroughly rinse the surface to ensure that no residue of TSP solution remains and to remove loose paint. To rinse, power wash the surface using a 5,000 psi pressure washer with a spinner tip. Scrub the surface with a soft bristled brush to remove any remaining chalk residue if necessary.
 5. Wipe a white cloth across the surface to ensure that no residue is visible on the cloth.
 6. As an alternative to TSP, a chalk removal additive recommended by the coating manufacturer can be used.
 7. If the surface cleanliness is not achieved using 5,000 psi pressure washing equipment, use heated pressure washing equipment (200F or higher) or contractor-selected equipment to achieve the specified degree of cleaning.
 8. Dispose of the wastewater as specified in the Environmental Requirements of Part 1 and in accordance with 01351.

- F. Steel - Exterior:
1. Remove dust, dirt buildup, grease, oil, mold, mildew, chalk, dirt, and surface debris. Pressure wash as specified in Part 3 herein to clean the surface.
 2. Remove minor rust, loose paint, and surface contamination with power tools in accordance with SSPC-SP3.
 3. Sand glossy surfaces with 220 grit sandpaper.
- G. Steel - Interior:
1. Remove dirt, dust, grease, oil, and other surface interference material by washing and scrubbing.
 2. Remove rust and loose paint with power tools in accordance with SSPC-SP3.
 3. Degloss surface with a scouring pad such as [Heavy Duty Scour Pad](#), [Non-Scratch Scour Pad](#), or equivalent by Scotch-Brite.
- H. Galvanized Steel - Exterior:
1. Remove dust, dirt buildup, grease, oil, mold, mildew, chalk, dirt, and surface debris. Pressure wash as specified in Part 3 herein to clean the surface.
 2. Remove loose coating, corrosion, deteriorated steel, and zinc salts by power tool in accordance with SSPC-SP3.
 3. Sand glossy surfaces with 220 grit sandpaper.
 4. On bare galvanizing, apply a solution of phosphoric acid and detergents designed to remove grease and oil residue to provide a clean, lightly etched surface suitable for adhesion of subsequently applied coats in accordance with the manufacturer's instructions.
- I. Galvanized Steel - Interior:
1. Remove dirt, dust, grease, oil, and other surface interference material by washing and scrubbing.
 2. Remove deteriorated galvanized steel, rust, and loose paint with power tools in accordance with SSPC-SP3.
 3. Degloss surface with a scouring pad such as [Heavy Duty Scour Pad](#), [Non-Scratch Scour Pad](#), or equivalent by Scotch-Brite.
 4. On bare galvanizing, apply a solution of phosphoric acid and detergents designed to remove grease and oil residue to provide a clean, lightly etched surface suitable for adhesion of subsequently applied coats in accordance with the manufacturer's instructions.
- J. Concrete Floors – Interior (to Receive Striping and Markings):
1. Mask floor surfaces that will not receive coating.
 2. Remove visible grease and oil deposits by detergent or solvent cleaning.
 3. Remove curing compound and sealers with solvents, commercial paint strippers, power tool cleaning, or abrasive blast cleaning using dust control methods specified herein for Full Coating Removal.
 4. Chemically or mechanically abrade surface to a texture of 50-70 grit sandpaper.
 5. If applying acid etching compound, thoroughly flush surface with clean water. Verify removal of acid with pH paper and allow the floor to thoroughly dry prior to painting.
 6. Protect painted floor surface from traffic for 12 hours after painting.
- K. Exterior Fiber Reinforced Cement Panels (FRCP):
1. Pressure wash surfaces of panels to remove grease and oil residue, efflorescence, and other contaminants to provide a clean, lightly etched surface suitable for adhesion of subsequently applied coats.
 - a. Where pressure washing is not feasible, clean surfaces by methods including compressed air, hand washing with biodegradable detergent and sponge or rags, broom cleaning, or solvent based cleaners.
 2. If mildew is present, use mildew removal method as recommended by the FRCP manufacturer.
 3. Rinse any remaining chemical films left by solvent cleaners.
- L. Wood:
1. Remove surface contamination by washing with a cleaning solution, scraping, sanding, and scrubbing to remove dirt, pollutants, mildew, deteriorated wood, and surface interference material.
 2. Allow to dry and apply patching material recommended by the coating manufacturer to fill cracks, nail holes, and other imperfections. Sand the patched areas smooth after drying.
 3. Scrape and clean small, dry, seasoned knots and apply a thin coat of knot sealer recommended by the coating manufacturer before applying prime coat.
 4. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dry.

5. Prime, stain, or seal wood required to be field painted immediately upon delivery to site. Prime edges, ends faces, undersides, and backsides of such wood, including cabinets and counters.
6. Seal tops, bottoms, and cut-outs with a heavy coat of sealer recommended by the coating manufacturer immediately upon delivery to the site.
7. Allow the surface to dry before applying new coatings. Prior to painting, verify dryness by testing in accordance with the manufacturer's instructions and the meter and plastic sheet methods as specified in Part 3 herein

M. Gypsum Board:

1. Fill minor defects with filler compound. Spot prime defects after repair.
2. Exterior Gypsum Board Sheathing: Exterior gypsum board sheathing to receive a paint finish shall be prepared for painting with joint treatment and skim coating as specified in Section 09250.

3.4 APPLICATION - GENERAL

- A. Apply paint to surfaces free of dirt, rust, scale, grease, moisture, scuffed surfaces, and conditions otherwise detrimental to formation of a durable paint film.
- B. Do not substitute or interchange products or coatings systems presented at the Pre-Installation Conference unless otherwise authorized by Owner's authorized representative.
- C. Do not paint silicone sealants designated by an S1 or S2 assignment as described in Section 07900.
- D. After cleaning and prior to painting, determine surface and subsurface moisture of non-metal substrates in compliance with the manufacturer's instructions and the following methods:
 - a. Radio frequency and conductivity moisture meter testing with results in the green range for conductivity and the yellow range or below for radio frequency.
 - b. Plastic sheet testing in accordance with ASTM D 4263 to determine the presence of capillary moisture. Levels are acceptable when dry on the plastic and the block.
- E. Mixing and Thinning:
 1. Mix coatings in clean containers in accordance with the manufacturer's published instructions.
 2. Remove skins on acrylic coatings prior to mixing. If mixed into the coating, remove skin residue by straining prior to use.
 3. Stir paint materials as necessary during use to maintain the consistency.
- F. Touch up shop-applied prime coats where damaged or bare. Use the same primer applied in the shop.
- G. If application procedures are not specified herein, use application procedures designated by the manufacturer's published instructions for the particular application and substrate.
- H. Dry Film Thickness (DFT) shown in the Product Schedules in Part 3 herein represent the minimum Dry Film Thickness in mils per coat. Apply each coat to uniform coverage. Avoid excessive thickness that results in runs, sags, and solvent voids in the film.
- I. Measure or allow to be measured the Wet Film Thickness (WFT) of exterior coatings if manufacturer's representative or Owner's authorized representative requires.
- J. Allow drying time between coats as recommended by the manufacturer.
- K. When coating irregular surfaces including edges, corners, crevices, welds, and exposed fasteners, apply a minimum dry film thickness equivalent to that of flat surfaces.
- L. Prime Coats, General: Before application of finish coats, apply a prime coat of material as scheduled. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to assure a finish coat with no burn through or other defects due to insufficient sealing.

- M. Pigmented (Opaque) Finishes: Completely cover to provide an opaque, smooth surface of uniform finish, color, appearance and coverage. Apply additional coats if shadow through of underlying coats or substrate is visible. Cloudiness, spotting, laps, brush marks, runs, sags or other surface imperfections will not be acceptable.

3.5 MECHANICAL AND ELECTRICAL EQUIPMENT

- A. Replace identification markings on mechanical or electrical equipment when painted over or spattered.
- B. Where exposed piping, conduit, and electrical equipment are to be painted, paint color and texture shall match adjacent surfaces.
- C. Paint both sides and edges of plywood backboards for electrical equipment prior to installation.
- D. Pre-paint gas piping prior to installation. Touch up paint after installation to repair damage. Colors shall be as follows:
 - 1. Exterior Piping on Roof (Yellow): P5, OSHA Standard "Safety Yellow."
 - 2. Interior Piping in Receiving and Stockroom Areas (Yellow): P5, OSHA Standard "Safety Yellow."
 - 3. Piping in all Other Areas: Color to match adjacent surfaces.

3.6 INTERIOR FIELD QUALITY CONTROL

- A. Interior Coatings and Exterior Coatings on Surfaces Other than Exterior Wall: Inspect painting and coating application for scheduled material, color, sheen, specified thickness (WFT where indicated and DFT), and coverage.

3.7 EXTERIOR FIELD QUALITY CONTROL

- A. Exterior Wall Work in Progress Inspections:
 - 1. Contractor's Installation Inspections:
 - a. Maintain schedule of application of exterior wall systems in field office for Owner's review.
 - b. Enter any painting defects defined as deviations, as well as recommended repairs by Owner's Construction Manager or Manufacturer's Technical Representative during progress inspections into the online Owner's Observation Log.
 - c. Maintain photographic documentation of application for Contractor's Completion Report as specified in Part 1 herein as a closeout document.
 - d. Conduct the following inspections and tests each day, as applicable. Document and make available to the Owner's Construction Manager.
 - 1) Ambient conditions during the work, including air temp, surface temp, relative humidity, dew point.
 - 2) Quality of surface preparation on each item prepared, including cleanliness and roughness, removal of chalk and loose paint, removal of biological growth, de-glossing, pressure washing, power tool cleaning, etc.
 - 3) Moisture content of cementitious surfaces prior to painting.
 - 4) Application, including product names, quantities, and locations of coatings applied.
 - 5) Methods of application, including whether spray, brush, roll, back-rolling, etc.
 - 6) Wet film thickness of coatings applied as measured at a minimum of 5 spots per 100 square feet or fraction thereof. Dry film thickness of coatings applied to metal as measured at a minimum of 5 spots per 100 square feet or fraction thereof.
 - 7) Quality of application, including aesthetics, coverage, presence of pinholes and shadow-through.
- B. Exterior Wall Post-Installation Inspections:
 - 1. Post-Installation Site Visits: Upon completion of the coating system installation, schedule site visits with the Manufacturer's Technical Representative.
 - a. Provide a minimum one week notification for the scheduling of final inspections.
 - b. Include Owner's authorized representative if available.
 - c. Verify that Manufacturer's Representative's observations include inspection of all specification requirements and comparison with the sample panel specified herein.
 - 2. Manufacturer Post-Installation Site Visit: Schedule a site visit with Manufacturer's Technical Representative.
 - a. Manufacturer's Representative shall be the same individual present at pre-construction conference.

- b. Record noted deficiencies and recommendations observed by the Manufacturer's Technical Representative.
 - c. Remediation of Deficiencies: If the Representative notes deficiencies, provide remediation as recommended by the Representative and necessary to achieve compliance with the specification requirements.
 - 1) Record products, methods of application, location, and quantities of coatings for remediation work.
- C. Fine for Failure to Remediate: If the Manufacturer's Representative or Owner's authorized representative determine that remediation work is not complete in accordance with the recommendations of the post-installation report and in conformance with the requirements herein, Owner may assess a fee of \$3,000.00 at Contractor's expense with no cost to the Owner.

3.8 MAINTENANCE OF WORK AREA

- A. As work proceeds and upon completion, remove paint where spilled, splashed, or spattered.
- B. During progress of work keep premises free from unnecessary accumulation of tools, equipment, surplus materials and debris. At the end of each workday, remove empty cans, rags, rubbish, and other discarded paint material from the site.
- C. Collect waste, cloths, and material which may constitute a fire hazard, place in closed metal containers, and remove daily from site.
- D. Upon completion of work, leave premises neat and clean. Remove protective coverings and paint from doorknobs, floors, counter tops and other areas not requiring paint.

3.9 PROTECTION

- A. Repair damage as a result of inadequate or unsuitable protection during preparation or installation.
- B. Do not leave plastic or other landscape protection covers in place so long that damage to plants results.

3.10 PAINT COLOR SCHEDULES

- A. Exterior Colors: Provide colors as shown or scheduled on the drawings.
- B. Interior Building Colors: Provide colors as shown or scheduled on the drawings.

3.11 PAINT SHEEN SCHEDULE

- A. Gloss:
 - 1. Exterior metal surfaces, including prefinished metal where shown to be painted.
 - a. Prefinished roof edge fascia.
 - 2. Exterior hollow metal doors and frames (inside and outside surfaces).
 - 3. Roof hatch (inside and outside surfaces).
 - 4. Interior & exterior pipe bollards shown to be painted.
 - 5. Interior & exterior metal railings.
 - 6. Metal stair stringers and handrails.
 - 7. Metal fixed ladders and cages.
 - 8. Exterior composite overhead sectional door surface if shown to be painted.
- B. Semi-gloss:
 - 1. Interior hollow metal doors and frames.
 - 2. Interior hollow metal window frames.
 - 3. Wood trim or simulated wood trim scheduled to be painted.
 - 4. Coiling metal counter doors, except aluminum coiling counter shutters at Pharmacy.
 - 5. Toilet gypsum board ceilings.
 - 6. Interior columns surfaces to receive epoxy finish.

7. Exterior fiber reinforced cement panels if shown to be painted.

C. Eggshell:

1. All surfaces to be painted where sheen is not otherwise specified.

D. Flat:

1. Exterior gypsum board ceilings.
2. Exterior concrete.

3.12 ITEMS TO BE PAINTED SCHEDULE

A. Paint surfaces as shown or scheduled on the drawings including, but not limited to, the following items.

1. Exterior: Paint exterior surfaces as shown and noted on the Drawings, including, but not limited to:
 - a. Hollow metal doors and frames.
 - b. Metal opening frames and trim.
 - c. Metal or fabric canopy columns and supporting steel structure components where shown on Drawings.
 - d. Metal flashing and downspout (surfaces exposed from ground level).
 - e. Metal gutters (surfaces exposed to view from ground level).
 - f. All surfaces of metal parapet cap.
 - g. Parapet walls, roof side (where roofing does not occur).
 - h. Pipe bollards where shown to be painted.
 - i. Metal railings.
 - j. Roof hatch.
 - k. Satellite dish support (from bottom of deck to top of support).
 - l. Exposed rooftop refrigeration and HVAC support framing.
 - m. Overhead doors if shown.
 - n. Paving graphics and markings.
 - o. Exposed piping and conduit, hangers and supports.
 - p. Exterior fiber reinforced cement panels if shown to be painted.
2. Interior: Paint interior surfaces as indicated on the Drawings including, but not limited to:
 - a. Hollow metal doors and frames.
 - b. Hollow metal window frames.
 - c. Overhead coiling doors.
 - d. Metal opening frames and trim.
 - e. Gypsum wallboard.
 - f. Pipe Bollards shown to be painted.
 - g. Metal railings.
 - h. Exposed plywood.
 - i. Plywood wainscot, if shown to be painted.
 - j. Exposed overhead structure including joists, girders, bridging, miscellaneous metal fabrications and deck (if scheduled to be painted).
 - k. Exposed structure columns.
 - l. Floor striping, graphics, and markings as shown or noted.
 - m. Metal stair stringers and handrails.
 - n. Exposed wood trim.

B. Do not paint the following Items:

1. Aluminum, brass, bronze, stainless steel, and chrome plated steel.
2. Pre-finished items, such as toilet compartments, acoustical ceiling materials, mechanical, and electrical equipment or factory finished metal panels and trim, unless otherwise shown or specified.
3. UL, FM, and other code-required labels.
4. Equipment identification, performance rating, and name plates.
5. Finish hardware.
6. Fire Suppression sprinklers.
7. Low voltage cabling (i.e. fire alarm, voice, data, EMS, audio, security) not in conduit.

3.13 PRODUCT SCHEDULES - EXTERIOR

- A. Refer to the following schedules to verify exterior coating characteristics, manufacturer’s recommended DFT, and installation temperature for the coatings in the selected system.

EXTERIOR PRODUCTS – PPG

PPG Products					
Product Name	DFT (mils)	VOC (g/l)	Perm	Min Temp(°F)	Elongation
PPG 4-100XI Filler	8.0-11.0	<100	46.13	35	--
PPG Perma-Crete High Build 4-22XI	3.2-5.8	<100	--	35	--
PPG Perma-Crete 4-9110 Solvent Acrylic	8.5	397	--	20	--
PPG Durethane-DTM-95-3300	3.0-5.0	241	--	40	--
PPG Perma-Crete 4-809/4-808 Sealer	0.7-1.3	228	52.11	35	--
PPG Timeless 73-410	2.2-2.6	<50	28.31	35	--
PPG PSX One	3.0	210	--	40	--
PPG Perma-Crete 4-110XI	5.4-7.2	<50	33	35	340%
PPG Amercoat One	4.0-6.0	309	--	50	--
PPG Amerlock 2	4.0-8.0	180	--	32	--
PPG BRP Urethane 1501	1.5-2.0	130	--	60	--
PPG Pitt-Tech 4020PF	2.2-3.5	91	--	50	--
PPG Flood Pro FLD812 Stain	0.7-0.9	<250	--	35	--
PPG Flood Pro FLD820 Stain	1.0-1.5	<100	--	35	--
PPG 17-921 Seal Grip Primer	1.5	84	--	35	--

3.14 COATINGS SYSTEM SCHEDULES - EXTERIOR

- A. Additional Considerations for Exterior Prime Coats: Prime coat type or thickness may depend on the condition of the substrate after field preparation does not yield typical results. Where additional determination regarding prime coat is based on atypical substrate conditions, an asterisk and footnote mark the field of the selected system in the System Schedule.
 - 1. If prepared substrate demonstrates chalking, provide the conditioner prime coat in the system.

PPG				
PRECAST CONCRETE PANELS				
Application	Sheen	PPG		
		Prime Coat		Finish Coat
Precast Non-Coastal Regions	Flat	PPG Perma-Crete 4-809/4-808 Sealer		PPG Timeless 73-410

PPG				
EXTERIOR FERROUS METAL – GENERAL CONDITIONS				
Substrate Description	Sheen	Conditions of Use	PPG	
			Prime Coat	Finish Coat(s)
Ferrous Metal – Misc steel doors, frames, and structural steel, except steel associated with roofs or canopies	Gloss	Standard Climate or High UV	PPG Amercoat One	PPG PSX ONE
	Gloss	Cold Temp	PPG Amerlock 2	PPG PSX ONE
Ferrous Metal – Rooftop equipment framing	Gloss	Standard Climate or High UV	PPG Amercoat One	PPG BRP Urethane 1501
	Gloss	Cold Temp	PPG Amerlock 2	95-3300 Durethane
EXTERIOR FERROUS METAL AND GALVANIZING – SPECIAL CONDITIONS				
Special Conditions Ferrous Metal and Galvanizing: Heavy corrosion; steel/ galvanized to ground interface; wall cap waterproofing	Gloss	Standard Climate or High UV	PPG Amercoat One	PPG BRP Urethane 1501 2 coats
	Gloss	Cold Temp	PPG Amerlock 2	95-3300 Durethane 2 coats
Ferrous Metal and Galvanized	Semi-Gloss	Standard Climate or High UV	PPG Amercoat One	PPG BRP Urethane 1501 2 coats
	Semi-Gloss	Cold Temp	PPG Amerlock 2	95-3300 Durethane 2 coats
EXTERIOR NON-FERROUS METAL AND GALVANIZING				
Non-Ferrous Metal and Galvanized ornamental metal fencing	Semi-Gloss	Standard Climate or High UV	PPG Amercoat One	PPG PSX1
		Cold Temp	PPG Amerlock 2	PPG PSX ONE
Non-Ferrous Metal and galvanized trim	Semi-Gloss	Standard Climate or High UV	PPG Amercoat One	PPG PSX ONE
		Cold Temp	PPG Amerlock 2	PPG PSX ONE
EXTERIOR PREFINISHED METAL				
Prefinished Metal - Prefinished metal panels and trim	Gloss	Standard Climate or High UV	PPG Amercoat One	PPG PSX ONE
		Cold Temp	PPG Amerlock 2	PPG PSX ONE
Prefinished metal factory finish (e.g., signage at new receiving dock doors)	Gloss	Standard Climate or High UV	PPG Amercoat One	PPG PSX ONE
		Cold Temp	PPG Amerlock 2	PPG PSX ONE
Prefinished metal framing for standing seam roof and canopies	Gloss	Standard Climate or High UV	PPG Amercoat One	PPG BRP Urethane 1501

END OF COATING SYSTEMS SCHEDULES - EXTERIOR

3.15 PRODUCT AND SYSTEM SCHEDULES - INTERIOR

- A. Select products and systems by one of the following manufacturers. Refer to the following Product Schedules to verify manufacturer’s recommended DFT.
- B. System Schedules for each manufacturer follow the Product Schedule.

Interior Products by Sherwin Williams		
Product Name	DFT (mils)	VOC (g/l)

SECTION 10160 - METAL TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Work Includes:

1. Stainless steel toilet compartments and screens, floor mounted, head rail braced.

B. Related Requirements:

1. Section 01600 – Product Requirements: Contractor’s Products Selection checklist.
2. Section 06100 - Rough Carpentry: Framing and plates within walls.
3. Section 10810 - Toilet Accessories: Coordinate compartment installation with subsequent accessory installation.

1.2 REFERENCES

- A. American National Standards Institute (ANSI): ANSI A117.1 - Specification for Making Buildings and Facilities Accessible To and Usable by Physically Handicapped People.
- B. Americans with Disabilities Act (ADA), ADA-ADAAGS - 2010 ADA Standards for Accessible Design.
- C. State and local disabled accessibility requirements and guidelines.

1.3 SUBMITTALS

- A. Process for the following submittal is specific to the scope of this Section. Comply with the submittal requirements herein with respect to format and manner of submission, notwithstanding the Process and Responsibilities requirements specified in Part 1 of Section 01330.
- B. Submit a Restroom Partition Field Verification Template to the pre-selected Supplier as follows:
 1. Follow www.hjcinc.com/tpdems.pdf to locate the Verification Template PDF.
 2. Complete the Verification Template with the information required and return to Supplier as prompted by the smart message link on the face of the Verification Template form.
 3. Verify ADA clearances are maintained between toilet partitions and any room fixture.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer’s recommendations.
- B. Receive and accept products and report suspected defects and shipping discrepancies in compliance with the requirements of Section 01600.
- C. Product Compliance Inspection: Inspect delivered products for compliance with product descriptions in Part 2 herein. Report discrepancies to the Architect.
- D. Product Packaging: Products be shipped in manufacturer's standard packaging with identification markings on each component or package.

PART 2 - PRODUCTS

2.1 PRODUCT PROCUREMENT

- A. Purchase products specified herein from Haines, Jones & Cadbury as Owner's pre-selected supplier. Contact [Haines, Jones & Cadbury](#), (800) 459-7099, WMT@hjcinc.com.

2.2 MANUFACTURERS

- A. Subject to compliance with project requirements, HJC will supply pedestal floor mount stainless steel toilet compartments and screens as manufactured by the following:
 1. [Flush Metal Partitions](#), (631) 768-8301.
 2. [Global Partitions](#), (an ASI Company), (706) 827-2700.
 3. [Hadrian Solutions, ULC](#), (440) 942-9118.
- B. Provide products by the manufacturers listed herein. No substitutions allowed.

2.3 DESCRIPTION

- A. Stainless Steel Partitions (Pedestal Floor Mount): Provide systems with manufacturer's enhanced privacy options and other components as follows:
 1. Panels and Doors: Two-piece interlocking panel unit with corners brazed and finished smooth. Panel face minimum 22 gauge stainless steel 304, composite construction of insulated honeycomb core adhered to inner surfaces with moisture resistant adhesive, minimum 1-inch thick. Limited exposed fasteners on outside of partitions.
 - a. Panel and Door Height: 72-inch.
 - b. Pilaster Height: 82-inch top of headrail.
 - c. Mounting Distance from Floor: 9-inches for stalls and pilasters.
 - d. For ADA and ambulatory stalls, provide solid wood backing for grab bar installation as required.
 2. Floor Mount Pedestal Support: Adjustable, cast stainless steel.
 3. Headrail: Satin Extruded clear anodized type 6463T5 aluminum channel; anti-grip design.
 4. Wall and Side Panel Mounting Brackets: 71inch, 18 gauge stainless steel #4 finish. Full length continuous (71-inch) stainless steel "U" brackets at connections from panels to walls.
 5. No-Sight Privacy Strips: Satin Aluminum to match head rail and stainless steel.
 6. Finish: Textured "diamond" pattern similar to Rigidized 5WL.
- B. Hardware:
 1. Hinge: Cast stainless steel, wrap-around and through-bolted.
 2. Occupancy Indicator Slide Latch: Cast stainless steel surface mounted slide latch, thru-bolted. Strike keeper shall be wrap-around type, thru-bolted. Must allow lift of door for emergency access.
 - a. No. 50683 ADA Surface Mounted by Jacknob Corp, or equivalent latch provided or included with partition assembly by manufacturer.
 3. Coat Hook and Wall Bumper: Cast stainless steel with rubber bumper.
 4. Pull Handle: Cast stainless steel, through-bolted to door. 2 each in accordance with the requirements of ADA.
- C. Urinal Screens: Wall hung type, 24 inches by 48 inches to match toilet compartments.
- D. Screws/Fasteners: Tamper proof, stainless steel, 6-lobe/pin sex bolts and screws per manufacturer's installation instruction.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Take site dimensions prior to fabrication of any items. Verify correct spacing of plumbing fixtures.

- B. Verify correct location of built-in framing, anchorage, and bracing.

3.2 INSTALLATION

- A. Install partitions secure, rigid, plumb, level, and square. Secure units in position with manufacturer's anchoring devices and in accordance with manufacturer's instructions.
 - 1. Provide for adjustment due to minor floor variations.
 - 2. Install adjacent components for consistency of line and plane.
- B. Maintain 1/2 inch space between wall and panels, and between wall and pilasters.
- C. Attach panels and pilasters to bracket with through sleeve, tamperproof bolts, and nuts. Locate head rail joints at pilaster centerlines.
- D. Anchor urinal screen panels to walls with brackets in accordance with manufacturer's instructions to suit supporting wall construction.
- E. Attach panel brackets securely to walls using anchor devices.
- F. Conceal floor fastenings with pilaster shoes.
- G. Equip each door with hinges, one door latch and one coat hook and bumper. Align hardware to uniform clearance at vertical edges of doors, not exceeding 1/4 inch.
- H. Install pull handles on both sides of toilet partition doors for handicapped and ambulatory stalls.
- I. Install pull handles on both sides of toilet partition doors for handicapped and ambulatory stalls.

3.3 ADJUSTING

- A. In Swinging Doors: Adjust hinges to hold doors in partially open position when unlatched.
- B. Accessible Stall In Swing Doors: Adjust hinges to gently return doors to closed position.
- C. Out Swinging Doors: Adjust hinges to gently return doors to closed position.

3.4 CLEANING

- A. Protection and Cleaning of Stainless Steel Toilet Compartments and Screens Prior to Possession
 - 1. Remove protective plastic coating from stainless steel partitions. Remove any residue from the plastic coating with mild soap and water.
 - 2. Caution: Muriatic acid or other caustic chemicals shall not be used to clean stainless steel products. Muriatic acid for cleaning masonry or similar hydrochloric acid type cleaners must immediately be neutralized and scrubbed off with clean water if splashed, sprayed, spilled or otherwise in contact with a stainless steel component.
 - 3. Immediately prior to possession, clean stainless steel toilet compartments and screens thoroughly using soap, ammonia, or mild detergent and water. Apply with sponge or soft cloth, rinse with clear water and wipe dry. Always rub in the direction of polish lines. Rinse thoroughly with fresh water after every cleaning operation. Clean and polish toilet partitions to a spotless luster. Wipe dry to avoid water marks.

END OF SECTION

10160-4

SECTION 10220 - OPERABLE PANEL PARTITIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes manually operate4d paired panel partitions:

1.2 SYSTEM PERFORMANCE REQUIREMENTS

- A. Acoustical Performance: Provide operable panel partitions tested by a qualified testing agency for the following acoustical properties according to test methods indicated:
 - 1. Sound Transmission Requirements: Operable panel partition assembly tested in a full-scale opening, 14 by 9 feet, for laboratory sound transmission loss performance according to ASTM E 90, determined by ASTM E 413, and rated for not less than the STC indicated.
 - a. STC: Not less than 49.
 - 2. Noise Reduction Requirements: Operable panel partition assembly, identical to partition tested for STC, tested for sound absorption performance according to ASTM C 423 and rated for not less than the NRC indicated.
 - a. NRC: Not less than 65.

1.3 SUBMITTALS

- A. Product Data: Material descriptions, construction details, finishes, installation details, and operating instructions for each type of operable panel partition, component, and accessory specified. Include data on acoustical performance, surface-burning characteristics, and durability.
- B. Shop Drawings: Show location and extent of operable panel partitions. Include plans, elevations, sections, details, attachments to other construction, and accessories. Indicate dimensions; weights; conditions at openings and for storage; and required installation, storage, and operating clearances. Indicate location and installation requirements for hardware and track, and direction of travel. Show blocking to be provided by others. Include the following:
 - 1. Calculations: Calculate requirements for supporting operable panel partitions and verify capacity of carriers and track components to support loads; indicate deflection limits for partition and adjacent construction.
- C. Setting Drawings: For embedded items and cutouts required in other work, including support beam punching template.
- D. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available for units with factory-applied color finishes.
- E. Samples for Verification: For each type of exposed finish required, 6" x 6" of same thickness and material indicated for the Work.
- F. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.
- G. Maintenance Data: For the following to include in maintenance manuals specified in Division 1:
 - 1. Panel face finishes and finishes for exposed trim and accessories. Include precautions for cleaning materials and methods that could be detrimental to finishes and performance.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who is certified in writing by the operable panel partition manufacturer as qualified to install the manufacturer's partition systems for work similar in material, design, and extent to that indicated for this Project.
- B. Fire-Test-Response Characteristics: Provide operable panel partitions with the following fire-test-response characteristics, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.
 - 1. Surface-Burning Characteristics: As follows, per ASTM E 84:
 - a. Flame Spread: 25 or less.
 - b. Smoke Developed: 450 or less.
 - 2. Fire Growth Contribution: Textile wall coverings complying with the acceptance criteria of UBC Standard 8-2.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Protectively package and sequence panels in order for installation. Clearly mark packages and panels with numbering system used on Shop Drawings. Do not use permanent markings on panels.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify operable panel partition openings and storage arrangements by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.7 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Panel-Face Finish Material: Furnish full-width in quantity to cover both sides of two panels when installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: The design for operable panel partitions is based on "Acoustiseal 932"; Modernfold operable panel partition. Subject to compliance with requirements, provide either the named product or a comparable product by one of the following:
 - 1. Hufcor Inc.
 - 2. Modernfold, Inc.

2.2 OPERABLE PANEL PARTITIONS

- A. Panel Construction: Provide top reinforcement as required to support panel from suspension components and provide reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.
- B. Dimensions: Fabricate operable panel partitions, from manufacturer's standard sizes, to form an assembled system of dimensions indicated on Drawings and verified by field measurements.
- C. Cap-Trimmed Edges: Protective aluminum perimeter-edge trim with tight hairline joints concealing edges of panel and finish facing.

- D. Trimless Edges: Fabricate exposed panel edges so finish facing wraps uninterrupted around panel, covering edge and resulting in an installed partition with facing visible on vertical panel edges, without trim, for minimal sightlines at panel-to-panel joints.
- E. Trim: Manufacturer's standard aluminum trim, finished as follows:
 - 1. Painted, as selected by Architect from manufacturer's full range.
- F. Hardware: Manufacturer's standard as required to operate operable panel partition and accessories; with decorative, protective finish.

2.3 SEALS

- A. General: Provide types of acoustical seals indicated that produce operable panel partitions complying with acoustical performance requirements and the following:
 - 1. Seals made from materials and profiles that minimize sound leakage.
 - 2. Seals fitting tight at contact surfaces and sealing continuously between adjacent panels and between operable panel partition perimeter and adjacent surfaces, when operable panel partition is extended, closed, and in place.
- B. Vertical Seals: Deep-nesting, interlocking astragals mounted on each edge of panel, with continuous PVC acoustical seal.
- C. Horizontal Top Seals: Continuous-contact, extruded-PVC or PVC-faced, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on track when extended.
- D. Horizontal Bottom Seals: PVC-faced, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on floor when extended, ensuring horizontal and vertical sealing and resisting panel movement.
 - 1. Automatically Operated: Extension and retraction of bottom seal automatically operated by movement of partition, with operating range not less than the 1-1/2-inch operating clearance between retracted seal and floor finish.

2.4 FINISH FACING

- A. General: Provide finish facings that comply with indicated fire-test-response characteristics and that are factory applied to operable panel partitions with appropriate backing, using mildew-resistant nonstaining adhesive as recommended by facing manufacturer's written instructions.
 - 1. Apply one-piece, seamless facings free from air bubbles, wrinkles, blisters, and other defects, with no gaps or overlaps. Tightly secure and conceal raw and selvage edges of facing for finished appearance.
 - 2. Where facings with directional or repeating patterns or directional weave are indicated, mark facing top and attach facing in same direction.
- B. Fabric Wall Covering: Manufacturers standard factory applied reinforced vinyl fabric weighing not less than 15 oz. per lineal yard.

2.5 SUSPENSION SYSTEMS

- A. Suspension Tracks: Steel or aluminum with adjustable steel hanger rods for overhead support, designed for type of operation, size, and weight of operable panel partition indicated. Size track to support partition operation and storage without damage to suspension system, operable panel partitions, or adjacent construction. Limit track deflection to no more than 0.10 inch between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.
 - 1. Panel Guide: Aluminum; finished with factory-applied, decorative, protective finish.
 - 2. Head Closure Trim: As required for acoustical performance; with factory-applied, decorative, protective finish selected by architect from manufacturer's full range.

3. Bracing: Braces as required for lateral support of operable partitions in accordance with manufacturer's written recommendations and shop drawings.
- B. Carriers: Trolley system as required for configuration type, size, and weight of partition and for easy operation; with ball-bearing wheels.
- C. Track Intersections, Switches, and Accessories: As required for type of operation, storage, track configuration, and layout indicated for operable panel partition, and compatible with partition assembly specified. Fabricate track intersections and switches from steel or aluminum.
- D. Aluminum Finish: Mill finish or manufacturer's standard, factory-applied, decorative finish, unless otherwise indicated.
- E. Steel Finish: Factory-applied, corrosion-resistant, protective coating, unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine flooring, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of operable panel partitions. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Comply with ASTM E 557, operable panel partition manufacturer's written installation instructions, Drawings, and approved Shop Drawings.
- B. Install operable panel partitions and accessories after other finishing operations, including painting, have been completed.

3.3 ADJUSTING

- A. Adjust operable panel partitions to operate smoothly, easily, and quietly, free from binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Lubricate hardware and other moving parts.

3.4 CLEANING AND PROTECTION

- A. Clean soiled surfaces, on completing installation of operable panel partitions, to remove dust, adhesives, and other foreign materials according to manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure operable panel partitions are without damage or deterioration at time of Substantial Completion.
- C. Replace panels that cannot be cleaned and repaired, in a manner approved by Architect, before time of Substantial Completion.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain operable panel partitions.

END OF SECTION

SECTION 10260 - WALL AND CORNER GUARDS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Crash rails.
- B. Related Requirements:
 - 1. Section 09310 – Ceramic Tile: Stainless steel corner trim installed with ceramic wall tile.

1.2 DELIVERY, STORAGE AND HANDLING

- A. Section 01600 - Product Requirements: Transport, handle, store, and protect Products.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Unless specified otherwise, provide guards by one of the following manufacturers as specified:
 - 1. Construction Specialties, Inc., Hughesville, PA, (800) 233-8493.

2.2 CRASH RAILS

- A. Engineered PETG Crash Rail to be CS Acrovyn.
 - 1. RS-40N Crash Rail by Construction Specialties, Inc.
 - 2. 6" tall.
 - 3. Colors: Match P131 SW# 7102 White Flour, and P76 Custom Match #076 Walmart Medium Blue.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and wall areas, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of Work.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Before installation, clean substrate to remove dust, debris, and loose particles.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's instructions, square and plumb, secured rigidly in position.
- B. Attach crash rails with included standard adhesive. Install level and plumb.

3.4 SCHEDULE

- A. Crash Rails: Locate crash rails where shown on the drawings.

10260-2

SECTION 10350 (10 7500) – FLAGPOLES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Aluminum flagpoles.
 - 2. Flags.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. The Aluminum Association, Inc. (AA):
 - 1. AA DAF45 - Designation System for Aluminum Finishes.
- C. ASTM International (ASTM):
 - 1. ASTM B 221 - Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
 - 2. ASTM B 917 - Standard Practice for Heat Treatment Of Aluminum-Alloy Castings From All Processes.
- D. National Association of Architectural Metal Manufacturers (NAAMM):
 - 1. NAAMM 1001 - Guide Specifications for Design of Metal Flagpoles Manual.

1.3 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600 and manufacturer's recommendations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. [Concord American Flagpole](#), a Division of HAPCO Pole Products; Abingdon VA (800) 527-3902, info@concordamericanflagpole.com.
 - 2. [Eder Flag Manufacturing Company](#), Oak Creek, WI. Contact Jill Fontaine, (800) 558-6044 x353.
- B. Substitutions: Comply with the requirements of Section 01600.

2.2 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide flagpoles capable of withstanding the effects of wind loads determined according to NAAMM FP 1001.
 - 1. Flag Size: Design flagpole based upon 4 foot x 6 foot nylon flag.
 - 2. Basic Wind Speed: Design flagpole based on 93 mph wind speed.

2.3 FLAGPOLES

- A. Groundset Flagpoles: Provide cone tapered ground set flagpole fabricated from extruded aluminum tubing complying with ASTM B 221, Alloy 6063, with a minimum wall thickness of 5/32 inch. Heat treat after fabrication to comply with ASTM B 917, Temper T6.
 - 1. Length: 30 feet exposed. Overall length shall be as shown to include unexposed portion below ground.
 - 2. Mounting: Ground sleeve type.

2.4 FITTINGS AND ACCESSORIES

- A. Finial Ball: Manufacturer's standard flush-seam ball, sized as indicated to match flagpole-butt diameter.
 - 1. Finish: Gold Anodized.
- B. External Halyard: Ball-bearing, non-fouling rotating or stationary truck assembly of cast metal with continuous 5/16-inch-diameter, braided nylon halyard, ground hoisted.
- C. Cleats: Cast aluminum 9 inch min. with fasteners.
 - 1. Finish exposed metal surfaces to match flagpole.
- D. Halyard Flag Snaps: Provide two swivel snap hooks per halyard.
- E. Cleat Box: Aluminum box with cylinder lock. Provide 2 keys.
- F. Mounting Hardware:
 - 1. Provide ground sleeve assembly including sleeve, centering wedges, collar, ground rod, and other required accessories.

2.5 FINISHES

- A. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; in accordance with AA DAF45, and seal aluminum surfaces with clear, hard-coat wax.

2.6 FLAGS

- A. Provide 4 ft. by 6 ft. nylon American flag with sewn stripes and embroidered stars.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas where flagpoles will be installed. Do not proceed with Work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install flagpoles where and as shown and according to manufacturer's written instructions.
- B. Install halyard and snaps leaving installation ready for use.
- C. Install cleat inside lockable cleat box mounted 5 feet above finished grade unless otherwise shown.

3.3 ADJUSTING AND CLEANING

- A. Clean flagpole surfaces immediately prior to installation.
- B. Adjust operating devices for smooth halyard and flag function.

END OF SECTION

SECTION 10511 - METAL LOCKERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Box lockers with see-thru faces.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of metal locker.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal locker.

1.3 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For special warranty.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver metal lockers until spaces to receive them are clean, dry, and ready for their installation.

1.6 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of recessed openings by field measurements before fabrication.
 - 1. Concealed framing, blocking, and reinforcements that support metal lockers before they are enclosed.
 - 2. Recessed openings.

1.7 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

1.8 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures.
 - b. Faulty operation of latches and other door hardware.
 - 2. Damage from deliberate destruction and vandalism is excluded.
 - 3. Warranty Period for Box Lockers: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain metal lockers and accessories from single source from single locker manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Accessibility Requirements: For lockers indicated to be accessible, comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines
- B. Regulatory Requirements: Comply with the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)."
 - 1. Provide not less than 1 shelf located no higher than 48 inches above the floor for forward, 54 inches above the floor for side reach.
 - 2. Provide hardware that does not require tight grasping, pinching, or twisting of the wrist, and that operates with a force of not more than 5 lbf.

2.3 BOX LOCKERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Hollowell Clear View/Safety View Box Lockers as manufactured by List Industries Inc. or comparable product by one of the following:
 - 1. Republic Storage Systems
 - 2. Penco
 - 3. ASI Storage Solutions
- B. Doors: One piece; fabricated from scratch-resistant clear acrylic panels.
- C. Doors: One piece; fabricated from 0.060 (16ga) nominal-thickness steel sheet; formed into channel shape with double bend at vertical edges and with right-angle single bend at horizontal edges with injection molded polycarbonate panels.
- D. Body: Assembled by riveting bolting or welding body components together. Fabricate from unperforated steel sheet with thicknesses as follows:
 - 1. Tops, Bottoms, and Intermediate Dividers: 0.024-inch (24ga) nominal thickness, with single bend at sides.
 - 2. Backs and Sides: 0.024-inch (24ga) nominal thickness, with full-height, double-flanged connections.
 - 3. Shelves: 0.024-inch (24ga) nominal thickness, with double bend at front and single bend at sides and back.
- E. Frames: Channel formed; fabricated from 0.060-inch (16ga) nominal-thickness steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral, full-height door strikes on vertical main frames.
 - 1. Cross Frames between Tiers: Channel formed and fabricated from same material as main frames; welded to vertical main frames.
- F. Hinges: Welded to door and attached to door frame with no fewer than two factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.
 - 1. Continuous Hinges: Manufacturer's standard, steel, full height.
- G. Latch: Hasp designed for use with either padlocks.
- H. Legs: formed by extending vertical frame members, or fabricated from 0.075-inch (14ga) nominal-thickness steel sheet; welded to bottom of locker.
 - 1. Provide prefinished metal closure panels attached to legs on all sides of lockers to enclose area below locker legs.
- I. Materials:
 - 1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
- J. Finish: Baked enamel or powder coat.
 - 1. Color: As selected by Architect from manufacturer's range of beige/tan colors available for quick ship options.

- K. Configuration: Provide 6-tier 12" wide x 12" deep lockers, factory ganged into 36" or 48" wide sections for installation.
- L. Configuration: Provide double tier 12" wide x 18" deep lockers, factory ganged into 36" or 48" wide sections for installation.

2.4 FABRICATION

- A. Fabricate metal lockers square, rigid, without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch and free of sharp edges and burrs.
 - 1. Form body panels, doors, shelves, and accessories from one-piece steel sheet unless otherwise indicated.
 - 2. Provide fasteners, filler plates, supports, clips, and closures as required for complete installation.
- B. Fabricate each metal locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments. Factory weld frame members of each metal locker together to form a rigid, one-piece assembly.
- C. Knocked-Down Construction: Fabricate metal lockers using nuts, bolts, screws, or rivets for preassembly at plant prior to shipping.
- D. Accessible Lockers: Fabricate as follows:
 - 1. Locate bottom shelf no lower than 15 inches above the floor.
- E. Continuous Sloping Tops: Provide sloping tops on all lockers, fabricated in lengths as long as practical, finished to match lockers, complete with end caps.

2.5 ACCESSORIES

- A. Fasteners: Zinc- or nickel-plated steel, slotless-type, exposed bolt heads; with self-locking nuts or lock washers for nuts on moving parts.
- B. Anchors: Material, type, and size required for secure anchorage to each substrate.

2.6 STEEL SHEET FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Factory finish steel surfaces and accessories except stainless-steel and chrome-plated surfaces.
- C. Baked-Enamel Finish: Immediately after cleaning, pretreating, and phosphatizing, apply manufacturer's standard thermosetting baked-enamel finish. Comply with paint manufacturer's written instructions for application, baking, and minimum dry film thickness.
 - 1. Powder-Coat Finish: Immediately after cleaning and pretreating, electrostatically apply manufacturer's standard baked-polymer thermosetting powder finish. Comply with resin manufacturer's written instructions for application, baking, and minimum dry film thickness.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine walls, floors, and support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install lockers level, plumb, and true; shim as required, using concealed shims.
 - 1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches o.c. Using concealed fasteners, install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion.
 - 2. Anchor single rows of metal lockers to walls near top of locker.
 - 3. Anchor back-to-back metal lockers to each other.
- B. Assemble with standard fasteners, with no exposed fasteners on door faces or face frames.
- C. Trim: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.
 - 1. Attach recess trim to recessed metal lockers with concealed clips.
 - 2. Attach filler panels with concealed fasteners. Locate filler panels where required to abut adjacent construction or to enclose inside corners of installations.

3.3 ADJUSTING

- A. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding.

3.4 PROTECTION

- A. Protect metal lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.
- B. Touch up marred finishes, or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

END OF SECTION

SECTION 10520 - FIRE EXTINGUISHERS AND CABINETS

PART 1 - GENERAL

1.01 SUMMARY

- A. Section Includes:
 - 1. Fire protection cabinets for portable fire extinguishers.
 - 2. Portable fire extinguishers.

1.02 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fire protection cabinets.
 - 1. Fire Protection Cabinets: Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style.
- B. Shop Drawings: For fire protection cabinets. Include plans, elevations, sections, details, and attachments to other work.
- C. Samples for Initial Selection: For each type of fire protection cabinet indicated.
- D. Product Schedule: For fire protection cabinets. Coordinate final fire protection cabinet schedule with fire extinguisher schedule to ensure proper fit and function. Use same designations indicated on Drawings.

1.03 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For fire protection cabinets to include in maintenance manuals.

1.04 QUALITY ASSURANCE

- A. Fire-Rated, Fire Protection Cabinets: Listed and labeled to comply with requirements in ASTM E 814 for fire-resistance rating of walls where they are installed.
- B. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
- C. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
 - 1. Provide fire extinguishers approved, listed, and labeled by FMG.

1.05 COORDINATION

- A. Coordinate size of fire protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
- B. Coordinate sizes and locations of fire protection cabinets with wall depths and wall assembly ratings.

1.06 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Failure of hydrostatic test according to NFPA 10.
 - b. Faulty operation of valves or release levers.
 - 2. Warranty Period: Six years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MATERIALS

- A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.
- B. Acrylic Bubble: One piece.

2.02 FIRE PROTECTION CABINET

- A. Cabinet Type: Suitable for fire extinguisher .
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Fire End & Croker Corporation; .
 - b. J. L. Industries, Inc., a division of Activar Construction Products Group; .
 - c. Kidde Residential and Commercial Division, Subsidiary of Kidde plc; .
 - d. Larsen's Manufacturing Company; .
 - e. Modern Metal Products, Division of Technico Inc.; .
 - f. Moon-American; .
 - g. Potter Roemer LLC; .
 - h. Watrous Division, American Specialties, Inc.; .
- B. Cabinet Construction: Match wall assembly rating.
 - 1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.0428-inch- (1.1-mm-) thick, cold-rolled steel sheet lined with minimum 5/8-inch- (16-mm-) thick, fire-barrier material. Provide factory-drilled mounting holes.
- C. Cabinet Material: Steel sheet.
 - 1. Shelf: Same metal and finish as cabinet.
- D. Semirecessed Cabinet: Cabinet box partially recessed in walls of sufficient depth to suit style of trim indicated; with one-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend). Provide where walls are of insufficient depth for recessed cabinets but are of sufficient depth to accommodate semirecessed cabinet installation.
 - 1. Radiused-Edge Trim: 1-1/4- to 1-1/2-inch (32- to 38-mm) backbend depth.
- E. Cabinet Trim Material: Same material and finish as cabinet.
- F. Door Material: Same material and finish as cabinet
- G. Door Style: Full bubble with frame.

10520-2

- H. Door Glazing: Molded clear acrylic bubble.
- I. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
 - 1. Provide manufacturer's standard.
 - 2. Provide continuous hinge, of same material and finish as trim, permitting door to open 180 degrees.
- J. Accessories:
 - 1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
 - 2. Door Lock: Cam lock that allows door to be opened during emergency by pulling sharply on door handle.
 - 3. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location.

2.03 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

- A. Fire Extinguishers: Type, size, and capacity for each fire protection cabinet and mounting bracket indicated.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :
 - a. Amerex Corporation.
 - b. Ansul Incorporated; Tyco International Ltd.
 - c. Badger Fire Protection; a Kidde company.
 - d. Buckeye Fire Equipment Company.
 - e. Fire End & Croker Corporation.
 - f. J. L. Industries, Inc.; a division of Activar Construction Products Group.
 - g. Kidde Residential and Commercial Division; Subsidiary of Kidde plc.
 - h. Larsen's Manufacturing Company.
 - i. Moon-American.
 - j. Pem All Fire Extinguisher Corp.; a division of PEM Systems, Inc.
 - k. Potter Roemer LLC.
 - l. Pyro-Chem; Tyco Safety Products.
 - 2. Valves: Manufacturer's standard.
 - 3. Handles and Levers: Manufacturer's standard.
 - 4. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B and bar coding for documenting fire extinguisher location, inspections, maintenance, and recharging.
- B. Multipurpose Dry-Chemical Type in Steel Container: UL-rated 4-A:60-B:C, 10-lb (4.5-kg) nominal capacity, with monoammonium phosphate-based dry chemical in enameled-steel container.

2.04 MOUNTING BRACKETS

- A. Mounting Brackets: Manufacturer's standard galvanized steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or black baked-enamel finish.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

- a. Amerex Corporation.
 - b. Ansul Incorporated; Tyco International Ltd.
 - c. Badger Fire Protection; a Kidde company.
 - d. Buckeye Fire Equipment Company.
 - e. Fire End & Croker Corporation.
 - f. J. L. Industries, Inc.; a division of Activar Construction Products Group.
 - g. Larsen's Manufacturing Company.
 - h. Potter Roemer LLC.
- B. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location.

2.05 FABRICATION

- A. Fire Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
- 1. Weld joints and grind smooth.
 - 2. Provide factory-drilled mounting holes.
 - 3. Prepare doors and frames to receive locks.
 - 4. Install door locks at factory.
- B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles selected.
- 1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch (13 mm) thick.
 - 2. Fabricate door frames of one-piece construction with edges flanged.
 - 3. Miter and weld perimeter door frames.
- C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.06 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces of fire protection cabinets from damage by applying a strippable, temporary protective covering before shipping.
- C. Finish fire protection cabinets after assembly.
- D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.07 STEEL FINISHES

- A. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils (0.05 mm).
- 1. Color and Gloss: As selected by Architect from manufacturer's full range .

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine walls and partitions for suitable framing depth and blocking where cabinets will be installed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare recesses for recessed and semirecessed fire protection cabinets as required by type and size of cabinet and trim style.

3.03 INSTALLATION

- A. General: Install fire protection cabinets in locations and at mounting heights indicated or, if not indicated, at heights indicated below:
 - 1. Fire Protection Cabinets: 54 inches (1372 mm) above finished floor to top of cabinet.
- B. Fire Protection Cabinets: Fasten cabinets to structure, square and plumb.
 - 1. Unless otherwise indicated, provide recessed fire protection cabinets. If wall thickness is not adequate for recessed cabinets, provide semirecessed fire protection cabinets.
 - 2. Fasten mounting brackets to inside surface of fire protection cabinets, square and plumb.
- C. Fire Extinguishers: Install fire extinguishers and mounting brackets in locations indicated and in compliance with requirements of authorities having jurisdiction.
- D. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.
- E. Identification: Apply vinyl lettering at locations indicated.

3.04 ADJUSTING AND CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as fire protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust fire protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of fire protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- D. Touch up marred finishes, or replace fire protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire protection cabinet and mounting bracket manufacturers.
- E. Replace fire protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

SECTION 10810 - TOILET ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Toilet accessories and attachment hardware.
- B. Related Requirements:
 - 1. Section 01600 – Product Requirements: General procedures related to products. Contractor’s Product Selection Checklist.
 - 2. Section 06100 - Rough Carpentry: Blocking for attachment of accessories.

1.2 REFERENCES

- A. The publications below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. American National Standards Institute (ANSI):
 - 1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.

1.3 DELIVERY, STORAGE AND HANDLING

- A. Transport, handle, store, and protect products in compliance with the requirements of Section 01600.
- B. Product Packaging: Products and equipment will be shipped in manufacturer's standard packaging with identification markings on each component or package.
- C. Receive and accept products and report suspected defects and shipping discrepancies in compliance with the requirements of Section 01600.
- D. Product Compliance Inspection: Inspect delivered products for compliance with product descriptions in Part 2 herein. Report discrepancies to the Architect.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Provide products from the following manufacturers as specified in the Schedule of Accessories hereinafter:
 - 1. American Specialties Co., Inc. (ASI), Yonkers, NY, (914) 476-9000.
 - 2. Bobrick Washroom Equipment, Inc., North Hollywood, CA, (818) 982-9600.
 - 3. Bradley Corporation, Menomonee, WI, (800) 272-3539.
 - 4. Brady Worldwide, Inc., Milwaukee, WI, (888) 272-3946 or (888) 250-3082 (toilet signage).
 - 5. Excel Dryer Corporation, East Longmeadow, MA, (800) 255-9235.
 - 6. Henkel Corporation, Rocky Hill, CT, (800) 624-7767 (thread lock compound).
 - 7. WingIts Innovations, LLC, Bradley Beach, NJ, (877) 894-6448 (grab bar wall fastener).
- B. Provide products by the manufacturers listed herein. No substitutions allowed.

2.2 SUPPLIERS

- A. Specified products may be procured from the following suppliers:
 - 1. Haines, Jones & Cadbury, (800) 459-7099, WMT@hjcinc.com.
 - 2. [AmeraProducts, Inc.](#) (800) 608-6568: ASI, Bradley.
 - 3. [Apex Supply Co.](#), (214) 741-5463: ASI, Bobrick.

4. Global Industrial.
5. Grab Bar Specialists: Supplies all products of this section by ASI, Bradley; 26 brands of grab bars.
6. Handy Dryer Supply: ASI, Bobrick, Excel.
7. Harbor City Supply: ASI, Bobrick, Bradley.
8. Restroom Direct: ASI, Bradley, Excel, Bobrick.
9. Sustainable Supply Co.: ASI, Bobrick, Bradley, Excel.
10. This list of suppliers is not exhaustive. Contact manufacturers for additional authorized local or national suppliers not listed.

2.3 MATERIALS

- A. Stainless Steel: AISI Type 302/304.
- B. Adhesive: Epoxy type contact cement.
- C. Thread Lock Compound (For Coat Rack Fastener): Loctite 242, by Henkel.
- D. Finishes:
 1. Chrome/Nickel Plating: Polished finish.
 2. Stainless Steel: No. 4 satin finish, unless specified otherwise.
 3. Shop Primed Ferrous Metals: Pretreat and clean, spray apply one coat primer and bake.

2.4 FABRICATION

- A. Weld and grind smooth joints of fabricated components.
- B. Form exposed surfaces from one sheet of stock, free of joints. Form surfaces flat without distortion. Maintain flat surfaces without scratches or dents.
- C. Provide steel anchor plates and anchor components for installation on building finishes. Hot-dip galvanize ferrous metal anchors and fastening devices.
- D. Back paint components where contact is made with building finishes to prevent electrolysis.
- E. Shop-assemble components and package complete with anchors and fittings.

2.5 SCHEDULE OF ACCESSORIES

- A. Provide products meeting the following design and performance characteristics by one of the approved manufacturers listed herein.
- B. Sanitary Napkin Disposal: Surface mount, removable 1.5 gall capacity locked waste cabinet.
 1. Fabrication: Waste receptacle, door, and cabinet 22 gauge type 304 stainless steel. Welded construction with no exposed fastening devices or exposed welded seams on cabinet.
 2. Overall Dimensions: Approx 15-in H x 11-in W x 4-in D. Verify height, width, and depth as specified by manufacturer of selected product.
 3. Push Door: Attached by concealed multi-staked piano hinges at top. Affixed with the international waste symbol.
 4. Finish: No. 4 Satin.
 5. Provide one of the following or an equivalent product by another manufacturer listed herein:
 - a. Model No. ASI 0473-1A by ASI.
 - b. Model No. 4722-15 by Bradley.
 - c. Model B-254 by Bobrick.
- C. Toilet Paper Dispensers: Surface mounted; twin jumbo roll capacity sliding access panel locked cabinet with refill indicator viewing slot.

1. Fabrication: Door, mounting plate, and cabinet 22 gauge type 304 stainless steel. Welded construction with no exposed fastening devices or exposed welded seams. High impact ABS dispensing mechanism.
 2. Overall Dimensions: Approx 20-1/2 in W x 11-3/16 in H x 5 in deep. Verify height, width, and depth as specified by manufacturer of selected product.
 3. Finish: No. 4 Satin.
 4. Provide one of the following or an equivalent product by another manufacturer listed herein:
 - a. Model No. 0039 by American Specialties.
 - b. Model No. 5425-0000, by Bradley Corporation.
 - c. Model B-2892 ClassicSeries by Bobrick.
- D. Paper Towel Dispensers, Surface Mounted: Compact arched-contour profile, lockable towel cabinet, center pull dispenser. Dispenser cabinet, door, and frame 22 gauge type 304 stainless steel.
1. Provide Model S2D-PT-2020-SM, by Stone and Steel. (Custom as supplied by HJC).
- E. Cylinder-Style Waste Receptacle, Free Standing: 55-gall capacity; Plastic, gray.
1. Provide Model 2655 Brute without lid by Rubbermaid.
- F. Electric Hand Dryers:
1. Public Toilets: Brushed stainless steel, recessed, warm-air automatic (no-touch) model, infrared activated.
 - a. Characteristics: 110V, 1240W, 20,000 rpm motor, vandal resistant heating element, manually adjustable noise, speed, and heat control mechanism.
 - b. Provide ADA-compliant recess kit.
 - c. Provide the following or an equivalent product by another manufacturer listed herein:
 - 1) Model: XL-SB Xlerator Hand Dryer and Model 40502 Recess Kit by Excel.
- G. Toilet Seat Cover Dispensers: Surface mounted (one per each water closet), 22 gage type 304 stainless steel, satin finish.
1. Model No. 0477SM, by American Specialties.
 2. Model No. B221, by Bobrick.
 3. Model No. 5831, by Bradley.
- H. Robe Hook: Surface mounted, satin stainless, by Bradley.
1. Single Robe Hook: Model No 9114.
 2. Install robe hook fastener using Thread Lock Compound specified in Part 2 above. Apply thread lock compound to fasteners in accordance with manufacturer's instructions.
- I. Towel Hook: Surface mounted, satin stainless, by Bradley.
1. Single Towel Hook: Model No 9314.
 2. Install robe hook fastener using Thread Lock Compound specified in Part 2 above. Apply thread lock compound to fasteners in accordance with manufacturer's instructions.
- J. Shower Curtain Rod: 18 gauge stainless steel, 1 inch diameter; concealed mounting of welded-on mounting flange with snap-on cover flange or escutcheon, by Bradley. Length as shown on Drawings.
1. Shower Curtain Rod: Model No 9538.
 2. Install robe hook fastener using Thread Lock Compound specified in Part 2 above. Apply thread lock compound to fasteners in accordance with manufacturer's instructions.
- K. Shower Curtain Hook: Stainless steel, by Bradley.
1. Shower Curtain Hook with Rollers: Model No 9540.
 2. Provide the required quantity in accordance with manufacturer's directions.
- L. Shower Curtain: Hook supported, white, by Bradley. Curtain size shall be 72" H x shower width+6" unless noted otherwise.
1. Antimicrobial vinyl shower curtain: Model No 9533.

- M. Grab Bars: 18 gage stainless steel; 1-1/4 inch diameter, (1-1/2 inch diameter where required by Local Code) textured grip surface; concealed mounting consisting of welded-on mounting flange with snap-on cover flange or escutcheon. Location, quantity, and length shall be as shown.
 - 1. Model No. 3700 P, by American Specialties.
 - 2. Model No. B-5806.99, by Bobrick.
 - 3. Model No. 832-2, by Bradley.
 - 4. Model No. PB23XX Series by Mainline (1-1/2 inch diameter only).
- N. Grab Bar Hollow Wall Fasteners: GBW40 stainless steel commercial grab bar fasteners manufactured by WingIts Innovations, LLC.
- O. Restroom Door Foot Operated Opener: Commercial grade T6 aluminum, surface mount, including sexed center bolt and related fasteners as supplied by manufacturer. Silver finish. Furnish the following:
 - 1. StepNPull Hands-Free Foot Operated Door Opener, (417) 295-8001, sales@stepnpull.com (HJC Item #1420113).

PART 3 - EXECUTION

3.1 PREPARATION

- A. Use templates and rough-in measurements as required for building into wall construction.
- B. Ensure that blocking is appropriately installed and ready to receive accessories.
- C. Rough Wall Openings: Provide rough wall opening (RWO) in compliance with ADA Accessibility Guidelines, as detailed on architectural drawings, and as described in the Schedule of Accessories.

3.2 INSTALLATION

- A. Install fixtures, accessories, and items in accordance with manufacturer's instructions and as shown on Drawings. Install accessories within toilet rooms and install soap dispensers in other areas in addition to toilet rooms where shown on the drawings. Use tamper-proof fasteners.
- B. Install true, plumb, and level, securely and rigidly anchored to wall framing.
- C. Install foot operated pulls on restroom doors where shown on the drawings. Install in accordance with manufacturer's instructions using the fasteners supplied by the door pull manufacturer. Install instructional decals on inside face of door above handle.
- D. Where blocking or framing is not properly located to receive grab bars in existing hollow walls that are not modified or scheduled to receive new finishes, install grab bars using specified hollow wall fasteners. Install fasteners in accordance with fastener manufacturer's recommendations, using hole saw recommended by fastener manufacturer for type of wall construction and finish encountered.
- E. Install sealant around metal frames of mirrors, and all toilet accessories abutting FRP/NRP wall panels.

3.3 CLEANING

- A. Protection and Cleaning of Toilet Accessories and Attachment Hardware Prior to Possession.
 - 1. Immediately prior to possession, clean stainless steel accessories and attachment hardware thoroughly using soap, ammonia, or mild detergent and water. Apply with sponge or soft cloth, rinse with clear water and wipe dry. Always rub in the direction of polish lines. Rinse thoroughly with fresh water after every cleaning operation. Clean and polish to a spotless luster. Wipe dry to avoid water marks.
 - 2. Clean and polish stainless steel accessories and mirror surfaces to a spotless luster.

END OF SECTION

SECTION 11025 - LOCK BOXES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Lock box key vault for fire department emergency building access.

1.2 QUALITY ASSURANCE

- A. Pre-Installation Meetings: Meet with fire department to determine requirements for lock box type and coordinate exact location for installation and mounting of box on building.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Fire Department Lock Box:
 - 1. [Knox-Box](#) by The Knox Company, Phoenix, AZ, (800) 552-5669.
 - 2. Alternate Manufacturers: As approved by fire department.

2.2 MANUFACTURED UNITS

- A. Fire Department Lock Box
 - 1. UL labeled, weather resistant, factory finished, heavy duty steel lock box.
 - 2. Model: Type and size as required by fire department.
 - 3. Ordering: Complete manufacturer's Authorization/Order Form and obtain local fire department authorized signature on form before processing.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install fire department lock box at location required by fire department in accordance with manufacturers published instructions.

11025-2

SECTION 11160 - LOADING DOCK EQUIPMENT

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Recessed dock levelers.
2. Light-communication systems (Interior and Exterior).
3. Laminated-tread dock bumpers.
4. Rain Sealing System
5. Wheel Chocks
6. Dock Reach Lights
7. Dock Reach Fans
8. Foam-Pad Dock Seals
9. Z-Guard Door Track Protection

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Inspect and discuss electrical roughing-in, equipment bases, and other preparatory work specified elsewhere.
2. Review sequence of operation for each type of loading dock equipment.
3. Review coordination of interlocked equipment specified in this Section and elsewhere.
4. Review required testing, inspecting, and certifying procedures.

1.03 DEFINITIONS

A. Operating Range: Maximum amount of travel above and below the loading dock level.

B. Working Range: Recommended amount of travel above and below the loading dock level for which loading and unloading operations can take place.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for stationary loading dock equipment.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: For stationary loading dock equipment.

1. Include plans, elevations, sections, details, and attachments to other work.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of anchors and field connection.
3. Include diagrams for power, signal, and control wiring.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Welding certificates.

- C. Product Test Reports: For each dock leveler, for tests performed by manufacturer and witnessed by a qualified testing agency.
 - 1. Indicate compliance of dock levelers with requirements in MH 30.1 for determining rated capacity, which is based on comprehensive testing within last two years of current products.
 - 2. Submittal Form: According to MH 30.1.
- D. Sample Warranty: For manufacturer's special warranty.

1.06 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For stationary loading dock equipment to include in operation and maintenance manuals.

1.07 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
 - 1. Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.3, "Structural Welding Code - Sheet Steel."

1.08 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of construction contiguous with stationary loading dock equipment, including recessed pit dimensions slopes of driveways and heights of loading docks, by field measurements before fabrication.

1.09 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace dock levelers that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Structural failures including cracked or broken structural support members, load-bearing welds, and front and rear hinges.
 - b. Faulty operation of operators, control system, or hardware.
 - c. Deck plate failures including cracked plate or permanent deformation in excess of 1/4 inch (6 mm) between deck supports.
 - 2. Warranty Period for Structural Assembly: 10 years from date of Substantial Completion.
 - 3. Warranty Period for Lifting System: Five years from date of Substantial Completion.
 - 4. Warranty shall be for unlimited usage of leveler for the specified rated capacity over the term of the warranty.
 - 5. Warranty Period for Dock Seals: Manufacturer's standard five (5) year frame warranty and two (2) year warranty against defects in materials and workmanship on the remaining components.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.02 RECESSED DOCK LEVELERS

- A. General: Recessed, hinged-lip-type dock levelers designed for permanent installation in concrete pits pre-formed in the edge of loading platform; of type, function, operation, capacity, size, and construction indicated; and complete with controls, safety devices, and accessories required.

1. Basis of Design: Subject to compliance with requirements, provide Kelley, AFX7x840:20; 4Front Engineered Solutions, Inc.:

- a. 4Front Engineered Solutions, Inc.

- B. Standard: Comply with MH 30.1, except for structural testing to establish rated capacity.
- C. Rated Capacity: Capable of supporting total gross load of 40,000 lb static load capacity minimum without permanent deflection or distortion.
- D. Platform: Not less than 3/8-inch- (9.5-mm-) thick, nonskid steel plate.
 - 1. Platform Size: Nominal 7 feet wide by 8 feet long
 - 2. Frame: Manufacturer's standard.
 - 3. Toe Guards: Equip open sides of dock leveler over range indicated with metal toe guards.
 - a. Toe-Guard Range: Entire upper working range.
- E. Hinged Lip: Not less than 5/8-inch- (16-mm-) thick, nonskid steel plate.
 - 1. Hinge: Full-width, piano-type hinge with heavy-wall hinge tube and grease fittings, with gussets on lip and ramp for support.
- F. Function: Dock levelers shall compensate for differences in height between truck bed and loading platform.
 - 1. Vertical Travel: Operating range above platform level of sufficient height to enable lip to extend and clear truck bed before contact with the following minimum working range:
 - a. Above Adjoining Platform: 12 inches (305 mm).
 - b. Below Adjoining Platform: 12 inches (305 mm).
 - 2. Automatic Vertical Compensation: Floating travel of ramp with lip extended and resting on truck bed shall compensate automatically for upward or downward movement of truck bed during loading and unloading.
 - 3. Automatic Lateral Compensation: Tilting of ramp with lip extended and resting on truck bed shall compensate automatically for canted truck beds of up to 4 inches (102 mm) over width of ramp.
 - 4. Lip Operation: Manufacturer's standard mechanism, which automatically extends and supports hinged lip on ramp edge with lip resting on truck bed over dock leveler's working range, allows lip to yield under impact of incoming truck and automatically retracts lip when truck departs.
 - a. Length of Lip Extension: 20 inches (508 mm).

5. Interlock: Leveler does not operate while overhead door is in closed position leveler night lock is engaged and inflatable dock seal is not inflated. Interlock to be interactive as identified in Sequence of Operation.
- G. Air-Bag Operating System: Electric control from a remote-control station; pneumatic operation. High-volume, low-pressure lifting of ramp. Equip leveler with a packaged unit including a PVC-coated, reinforced polyester lifting bag and two-stage, single-speed electric fan of proper size, type, and operation for capacity of leveler indicated. Include dock-leveler supports controlled by release chain for lowering ramp below platform level without extending lip.
1. Remote-Control Station: Single-button station of the constant-pressure type, enclosed in NEMA ICS 6, Type 4 box. Ramp raises by depressing and holding button; ramp lowers at a controlled rate by releasing button.
 - a. Control Station to include operation of dock fan, dock light, communication lights and dock lever as identified in Sequence of Operation.
 - b. Control Station to be able to control both light with a minimum of 0.5 amps and fan with a minimum of 8.8 amps.
- H. Construction: Fabricate dock-leveler frame, platform supports, and lip supports from structural- or formed-steel shapes. Weld platform and hinged lip to supports. Fabricate entire assembly to withstand deformation during both operating and stored phases of service. Chamfer lip edge to minimize obstructing wheels of material-handling vehicles.
1. Cross-Traffic Support: Manufacturer's standard method of supporting ramp at platform level in stored position with lip retracted. Provide a means to release supports to allow ramp to descend below platform level.
 2. Maintenance Strut: Integral strut to positively support ramp in up position during maintenance of dock leveler.
- I. Materials:
1. Steel Plates, Shapes, and Bars: ASTM 36/A 36M.
 2. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from steel plate complying with ASTM A 572/A 572M, Grade 55 (380).
 3. Steel Tubing: ASTM A 500/A 500M, cold formed.
 4. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- J. Dock-Leveler Finish: Manufacturer's standard finish.
1. Toe Guards: Paint toe guards to comply with ANSI Z535.1.
- K. Accessories:
1. Curb Angles: 3-by-3-by-1/4-inch (76-by-76-by-6-mm) galvanized-steel curb angles for edge of recessed leveler pit, with 1/2-inch- (13-mm-) diameter by 6-inch- (152-mm-) long concrete anchors welded to angle at 6 inches (152 mm) o.c.
 2. Self-Forming Pan (Alternate Bid): Manufacturer's standard prefabricated, self-forming steel form system for poured-in-place construction of concrete pit.
 3. Night Locks: Manufacturer's standard means to prevent extending lip and lowering ramp when overhead doors are locked.
 4. Side and rear brush weatherseals.
 5. Side Toe Guards: Manufacturer's Standard.
 6. Abrasive skid-resistant surface.

2.03 LIGHT-COMMUNICATION SYSTEMS

- A. General: Communication system consisting of signal-light sets, caution signs, alarms, and controls for each location indicated.
1. Basis of Design: Subject to compliance with requirements, provide the following:
 - a. APS&Go Outside; 4Front Engineered Solutions, Inc.
- B. Caution Signs: Surface mounted; designed to inform both dock attendant and truck driver; with sign copy as follows:
1. Exterior Sign Copy in Forward and Reverse Text: Manufacturer's standard text permitting truck movement with green light.
- C. Signal-Light Sets: Red and green illuminated signal-light sets, with lens approximately 4 inches (102 mm) in diameter, designed to indicate status to both dock attendant and truck driver. Equip system with steel control panel that indicates status of exterior signal lights; locate control panel at interior of dock. Provide signal-light set and control panel at each location indicated for light-communication system. Enclose signal lights in steel or plastic housing, with exterior signal-light sets equipped with sunshade.
1. Manual Operation: Lights are activated by push button or switch located on interior signal-light enclosure.
 2. Automatic Operation: Lights are activated automatically by limit switch mounted on overhead door track. Provide on-off switch located on control panel.
- Provide both Interior and Exterior Red/Green lights. Refer to section 3.07 for Sequence of Operation.
- D. Materials:
1. Steel Plates, Shapes, and Bars: ASTM 36/A 36M.
 2. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from steel plate complying with ASTM A 572/A 572M, Grade 55 (380).
 3. Steel Tubing: ASTM A 500/A 500M, cold formed.
 4. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

2.04 DOCK BUMPERS

- A. General: Surface-mounted bumpers; of type, size, and construction indicated; designed to absorb kinetic energy and minimize damage to loading dock structure.
1. Basis of Design: Subject to compliance with requirements, provide the following:
 - a. APS Resource, AP0426; 4Front Engineered Solutions, Inc.
- B. Laminated-Tread Dock Bumpers: Fabricated from multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two 3/4-inch- (19-mm-) diameter, steel supporting rods that are welded at one end to 1/4-inch- (6-mm-) thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than 1 inch (25 mm) of tread plies extending beyond the face of closure angles. Weld face-plate to two steel support brackets, which shall extend back to and engage 3/4-inch- (19-mm-) diameter support rods in elongated holes, allowing steel face to float on impact.
1. Thickness: 4.5 inches (152 mm).
 2. Vertical Style: 14 inches (203 mm) wide by 20 inches (508 mm) high.

- C. Anchorage Devices: Galvanized-steel anchor bolts, nuts, washers, bolts, sleeves, cast-in-place plates, and other anchorage devices as required to fasten bumpers securely in place and to suit installation type indicated. Hot-dip galvanized according to ASTM A 153/A 153M or ASTM F 2329.
- D. Materials: ASTM 36/A 36M for steel plates, shapes, and bars. Hot-dip galvanized according to ASTM A 123/A 123M.

2.05 FOAM-PAD DOCK SEALS

- A. General: Dock seals consisting of fabric-covered foam pads designed to compress 4 to 5 inches (102 to 127 mm) under pressure of truck body to form an airtight seal at jambs and head of loading dock openings; of type, size, and construction indicated.
 - 1. Kelly/Entrematic DS Series, 4Front Engineered Solutions.
 - 2. Approved Alternate: DL Manufacturing, Low Compression U-Seal.
- B. Stationary Head Pad with Curtain: Square (9'-6" heights)
 - 1. Nominal size: 12 inches (305 mm) high and 2 inches (254 mm) deeper than jamb pads; sized for opening width.
 - 2. Curtain: 12 inches (305 mm) high; size for opening width.
- C. Jamb Pads – Doors greater than 8'-6" wide: Square.
 - 1. Nominal Size: 12 inches (305 mm) wide at face, 10 inches (254 mm) projection, and sized for opening height.
- D. Construction: Consisting of single- or double-ply, coated, fabric-covered, urethane-foam core with supporting frame. Fabricate jamb and head pads of same depth and sized for opening width.
 - 1. Steel Support Frame: Manufacture's standard hot rolled steel sheet, G90 coating. All joints to be continuously welded.
- E. Materials:
 - 1. Cover Fabric: Vinyl-coated nylon or polyester with minimum total weight of 22 oz./sq. yd. (1356 g/sq. m). Lower 4 foot inside wear surface 40 oz./sq. yd. each jamb.
 - a. Color: As selected by Architect from manufacturer's full range.
 - 2. Guide Strips: Minimum 3-inch, nominal 4-inch- (102-mm-) wide, coated, nylon guide strips on jamb pads.
 - 3. Pleated Protectors: On face of jamb pads of overlapping layers of coated fabric attached to base fabric; 8-inch (203-mm) wear exposure pleats 40 oz./sq. yd. full height of each side pad and at each end of the head pad.
- F. Steel Finish: Hot-dip galvanize components to comply with the following:
 - 1. ASTM A 123/A 123M for iron and steel support framing.
 - 2. ASTM A 153/A 153M or ASTM F 2329 for iron and steel hardware and anchors.

2.06 RAIN SEALING SYSTEM

- A. General: Surface-mounted system: Installs over existing dock seals and head curtain. Protects dock area from exterior moisture.
 - 1. Basis of Design: Subject to compliance with requirements, provide the following:

11160-6

- a. KELLEY, AquaShield; 4Front Engineered Solutions, Inc.
- B. Anchorage Devices: Galvanized-steel anchor bolts, nuts, washers, bolts, sleeves, cast-in-place plates, and other anchorage devices as required to fasten Rain Sealing System securely in place and to suit installation type indicated. Hot-dip galvanized according to ASTM A 153/A 153M or ASTM F 2329.
- C. Materials: ASTM 36/A 36M for steel plates, shapes, and bars. Hot-dip galvanized according to ASTM A 123/A 123M.

2.07 ACCESSORIES

- A. Wheel Chocks for Trailer Stops: Laminated wheel chock with 15 ft min. chain. Mounting location to be approved/confirmed by Tenant.
 - 1. Basis of Design: Provide 4 Front/Entrematic, Model AP0071.
- B. Z-Guard Door Track Protection
 - 1. One (1) pair per door (48" High)
 - 2. 1/4" (Heavy Duty) thick steel
 - 3. 1/2" mounting holes for wall and floor
 - 4. Power Coated safety yellow
- C. Dock Reach Lights for Trailers: Snake arm type or mountable onto dock fan's dual articulating arm.
 - 1. LED with a minimum of 50,000 hour lamplife.
 - 2. Internal switch. Lights to include plug-in chord with a length to reach the control panel as located and attached to building structure for 120 V receptacle power.
 - 3. Low voltage wires in snake arm
 - 4. Provide one of the following:
 - a. 4 Front/Entrematic, high impact LED, mountable onto 6-inch tall steel pipe bollard (0.12 amps).
 - b. DL Manufacturing, Model 450 Versa Light (0.5 amps)
 - c. Alternate: 4 Front/Entrematic, high impact LED, mountable onto 4 Front/Entrematic dock fan arm (0.15 amps)
- D. Dock Reach Fans for Trailers:
 - 1. Dock fan with minimum 1200 CFM output.
 - 2. Integral switch. Fans to include plug in chord with a length to reach the control panel as located and attached to the building structure for 120 V receptacle power.
 - 3. Mount: Dual articulating 40-inch or longer arm or slide & swivel swing 24-inch arm that mounts to building wall.
 - 4. Provide the following:
 - a. 4 Front/Entrematic, Model TurboES (3.0 Amps)

2.08 FINISH REQUIREMENTS

- A. Finish loading dock equipment after assembly and testing.
- B. Galvanizing: Hot-dip galvanize components to comply with the following:
 - 1. ASTM A 123/A 123M for iron and steel loading dock equipment.
 - 2. ASTM A 153/A 153M or ASTM F 2329 for iron and steel hardware for loading dock equipment.

11160-7

- C. Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat in manufacturer's standard color.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for electrical systems for loading dock equipment to verify actual locations of connections before equipment installation.
- C. Examine walls and floors of pits for suitable conditions where recessed loading dock equipment is to be installed. Pits shall be plumb and square and properly sloped for drainage from back to front of loading dock.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Coordinate size and location of loading dock equipment indicated to be attached to or recessed into concrete or masonry, and furnish anchoring devices with templates, diagrams, and instructions for their installation.
- B. Set curb angles in concrete edges of dock-leveler recessed pits with tops flush with loading platform. Fit exposed connections together to form hairline joints.
- C. Set curb angles in concrete edges of truck-leveler recessed pits with tops flush with driveway. Fit exposed connections together to form hairline joints.
- D. Place self-forming pan system for recessed dock levelers in proper relation to loading platform before pouring concrete.
- E. Clean recessed pits of debris.

3.03 INSTALLATION

- A. General: Install loading dock equipment as required for a complete installation.
 - 1. Rough-in electrical connections.
- B. Recessed Dock Levelers: Attach dock levelers securely to loading dock platform, flush with adjacent loading dock surfaces and square to recessed pit.
- C. Dock Bumpers: Attach dock bumpers to face of loading dock in a manner that complies with requirements indicated for spacing, arrangement, and position relative to top of platform and anchorage.
 - 1. Welded Attachment: Plug-weld anchor holes in contact with steel inserts and fillet weld at other locations.
 - 2. Bolted Attachment: Attach dock bumpers to preset anchor bolts embedded in concrete or to cast-in-place inserts or threaded studs welded to embedded-steel plates or angles. If preset anchor bolts, cast-in-place inserts, or threaded studs welded to embedded-steel plates or angles are not provided, attach dock bumpers by drilling and anchoring with expansion anchors and bolts.
- D. Rain Sealing System: Attach support frames securely to building structure in proper relation to door openings, and dock seals to ensure proper alignment.

3.04 ADJUSTING

- A. Adjust loading dock equipment to function smoothly and safely, and lubricate as recommended by manufacturer.
- B. Test dock levelers for vertical travel within operating range indicated.
- C. After completing installation of exposed, factory-finished loading dock equipment, inspect exposed finishes and repair damaged finishes.

3.05 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of loading dock equipment Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper loading dock equipment operation at rated speed and capacity. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.06 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain loading dock equipment.

3.07 SEQUENCE OF OPERATION

- A. Dock Leveler: Dock control panel shall automatically control and interlock the dock communication lights (interior and exterior), leveler, fan and light. The total electrical load for all dock equipment shall not exceed the capacity of a single 120v volt, 20 amp circuit at any time during operation. Control sequence shall be as outlines below:

1. Control Sequence:

- a. Dock Door Closed
 - 1) Outside communication light is green. Inside communication light is red green.
 - 2) Dock light and dock fan are off.
 - 3) Dock leveler is disabled.
- b. Dock Door leaves the closed position
 - 1) Outside communication light transitions to red. Inside communication light transitions to red green.
- c. Dock Door Open
 - 1) Door position sensor senses door is open.
 - 2) Outside communication light is red. Inside communication light is red green
 - 3) Dock light and dock fan automatically turn on.
 - 4) Dock leveler is enabled and can be operated with leveler control.
 - 5) While the dock leveler is being cycled, the dock fan and dock light are automatically disabled.
 - 6) After the leveler is fully cycled, the dock fan and dock light are automatically enabled.
 - 7) Outside communication light is red. Inside communications light is green.
- d. Loading Operation Completed
 - 1) Dock leveler is cycled to stored position.
 - 2) Outside communication light is red. Inside communication light is red green
- e. Closing Dock Door
 - 1) Dock door leaves the opened position - dock fan, light and leveler operation is disabled.
 - 2) Dock door fully closes, door position sensor senses door is closed.

- 3) Outside communication light green. Inside communication light is red green

END OF SECTION

SECTION 12490 - SECURITY FILM WINDOW LAMINATE

PART 1 - GENERAL

1.1 SCOPE

- A. This Section provides for the furnishing and installing of security film window laminate at selected windows as shown on Drawings.

1.2 SUBMITTALS

- A. Product Data: Submit product data indicating material specifications, characteristics applicable for each glass type to receive film laminate, and instructions for using adhesive and sealant.
- B. Field Samples:
 - 1. Submit two (2) samples, 12 inches by 12 inches in size, illustrating security film laminate material and adhesives.
 - 2. Submit 12 inch long bead of film perimeter sealant; black color.
- C. Maintenance Data: Submit maintenance data including recommended cleaning and stain removal methods.

1.3 DELIVERY, STORAGE, AND HANDLING

- A. Materials shall be delivered to the job site with the manufacturer's labels intact and legible.
- B. Store and protect security film materials according to manufacturer's written instructions. Prevent damage to film materials from condensation, temperature changes, direct exposure to sun, or other causes.

1.4 WARRANTY

- A. Film laminate shall be warranted by the specified manufacturer for a period of ten (10) years after application to maintain shatter-resistant properties without cracking, hazing, peeling, or discoloration.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis of Design: Subject to compliance with requirements, provide CD 335 Max Pro Series Film window laminate by Clear Defense, Inc.; (336) 370-1699 or comparable products by one of the following:
 - 1. Clear Defense, Inc.
 - 2. 3M
 - 3. Llumar
 - 4. Armor Glass
 - 5. SolarGard (Saint-Gobain Performance Plastics Corporation)
 - 6. (Or) Approved Equal

2.2 MATERIALS

- A. Basis of Design Product: Provide products from manufacturers above aligning with the basis of design indicated below.
 - 1. Provide CD 335 Max Pro Series security film window laminate in clear finish. Each sheet shall consist of three (3) layers of optically clear 100 micron P.E.T. with a 23.5 micron mounting adhesive, 11.7 micron laminating adhesive, and a 0.25 micron acrylic abrasion-resistant surface coating for a total thickness of 14 mils.
 - 2. Provide Safety S140, 3-Ply film, from 3M, with a minimum 14 mil thickness.

3. Provide 14 Mil Clear Armorcoat from Solar Gard (Saint-Gobain Performance Plastics Corporation)
 - B. Mounting adhesive shall be protected by a 25 micron thick polyester release liner.
 - C. Adhesive System: Manufacturer's standard high mass acrylic, pressure sensitive adhesive system, applied uniformly.
 - D. Sealant: Dow Corning 995 Silicone Structural Adhesive.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine glass surfaces to receive new film laminate and verify that they are free from defects and imperfections affecting the performance or final appearance of the application. Correct all deficiencies before starting film laminate application.

3.2 PREPARATION

- A. Clean windows and window framing thoroughly with a neutral cleaning solution. Inside surface of window glass shall be bladed with industrial razors to insure the removal of foreign contaminants.
- B. Place towels or other absorbent material on the window sill or sash to absorb moisture accumulation generated by the film application.

3.3 APPLICATION

- A. Apply film laminate in strict accordance with the instructions and recommendations of the specified manufacturer including, but not limited to, cutting, positioning, and silicone beading around window perimeter.
- B. Refer to Drawings for windows to receive the security film laminate.

3.4 CLEANING

- A. Clean finished film application with materials and within the time frame recommended by the manufacturer.

END OF SECTION

SECTION 12492 – ALUMINUM HORIZONTAL BLINDS

PART 1 - GENERAL

1.1 SCOPE

- A. This Section provides for the furnishing and installing of aluminum horizontal blinds at selected windows as shown on Drawings.

1.2 SUBMITTALS

- A. Product Data: Include styles, material descriptions, construction details, dimensions of individual components and profiles, features, finishes, and operating instructions for window treatments.
- B. Shop drawings:
 - 1. Shop drawings: Indicate field-measured dimensions of opening which are to receive blinds, details on mounting surface and sill conditions, and details of corners and conditions between adjacent blinds.
 - 2. Color samples: Submit a sample of each type and color of material specified.
- C. Maintenance Data:
 - 1. For window treatments to include in maintenance manuals.
 - 2. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 3. Window treatments: Full-size units equal to 5 percent of quantity installed for each size and color material indicated, but no fewer than two units

1.3 DELIVERY, STORAGE, AND HANDLING

- A. Deliver product in factory packages, marked with manufacturer, product name, and location of installation using same designations indicated on Drawings.
- B. Store product in clean, dry areas indoors, in manufacturer's unopened packaging, laid flat to prevent sagging and twisting until ready for installation, in accordance with manufacturer's instructions.
- C. Handling: Protect materials and finish from damage during handling and installation.

1.4 WARRANTY

- A. Limited Lifetime Warranty per manufacturer standard.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain horizontal louver blinds from single source from single manufacturer.
- B. Basis of Design:
- C. Slats: Aluminum; alloy and temper recommended by producer for type of use and finish indicated; with crowned profile and radius corners.
 - 1. Width: 1 inch
 - 2. Thickness: Manufacturer's standard.
 - 3. Spacing: Manufacturer's standard.

- D. Headrail: Formed .025 min thick, painted steel; U-shaped rolled edges. Headrails fully enclose operating mechanisms on three sides.
 - 1. Capacity: One blind per headrail unless otherwise indicated.
 - 2. Ends: Manufacturer's standard.
 - 3. Manual Lift Mechanism:
 - 4. Manual Tilt Mechanism: Enclosed worm-gear mechanism and linkage rod that adjusts ladders.
 - a. Tile/Full
 - b. Operator: Corrosion-resistant steel rod
 - c. Over-Rotation Protection: Manufacturer's detachable operator or slip clutch to prevent over rotation of gear.
 - 5. Manual Lift-Operator and Tilt-Operator Lengths: Manufacturer's standard.
 - 6. Manual Lift-Operator and Tilt-Operator Locations: Manufacturer's standard.
- E. Bottom Rail: Formed-steel tube that secures and protects ends of ladders and lift cords and has molded clear plastic-capped ends with integral protrusions to prevent bottom bar from marring window sills and mullions.
 - 1. Type: Manufacturer's standard.
- F. Lift Cords: Manufacturer's standard braided cord.
- G. Ladder Slat Supports: Evenly spaced across headrail at spacing that prevents long-term slat sag.
 - 1. Type: Braided polyester yarn dyed to manufacturer's color standards
- H. Valance: Manufacturer's standard.
- I. Mounting Brackets: With spacers and shims required for blind placement and alignment indicated.
 - 1. Type: Inside Top Mount
 - 2. Mounting Brackets: With spacers and shims required for blind placement and alignment indicated.
- J. Colors, Textures, Patterns, and Gloss
 - 1. Slats: Raw Umber or Low Gloss Black
 - 2. Components: Provide rails, cords, ladders, and materials exposed to view matching or coordinating with slat color unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, and other conditions affecting performance of the Work.

3.2 INSTALLATION

- A. Install horizontal louver blinds level and plumb, aligned and centered on openings, and aligned with adjacent units in accordance with manufacturer's written instructions.
 - 1. Locate so exterior slat edges are not closer than 1 inch (25 mm) from interior faces of glass and not closer than 1/2 inch (13 mm) from interior faces of glazing frames through full operating ranges of blinds.
 - 2. Install mounting and intermediate brackets to prevent deflection of headrails.
 - 3. Install with clearances that prevent interference with adjacent blinds, adjacent construction, and operating hardware of glazed openings, other window treatments, and similar building components and furnishings.

3.3 ADJUSTING

- A. Adjust horizontal louver blinds to operate free of binding or malfunction through full operating ranges.

3.4 CLEANING

- A. Clean horizontal louver blind surfaces after installation in accordance with manufacturer's written instructions.
- B. Provide final protection and maintain conditions in a manner acceptable to manufacturer and Installer that ensures that horizontal louver blinds are without damage or deterioration at time of Substantial Completion.
- C. Replace damaged horizontal louver blinds that cannot be repaired in a manner approved by Architect before time of Substantial Completion.

SECTION 12500 - FURNITURE AND ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Furniture and Accessories.

PART 2 - PRODUCTS

2.1 FURNITURE AND ACCESSORIES

A. Procurement:

- 1. Furnishings provided by General Contractor Through Walmart Preferred Vendor.

B. Manufacturer:

- 1. Herman Miller (preferred Manufacturer).
 - a. Contact:
Mark Bormann
Senior Interior Designer & Account Manager
John A. Marshall Co. (preferred Vendor)
123 W 11th Street
Tulsa, OK 74119
M: 918-671-3359
Mark.Bormann@jamarshall.com

C. Alternate Manufacturer

- 1. HON : Open line alternate for pricing per budget constraints.
 - a. THE HON Company
200 Oak Street
Muscatine, Iowa 52761

D. Products:

- 1. Refer to drawings for schedule of selections and quantity.

PART 3 - EXECUTION (Not Used)

12500-2

SECTION 14210 - ELECTRIC TRACTION ELEVATORS

PART 1 - GENERAL

1.01 SUMMARY

- A. Section includes electric traction hospital service elevators.

1.02 DEFINITIONS

- A. Definitions in ASME A17.1/CSA B44 apply to work of this Section.

1.03 ACTION SUBMITTALS

- A. Product Data: Include capacities, sizes, performances, operations, safety features, finishes, and similar information. Include product data for car enclosures, hoistway entrances, and operation, control, and signal systems.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and large-scale details indicating service at each landing, controller closet coordination, relationships with other construction, and locations of equipment.
 - 2. Include large-scale layout of car-control station.
 - 3. Indicate maximum dynamic and static loads imposed on building structure at points of support, and maximum and average power demands.
 - 4. Preliminary elevator shop drawings must be provided to the project Architect and Structural Engineer for review prior to the review and approval of the elevator shaft foundation and precast wall shop drawings. At a minimum the preliminary shop drawings shall contain the following:
 - a. Shaft dimensions and tolerances
 - b. Rough opening dimensions
 - c. Foundation and wall reactions
 - d. Electrical loads
 - e. Ventilation requirements
 - 5. Final elevator shop drawings must be provided to the project Architect for review and approval prior to the final equipment order. Changes from the preliminary elevator shop drawings may not be approved if they affect the shaft design.
- C. Samples for Initial Selection: For finishes involving color selection.
- D. Samples for Verification: For exposed car, hoistway door and frame, and signal equipment finishes; 3-inch- (75-mm-) square Samples of sheet materials; and 4-inch (100-mm) lengths of running trim members.
- E. Renderings or color photographs of the provide features and materials of the cab front wall.

1.04 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.

- B. Seismic Qualification Certificates: For elevator equipment, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Manufacturer Certificates: Signed by elevator manufacturer certifying that hoistway, pit, and controller closet layout and dimensions, as shown on Drawings, and electrical service including standby power generator, as shown and specified, are adequate for elevator system being provided.
- D. Sample Warranty: For special warranty.

1.05 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For elevators to include in emergency, operation, and maintenance manuals.
 - 1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include diagnostic and repair information available to manufacturer's and Installer's maintenance personnel.
- B. Inspection and Acceptance Certificates and Operating Permits: As required by authorities having jurisdiction for normal, unrestricted elevator use.
- C. Continuing Maintenance Proposal: Submit a continuing maintenance proposal from Installer to Owner, in the form of a standard one-year maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: Elevator manufacturer or an authorized representative who is trained and approved by manufacturer.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.08 COORDINATION

- A. Coordinate installation of sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
- B. Coordinate locations and dimensions of other work relating to electric traction elevators including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, and pits.

1.09 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair, restore, or replace elevator work that fails in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.
 - 2. Warranty Period: One year from date of Substantial Completion.

1.10 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide Twelve (base bid) and an additional forty-eight (alternate bid) months' full maintenance service by skilled employees of the elevator Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation at rated speed and capacity. Provide parts and supplies as used in the manufacture and installation of original equipment.
 - 1. Include 24-hour-per-day, 7-day-per-week emergency callback service with two-hour response time.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Approved Products: Subject to compliance with requirements, provide comparable product by one of the following:
 - 1. TK Elevator: Evolution Series. <https://www.tkelevator.com/us-en/>
 - 2. KONE Elevator Corporation: MonoSpace Series. <https://www.kone.com/en/>
 - 3. Otis Elevator Company: Gen2 Series. <https://www.otis.com/en/us/>
 - 4. Schindler Elevator Corporation: 3300 Series. <https://group.schindler.com/en.html>
- B. Basis-of-Design: Elevator shaft layout and design shown on drawings is based on the following suppliers and elevator models:
 - 1. Office/Service elevator: Schindler 3300XL MRL Traction Elevator
 - 2. Parking Lot Tower elevator: Schindler 3300 MRL Traction Elevator
 - 3. Alternative selection: Selection of an alternate supplier and/or model is permitted but will require the elevator shaft design to be reviewed and updated by the project Architect and Structural Engineer.
- C. Source Limitations: Obtain elevators from single manufacturer.
 - 1. Major elevator components, including driving machines, controllers, signal fixtures, door operators, car frames, cars, and entrances, shall be manufactured by single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.

- B. Accessibility Requirements: Comply with Section 407 in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and with ICC A117.1.
- C. Seismic Performance: Elevator system shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 and shall comply with elevator safety requirements for seismic risk Zone 3 or greater in ASME A17.1/CSA B44.
- D. Fire-Rated Hoistway Entrance Assemblies: Door and frame assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated.

2.03 ELEVATORS

- A. Elevator System, General: Manufacturer's standard elevator systems. Unless otherwise indicated, manufacturer's standard components shall be used, as included in standard elevator systems and as required for complete system.
- B. Office/Service Elevator Description: Passenger/Hospital Service Elevator
 - 1. Machine Location: Machine Room.
 - 2. Machine Type: Gearless traction.
 - 3. Rated Load: 4500 lbs.
 - 4. Rated Speed: Minimum 150 fpm.
 - 5. Operation System: Single Car.
 - 6. Auxiliary Operations:
 - a. Battery operated lowering.
 - b. Nuisance call cancel.
 - 7. Car Enclosures:
 - a. Inside Width: 67 inches (2032 mm) from side wall to side wall.
 - b. Inside Depth: 97 inches (1651 mm) from back wall to front wall (return panels).
 - c. Inside Height: Minimum 108 inches to underside of ceiling.
 - d. Front Walls (Return Panels): Satin stainless steel, vandal resistant
 - e. Car Fixtures: Satin stainless steel, No. 4 finish.
 - f. Wall Panels Base Bid: Manufacturer standard upgraded stainless steel vandal resistant panels.
 - g. Door Faces (Interior): Satin stainless steel, vandal resistant.
 - h. Door Sills: Aluminum, mill finish.
 - i. Ceiling: Polished stainless steel, No. 8 finish, with LED lights.
 - j. Handrails: Manufacturer standard flat bar, satin stainless steel, No. 4 finish, at sides and rear of car.
 - k. Floor prepared to receive finished flooring as part of separate Bid Package. No more than 3/4 inch thick and less than 800 lbs.
 - 8. Hoistway Entrances:
 - a. Width: 48 inches.
 - b. Height: 84 inches.
 - c. Type: Front entrance - Two-stage side opening.
 - d. Frames: Satin stainless steel, vandal resistant finish.
 - e. Doors: Satin stainless steel, vandal resistant
 - f. Sills: Aluminum, mill finish.

9. Hall Fixtures: Satin stainless steel, No. 4 finish.
10. Additional Requirements:
 - a. Provide inspection certificate in each car, mounted under acrylic cover with frame made from satin stainless steel, No. 4 finish.
 - b. Provide hooks for protective pads in all cars and one complete set(s) of full-height protective pads.

C. Parking Tower Elevator Description: Passenger Elevator

1. Machine Location: Machine Room.
2. Machine Type: Gearless traction.
3. Rated Load: 3500 lbs.
4. Rated Speed: Minimum 150 fpm.
5. Operation System: Single Car.
6. Auxiliary Operations:
 - a. Battery operated lowering.
 - b. Nuisance call cancel.
7. Car Enclosures:
 - a. Inside Width: 67 inches (2032 mm) from side wall to side wall.
 - b. Inside Depth: 97 inches (1651 mm) from back wall to front wall (return panels).
 - c. Inside Height: Minimum 108 inches to underside of ceiling.
 - d. Front Walls (Return Panels): Satin stainless steel, vandal resistant
 - e. Car Fixtures: Satin stainless steel, No. 4 finish.
 - f. Wall Panels Base Bid: Manufacturer standard upgraded stainless steel vandal resistant panels.
 - g. Door Faces (Interior): Satin stainless steel, vandal resistant.
 - h. Door Sills: Aluminum, mill finish.
 - i. Ceiling: Polished stainless steel, No. 8 finish, with LED lights.
 - j. Handrails: Manufacturer standard flat bar, satin stainless steel, No. 4 finish, at sides and rear of car.
 - k. Floor prepared to receive finished flooring as part of separate Bid Package. No more than 3/4 inch thick and less than 800 lbs.
8. Hoistway Entrances:
 - a. Width: 42 inches.
 - b. Height: 84 inches.
 - c. Type: Front and Rear entrance, Two-stage side opening.
 - d. Frames: Satin stainless steel, vandal resistant finish.
 - e. Doors: Satin stainless steel, vandal resistant
 - f. Sills: Aluminum, mill finish.
9. Hall Fixtures: Satin stainless steel, No. 4 finish.
10. Additional Requirements:
 - a. Provide inspection certificate in each car, mounted under acrylic cover with frame made from satin stainless steel, No. 4 finish.
 - b. Provide hooks for protective pads in all cars and one complete set(s) of full-height protective pads.

2.04 TRACTION SYSTEMS

- A. Elevator Machines: The hoisting machine shall be a compact Gearless traction type, consisting of AC motor, brake and driving sheave mounted on a rigid bedplate in the top of the hoistway.
 - 1. Machine shall be permanent magnet AC gearless traction type.
 - 2. Limit total harmonic distortion of regenerated power to 5 percent per IEEE 519.
 - 3. Provide means for absorbing regenerated power when elevator system is operating on standby power.
 - 4. Provide line filters or chokes to prevent electrical peaks or spikes from feeding back into building power system.
 - 5. A large diameter, forged shaft to serve as a support for the motor armature and for the removable drive sheave and brake system.
 - 6. Supported by roller bearings mounted in the machine housing.
 - 7. The drive system shall be of the Variable Voltage Variable Frequency (VVVF) Non Regenerative or Regenerative.
 - 8. The system shall be a vector controlled pulse-width modulated AC drive. The variable voltage variable frequency drive shall convert the AC power supply using a two step process to a variable voltage variable frequency power supply for use by the hoist motor.
 - 9. The speed control shall be by means of vector control providing independent excitation and torque current. A digital absolute velocity encoder shall be provided giving feedback to the controller on armature position and motor speed.
- B. Fluid for Hydraulic Buffers: If using hydraulic buffers, use only fire-resistant fluid.
- C. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work. Device installation is specified in another Section.
- D. Machine Beams: Provide framing to support elevator hoisting machine and deflector sheaves from the building structure. Comply with Section 05 50 00 "Metal Fabrications" for materials and fabrication.
- E. Car Frame and Platform: Bolted- or welded-steel units.
- F. Guide Rails: Dry, non-lubricated steel, fastened to the building with steel brackets.
- G. Guides: Roller guides, with a minimum of three tires, shall be mounted on top and bottom of the car and counterweight frame and be held in contact with the guide rail by adjustable devices.
- H. Buffers: Provide substantial buffers in the elevator pit. Mount buffers on continuous channels fastened to the elevator guide rail or securely anchored to the pit floor. Provide extensions if required by project conditions.
- I. Brake:
 - 1. The brake shall be a spring applied electric brake, held open by an electro-magnet actuated by a digital brake controller and designed to make smooth, positive stops. The Brake shall be designed to automatically apply in the event of interruption of power supply from any cause. Operation and control of the brake shall be all digital. The setting and lifting of the brake shall be software based and all electronic. All adjustments and setup of the brake shall be made using a PC interface. No contactors or resistors shall be used in the actuation of the brake.

- J. Ropes:
1. Provide Steel hoist cables of size and number to ensure proper wear qualities shall be used. Special wedge shackles shall be used.
 2. Governor ropes shall be of iron construction
 3. Any special tools, devices, software or equipment required for monitoring the wear of any means of suspension other than standard elevator steel cables shall be included with the installation of the equipment and become the property of the owner at time of elevator completion. This includes special ongoing monitoring systems, special tools and instruction needed to monitor the suspension system.
- K. Counterweight:
1. Counterbalance each elevator for smooth and economical operation by using iron or steel plate weights securely fastened in a steel counterweight frame. Counterweight shall equal the weight of the complete elevator car and approximately 40-45 percent of the specified capacity load.
- L. Safety and Governor:
1. Car safety shall be mounted on the bottom members of the car frame and be operated by a centrifugal speed governor. The governor shall be designed to cut off power to the motor and apply the brake whenever the governor indicates the car has excessive speed. The governor shall function when the car over speeds.
- M. Emergency Terminal Limits:
1. Place electric limit switches in the hoistway near the terminal landings. Limit switches shall be designed to cut off the electric current and stop the car if it runs beyond either terminal landing.
- N. Automatic Self-Leveling:
1. Provide each elevator car with a self-leveling feature to automatically bring the car to the floor landings and correct for over travel or under travel. Self-leveling shall, within its zone, be automatic and independent of the operating device. The car shall be maintained approximately level with the landing irrespective of its load.
- O. Sound Reducing: Provide sound reducing materials to effectively isolate the elevator equipment from floors and structure.
1. Control system shall be arranged to eliminate mechanical vibration, airborne noise and structurally transmitted vibrations from control generated power transients.
- P. Elevator Pit Ladder: Fabricate elevator pit ladder ladders with dimensions, spacings, details, and anchorages as required.
1. Comply with ASME A17.1.
 2. Siderails: Continuous, 1/2-by-2-1/2-inch (12-by-64-mm) steel flat bars, with eased edges, spaced 18 inches (457 mm) apart.
 3. Bar Rungs: 3/4-inch- (19-mm-) diameter steel bars, spaced 12 inches (300 mm) o.c.
 4. Fit rungs in centerline of side rails; plug-weld and grind smooth on outer rail faces.
 5. Support each ladder at top and bottom and not more than 60 inches (1500 mm) o.c. with welded or bolted steel brackets. Size brackets to support design loads specified in ANSI A14.3.

6. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.

2.05 OPERATION SYSTEMS

- A. General: Provide manufacturer's standard microprocessor operation systems as required to provide type of operation indicated.
- B. Single Car Operation: Provide single car operation.
- C. Auxiliary Operations: In addition to primary operation system features, provide the following operational features for elevators where indicated:
 1. Battery-Powered Lowering: If power fails, cars that are at a floor remain at that floor, open their doors, and shut down. Cars that are between floors are lowered one at a time to the next floor below, open their doors, and shut down. System includes rechargeable battery and automatic recharging system.
 - a. If automatic detection systems signal the presence of smoke or fire on the lowest floor level with direct exits, battery-powered lowering shall be to the next closest level.
 2. Nuisance Call Cancel: When car calls exceed a preset number while car load is less than a predetermined weight, all car calls are canceled. Preset number of calls and predetermined weight can be adjusted.
- D. Traveling Cable: Provide traveling cable from each car to location of control panel for integration with owners access control system.
 1. Provide rough-in for owner provided and installed proximity reader in each car.

2.06 DOOR REOPENING DEVICES

- A. Infrared Array: Provide door reopening device with uniform array of 36 or more microprocessor-controlled, infrared light beams projecting across car entrance. Interruption of one or more light beams shall cause doors to stop and reopen.
- B. Nudging Feature: After car doors are prevented from closing for predetermined adjustable time, through activating door reopening device, a loud buzzer shall sound and doors shall begin to close at reduced kinetic energy.

2.07 CAR ENCLOSURES

- A. General: Provide steel-framed car enclosures with nonremovable wall panels, with removable car roof, access doors, power door operators, and ventilation.
 1. Provide standard railings complying with ASME A17.1/CSA B44 on car tops where required by ASME A17.1/CSA B44.
- B. Materials and Finishes: Manufacturer's standards, but not less than the following:
 1. Subfloor: Exterior, C-C Plugged grade plywood, not less than 7/8-inch (22.2-mm) nominal thickness.
 2. Floor Finish: To be bid separately.

3. Wall Panels Base Bid: Manufacturer standard upgraded vandal resistant stainless steel wall panels.
4. Fabricate car with recesses and cutouts for signal equipment.
5. Fabricate car door frame integrally with front wall of car.
6. Stainless-Steel Doors: Flush, hollow-metal construction; fabricated from vandal resistant stainless-steel sheet or by laminating stainless-steel sheet to exposed faces and edges of enameled cold-rolled steel doors using adhesive that fully bonds metal to metal without telegraphing or oil-canning.
7. Sight Guards: Provide sight guards on car doors.
8. Sills: Extruded metal, with grooved surface, 1/4 inch (6.4 mm) thick.
9. Metal Ceiling: Flush panels, with LED downlights in the center of each panel. Align ceiling panel joints with joints between wall panels.
10. Handrails: Manufacturer's standard handrails, of shape, metal, and finish indicated.

2.08 HOISTWAY ENTRANCES

- A. Hoistway Entrance Assemblies: Manufacturer's standard horizontal-sliding, door-and-frame hoistway entrances complete with track systems, hardware, sills, and accessories. Frame size and profile shall accommodate hoistway wall construction.
- B. Fire-Rated Hoistway Entrance Assemblies: Door and frame assemblies shall comply with NFPA 80 and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction based on testing at as close-to-neutral pressure as possible according to NFPA 252 or UL 10B.
 1. Fire-Protection Rating: As noted on Drawings, with 30-minute temperature rise of 450 deg F (250 deg C).
- C. Materials and Fabrication: Manufacturer's standards, but not less than the following:
 1. Steel Subframes: Formed from cold- or hot-rolled steel sheet, with factory-applied enamel finish or rust-resistant primer. Fabricate to receive applied finish as indicated.
 2. Stainless-Steel Frames: At all passenger entrances on all floors, formed from stainless-steel sheet.
 3. Star of Life Symbol: Identify emergency elevators with star of life symbol, not less than 3 inches (76 mm) high, on both inside surfaces of hoistway door frames.
 4. Stainless-Steel Doors: At all passenger entrances on all floors, hollow-metal construction; fabricated from stainless-steel sheet.
 5. Sight Guards: Provide sight guards on doors matching door edges.
 6. Sills: Extruded metal, with grooved surface, 1/4 inch (6.4 mm) thick.
 7. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M.

2.09 SIGNAL EQUIPMENT

- A. General: Provide hall-call and car-call buttons that light when activated and remain lit until call has been fulfilled. Fabricate lighted elements with LEDs.
 1. Provide vandal resistant buttons
- B. Swing-Return Car-Control Stations: Provide car-control stations mounted on rear of hinged return panel adjacent to car door and with buttons, switches, controls, and indicator lights projecting through return panel but substantially flush with face of return panel.

1. Include call buttons for each landing served and other buttons, switches, and controls required for specified car operation.
 - a. Provide manufacturers standard upgraded vandal resistant buttons.
 2. Mark buttons and switches for function. Use both tactile symbols and Braille.
 3. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by authorities having jurisdiction.
 4. Mount controls at heights complying with the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines (ADAAG)."
 5. Provide full-width wrap around hinged car operating panel with integral column and filler panel.
 6. All components in the car control stations are to be mounted flush with the front wall panels and are to be constructed of the same material as the front wall panels. Surface mounted and plastic trimmed faceplates are not allowed.
- C. Emergency Communication System: Provide system that complies with ASME A17.1 and the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines (ADAAG)." On activation, system dials preprogrammed number of monitoring station and identifies elevator location to monitoring station. System provides two-way voice communication without using a handset and provides visible signals that indicate when system has been activated and when monitoring station has responded. System is contained in flush-mounted cabinet, with identification, instructions for use, and battery backup power supply.
- D. Car Position Indicator: Provide illuminated, digital-type car position indicator, located above car door or above car-control station. Also, provide audible signal to indicate to passengers that car is either stopping at or passing each of the floors served. Include travel direction arrows if not provided in car-control station.
- E. Hall Push-Button Stations: Provide one hall push-button station at each landing.
1. Provide units with flat, trimless faceplate for mounting with body of unit recessed in wall.
 2. Equip units with buttons for calling elevator and for indicating desired direction of travel.
 3. Equip units with buttons for calling elevator and for indicating direction of travel or destination as required by system. Provide a signaling system to verify floor selection, where destination registration is required, and to direct passengers to appropriate car.
 4. Provide manufacturers standard upgraded decorative "rimlight" fixtures.
- F. Emergency Pictorial Signs: Fabricate from materials matching hall push-button stations, with text and graphics as required by authorities having jurisdiction, indicating that in case of fire, elevators are out of service and exits should be used instead. Provide one sign integral with hall push-button station unless otherwise indicated.
1. Refer to ASME A17.1, Appendix O "Elevator Corridor Call Station Pictograph".
 2. Provide manufacturers standard upgraded decorative "rimlight" fixtures.
- G. Hall Lanterns: Units with illuminated arrows; but provide single arrow at terminal landings. Provide the following:
1. Place lanterns either above or beside each hoistway entrance, as directed by architect. Mount at a minimum of 72 inches above finished floor.
 - a. Provide alternate bid to place hall lanterns in-car.

2. Provide units with flat, trimless faceplate for mounting with body of unit recessed in wall.
3. With each lantern, provide audible signals indicating car arrival and direction of travel. Signals sound once for up and twice for down.

a. At manufacturer's option, audible signals may be placed on each car.

H. Hall Position Indicators: Provide illuminated, digital-display-type position indicators, located above each hoistway auxiliary entrance at ground floor only when required by code. Otherwise, provide hall lantern only. Provide units with flat faceplate for mounting and with body of unit recessed in wall.

1. Integrate ground-floor hall lanterns with hall position indicators.

2.10 FINISH MATERIALS

- A. General: Provide the following materials for exposed parts of elevator car enclosures, car doors, hoistway entrance doors and frames, and signal equipment as indicated.
- B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, commercial steel, Type B, exposed, matte finish.
- C. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304.
- D. Stainless-Steel Bars: ASTM A 276, Type 304.
- E. Stainless-Steel Tubing: ASTM A 554, Grade MT 304.
- F. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063.
- G. Plastic Laminate: High-pressure type complying with NEMA LD 3, Type HGS for flat applications.

PART 3 - EXECUTION

3.01 EXAMINATION

- A. Examine elevator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Examine hoistways, hoistway openings, pits, and machine rooms as constructed; verify critical dimensions; and examine supporting structure and other conditions under which elevator work is to be installed.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Install elevator systems components and coordinate installation of hoistway wall construction.
 1. Work shall be performed by competent elevator installation personnel in accordance with ASME A17.1, manufacturer's installation instructions and approved shop drawings.
 2. Comply with the National Electrical Code for electrical work required during installation.

- B. Perform work with competent, skilled workmen under the direct control and supervision of the elevator manufacturer's experienced foreman.
- C. Supply in ample time for installation by other trades, inserts, anchors, bearing plates, brackets, supports, and bracing including all setting templates and diagrams for placement.
- D. Comply with manufacturer's written instructions.
- E. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS standards for workmanship and for qualifications of welding operators.
- F. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts to minimize vibration transmission to structure and structure-borne noise due to elevator system.
- G. Lubricate operating parts of systems, including ropes, as recommended by manufacturers.
- H. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay final adjustment of sills and doors until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.
- I. Leveling Tolerance: 1/8 inch (3 mm), up or down, regardless of load and travel direction.
- J. Set sills flush with finished floor surface at landing. Fill space under sill solidly with nonshrink, nonmetallic grout.
- K. Locate hall signal equipment for elevators as follows unless otherwise indicated:
 - 1. For groups of elevators, locate hall push-button stations between two elevators at center of group or at location most convenient for approaching passengers.
 - 2. Place hall lanterns either above or beside each hoistway entrance.
 - 3. Mount hall lanterns at a minimum of 72 inches (1829 mm) above finished floor.
- L. Erect hoistway sills, headers, and frames before erection of rough walls and doors; erect fascia and toe guards after rough walls finished. Set sill units accurately aligned and slightly above finish floor at landings.

3.03 FIELD QUALITY CONTROL

- A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.
- B. Operating Test: Load each elevator to rated capacity and operate continuously for 30 minutes over full travel distance, stopping at each level and proceeding immediately to the next. Record temperature rise of elevator machine during 30-minute test period. Record failure to perform as required.
- C. Advise Owner, Architect, and authorities having jurisdiction in advance of dates and times that tests are to be performed on elevators.

3.04 PROTECTION

- A. Temporary Use: Limit temporary use for construction purposes to one elevator. Comply with the following requirements for elevator used for construction purposes:
 - 1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
 - 2. Provide strippable protective film on entrance and car doors and frames.
 - 3. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.
 - 4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
 - 5. Do not load elevators beyond their rated weight capacity.
 - 6. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
 - 7. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.

3.05 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate, adjust, and maintain elevator(s).
- B. Check operation of each elevator with Owner's personnel present before date of Substantial Completion and again not more than one month before end of warranty period. Determine that operation systems and devices are functioning properly.

3.06 MAINTENANCE

- A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of elevator Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation at rated speed and capacity. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
 - 1. Perform maintenance during normal working hours.
 - 2. Perform emergency callback service during normal working hours with response time of two hours or less.
 - 3. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of two hours or less.

DIVISION 20 - SEISMIC CONTROLS FOR MEFPT SPECIFICATION

17100 (200548) Seismic Controls for MEP/F/T Systems

END OF DIVISION 20 TABLE OF CONTENTS

PAGE INTENTIONALLY LEFT BLANK

SECTION 17100 (200548) - SEISMIC CONTROLS FOR MEP/F/T SYSTEMS

PART 1 - GENERAL REQUIREMENTS

1.1 SECTION INCLUDES

- A. This section includes requirements for seismic controls to be installed for project, the design for which is a delegated design responsibility.

1.2 DEFINITIONS

- A. Section Title: Seismic Controls for Mechanical, Electrical Plumbing, Fire Protection, and Technology (MEP/F/T) Systems.
- B. IBC: International Building Code.
- C. ICC-ES: ICC-Evaluation Service.
- D. OSHPD: Office of Statewide Health Planning and Development for the State of California.

1.3 ADMINISTRATIVE REQUIREMENTS

- A. The contractor shall be responsible for determining the requirements for seismic control measures to be applied to HVAC piping and equipment, electrical conduit and raceways, electrical switchgear and plumbing systems specified herein. Seismic protection criteria used to determine seismic control requirements of all mechanical, electrical and plumbing systems shall be determined by the applicable code adopted in the project jurisdiction. Where not already determined within the contract documents, the contractor shall be responsible for contracting a licensed professional engineer to establish building site class, seismic use group, occupancy category, seismic design category, seismic zone or any other criteria necessary to determine the requirements for seismic control measures for mechanical, electrical and/or plumbing systems.
- B. Where required, the Contractor shall be responsible for determining the type and location of seismic supports required for the HVAC piping and equipment, electrical conduit and raceways and plumbing elements shown on the contract drawings based on the seismic criteria, the size and weight of the supported element and the distance from structure that the element will be installed. The Contractor shall submit shop drawings as defined in Paragraph "Submittals" showing the types and locations of required seismic supports.
- C. The requirements for seismic control measures to be applied to HVAC piping and equipment, electrical conduit and raceways, electrical switchgear and plumbing systems specified herein are in addition to any other items called for in other sections of these specifications. All anchor connections to structure for support of mechanical/electrical equipment, regardless of the need for seismic restraints, shall be shown on shop drawings and submitted for review by the Engineer of Record.
- D. At the Contractor's option, use pre-engineered seismic restraints produced by the manufacturers specified in part 2.1 of this section. Spacing of seismic restraints may be modified in these pre-engineered systems to meet seismic design parameters when properly engineered and documented.
- E. All seismic restraints, isolators, and isolation materials shall be of the same manufacturer and shall be certified by the manufacturer.

- F. Seismic protection systems shall be installed in strict accordance with all applicable local, state, and/or federal codes. Installation shall also be in strict accordance with component manufacturer's requirements and standards and with industry construction standards. Whenever conflicts occur between codes or standards, the most stringent shall apply.
- G. Seismic protection of fire protection piping systems shall be installed in strict accordance with the provisions of NFPA 13 (2010 or later edition).

1.4 SUBMITTALS

- A. Seismic Control Measure Analysis: The contractor shall provide an analysis determining the requirement or exemption for seismic control measures for mechanical, electrical and plumbing equipment. The analysis shall be signed and sealed by a licensed professional structural engineer.
 - 1. The analysis shall at a minimum include the following:
 - a. For projects permitted under Uniform Building Code
 - 1) UBC Seismic Zone
 - 2) Seismic Zone Factor
 - 3) Occupancy Category
 - b. For projects permitted under International Building Code
 - 1) Seismic Use Group or Building Category.
 - 2) Seismic Design Category
 - 3) Site Class
 - 4) Design Spectral Response Acceleration Values
 - c. For projects with equipment mounted outdoors and subject to wind restraint requirements:
 - 1) Basic Wind Speed.
 - 2) Building Classification Category
 - 3) Minimum 10lb/sq. ft. multiplied by maximum area of HVAC component projected on vertical plane normal to wind direction and 45 degrees either side of normal.
- B. Where seismic control measure analysis determines seismic controls are not required:
 - 1. Submit report that summarizes the analysis for review and approval.
 - 2. Disregard the remaining portions of this submittal section
- C. Where seismic control measure analysis determines seismic controls are required:
 - 1. Submit report that summarizes the analysis for review and approval
 - 2. Provide submittals for seismic bracing as required in the remaining portions of this submittal section.
- D. Product Data: The manufacturer of vibration isolation and seismic restraints shall provide submittals for products as follows:
 - 1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
 - 2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
 - a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by an agency acceptable to authorities having jurisdiction.
 - b. Annotate to indicate application of each product submitted and compliance with requirements.
 - 3. Restrained-Isolation Devices: Include ratings for horizontal, vertical, and combined loads.
- E. Delegated-Design Submittal: Submit seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic and wind forces required to select vibration isolators and seismic restraints.

- a. Coordinate design calculations with wind-load calculations required for equipment mounted outdoors. Comply with requirements in other sections for equipment mounted outdoors.
 2. Indicate materials and dimensions and identify hardware, including attachment and anchorage devices.
 3. Seismic and Wind Restraint Details:
 - a. Design Analysis: Submit report that supports selection and arrangement of seismic and wind restraints. Include calculations of combined tensile and shear loads.
 - b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events.
 - c. Preapproval and Evaluation Documentation: Where required provide preapproval documentation from an agency acceptable to authorities having jurisdiction, showing maximum ratings of restraint items and the basis for approval (tests or calculations).
- F. Shop Drawings: The following items shall be signed and sealed by a registered professional engineer:
1. Shop drawings along with catalog cuts, templates, erection, and installation details, as appropriate, for the items listed below shall be submitted for approval. Submittals shall be complete in detail; shall indicate thickness, type, grade, class of metal, and dimensions; and shall show construction details, reinforcement, anchorage, and installation with relation to other building systems and construction.
 - a. Sway Braces
 - b. Flexible Couplings or Joints
 - c. Resilient Type Vibration Devices
 - d. Equipment Anchor Connections
 - e. Fabrication details for equipment bases including dimensions, structural member sizes and support point locations.
 - f. Details of suspension and support for ceiling hung equipment.
 - g. Where walls, floors, slabs or supplementary steel work are used for seismic restraint locations, details of acceptable attachment methods for ducts, conduit and pipe must be included and approved before the condition is accepted for installation. Restraint manufacturers' submittals must include spacing, static loads and seismic loads at all attachment and support points.
 - h. Provide specific details of seismic restraints and anchors; include number, size and locations for each piece of equipment.
 2. Layout drawings showing locations and types of seismic restraints for all equipment, ductwork, piping and conduit shall be submitted. Locations for seismic restraints shall be coordinated with the structure and with other mechanical and electrical components. Coordinate types of restraints with the submitted schedule
 3. Indicate components exempt from seismic due to exceptions for component importance factor, component response modification factor, component amplification factor, seismic design category, etc.
- G. Seismic Certification and Analysis:
1. Seismic restraint calculations shall be provided for all connections of equipment to the structure. Calculations shall be stamped by a registered professional engineer with at least five years of seismic design experience, licensed in the state of the project location.
 2. All restraining devices shall have a preapproval number from California OSHPD or some other recognized government agency showing maximum restraint ratings. Preapprovals based on independent testing are preferred to preapprovals based on calculations. Where preapproved devices are not available, submittals based on independent testing are preferred. Testing and calculations shall include shear and tensile loads as well as one test or analysis at 45° to the weakest mode.
 3. Analysis shall indicate calculated dead loads, static seismic loads and capacity of materials utilized for connections to equipment and structure. Analysis must detail anchoring methods, bolt diameter, embedment and/or welded length. All seismic restraint devices shall be designed to accept, without

failure, the code required forces acting through the equipment center of gravity. Overturning moments may exceed forces at ground level.

4. Submit certification letter stating that the special inspector has received the factory training necessary to perform the field inspection specified in Part 3 of this specification.

H. Welding certificates.

1.5 QUALITY ASSURANCE

- A. Professional Engineer Qualifications (Analysis): The professional engineer shall be licensed to practice in the jurisdiction where the project is located and shall be experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for building structural and seismic requirements.
- B. Professional Engineer Qualifications (Design): The professional engineer shall be legally qualified to practice in the jurisdiction where the Project is located and shall be experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of vibration isolation bases and seismic restraints that are similar to those indicated for this Project in material, design, and extent.
- C. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
- D. Seismic Restraint Manual: A seismic restraint manual shall be prepared that contains the basis of the design for the seismic support systems, product data, shop drawings and layout drawings. A copy of the seismic restraint manual shall be kept on the jobsite for the duration of the project.
- E. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- F. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval OPA number from OSHPD, preapproval by ICC-ES, or preapproval by another agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.
- G. Comply with NFPA 70.

1.6 SPECIAL INSPECTION

- A. Requirements specified herein for special inspection of important aspects of the seismic design are in addition to other requirements specified in other sections of this specification.

1.7 HVAC EQUIPMENT

- A. HVAC equipment to be protected shall include the following items to the extent required on the drawings or in other sections of these specifications:
 1. Mechanical Equipment including but not limited to:
 - a. Boilers
 - b. Expansion Tanks
 - c. Heat Rejection Equipment
 - d. Refrigerant Compressors

- e. Indoor Air Handling Equipment
 - f. Rooftop Air Handling Equipment
 - g. Packaged Rooftop Units
 - h. HVAC Piping and Equipment Storage Racks
 - i. Heat Exchangers
 - j. Water Chillers
 - k. Cooling Towers, Fluid Coolers, Condensing Equipment
 - l. Control Panels
 - m. Pumps with Motors
- 2. HVAC (hydronic) Piping Systems
 - 3. HVAC Ductwork Systems

1.8 ELECTRICAL EQUIPMENT

- A. Electrical equipment to be protected shall include the following items to the extent required on the drawings or in other sections of these specifications:
 - 1. Major Electrical Distribution Equipment including but not limited to
 - a. Panelboards
 - b. Generators
 - c. Switchgear
 - d. Motor Control Centers
 - e. Transformers
 - f. Freestanding Disconnect
 - g. Control equipment (time-clocks, contactor enclosures, etc.)
 - 2. Electrical Conduit and Raceways
 - 3. Electrical Bussways

1.9 PLUMBING EQUIPMENT

- A. Plumbing equipment to be protected shall include the following items to the extent required on the drawings or in other sections of these specifications:
 - 1. Plumbing Equipment including but not limited to
 - a. Water Heaters
 - b. Heat Exchangers
 - c. Water Softeners
 - d. Expansion Tanks
 - e. Air Compressors
 - f. Vacuum Pumps
 - g. Pumps with Motors
 - 2. Fuel Gas piping
 - 3. Fuel Oil Piping
 - 4. Medical Gas Piping

1.10 RELATED WORK

- A. Housekeeping Pads
 - 1. The restraint vendor shall prepare housekeeping pad reinforcement and monolithic pad attachment to the structure details and design..
 - 2. Housekeeping pads shall be coordinated with restraint vendor and sized to provide a minimum edge distance of ten (10) bolt diameters all around the outermost anchor bolt to allow development of full drill-in wedge anchor ratings. If cast-in anchors are to be used, the housekeeping pads shall be sized to accommodate the ACI requirements for bolt coverage and embedment.
- B. Supplementary Support Steel

1. Contractor shall supply supplementary support steel for all equipment, piping, ductwork, etc., as required or specified.

1.11 ATTACHMENTS

- A. Contractor shall supply restraint attachment plates cast into housekeeping pads, concrete inserts, double sided beam clamps, etc. in accordance with the requirements of the seismic vendor's calculations.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Seismic Restraints: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following or approved equals:
 1. Amber/Booth Company, Inc.
 2. B-Line / Tolco.
 3. International Seismic Application Technology (ISAT).
 4. Kinetics Noise Control, Inc.
 5. Loos & Company, Inc.
 6. Mason Industries, Inc.
 7. Uni-Strut.
 8. Vibro-Acoustics.
- B. Flexible Couplings: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following or approved equals:
 1. Barco Div.
 2. Flexonics, Inc.
 3. Hispan.
 4. International Seismic Application Technology (ISAT).
 5. Mason Industries, Inc.
 6. Resistoflex.

2.2 VIBRATION ISOLATORS

- A. Isolator Pads: Oil and water resistant and factory cut to sizes that match requirements of the equipment supported.
 1. Rubber Isolator Pads: Elastomer (neoprene or silicone) arranged in single or multiple layers and molded with a nonslip pattern and steel baseplates of sufficient stiffness to provide uniform loading over the pad area.
 2. Fiberglass or cork isolator pads: molded cork or glass fiber not less than 1 inch thick and pre-compressed through 10 compression cycles at 3 times the rated load.
 3. Load range: from 10 to 50 psig and a deflection not less than 0.08 inch per 1 inch of thickness. Do not exceed a loading of 50 psig.
- B. Rubber Isolator Mounts: Double-deflection type, with molded, oil-resistant rubber or neoprene isolator elements, with encapsulated top- and baseplates. Factory-drilled and tapped top plate for bolted equipment mounting. Factory-drilled baseplate for bolted connection to structure. Color-code to indicate capacity range.
- C. Spring Isolators: Freestanding, laterally stable, open-spring-type isolators.
 1. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 2. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 3. Lateral Stiffness: More than 1.0 times the rated vertical stiffness.

4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 5. Baseplates: Factory drilled for bolting to structure and bonded to a 1/4-inch thick, rubber isolator pad attached to the baseplate underside. Size baseplates to limit floor loading to the structural design criteria. Contact the Engineer if design criteria is not shown on the drawings.
 6. Top Plates: Provide threaded studs for fastening and leveling equipment.
 7. Finishes: Manufacturer's standard corrosive-resistant finish.
- D. Restrained Spring Isolators: Vertically restrained, freestanding, laterally stable, steel open-spring-type isolators.
1. Housing: Welded steel with resilient vertical limit stops to prevent spring extension due to wind loads or when weight is removed. Factory-drilled baseplate for bolting to structure and bonded to a 1/4-inch thick, rubber isolator pad attached to the baseplate underside. Provide adjustable equipment mounting and leveling bolt.
 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 4. Lateral Stiffness: More than 0.8 times the rated vertical stiffness.
 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 6. Finishes: Baked enamel for metal components on isolators for interior use. Hot-dip galvanized for metal components on isolators for exterior use.
- E. Rubber Hangers: Double-deflection type, with molded, oil-resistant rubber or neoprene isolator elements bonded to formed-steel housings with threaded connections for hanger rods. Color-code to indicate capacity range.
- F. Spring Hangers: Combination spring and elastomeric hanger with coil spring and elastomeric insert in compression.
1. Frame: Formed steel, fabricated for connection to threaded rods and to allow for 30 degrees of angular hanger rod misalignment without binding or reducing isolation efficiency.
 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 4. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Install elastomeric grommet at bottom connection for isolation between anchor bolt and base plate or housing.
 5. Finishes: Baked enamel for metal components. Color-code to indicate capacity range.

2.3 SEISMIC CONTROLS

- A. Thrust Restraints: Combination spring and elastomeric restraints with coil spring and elastomeric insert in compression. Factory set for thrust.
1. Frame: Formed steel, fabricated for connection to threaded rods and to allow for 30 degrees of angular hanger rod misalignment without binding or reducing isolation efficiency.
 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 4. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
 5. Finishes: Baked enamel for metal components. Color-code to indicate capacity range.
- B. Manufactured Seismic Snubbers: All-directional snubbers.
1. Construction: Interlocking steel members restrained by a 3/4-inch- thick, replaceable, shock-absorbing neoprene insert. Maintain 1/8-inch clearance in all directions between rigid and resilient surfaces.

- C. Fabricated Seismic Snubbers: Welded structural-steel shapes designed and fabricated to restrain equipment or vibration isolation bases from excessive movement during a seismic event. Design to resist gravity forces identified by authorities having jurisdiction.
 - 1. Construction: Welded steel shapes conforming to ASTM A 36.
 - 2. Resilient Components: 3/4-inch thick, replaceable, shock-absorbing neoprene insert.

2.4 VIBRATION ISOLATION BASES

- A. Fabricated Steel Bases: Structural-steel bases and rails designed and fabricated by the isolation equipment manufacturer. Include equipment static loadings, power transmission, component misalignment, and cantilever loadings.
 - 1. Fabricate bases to shapes required, with welded structural-steel shapes, plates, and bars conforming to ASTM A 36. Include support brackets to anchor base to isolation units. Include prelocated equipment anchor bolts and auxiliary motor slide bases or rails.
 - 2. Design and fabricate bases to result in the lowest possible mounting height with not less than 1-inch clearance above the floor.
 - 3. Concrete-Filled Inertia Bases: Weld reinforcing bars to the structural frame. Pour concrete into base with relocated equipment anchor bolts.
 - 4. Weld steel angles on frame for outrigger isolation mountings, and provide for anchor bolts and equipment support.
 - 5. Configure inertia bases to accommodate equipment supported.
 - 6. Pump Bases: Size to support pump and piping elbows.
 - 7. Factory Finish: Manufacturer's standard corrosive-resistant finish.

2.5 VIBRATION ISOLATION ROOF CURBS

- A. Description: Factory-assembled, fully enclosed, insulated, air- and watertight curb designed to resiliently support roof-mounted equipment and to withstand 125-mph wind impinging laterally against the side of the equipment. Design restraints to meet seismic requirements of authorities having jurisdiction.
- B. Components: Upper support frame; lower support assembly; freestanding, unhooused, laterally stable steel springs; vertical and horizontal restraints.
 - 1. Lower Support Assembly: Provide a means of attachment to the building structure and include a wood nailer strip for attachment of roof material and 2 inches of rigid insulation on the inside of the assembly.
 - 2. Spring Isolators: As indicated or scheduled. Include adjustment bolt to permit leveling of equipment after installation. Attach to lower assembly with a rubber isolation pad. Locate spring isolators so they are accessible for adjustment at any time during the life of the installation without interfering with the integrity of the roof.
 - 3. Water Seal: Elastomeric seal conforming to UL Class A roofing materials, attached to the upper support frame, extending down past the wood nailer of the lower support assembly, and counterflashed over the roof materials.

2.6 MATERIALS

- A. Bolts and Nuts:
 - 1. Squarehead bolts and heavy hexagon nuts, ANSI B18.2.1 and B18.2.2, and ASTM A307 or A 576.
 - 2. Bolts, underground, ASTM A 325.
- B. Sway Brace: Except for pipes, material shall be structural steel conforming to ASTM A 36. Steel pipes shall conform to ASTM A 501.
- C. Flexible Couplings: Flexible couplings shall have same pressure ratings as adjoining pipe. Where required by these specifications, flexible couplings shall be one of the following:

1. Flexible ball joints conforming to the following requirements may be employed on aboveground piping. Joints shall have cast or wrought steel casing and ball parts capable of 360-degree rotation plus not less than 15-degree angular movement. Joints shall be certified to be suitable for the service intended by the manufacturer, based on not less than 2 years' satisfactory operation in a similar application.
2. Flexible metal hose type joints may be used for aboveground or underground piping, up to 8" pipe diameter. Where permitted in other sections of these specifications, joints utilizing split-half couplings with grooved or shouldered pipe ends may be used.

D. Resilient Vibration Isolation Devices:

1. Selection of anchor bolts for vibration isolation devices and/or snubbers to equipment base and foundations shall follow the same procedure as in paragraph "Anchor Bolts".
2. Multidirectional Seismic Snubbers: Multidirectional seismic snubbers employing elastomeric pads shall be installed on all floor or slab-mounted equipment. Snubbers shall provide 0.25 inches vertical and horizontal clearances. Vertical forces shall be resisted by the snubber medium. Provide additional structural steel supports/frame necessary for equipment to insure proper restraint.
3. Seismically Restrained Vibration Isolators: As an option to multidirectional seismic snubbers, a unitized adjustable open spring isolator and a welded steel housing designed to resist seismic forces in all directions may be utilized. Restraint surfaces which engage under seismic motion shall be cushioned with a resilient elastomer, neoprene or equal, to protect equipment.
4. Restraints shall allow a maximum of 1/4" movement before engaging and shall not interfere in normal operation. Housing shall allow for visual inspection of the spring. The entire assembly shall have a certified minimum rating of 1g. in all directions. Submit test data from independent testing lab.
5. Isolator shall be stable spring with a minimum K_y/K_x of 1.0 and the spring shall be isolated from the housing by an internal elastomeric pad on its base for sound absorption. Spring shall have a combination leveling bolt and equipment fastening device. Nuts and bolts shall be zone-electroplated to prevent corrosion. Adjusting bolt and equipment attachment shall have a minimum rating of 1g. Bolting equipment to isolator with bolts smaller than main adjusting bolt will not be allowed.
6. Baseplate shall have adequate means for bolting to the structure. If elastomeric pad for sound absorption is on baseplate of housing, anchor bolts shall be isolated with elastomeric grommets.

2.7 CABLE RESTRAINT

- A. Restraint assembly for suspended equipment, piping and ductwork consisting of galvanized steel aircraft cable attached to galvanized steel thimbles or steel assemblies with two clamping bolts. Thimbles or assemblies shall be specifically designed for cable service, shall be able to swivel to final installation angle and shall be securely fastened to the equipment or equipment base and the building structure. Cables shall be sized for the force required per code with a minimum safety factor of 2.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General

1. Install and anchor seismic-control products according to manufacturer's written instructions and authorities having jurisdiction.
2. Anchor interior mounts, isolators, hangers, and snubbers to vibration isolation bases. Bolt isolator baseplates to structural floors as required by authorities having jurisdiction.
3. Anchor exterior mounts, isolators, hangers, and snubbers to vibration isolation bases. Bolt isolator baseplates to structural supports as required by authorities having jurisdiction.
4. Fill concrete inertia bases, after installing base frame, with 3000-psi concrete, and trowel to a smooth, hard finish.

5. Install pipe connectors at connections for equipment supported on vibration isolators.
6. Install cables to prevent excessive seismic motion and so arranged that they do not engage during normal operation.

B. Sway Braces for Piping, Conduit and Ducts

1. Sway braces shall be installed on piping, conduit and HVAC ducts to preclude damage during seismic activity. Provisions of this paragraph apply to all piping within a 5-foot line around outside of building unless buried in the ground. Piping grouped for support on trapeze-type hangers shall be braced at the same intervals as determined by the smallest diameter pipe of the group. No trapeze-type hanger shall be secured with less than two 1/2 inch bolts. Bracing rigidly attached to pipe flanges, or similar, shall not be used where it would interfere with thermal expansion of piping.
2. Sway Braces for Piping and Conduit:
 - a. Horizontal Runs: Provide transverse and longitudinal sway bracing at intervals as required for the pipe size and seismic zone.
 - b. Vertical Runs: Vertical runs of piping 1-1/2" or greater diameter shall be braced at not more than 10-foot vertical intervals. For piping smaller than 1-1/2" diameter, bracing shall be provided at no more than 4-foot spacing.
 - c. Anchor Rods, Angles, and Bars: Anchor rods, angles, and bars shall be bolted to either pipe clamps or pipe flanges at one end and cast-in place concrete or masonry insert of clip angles bolted to the steel structure on the other end. Rods shall be solid metal or pipe as specified below. Anchor rods, angles, and bars shall not exceed lengths given in Table III.
 - d. Clamps: Clamps on uninsulated pipes shall be applied directly to pipe. Insulated piping shall have clamps applied over insulation vapor barrier with high-density inserts and metal protection shields under each clamp.
 - e. Bolts: Bolts used for attachment of anchors to pipe and structure shall be not less than 1/2 inch diameter.
3. Sway Braces for HVAC Ducts:
 - a. Transverse Sway Bracing: Transverse sway bracing shall be provided at each horizontal turn of 45 degrees or more, at the end of each duct run, and otherwise at intervals as required for duct size and seismic zone. Walls which ducts penetrate may be considered transverse braces.
 - b. Longitudinal Sway Bracing: Longitudinal sway bracing shall be provided at intervals as required for duct size and seismic zone. Transverse bracing for one duct section may also act as longitudinal bracing for a duct section connected perpendicular to it, if the bracing is installed within 4 feet of the intersection, and it is sized for the larger duct.

C. Piping and Conduit Penetration Requirements

1. All piping from 1 to 3-1/2 inches diameter shall be installed with 1" clearance on all sides and at every floor, and masonry or concrete wall penetration. A 2" clearance is required for pipe sizes larger than 3-1/2".
2. Insulated and uninsulated pipes and conduit passing through walls and partitions (except smoke and fire walls and partitions) shall be run through not less than No. 12 gauge steel pipe sleeves finishing flush with the finished wall surfaces. Where covered pipes pass through the walls or partitions, same shall be centered in steel pipe sleeves. All sleeves or thimbles shall be independent of the pipes they enclose and centered in sleeves to insure free movement of the pipes without injury to pipe insulation, wall or other finish. Caulk around all pipes and pipe sleeves passing through walls or ceilings with untarred jute and make airtight and soundproof.
3. Insulated and uninsulated pipes and conduit passing through fire, or fire and smoke walls and partitions shall be run through rated wall sleeve assemblies sealed with Hilti CS-240 firestop sealant or approved equal UL approved sealant meeting the approval of the authority having jurisdiction and as indicated on details on drawings.
4. Pipe sleeves through outside walls shall be Schedule 40 steel pipe sleeves with 1-1/2" collar welded to center of sleeve and cast in wall. Caulk between sleeves and pipes and make watertight.
5. Materials and equipment shall conform to the respective specifications and other requirements specified below:

D. Spreaders

1. Provide spreaders between racked or adjacent piping runs to prevent contact during seismic activity whenever pipe or insulated pipe surfaces are less than 4 inches apart or four times the maximum displacement due to seismic force. Spreaders to be applied at same interval as sway braces. Spreaders shall be applied to surface of bare or insulated hot pipe and over insulation utilizing high-density inserts and pipe protection shields where vapor-barrier-type insulation is employed.

E. Flexible Couplings or Joints

1. Building Piping: Flexible couplings or joints in building piping shall be provided in the following locations on pipe risers:
 - a. Within 24 inches of the top and bottom of all risers. This requirement may be deleted in risers less than 3 ft. in length, and in risers 3 to 7 ft. in length, one flexible coupling is adequate.
2. Underground Piping: All underground piping and 4-inch or larger conduit, except heat distribution system, shall have flexible couplings installed adjacent to building. Additional flexible couplings shall be provided as follows:
 - a. On each side of the joints of demarcation between soils having widely differing degrees of consolidation.
 - b. At all points that can be considered to act as anchors.
 - c. On every branch of a tee and each side of an elbow.

F. Anchor Bolts

1. All floor or pad mounted equipment required by any Section of these specifications shall use cast-in-place or female wedge type anchor bolts. Anchor bolts must conform to ASTM A 307. Female wedge anchors shall have an evaluation report number from ICBA Evaluation Service. Anchor bolts shall have an embedded straight length equal to at least twelve times nominal diameter of the bolt. If the size and number of the anchor bolts are not shown on the drawings, then anchor bolts shall conform to the applicable codes and standards for the various equipment weights or the manufacturer's installation recommendations, whichever is the most stringent.

G. Equipment Sway Bracing

1. Provide for all items supported from overhead floor or roof structures with the following requirements:
 - a. Braces shall consist of angles, rods, bars, or pipes secured at both ends with not less than 1/2 inch bolts. Braces shall conform to all applicable codes and standards. Bracing shall be provided in two planes of directions, 90 degrees apart, for each item of equipment. Sufficient braces shall be provided for equipment to resist a horizontal force equal to 50 percent of the weight of equipment without exceeding safe working stress of bracing components. Details of all equipment bracing shall be submitted for approval.
 - b. In lieu of bracing with vertical supports, these items may be supported with hangers inclined at 45 degrees directed up and radially away from equipment and oriented symmetrically in 90 degree intervals on the horizontal plane, bisecting the angles of each corner of the equipment, provided that supporting members are properly sized to support operating weight of equipment when hangers are included at a 45 degree angle.

H. Ceiling mounted air terminals or services installed in lay-in ceilings

1. Positively attach to the ceiling suspension main runners or to cross runners with the same carrying capacity as the main runners.
2. Terminals or services weighing not more than 56 pounds, in addition to the above, shall have two No. 12 gauge hangers connected from the terminal or service or to the structure above. These wires may be slack.
3. Terminals or services weighing more than 56 pounds shall be supported directly from the structure above by approved hangers.

I. Miscellaneous Equipment

1. The following specific items of equipment to be furnished under this contract shall be constructed and assembled so as to be capable of withstanding the horizontal equivalent static force of 0.11 times the operating weight of the equipment, at vertical center of gravity of the equipment without causing permanent deformation, dislocations, separation of components, or other damage, which would render the equipment inoperative for significant periods of time following an earthquake.
 - a. Air Handling Units
 - b. Free Standing Electric Motors

J. Floor Mounted Equipment Support

1. Vibration Isolation Bases: Mount equipment on structural-steel bases or concrete inertia bases.
2. Snubbers: Install the required number of seismic snubbers on each spring-mounted piece of equipment. Locate snubbers as close as possible to the vibration isolators and bolt to supporting structure.

3.2 ADJUSTING AND CLEANING

- A. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operations.
- B. Adjust thrust restraints for a maximum of 1/4 inch of movement at start and stop.

3.3 SPECIAL INSPECTION

- A. Special Inspector: Employ a factory trained representative during construction to observe the work specified and to ensure that it conforms to the Contract documents. Factory trained representative shall be a qualified person who shall demonstrate competence and specialized experience, to the satisfaction of the engineer of record, for inspection of the seismic protection of mechanical and electrical equipment.
- B. Inspection Requirements: The factory trained representative shall periodically inspect the following systems to verify conformance with the contract documents and the local code:
 1. Installation of piping systems intended to carry flammable, combustible or highly toxic contents and their associated mechanical units in structures assigned to Seismic Design Category C, D, E or F.
 2. Installation of HVAC ductwork that will contain hazardous materials in structures assigned to Seismic Design Category C, D, E or F.
 3. Installation of vibration isolation systems in structures assigned to Seismic Design Category C, D, E or F where a nominal clearance of 0.25 inches or less between the equipment support frame and restraint is required.
- C. Inspection Reports: Ensure that the inspection report is furnished from the special inspector to the engineer of record. At the end of the work, ensure that a final, signed report is submitted by the special inspector, stating whether the work requiring special inspection was, to the best of the special inspector's knowledge, in conformance with the Contract documents.
- D. Discrepancies: Discrepancies shall be brought to the immediate attention of the Contractor for correction, and then, if uncorrected, to the architect and engineer of record.

END OF DIVISION 21 TABLE OF CONTENTS

PAGE INTENTIONALLY LEFT BLANK

SECTION 13900 (210010) - GENERAL FIRE SUPPRESSION REQUIREMENTS

PART 1 - GENERAL REQUIREMENTS

1.1 DESCRIPTION OF WORK

- A. This Division requires the furnishing and installing of complete functioning systems, and each element thereof, as specified or indicated on the Drawings and Specifications or reasonably inferred; including every article, device or accessory (whether or not specifically called for by item) reasonably necessary to facilitate each system's functioning as indicated by the design and the equipment specified. Elements of the work include materials, labor, supervision, supplies, equipment, transportation, and utilities.
- B. Division 21 of the Specifications and Drawings numbered with prefixes <FS> generally describe these systems, but the scope of the Fire Suppression work includes all such work indicated in the Contract Documents: Instructions to Bidders; Proposal Form; General Conditions; Supplementary General Conditions; Architectural, Structural, Fire Suppression, Mechanical, Plumbing, Fire Alarm and Electrical Drawings and Specifications; and Addenda.
- C. The Drawings have been prepared diagrammatically intended to convey the scope of work, indicating the intended general location and arrangement of the equipment, piping, etc. without showing all the exact details as to elevations, offsets, pipe routing, and other installation requirements. The Contractor shall use the Drawings as a guide when laying out the work and shall verify that materials and equipment will fit into the designated spaces, and which, when installed per manufacturers requirements, will ensure a complete, coordinated, satisfactory and properly operating system.
- D. This system has been designed by a registered Fire Protection Engineer, licensed in the State of California. Design documents have been submitted to the City of Stockton Fire Marshal's Office and the Owner.
- E. Related Sections: The following sections contain requirements that relate to this Section:
1. Division 7 Section "Penetration Firestopping" for material and methods for firestopping systems.
 2. Division 21 Section 210500 "Common Work Results for Fire Suppression," for materials and methods for wall and floor penetrations.
 3. Division 21 Section 210515 "Basic Fire Suppression Piping Material and Methods," for general piping and fitting materials and methods.
 4. Division 21 Section 210533 "Heat Tracing for Fire-Suppression Piping" for heat tracing requirements.
 5. Division 21 Section 210548 "Seismic Controls for Fire Protection" for seismic bracing requirements.
 6. Division 21 Section 210553 "Identification for Fire Suppression Piping and Equipment" for labeling and identification of installed fire suppression equipment.
 7. Division 21 Section 211100 "Fire Suppression Water Service Piping" for fire suppression piping starting 5 feet outside the building to within the building.
 8. Division 21 Section 213116 "Diesel-Drive Fire Pumps" "
 9. Division 21 Section 211313 "Water-based Fire Suppression Systems" for fire suppression sprinkler systems inside the building.
 10. Division 21 Section 213113 "Electric-Drive Fire Pumps" for fire pumps.
 11. Division 21 Section 213220 "Water Storage Tank"

1.2 QUALITY ASSURANCE

- A. All work under this division shall be executed in a thorough professional manner by competent and experienced workmen licensed to perform the Work specified.

- B. All work shall be installed in strict conformance with manufacturer's requirements and recommendations. Equipment and materials shall be installed in a neat and professional manner and shall be aligned, leveled, and adjusted for satisfactory operation.
- C. Material and equipment shall be new, shall be of the best quality and design, shall be current model of the manufacturer, shall be free from defects and imperfections and shall have markings or a nameplate identifying the manufacturer and providing sufficient reference to establish quality, size and capacity. Material and equipment of the same type shall be made by the same manufacturer whenever practicable.
- D. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. Threaded joints shall conform to ASME B1.20.1, Pipe Threads, General Purpose and the Pipe Fitters Handbook.
- G. Regulatory Requirements: Comply with all standards listed in Section 1.2 and all applicable local requirements.
- H. All electrical equipment provided and the wiring and installation of electrical equipment shall be in accordance with the requirements of this Section, Division 26 and Division 28.
- I. Through and Membrane Penetration Firestopping Systems Installer Qualifications: A firm experienced in installing penetration firestopping systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its penetration firestopping system products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.

1.3 CODES, REFERENCES AND STANDARDS

- A. Execute Work in accordance with the National Fire Protection Association Standards and all Local, State, and National codes, ordinances and regulations in force governing the particular class of Work involved. Obtain timely inspections by the constituted authorities, and upon final completion of the Work obtain and deliver to the Owner executed final certificates of acceptance from the Authority Having Jurisdiction.
- B. Any conflict between these Specifications and accompanying Drawings and the applicable Local, State and Federal codes, ordinances and regulations shall be reported to the Architect in sufficient time, prior to the submission of Bids, to prepare the Supplementary Drawings and Specification Addenda required to resolve the conflict.
- C. The governing codes are minimum requirements. Where these Drawings and Specifications exceed the code requirements, these Drawings and Specification shall prevail.
- D. All material, manufacturing methods, handling, dimensions, method or installation and test procedure shall conform to but not be limited to the following industry standards and codes.
 1. NFPA (National Fire Protection Association) 13, "Installation of Sprinkler Systems", 2022 Edition.
 2. NFPA 14, "Installation of Standpipes, Private Hydrants and Hose Systems", 2019 Edition.
 3. NFPA 20, "Installation of Stationary Pumps for Fire Protection", 2022 Edition.
 4. NFPA 24, "Private Fire Service Mains and their Appurtenances", 2022 Edition.
 5. NFPA 25, "Inspection, Testing and Maintenance of Water-Based Fire Protection Systems", 2013 Edition With California Amendments.

6. NFPA 22, “Water Tanks for Private Fire Protection”, 2018 Edition
7. Underwriters Laboratories, “Fire Protection Equipment Directory”, Latest Edition.
8. Factory Mutual Systems, “Approval Guide”, Latest Edition.
9. California Fire Code (CFC) 2022 Edition with local amendments.
10. International Building Code (IBC), 2018 Edition with local amendments.
11. International Fire Code (IFC), 2018 Edition with local amendments.

- E. Contractor shall comply with rules and regulations of public utilities and municipal departments affected by connections of services.
- F. All Fire Suppression work shall be performed in compliance with applicable safety regulations, including OSHA regulations. Safety lights, guards, shoring and warning signs required for the performance of the Fire Suppression work shall be provided by the Contractor.

1.4 DEFINITIONS

A. General:

1. **Furnish:** The term “furnish” is used to mean “supply and deliver to the project site, ready for unloading, unpacking, assembly, installation and similar operations.”
2. **Install:** The term “install” is used to describe operations at the project site including the actual “unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations.”
3. **Provide:** The term “provide” means “to furnish and install, complete and ready for the intended use.” When 'furnish', 'install', 'perform', or 'provide' is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of Contractor, "provide" is implied.
4. **Furnished by Owner or Furnished by Others:** The item will be furnished by the Owner or Others. It is to be installed and connected under the requirements of this Division, complete and ready for operation, including items incidental to the Work, including services necessary for proper installation and operation. The installation shall be included under the guarantee required by this Division.
5. **Engineer:** Where referenced in this Division, “Engineer” is the Engineer of Record and the Design Professional for the Work under this Division, and is a Consultant to, and an authorized representative of, the Architect, as defined in the General and/or Supplementary Conditions. When used in this Division, it means increased involvement by, and obligations to, the Engineer, in addition to involvement by, and obligations to, the “Architect”.
6. **AHJ:** The local code and/or inspection agency (Authority) Having Jurisdiction over the Work.
7. **NRTL:** Nationally Recognized Testing Laboratory, as defined and listed by OSHA in 29 CFR 1910.7 (e.g., UL, ETL, CSA, etc.), and acceptable to the Authority having Jurisdiction (AHJ) over this project. Nationally Recognized Testing Laboratories and standards listed are used only to represent the characteristics required and are not intended to restrict the use of other listed Manufacturers and models that meet the specified criteria.
8. **Substitution:** Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor. Substitutions include Value Engineering proposals.
 - a. **Substitutions for Cause:** Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
 - b. **Substitutions for Convenience:** Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.
9. **Value Engineering:** A systematic method to improve the “value” of goods and services by using an examination of function. Value, as defined, is the ratio of function to cost. Value can therefore be increased by either improving the function or reducing the cost. The goal of VE is to achieve the desired function at the lowest overall cost consistent with required performance.

- B. The terms "approved equal", "equivalent", or "equal" are used synonymously and shall mean "accepted by or acceptable to the Engineer as equivalent to the item or manufacturer specified". The term "approved" shall mean labeled, listed, or both, by an NRTL, and acceptable to the AHJ over this project.
- C. Pipe sizes used in this Specification are Nominal Pipe Size (NPS).
- D. Other definitions for fire protection systems are listed in NFPA Standards 13, 14, 20 and 24.
- E. Working Plans, also referred to as Fire Protection Drawings as used in this Section means those documents (including drawings and calculations) prepared pursuant to the requirements contained in NFPA 13 for obtaining approval of the Authority Having Jurisdiction.
- F. The following definitions apply to excavation operations:
 - 1. Additional Excavation: Where excavation has reached required subgrade elevations, if unsuitable bearing materials are encountered, continue excavation until suitable bearing materials are reached. The Contract Sum may be adjusted by an appropriate Contract Modification.
 - 2. Sub-base: as used in this Section refers to the compacted soil layer used in pavement systems between the subgrade and the pavement base course material.
 - 3. Subgrade: as used in this Section refers to the compacted soil immediately below the slab or pavement system.
 - 4. Unauthorized excavation consists of removal of materials beyond indicated subgrade elevations or dimensions without specific direction from the Architect.

1.5 COORDINATION

- A. The Contractor shall visit the site and ascertain the conditions to be encountered while installing the Work under this Division, verify all dimensions and locations before purchasing equipment or commencing work, and make due provision for same in the bid. Failure to comply with this requirement shall not be considered justification for omission, alteration, incorrect or faulty installation of Work under this Division or for additional compensation for Work covered by this Division.
- B. The Contractor shall refer to Drawings of the other disciplines and to relevant equipment drawings and shop drawings to determine the extent of clear spaces. The Contractor shall make offsets required to clear equipment, beams and other structural members; and to facilitate concealing piping in the manner anticipated in the design.
- C. The Contractor shall maintain a foreman on the jobsite at all times to coordinate his work with other contractors and subcontractors so that various components of the Fire Suppression systems will be installed at the proper time, will fit the available space, and will allow proper service access to the equipment. Carry on the work in such a manner that the work of the other contractors and trades will not be handicapped, hindered, or delayed at any time.
- D. Work of this Division shall progress according to the "Construction Schedule" as established by the Prime Contractor and his subcontractors and as approved by the Architect/Engineer. Cooperate in establishing these schedules and perform the Work under this Division, in a timely manner in conformance with the construction schedule so as to ensure successful achievement of schedule dates.
- E. The contractor shall coordinate work in this section with all related trades. Work and/or equipment provided in other sections and related to the fire protection system shall include, but not be limited to:
 - 1. Sprinkler monitoring equipment (water flow switches, valve tampers, etc) shall be provided by the fire sprinkler installer, but wired and connected by Division 28.
- F. System shall be complete and operational with power and control wiring provided to meet the design intent shown on the drawings and described within the specification sections.

1.6 MEASUREMENTS AND LAYOUTS

- A. The drawings are schematic in nature, but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the building. Figured dimensions shall be taken in preference to scale dimensions. Determine exact locations by job measurements, by checking the requirements of other trades, and by reviewing the Contract Documents. The Contractor will be held responsible for errors which could have been avoided by proper checking and inspection.

1.7 COORDINATION DRAWINGS

- A. Coordination Drawings, General: Prepare coordination drawings according to the requirements of individual Sections. Additionally, prepare coordination drawings as required scope of installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one trade.
 1. Information shall be project specific and drawn accurately to a scale large enough to resolve conflicts. Do not base coordination drawings on standard dimensional data.
 2. Prepare floorplans, sections, elevations, and details as needed to adequately describe relationship of various systems and components.
 3. Clearly indicate functional and spatial relationships of components of all systems specified in the Contract Documents, including but not limited to: architectural, structural, civil, mechanical, electrical, fire protection, and specialty systems.
 4. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
 5. Show location and size of access doors required for access to concealed equipment, fittings, controls, terminations, and cabling.
 6. Indicate required installation sequence to minimize conflicts between entities.
 7. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Contract Administrator indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.
 8. The details of the coordination are the responsibility of the Contractor and, where indicated on the Drawings, minor adjustments in raceway routing, device placement, device type, or equipment arrangement are not to be considered changes to the Contract.
- B. Equipment Room Coordination Drawings: In accordance with the submittal procedures outlined within these Specifications, provide dimensioned layouts of electrical equipment locations within electrical rooms/closets, mechanical rooms, generator rooms, and fire pump rooms with equipment drawn to scale and identified therein.
 1. Clearly identify all required working clearances and access provisions required for installation and maintenance.
 2. Equipment layouts should be arranged accounting for considerations for required door openings and the clearances required by the equipment manufacturer.
 3. Indicate path to allow for the future removal of each large piece of equipment (up to and including generators and unit sub-station transformers) without removal of non-related equipment or architectural elements.
 4. Include work provided by others routed through the equipment rooms.
- C. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:
 1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.
 2. BIM File Incorporation: Develop and incorporate coordination drawing files into Building Information Model established for Project.

- a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Contract Administrator.
3. Where Henderson Engineer's digital data files are provided to the Contractor for use in preparing coordination digital data files, Henderson Engineers makes no representations as to the accuracy or completeness of digital data files as they relate to the Drawings or Specifications.
4. Submit coordination drawings in accordance with the submittal procedures outlined within these Specifications.

1.8 SUBMITTALS

- A. Refer to Division 01 and General Conditions for submittal requirements, in addition to requirements specified herein.
- B. Submittals and shop drawings shall not contain the firm name, logo, seal, or signature of the Engineer. They shall not be copies of the work product of the Engineer. If the Contractor desires to use elements of such product, the license agreement for transfer of information obtained from the Engineer must be used.
- C. Assemble and submit for review manufacturer product literature for material and equipment to be furnished and/or installed under this Division. Literature shall include shop drawings, manufacturer product data, performance sheets, samples, and other submittals required by this Division. Provide the number of submittals required by Division 1; if hard-copy sets are provided, submit a minimum of seven (7) sets. General product catalog data not specifically noted to be part of the specified product will be rejected and returned without review.
- D. Separate submittals according to individual specification sections. Only resubmit those sections requested for resubmittal.
- E. Provide submittals in sufficient detail so as to demonstrate compliance with these Contract Documents and the design concept. Highlight, mark, list or indicate the materials, performance criteria and accessories that are being proposed. Illegible submittals will be rejected and returned without review.
- F. Refer to individual Sections for additional submittal requirements.
- G. Transmit submittals as early as required to support the project schedule. Allow two weeks for Engineer review time, plus to/from mailing time via the Architect, plus a duplication of this time for resubmittals, if required. Transmit submittals as soon as possible after Notice to Proceed and before Fire Suppression construction starts.
- H. Before transmitting submittals and material lists, verify that the equipment submitted is mutually compatible with and suitable for the intended use. Verify that the equipment will fit the available space and maintain manufacturer recommended service clearances. If the size of equipment furnished makes necessary any change in location, or configuration, submit a shop drawing showing the proposed layout.
- I. Submittals shall contain the following information:
 1. The project name.
 2. The applicable specification section and paragraph.
 3. Equipment identification acronym as used on the drawings.
 4. The submittal date.
 5. The Contractor's stamp, which shall certify that the stamped drawings have been checked by the Contractor, comply with the Drawings and Specifications, and have been coordinated with other trades.
 6. Submittals not so identified will be returned to the Contractor without action.

- J. Refer to Division 1 for acceptance of electronic submittals for this project. For electronic submittals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 1. Contractor shall notify the Architect and Engineer that the submittals have been posted. If electronic submittal procedures are not defined in Division 1, Contractor shall include the website, user name and password information needed to access the submittals. For submittals sent by e-mail, Contractor shall copy the Architect and Engineer's designated representatives. Contractor shall allow for the Engineer review time as specified above in the construction schedule. Contractor shall submit only the documents required to purchase the materials and/or equipment in the submittal.
- K. The checking and subsequent acceptance by the Engineer and/or Architect of submittals shall not relieve responsibility from the Contractor for (1) deviations from the Drawings and Specifications; (2) errors in dimensions, details, sizes of equipment, or quantities; (3) omissions of components or fittings; and (4) not coordinating items with actual building conditions and adjacent work. Contractor shall request and secure written acceptance from the Engineer and Architect prior to implementing any deviation.
- L. Provide shop drawings prepared in accordance with referenced standards identified as "Working Plans", including hydraulic calculations where applicable. Shop drawings shall be signed and sealed by a Professional Engineer registered in the state in which the project is located where required by local authorities having jurisdiction, or NICET Level III or IV certified technician. Submit copies of the certification for the designer with submittal. Shop drawings consisting of the following shall be furnished at a minimum. Refer to NFPA 13 for additional requirements.
1. Scaled site plan indicating underground piping with sizes and hydrants utilized for flow test in relation to the building.
 2. Layout drawings of complete fire sprinkler system indicating relationship to all other trades. This shall include all equipment, piping and a reflected ceiling plan indicating sprinkler locations.
 3. Complete details and sections as required to clearly define and clarify the design indicated.
 4. Shop drawings shall be to a standard scale and not less than 3/32" = 1'-0".
 5. Shop drawings shall be produced using computer-aided design. Hand drawn documents will not be reviewed or approved.
 6. Hydraulic calculations shall be based on a water flow test conducted at the site within twelve (12) months of the submittal of plans for approval. The contractor shall be responsible for obtaining the flow test if existing data is not available. Flow test information shall be documented on shop drawings with an accompanying site plan to scale. Contractor shall verify with AHJ any minimum safety factor requirements. Demand shall not be less than 10 percent below the supply at the demand point.
 - a. Hydrant testing shall be in accordance with NFPA 13 and 291 requirements.
 7. Available fire-hydrant flow test records indicate the following conditions:
 - a. Date: 09-01-2021
 - b. Performed by: Chad A. Lueder, PE.
 - c. Static Pressure at Residual Fire Hydrant: 48 psig
 - d. Measured Flow at Flow Fire Hydrant: 3669 gpm
 - e. Residual Pressure at Residual Fire Hydrant: 37 psig
- M. Contractor shall prepare installation drawings (working shop drawings) based upon this design. Requests for deviations from the approved design shall be submitted in writing to the Engineer of Record for approval. Shop drawings showing deviations from the design without prior approval will not be approved.
- N. Provide welders' qualification certificates.
- O. Provide Test Reports and Certificates including:
1. "Contractor's Material & Test Certificate for Aboveground Piping"
 2. "Contractor's Material & Test Certificate for Underground Piping" as described in NFPA
 - a. Underground piping test certificate shall be obtained prior to connection of the aboveground system.

- P. [BIM Incorporation: Develop and incorporate Shop Drawing files into BIM established Project]

1.9 ELECTRONIC DRAWING FILES

- A. In preparation of shop drawings or record drawings, Contractor may, at their option, obtain electronic drawing files in AutoCAD or DXF format from the Engineer for a shipping and handling fee of \$200 for a drawing set up to 12 sheets and \$15 per sheet for each additional sheet. Contact the Architect for Architect's written authorization. Contractor shall request and complete the Electronic File Release Agreement form from the Engineer. Send the form along with a check made payable to Henderson Engineers, Inc. Contractor shall indicate the desired shipping method and drawing format on the attached form. In addition to payment, Architect's written authorization and Engineer's release agreement form must be received before electronic drawing files will be sent.

1.10 SUBSTITUTIONS

- A. Refer to Division 1 and General Conditions for substitutions in addition to requirements specified herein.
- B. Materials, products, equipment, and systems described in the Bidding Documents establish a standard of required function, dimension, appearance and quality to be met by the proposed substitution.
- C. The base bid shall include only the products from manufacturers specifically named in the drawings and specifications.
- D. Request for Substitution:
1. Complete and send the Substitution Request Form attached at the end of this section for each material, product, equipment, or system that is proposed to be substituted.
 2. The burden of proof of the merit of the proposed substitution is upon the proposer.
 3. Unless stated otherwise in writing to the Engineer by the Contractor, Contractor warrants to the Engineer, Architect, and Owner the following:
 - a. Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.
 - b. Proposed substitution is consistent with the Contract Documents and will produce indicated results, including functional clearances, maintenance service, and sourcing of replacement parts.
 - c. Proposed substitution has received necessary approvals of authorities having jurisdiction.
 - d. Same warranty will be furnished for proposed substitution as for specified Work.
 - e. If accepted substitution fails to perform as required, Contractor shall replace substitute material or system with that originally specified and bear costs incurred thereby.
 - f. Coordination, installation and changes in the Work as necessary for accepted substitution will be complete in all respects.
- E. Substitution Consideration:
1. No substitutions will be considered unless the Substitution Request Form is completed and attached with the appropriate substitution documentation.
 2. No substitutions will be considered prior to receipt of Bids unless written request for approval to bid has been received by the Engineer at least ten (10) calendar days prior to the date for receipt of Bids.
 3. If the proposed substitution is approved prior to receipt of Bids, such approval will be stated in an Addendum. Bidders shall not rely upon approvals made in any other manner. Verbal approval will not be given.
 4. No substitutions will be considered after the Contract is awarded unless specifically provided in the Contract Documents.

1.11 OPERATION AND MAINTENANCE MANUALS

- A. Refer to Division 1 and General Conditions for Operation and Maintenance Manuals in addition to requirements specified herein.
- B. Submit manuals prior to requesting the final punch list and before all requests for Substantial Completion.
- C. Instruct the Owner's permanent personnel in the proper operation of, startup and shutdown procedures and maintenance of the equipment and components of the systems installed under this Division.
- D. Prior to Substantial Completion for the project, furnish to the Architect, for Engineer's review, and for Owner's use, four (4) copies of Operation and Maintenance Manuals in labeled, hard-back three-ring binders, with cover, binding label, tabbed dividers and plastic insert folders for Record Drawings. Include local contacts, complete with address and telephone number, for equipment, apparatus, and system components furnished and installed under this Division of the specifications.
- E. Include the following sections with the appropriate information for each section:
 - 1. Typewritten Index.
 - 2. Qualifications. Provide designer and installer qualification.
 - 3. Bill of Materials. Provide complete nomenclature, model number and vendor information for all parts.
 - 4. Operating Instructions. Complete instructions detailing operation and maintenance of all equipment installed.
 - 5. Product Data: Provide product cut-sheets for all equipment utilized and installed.
 - 6. Guarantee. Copy of all guarantees and warranties issued.
 - 7. Testing/Certification: Provide all completed testing and certification forms as required per NFPA 13 and 25.
 - 8. Contact list with minimum three service representative phone numbers.
- F. Refer to Division 1 for acceptance of electronic manuals for this project. For electronic manuals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 1. Contractor shall notify the Architect and Engineer that the manuals have been posted. If electronic manual procedures are not defined in Division 1, Contractor shall include the website, user name and password information needed to access the manuals. For manuals sent by e-mail, Contractor shall copy the Architect and Engineer's designated representatives.

1.12 SPARE PARTS

- A. Provide to the Owner the spare parts specified in the individual sections in Division 21 specifications.

1.13 RECORD DRAWINGS

- A. Refer to Division 01 and General Conditions for Record Drawings in addition to requirements specified herein.
- B. A set of work prints of the Contract Documents shall be kept on the jobsite during construction for the purpose of noting changes. During the course of construction, the Contractor shall indicate on these Documents changes made from the original Contract Documents. Particular attention shall be paid to those items which need to be located for servicing. Underground utilities shall be located by dimension from column lines.
- C. At the completion of the project, the Contractor shall obtain, at their expense, reproducible copies of the final drawings and incorporate changes noted on the jobsite work prints onto these drawings. These changes shall be done by a skilled drafter. Each sheet shall be marked "Record Drawing", along with the date. These drawings shall be delivered to the Architect/Engineer.

- D. The fire shop drawings and all information contained therein shall be utilized as the basis for the Record Drawings.

1.14 TRAINING

- A. Provide training as indicated in each specific section. Schedule training with the Owner at least 7 days in advance. Video tape the training sessions in a format as agreed to with the Owner. Provide three copies of each session to the Owner and obtain written receipt from the Owner.

1.15 PAINTING

- ~~A. Exposed ferrous surfaces, including pipe, pipe hangers, equipment stands and supports shall be painted by the Fire Suppression Contractor using materials and methods as specified under Division 9 of the Specifications; colors shall be as selected by the Architect.~~
- ~~B. Factory finishes, shop priming and special finishes are specified in the individual equipment specification sections.~~
- C. Where factory finishes are provided and no additional field painting is specified, marred or damaged surfaces shall be touched up or refinished so as to leave a smooth, uniform finish.

1.16 DELIVERY, STORAGE AND HANDLING

- A. Refer to Division 1 and General Conditions for Delivery, Storage and Handling in addition to requirements specified herein.
- B. Equipment and material shall be delivered to the job site in their original containers with labels intact, fully identified with manufacturer's name, model, model number, type, size, capacity and Underwriter's Laboratories, Inc. labels and other pertinent information necessary to identify the item.
- C. Deliver, receive, handle and store equipment and materials at the job site in the designated area and in such a manner as to prevent equipment and materials from damage and loss. Store equipment and materials delivered to the site on pallets and cover with waterproof, tear resistant tarp or plastic or as required to keep equipment and materials dry. Follow manufacturer's recommendations, and at all times, take every precaution to properly protect equipment and material from damage, to include the erection of temporary shelters to adequately protect equipment and material stored at the Site. Equipment and/or material which become rusted or damaged shall be replaced or restored by the Contractor to a condition acceptable to the Architect.
- D. The Contractor shall be responsible for the safe storage of his own tools, material and equipment.

1.17 GUARANTEES AND WARRANTIES

- A. Refer to Division 1 and General Conditions for Guarantees and Warranties in addition to requirements specified herein.
- B. Furnish service and maintenance of fire protection system for one year from date of substantial completion.
- C. Each system and element thereof shall be warranted against defects due to faulty workmanship, design or material for a period of 12 months from date of Substantial Completion, unless specific items are noted to carry a longer warranty in the Construction Documents or manufacturer's standard warranty. The Contractor shall remedy defects occurring within a period of one year from the date of Substantial Completion or as stated in the General Conditions.
- D. The following additional items shall be guaranteed:

1. Piping shall be free from obstructions, holes or breaks of any nature.
 2. Proper sloping of pipe to drain in each piping system per NFPA 13.
- E. The above guarantees shall include labor (including travel expenses), troubleshooting and material; and repairs or replacements shall be made without additional cost to the Owner.
- F. The remedial work shall be performed promptly, upon written notice from the Architect or Owner.
- G. At the time of Substantial Completion, deliver to the Owner warranties with terms extending beyond the one year guarantee period, each warranty instrument being addressed and stating the commencement date and term.

1.18 PROJECT CONDITIONS

- A. Conditions Affecting Work In Existing Buildings:
1. The Drawings describe the general nature of remodeling to the existing building. However, the Contractor shall visit the site prior to submitting their bid to determine the nature and extent of work involved.
 2. Work in the existing building shall be scheduled with the Owner.
 3. Certain demolition work must be performed prior to the remodeling. The Fire Suppression Contractor shall perform the demolition which involves Fire Suppression and Fire Suppression systems, equipment, piping, equipment supports or foundations and materials.
 4. Fire Suppression Contractor shall remove articles which are not required for the new work. Unless otherwise indicated, each item removed by the Fire Suppression Contractor during this demolition shall be removed by the Fire Suppression Contractor from the premises and disposed of in accordance with applicable federal, state and local regulations.
 5. Fire Suppression Contractor shall relocate and reconnect Fire Suppression equipment that must be relocated in order to accomplish the remodeling shown in the Drawings or indicated in the Specifications. Where Fire Suppression equipment or materials are removed, the Fire Suppression Contractor shall cap unused piping beyond the floor line or wall line to facilitate restoration of finish.
 6. General Contractor shall install finish material.
 7. Obtain permission from the Architect for channeling of floors or walls not specifically noted on the Drawings.
 8. Protect adjacent materials indicated to remain. Install and maintain dust and noise barriers to keep dirt, dust, and noise from being transmitted to adjacent areas. Remove protection and barriers after demolition operations are complete.
 9. Locate, identify, and protect Fire Suppression services passing through demolition area and serving other areas outside the demolition limits. Maintain services to areas outside demolition limits. When services must be interrupted, install temporary services for affected areas.
- B. Conditions Affecting Excavations: The following project conditions apply:
1. Maintain and protect existing building services which transit the area affected by selective demolition.
 2. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by excavation operations.
 3. Use of explosives is not permitted.
- C. Environmental Conditions: Apply joint sealers under temperature and humidity conditions within the limits permitted by the joint sealer manufacturer. Do not apply joint sealers to wet substrates.

PART 2 - PRODUCTS AND MATERIALS

2.1 GENERAL

- A. Electrical Contractors shall provide all motors, starters, disconnects, wire, conduit, etc. as specified in the Construction Documents. If, however, the Fire Suppression Contractor furnishes a piece of equipment requiring a different motor, starter, disconnect, wire size, etc. than what is shown and/or intended on the Construction Documents, the Fire Suppression Contractor shall coordinate the requirements with any other Contractor and shall be responsible for any additional cost incurred by any other Contractor that is associated with installing the different equipment and related accessories for proper working condition.
- B. Refer to Division 26, "Common Work Results for Electrical" for specification of motor connections.
- C. Refer to Division 26, "Enclosed Switches and Circuit Breakers" for specification of disconnect switches.
- D. Refer to Division 28, "Fire Detection and Alarm" for specification of sprinkler monitoring equipment connections.
- E. All fire protection equipment shall be UL listed and FM approved (FM Insureds only) for its intended use and in conformance with the applicable NFPA codes.
- F. System Pressures: All system components shall be listed for the actual designed system pressures.
 - 1. Standard-Pressure Piping System Component: Listed for 175-psig minimum working pressure.
 - 2. High-Pressure Piping System Component: Listed for 250-psig minimum working pressure.

2.2 SOIL MATERIALS

- A. Subbase Material: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, crushed slag, or natural or crushed sand.
- B. Drainage Fill: Washed, evenly graded mixture of crushed stone, or crushed or uncrushed gravel, with 100 percent passing a 1-1/2-inch sieve, and not more than 5 percent passing a No. 4 sieve.
- C. Backfill and Fill Materials: Materials complying with ASTM D2487 soil classification groups GW, GP, GM, SM, SW, and SP; free of clay, rock, or gravel larger than 2 inches in any dimension; debris; waste; frozen materials; and vegetable and other deleterious matter.

PART 3 - EXECUTION

3.1 GENERAL

- A. The Contractor shall install, and test all new equipment identified in this contract and revise existing equipment as noted.
- B. Installation shall be in accordance with NFPA requirements and the Contractor shall have employed or enlist the design services of at least one minimum NICET Level II certified technician.
- C. Installer: Company specializing in the products indicated in this section with minimum three years documented experience. Shall be bondable and licensed contractor and employ full-time factory-trained and certified installers and technicians. Installers shall provide with the fire sprinkler submittal proof of factory training for each installer.

- D. The Contractor shall provide all required equipment, sprinklers and piping for a complete and operational fire protection system. All components shall be installed in accordance with the guidelines of these specifications and documents as well as the NFPA codes and standards listed in these specifications.
- E. The General Contractor is the central authority governing the total responsibility of all trade contractors. Therefore, deviations and clarifications of this schedule are permitted provided the General Contractor assumes responsibility to coordinate the trade contractors different than as indicated herein. If deviations or clarifications to this schedule are implemented, submit a record copy to the Engineer.

3.2 PERMITS

- A. Secure and pay for permits required in connection with the installation of the Fire Suppression Work. Arrange with the various utility companies for the installation and connection of required utilities for this facility and pay charges associated therewith including connection charges and inspection fees, except where these services or fees are designated to be provided by others.

3.3 PREPARATION

- A. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Section.
- B. Report test results promptly and in writing.

3.4 EXISTING UTILITIES

- A. Schedule and coordinate with the Utility Company, Owner and with the Engineer connection to, or relocation of, or discontinuation of normal utility services from existing utility lines. Premium time required for any such work shall be included in the bid.
- B. Existing utilities damaged due to the operations of utility work for this project shall be repaired to the satisfaction of the Owner or Utility Company without additional cost.
- C. Utilities shall not be left disconnected at the end of a work day or over a weekend unless authorized by representatives of the Owner or Engineer.
- D. Repairs and restoration of utilities shall be made before workmen leave the project at the end of the workday in which the interruption takes place.
- E. Contractor shall include in his bid the cost of furnishing temporary facilities to provide services during interruption of normal utility service.

3.5 SELECTIVE DEMOLITION

- A. General: Demolish, remove, demount, and disconnect abandoned Fire Suppression materials and equipment indicated to be removed and not indicated to be salvaged or saved.
- B. Materials and equipment to be salvaged: Remove, demount, and disconnect existing Fire Suppression materials and equipment indicated to be removed and salvaged, and deliver materials and equipment to the location designated for storage.
- C. Disposal and Cleanup: Remove from the site and legally dispose of demolished materials and equipment not indicated to be salvaged.
- D. Fire Suppression Materials and Equipment: Demolish, remove, demount, and disconnect the following items:

1. Inactive and obsolete piping, fittings, specialties, equipment and controls.
 - a. Piping embedded in floors, walls, and ceilings may remain if such materials do not interfere with new installations. Remove exposed materials and materials above accessible ceilings. Drain and cap piping allowed to remain.
 - b. Perform cutting and patching required for demolition in accordance with Division 1, General Conditions and "Cutting and Patching" portion of this Section in Division 21.

3.6 EXCAVATION AND BACKFILLING

- A. Perform excavation of every description, of whatever substance encountered and to the depth required in connection with the installation of the work under this Division. Excavation shall be in conformance with applicable Division and section of the General Specifications.
- B. Roads, alleys, streets and sidewalks damaged during this work shall be restored to the satisfaction of Authorities Having Jurisdiction.
- C. Trenches close to walks or columns shall not be excavated without prior consultation with the Architect.
- D. The Contractor shall erect barricades around excavations, for safety, and shall place an adequate number of amber lights on or near the work and shall keep them burning from dusk to dawn. The Contractor shall be held responsible for any damage that any parties may sustain in consequence of neglecting the necessary precautions in prosecuting the work.
- E. Slope sides of excavations to comply with local, state and federal codes and ordinances. Shoring and Bracing: Establish requirements for trench shoring and bracing to comply with local, state and federal codes and authorities. Maintain shoring and bracing in excavations regardless of time period excavations will be open.
 1. Remove shoring and bracing when no longer required. Where sheeting is allowed to remain, cut top of sheeting at an elevation of 30 inches below finished grade elevation.
- F. Install sediment and erosion control measures in accordance with local codes and ordinances.
- G. Dewatering: Prevent surface water and subsurface or ground water from flowing into excavations and from flooding project site and surrounding area.
 1. Do not allow water to accumulate in excavations. Remove water to prevent softening of bearing materials. Provide and maintain dewatering system components necessary to convey water away from excavations.
 2. Establish and maintain temporary drainage ditches and other diversions outside excavation limits to convey surface water to collecting or run-off areas. Do not use trench excavations as temporary drainage ditches. In no case shall sewers be used as drains for such water.
- H. Material Storage: Stockpile satisfactory excavated materials where directed, until required for backfill or fill. Place, grade, and shape stockpiles for proper drainage.
 1. Locate and retain soil materials away from edge of excavations. Do not store within drip-line of trees indicated to remain.
 2. Remove and legally dispose of excess excavated materials and materials not acceptable for use as backfill or fill.
- I. Excavation for Underground Tanks, Basins, and Fire Suppression Structures: Conform to elevations and dimensions shown within a tolerance of plus or minus 0.10 foot; plus a sufficient distance to permit placing and removal of concrete formwork, installation of services, other construction, and for inspection.
 1. Excavate, by hand, areas within drip-line of large trees. Protect the root system from damage and dry-out. Maintain moist conditions for root system and cover exposed roots with burlap. Paint root cuts of 1 inch in diameter and larger with emulsified asphalt tree paint.

2. Take care not to disturb bottom of excavation. Excavate by hand to final grade just before concrete reinforcement is placed.
- J. Trenching: Excavate trenches for Fire Suppression installations as follows:
1. Excavate trenches to the uniform width, sufficiently wide to provide ample working room and a minimum of 6 to 9 inches clearance on both sides of pipe and equipment.
 2. Excavate trenches to depth indicated or required for piping to establish indicated slope and invert elevations. Beyond building perimeter, excavate trenches to an elevation below frost line.
 3. Limit the length of open trench to that in which pipe can be installed, tested, and the trench backfilled within the same day.
 4. Where rock is encountered, carry excavation below required elevation and backfill with a layer of crushed stone or gravel prior to installation of pipe. Provide a minimum of 6 inches of stone or gravel cushion between rock bearing surface and pipe.
 5. Excavate trenches for piping and equipment with bottoms of trench to accurate elevations for support of pipe and equipment on undisturbed soil.
 - a. For pipes or equipment 6 inches or larger in nominal size, shape bottom of trench to fit bottom 1/4 of the circumference. Fill unevenness with tamped sand backfill. At each pipe joint over-excavate to relieve the bell or pipe joint of the pipe of loads, and to ensure continuous bearing of the pipe barrel on the bearing surface.
- K. Cold Weather Protection: Protect excavation bottoms against freezing when atmospheric temperature is less than 35°F.
- L. Backfilling and Filling: Place soil materials in layers to required subgrade elevations for each area classification listed below, using materials specified in Part 2 of this Section.
1. Under walks and pavements, use a combination of subbase materials and excavated or borrowed materials.
 2. Under building slabs, use drainage fill materials.
 3. Under piping and equipment, use subbase materials where required over rock bearing surface and for correction of unauthorized excavation.
 4. For piping less than 30 inches below surface of roadways, provide 4-inch-thick concrete base slab support. After installation and testing of piping, provide a 4-inch thick concrete encasement (sides and top) prior to backfilling and placement of roadway subbase.
 5. Other areas, use excavated or borrowed materials.
- M. Backfill excavations as promptly as work permits, but not until completion of the following:
1. Inspection, testing, approval, and locations of underground utilities have been recorded.
 2. Removal of concrete formwork.
 3. Removal of shoring and bracing, and backfilling of voids.
 4. Removal of trash and debris.
- N. Placement and Compaction: Place backfill and fill materials in layers of not more than 8 inches in loose depth for material compacted by heavy equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.
- O. Before compaction, moisten or aerate each layer as necessary to provide optimum moisture content. Compact each layer to required percentage of maximum dry density or relative dry density for each area classification specified below. Do not place backfill or fill material on surfaces that are muddy, frozen, or contain frost or ice.
- P. Place backfill and fill materials evenly adjacent to structures, piping, and equipment to required elevations. Prevent displacement of piping and equipment by carrying material uniformly around them to approximately same elevation in each lift.

- Q. Compaction: Control soil compaction during construction, providing minimum percentage of density specified for each area classification indicated below.
1. Percentage of Maximum Density Requirements: Compact soil to not less than the following percentages of maximum density for soils which exhibit a well-defined moisture-density relationship (cohesive soils), determined in accordance with ASTM D 1557 and not less than the following percentages of relative density, determined in accordance with ASTM D 2049, for soils which will not exhibit a well-defined moisture-density relationship (cohesionless soils).
 - a. Areas under structures, building slabs, steps, and pavements: Compact top 12 inches of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.
 - b. Areas under walkways: Compact top 6 inches of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.
 - c. Other areas: Compact top 6 inches of subgrade and each layer of backfill or fill material to 85 percent maximum density for cohesive soils, and 90 percent relative density for cohesionless soils.
 2. Moisture Control: Where subgrade or layer of soil material must be moisture conditioned before compaction, uniformly apply water. Apply water in minimum quantity necessary to achieve required moisture content and to prevent water appearing on surface during, or subsequent to, compaction operations.
- R. Subsidence: Where subsidence occurs at Fire Suppression installation excavations during the period 12 months after Substantial Completion, remove surface treatment (i.e., pavement, lawn, or other finish), add backfill material, compact to specified conditions, and replace surface treatment. Restore appearance, quality, and condition of surface or finish to match adjacent areas.

3.7 CUTTING AND PATCHING

- A. The Contractor shall do necessary cutting of walls, floors, ceilings and roofs.
- B. No structural member shall be cut without permission from Architect and Structural Engineer.
- C. Patch around openings to match adjacent construction.
- D. After the final waterproofing membrane has been installed, roofs may be cut only with written permission by the Architect.

3.8 CLEANING

- A. Dirt and refuse resulting from the performance of the work shall be removed from the premises as required to prevent accumulation. The Fire Suppression Contractor shall cooperate in maintaining reasonably clean premises at all times.
- B. Immediately prior to the final inspection, the Fire Suppression Contractor shall clean material and equipment installed under the Fire Suppression Contract. Dirt, dust, plaster, stains, and foreign matter shall be removed from surfaces including components internal to equipment. Damaged finishes shall be touched-up and restored to their original condition.

3.9 SUBSTANTIAL COMPLETION REVIEW

- A. Prior to requesting inspection for "CERTIFICATE OF SUBSTANTIAL COMPLETION", the Contractor shall complete the following items:
 1. Submit complete Operation and Maintenance Manuals.
 2. Submit complete Record Drawings.
 3. Perform special inspections.

4. Start-up testing of systems.
 5. Removal of temporary facilities from the site.
 6. Comply with requirements for Substantial Completion in the "General Conditions".
-
- B. The Contractor shall request in writing a review for Substantial Completion. The Contractor shall give the Architect/Engineer at least seven (7) days notice prior to the review.
 - C. The Contractor's written request shall state that the Contractor has complied with the requirements for Substantial Completion.
 - D. Upon receipt of a request for review, the Architect/Engineer will either proceed with the review or advise the Contractor of unfulfilled requirements.
 - E. If the Contractor requests a site visit for Substantial Completion review prior to completing the above mentioned items, they shall reimburse the Architect/Engineer for time and expenses incurred for the visit.
 - F. Upon completion of the review, the Architect/Engineer will prepare a "final list" of outstanding items to be completed or corrected for final acceptance.
 - G. Omissions on the "final list" shall not relieve the Contractor from the requirements of the Contract Documents.
 - H. Prior to requesting a final review, the Contractor shall submit a copy of the final list of items to be completed or corrected. He shall state in writing that each item has been completed, resolved for acceptance or the reason it has not been completed.

Specification Title: _____

Section Number: _____ Page: _____ Article/Paragraph: _____

Proposed Substitution: _____

Manufacturer: _____ Model No.: _____

Address: _____ Phone: _____

History: New product 1-4 years old 5-10 years old More than 10 years old

Differences between proposed substitution and specified Work: _____

Point-by-point comparative data attached – REQUIRED BY ENGINEER

Comparative data may include but not be limited to performance, certifications, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements. Include all information necessary for an evaluation.

Supporting Data Attached: Drawings Product Data Samples
 Tests Reports Other: _____

Reason for not providing specified item: _____

Similar Installation:

Project: _____ Architect: _____

Address: _____ Owner: _____

_____ Date Installed: _____

Proposed substitution affects other parts of Work: No Yes; explain: _____

Substitution Certification Statement:

Unless stated otherwise in writing to the Engineer by the Contractor, Contractor warrants to the Engineer, Architect, and Owner that the:

- ▲ A. Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.
- B. Proposed substitution is consistent with the Contract Documents and will produce indicated results.
- C. Proposed substitution does not affect dimensions and functional clearances.
- D. Proposed substitution has received necessary approvals of authorities having jurisdiction.
- E. Same warranty will be furnished for proposed substitution as for specified Work.
- F. Same maintenance service and source of replacement parts, as applicable, is available.
- G. Proposed substitution will not adversely affect other trades or delay construction schedule.
- H. Coordination, installation, and changes in the Work as necessary for accepted substitution will be complete in all respects.

Submitting Contractor	Date	Company

PAGE INTENTIONALLY LEFT BLANK

SECTION 13905 (210500) - COMMON WORK RESULTS FOR FIRE SUPPRESSION

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes limited scope general construction materials and methods for application with Fire Suppression installations as follows:
1. Access panels and doors in walls, ceilings, and floors for access to Fire Suppression materials and equipment.
 2. Concrete for bases and housekeeping pads.
 3. Non-shrink grout for equipment installations.
 4. Miscellaneous metals for support of Fire Suppression materials and equipment.
 5. Wood grounds, nailers, blocking, fasteners, and anchorage for support of Fire Suppression materials and equipment.
 6. Joint sealers for sealing around Fire Suppression materials and equipment.
- B. Related Sections: The following sections contain requirements that relate to this Section:
1. Division 7 Section "Penetration Firestopping" for material and methods for firestopping systems.
 2. Division 21 Section 210010 "General Fire Suppression Requirements" for requirements for hydraulic calculations, fire flow test data, obtaining electronic drawings files, shop drawings and record drawings.
 3. Division 21 Section 210515 "Basic Fire Suppression Piping Material and Methods," for general piping and fitting materials and methods.
 4. Division 21 Section 210533 "Heat Tracing for Fire-Suppression Piping" for heat tracing requirements.
 5. Division 21 Section 210548 "Seismic Controls for Fire Protection" for seismic bracing requirements.
 6. Division 21 Section 210553 "Identification for Fire Suppression Piping and Equipment" for labeling and identification of installed fire suppression equipment.
 7. Division 21 Section 211100 "Fire Suppression Water Service Piping" for fire suppression piping starting 5 feet outside the building to within the building.
 8. Division 21 Section 211313 "Water-based Fire Suppression Systems" for fire suppression sprinkler systems inside the building.
 9. ~~Division 21 Section 213113 "Electric Drive Fire Pumps" for fire pumps.~~
 10. Division 21 Section 213116 "Diesel-Drive Fire Pumps" for fire pumps,
 11. Division 21 Section 213220 "Water Storage Tank"

1.2 SUBMITTALS

- A. General: Submit the following in accordance with Division 1 and Division 21 Section "General Fire Suppression Requirements".
1. Product data for the following products:
 - a. Access panels and doors.
 - b. Through and membrane-penetration firestopping systems.
 2. Schedules indicating proposed methods and sequence of operations for selective demolition prior to commencement of Work. Include coordination for shut-off of utility services and details for dust and noise control.
 - a. Coordinate sequencing with construction phasing and Owner occupancy specified in Division 1 Section "Summary of Work."

1.3 QUALITY ASSURANCE

- A. Fire-Resistance Ratings: Where a fire-resistance classification is indicated, provide access door assembly with panel door, frame, hinge, and latch from manufacturer listed in the UL "Building Materials Directory" for rating shown.
 - 1. Provide UL Label on each fire-rated access door.

PART 2 - PRODUCTS AND MATERIALS

2.1 ACCESS TO EQUIPMENT

- A. [Acceptable]Manufacturer[s]:
 - 1. Bar-Co., Inc.
 - 2. Elmdor Stoneman.
 - 3. JL Industries
 - 4. Jay R. Smith Mfg. Co.
 - 5. Karp Associates, Inc.
 - 6. Milcor
 - 7. Nystrom Building Products
 - 8. Wade
 - 9. Zurn
- B. Access Doors:
 - 1. Provide access doors for all concealed equipment, except where above lay-in ceilings. Refer to Section "Identification for Fire Suppression Piping and Equipment" for labeling of access doors.
 - 2. Access doors shall be adequately sized for the devices served with a minimum size of 18 inches x 18 inches, furnished by the respective Contractor or Subcontractor and installed by the General Contractor.
 - 3. Access doors must be of the proper construction for type of construction where installed.
 - 4. The exact location of all access doors shall be verified with the Architect prior to installation.
 - 5. Steel Access Doors and Frames: Factory-fabricated and assembled units, complete with attachment devices and fasteners ready for installation. Joints and seams shall be continuously welded steel, with welds ground smooth and flush with adjacent surfaces.
 - 6. Frames: 16-gauge steel, with a 1-inch-wide exposed perimeter flange for units installed in unit masonry, pre-cast, or cast-in-place concrete, ceramic tile, or wood paneling.
 - a. For installation in masonry, concrete, ceramic tile, or wood paneling: 1-inch-wide exposed perimeter flange and adjustable metal masonry anchors.
 - b. For installation in gypsum wallboard or plaster: perforated flanges with wallboard bead.
 - c. For installation in full-bed plaster applications: galvanized, expanded metal lath and exposed casing bead, welded to perimeter of frame.
 - 7. Flush Panel Doors: 14-gauge sheet steel, with concealed spring hinges or concealed continuous piano hinge set to open 175 degrees; factory-applied prime paint.
 - a. Fire-Rated Units: Insulated flush panel doors, with continuous piano hinge and self-closing mechanism.
 - 8. Locking Devices: Flush, screwdriver-operated cam locks.
 - 9. Locking Devices: Where indicated on the drawings or where access panels are installed in locations accessible to the public, provide 5-pin or 5-disc type cylinder locks, individually keyed; provide 2 keys.

2.2 FIRE SUPPRESSION EQUIPMENT NAMEPLATE DATA

- A. For each piece of power operated Fire Suppression equipment, provide a permanent operational data nameplate indicating manufacturer, product name, model number, serial number, capacity, operating and

power characteristics, labels of tested compliance's, and similar essential data. Locate nameplates in an accessible location.

2.3 CONCRETE EQUIPMENT BASES/HOUSEKEEPING PADS

- A. Provide concrete equipment bases and housekeeping pads for various pieces of floor mounted Fire Suppression equipment. Concrete equipment bases/housekeeping pads shall generally conform to the shape of the piece of equipment it serves with a minimum 4" margin around the equipment and supports.
- B. Form concrete equipment bases and housekeeping pads using framing lumber or steel channel with form release agent. Chamfer top edges and corners. Trowel tops and sides of each base/pad to a smooth finish, equal to that of the floors.
- C. Concrete equipment bases and housekeeping pads shall be made of a minimum 28 day, 4000 psi concrete conforming to American Concrete Institute Standard Building Code for Reinforced Concrete (ACI 318-99) and the latest applicable recommendations of the ACI standard practice manual. Concrete shall be composed of cement conforming to ASTM C 150 Type I, aggregate conforming to ASTM C33, and potable water. All exposed exterior concrete shall contain 5 to 7 percent air entrainment.
- D. Unless otherwise specified or shown on the structural drawings, reinforce equipment bases and housekeeping pads with No. 4 reinforcing bars conforming to ASTM A 615 or 6x6 – W2.9 x W2.9 welded wire mesh conforming to ASTM A185. Reinforcing bars shall be placed 24" on center with a minimum of two bars each direction.
- E. Provide galvanized anchor bolts for all equipment placed on concrete equipment bases and housekeeping pads or on concrete slabs. Anchor bolts size, number and placement shall be as recommended by the Manufacturer of the equipment.
- F. Concrete equipment bases and housekeeping pads shall have minimum heights in accordance with the following table:

Equipment	Minimum Height
Pumps and Equipment Less than or equal to 20 tons and Other Equipment Not Listed – Note 1	3-1/2"
Pumps 30 HP to 75 HP (See Note 1)	7-1/4"
Pumps greater than 75 HP (See Note 1)	11-1/4"

NOTES:

- 1. Height of equipment bases applies to equipment installed on slab-on-grade. For equipment installed on floors above grade and/or roof, reference the drawings.

2.4 GROUT

- A. Provide nonshrink, nonmetallic grout conforming to ASTM C 1107, Grade B, in premixed and factory-packaged containers.
- B. Grout shall have post-hardening, volume-adjusting, dry, non-staining, non-corrosive, non-gaseous, hydraulic-cement characteristics and shall be as recommended by manufacturer for interior and exterior applications.
- C. Grout shall have 5,000 psi, 28-day compressive strength design mix.

2.5 MISCELLANEOUS METALS

- A. Steel plates, shapes, bars, and bar grating: ASTM A 36.
- B. Cold-Formed Steel Tubing: ASTM A 500.
- C. Hot-Rolled Steel Tubing: ASTM A 501.
- D. Steel Pipe: ASTM A 53, Schedule 40, welded.
- E. Fasteners: Zinc-coated, type, grade, and class as required.

2.6 MISCELLANEOUS LUMBER

- A. Framing Materials: Standard Grade, light-framing-size lumber of any species. Number 3 Common or Standard Grade boards complying with WCLIB or AWP rules, or Number 3 boards complying with SPIB rules. Lumber shall be preservative treated in accordance with AWPB LP-2, and kiln dried to a moisture content of not more than 19 percent.
 - 1. Framing materials shall be fire resistant treated for use in Type I and II buildings.
- B. Construction Panels: Plywood panels; APA C-D PLUGGED INT, with exterior glue; thickness as indicated, or if not indicated, not less than 15/32 inches.
 - 1. Framing materials shall be fire resistant treated for use in Type I and II buildings.

2.7 JOINT SEALERS

- A. General: Joint sealers, joint fillers, and other related materials compatible with each other and with joint substrates under conditions of service and application.
- B. Colors: As selected by the Architect from manufacturer's standard colors.
- C. Elastomeric Joint Sealers: Provide the following types:
 - 1. One-part, nonacid-curing, silicone sealant complying with ASTM C 920, Type S, Grade NS, Class 25, for uses in non-traffic areas for masonry, glass, aluminum, and other substrates recommended by the sealant manufacturer. Provide one of the following:
 - a. "Dow Corning 790," Dow Corning Corp.
 - b. "Silglaze II SCS 2801," General Electric Co.
 - c. "Silpruf SCS 2000," General Electric Co.
 - d. "864," Pecora Corp.
 - e. "Rhodia 5C," Rhone-Poulenc, Inc.
 - f. "Spectrem 1," Tremco, Inc.
 - g. "Spectrem 2," Tremco, Inc.
 - h. "Dow Corning 795," Dow Corning Corp.
 - i. "Rhodia 7B," Rhone-Poulenc, Inc.
 - j. "Rhodia 7S," Rhone-Poulenc, Inc.
 - k. "Omniseal," Sonneborn Building Products Div.
 - 2. One-part, mildew-resistant, silicone sealant complying with ASTM C 920, Type S, Grade NS, Class 25, for uses in non-traffic areas for glass, aluminum, and nonporous joint substrates; formulated with fungicide; intended for sealing interior joints with nonporous substrates; and subject to in-service exposure to conditions of high humidity and temperature extremes. Provide one of the following:
 - a. "Dow Corning 786," Dow Corning Corp.
 - b. "Sanitary 1700," General Electric Co.
 - c. "898 Silicone Sanitary Sealant," Pecora Corp.
 - d. "OmniPlus," Sonneborn Building Products Div.

- D. Acrylic-Emulsion Sealants: One-part, nonsag, mildew-resistant, paintable complying with ASTM C 834 recommended for exposed applications on interior and protected exterior locations involving joint movement of not more than plus or minus 5 percent.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. "Chem-Calk 600," Bostik Construction Products Div.
 - b. "AC-20," Pecora Corp.
 - c. "Sonolac," Sonneborn Building Products Div.
 - d. "Tremflex 834," Tremco, Inc.

2.8 ACOUSTICAL SEALANTS

- A. General: Penetrations by pipes through surfaces that are around and between noise critical spaces shall be sleeved, packed and sealed airtight with foam rod, non-hardening sealant and/or packing material as described herein.
- B. Foam Rod: Foam backer rod shall be closed cell polyethylene suitable for use as a backing for non-hardening sealant.
- C. Non-Hardening Sealant: Sealant for penetrations shall be non-hardening polysulphide type. Permanently flexible, approved firestop putty may be used in lieu of the sealant on foam rod in noise critical walls that are also fire rated.
- D. Packing Material: Mineral fiber; non-combustible; resistant to water, mildew and vermin. Expanding resilient foams manufactured for this purpose are an acceptable alternative only if the material density is at least 15 pcf (40 kg/m³).

PART 3 - EXECUTION

3.1 INSTALLATION OF ACCESS DOORS

- A. Set frames accurately in position and securely attached to supports, with face panels plumb and level in relation to adjacent finish surfaces.
- B. Adjust hardware and panels after installation for proper operation.

3.2 ERECTION OF METAL SUPPORTS AND ANCHORAGE

- A. Cut, fit, and place miscellaneous metal fabrications accurately in location, alignment, and elevation to support and anchor Fire Suppression materials and equipment.
- B. Field Welding: Comply with AWS "Structural Welding Code."

3.3 ERECTION OF WOOD SUPPORTS AND ANCHORAGE

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorage accurately in location, alignment, and elevation to support and anchor Fire Suppression materials and equipment.
- B. Select fastener sizes that will not penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

3.4 PREPARATION FOR JOINT SEALERS

- A. Surface Cleaning for Joint Sealers: Clean surfaces of joints immediately before applying joint sealers to comply with recommendations of joint sealer manufacturer.
- B. Apply joint sealer primer to substrates as recommended by joint sealer manufacturer. Protect adjacent areas from spillage and migration of primers, using masking tape. Remove tape immediately after tooling without disturbing joint seal.

3.5 APPLICATION OF JOINT SEALERS

- A. General: Comply with joint sealer manufacturers' printed application instructions applicable to products and applications indicated, except where more stringent requirements apply.
 - 1. Comply with recommendations of ASTM C 962 for use of elastomeric joint sealants.
 - 2. Comply with recommendations of ASTM C 790 for use of acrylic-emulsion joint sealants.
- B. Tooling: Immediately after sealant application and prior to time skinning or curing begins, tool sealants to form smooth, uniform beads; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

3.6 PENETRATIONS:

- A. New Construction:
 - 1. Coordinate with Divisions 03 and 04 for installation of sleeves and sleeve seals integrally in cast-in-place, precast, and masonry walls and horizontal slabs where indicated on the Drawings or as required to support piping penetrations.
- B. Construction in Existing Facilities:
 - 1. Saw cut or core drill existing walls and slabs to install sleeves and sleeve seals in existing facilities. Do not cut or drill any walls or slabs without first coordinating with, and receiving approval from, the Architect, Owner, or both. Seal sleeves and sleeve seals into concrete walls or slabs with a waterproof non-shrink grout acceptable to the Architect.
- C. Provide sleeves and/or box frames for openings in all concrete and masonry construction and fire or smoke partitions, for all mechanical work that passes through such construction; Coordinate with other trades and Divisions to dimension and lay out all such openings.
- D. The General Contractor will provide only those openings specifically indicated on the Architectural or Structural Drawings as being provided under the General Contractor's work.
- E. The cutting of new or existing construction shall not be permitted except by written approval of the Architect.
- F. Floor sleeves shall be fitted with means for attachment to forms and shall be of length to extend at least two inches above the floor level.
- G. Cut sleeves to length for mounting flush with both surfaces of walls.
- H. Seal space outside of sleeves with grout for penetrations of concrete and masonry.
- I. Seal space outside of sleeves with approved joint compound for penetrations of gypsum board assemblies.

- J. All openings sleeved through underground exterior walls shall be sealed with mechanical sleeve seals as specified in Division 21 Section “Basic Fire Suppression Piping Materials and Methods

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 13907 (210515) - BASIC FIRE SUPPRESSION PIPING MATERIALS AND METHODS

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section specifies piping materials and installation methods common to more than one Section of Division 21 and includes piping, joining materials, piping specialties and basic piping installation instructions.
- B. Related Sections: The following sections contain requirements that relate to this Section:
1. Division 21 Section 210010 "General Fire Suppression Requirements" for requirements for hydraulic calculations, fire flow test data, obtaining electronic drawings files, shop drawings and record drawings.
 2. Division 21 Section 210500 "Common Work Results for Fire Suppression," for materials and methods for wall and floor penetrations.
 3. Division 21 Section 210533 "Heat Tracing for Fire-Suppression Piping" for heat tracing requirements.
 4. Division 21 Section 210548 "Seismic Controls for Fire Protection" for seismic bracing requirements.
 5. Division 21 Section 210553 "Identification for Fire Suppression Piping and Equipment" for labeling and identification of installed fire suppression equipment.
 6. Division 21 Section 211100 "Fire Suppression Water Service Piping" for fire suppression piping starting 5 feet outside the building to within the building.
 7. Division 21 Section 211313 "Water-based Fire Suppression Systems" for fire-suppression sprinkler systems inside the building.
 - ~~8. Division 21 Section 213113 "Electric Drive Fire Pumps" for fire pumps.~~
 9. Division 21 Section 213116 "Diesel-Drive Fire Pumps" for fire pumps.
 10. Division 21 Section 213220 "Water Storage Tank"

1.2 SUBMITTALS

- A. Refer to Division 1 and Division 21 "General Fire Suppression Requirements" for administrative and procedural requirements for submittals.
- B. Product Data: Submit product data on the following items:
1. Piping and Fittings
 2. Escutcheons
 3. Dielectric Unions and Fittings
 4. Sleeves and Mechanical Sleeve Seals
 5. Wall Pipes

1.3 QUALITY ASSURANCE

- A. Welding procedures and testing shall comply with ANSI Standard B31.9 - Standard Code for Building Services Piping and The American Welding Society, Welding Handbook.
- B. Soldering and Brazing procedures shall conform to ANSI B9.1 Standard Safety Code for Plumbing Refrigeration.
- C. Threaded joints shall conform to ASME B1.20.1, Pipe Threads, General Purpose and the Pipe Fitters Handbook.

D. UL and FM Compliance: Fire protection system materials and components shall be Underwriter's Laboratories listed and labeled, and Factory Mutual approved (FM Insureds only) for fire service.

~~E. Pipe, piping specialties and fittings shall be manufactured in plants located in the United States.~~

PART 2 - PRODUCTS AND MATERIALS

2.1 GENERAL REQUIREMENTS

- A. All fire suppression system materials and components essential to successful system operation shall be listed for their intended purpose.
- B. For FM Global insured projects – All fire Suppression system materials and components shall be U.L. and FM approved.
- C. General: Refer to the individual piping system specification sections in Division 21 for specifications on piping and fittings relative to that particular system.

2.2 STEEL PIPE AND FITTINGS

- A. All piping 2-inch and smaller:
 - 1. With the use of welded or roll grooved fittings: ASTM A135 or 795, Grade A, Schedule 10 or 40, seamless or ERW, black steel pipe.
 - 2. With the use of threaded fittings: ASTM A135 or 795, Grade A, Schedule 40, seamless or ERW, black steel pipe. All 1-inch piping shall have threaded ends.
- B. All piping 2-1/2" and larger: ASTM A135 or 795, Grade A, Schedule 10, ERW, black steel pipe, roll grooved ends.
- C. Piping used in dry pipe sprinkler systems shall be ASTM A135 or 795, Type E, Grade A, Schedule 40, Black Steel pipe, threaded or roll grooved ends.
- D. All piping on the exterior of the building shall be externally galvanized.
- E. Acceptable alternatives to Schedule 40 and Schedule 10 pipe shall be manufactured to standards recognized by NFPA 13. Threaded pipe shall have a corrosion resistance rating (CRR) of 1.0 or greater. Crimp type couplings shall not be used. Threadable thinwall pipe with CRR less than 1.0 not permitted.
- F. Cast-Iron Threaded Fittings: ANSI B16.4, Class 125, standard pattern, for threaded joints. Threads shall conform to ANSI B1.20.1.
- G. Black Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, standard-weight, seamless steel pipe with threaded ends.
- H. Steel Couplings: ASTM A 865, threaded
- I. Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.
- J. Malleable-Iron Threaded Fittings: ANSI B16.3, Class 150, standard pattern, for threaded joints. Threads shall conform to ANSI B1.20.1.
- K. Malleable- or Ductile-Iron Unions: UL 860. Not allowed.
- L. Cast-Iron Flanges: ASME 16.1, Class 125.

- M. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.
- N. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.
- O. Grooved-Joint, Steel-Pipe Appurtenances
 - 1. Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
 - 2. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.
 - 3. Grooved mechanical couplings including gaskets used on dry-pipe systems shall be listed for dry-pipe service.

~~2.3 COPPER TUBE AND FITTINGS~~

- ~~A. Hard Copper Tube: ASTM B 88, Type L, water tube, drawn temper.~~
- ~~B. Cast Copper, Solder Joint Fittings: ASME B16.18, pressure fittings.~~
- ~~C. Wrought Copper, Solder Joint Fittings: ASME B16.22, pressure fittings.~~
- ~~D. Bronze Flanges: ASME B16.24, Class 150, with solder joint ends.~~
- ~~E. Copper Unions: MSS SP 123, cast copper alloy, hexagonal stock body, with ball and socket, metal to metal seating surfaces, and solder joint or threaded ends.~~

2.4 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free.
 - 1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
 - 2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.5 LISTED FIRE-PROTECTION VALVES

- A. General Requirements:
 - 1. Valves shall be UL listed or FM approved.
 - 2. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig.
 - 3. Minimum Pressure Rating for High-Pressure Piping: 250 psig.
- B. Check Valves:
 - 1. Description: Swing-check type, rubber-face checks unless otherwise indicated, and ends matching piping.
 - 2. Standard: UL 312.
 - 3. Pressure Rating: 250 psig minimum.
 - 4. Type: Swing check.

5. Body Material: Cast iron.
6. End Connections: Flanged or grooved.

C. Bronze OS&Y Gate Valves:

1. Description: Bronze body and bonnet and bronze stem.
2. Standard: UL 262.
3. Pressure Rating: 175 psig.
4. Body Material: Bronze.
5. End Connections: Threaded or grooved.

D. Iron OS&Y Gate Valves:

1. Description: Iron body and bonnet and bronze seating material.
2. Standard: UL 262.
3. Pressure Rating: 250 psig minimum.
4. Body Material: Cast or ductile iron.
5. End Connections: Flanged or grooved.

E. Indicating-Type Butterfly Valves:

1. Standard: UL 1091.
2. Pressure Rating: 175 psig minimum.
3. Valves NPS 2 and Smaller:
 - a. Valve Type: Ball or butterfly.
 - b. Body Material: Bronze.
 - c. End Connections: Threaded or grooved.
4. Valves NPS 2-1/2 and Larger:
 - a. Valve Type: Butterfly.
 - b. Body Material: Cast or ductile iron.
 - c. End Connections: Flanged or grooved.
5. Valve Operation: Integral, prewired supervisory switch and visual indicating device.

2.6 TRIM AND DRAIN VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing (FM insureds only).
2. Pressure Rating: 175 psig minimum.

B. Automatic (Ball Drip) Drain Valves:

1. Standard: UL 1726.
2. Pressure Rating: 175 psig minimum.
3. Type: Automatic draining, ball check.
4. Size: NPS 3/4.
5. End Connections: Threaded.

2.7 AUTOMATIC AIR RELEASE VALVE

A. Standard: UL 2573

B. Pressure Rating: 175 psig minimum.

2.8 FIRE-DEPARTMENT CONNECTIONS

A. Exposed-Type, Fire-Department Connection:

1. Standard: UL 405.

2. Type: Exposed, projecting, for wall mounting.
3. Pressure Rating: 175 psig minimum.
4. Body Material: Corrosion-resistant metal.
5. Inlets: NPS 2-1/2 brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
6. Caps: Brass, lugged type, with gasket and chain.
7. Escutcheon Plate: Round, brass, wall type.
8. Outlet: Back, with pipe threads, NPS 4"
9. Number of Inlets: Two.
10. Escutcheon Plate Marking: Similar to "AUTO SPKR
Finish: Rough Brass

B. Storz-Type, Fire-Department Connection:

1. Pressure Rating: 175 psig minimum.
2. Body Material: Aluminum Alloy.
3. Inlets: NPS 6. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
4. Caps: Aluminum with gasket and chain.
5. Escutcheon Plate: Rectangular, brass, wall type.
6. Outlet: NPS 6
7. Escutcheon Plate Marking: Similar to "AUTO SPKR."
8. Include 30 degree downturn elbow.
9. Finish: Anodized aluminum

2.9 PIPING SPECIALTIES

- A. Escutcheons: Inside diameter shall closely fit pipe outside diameter, or outside of pipe insulation where pipe is insulated. Outside diameter shall completely cover the opening in floors, walls, or ceilings.
1. One-Piece, Cast-Brass Type: With rough-brass finish and setscrew fastener.
 2. One-Piece, Stamped-Steel Type: With white painted finish and spring-clip fasteners.
 3. Split-Casting Brass Type: With rough-brass finish and with concealed hinge and setscrew.
 4. Split-Plate, Stamped-Steel Type: With white painted finish, concealed hinge, and spring-clip fasteners.
- B. Floor Plates: Inside diameter shall closely fit pipe outside diameter. Outside diameter shall completely cover the opening in floors, walls, or ceilings.
1. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.
 2. Split-Casting Floor Plates: Cast brass with concealed hinge.
- C. Unions: Malleable-iron, Class 150 for low pressure service and class 250 for high pressure service; hexagonal stock, with ball-and-socket joints, metal-to-metal bronze seating surfaces; female threaded ends.
- D. Dielectric Unions and Fittings: Provide factory-fabricated dielectric unions and fittings with appropriate end connections for the pipe materials in which installed (screwed, soldered, or flanged), which effectively isolate dissimilar metals, prevent galvanic action, and stop corrosion.
- E. Pressure Gauges
1. Standard: UL 393.
 2. Dial Size: 3-1/2- to 4-1/2-inch diameter.
 3. Pressure Gage Range: 0 to 300 psig.
 4. Water System Piping Gage: Include "WATER" or "AIR/WATER" label on dial face.
 5. Air System Piping Gage: Include "AIR" or "AIR/WATER" label on dial face.

2.10 PENETRATIONS

A. Sleeves:

1. Steel Sleeves: Schedule 40 galvanized, welded steel pipe, ASTM A-53 grade A or 12 gauge (0.1084 inches) welded galvanized steel formed to a true circle concentric to the pipe.
2. Sheet-Metal Sleeves: 10 gauge (0.1382 inches), galvanized steel, round tube closed with welded longitudinal joint.
3. Frames for rectangular openings attached to forms and of a maximum dimension established by the Architect. For sleeve cross-section rectangle perimeter less than 50 inches and no side greater than 16 inches, provide 18 gauge (0.052 inches) welded galvanized steel. For sleeve cross-section rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, provide 10 gauge (0.1382 inches) welded galvanized steel. Notify the General Contractor or Architect before installing any box openings not shown on the Architectural or Structural Drawings.
4. Box Frames: Frames for rectangular openings shall be of welded 12 gauge steel attached to forms and of a maximum dimension established by the Architect. Contractor shall notify the General Contractor or Architect before installing any box openings not shown on the Architectural or Structural Drawings.

B. Wall Pipes

1. Cast-iron sleeve with integral clamping flange with clamping ring, bolts, and nuts for membrane flashing.
 - a. Underdeck Clamp: Clamping ring with setscrews.

C. Mechanical Sleeve Seals: Modular Plumbing type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between pipe and sleeve, connected with bolts and pressure plates which cause rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
 - a. Pressure Plates: Carbon steel or stainless steel.
 - b. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, or Stainless steel of length required to secure pressure plates to sealing elements.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Ream ends of pipes and tubes, and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris for both inside and outside of piping and fittings before assembly.

3.2 PIPING INSTALLATIONS

- A. General Locations and Arrangements: Drawings (plans, schematics, and diagrams) indicate the general location and arrangement of the piping systems. Location and arrangement of piping layout take into consideration pipe sizing and friction loss, expansion, pump sizing, and other design considerations. So far as practical, install piping as indicated. Refer to individual system specifications for requirements for coordination drawing submittals.
- B. Coordinate installation of horizontal piping with other components. Allow sufficient space above removable ceiling panels to allow for panel removal (minimum 6" clearance).

- C. Install system such that all piping is rigidly secured and supported. Cutting of structural members for passage of sprinkler pipes or hangers shall not be permitted. Coordination between ductwork, lights, structural members and sprinkler pipe to be coordinated on the construction phase of the project.
- D. Conceal all pipe installations in walls, pipe chases, utility spaces, above ceilings, below grade or floors, unless indicated otherwise. In areas with ceilings, piping shall be routed concealed, above ceiling. In areas without ceilings, piping shall extend as high as possible.
- E. Install piping free of sags and bends and with ample space between piping to permit proper insulation applications.
- F. Install exposed piping at right angles or parallel to building walls. Diagonal runs are not permitted, unless expressly indicated on the Drawings.
- G. Locate groups of pipes parallel to each other, spaced to permit applying full insulation and servicing of valves.
- H. Support piping from structure. Do not support piping from ceilings, equipment, ductwork, conduit and other non-structural elements.
- I. Install sprinkler piping to provide for system drainage in accordance with NFPA 13. Install drains at low points in mains, risers, and branch lines consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple and cap.
- J. Coordinate pipe routing near electrical equipment in accordance with NFPA 70.
- K. Verify final equipment locations for roughing in.
- L. Deviations from approved "Working Plans" for sprinkler piping require written approval of the Authority Having Jurisdiction. Written approval shall be on file with the Engineer prior to deviating from the approved "Working Plans."
- M. Install escutcheons for exposed piping penetrations of walls, ceilings, and floors.

3.3 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- B. Use approved fittings to make all changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- C. Install unions in pipes NPS 2 and smaller, adjacent to each valve. Unions are not required on flanged devices or in piping installations using grooved mechanical couplings.
- D. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.
- E. Install dielectric unions to connect piping materials of dissimilar metals in dry piping systems.
- F. Non-ferrous Pipe Joints:
 - 1. Brazed and Soldered Joints: For copper tube and fitting joints, braze joints in accordance with ANSI B31.9 - Standard Code for Building Services Piping.

2. Thoroughly clean tube surface and inside surface of the cup of the fittings, using very fine emery cloth, prior to making soldered or brazed joints. Wipe tube and fittings clean and apply flux. Flux shall not be used as the sole means for cleaning tube and fitting surfaces.
- G. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
 - a. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.
 - H. Threaded Joints: Conform to ANSI B1.20.1, tapered pipe threads for field cut threads and Pipe Fitter's Handbook. Join pipe, fittings, and valves as follows:
 1. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
 2. Align threads at point of assembly.
 3. Apply appropriate tape or thread compound to the external pipe threads.
 4. Assemble joint to appropriate thread depth. When using a wrench on valves place the wrench on the valve end into which the pipe is being threaded.
 5. Damaged Threads: Do not use pipe with threads that are corroded, or damaged. If a weld opens during cutting or threading operations, that portion of pipe shall not be used.
 - I. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9. Align flanged surfaces parallel. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly to appropriate torque specified by the bolt manufacturer.
 - J. Mechanical Grooved Joints: Roll grooves on pipe ends dimensionally compatible with the couplings. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.
 - K. Joints for other piping materials are specified within the respective piping system sections.

3.4 FIRE DEPARTMENT CONNECTION INSTALLATION

- A. Install wall-type, fire department connection.
- B. Install connections between 18- and 36-inches above finished grade and as indicated on the Drawings.
- C. Grout or caulk pipe penetration in exterior wall.
- D. Provide minimum 36-inch working clearance around connection for fire department access.
- E. Install automatic (ball drip) drain valve at each check valve for fire department connection. The drain line shall discharge to the exterior.
- F. Install two protective pipe bollards on sides of each fire department connection. Comply with requirements for bollards in Division 5 Section 055000 "Metal Fabrications."

3.5 ALARM DEVICE INSTALLATION

- A. General: Comply with NFPA 24 for devices and methods of valve supervision.
- B. Supervisory Switches: Supervise valves in open position unless noted otherwise.

1. Valves: Grind away portion of exposed valve stem. Bolt switch, with plunger in stem depression, to OS&Y gate-valve yoke.
 2. Indicator Posts: Drill and thread hole in upper-barrel section at target plate. Install switch, with toggle against target plate, on barrel of indicator post.
- C. Locking and Sealing: Secure unsupervised valves as follows:
1. Valves: Install chain and padlock on open OS&Y gate valve.
 2. Post Indicators: Install padlock on wrench on indicator post.
- D. Water-Flow Indicators: Install in fire suppression piping where indicated. Select indicator with saddle and vane matching pipe size. Drill hole in pipe, insert vane, and bolt saddle to pipe.
- E. Connect alarm devices to building's fire-alarm system. Wiring and fire-alarm devices are specified in Division 28 Sections.

3.6 PIPING PROTECTION

- A. Protect piping during construction period, to avoid clogging with dirt and debris, and to prevent damage from traffic and construction work.
- B. Place plugs in ends of uncompleted piping at the end of each day or whenever work stops.

3.7 PENETRATIONS

- A. Fire suppression penetrations occur when piping penetrate concrete slabs, concrete or masonry walls, or fire / smoke rated floor and wall assemblies.
- B. Above Grade Concrete or Masonry Penetrations
 1. Provide sleeves for pipes passing through above grade concrete or masonry walls, concrete floor or roof slabs. Sleeves are not required for core drilled holes in existing masonry walls, concrete floors or roofs. Provide sleeves as follows:
 - a. Provide schedule 40 galvanized steel pipe for sleeves smaller than 6 inches in diameter.
 - b. Provide galvanized sheet metal for sleeves 6 inches in diameter and larger, thickness shall be 10 gauge (0.1382 inches).
 - c. Provide welded galvanized sheet metal for rectangular sleeves with the following minimum metal thickness:
 - 1) For sleeve cross-section rectangle perimeter less than 50 inches and no side greater than 16 inches, thickness shall be 18 gauge (0.052 inches).
 - 2) For sleeve cross-section rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, thickness shall be 10 gauge (0.1382 inches).
 - d. Schedule 40 PVC pipe sleeves are acceptable for use in areas without return air plenums.
 2. Seal elevated floor, exterior wall and roof penetrations watertight and weathertight with non-shrink, non-hardening commercial sealant. Pack with mineral wool and seal both ends with minimum of ½" of sealant.
- C. Underground, Exterior-Wall Penetrations: Install cast-iron wall pipes for sleeves. Size sleeves to allow for 1-inch (or larger, if required by the mechanical sleeve manufacturer) annular clear space between pipe and sleeve. Provide mechanical sleeve seal.
 1. Use type and number of sealing elements recommended by manufacturer for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
 2. Inspect installed sleeve and sleeve-seal installations for damage and faulty work. Verify watertight integrity of sleeves and seals installed below grade to seal against hydrostatic pressure.

- D. Elevated Floor Penetrations of Waterproof Membrane:
1. Provide cast-iron wall pipes for sleeves, extend top of wall pipe minimum 1" above finish floor. Size wall pipe for minimum ½" annular space between pipe and wall pipe.
 2. Extend pipe insulation for insulated pipe through wall pipe. The vapor barrier shall be maintained. Size wall pipe for a minimum of 1" annular clear space between inside of sleeve and outside of insulation.
 3. Pack with mineral wool and seal both ends with minimum of ½" of waterproof sealant. Refer to Division 07 Section "Joint Sealants" for materials and installation.
 4. Secure waterproof membrane flashing between clamping flange and clamping ring. Comply with requirements for flashing specified in Division 7 Section "Sheet Metal Flashing and Trim."
 5. Extend bottom of wall pipe below floor slab as required and secure underdeck clamp to hold wall pipe rigidly in place.
- E. Interior Foundation Penetrations: Provide sleeves for horizontal pipe passing through or under foundation. Sleeves shall be cast iron soil pipe two nominal pipe sizes larger than the pipe served.
- F. Concrete Slab on Grade Penetrations:
1. Provide schedule 40 PVC pipe sleeves for vertical pressure pipe passing through concrete slab on grade. Sleeves shall be one nominal pipe size larger than the pipe served and two pipe sizes larger than pipe served for ductile iron pipes with restraining rods. Seal water-tight with silicone caulk.
 2. Provide 1/2-inch thick cellular foam insulation around perimeter of non-pressure pipe passing thru concrete slab on grade. Insulation shall extend to 2-inch above and below the concrete slab.
- G. Interior Penetrations of Non-Fire-Rated Walls: Seal annular space between sleeve and pipe or duct, using joint sealant appropriate for size, depth, and location of joint. Pack with mineral wool and seal both ends with minimum of 1/2-inch of sealant. Refer to Division 21 Section "Common Work Results for Fire Suppression" for materials and installation.
1. Extend pipe insulation for insulated pipe through sleeve. The vapor barrier shall be maintained. Size sleeve for a minimum of 1-inch annular clear space between inside of sleeve and outside of insulation.
- H. Exterior Wall Penetrations: Seal annular space between sleeve and pipe or duct, using joint sealant appropriate for size, depth, and location of joint. Pack with mineral wool and seal both ends with minimum of 1/2-inch of waterproof sealant. Refer to Division 07 Section "Joint Sealants" for materials and installation.
1. Extend pipe insulation for insulated pipe through sleeve. The vapor barrier shall be maintained. Size sleeve for a minimum of 1-inch annular clear space between inside of sleeve and outside of insulation.
- I. Fire / Smoke Rated Floor and Wall Assemblies: Seal around penetrations of fire rated assemblies to maintain fire resistance rating of assemblies. Coordinate fire ratings and locations with the architectural drawings. Install sealants in compliance with the manufacturer's UL listing. Refer to Division 21 Section "Common Work Results for Fire Suppression" for firestopping and materials.

3.8 ACOUSTICAL PENETRATIONS

- A. General: There shall be no direct contact of piping with shaft walls, floor slabs and/or partition. All openings around pipes in the structure surrounding the Fire Suppression equipment and surrounding noise-critical spaces shall be sealed, packed with caulking for the full depth of the penetration, as described herein. This includes all slab penetrations and penetrations of noise critical walls.
- B. Fire Sprinkler Piping
1. Where a pipe passes through a wall, ceiling or floor slab of a noise critical space, a steel sleeve shall be cast or grouted into the structure. The internal diameter of the sleeve shall be 2 inches larger than

the external diameter of the pipe passing through it. After all of the piping is installed in that area, the Contractor shall check the clearance and correct it, if necessary, to within 1/2 inch. Pack the void full depth with packing material sealed at both ends, 1 inch deep, with non-hardening sealant backed by foam rod.

3.9 PIPE FIELD QUALITY CONTROL

- A. Testing: Refer to individual piping system specification sections.

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 13917 (210548) - SEISMIC CONTROLS FOR FIRE SUPPRESSION SYSTEMS

PART 1 - GENERAL REQUIREMENTS

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 RELATED SECTIONS INCLUDE THE FOLLOWING:

- A. Division 20 Section "Seismic Controls for MEP/F/T Systems" for general requirement and related documents that apply to this section.

1.3 DEFINITIONS

- A. The IBC: International Building Code.
- B. ICC-ES: International Code Council Evaluation Service.
- C. OSHPD: Office of Statewide Health Planning and Development for the State of California.

1.4 SUMMARY

- A. Seismic bracing, restraints, and controls for all fire protection systems specified herein shall be designed and installed as required by Division 20 Section "Seismic Controls for MEP/F/T Systems".

1.5 SUBMITTALS

- A. Provide submittals as required by Division 20 Section "Seismic Controls for MEP/F/T Systems" for all fire protection systems specified herein.

PART 2 - PRODUCTS AND MATERIALS

NOT USED

PART 3 - EXECUTION

NOT USED

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes heat tracing with the following electric heating cables:
 - 1. Self-regulating, parallel resistance.
- B. Related Sections include the following:
 - 1. Division 22 Section "Heat Tracing for Plumbing Piping."

1.3 ACTION SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
 - 1. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
- B. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.
 - 1. Wiring Diagrams: Power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. Field quality-control test reports.
- B. Warranty: Special warranty specified in this Section.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.7 WARRANTY

- A. Warranty Period: One year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SELF-REGULATING, PARALLEL-RESISTANCE HEATING CABLES

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. BH Thermal Corporation.
 - 2. Chromalox, Inc.; Wiegard Industrial Division; Emerson Electric Company.
 - 3. Delta-Therm Corporation.
 - 4. Easy Heat Inc.
 - 5. Nelson Heat Trace.
 - 6. Pyrotenax; a division of Tyco Thermal Controls.
 - 7. Raychem; a division of Tyco Thermal Controls.
 - 8. Thermon Manufacturing Co.
 - 9. Trasor Corp.
- B. Heating Element: Pair of parallel No. 16 or 18 AWG, nickel-coated stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.
- C. Electrical Insulating Jacket: Flame-retardant polyolefin.
- D. Cable Cover: Stainless-steel braid, and polyolefin outer jacket with UV inhibitor.
- E. Maximum Operating Temperature (Power On): 150 deg F. Verify temperature of circulated media in freeze-protected piping in first paragraph below.
- F. Maximum Exposure Temperature (Power Off): 185 deg F.
- G. Maximum Operating Temperature: 300 deg F.

2.2 CONTROLS

- A. Remote bulb unit with adjustable temperature range from 30 to 50 deg F.
- B. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
- C. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
- D. Corrosion-resistant, waterproof control enclosure.

2.3 ACCESSORIES

- A. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.

- B. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
 - 1. Width for Markers on Pipes with OD, Including Insulation, Less Than 4 Inches: 3/4 inch minimum.
 - 2. Width for Markers on Pipes with OD, Including Insulation, 6 Inches or Larger: 1-1/2 inches minimum.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and substrates to receive electric heating cables for compliance with requirements for installation tolerances and other conditions affecting performance.
 - 1. Ensure surfaces and pipes in contact with electric heating cables are free of burrs and sharp protrusions.
 - 2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install electric heating cable across expansion joints according to manufacturer's written recommendations using slack cable to allow movement without damage to cable.
- B. Install electric heating cables after piping has been tested and before insulation is installed.
- C. Install electric heating cables according to IEEE 515.1.
- D. Install insulation over piping with electric cables according to manufacturers guidelines, NFPA 13, and FM Data Sheets.
- E. Install warning tape on piping insulation where piping is equipped with electric heating cables.
- F. Set field-adjustable switches and circuit-breaker trip ranges.
- G. Protect installed heating cables, including nonheating leads, from damage.

3.3 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
 - 1. Test cables for electrical continuity and insulation integrity before energizing.
 - 2. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.

- B. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables.
- C. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION

SECTION 13911 (210553) - IDENTIFICATION FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. Extent of Fire Suppression work to be identified as required by this Section is indicated on drawings and/or specified in other Division 21 Sections.
- B. Types of identification devices specified in this Section include the following:
 - 1. Equipment labels.
 - 2. Valve tags.
 - 3. Hydraulic placards.
 - 4. Pipe labels.
 - 5. Stencils.
- C. Related Sections
 - 1. Division 21 Section 210010 "General Fire Suppression Requirements" for requirements for hydraulic calculations, fire flow test data, obtaining electronic drawings files, shop drawings and record drawings.
 - 2. Division 21 Section 210500 "Common Work Results for Fire Suppression," for materials and methods for wall and floor penetrations.
 - 3. Division 21 Section 210515 "Basic Fire Suppression Piping Material and Methods," for general piping and fitting materials and methods.
 - 4. Division 21 Section 210548 "Seismic Controls for Fire Protection" for seismic bracing requirements.
 - 5. Division 21 Section 211100 "Fire Suppression Water Service Piping," for fire suppression piping starting 5 feet outside the building to within the building.
 - 6. Division 21 Section 211313 "Water-based Fire Suppression Systems" for fire-suppression sprinkler systems inside the building.
 - 7. Division 21 Section 213113 "Electric-Drive Fire Pumps" for fire pumps.
 - 8. Division 21 Section 213116 "Diesel-Drive Fire Pumps" for fire pumps.

1.2 CODES AND STANDARDS:

- A. ANSI Standards: Comply with ANSI A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.
- B. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.

1.3 SUBMITTALS

- A. Product Data: Submit manufacturer's technical product data and installation instructions for each identification material and device required.
- B. Maintenance Data: For each piping system to include in maintenance manuals.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:
 - 1. Material and Thickness: Brass, aluminum, or anodized aluminum, 0.032 inch thick, with predrilled holes for attachment hardware.
 - 2. Background/Letter Color: Red/White or Bare Metal/Black.
 - 3. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

4. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
5. Fasteners: Stainless-steel rivets or self-tapping screws.
6. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch thick, with predrilled holes for attachment hardware.
2. Background/Letter Color: Red/White
3. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch
5. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
6. Fasteners: Stainless-steel rivets or self-tapping screws.
7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

C. Label Content: Include equipment's Drawing designation or unique equipment number,

2.2 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping-system abbreviation and 1/2-inch (13-mm) numbers.
1. Tag Material: Brass, stainless steel, aluminum or anodized aluminum, 0.032 inch thick, with predrilled holes for attachment hardware.
 2. Fasteners: Brass wire-link chain, beaded chain or S-hook.
 3. Valve-Tag Color: Red.
 4. Letter Color: White.

2.3 HYDRAULIC PLACARDS

- A. Provide hydraulic calculation placard attached to each riser in accordance with NFPA 13. Placard shall include location of design area or areas, discharge densities over the design area or areas, required flow and pressures at the base of riser, occupancy classification and maximum permitted storage height and configuration, hose stream allowance included in addition to the sprinkler demand and name of installing contractor. Information shall be permanently and clearly displayed on placard.

2.4 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service and showing flow direction.
- B. Pretensioned Pipe Labels: Pre-coiled, semi-rigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- D. Pipe-Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; pipe size; and an arrow indicating flow direction.
- E. Lettering Size: At least 1-1/2 inches high.
- F. Pipe-Label Colors:
1. Background Color: Red.
 2. Letter Color: White.

2.5 STENCILS

- A. Stencils: Prepared with letter sizes according to ASME A13.1 for piping; and minimum letter height of 3/4 inch for access panel and door labels, equipment labels, and similar operational instructions.

1. Stencil Material: Fiberboard or metal.
2. Stencil Paint: Exterior, gloss, alkyd enamel or acrylic enamel, black unless otherwise indicated. Paint may be in pressurized spray-can form.
3. Identification Paint: Exterior, alkyd enamel or acrylic enamel in colors according to ASME A13.1 unless otherwise indicated.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT IDENTIFICATION

- A. General: Install metal or plastic equipment marker on or near each major item of fire protection equipment and each operational device, as specified herein if not otherwise specified for each item or device. Provide signs for the following general categories of equipment and operational devices:

1. Pumps
2. Tanks and pressure vessels
3. Backflow Preventers

3.3 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in fire suppression systems

3.4 LABEL INSTALLATION

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install or permanently fasten labels on each major piece of equipment.
- D. Locate equipment labels where accessible and visible.
- E. Piping Color-Coding: Painting of piping is specified in Division 09 Section "Interior Painting."
- F. Pipe-Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 1. Near each valve and control device.
 2. Near each branch connection excluding short takeoffs. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 3. At access doors, manholes, and similar access points that permit view of concealed piping.
 4. Near major equipment items and other points of origination and termination.
 5. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
 6. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 13925 (211100) - FIRE SUPPRESSION WATER SERVICE PIPING

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. The extent of this fire suppression water service piping shall be as specified herein. Contractor shall be responsible for preparation of design drawings, fabrication and installation for complete fire suppression water service piping for the building.
- B. This section specifies:
 - 1. Materials and equipment for fire suppression water service piping and related components starting 5-feet outside the building and the following:
 - a. Service entrance piping through floor into the building.
 - b. Service entrance piping through wall into the building.
- C. This section includes:
 - 1. Pipe and fittings
 - 2. Valves
 - 3. Post indicating valves
 - 4. Backflow preventers
 - 5. Fire department connection
 - 6. Alarm devices
 - 7. Accessories
- D. Provide facility fire suppression water service piping during construction in accordance with code.
- E. Related Documents: Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 21 Specifications Sections, apply to this section.
- F. Related Sections:
 - 1. Division 31 Section "Earthwork," for trenching and backfilling materials and methods for underground piping installations.
 - 2. Division 33 Section "Water Service Systems," for water service piping beginning from 5'-0" outside the building and extending to the water service line.
 - 3. Division 21 Section 210010 "General Fire Suppression Requirements" for requirements for hydraulic calculations, fire flow test data, obtaining electronic drawings files, shop drawings and record drawings.
 - 4. Division 21 Section 210500 "Common Work Results for Fire Suppression," for materials and methods for wall and floor penetrations.
 - 5. Division 21 Section 210533 "Heat Tracing for Fire-Suppression Piping" for heat tracing requirements.
 - 6. Division 21 Section 210548 "Seismic Controls for Fire Protection" for seismic bracing requirements.
 - 7. Division 21 Section 210553 "Identification for Fire Suppression Piping and Equipment" for labeling and identification of installed fire suppression equipment.
 - 8. Division 21 Section 211313 "Water-based Fire Suppression Systems" for fire suppression sprinkler systems inside the building.
 - 9. Division 21 Section 213113 "Electric-Drive Fire Pumps" for fire pumps.
 - 10. Division 21 Section 213116 "Diesel-Drive Fire Pumps" for fire pumps.
 - 11. Division 21 Section 213220 "Water Storage Tank

1.2 SUBMITTALS

- A. Submit shop drawings prepared in accordance with Division 21 Section 210010 “General Fire Suppression Requirements.”
- B. Detail precast concrete vault assemblies and indicate dimensions, method of field assembly, and components.

1.3 QUALITY ASSURANCE

- A. Contractor shall be responsible for all permits and fees associated with preparation and approval of Drawings and the installation and approval of the Facility Fire Suppression Water Service Piping.
- B. Regulatory Requirements:
 - 1. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.
 - 2. Comply with standards of authorities having jurisdiction for fire suppression water service piping, including materials, hose threads, installation, and testing.
- C. Piping materials shall bear label, stamp, or other markings of specified testing agency.
- D. NFPA 24, “Private Fire Service Mains and their Appurtenances”, Latest Edition. Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire suppression water service piping.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Preparation for Transport: Prepare valves according to the following:
 - 1. Ensure that valves are dry and internally protected against rust and corrosion.
 - 2. Protect valves against damage to threaded ends and flange faces.
 - 3. Set valves in best position for handling.
- B. During Storage: Use precautions for valves, including fire hydrants, according to the following:
 - 1. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
 - 2. Protect from weather. Store indoors and maintain temperature higher than ambient dew point temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.
- C. Handling: Use sling to handle valves if size requires handling by crane or lift. Rig valves to avoid damage to exposed parts. Do not use hand wheels or stems as lifting or rigging points.
- D. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.
- E. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.
- F. Protect flanges, fittings, and specialties from moisture and dirt.
- G. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

1.5 PROJECT CONDITIONS

- A. Interruption of Existing Fire Suppression Water Service Piping: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water distribution service according to requirements indicated:
 - 1. Notify Owner no fewer than seven days in advance of proposed interruption of service.
 - 2. Do not proceed with interruption of service without Owner's written permission.

PART 2 - PRODUCTS AND MATERIALS

2.1 GENERAL

- A. Refer to Division 21 Section 210515 "Basic Fire Suppression Piping Materials and Methods" for general piping fittings and piping specialty requirements.

2.2 DUCTILE-IRON PIPE AND FITTINGS.

- A. Mechanical-Joint, Cement Lined Ductile-Iron Pipe: AWWA C151/C104, with mechanical-joint bell and plain spigot end.
- B. Mechanical-Joint, Cement Lined Ductile-Iron Fittings: AWWA C110/C104, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
 - 1. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
- C. Flanges: ASME B16.1, Class 125, cast iron.
- D. Ductile-Iron Deflection Fittings:
 - 1. Description: Compound, ductile-iron coupling fitting with sleeve and one or two flexing sections for up to 15-degree deflection, gaskets, and restrained-joint ends complying with AWWA C110 or AWWA C153. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
 - 2. Pressure Rating: 250 psig minimum.

2.3 SERVICE ENTRANCE ASSEMBLY

- A. At Contractor's option, the service entrance is permitted to utilize a one-piece riser assembly to enter the building.
 - 1. Assembly shall be Ames Fire and Waterworks Series IBR or approved equivalent. In-Building Riser shall be composed of a single extended 90 degrees fitting of fabricated 304 stainless steel tubing, maximum working pressure 200 psi. The fitting shall have a grooved-end connection on the outlet (building) side and a CIPS coupler on the inlet (underground) side. The grooved end shall include a coupler and cap to facilitate testing of the underground piping.

2.4 ENCASEMENT FOR PIPING

- A. Standard: ASTM A 674 or AWWA C105.
- B. Material: Linear low-density PE film of 0.008-inch (0.20-mm) or High-density, cross-laminated PE film of 0.004-inch (0.10-mm) minimum thickness.
- C. Form: Sheet or tube.

2.5 CURB VALVES

- A. Curb Valves: Comply with AWWA C800 for high pressure service line valves. Valve has bronze body, ground-key plug or ball, wide tee head, and inlet and outlet matching service piping material.
- B. Service Boxes for Curb Valves: Similar to AWWA M44 requirements for cast-iron valve boxes. Include cast-iron telescoping top section of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over curb valve and with a barrel approximately 3 inches in diameter.
 - 1. Shutoff Rods: Steel; with tee-handle with one pointed end, stem of length to operate deepest buried valve, and slotted end matching curb valve.
- C. Meter Valves: Comply with AWWA C800 for high pressure service line valves. Include angle- or straight-through-pattern bronze body, ground-key plug or ball, and wide tee head, with inlet and outlet matching service piping material.

2.6 GATE VALVES

- A. UL Listed or FM Approved Gate Valves:
 - 1. UL listed or FM approved, Iron, Non-rising Stem Gate Valves:
 - a. Description: Iron body and bonnet, bronze seating material, and inside screw.
 - b. Standards: UL 262 listing and "Approval Guide," published by FM Global, approval.
 - c. Pressure Rating: 175 psig minimum.
 - d. End Connections: Mechanical or push-on joint.
 - e. Indicator-Post Flange: Include on valves used with indicator posts.
 - 2. UL-Listed or FM-Approved, Iron, OS&Y, Gate Valves:
 - a. Description: Iron body and bonnet and bronze seating material.
 - b. Standards: UL 262 listing and "Approval Guide," published by FM Global, approval.
 - c. Pressure Rating: 175 psig minimum.
 - d. End Connections: Flanged or grooved.

2.7 GATE VALVE ACCESSORIES AND SPECIALTIES

- A. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately 5-inches (125 mm) in diameter.
 - 1. Operating Wrenches: Steel; with tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.
- B. Indicator Posts:
 - 1. Description: Vertical-type, cast-iron body with operating wrench, extension rod, and adjustable cast-iron barrel of length required for depth of burial of valve.
 - 2. Standards: UL 789 listing and "Approval Guide," published by FM Global, approval.

2.8 CHECK VALVES

- A. UL listed or FM approved Check Valves:
 - 1. Description: Swing-check type with pressure rating, rubber-face checks unless otherwise indicated, and ends matching piping.
 - 2. Standards: UL 312 listing and "Approval Guide," published by FM Global, approval.
 - 3. Pressure Rating: 175 psig minimum.

2.9 DETECTOR CHECK VALVES

- A. Description: Galvanized cast-iron body, bolted cover with air bleed device for access to internal parts, and flanged ends. Include one-piece bronze disc with bronze bushings, pivot, and replaceable seat. Include threaded bypass taps in inlet and outlet for bypass meter connection. Set valve to allow minimal water flow through bypass meter when major water flow is required.
 - 1. Standards: UL 312 listing and "Approval Guide," published by FM Global, approval.
 - 2. Pressure Rating: 175 psig minimum.
- B. Water Meter: AWWA C700, disc type, at least one-fourth size of detector check valve. Include meter, bypass piping, gate valves, check valve, and connections to detector check valve.

2.10 PRESSURE-REDUCING VALVES

- A. Water Control Valves:
 - 1. Description: Pilot-operation, diaphragm-type, single-seated main water control valve with AWWA C550 or FDA-approved, interior epoxy coating. Include small pilot control valve, restrictor device, specialty fittings, and sensor piping.
 - 2. Pressure Rating: Initial pressure of 150 psig minimum.
 - 3. Main Valve Body: Cast or ductile iron with AWWA C550 or FDA-approved, interior epoxy coating; or stainless-steel body.
 - a. Size: 10"
 - b. Pattern: Globe valve design.
 - c. Trim: Stainless steel.
 - 4. Design Flow Rate: 2500 gpm.
 - 5. Design Inlet Pressure: 230 psig.
 - 6. Design Outlet Pressure Setting: 175 psig.
 - 7. End Connections: flanged.

2.11 BACKFLOW PREVENTERS

- A. Double Check Backflow Preventer Assembly:
 - 1. Standard: ASSE 1015.
 - 2. Operation: Continuous-pressure applications unless otherwise indicated.
 - 3. Body Material: Cast iron with fused epoxy coating or stainless steel.
 - 4. End Connections: Threaded, flanged or grooved.
 - 5. Accessories: Supervised butterfly or OS&Y gate valves. Backflow preventer and valves shall be listed as an assembly.
- B. Double Check Detector Backflow Preventer Assembly:
 - 1. Standards: ASSE 1048 and UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, approval.
 - 2. Operation: Continuous-pressure applications.
 - 3. Body Material: Cast iron with interior lining complying with AWWA C550 or that is FDA approved; Steel with interior lining complying with AWWA C550 or that is FDA approved; or Stainless steel.
 - 4. End Connections: Threaded, flanged or grooved.
 - 5. Accessories:
 - a. Supervised butterfly or OS&Y gate valves. Backflow preventer and valves shall be listed as an assembly.
 - b. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

- C. Reduced Pressure Zone (RPZ) Backflow Preventer Assembly:
 - 1. Standard: ASSE 1013 and UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, approval.
 - 2. Operation: Continuous-pressure applications.
 - 3. Body Material: Cast iron with fused epoxy coating or stainless steel.
 - 4. End Connections: Threaded, flanged or grooved.
 - 5. Accessories:
 - a. Supervised butterfly or OS&Y gate valves. Backflow preventer and valves shall be listed as an assembly.
 - b. Air-Gap Fitting: ASME A112.1.2, matching backflow preventer connection.

- D. Reduced Pressure Zone (RPZ) Detector Backflow Preventer Assembly:
 - 1. Standards: ASSE 1047 and UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, approval.
 - 2. Operation: Continuous-pressure applications.
 - 3. Body Material: Cast iron with interior lining complying with AWWA C550 or that is FDA approved; Steel with interior lining complying with AWWA C550 or that is FDA approved; or Stainless steel.
 - 4. End Connections: Threaded, flanged or grooved.
 - 5. Accessories:
 - a. Supervised butterfly or OS&Y gate valves. Backflow preventer and valves shall be listed as an assembly.
 - b. Air-Gap Fitting: ASME A112.1.2, matching backflow preventer connection.
 - c. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

2.12 CONCRETE VAULTS

- A. Description: Precast, reinforced concrete vault, designed for A-16 load designation according to ASTM C 857, and made according to ASTM C 858.
- B. Ladder: ASTM A 36/A 36M, steel ladder; or PE-encased steel steps.
- C. Manhole: ASTM A 536, Grade 60-40-18, ductile-iron traffic frame and cover.
 - 1. Dimension: 24-inch (610-mm) minimum diameter unless otherwise indicated.
- D. Drain: ASME A112.6.3, cast-iron floor drain with outlet of size indicated. Include body anchor flange, light-duty cast-iron grate, bottom outlet, and integral or field-installed bronze ball or clapper-type backwater valve.

2.13 FIRE DEPARTMENT CONNECTION

- A. Description: Freestanding, Storz-type with aluminum body, threaded bottom outlet. Include lugged caps, gaskets, and chains; lugged swivel connection and drop clapper for each hose connection inlet; 18-inch high brass sleeve; and round escutcheon plate.
 - 1. Standard: UL 405.
 - 2. Pressure Rating: 175 psig (minimum).
 - 3. Body Material: Corrosion-resistant metal
 - 4. Finish: Rough brass
 - 5. Caps: Powder coated red, lugged type, with gasket and chain.
 - 6. Outlet: 30° elbow.
 - 7. Size: NPS 6
 - 8. Check valve: Sized per NFPA 13 with 3/4" ball drip drain piped to the exterior of the building.

9. Escutcheon Plate Marking: "AUTO SPKR" as applicable."

PART 3 - EXECUTION

3.1 EARTHWORK

- A. Comply with excavating, trenching, and backfilling requirements in Section 312000 "Earth Moving."

3.2 PREPARATION FOUNDATION FOR BELOW GROUND WATER DISTRIBUTION PIPE AND FITTINGS

- A. Grade trench bottoms to provide a smooth, firm, and stable foundation, free from rock, throughout the length of the pipe.
- B. Remove unstable, soft, and unsuitable materials at the surface upon which pipes are to be laid and backfill with clean sand or pea gravel to indicated elevation.
- C. Pipe Beds:
1. Ductile Iron Pipe: Shape bottom of trench to fit bottom of pipe for 90-degrees (bottom 1/4 of the circumference). Fill unevenness with tamped sand backfill. At each pipe joint dig bell holes to relieve the bell of the pipe of all loads, and to ensure continuous bearing of the pipe barrel on the foundation. Provide first layer of pea gravel backfill 6-inch above pipe, tamp backfill with mechanical tamper to 85% to 95% compaction. For piping with rock trench bottoms, provide sand pipe bed 6-inch underneath and around sides of pipe up to middle half of the pipe, including fittings.
- D. Provide backfill above top of pipe bed as required for field conditions. Refer to Division 21 Section 210010 "General Fire Suppression Requirements" for materials and methods for backfill.

3.3 PIPE APPLICATIONS

- A. Piping below grade: Provide cement lined ductile iron pipe and fittings with mechanical joints.

3.4 PIPING INSTALLATION

- A. Comply with NFPA 24 for fire service main piping materials and installation.
- B. Water main connection: Arrange with water utility company for tap of size and in location indicated in water main or tap water main according to the requirements of the water utility company.
- C. Install ductile-iron, water service piping according to AWWA C600 and AWWA M41.
1. Install encasement for piping according to ASTM A 674 or AWWA C105.
- D. Bury piping with depth of cover over top of piping at least 30-inches, with top at least 12-inches below level of maximum frost penetration, and according to the following:
1. Under Driveways: With at least 36-inches of cover over top.
 2. Under Railroad Tracks: With at least 48-inches of cover over top.
- E. Install piping by tunneling or jacking, or combination of both, under streets and other obstructions that cannot be disturbed.
- F. Extend fire suppression water service piping and connect to water supply source and building fire suppression water service piping systems at locations and pipe sizes indicated.

1. Terminate fire suppression water service piping at building wall until building water piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building's fire suppression water service piping systems when those systems are installed.
- G. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.
 - H. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 210515 "Basic Fire Suppression Piping Materials and Methods."
 - I. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 210515 "Basic Fire Suppression Piping Materials and Methods."
 - J. Make connections between underground and aboveground piping using an approved transition piece strapped or fastened to prevent separation.
- 3.5 JOINT CONSTRUCTION
- A. See Division 21 Section 210515 "Basic Fire Suppression Piping Materials and Methods" for general joint construction requirements.
 - B. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure rating same as or higher than systems pressure rating for aboveground applications unless otherwise indicated.
 - C. Remove scale, slag, dirt, and debris from outside and inside of pipes, tubes, and fittings before assembly.
 - D. Ductile-Iron Piping, Gasketed-Joints for Fire Service Main Piping: UL 194.
 - E. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with bolts according to ASME B31.9.
- 3.6 ANCHORAGE INSTALLATION
- A. Anchorage, General: Install water distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:
 1. Locking mechanical joints.
 2. Bolted flanged joints.
 - B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches in fire suppression water service piping according to NFPA 24 and the following:
 1. Gasketed-Joint, Ductile-Iron, Water Service Piping: According to AWWA C600.
 - C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.
- 3.7 VALVE INSTALLATION
- A. See Division 21 Section 210515 "Basic Fire Suppression Piping Materials and Methods" for general valve installation requirements.
 - B. UL-Listed or FM-Approved Gate Valves: Comply with NFPA 24. Install each underground valve(s) in vaults with stem pointing up, and with vertical cast-iron indicator post.

- C. UL-Listed or FM-Approved Valves Other Than Gate Valves: Comply with NFPA 24.
- D. Pressure-Reducing Valves: Install in vault or aboveground between shutoff valves. Install full-size valved bypass.
- E. Support valves and piping, not direct buried, on concrete piers. Comply with requirements for concrete piers in Division 03.

3.8 ROUGHING-IN FOR WATER METERS

- A. Rough-in piping and specialties for water meter installation according to utility company's written instructions

3.9 BACKFLOW PREVENTER INSTALLATIONS

- A. Install backflow preventer at each fire protection entry in compliance with the plumbing code and Authority Having Jurisdiction. Locate in an accessible and testable location.
 - 1. Install air gap fitting and pipe relief outlet drain without valves to nearest floor drain or exterior.
- B. Install backflow preventers of type, size, and capacity indicated. Include valves and test cocks.
- C. Do not install backflow preventers that have relief drain in vault or in other spaces subject to flooding.
- D. Do not install bypass piping around backflow preventers.
- E. Support NPS 2-1/2 and larger backflow preventers with pipe supports attached to the floor with anchor bolts where indicated on the drawings.
- F. Test backflow preventer per requirements of plumbing or division of cross connection control official.
 - 1. Reports: Prepare backflow preventer test reports signed by the plumbing or division of cross connection control official and turn over to the Architect upon completion of the project.

3.10 CONCRETE VAULT INSTALLATION

- A. Install precast concrete vaults according to ASTM C 891.

3.11 POST INDICATOR VALVE

- A. Install post indicator valve on the underground supply, as indicated on the Drawings. Post indicator valve shall be electronically supervised-open.

3.12 FIRE DEPARTMENT CONNECTION INSTALLATIONS

- A. Install automatic (ball drip) drain valve at each check valve for fire department connection, to drain piping between fire department connection and check valve. Install drain piping to and discharge to outside building.
- B. Install connections between 18- and 36-inches above finished grade and as indicated on the Drawings.
- C. Install mechanical sleeve seal at pipe penetration in outside walls.
- D. Provide minimum 36-inch working clearance around connection for fire department access.

- E. Install protective pipe bollards on two sides of each fire department connection. Pipe bollards are specified in Section 055000 "Metal Fabrications."

3.13 FIELD QUALITY CONTROL

- A. Flush, test, and inspect in accordance with NFPA 24.
- B. Leave uncovered and unconcealed all new, altered, extended, or replaced water distribution piping until it has been tested and approved. Expose all such work for testing that has been covered or concealed before it has been tested and approved.
- C. Replace piping system components that do not pass the test procedures specified, and retest repaired portion of the system.

3.14 IDENTIFICATION

- A. Install continuous underground detectable warning tape during backfilling of trench for underground fire suppression water service piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Section 312000 "Earth Moving."

3.15 CLEANING

- A. Clean fire suppression water service piping as follows:
 - 1. Flush new piping systems and parts of existing systems that have been altered, extended, or repaired before use.
 - 2. Use flushing procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in NFPA 24 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.
- B. Prepare reports of flushing activities.

END OF SECTION

SECTION 13930 (211313) - WATER BASED FIRE SUPPRESSION SYSTEMS

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. The extent of this fire sprinkler system shall be as specified herein. Contractor shall be responsible for preparation of design drawings, hydraulic calculations, fabrication and installation for complete fire sprinkler protection for the building.
- B. Section Includes:
1. Pipes, fittings, and specialties.
 2. Fire protection valves.
 3. Sprinkler pipe fittings.
 4. Sprinklers.
 5. Alarm devices.
 6. Control panels.
- C. Related Sections:
1. Division 21 Section 210010 "General Fire Suppression Requirements" for requirements for hydraulic calculations, obtaining electronic drawings files, shop drawings and record drawings.
 2. Division 21 Section 210500 "Common Work Results for Fire Suppression," for materials and methods for wall and floor penetrations.
 3. Division 21 Section 210515 "Basic Fire Suppression Piping Material and Methods," for general piping and fitting materials and methods.
 4. Division 21 Section 210533 "Heat Tracing for Fire-Suppression Piping" for heat tracing requirements.
 5. Division 21 Section 210548 "Seismic Controls for Fire Protection" for seismic bracing requirements.
 6. Division 21 Section 210553 "Identification for Fire Suppression Piping and Equipment" for labeling and identification of installed fire suppression equipment.
 7. Division 21 Section 211100 "Fire Suppression Water Service Piping" for fire suppression piping starting 5 feet outside the building to within the building.
 8. Division 21 Section 211200 "Fire Suppression Standpipes" for fire-suppression standpipes inside the building.
 9. ~~Division 21 Section 213113 "Electric Drive Fire Pumps" for fire pumps.~~
 10. Division 21 Section 213116 "Diesel-Drive Fire Pumps" for fire pumps.
 11. Division 21 Section 213220 "Water Storage Tank"

1.2 SYSTEM DESCRIPTION

- A. Fire protection system in the location or portion of the building is a combination of Wet Pipe, and Dry Pipe Systems.
1. Wet Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to a water supply. Water discharges immediately from sprinklers when they are opened. Sprinklers open when heat melts a fusible link or destroys a frangible device. Hose connections are included if indicated.
 2. Dry Pipe Sprinkler System: Automatic sprinklers are attached to piping containing compressed air. Opening of sprinklers releases compressed air and permits water pressure to open a dry pipe valve. Water then flows into piping and discharges from sprinklers that are open.

- B. Provide system(s) as specified herein and as shown on drawings. The sprinkler system shall be supplied by the underground as shown on the Drawings.
- C. Provide dry pipe fire protection system for non-heated spaces and other areas of building subject to freezing including the loading docks and canopies, mansards, and balconies. Portions of systems subject to freezing or temperatures below 40° F shall be protected against freezing as required by NFPA 13. The Contractor shall be responsible for repairs and for all costs incurred from damage caused by freezing of the fire protection system.

1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design fire suppression system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Standard Pressure, Fire Suppression System Component: Listed for 175-psig minimum working pressure.
- C. High Pressure, Fire Suppression System Component: Listed for 250-psig minimum working pressure.
- D. Performance Criteria
 - 1. Protect Low bay area: with a sprinkler system designed in accordance with FM Data Sheets 8-9 Storage of Class 1,2,3,4 and plastics, Table 17B, 10 Sprinklers K25 ESFR @ 50 PSI.
 - 2. Protect High bay area over KNAPP Racks FM Data Sheets 8-34, Protection of Automated Storage and Retrieval Systems. Table 19. . Design criteria will depend on the elevation of storage above top level and vertical distance between top level and ceiling (K25 ESFR sprinklers)
 - 3. KNAPP racks per UL testing K25 sprinklers, 8 sprinklers (4 sprinkler on 2 adjacent lines) @ 35 PSI. 4 Sprinklers (2 sprinklers on 2 adjacent lines) @ 50 PSI.
 - 4. Protect Roof deck over Platform area with a sprinkler system designed in accordance to FM Data Sheets 8-9 Storage of Class 1,2,3,4 and plastics, Table 8, 9 Sprinklers K25 ESFR @ 20 PSI
 - 5. Protect Material Handling Equipment in building, unless noted otherwise, with a sprinkler system designed in accordance with FM Data Sheets 8-34, Protection of Automated Storage and Retrieval Systems.
 - 6. Protect Mezzanine area of work, unless noted otherwise, with a sprinkler system designed in accordance with FM Data Sheets 3-26 Fire Protection for Non-storage occupancies. 0.30gpm/2500sq.ft. for ceilings 30'-0" in height. 30'-0" to 45'-0" utilize sprinkler design .0.30gpm/3600sq.ft.
 - 7. Protect mechanical and electrical areas/rooms with a sprinkler system designed in accordance with NFPA 13 for Ordinary Hazard Group 1 requirements.
 - 8. Protect storage areas/rooms, unless noted otherwise, with a sprinkler system designed in accordance with NFPA 13 for Ordinary Hazard Group 2 requirement.
 - 9. Other Occupancy Hazard Classifications.
 - a. Building Service Areas: Ordinary Hazard Group 1.
 - b. Automobile Parking Areas: Ordinary Hazard, Group 1.
 - c. Machine Shops: Ordinary Hazard, Group 2.
 - d. Office and Public Areas: Light Hazard.
 - 10. Design Criteria for Automatic-Sprinkler Piping Design:
 - a. Light Hazard Occupancy:
 - 1) Minimum Design Density: 0.10 gpm over 1,500 sq.ft. area.
 - 2) Maximum protection area per sprinkler: 225 sq.ft.
 - 3) Minimum Combined Hose Stream Demand Requirement: 100 gpm for 30 minutes.
 - b. Ordinary Hazard Group 1 Occupancy:
 - 1) Minimum Design Density: 0.15 gpm over 1,500 sq.ft. area.
 - 2) Maximum area per sprinkler: 130 sq.ft..
 - 3) Minimum Combined Hose Stream Demand: 250 gpm for 60 to 90 minutes.
 - c. Ordinary Hazard Group 2 Occupancy:
 - 1) Minimum Design Density: 0.20 gpm over 1,500 sq.ft. area.

- 2) Maximum protection area per sprinkler: 130 sq.ft.
 - 3) Minimum Combined Hose Stream Demand: 250 gpm for 60 to 90 minutes.
 - d. Extra Hazard Group 1 Occupancy:
 - 1) Minimum Design Density: 0.30 gpm over 2,500-sq.ft. area.
 - 2) Maximum protection area per sprinkler: 100 sq.ft.
 - 3) Minimum Combined Hose Stream Demand: 500 gpm for 90 to 120 minutes.
 - e. Extra Hazard Group 2 Occupancy:
 - 1) Minimum Design Density: 0.40 gpm over 2,500-sq.ft. area.
 - 2) Maximum protection area per sprinkler: 100 sq.ft.
 - 3) Minimum Combined Hose Stream Demand: 500 gpm for 90 to 120 minutes.
 - f. Special Occupancy Hazard: As determined by authorities having jurisdiction.
 - g. Other:
 - 1) Maximum protection area per sprinkler: 100 sq.ft.
 - 2) Minimum Combined Hose Stream Demand: 500 gpm for 120 minutes.
- E. The criteria listed herein shall not preclude the use of extended coverage or special application fire sprinklers designed and installed in accordance with their listing and manufacturer's instructions.
- F. The hydraulic area of operation may not be reduced as allowed by NFPA 13 for areas utilizing quick response sprinklers in unfinished shell spaces. For all other areas, the hydraulic area of operation shall not be reduced as allowed by NFPA 13 for areas utilizing quick response sprinklers unless specifically approved by the Engineer via a formally submitted RFI.
- G. Sprinkler spacing shall conform to NFPA 13 and shall not exceed 225 SF per sprinkler in unfinished shell spaces.
- H. The hydraulic area of operation shall be increased by 30% without revising the density for areas with sloped ceilings with a pitch exceeding 1 in 6 (16.7% slope) in accordance with NFPA 13.
- I. The hydraulic area of operation shall be increased by 30% without revising the density for dry-pipe systems in accordance with NFPA 13.

1.4 SUBMITTALS

- A. Submit shop drawings prepared in accordance with NFPA 13 as specified in Division 21 Section 210010 "General Fire Suppression Requirements."

1.5 QUALITY ASSURANCE

- A. Contractor shall be responsible for all permits and fees associated with preparation and approval of Drawings and the installation and approval of a fire sprinkler system.
- B. Tests and Inspections: Arrange, test, and pay for all tests required by code and authorities having jurisdiction.

1.6 PROJECT CONDITIONS

- A. Interruption of Existing Fire Sprinkler Protection: Do not interrupt fire sprinkler system protection to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary fire sprinkler protection according to requirements indicated:
 - 1. Notify Owner no fewer than two days in advance of proposed interruption of fire-sprinkler protection.
 - 2. Do not proceed with interruption of fire sprinkler protection without Owner's written permission.

1.7 COORDINATION

- A. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.

1.8 EXTRA MATERIALS

- A. Sprinkler Wrenches: Furnish to Owner, 2 sprinkler wrenches for each type of sprinkler installed.
- B. Sprinklers: Furnish extra sprinklers of each style, type and finish included in the project as required by NFPA 13.
- C. Sprinkler Cabinet and Wrench: Provide a finished steel cabinet(s), suitable for wall mounting, with hinged cover and space for the quantity of spare sprinklers provided plus sprinkler wrench(es).
- D. Provide hydraulic calculation placard attached to each riser.

PART 2 - PRODUCTS AND MATERIALS

2.1 EQUIPMENT

- A. All fire protection equipment shall be UL listed and FM approved for its intended use and in conformance with the applicable NFPA documents.

2.2 PIPE AND FITTING MATERIALS

- A. Refer to Division 21 Section 210515 "Basic Fire Suppression Piping Materials and Methods" for specifications on piping and fittings.

2.3 HANGERS

- A. Shall be UL listed and shall meet requirements of NFPA 13 for type, dimension and location.

2.4 GENERAL DUTY VALVES

- A. Refer to Division 21 Section 210515 "Basic Fire Suppression Piping Materials and Methods" for specifications on general duty valves.

2.5 SPECIALTY VALVES

- A. General Requirements:
 - 1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by Factory Mutual, approval.
 - 2. Pressure Rating:
 - a. Standard Pressure Piping Specialty Valves: 175-psig minimum.
 - b. High Pressure Piping Specialty Valves: 250-psig minimum.
 - 3. Body Material: Cast- or ductile- iron.
 - 4. Size: Same as connected piping.
 - 5. End Connections: Flanged or grooved.
- B. Alarm Valves:
 - 1. Standard: UL 193.
 - 2. Design: For horizontal or vertical installation.

3. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gauges, retarding chamber, and fill-line attachment with strainer.
4. Drip Cup Assembly: Pipe drain without valves and separate from main drain piping.
5. Drip Cup Assembly: Pipe drain with check valve to main drain piping.

C. Dry-Pipe Valves:

1. Standard: UL 260.
2. Design: Differential-pressure type.
3. Include UL 1486, quick-opening devices, trim sets for bypass, air supply, drain, priming level, alarm connections, ball drip valves, pressure gauges, drip cup assembly piped with check valve to main drain piping, priming chamber attachment, and fill-line attachment with strainer.
4. Air-Pressure Maintenance Device:
 - a. Type: Automatic device to maintain minimum air pressure in piping.
 - b. Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with 14- to 60-psig adjustable range, and 175-psig outlet pressure.
5. Air Compressor:
 - a. Type: Oil-less, air-cooled
 - b. Standard: UL's "Fire Protection Equipment Directory" listing.
 - c. Motor Horsepower: Fractional.
 - d. Power: 120-V ac, 60 Hz, single phase, hard wired per NEC and manufacturer's requirements.
 - e. Provide combination fused disconnect switch and magnetic starter.

D. Air Release Valve:

1. Provide for all wet pipe sprinkler systems utilizing metallic piping in accordance with one of the following options:
 - a. Manual ball valve with a minimum size of ½ inch (15 mm).
 - b. Listed and/or Factory Mutual Approved automatic valve.

2.6 PIPE FITTINGS

A. Branch Outlet Fittings:

1. Standard: UL 213.
2. Pressure Rating: 175-psig minimum.
3. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
4. Type: Mechanical-T and -cross fittings.
5. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
6. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
7. Branch Outlets: Grooved, welded or threaded.

B. Flow Detection and Test Assemblies:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, approval.
2. Pressure Rating: 175-psig minimum.
3. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
4. Size: Same as connected piping.
5. Inlet and Outlet: Grooved or threaded.

C. Sprinkler Inspector's Test Fittings:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, approval.
2. Pressure Rating: 175-psig minimum.

3. Body Material: Cast- or ductile-iron housing with sight glass.
4. Size: Same as connected piping.
5. Inlet and Outlet: Threaded.

D. Flexible Piping Systems:

1. At Contractor's option, UL listed and FM approved flexible piping connections to sprinklers may be used for both acoustical panel and gypsum board ceilings when suitable for their intended use. Piping shall be seismically qualified per ICC-ES AC-156 where required.
2. Description: Connections shall include a leak-tested sprinkler drop with a minimum internal corrugated hose diameter of 1 inch.
3. Flexible piping lengths shall not exceed 6 feet.
4. Installation shall not exceed the minimum bend radius and maximum allowable bends as specified by the manufacturer.
5. Change in direction shall be gradual enough to allow flexible piping to bend without crimping, distorting or reducing internal diameter.

2.7 AUTOMATIC SPRINKLERS

- A. Sprinklers: type and style as indicated or required by application. Sprinkler operating temperatures to comply with NFPA 13. Sprinklers in Light Hazard areas shall be quick response type.
- B. General Requirements:
1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, approval.
 2. Pressure Rating for Automatic Sprinklers: 175-psig minimum.
 3. Pressure Rating for High-Pressure Automatic Sprinklers: 250-psig minimum.
- C. Automatic Sprinklers with Heat-Responsive Element:
1. Early-Suppression, Fast-Response Applications: UL 1767. Tyco Preferred Manufacturer SIN TY9226.
 2. Nonresidential Applications: UL 199.
 3. Characteristics: Nominal 1/2-inch orifice with discharge coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.
- D. Use sprinkler types below for the following applications:
1. Rooms without Ceilings: Upright sprinklers.
 2. Rooms with Suspended Ceilings: Recessed sprinklers as indicated on drawings.
 3. Rooms with Gypsum Board Ceilings: Recessed sprinklers as indicated on drawings>.
 4. Wall Mounting: Sidewall sprinklers.
 5. Spaces Subject to Freezing: Dry pendent or dry sidewall sprinklers as indicated on drawings.
- E. Provide sprinkler types below with finishes indicated.
1. Finished Areas:
 - a. Recessed Sprinklers: SIN TY223 white painted with white escutcheon
 - b. Upright Sprinklers: SIN TY313 Brass
- F. Coordinate sprinkler temperature ratings near heat-producing sources in accordance with NFPA 13.
- G. Sprinklers shall be wax coated where exposed to acids, chemicals, or other corrosive fumes.
- H. Sprinkler Guards: Provide sprinkler guard where sprinklers are less than 7-feet above finished floor; where subject to physical damage, and/or where indicated on drawings. Guard shall be UL 199 listed, wire cage type with fastening device for attaching to sprinkler.

- I. Sprinkler Cabinet and Wrench: Provide a finished steel cabinet, suitable for wall mounting, with hinged cover and space for the appropriate quantity of spare sprinklers plus sprinkler wrench(es).

2.8 ALARM DEVICES

- A. General: Alarm device types shall match piping and equipment connections.
- B. Water Motor Operated Alarm:
 - 1. Standard: UL 753.
 - 2. Type: Mechanically operated, with Pelton wheel.
 - 3. Alarm Gong: Cast aluminum with red-enamel factory finish.
 - 4. Size: 10-inch diameter.
 - 5. Components: Shaft length, bearings, and sleeve to suit wall construction.
 - 6. Inlet: NPS 3/4.
 - 7. Outlet: NPS 1 drain connection.
 - 8. Provide engraved lamacoid plate under Bell lettered "Building Fire Sprinkler System."
- C. Electrically Operated Alarm Bell:
 - 1. Standard: UL 464.
 - 2. Type: Vibrating, metal alarm bell.
 - 3. Size: 6-inch minimum diameter.
 - 4. Finish: Red-enamel factory finish, suitable for outdoor use.
 - 5. Provide engraved lamacoid plate under bell lettered "Building Fire Sprinkler System."
- D. Audible/Visual Alarm Notification Appliances (Horn/Strobe):
 - 1. Standard: UL 1971 combination horn and strobe appliance.
 - 2. Horn: Electric-vibrating-polarized type, 24-V dc; with provision for housing the operating mechanism behind a grille. Comply with UL 464. Horns shall produce a sound-pressure level of 90 dBA, measured 10 feet from the horn.
 - 3. Strobes: Xenon strobe lights complying with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch (25-mm) high letters on the lens.
 - 4. Audible/visual notification appliance shall be exterior, weatherproof with weatherproof backbox.
- E. Water Flow Indicators:
 - 1. Standard: UL 346.
 - 2. Water-Flow Detector: Electrically supervised.
 - 3. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory set, field-adjustable retard element to prevent false signals and tamperproof cover.
 - 4. Type: Paddle operated.
 - 5. Pressure Rating: 250 psig.
 - 6. Design Installation: Horizontal or vertical.
- F. Pressure Switches – Water Flow Alarm Detection:
 - 1. Standard: UL 346.
 - 2. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory set, field adjustable retard element to prevent false signals and tamperproof cover.
 - 3. Type: Electrically supervised water flow switch with retard feature.
 - 4. Pressure Rating: 250 psig.
 - 5. Design Operation: Rising pressure signals water flow.
- G. Pressure Switches – Low/High Air Pressure Supervisory:

1. Standard: UL 346.
2. Components: Two single-pole, double-throw circuit switches for isolated alarm contacts, 7 A, 125-V ac and 0.25 A, 24-V dc.
3. Type: Electrically supervised pressure supervisory switch
4. Pressure Rating: 250 psig.
5. Design Operation: Rising pressure signals excessive supervisory air pressure within the system piping, with lowering pressure signals lack of air pressure within the system piping.

H. Valve Supervisory Switches:

1. Standard: UL 346.
2. Type: Electrically supervised.
3. Components: Single-pole, double-throw switch with normally closed contacts and tamperproof cover.
4. Design: Signals that controlled valve is in other than fully open position.

I. Indicator Post Supervisory Switches:

1. Standard: UL 346.
2. Type: Electrically supervised.
3. Components: Single-pole, double-throw switch with normally closed contacts and tamperproof cover.
4. Design: Signals that controlled indicator post valve is in other than fully open position.

2.9 SPRINKLER WATERFLOW AND SUPERVISORY SYSTEM

A. Provide a Sprinkler Waterflow and Supervisory System control panel in accordance with NFPA 13 and NFPA 72.

1. UL listed, microprocessor based fire alarm control/communicator that provides addressable point monitoring or supports a minimum of 5 zones providing supervising station service. Microprocessor shall be capable of continuously monitoring and reporting system status of AC, standby battery, inputs and telephone line connections. In the event of a fault condition a local audible sound shall be activated and reported to supervising station.
2. Shall have one notification appliance circuit for connection of the exterior bell or horn/strobe.
3. A keypad shall be provided and mounted adjacent to the fire sprinkler remote dialer.
4. Power requirements: primary power, 20-V ac, 60 Hz, 600 mA max; secondary rated 18-V ac, 40 VA. Backup battery: 12-V dc, 7 AH min to 14 AH max, lead acid (gel type).
5. Provide two telephone lines for off site system monitoring in accordance with NFPA 72. Other monitoring methods permitted by NFPA 72 may be used subject to Engineer approval.

B. Supervisory System Wire and Cable

1. Power Branch Circuits: Building wire as specified in Division 26.
2. Fire alarm Wire and Cable: NRTL listed and labeled as complying with NFPA 70 (NEC) Article 760. All wiring, including wiring to existing modified devices and appliances shall be new.
3. Signaling Line, Initiating Device and Notification Appliance Circuits: Power limited fire protective signaling cable, solid copper conductor, 300 volts insulation, suitable for temperature, conditions and location installed. Minimum wire size for initiating device circuits, control circuits and notification appliance circuits shall be determined by calculations and manufacturer's requirements or recommendations. Wire and cable shall be twisted and shielded if recommended by the system manufacturer.
4. The type of cable chosen should be based on fire alarm system requirements, specification requirements and applicable code requirements. Consideration should also be given to the length of cable runs and potential interference.
5. Initiating, notification, and control circuits shall be sized based on 20% additional power consuming devices.
6. Conduit and Boxes: Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Install in accordance with manufacturer's instructions.

3.2 PREPARATION

- A. Perform fire hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.

3.3 WATER SUPPLY CONNECTION

- A. Connect sprinkler piping to water service piping for service entrance to building. Do not connect to underground supply until provided with written documentation that piping has been flushed and pressure tested in accordance with NFPA 13. Comply with requirements for exterior piping in Division 21 Section 211100 "Fire Suppression Water Service Piping."
- B. Connect sprinkler piping to building's interior water distribution piping. Comply with requirements in Division 22 Section 221116 "Domestic Water Piping" for interior piping.
- C. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories indicated at connection to water-service piping. Comply with requirements for backflow preventers in Division 21 Section 211100 "Fire Suppression Water Service Piping."
- D. Wet pipe systems shall be equipped with a listed relief valve not less than ½-inch in size and set to operate at 175 psi or 10 psi in excess of the maximum system pressure, whichever is greater.

3.4 PIPE APPLICATIONS

- A. Piping Below Grade: Refer to Division 21 Section 211100 "Fire Suppression Water Service Piping."
- B. Piping Above Grade: Refer to Division 21 Section 210515 "Basic Fire Suppression Piping Materials and Methods."

3.5 PIPING INSTALLATIONS

- A. Refer to Division 21 Section 210515 "Basic Fire Suppression Piping Materials and Methods" for general fire suppression piping installation requirements.
- B. Piping Standard: Comply with requirements for installation of sprinkler piping in NFPA 13.
- C. Hangers and Supports: Comply with the requirements of NFPA 13. Hanger and support spacing and locations for piping joined with grooved mechanical couplings shall be in accordance with the grooved mechanical coupling manufacturer's written instructions, for rigid systems. Provide protection from damage where subject to earthquake if required by the applicable building code, designed in accordance with NFPA 13. Locate hangers at or directly adjacent to the joist panel points. Provide two nuts on threaded supports to securely fasten the support.
- D. Install test connections sized and located in accordance with NFPA 13 complete with shutoff valve. Test connections may also serve as drain pipes.
- E. Install pressure gauge on the riser or feed main at or near each test connection. Provide pressure gauge with a connection not less than 1/4 inch and having a soft metal seated globe valve, arranged for draining

pipe between gauge and valve. Install gauges to permit removal, and install where they will not be subject to freezing.

- F. Install automatic (ball drip) drain valves to drain piping between fire department connections and check valves. Drain to floor drain or outside building.
- G. Drain dry-type sprinkler system piping.
- H. Pressurize and check preaction sprinkler system piping and air-pressure maintenance devices
- I. Fill wet-type sprinkler system piping with water.
- J. Connect compressed air supply to dry pipe sprinkler piping.
- K. Connect air compressor to the following piping and wiring:
 - 1. Pressure gauges and controls.
 - 2. Electrical power system.
 - 3. Fire-alarm devices, including high- and low-pressure alarm.
- L. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 21 Section 210515 "Basic Fire Suppression Piping Materials and Methods"
- M. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 21 Section 210515 "Basic Fire Suppression Piping Materials and Methods."

3.6 PIPE JOINT CONSTRUCTION

- A. Refer to Division 21 Section 210515 "Basic Fire Suppression Piping Materials and Methods" for general pipe joint construction requirements.

3.7 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and authorities having jurisdiction.
- B. Install listed fire protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable water supply sources.
- D. Specialty Valves:
 - 1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
 - 2. Alarm Valves: Include bypass check valve and retarding chamber drain line connection.
 - 3. Deluge/Preaction Valves: Install in vertical position, in proper direction of flow, and in main supply to deluge system. Install trim sets for drain, priming level, alarm connections, ball drip valves, pressure gauges, priming chamber attachment, and fill-line attachment.
 - a. Install air compressor and compressed air supply piping. Connect 1/4 inch compressor outlet with the 1/4 inch pipe through a shutoff valve to the system side of the deluge valve. Adjust pressure switch to the required setting.
 - b. Air Pressure Maintenance Device: Install shutoff valves to permit servicing without shutting down sprinkler system; bypass valve for quick system filling; pressure regulator or switch to

maintain system pressure; strainer; pressure ratings with 14- to 60-psig adjustable range; and 175-psig maximum inlet pressure.

3.8 SPRINKLER INSTALLATIONS

- A. Use proper tools to prevent damage during installations.
- B. Areas with ceilings: Install sprinklers not less than 6-inches from the edge of a ceiling tile in areas with suspended ceilings, in a symmetrical pattern with lights and outlets.
- C. Install sprinklers in suspended ceilings in center or quarter point of acoustical ceiling panels, in a symmetrical pattern with lights and outlets.
- D. Install sprinklers in a symmetrical pattern with lights and outlets in all other areas with ceilings.
- E. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.
- F. Install sprinklers into flexible, sprinkler hose fittings and install hose into bracket on ceiling grid.
- G. Do not install more than one sprinkler on a one inch outlet unless hydraulic calculations are included to verify performance.

3.9 IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13 and Division 21 Section 210553 "Identification for Fire Suppression Piping and Equipment."
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.10 FIELD QUALITY CONTROL

- A. Perform required tests and inspections.
- B. Tests and Inspections:
 - 1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 3. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
 - 4. Energize circuits to electrical equipment and devices.
 - 5. Start and run air compressors.
 - 6. Coordinate with fire alarm tests. Operate as required.
 - 7. Coordinate with fire pump tests. Operate as required.
 - 8. Verify that equipment hose threads are same as local fire department equipment.
- C. Replace piping system components that do not pass the test procedures specified, and retest repaired portion of the system.

3.11 CLEANING

- A. Clean dirt and debris from sprinklers.
- B. Remove and replace sprinklers with paint other than factory finish.

3.12 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain specialty valves.

3.13 COMMISSIONING

- A. Sprinkler Systems: Test per NFPA 13, NFPA 25 and local authorities requirements. Submit Contractor's Material & Test Certificates for Above Ground Piping. Submit certificates of completion to Authority Having Jurisdiction and Owner.
 - 1. After completion of all installation, tests, etc., and prior to the opening date, the Sprinkler Subcontractor shall instruct the building personnel in the operation of the sprinkler system. Special care shall be taken to make sure the building personnel:
 - a. Will immediately recognize whether the system control valves are in an 'Open' position or a 'Closed' position.
 - b. Will know how to drain the system.
 - c. Will know how to test the flow switches, tamper switches and alarm system.
 - d. Will know how to test the dry pipe/preaction valve.
 - e. Will know how to make complete weekly inspection.
 - f. Will know how to perform periodic maintenance of the Fire Sprinkler System.
- B. Fire Alarm Equipment: Test per NFPA 25, NFPA 72 and local authorities requirements in the presence of the Owner. Submit certificates of completion to authority having jurisdiction and Owner.
- C. Preaction System: Test per NFPA 13, NFPA 25, NFPA 72 and local authorities requirements in the presence of the Owner. Submit certificates of completion to authority having jurisdiction and Owner.

END OF SECTION

SECTION 13940 (213116) - DIESEL-DRIVE, CENTRIFUGAL FIRE PUMPS

PART 1 - GENERAL

1.1 SUMMARY

- A. The extent of this fire pump system shall be as specified herein. Contractor shall be responsible for preparation of design drawings, hydraulic calculations, fabrication, and installation for complete fire pump system for the building.
- B. Section Includes:
 - 1. Single-stage, split-case fire pumps.
 - 2. Diesel engine.
 - 3. Fire-pump accessories and specialties.
 - 4. Fuel oil storage.
 - 5. Grout.
- C. Related Requirements:
 - 1. Division 21 Section 13900 (210010) "General Fire Suppression Requirements" for requirements for hydraulic calculations, obtaining electronic drawings files, shop drawings and record drawings.
 - 2. Division 21 Section 13905 (210500) "Common Work Results for Fire Suppression," for materials and methods for wall and floor penetrations.
 - 3. Division 21 Section 13907 (210515) "Basic Fire Suppression Piping Material and Methods," for general piping and fitting materials and methods.
 - 4. Division 21 Section 13911 (210553) "Identification for Fire Suppression Piping and Equipment" for labeling and identification of installed fire suppression equipment.
 - 5. Division 21 Section 13925 (211100) "Fire Suppression Water Service Piping" for fire suppression piping starting 5 feet outside the building to within the building.
 - 6. Division 21 Section 13930 (211313) "Water Based Fire Suppression Systems" for fire suppression sprinkler systems inside the building.

1.2 SYSTEM DESCRIPTION

- A. General: Provide a diesel, horizontal split case fire booster pump, complete with jockey pump, fire and jockey pump controllers and all necessary equipment and accessories to supply the sprinkler and/or standpipe system. The fire booster pump, associated equipment and piping shall be installed where indicated on the Drawings. Provide in accordance with the latest issue of NFPA 20.
- B. Pump Conditions: Remote indication of all monitor switches, circuit breaker open, low pump room temperature (below 45° F), pump running, and all signals required by NFPA 20. Reference: Division 26 for WIRING.
- C. Quality Assurance: Pump manufacturer shall have unit responsibility for proper operation of the complete unit, and provide services of a factory trained technician to supervise installation, and to attend final field acceptance tests.
- D. Operation: The fire booster pump shall be connected to an automatic water supply and supply the fire sprinkler system(s). Fire pump shall be automatic starting following pressure loss within the sprinkler system. All drains shall be piped to the exterior of the building.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fire pump.
 - 2. Include rated capacities, operating characteristics, certified performance test curves, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For each fire pump.
 - 1. Include plans, elevations, sections, and mounting details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Detail fabrication and assembly of fire pumps.
 - 4. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
 - 5. Include diagrams for power, signal, and control wiring.
- C. Delegated-Design Submittal: For fire pumps.
 - 1. Include design calculations for selecting vibration isolators and for designing vibration isolation bases.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of fire pump.
- B. Source quality-control reports.
- C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fire pumps to include in operation and maintenance manuals.
- B. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
- C. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor-based logic controls.
- D. Field quality-control reports to include pump acceptance test documentation.

1.6 QUALITY ASSURANCE

- A. Contractor shall be responsible for all permits and fees associated with preparation and approval of Drawings and the installation and approval of a fire booster pump.
- B. Tests and Inspections: Arrange, test, and pay for all tests required by code and authorities having jurisdiction.

- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. NFPA Compliance: Comply with NFPA 20, "Installation of Stationary Pumps for Fire Protection."
- E. Source Limitations: Obtain fire pump controllers and all associated equipment from single source or producer.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.

1.8 PROJECT CONDITIONS

- A. Ambient Temperature Rating: Not less than 40 deg F (5 deg C) and not exceeding 122 deg F (50 deg C) unless otherwise indicated.

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate layout and installation of controllers with other construction including conduit, piping, fire pump equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels. Ensure that controllers are within sight of fire pump drivers

2.1 PERFORMANCE REQUIREMENTS

- A. Environmental Conditions:
 - 1. Ambient Temperature: 17 to 85 deg F.
 - 2. Relative Humidity: 57 to 80 percent.
 - 3. Altitude: Sea level to 597 feet.
- B. Pump Equipment, Accessory, and Specialty Pressure Rating: 175 psig (1200 kPa) minimum unless higher pressure rating is indicated.

2.2 ASSEMBLY DESCRIPTION

- A. Description: Factory-assembled and -tested fire-pump and driver unit.
- B. Finish: Red paint applied to factory-assembled and -tested unit before shipping.
- C. NFPA Compliance: Comply with NFPA 20.

2.3 SINGLE-STAGE, SPLIT-CASE FIRE PUMPS

- A. Available Manufactures:
 - 1. Patterson Pump Company
 - 2. Peerless Pump; Groudfos Group.
 - 3. SPP Pumps

- B. Pump:
 - 1. Standard: UL 448, for split-case pumps for fire service.
 - 2. Casing: Axially split case, cast iron with ASME B16.1 pipe-flange connections.
 - 3. Impeller: Double suction, cast bronze, statically and dynamically balanced, and keyed to shaft.
 - 4. Wear Rings: Replaceable bronze.
 - 5. Shaft and Sleeve: Alloy-steel shaft with bronze sleeve.
 - a. Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
 - b. Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
 - 6. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.

- C. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.

- D. Capacities and Characteristics:
 - 1. Rated Capacity: 2500 gpm.
 - 2. Total Rated Head: 175 psig..
 - 3. Inlet Flange: Class 250.
 - 4. Outlet Flange: Class 250.
 - 5. Engine Horsepower: To be determined by contractor.
 - 6. Engine Speed: To be determined by contractor.
 - 7. Fuel Tank Capacity: To be determined by contractor.
 - 8. Rotation: Clockwise.
 - 9. Electrical Characteristics:
 - a. Volts: 120.
 - b. Phase: Three
 - c. Hertz: 60.
 - d. Full-Load Amperes: Verify with manufacturer.

2.4 DIESEL ENGINE

- A. Fuel: Fuel oil, Grade DF-2.

- B. Horse Power Rating: Not less than 110 percent of maximum brake horsepower (after derating for temperature and elevation according to NFPA 20).

- C. Emergency Manual Operator: Factory wired for starting and operating standby engine in case of malfunction in main controller or wiring.

- D. Controls:
 - 1. Adjustable governor.
 - 2. Over-speed shutdown.
 - 3. Manual reset, speed switch.
 - 4. Instrument panel with tachometer, oil pressure gage, water temperature gage, and hour meter.

- E. Fuel System:
 - 1. Comply with NFPA 20.
 - 2. Main Fuel Pump: Mounted on engine. Pump ensures adequate primary fuel flow under starting and load conditions.
 - 3. Relief-Bypass Valve: Automatically regulates pressure in fuel line and returns excess fuel to source.
 - 4. Flexible metallic fuel lines.
 - 5. Inline fuel filter.

6. Oil pressure safety switch.
 7. Air cleaner.
 8. Engine-driven oil pump.
 9. Enclosed control wiring electric starter with voltage regulator.
 10. Double-Wall Storage Tank: Size indicated, but not less than required by NFPA 20; with floor legs, direct-reading level gage.
- F. Exhaust System:
1. Piping: ASTM A53/A53M, Type E or S, Schedule 40 black steel pipe; ASME B16.9 weld-type pipe fittings; ASME B16.5 steel flanges; and ASME B16.21 nonmetallic gaskets.
 2. Fabricate double-wall, ventilated thimble from steel pipe.
 3. Flexible exhaust connector.
 4. Industrial exhaust silencer with spark arrestor.
 5. Exhaust Piping Insulation: Provide removable insulation blanket rated to 1200 degrees F. Blanket as manufactured by Firwin Corporation, North York, Ontario, Canada,
- G. Rated Engine Speed: 1800 rpm.
- H. Maximum Piston Speed for Four-Cycle Engines: 2250 fpm (11.4 m/s).
- I. Engine- or Skid-Mounted Lubrication System:
1. Filter and Strainer: Rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.
 2. Thermostatic Control Valve: Controls flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
 3. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.
- J. Coolant Jacket Heater: Electric-immersion type, factory installed in coolant jacket system.
- K. Cooling System, Factory-Mounted Radiator:
1. Factory installed, closed loop, liquid cooled, with radiator factory mounted on fire-pump mounting frame and integral engine-driven coolant pump.
 2. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
 3. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
 4. Expansion Tank: Constructed of welded-steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
 5. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
 6. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.
 - a. Rating: 50-psig (345-kPa) maximum working pressure, with coolant at 180 deg F (82 deg C), and noncollapsible under vacuum.
 - b. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.
- L. Muffler/Silencer, Industrial Type: Sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.
1. Minimum sound attenuation of 12 dB at 500 Hz.
 2. Sound level measured at a distance of 25 feet (8 m) from exhaust discharge after installation is complete shall be 87 dBA or less.

- M. Air-Intake Filter: Standard-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.
- N. Starting System: 24-V dc, with negative ground.
 - 1. Components: Sized so they will not be damaged during a full engine-cranking cycle with ambient temperature at maximum specified in "Performance Requirements" Article.
 - 2. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.
 - 3. Cranking Cycle: 60 seconds.
 - 4. Battery: Adequate capacity within ambient temperature range specified in "Performance Requirements" Article to provide specified cranking cycle at least twice without recharging.
 - 5. Battery Cable: Size as recommended by engine manufacturer for cable length indicated. Include required interconnecting conductors and connection accessories.
 - 6. Battery Compartment: Factory fabricated of metal with acid-resistant finish and thermal insulation. Thermostatically controlled heater shall be arranged to maintain battery above 10 deg C regardless of external ambient temperature within range specified in "Performance Requirements" Article. Include accessories required to support and fasten batteries in place.
 - 7. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.
 - 8. Battery Charger: Current-limiting, automatic-equalizing and float-charging type. Unit shall comply with UL 1236 and include the following features:
 - a. Operation: Equalizing-charging rate of 10 A shall be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit shall then be automatically switched to a lower float-charging mode and shall continue to operate in that mode until battery is discharged again.
 - b. Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from minus 40 deg C to plus 60 deg C to prevent overcharging at high temperatures and undercharging at low temperatures.
 - c. Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.
 - d. Ammeter and Voltmeter: Flush mounted in door. Meters shall indicate charging rates.
 - e. Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition shall close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.
 - f. Enclosure and Mounting: NEMA 250, Type 1 wall-mounted cabinet.

2.5 FIRE-PUMP ACCESSORIES AND SPECIALTIES

- A. Automatic Air-Release Valves: Comply with NFPA 20 for installation in fire-pump casing.
 - 1. Install at high point of suction piping.
- B. Circulation Relief Valves: UL 1478, bronze or cast iron, spring loaded; for installation in pump-discharge piping.
- C. Inlet Fitting: Eccentric tapered reducer at pump suction inlet.
- D. Outlet Fitting: Concentric tapered reducer at pump-discharge outlet.
- E. Discharge Cone: Open type.
- F. Hose Valve Manifold Assembly:
 - 1. Standard: Comply with requirements in NFPA 20.

2. Header Pipe: ASTM A53/A53M, Schedule 40 galvanized steel, with ends threaded according to ASME B1.20.1.
3. Header Pipe Fittings: ASME B16.4 galvanized cast-iron threaded fittings.
4. Automatic Drain Valve: Complying with UL 1726.
5. Manifold:
 - a. Test Connections: Comply with UL 405, except provide outlets without clappers instead of inlets.
 - b. Body: Exposed-type, brass or ductile iron, with number of outlets required by NFPA 20.
 - c. Escutcheon Plate: Brass or bronze; rectangular.
 - d. Hose valves in "Hose Valves" Subparagraph below are typically unnecessary; retain if required.
 - e. Hose Valves: UL 668, bronze, with outlet threaded according to NFPA 1963 and matching local fire-department threads.
 - f. Exposed Parts Finish: Rough brass.
 - g. Escutcheon Plate Marking: Equivalent to "FIRE PUMP TEST."

2.6 FUEL OIL STORAGE

- A. Comply with NFPA 30.
- B. Day Tank: UL 142, freestanding, factory-fabricated fuel tank assembly, with integral, float-controlled transfer pump and the following features:
 1. Containment: Integral rupture basin, with a capacity of 150 percent of nominal capacity of day tank.
 - a. Leak Detector: Locate in rupture basin and connect to provide audible and visual alarm in the event of day-tank leak.
 2. Tank Capacity: As recommended by engine manufacturer.
 3. Pump Capacity: Exceeds maximum flow of fuel drawn by engine-mounted fuel supply pump at 110 percent of rated capacity, including fuel returned from engine.
 4. Low-Level Alarm Sensor: Liquid-level device operates alarm contacts at 25 percent of normal fuel level.
 5. Piping Connections: Factory-installed fuel supply and return lines from tank to engine; local fuel fill, vent line, overflow line; and tank drain line with shutoff valve.
- C. Base-Mounted Fuel Oil Tank: Factory installed and piped, complying with UL 142 fuel oil tank. Features include the following:
 1. Tank level indicator.
 2. Capacity: Fuel for eight hours' continuous operation at 100 percent rated power output.
 3. Vandal-resistant fill cap.
 4. Containment Provisions: Comply with requirements of authorities having jurisdiction.

2.7 FIRE PUMP CONTROLLERS

- A. Manufacturer
 1. Subject to compliance with requirements provide pumps by one of the following manufacturers.
 - a. Firetrol, Inc.
 - b. Tornatech
 2. The fire pump controller to be a factory assembled, wired and tested unit. The controller to be of the combined manual and automatic type designed for diesel engine operation of the fire pump.
- B. Standards, Listings & Approvals
 1. Controller to conform with requirements of the latest editions of: NFPA 20, Standard for the Installation of Stationary Pumps for Fire Protection NFPA 70, National Electrical Code. The controller shall be listed in accordance with UL218, Standard for Fire Pump Controllers.

C. Enclosure

1. House controller components in a NEMA Type 2 (IEC IP22) drip-proof, wall mounted enclosure.

D. Operator Interface

1. The fire pump controller shall display motor operating conditions, including all alarms, events, and pressure conditions required by NFPA 20 and NFPA 72. All alarms, events, and pressure conditions shall be displayed with a time and date stamp with a multi-line digital display.
2. Digital display must indicate text messages for the status and alarm conditions of the following:
 - a. Engine Run
 - b. Remote Start
 - c. Minimum Run Time / Off Delay Time
 - d. Manual Engine Crank
 - e. Engine Fail To Start
 - f. Electric Control Module (ECM) Warning
 - g. Drive Not Installed
 - h. ECM Failure
 - i. Disk Error
 - j. Low Suction Pressure PLD (Pressure Limiting Driver) if so equipped
 - k. Sequential Start Time
 - l. High Cooling Water Temperature
 - m. Clogged Cooling Water Strainer
 - n. Crank/Rest Time Cycle
 - o. Low Engine Temperature
 - p. Interstitial/Fuel Spill
 - q. Pressure Error
3. The Sequential Start Timer and Minimum Run Timer/Off Delay Timer shall be displayed as numeric values reflecting the value of the remaining time.

E. Automatic Operation

1. Pressure switch actuated. Water pressure actuated switch and solid state pressure transducer with independent high- and low-calibrated adjustments responsive to water pressure in fire suppression piping.
2. Programmable minimum-run-time relay to prevent short cycling.
3. Programmable timer for weekly tests.
4. Controller Sensing Pipes. Pipe and fittings according to NFPA 20 with nonferrous-metal sensing piping, NPS 1/2, with globe valves for testing controller mechanism from system to pump controller as indicated. Include bronze check valve with 3/32-inch orifice in clapper or ground-face union with noncorrosive diaphragm having 3/32-inch orifice.
5. Solid State Pressure Transducer
 - a. Systems using analog pressure devices or mercury switches for operational control will not be accepted.
 - b. Provide controller with a solid state pressure transducer with a range of 0-300 psi (0-20.7 bar) ± 1 psi.
 - c. Solid state pressure transducer must be used for both display of the system pressure and control of the fire pump controller.
 - d. The start, stop, and system pressures must be digitally displayed and adjustable through the user interface.
 - e. The pressure transducer must be mounted inside the controller to prevent accidental damage. Field connections must be made externally at the controller coupling to prevent distortion of the pressure switch element and mechanism.

F. Manual Operation

1. Door Mounted Manual START, STOP, and AUTO push buttons, membrane keypad, or hand switch.

G. Local and Remote Alarm and Status Indicators

1. Provide LED alarm and status indicating lights
2. The following conditions must be visible with the controller door closed
 - a. AC Power Available
 - b. Alarm
 - c. Main Switch in Auto
 - d. Main Switch in Manual
 - e. System Pressure Low
 - f. Engine Running
 - g. Engine Fail to Start
 - h. Engine Temperature High
 - i. Engine Oil Pressure Low
 - j. Engine Overspeed
 - k. Engine Alternate ECM
 - l. Engine Fuel Injector Malfunction
 - m. Fuel Level Low
 - n. Automatic Shutdown Disabled
 - o. Charger Malfunction
 - p. Battery #1 Trouble
 - q. Battery #2 Trouble

H. Nameplate

1. Provide nameplate with capacity, characteristics, approvals and listings, and other pertinent data.

I. Controller Operation

1. Controller to be field programmable for manual stop or automatic stop. If set for automatic stopping, the controller shall allow the user to select either a Minimum Run Timer or an Off-Delay Timer. Both timers shall be programmable through the user interface.
2. Controller to include an AC Power Loss start timer to start the engine in the event of AC Power failure.
3. Provide weekly test timer. The controller must have the ability to program the time, date, and frequency of the weekly test.
4. Provide a lamp test feature.
5. Provide audible test feature to test the operation of the audible alarm device.

J. Battery Chargers

1. Controller to include two fully automatic battery chargers. The chargers shall verify that batteries are not defective and are capable of accepting a charge.
2. The battery charger must include selectable AC power voltage, selectable battery voltage, selectable battery type, and charge cycle reset.

K. Finish: Manufacturer's standard red coating or paint

2.8 PRESSURE MAINTENCE PUMPS

A. Available Manufacturers:

1. Grundfos, Grundfos Group

B. Description: Factory-assembled and -tested, vertical, multistage, open-line-shaft turbine pump as defined in HI 2.1-2.2 and HI 2.3; with pump motor mounted above pump head. Include base.

C. Pump Construction:

1. Pump Head: Cast-iron, for surface discharge, with flange except connections may be threaded in sizes in which flanges are not available.
2. Pump Head Seal: Stuffing box and stuffing.
3. Line Shaft: Stainless steel or steel, with corrosion-resistant shaft sleeves.
4. Line Shaft Bearings: Rubber sleeve, water lubricated.
5. Impeller Shaft: Monel metal or stainless steel.
6. Bowl Section: Multiple cast-iron bowls with closed-type bronze or stainless-steel impellers.

D. Motor:

1. Single speed with permanently lubricated ball bearings.
 - a. Motor Sizes: Minimum size as indicated; if not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

E. Base: Cast-iron or steel with hole for electrical cable.

F. Nameplate: Permanently attached to pump and indicating capacity and characteristics.

G. Capacities and Characteristics:

1. Rated Capacity: 20 GPM.
2. Rated Head: To be determined by contractor.
3. Working Pressure: 175 psig.
4. Suction Head Available at Pump: To be determined by contractor.
5. Motor Horsepower: To be determined by contractor.
6. Motor Speed: To be determined by contractor.
7. Electrical Characteristics:
 - a. Volts: 240.
 - b. Phases: Three.
 - c. Hertz: 60.
 - d. Full-Load Amperes: Verify with manufacture

2.9 CONTROLLERS FOR PRESSURE-MAINTENANCE PUMPS

A. Available Manufacturers:

1. Firetrol, Inc.
2. Tornatech

B. General Requirements for Pressure-Maintenance-Pump Controllers:

1. Type: UL 508 factory assembled, wired, and tested, across-the-line; for combined automatic and manual operation.
2. Enclosure: UL 508 and NEMA 250, Type 2 for wall mounting.
3. Factory assembled, wired, and tested.
4. Finish: Manufacturer's standard red coating or paint.

C. Rate controller for scheduled horsepower and include the following:

1. Fusible disconnect switch.
2. Pressure switch.
3. Hand-off-auto selector switch.
4. Pilot light.

2.10 GROUT

- A. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

- B. Characteristics: Nonshrink and recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

2.11 SOURCE QUALITY CONTROL

- A. Testing: Test and inspect fire pumps according to UL 448 requirements for "Operation Test" and "Manufacturing and Production Tests."
 - 1. Verification of Performance: Rate fire pumps according to UL 448.
- B. Fire pumps will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.1 EXAMINATION

- A. Examine equipment bases and anchorage provisions, with Installer present, for compliance with requirements and for conditions affecting performance of fire pumps.
- B. Examine roughing-in for fire-suppression piping systems to verify actual locations of piping connections before fire-pump installation.
- C. Examine equipment before installation. Reject equipment that is wet or damaged by moisture or mold or physically damaged.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Fire-Pump Installation Standard: Comply with NFPA 20 for installation of fire pumps, relief valves, and related components.
- B. Equipment Mounting:
 - 1. Install fire pumps on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Division 21.
 - 2. Attach pumps to equipment base using anchor bolts.
- C. Install fire-pump suction and discharge piping equal to or larger than sizes required by NFPA 20.
- D. Support piping and pumps separately, so weight of piping does not rest on pumps.
- E. Install valves that are same size as connecting piping. Comply with requirements for fire-protection valves specified in Section 13907 (210515) "Basic Fire Suppression Piping Materials and Methods".
- F. Install pressure gages on fire-pump suction and discharge flange pressure-gage tapings. Comply with requirements for pressure gages specified in Section 13907 (210515) "Basic Fire Suppression Piping Materials and Methods".

- G. Install piping hangers and supports, anchors, valves, gages, and equipment supports according to NFPA 20.
- H. Install fuel system according to NFPA 20.
- I. Install water supply and drain piping for diesel-engine heat exchangers. Extend drain piping from heat exchangers to point of disposal.
- J. Install exhaust-system piping for diesel engines. Extend to point of termination outside structure. Install pipe and fittings with welded joints; install components having flanged connections with gasketed joints. Install insulation and jacketing on exhaust piping.
- K. Install condensate-drain piping for diesel-engine exhaust system. Extend drain piping from low points of exhaust system to condensate traps and to point of disposal.
- L. Electrical Wiring: Install electrical devices furnished by equipment manufacturers that are not factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.
- M. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- N. Wall-Mounting Controllers: Install controllers on walls with disconnect operating handles not higher than 79-inches above finished floor, and bottom of enclosure not less than 12-inches above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."
- O. Floor-Mounting Controllers: Install controllers on 4-inch nominal-thickness concrete bases, using floor stands high enough so that the bottom of enclosure cabinet is not less than 12-inches above finished floor. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 - 1. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
 - 2. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 3. Install anchor bolts to elevations required for proper attachment to supported equipment.
- P. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
 - 1. Comply with NEMA ICS 15.

3.3 ALIGNMENT

- A. Align split-case pump and driver shafts after complete unit has been leveled on concrete base, grout has set, and anchor bolts have been tightened.
- B. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks and shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.
- C. Align piping connections.

- D. Align pump and driver shafts for angular and parallel alignment according to HI 1.4 and to tolerances specified by manufacturer.

3.4 CONNECTIONS

- A. Coordinate fire-suppression piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.
- B. Comply with requirements for piping and valves specified in Section 13907 (210515) "Basic Fire Suppression Piping Materials and Methods". Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to pumps and equipment to allow service and maintenance.
- D. Connect relief-valve discharge to drainage piping or point of discharge.
- E. Provide drains for bases and seals, piped to and discharging into floor drains.
- F. Connect fire pumps and pressure-maintenance pump to their controllers.
- G. Connect controllers to their dedicated pressure-sensing lines.
- H. Provide for fire pump controller connection to building fire-alarm system. Refer to Division 28, "Fire Detection and Alarm".

3.5 IDENTIFICATION

- A. Identify system components. Comply with requirements for fire-pump marking according to NFPA 20.

3.6 FIELD QUALITY CONTROL

- A. Test each fire pump with its controller as a unit. Comply with requirements for diesel-engine-driver fire-pump controllers.
- B. Final Checks before Startup: Perform the following preventive maintenance operations and checks:
 - 1. Lubricate oil-lubrication-type bearings.
 - 2. Verify that pump is free to rotate by hand. If pump is bound or if it drags even slightly, do not operate until cause of trouble is determined and corrected.
 - 3. Inspect and Test each controller component:
 - a. Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.
 - b. Test insulation resistance for each element, component, connecting supply, feeder, and control circuits.
 - c. Test continuity of each circuit
- C. Manufacturer's Field Service: Engage a factory-authorized representative to test and inspect components, assemblies, and equipment installations, including connections.
 - 1. Perform the following test and Inspections.
 - a. After installing components, assemblies, and equipment, including controller, test for compliance with requirements.

- b. Test according to NFPA 20 for acceptance and performance testing.
- c. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
- d. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
- e. Verify and Test each Diesel-Driver Controller.
- f. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- g. Components, assemblies, and equipment will be considered defective if they do not pass tests and inspections.
- h. Prepare test and inspection reports

D. Field Acceptance Tests:

- 1. Do not begin field acceptance testing until suction piping has been flushed and hydrostatically tested and the certificate for flushing and testing has been submitted to Engineer and authorities having jurisdiction.
- 2. Prior to starting, notify authorities having jurisdiction of the time and place of the acceptance testing.
- 3. Furnish fire hoses in number, size, and length required to reach storm drain or other acceptable location to dispose of fire pump test water. Hoses are for tests only and do not convey to Owner.
- 4. Furnish all equipment required to conduct field acceptance tests to include play pipes, hose monsters, pitot tubes, gauges, ammeter, voltmeter, tachometer, etc.

3.7 ADJUSTING

- A. Adjust controllers to function smoothly and as recommended by manufacturer.
- B. Set field-adjustable switches, auxiliary relays, time-delay relays, and timers.
- C. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.
- D. Set field-adjustable pressure switches.

3.8 STARTUP SERVICE

- A. Perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions,

3.9 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.
- B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.10 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain fire pumps.

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 13220 (213220) – WATER STORAGE TANK (FIRE SUPPRESSION)

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Water storage tank for fire suppression.
 - 2. Pipe freeze protection.
- B. Related Requirements:
 - 1. Section 02510 - Water Distribution Systems.
 - 2. Section 01351 – Regulatory Compliance:
 - a. Disposal and removal of construction and universal waste.
 - b. Work practice control methods for airborne respirable dust.
 - 3. Section 13900 – (210010) Fire Suppression.
 - 4. Section 13920 (213116) - Fire Pumps.

1.2 REFERENCES

- A. The publications listed below form a part of this specification to the extent referenced. Publications are referenced within the text by the basic designation only.
- B. Factory Mutual System (FM):
 - 1. Approval Guide.
- C. National Fire Protection Association (NFPA):
 - 1. NFPA 22 - Standard for Water Tanks for Private Fire Protection.
 - 2. NFPA 780 - Standard for the Installation of Lightning Protection Systems.
- D. Occupational Safety and Health Administration (OSHA):
 - 1. OSHA 01926.1153 Respirable Crystalline Silica.
- E. Underwriters Laboratory (UL):
 - 1. UL Fire Protection Directory.
- F. American Water Works Association (AWWA):
 - 1. AWWA D100 - Welded Steel Tanks for Water Storage
 - 2. AWWA D102 - Coating Steel Water-Storage Tanks
 - 3. AWWA D103 - Factory-Coated Bolted Steel Tanks for Water Storage

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Minimize dust emissions and provide equipment that suppresses dust.

1.4 SUBMITTALS

- A. Submittal shall include, but is not limited to, the following:
 - 1. Shop Drawings: Tank fabrication and erection details. Cross sections and submittal data. Provide drawings of tank shell, roof, floor, inlet and outlet piping, valves, ladders, heaters, insulation, freeze protection of valves, controller and power wiring diagrams, interior and exterior paint.
 - 2. Structural calculations (including seismic).
 - 3. Pad preparation information and foundation details.
 - 4. Start-up instructions.
 - 5. Additional data as may be required by NFPA 13 and Owner’s Fire Protection Consultant.
- B. Submittal Procedure:
 - 1. Reference Section 01330 for general submittal procedures. Conform to provisions of Section 01330 unless otherwise specified herein.
 - 2. Within 30 days after award of contract, send submittals to Owner’s Fire Protection Consultant as specified Section 01330. Allow 30 day turn-around on submittals sent to Owner’s Fire Protection Consultant.
 - a. If the Contractor fails to submit a complete Fire Suppression submittal package within 30 days, the Contractor shall pay the Owner \$250.00 per day as liquidated damages and not as a penalty, until the fully completed Fire Suppression submittal package is received by Owner’s Fire Protection Consultant.
 - 3. Submittals shall be complete, accurate, and in full compliance with contract requirements for proper

- and timely approval.
4. Contractor shall respond to shop drawing review comments within 15 days of receipt.
 5. Maintain two copies of approved documents on site.
- C. Submittal Rejection:
1. Owner's Fire Protection Consultant will reject submittals which do not comply with Contract Documents. If submittal is rejected by Owner's Fire Protection Consultant for any reason, Owner will back-charge the Contractor \$200.00 via Change Order, to cover the processing costs of each subsequent review until submittal is approved. Submittal rejections include, but are not limited to, the following reasons:
 - a. Design Issues: Incorrect, missing, or incomplete system design.
 - b. Incorrect Material: Do not propose products not specified in the Contract Documents.
 2. Rejected submittals shall be revised and resubmitted until approved. Extension of time will not be allowed for rejected submittals.
 - a. Fire Suppression subcontractor shall revise and resubmit rejected submittals within 15 days of receipt of rejected submittals.
 - b. Contractor shall verify that the Fire Suppression subcontractor has addressed all required revisions in the resubmittal.
- D. Contract Closeout Submittals: Submit the following under provisions of Section 01770.
1. Maintenance Data: Include components of system, servicing requirements, inspection data, and owners manuals.
 2. Contractors Material Test Certificates: Provide Copies of completed Contractor's Material Test Certificates.
 3. As-Built shop drawings indicating installed location of components.
 4. Contractors Record Letter of Conformance for Fire Suppression: Submit under provisions of Section 13900.
 5. At Project completion, present to the Store Manager the As built Drawings enclosed in a plastic pipe tube (fixed cap at one end and a threaded-cap on the other end) for storage in the Riser Room.
 6. In addition to the copies of Documents delivered to the Store Manager, distribute additional copies of documents as indicated below:
 - a. Contractor shall deliver copies of the As-Built shop drawings and Contractor's Material Test Certificates in both hard copy and electronic form (*.pdf or *.plt) to Owner's Fire Protection Consultant.

1.5 QUALITY ASSURANCE

- A. Comply with NFPA 22, "Water Tanks for Private Fire Protection," for surface water-storage tanks for fire-suppression water supply.
- B. Qualifications (Fabricator): Company specializing in performing work of this Section with minimum three year experience. Water storage tank drawings shall be prepared, signed, and sealed by a Registered Professional Engineer (Structural Discipline) in the state where the project is located.
- C. Regulatory Requirements: Provide certificate of compliance from Authorities Having Jurisdiction indicating approval of field acceptance tests.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and protect products to site under provisions of Section 01600.
- B. Store products in shipping containers and maintain in place until installation. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Provide UL Listed or FM Approved materials complying with NFPA 22.

2.2 WATER STORAGE TANK

- A. Manufacturers: Subject to compliance with requirements, provide products from one of the following manufacturers:
 1. Tank Connection, Contact David Mann; 620-423-3010 Ext. 233; .
 2. Pittsburg Tank and Tower, Contact Greg Garber; 757-422-1882; .
 3. CST Storage. Contact Erik Carson; 913-748-4567; .
 4. Tarsco Bolted Tank, Inc., Contact Chris Coté; 417-434-7201; chris.cote@tfwarren.com.

B. General Description:

1. Provide welded or bolted NFPA 22 compliant or FM Approved water storage tank.
2. Minimum tank volume shall be as shown on plans.
3. Provide site preparation, pad preparation and design, tank foundation and design per site conditions, tank manufacturers criteria and requirements of Contract Documents and Authorities Having Jurisdiction.
4. Provide Water Storage Tank accessories per NFPA 22 and Authorities Having Jurisdiction, including, but not limited to:
 - a. Fixed ladders with safety cage and chain on the outside of the tank per NFPA 22 requirements. Provide an inside ladder with safety-harness system per NFPA 22 requirements.
 - b. 360 degree handrail around perimeter tank roof.
 - c. Two manholes 24" in diameter or 24" square with centerline approximately 2'-0" above the bottom of the tank.
 - d. Overflow pipe and minimum of 3' x 3' x 6" concrete splash block at overflow discharge (unless noted otherwise).
 - e. Two lockable, rainproof roof manways; one at exterior ladder, one at opposite side of roof.
 - f. Roof vent equipped with insect proof galvanized, or stainless steel screen (#24 mesh or finer).
 - g. Water level gauge.
 - h. Low level tank switch, Potter Electric Signal, model WLS installed not more than 6 inches below the overflow water level. Substitutions not permitted.
 - i. Low-Low level tank switch, Potter Electric Signal, model WLS. Substitutions not permitted.
 - j. Tamper switch on the main drain to the tank.
 - k. Insulation with minimum R-value of 10.
 - l. Immersion Tank Heaters: Chromalox Model STFX or equal, to maintain a minimum temperature of 42° F during a design of one-day mean temperature of [15]^o degrees F per NFPA 22. Heater shall be capable of being replaced without draining the tank.
 - m. Low temperature alarms on tank. Potter Electric Signal, model TTS. Substitutions not permitted.
 - n. Provide lightning protection in accordance with NFPA 780 requirements.]
5. Welded Tank: Provide finishes and surface preparation per Contract Documents, NFPA 22 and Authorities Having Jurisdiction. Submit to Architect for exterior finish color approval.
 - a. Paints and materials used on interior surfaces shall be accepted by the AWWA, EPA, and NSF for potable water service. Provide certification to Owner.
 - b. Finish coat painting for interior surfaces exposed to stored water shall be in accordance with NFPA 22 and AWWA D102, "Inside Paint System No. 1," using the basic system throughout.
 - c. Finish coat painting for exterior surfaces shall be in accordance with NFPA 22 and AWWA D102, "Outside Paint System No. 4," using three coats of aluminum or alkyd enamel to provide a minimum total system dry film thickness of 5.0 mils for aluminum finishes and 6.0 mils for alkyd enamels.
 - d. Where spot-blast cleaning is required, use tools and methods to maintain dust emissions below the permissible level. Abrasive used in spot-blast cleaning operations shall be new, washed, graded and free of contaminants that would interfere with adhesion of coating of paint. Abrasive shall not be reused.
 - e. Protect site, equipment, buildings, vehicles, and property from cleaning and painting operations.
 - f. Maintain clean work area.
 - g. Dispose of construction waste in accordance with the requirements of Section 01351 Regulatory Compliance Supplement.
 - h. Repair holidays and defects discovered during inspection with the same material as used for the original finish coats. Excessive low film thickness will require extra full coat (s) of paint.
6. Bolted Tanks: Provide finishes and surface preparation per Contract Documents, NFPA 22 and Authorities Having Jurisdiction. Submit to Architect for exterior finish color approval.
 - a. Paints and materials used on interior surfaces shall be accepted by the AWWA, EPA, and

NSF for potable water service. Provide certification to Owner.

- b. Coatings shall be applied in accordance with AWWA D103.
- c. After erection, touch up paint per manufacturer's instructions.

2.3 SUBSTITUTIONS

- A. Reference Section 01600.

2.4 FIRE PROTECTION PIPING - BELOW GROUND

- A. Refer to Section 13900 for requirements.

2.5 FIRE PROTECTION PIPING - ABOVE GROUND

- A. Piping: Refer to Section 13900 for requirements.
 - 1. Use galvanized pipe, zinc coated internally and externally, outdoors, inside coolers and freezers, in non-conditioned spaces including exterior insulated piping or submerged piping.
- B. Fittings: Refer to Section 13900 for requirements.
 - 1. Fitting type shall match pipe. Galvanized fittings shall be used for areas where galvanized piping is required.

2.6 FREEZE PROTECTION

- A. Freeze protection system shall be installed on above-ground tank fill piping, fire pump suction piping, and tank drain valve.
- B. Freeze protection shall include the following:
 - 1. Parallel circuit heating cable.
 - 2. Transformers.
 - 3. Ambient sensor and controller with fire alarm supervisory capability.
 - 4. Junction boxes.
 - 5. Branch circuit wiring and conduit as specified in Section 16100.
 - 6. Other items as necessary to complete system.
- C. Components:
 - 1. Heating Cable: Parallel circuit, jacketed cable, self-limiting, as shown on the drawings. Provide XL-Trace as manufactured by Raychem or Model SRL by Chromalox
 - a. Provide minimum 5810 watts per lineal foot as required for specified piping and insulation per manufacturer's published instructions.
 - b. Provide termination fittings for direct connection to junction boxes.
 - 2. Junction Boxes: NEMA 3R watertight.
 - 3. Controller: Digitrace C910 by Raychem or DTS Heat Trace Digital Thermostat by Chromalox. Set thermostat to activate heat trace at 42 F on decreasing temperature.
- D. Insulation:
 - 1. Walls: Provide minimum 2 inch thick layer of polystyrene insulation panels attached to tank with cables. Overlay with 1 inch thick foil faced polyisocyanurate foam laminated to an aluminum jacket with seams not overlapping the first insulation layer, attached to cables.
 - a. Minimum R-Value = $10 \frac{hr \cdot ft^2 \cdot ^\circ F}{Btu}$.
 - 2. Roof: Provide minimum 2 inch thick foil faced polyisocyanurate foam laminated to an aluminum jacket. Attach to tank with cables.
 - 3. Piping (Tank to Pumphouse): Polyisocyanurate insulation, 2 inches thick, with vapor retarder film and tape. Provide Trymer 2000 XP insulation with Saran 540 Vapor Retarder by ITW Insulation Systems, Houston, TX, or equivalent.
 - a. All piping shall have aluminum jacket attached with bands. Do not secure jacketing with screws or rivets.
 - 4. Spray on insulation not permitted.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Erect tank shell, accessories, and appurtenances according to NFPA 22 and AWWA D100.
- B. Fabricate steel plate sections in the shop.
 - 1. Welded Tanks: Erect welded steel tank shell by welding plate sections in the field.
 - 2. Bolted Tanks: Drill or punch bolt holes in the shop. Install bolts during field erection of tank.
- C. Set top of reinforced-concrete foundation at least 6 inches above finish grade.

3.2 INSTALLATION - BELOW GROUND PIPING

- A. Refer to Section 13900 for requirements.

3.3 INSTALLATION - ABOVE GROUND PIPING

- A. Refer to Section 13900 for requirements

3.4 FREEZE PROTECTION

- A. Install heating cable at locations shown on drawings for pipe freeze protection.
- B. Cut heating cable to length required for pipe lengths and watt per foot requirements.
- C. Install heating cable in accordance with manufacturer's published instructions.
- D. Provide conduit for fire alarm control panel monitoring cable to controller.

3.5 FIELD QUALITY CONTROL

- A. General – Refer to Section 13900 for requirements.

- B. Site Tests - Water Storage Tank:

- 1. Test per NFPA 22.
- 2. Provide personnel and equipment necessary for complete start up and acceptance testing.

- C. Site Tests - Heat Trace:

- 1. Provide personnel and equipment necessary for complete start up and acceptance testing.
- 2. Provide photographs of heat trace cable installation to Owner's Fire Protection Consultant.
- 3. Perform heat trace acceptance testing per manufacturer's instructions after completed installation.
- 4. Complete Heat Trace Installation and Commissioning Record form at the end of this Section and submit to Fire Protection Consultant.

END OF SECTION

HEAT TRACE INSTALLATION AND COMMISSIONING RECORD

Refer to Manufacturer's Installation and Operation Manual for required Commissioning Tests. All tests, as well as photographs of the heating cable installation taken prior to covering of cable with pipe insulation, are required to obtain the Fire Suppression Letter of Conformance from Owner's Fire Protection Consultant.

Store/Club:	Tank Fill	Pump Suction	Drain Valve

END OF DIVISION 22 TABLE OF CONTENTS

PAGE INTENTIONALLY LEFT BLANK

SECTION 15011 (220010) - GENERAL PLUMBING REQUIREMENTS

PART 1 - GENERAL REQUIREMENTS

1.1 DESCRIPTION OF WORK

- A. This Division requires the furnishing and installing of complete functioning systems, and each element thereof, as specified or indicated on the Drawings and Specifications or reasonably inferred; including every article, device or accessory (whether or not specifically called for by item) reasonably necessary to facilitate each system's functioning as indicated by the design and the equipment specified. Elements of the work include materials, labor, supervision, supplies, equipment, transportation, and utilities.
- B. Division 22 of the Specifications and Drawings numbered with prefixes P, MP and EP, or MEP generally describe these systems, but the scope of the Plumbing work includes all such work indicated in the Contract Documents: Instructions to Bidders; Proposal Form; General Conditions; Supplementary General Conditions; Architectural, Structural, Mechanical, Plumbing and Electrical Drawings and Specifications; and Addenda.
- C. The Drawings have been prepared diagrammatically intended to convey the scope of work, indicating the intended general arrangement of the equipment, fixtures, piping, etc. without showing all the exact details as to elevations, offsets, control lines, and other installation requirements. The Contractor shall use the Drawings as a guide when laying out the work and shall verify that materials and equipment will fit into the designated spaces, and which, when installed per manufacturers requirements, will ensure a complete, coordinated, satisfactory and properly operating system.

1.2 QUALITY ASSURANCE

- A. All work under this division shall be executed in a thorough professional manner by competent and experienced workmen licensed to perform the Work specified.
- B. All work shall be installed in strict conformance with manufacturer's requirements, recommendations, and installation instructions. Equipment and materials shall be installed in a neat and professional manner and shall be aligned, leveled, and adjusted for satisfactory operation.
- C. Material and equipment shall be new, shall be of the best quality and design, shall be current model of the manufacturer, shall be free from defects and imperfections and shall have markings or a nameplate identifying the manufacturer and providing sufficient reference to establish quality, size and capacity. Material and equipment of the same type shall be made by the same manufacturer whenever practicable.
- D. Unless specified otherwise, manufactured items shall have been installed and used, without modification, renovation, or repair for not less than one year prior to date of bidding for this project.

1.3 CODES, REFERENCES AND STANDARDS

- A. Execute Work in accordance with the National Fire Protection Association and all Local, State, and National codes, ordinances and regulations in force governing the particular class of Work involved. Obtain timely inspections by the constituted authorities, and upon final completion of the Work obtain and deliver to the Owner executed final certificates of acceptance from the Authority Having Jurisdiction.
- B. Any conflict between these Specifications and accompanying Drawings and the applicable Local, State and Federal codes, ordinances and regulations shall be reported to the Architect in sufficient time, prior to the opening of Bids, to prepare the Supplementary Drawings and Specification Addenda required to resolve the conflict.

- C. The governing codes are minimum requirements. Where these Drawings and Specifications exceed the code requirements, these Drawings and Specification shall prevail.
- D. All material, manufacturing methods, handling, dimensions, method or installation and test procedure shall conform to but not be limited to the following industry standards and codes:

CBC	California Building Code – 2019
CMC	California Mechanical Code – 2019
CPC	California Plumbing Code – 2019
CEC	California Energy Code – 2019
ADA	American Disabilities Act
AMCA	Air Movement and Control Association, Inc.
ANSI	American National Standards Institute
AHRI	Air Conditioning, Heating and Refrigeration Institute
ASHRAE	American Society of Heating Refrigerating and Air Conditioning Engineers
ASME	American Society of Mechanical Engineers
ASSE	American Society of Sanitary Engineering
ASTM	American Society of Testing Materials
AWS	American Welding Society
AWWA	American Water Works Association
CISPI	Cast Iron Soil Pipe Institute
ETL	Electrical Testing Laboratories
FGI	Facilities Guideline Institute
HI	Hydraulic Institute
MSS	Manufacturer’s Standardization Society of the Valve and Fitting Industry
NBFU	National Board of Fire Underwriters
NEC	National Electrical Code
NFPA	National Fire Protection Association
NEMA	National Electrical Manufactures' Association
OSHA	Occupational Safety and Health Act
PDI	Plumbing and Drainage Institute
UL	Underwriter's Laboratories

- E. Contractor shall comply with rules and regulations of public utilities and municipal departments affected by connections of services.
- F. All Plumbing work shall be performed in compliance with applicable safety regulations, including OSHA regulations. Safety lights, guards, shoring and warning signs required for the performance of the Plumbing work shall be provided by the Contractor.

1.4 DEFINITIONS

A. General:

1. Furnish: When ‘furnish’, ‘install’, ‘perform’, or ‘provide’ is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of Contractor, “provide” is implied.
2. Install: The term “install” is used to describe operations at the project site including the actual “unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations.”
3. Provide: The term “provide” means “to furnish and install, complete and ready for the intended use.” When ‘furnish’, ‘install’, ‘perform’, or ‘provide’ is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of Contractor, “provide” is implied.

4. **Furnished by Owner or Furnished by Others:** The item will be furnished by the Owner or Others. It is to be installed and connected under the requirements of this Division, complete and ready for operation, including items incidental to the Work, including services necessary for proper installation and operation. The installation shall be included under the guarantee required by this Division.
 5. **Engineer:** Where referenced in this Division, "Engineer" is the Engineer of Record and the Design Professional for the Work under this Division, and is a Consultant to, and an authorized representative of, the Architect, as defined in the General and/or Supplementary Conditions. When used in this Division, it means increased involvement by, and obligations to, the Engineer, in addition to involvement by, and obligations to, the "Architect".
 6. **AHJ:** The local code and/or inspection agency (Authority) Having Jurisdiction over the Work.
 7. **NRTL:** Nationally Recognized Testing Laboratory, as defined and listed by OSHA in 29 CFR 1910.7 (e.g., UL, ETL, CSA, etc.), and acceptable to the Authority having Jurisdiction (AHJ) over this project. Nationally Recognized Testing Laboratories and standards listed are used only to represent the characteristics required and are not intended to restrict the use of other listed Manufacturers and models that meet the specified criteria.
 8. **Substitution:** Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor. Substitutions include Value Engineering proposals.
 - a. **Substitutions for Cause:** Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
 - b. **Substitutions for Convenience:** Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.
 9. **Value Engineering:** A systematic method to improve the "value" of goods and services by using an examination of function. Value, as defined, is the ratio of function to cost. Value can therefore be increased by either improving the function or reducing the cost. The goal of VE is to achieve the desired function at the lowest overall cost consistent with required performance.
- B. The terms "approved equal", "equivalent", or "equal" are used synonymously and shall mean "accepted by or acceptable to the Engineer as equivalent to the item or manufacturer specified". The term "approved" shall mean labeled, listed, or both, by an NRTL, and acceptable to the AHJ over this project.
- C. The following definitions apply to excavation operations:
1. **Additional Excavation:** Where excavation has reached required subgrade elevations, if unsuitable bearing materials are encountered, continue excavation until suitable bearing materials are reached. The Contract Sum may be adjusted by an appropriate Contract Modification.
 2. **Bedding:** as used in this Section refers to the compacted sand or pea gravel installed in the bottom of a pipe trench to immediately support a pipe and cover a pipe.
 3. **Subbase:** as used in this Section refers to the compacted soil layer used in pavement systems between the subgrade and the pavement base course material.
 4. **Subgrade:** as used in this Section refers to the compacted soil immediately below the slab or pavement system.
 5. **Unauthorized excavation** consists of removal of materials beyond indicated subgrade elevations or dimensions without specific direction from the Architect.

1.5 COORDINATION

- A. The Contractor shall visit the site and ascertain the conditions to be encountered while installing the Work under this Division, verify all dimensions and locations before purchasing equipment or commencing work, and make due provision for same in the bid. Failure to comply with this requirement shall not be considered justification for omission, alteration, incorrect or faulty installation of Work under this Division or for additional compensation for Work covered by this Division.

- B. The Contractor shall refer to Drawings of the other disciplines and to relevant equipment drawings and shop drawings to determine the extent of clear spaces. The Contractor shall make offsets required to clear equipment, beams and other structural members; and to facilitate concealing piping and ductwork in the manner anticipated in the design.
- C. The Contractor shall confirm and coordinate the final location and routing of all mechanical, electrical, plumbing, fire protection, control and audio-visual systems with all architectural features, structural components, and other trades. The contractor shall locate equipment, components, ductwork, piping, conduit, and related accessories to maintain the desired ceiling heights as indicated on the architectural drawings. The contractor shall inform the architect of any areas where conflicts may prevent the indicated ceiling height from being maintained. The contractor shall not proceed with any installation in such areas until the architect has given written approval to proceed or has provided modified contract drawings or written instructions to resolve the apparent conflict.
- D. The contractor shall provide materials with trim which will fit properly the types of ceiling, wall, or floor finishes actually installed.
- E. The Contractor shall maintain a foreman on the jobsite at all times to coordinate his work with other contractors and subcontractors so that various components of the Plumbing systems will be installed at the proper time, will fit the available space, and will allow proper service access to the equipment. Carry on the Work in such a manner that the Work of the other contractors and trades will not be handicapped, hindered, or delayed at any time.
- F. Work of this Division shall progress according to the "Construction Schedule" as established by the Prime Contractor and his subcontractors and as approved by the Architect. Cooperate in establishing these schedules and perform the Work under this Division, in a timely manner in conformance with the construction schedule so as to ensure successful achievement of schedule dates.

1.6 MEASUREMENTS AND LAYOUTS

- A. The drawings are schematic in nature, but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the building. Figured dimensions shall be taken in preference to scale dimensions. Determine exact locations by job measurements, by checking the requirements of other trades, and by reviewing the Contract Documents. The Contractor will be held responsible for errors which could have been avoided by proper checking and inspection.

1.7 COORDINATION DRAWINGS

- A. Coordination Drawings, General: Prepare coordination drawings according to the requirements of individual Sections. Additionally, prepare coordination drawings as required scope of installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one trade.
 1. Information shall be project specific and drawn accurately to a scale large enough to resolve conflicts. Do not base coordination drawings on standard dimensional data.
 2. Prepare floorplans, sections, elevations, and details as needed to adequately describe relationship of various systems and components.
 3. Clearly indicate functional and spatial relationships of components of all systems specified in the Contract Documents, including but not limited to: architectural, structural, civil, mechanical, electrical, fire protection, and specialty systems.
 4. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
 5. Show location and size of access doors required for access to concealed equipment, fittings, controls, terminations, and cabling.

6. Indicate required installation sequence to minimize conflicts between entities.
 7. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Contract Administrator indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.
 8. The details of the coordination are the responsibility of the Contractor and, where indicated on the Drawings, minor adjustments in raceway routing, device placement, device type, or equipment arrangement are not to be considered changes to the Contract.
- B. Equipment Room Coordination Drawings: In accordance with the submittal procedures outlined within these Specifications, provide dimensioned layouts of electrical equipment locations within electrical rooms/closets, mechanical rooms, generator rooms, and fire pump rooms with equipment drawn to scale and identified therein.
1. Clearly identify all required working clearances and access provisions required for installation and maintenance.
 2. Equipment layouts should be arranged accounting for considerations for required door openings and the clearances required by the equipment manufacturer.
 3. Indicate path to allow for the future removal of each large piece of equipment (up to and including generators and unit sub-station transformers) without removal of non-related equipment or architectural elements.
 4. Include work provided by others routed through the equipment rooms.
- C. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:
1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.
 2. BIM File Incorporation: Develop and incorporate coordination drawing files into Building Information Model established for Project.
 - a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Contract Administrator.
 3. Where Henderson Engineer's digital data files are provided to the Contractor for use in preparing coordination digital data files, Henderson Engineers makes no representations as to the accuracy or completeness of digital data files as they relate to the Drawings or Specifications.
 4. Submit coordination drawings in accordance with the submittal procedures outlined within these Specifications.

1.8 SUBMITTALS

- A. Refer to Division 01 and General Conditions for submittal requirements in addition to requirements specified herein.
- B. Refer to Division 01 for acceptance of electronic submittals. If not specified by Division 01, provide electronic submittals. If Division 01 requires paper submittals, provide the quantity of submittals required, but no fewer than seven (7) sets.
- C. For electronic submittals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 01. Contractor shall notify the Contract Administrator and Engineer that the submittals have been posted. If electronic submittal procedures are not defined in Division 01, Contractor shall include the website, user name and password information needed to access the submittals. For submittals sent by e-mail, Contractor shall copy the Contract Administrator's and Engineer's designated representatives. Contractor shall allow for the Engineer Review Time as specified. Contractor shall submit only the documents required to purchase the materials and/or equipment in the submittal.

- D. Engineer Review Time: Transmit submittals as early as required to support the project schedule. Allow two weeks for Engineer review time plus to/from mailing time via the Contract Administrator, plus a duplication of this time for resubmittal if required. Transmit submittals as soon as possible after Notice to Proceed and before Mechanical construction starts.
 - E. Submittals and shop drawings shall not contain the firm name, logo, seal, or signature of the Engineer. They shall not be copies of the work product of the Engineer. If the Contractor desires to use elements of such product, the license agreement for transfer of information obtained from the Engineer must be used.
 - F. Assemble and submit for review manufacturer product literature for material and equipment to be furnished and/or installed under this Division. Literature shall include shop drawings, manufacturer product data, performance sheets, samples, and other submittals required by this Division as noted in each individual Section. General product catalog data not specifically noted to be part of the specified product will be rejected and returned without review.
 - G. Separate submittals according to individual specification sections. Only resubmit those sections requested for resubmittal.
 - H. Provide submittals in sufficient detail so as to demonstrate compliance with these Contract Documents and the design concept. Highlight, mark, list or indicate the materials, performance criteria and accessories that are being proposed. Illegible submittals will be rejected and returned without review.
 - I. Refer to individual Sections for additional submittal requirements.
 - J. Before transmitting submittals and material lists, verify that the equipment submitted is mutually compatible with and suitable for the intended use. Verify that the equipment will fit the available space and maintain manufacturer recommended service clearances. If the size of equipment furnished makes necessary any change in location, or configuration, submit a shop drawing showing the proposed layout.
 - K. Submittals shall contain the following information:
 - 1. The project name.
 - 2. The applicable specification section and paragraph.
 - 3. Equipment identification acronym as used on the drawings.
 - 4. The submittal date.
 - 5. The Contractor's stamp, which shall certify that the stamped drawings have been checked by the Contractor, comply with the Drawings and Specifications, and have been coordinated with other trades.
 - 6. Submittals not so identified will be returned to the Contractor without action.
 - L. The checking and subsequent acceptance by the Engineer and/or Contract Administrator of submittals shall not relieve responsibility from the Contractor for (1) deviations from Drawings and Specifications; (2) errors in dimensions, details, sizes of equipment, or quantities; (3) omissions of components or fittings; and (4) not coordinating items with actual building conditions and adjacent work. Contractor shall request and secure written acceptance from the Engineer and Contract Administrator prior to implementing any deviation.
 - M. Provide welders' qualification certificates.
 - N. BIM Incorporation: Develop and incorporate Shop Drawing files into BIM established for Project.
- 1.9 ELECTRONIC DRAWING FILES
- A. In preparation of shop drawings or record drawings, Contractor may, at their option, obtain electronic drawing files in AutoCAD or DXF format from the Engineer for a shipping and handling fee of \$200 for a

drawing set up to 12 sheets and \$15 per sheet for each additional sheet. Contact the Architect for Architect's written authorization. Contractor shall request and complete the Electronic File Release Agreement form from the Engineer. Send the form along with a check made payable to Henderson Engineers, Inc. Contractor shall indicate the desired shipping method and drawing format on the attached form. In addition to payment, Architect's written authorization and Engineer's release agreement form must be received before electronic drawing files will be sent.

1.10 SUBSTITUTIONS

- A. Refer to Division 01 and General Conditions for substitutions in addition to requirements specified herein.
- B. Materials, products, equipment, and systems described in the Bidding Documents establish a standard of required function, dimension, appearance and quality to be met by the proposed substitution.
- C. The base bid shall include only the products from manufacturers specifically named in the drawings and specifications.
- D. Request for Substitution:
 - 1. Complete and send the Substitution Request Form attached at the end of this section for each material, product, equipment, or system that is proposed to be substituted.
 - 2. The burden of proof of the merit of the proposed substitution is upon the proposer.
 - 3. Unless stated otherwise in writing to the Engineer by the Contractor, Contractor warrants to the Engineer, Architect, and Owner the following:
 - a. Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.
 - b. Proposed substitution is consistent with the Contract Documents and will produce indicated results, including functional clearances, maintenance service, and sourcing of replacement parts.
 - c. Proposed substitution has received necessary approvals of authorities having jurisdiction.
 - d. Same warranty will be furnished for proposed substitution as for specified Work.
 - e. If accepted substitution fails to perform as required, Contractor shall replace substitute material or system with that originally specified and bear costs incurred thereby.
 - f. Coordination, installation and changes in the Work as necessary for accepted substitution will be complete in all respects.
- E. Substitution Consideration:
 - 1. No substitutions will be considered unless the Substitution Request Form is completed and attached with the appropriate substitution documentation.
 - 2. No substitution will be considered prior to receipt of Bids unless written request for approval to bid has been received by the Engineer at least ten (10) calendar days prior to the date for receipt of Bids.
 - 3. If the proposed substitution is approved prior to receipt of Bids, such approval will be stated in an Addendum. Bidders shall not rely upon approvals made in any other manner. Verbal approval will not be given.
 - 4. No substitutions will be considered after the Contract is awarded unless specifically provided in the Contract Documents.

1.11 OPERATION AND MAINTENANCE MANUALS

- A. Refer to Division 1 and General Conditions for Operation and Maintenance Manuals in addition to requirements specified herein.
- B. Submit manuals prior to requesting the final punch list and before all requests for Substantial Completion.
- C. Instruct the Owner's permanent personnel in the proper operation of, startup and shutdown procedures and maintenance of the equipment and components of the systems installed under this Division.

- D. Prior to Substantial Completion of the project, furnish to the Architect, for Engineer's review, and for the Owner's use, four (4) copies of Operation and Maintenance Manuals in labeled, hard-back three-ring binders, with cover, binding label, tabbed dividers and plastic insert folders for Record Drawings. Include local contacts, complete with address and telephone number, for equipment, apparatus, and system components furnished and installed under this Division of the specifications.
- E. Each manual shall contain data listed in Table 5.
- F. Refer to Division 1 for acceptance of electronic manuals for this project. For electronic manuals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 1. Contractor shall notify the Architect and Engineer that the manuals have been posted. If electronic manual procedures are not defined in Division 1, Contractor shall include the website, user name and password information needed to access the manuals. For manuals sent by e-mail, Contractor shall copy the Architect and Engineer's designated representatives.

1.12 SPARE PARTS

- A. Provide to the Owner the spare parts specified in the individual sections in Division 22 of this specification. Refer to Table 2 at the end of this section for a list of specification sections in Division 22 that contain spare parts requirements.
- B. Owner or Owner's representative shall initial and date each section line in Table 2 when the specified spare parts for that section are received and shall sign at the bottom when all spare parts have been received.

1.13 RECORD DRAWINGS

- A. Refer to Division 01 and General Conditions for Record Drawings in addition to requirements specified herein.
- B. A set of work prints of the Contract Documents shall be kept on the jobsite during construction for the purpose of noting changes. During the course of construction, the Contractor shall indicate on these Documents changes made from the original Contract Documents. Particular attention shall be paid to those items which need to be located for servicing. Underground utilities shall be located by dimension, from column lines.
- C. At the completion of the project, the Contractor shall obtain, at their expense, reproducible copies of the final drawings and incorporate changes noted on the jobsite work prints onto these drawings. These changes shall be done by a skilled drafter. Each sheet shall be marked "Record Drawing", along with the date. These drawings shall be delivered to the Architect/Engineer.

1.14 TRAINING

- A. Provide training as indicated in each specific section. Schedule training with the Owner at least 7 days in advance. Video tape the training sessions in format as agreed to with the Owner. Provide three copies of each session to the Owner and obtain written receipt from the Owner.

1.15 PAINTING

- A. Exposed ferrous surfaces, including pipe, pipe hangers, equipment stands and supports shall be painted by the Plumbing Contractor using materials and methods as specified under Division 9 of the Specifications; colors shall be as selected by the Architect.
- B. Factory finishes, shop priming and special finishes are specified in the individual equipment specification sections.

- C. Where factory finishes are provided and no additional field painting is specified, marred or damaged surfaces shall be touched up or refinished so as to leave a smooth, uniform finish.

1.16 DELIVERY, STORAGE AND HANDLING

- A. Refer to Division 1 and General Conditions for Delivery, Storage and Handling in addition to requirements specified herein.
- B. Equipment and material shall be delivered to the job site in their original containers with labels intact, fully identified with manufacturer's name, model, model number, type, size, capacity and Underwriter's Laboratories, Inc. labels and other pertinent information necessary to identify the item.
- C. Deliver, receive, handle and store equipment and materials at the job site in the designated area and in such a manner as to prevent equipment and materials from damage and loss. Store equipment and materials delivered to the site on pallets and cover with waterproof, tear resistant tarp or plastic or as required to keep equipment and materials dry. Follow manufacturer's recommendations, and at all times, take every precaution to properly protect equipment and material from damage, to include the erection of temporary shelters to adequately protect equipment and material stored at the Site. Equipment and/or material which become rusted or damaged shall be replaced or restored by the Contractor to a condition acceptable to the Architect.
- D. The Contractor shall be responsible for the safe storage of his own tools, material and equipment.

1.17 GUARANTEES AND WARRANTIES

- A. Refer to Division 1 and General Conditions for Guarantees and Warranties in addition to requirements specified herein.
- B. Each system and element thereof shall be warranted against defects due to faulty workmanship, design or material for a period of 12 months from date of Substantial Completion, unless specific items are noted to carry a longer warranty in the Construction Documents or manufacturer's standard warranty. The Contractor shall remedy defects occurring within a period of one year from the date of Substantial Completion or as stated in the General Conditions.
- C. The following additional items shall be guaranteed:
 - 1. Piping shall be free from obstructions, holes or breaks of any nature.
 - 2. Insulation shall be effective.
 - 3. Proper circulation of fluid in each piping system.
- D. The above guarantees shall include both labor and material; and repairs or replacements shall be made without additional cost to the Owner.
- E. The remedial work shall be performed promptly, upon written notice from the Architect or Owner.
- F. At the time of Substantial Completion, deliver to the Owner warranties with terms extending beyond the one year guarantee period, each warranty instrument being addressed to the Owner and stating the commencement date and term. Refer to Table 3 at the end of this section for a list of specification sections in Division 22 that contain special warranties.

1.18 PROJECT CONDITIONS

- A. Conditions Affecting Excavations: The following project conditions apply:
 - 1. Maintain and protect existing building services which transit the area affected by selective demolition.

2. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by excavation operations.
- B. Site Information: Subsurface conditions were investigated during the design of the Project. Reports of these investigations are available for information only; data in the reports are not intended as representations or warranties of accuracy or continuity of conditions. The Owner will not be responsible for interpretations or conclusions drawn from this information.
- C. Use of explosives is not permitted.
- D. Environmental Conditions: Apply joint sealers under temperature and humidity conditions within the limits permitted by the joint sealer manufacturer. Do not apply joint sealers to wet substrates.

PART 2 - PRODUCTS AND MATERIALS

2.1 SOIL MATERIALS

- A. Provide clean sand, pea gravel or flowable fill material (per the geotechnical engineer's or structural engineer's recommendations).
- B. Subbase Material: Where applicable, provide natural soils with 10% by volume of rocks less than 2" diameter or artificially crushed aggregate. Corrosive fill materials shall not be utilized. When CL clay, rock, or gravel is used, it shall not be larger than 2 inches in any dimension and be free of debris, waste, frozen materials, vegetable and other deleterious matter.

PART 3 - EXECUTION

3.1 PERMITS

- A. Secure and pay for permits required in connection with the installation of the Plumbing Work. Arrange with the various utility companies for the installation and connection of required utilities for this facility and pay charges associated therewith including connection charges and inspection fees, except where these services or fees are designated to be provided by others.

3.2 EXCAVATION AND BACKFILLING

- A. Refer to Division 01, Division 02, and Division 31, Geotechnical Soils Report and General Conditions for Excavation and Backfilling in addition to the requirements specified herein.
- B. Perform excavation of every description, of whatever substance encountered and to the depth required in connection with the installation of the work under this Division. Excavation shall be in conformance with applicable Division and section of the General Specifications.
- C. Roads, alleys, streets and sidewalks damaged during this work shall be restored to the satisfaction of Authorities Having Jurisdiction.
- D. Trenches close to walks or columns shall not be excavated without prior consultation with the Architect.
- E. Erect barricades around excavations. Provide an adequate number of amber lights on or near the work and keep them burning from dusk to dawn. The Contractor shall be held responsible for any damage that any parties may sustain due to neglecting the necessary precautions when performing the work.

- F. Slope sides of excavations to comply with local, state and federal codes and ordinances. Shore and brace as required for stability of excavation.
- G. Shoring and Bracing: Establish requirements for trench shoring and bracing to comply with local, state and federal codes and authorities. Maintain shoring and bracing in excavations regardless of time period excavations will be open.
 - 1. Remove shoring and bracing when no longer required. Where sheeting is allowed to remain, cut top of sheeting at an elevation of 30 inches below finished grade elevation.
- H. Install sediment and erosion control measures in accordance with local codes and ordinances.
- I. Dewatering: Prevent surface water and subsurface or ground water from flowing into excavations and trenches.
 - 1. Do not allow water to accumulate in excavations and trenches. Remove water to prevent softening of bearing materials. Provide and maintain dewatering system components necessary to convey water away from excavations.
 - 2. Establish and maintain temporary drainage ditches and other diversions outside excavation and trench limits to convey surface water to collecting or run-off areas. Do not use trench excavations as temporary drainage ditches. In no case shall sewers be used as drains for such water.
- J. Material Storage: Stockpile satisfactory excavated materials where directed, until required for backfill or fill. Place, grade, and shape stockpiles for proper drainage.
 - 1. Locate and retain soil materials away from edge of excavations. Do not store within drip-line of trees indicated to remain.
 - 2. Remove and legally dispose of excess excavated materials and materials not acceptable for use as backfill or fill.
- K. Excavation for Underground Tanks, Basins, and Plumbing Structures: Conform to elevations and dimensions shown within a tolerance of plus or minus 0.10 foot; plus a sufficient distance to permit placing and removal of concrete formwork, installation of services, other construction, and for inspection.
 - 1. Excavate, by hand, areas within drip-line of large trees. Protect the root system from damage and dry-out. Maintain moist conditions for root system and cover exposed roots with burlap. Paint root cuts of 1 inch in diameter and larger with emulsified asphalt tree paint.
 - 2. Take care not to disturb bottom of excavation. Excavate by hand to final grade just before concrete reinforcement is placed.
- L. Trenching: Excavate trenches for Plumbing installations as follows:
 - 1. Excavate trenches to the uniform width, sufficiently wide to provide ample working room and a minimum of 6 to 9 inches clearance on both sides of pipe and equipment.
 - 2. Excavate trenches to depth indicated or required for piping to establish indicated slope and invert elevations. Beyond building perimeter, excavate trenches to an elevation below frost line.
 - 3. Limit the length of open trench to that in which pipe can be installed, tested, and the trench backfilled within the same day.
 - 4. Where rock is encountered, carry excavation below required elevation and backfill with a layer of crushed stone or gravel prior to installation of pipe. Provide a minimum of 6 inches of stone or gravel cushion between rock bearing surface and pipe.
 - 5. Excavate trenches for piping and equipment with bottoms of trench to accurate elevations for support of pipe and equipment on undisturbed soil.
- M. Cold Weather Protection: Protect excavation bottoms against freezing when atmospheric temperature is less than 35°F.
- N. Bedding:

1. Fill bottom of pipe trench and fill unevenness with compacted bedding material to ensure continuous bearing of the pipe barrel on the bearing surface. Additional bedding installation requirements are in the following piping specifications. Compact bedding as described below:
 2. Fill bottom of equipment trench and fill unevenness with compacted sand backfill to ensure continuous bearing of the equipment on the bearing surface. Compact bedding as described below.
- O. Backfilling and Filling: Place soil materials in layers to required subgrade elevations for each area classification listed below, using materials specified in Part 2 of this Section.
1. Under walks and pavements, use a combination of subbase materials and excavated or borrowed materials.
 2. Under building slabs, use drainage fill materials.
 3. Under piping and equipment, use subbase materials where required over rock bearing surface and for correction of unauthorized excavation.
 4. For piping less than 30 inches below surface of roadways, provide 4-inch-thick concrete base slab support after installation and testing of piping and prior to backfilling and placement of roadway subbase. Coordinate with AHJ for colored concrete requirements.
 5. Other areas, use excavated or borrowed materials.
- P. Backfill excavations as promptly as work permits, but not until completion of the following:
1. Inspection, testing, approval, and locations of underground utilities have been recorded.
 2. Removal of concrete formwork.
 3. Removal of shoring and bracing, and backfilling of voids.
 4. Removal of trash and debris.
- Q. Placement and Compaction: Place subgrade backfill and fill materials in layers of not more than 8 inches in loose depth for material compacted by heavy equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.
- R. Before compaction, moisten or aerate each layer as necessary to provide optimum moisture content. Compact each layer to required percentage of maximum dry density or relative dry density for each area classification specified below. Do not place backfill or fill material on surfaces that are muddy, frozen, or contain frost or ice.
- S. Place backfill and fill materials evenly adjacent to structures, piping, and equipment to required elevations. Prevent displacement of piping and equipment by carrying material uniformly around them to approximately same elevation in each lift.
- T. Compaction: Place bedding backfill materials in maximum layers of not more than 6 inches loose depth for material compacted by hand-operated tampers. Place subbase backfill materials in maximum layers of not more than 8 inches in loose depth for material compacted by heavy equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers. Control soil compaction during construction, providing minimum percentage of density specified for each area classification indicated below.
1. Use of pneumatic backhoe as compaction method is not allowed as an acceptable process for compaction of excavations or trenches.
 2. For vertical and/or diagonal pipe installations greater than ½" rise/lf, thoroughly support pipes from permanent concrete structures or undisturbed earth at no less than 10-foot intervals, while placing backfill materials, so that pipes are not deflected, crushed, broken, or otherwise damaged by the backfill placement or settlement.
 3. Where subgrade or layer of soil material must be moisture conditioned before compaction, uniformly apply water. Apply water in minimum quantity necessary to achieve required moisture content and to prevent water appearing on surface during, or subsequent to, compaction operations. Compact each layer to required percentage of maximum dry density or relative dry density for each area classification specified below. Do not place backfill or fill material on surfaces that are muddy, frozen, or contain frost or ice.

4. Place backfill and/or drainage fill materials evenly adjacent to structures, piping, and equipment to required elevations. Coordinate with Architect and/or Civil Engineer backfill requirements prior to installation. Prevent displacement of pipes and equipment by carrying material uniformly around them to approximately same elevation in each layer or lift.
 5. Percentage of Maximum Density Requirements: Compact soil to not less than the following percentages of maximum density for soils which exhibit a well-defined moisture-density relationship (cohesive soils), determined in accordance with ASTM D 1557 or ASTM D 698 and not less than the following percentages of relative density, determined in accordance with ASTM D 4253, for soils which will not exhibit a well-defined moisture-density relationship (cohesionless soils).
 - a. Areas Under Structures, Building Slabs and Steps, Pavements: Compact top 12 inches of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.
 - b. Areas Under Walkways: Compact top 6 inches of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.
 - c. Other Areas: Compact top 6 inches of subgrade and each layer of backfill or fill material to 85 percent maximum density for cohesive soils, and 90 percent relative density for cohesionless soils.
- U. Subsidence: Where subsidence occurs at Plumbing installation excavations during the period 12 months after Substantial Completion, remove surface treatment (i.e., pavement, lawn, or other finish), add backfill material, compact to specified conditions, and replace surface treatment. Restore appearance, quality, and condition of surface or finish to match adjacent areas.
- V. Additional Excavation: Where additional excavation may be required due to unsuitable bearing materials encountered, notify the architect immediately for resolution.

3.3 CUTTING AND PATCHING

- A. Cut walls, floors, ceilings, and other portions of the facility as required to install work under this Division.
- B. Obtain permission from the Architect prior to cutting. Do not cut or disturb structural members without prior approval from the Architect and Structural Engineer.
- C. For post-tension slabs, x-ray slab and closely coordinate all core drill locations with Architect and Structural Engineer prior to performing any work. Obtain approval from Architect and Structural Engineer for all core drills and penetrations at least four days prior to performing work.
- D. Penetrations shall be made as small as possible while maintaining required clearances between the building element penetrated and the system component.
- E. Patch around openings to match adjacent construction, including fire ratings, if applicable.
- F. Repair and refinish areas disturbed by work to the condition of adjoining surfaces in a manner satisfactory to the Architect.
- G. After the final waterproofing membrane has been installed, roofs may be cut only with written permission by the Architect.

3.4 CLEANING

- A. Dirt and refuse resulting from the performance of the work shall be removed from the premises as required to prevent accumulation. The Plumbing Contractor shall cooperate in maintaining reasonably clean premises at all times.

- B. Immediately prior to the final inspection, the Plumbing Contractor shall clean material and equipment installed under the Plumbing Contract. Dirt, dust, plaster, stains, and foreign matter shall be removed from surfaces including components internal to equipment. Damaged finishes shall be touched-up and restored to their original condition.

3.5 SUBSTANTIAL COMPLETION REVIEW

- A. Prior to requesting inspection for "CERTIFICATE OF SUBSTANTIAL COMPLETION", the Contractor shall complete the following items:
 - 1. Submit complete Operation and Maintenance Manuals.
 - 2. Submit complete Record Drawings.
 - 3. Perform special inspections. Refer to Table 4 at the end of this section for a list of specification sections in Division 22 that contain special inspection requirements.
 - 4. Start-up testing of systems.
 - 5. Removal of temporary facilities from the site.
 - 6. Comply with requirements for Substantial Completion in the "General Conditions".
- B. The Contractor shall request in writing a review for Substantial Completion. The Contractor shall give the Architect/Engineer at least seven (7) days notice prior to the review.
- C. The Contractor's written request shall state that the Contractor has complied with the requirements for Substantial Completion.
- D. Upon receipt of a request for review, the Architect/Engineer will either proceed with the review or advise the Contractor of unfulfilled requirements.
- E. If the Contractor requests a site visit for Substantial Completion review prior to completing the above mentioned items, He shall reimburse the Architect/Engineer for time and expenses incurred for the visit.
- F. Upon completion of the review, the Architect/Engineer will prepare a "final list" of outstanding items to be completed or corrected for final acceptance.
- G. Omissions on the "final list" shall not relieve the Contractor from the requirements of the Contract Documents.
- H. Prior to requesting a final review, the Contractor shall submit a copy of the final list of items to be completed or corrected. He shall state in writing that each item has been completed, resolved for acceptance or the reason it has not been completed.

SUBSTITUTION REQUEST FORM

To Project Engineer: _____ Request # (GC Determined): _____

Project Name: _____

Project No/Phase: _____ Date: _____

Specification Title: _____

Section Number: _____ Page: _____ Article/Paragraph: _____

Proposed Substitution: _____

Manufacturer: _____ Model No.: _____

Address: _____ Phone: _____

History: New product 1-4 years old 5-10 years old More than 10 years old

Differences between proposed substitution and specified Work: _____

Point-by-point comparative data attached – REQUIRED BY ENGINEER

Comparative data may include but not be limited to performance, certifications, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements. Include all information necessary for an evaluation.

Supporting Data Attached: Drawings Product Data Samples
 Tests Reports Other: _____

Reason for not providing specified item: _____

Similar Installation:

Project: _____ Architect: _____

Address: _____ Owner: _____

_____ Date Installed: _____

Proposed substitution affects other parts of Work: No Yes; explain: _____

Substitution Certification Statement:

Unless stated otherwise in writing to the Engineer by the Contractor, Contractor warrants to the Engineer, Architect, and Owner that the:

- ▲ A. Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.
- B. Proposed substitution is consistent with the Contract Documents and will produce indicated results.
- C. Proposed substitution does not affect dimensions and functional clearances.
- D. Proposed substitution has received necessary approvals of authorities having jurisdiction.
- E. Same warranty will be furnished for proposed substitution as for specified Work.
- F. Same maintenance service and source of replacement parts, as applicable, is available.
- G. Proposed substitution will not adversely affect other trades or delay construction schedule.
- H. Coordination, installation, and changes in the Work as necessary for accepted substitution will be complete in all respects.

Submitting Contractor Date Company

Manufacturer's Certification of Equal Quality:

I _____ represent the manufacturer of the Proposed Substitution item and hereby certify and warrant to Architect, Engineer, and Owner that the function and quality of the Proposed Substitution meets or exceeds the Specified Item.

SECTION 15031 (220015) - COORDINATION

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section specifies the basic requirements for electrical components which are an integral part of packaged plumbing equipment. These components include, but are not limited to factory furnished motors, starters, and disconnect switches furnished as an integral part of packaged plumbing equipment.
- B. Specific electrical requirements (i.e. horsepower and electrical characteristics) for plumbing equipment are scheduled on the Drawings.
- C. System shall be complete and operational with power and control wiring provided to meet the design intent shown on the drawings and specified within the specification sections.

1.2 SUBMITTALS

- A. No separate submittal is required. Submit product data for motors, starters, and other electrical components with submittal data required for the equipment for which it serves, as required by the individual equipment specification Sections.

1.3 QUALITY ASSURANCE

- A. Electrical components and materials shall be UL labeled.
- B. All electrical equipment provided and the wiring and installation of electrical equipment shall be in accordance with the requirements of this Section and Division 26.

PART 2 - PRODUCTS AND MATERIALS

2.1 GENERAL

- A. The Contractors shall provide all motors, starters, disconnects, wire, conduit, etc. as specified in the Construction Documents. If, however, the Plumbing Contractor furnishes a piece of equipment requiring a different motor, starter, disconnect, wire size, etc. than what is shown and/or intended on the Construction Documents, the Plumbing Contractor shall coordinate the requirements with any other Contractor and shall be responsible for any additional cost incurred by any other Contractor that is associated with installing the different equipment and related accessories for proper working condition.
- B. Refer to Division 26, "Common Work Results for Electrical" for specification of motor connections
- C. Refer to Division 26, "Enclosed Switches and Circuit Breakers" for specification of disconnect switches.

PART 3 - EXECUTION

3.1 CONTRACTOR COORDINATION

- A. Unless otherwise indicated, all motors, equipment, controls, etc. shall be furnished, set in place and wired in accordance with Table 1. Any items not listed but shown on the drawings shall be considered part of the Contract Documents and brought to the attention of the Architect.

- B. The General Contractor is the central authority governing the total responsibility of all trade contractors. Therefore, deviations and clarifications of this schedule are permitted provided the General Contractor assumes responsibility to coordinate the trade contractors different than as indicated herein. If deviations or clarifications to this schedule are implemented, submit a record copy to the Engineer.

TABLE 1: ELECTRICAL REQUIREMENTS FOR PLUMBING EQUIPMENT

END OF SECTION

SECTION 15051 (220500) - COMMON WORK RESULTS FOR PLUMBING

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes limited scope general construction materials and methods for application with Plumbing installations as follows:
 - 1. Access panels and doors in walls, ceilings, and floors for access to Plumbing materials and equipment.
 - 2. Plumbing equipment nameplate data.
 - 3. Concrete for bases and housekeeping pads.
 - 4. Non-shrink grout for equipment installations.
 - 5. Sleeves for Plumbing penetrations.
 - 6. Miscellaneous metals for support of Plumbing materials and equipment.
 - 7. Wood grounds, nailers, blocking, fasteners, and anchorage for support of Plumbing materials and equipment.
 - 8. Joint sealers for sealing around Plumbing materials and equipment.

- B. Related Sections: The following sections contain requirements that relate to this Section:
 - 1. Division 7 Section "Penetration Firestopping" for material and methods for firestopping systems.
 - 2. Division 22 Section "Basic piping Materials and Methods" for materials and methods for mechanical sleeve seals.
 - 3. Division 22 Section "Sanitary Drainage and Vent Piping and Specialties" for indirect drain piping and installation requirements.
 - 4. Division 23 Section "Direct Digital Controls for HVAC" for integration with building automation system of leak detection system "Water Present" alarm.
 - 5. Division 26 Section "Common Work Results for Electrical" required electrical devices.
 - 6. Division 26 Sections "Enclosed Switches and Circuit Breakers" for field-installed disconnects.

1.2 SUBMITTALS

- A. General: Submit the following in accordance with Division 1 and Division 22 Section "General Plumbing Requirements".
 - 1. Product data for the following products:
 - a. Access panels and doors.
 - b. Through and membrane-penetration firestopping systems.
 - c. Joint sealers.
 - 2. Shop drawings detailing fabrication and installation for metal fabrications, and wood supports and anchorage for Plumbing materials and equipment.
 - 3. Welder certificates, signed by Contractor, certifying that welders comply with requirements specified under "Quality Assurance" article of this Section.
 - 4. Schedules indicating proposed methods and sequence of operations for selective demolition prior to commencement of Work. Include coordination for shut-off of utility services and details for dust and noise control.
 - a. Coordinate sequencing with construction phasing and Owner occupancy specified in Division 1 Section "Summary of Work."
 - 5. Through and Membrane Penetration Firestopping Systems Product Schedule: Submit a schedule for each piping system penetration that includes UL listing, location, wall or floor rating and installation drawing for each penetration fire stop system.
 - a. Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping condition, submit illustration, with

modifications marked, approved by penetration firestopping manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

1.3 QUALITY ASSURANCE

- A. Qualify welding processes and welding operators in accordance with AWS D1.1 "Structural Welding Code - Steel."
 - 1. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.
- B. Fire-Resistance Ratings: Where a fire-resistance classification is indicated, provide access door assembly with panel door, frame, hinge, and latch from manufacturer listed in the UL "Building Materials Directory" for rating shown.
 - 1. Provide UL Label on each fire-rated access door.
- C. Through and Membrane Penetration Systems Installer Qualifications: A firm experienced in installing penetration firestopping systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its penetration firestopping system products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.

1.4 NOISE CRITICAL SPACES

- A. Many areas of the building, referred to as "noise-critical spaces", require special attention (special acoustical provisions and restrictions). The table below designates the noise-critical spaces; noise levels due to equipment, ductwork, grilles, registers, terminal devices, diffusers, etc., shall permit attaining sound pressure levels in all 8 octave bands in occupied spaces conforming to RC levels per ASHRAE handbook as indicated.

Space	RC Levels
Meeting/Banquet Rooms	30
Conference Rooms	30

PART 2 - PRODUCTS AND MATERIALS

2.1 ACCESS TO EQUIPMENT

- A. Manufacturer:
 - 1. Bar-Co., Inc.
 - 2. Elmdor Stoneman.
 - 3. JL Industries
 - 4. Jay R. Smith Mfg. Co.
 - 5. Karp Associates, Inc.
 - 6. Milcor
 - 7. Nystrom Building Products
 - 8. Wade
 - 9. Zurn
- B. Access Doors:
 - 1. Provide access doors for all concealed equipment, except where above lay-in ceilings. Refer to Section "Identification for Plumbing Piping" for labeling of access doors.

2. Access doors shall be adequately sized for the devices served with a minimum size of 18 inches x 18 inches, furnished by the respective Contractor or Subcontractor and installed by the General Contractor.
3. Access doors must be of the proper construction for type of construction where installed.
4. The exact location of all access doors shall be verified with the Architect prior to installation.
5. Steel Access Doors and Frames: Factory-fabricated and assembled units, complete with attachment devices and fasteners ready for installation. Joints and seams shall be continuously welded steel, with welds ground smooth and flush with adjacent surfaces.
6. Frames: 16-gauge steel, with a 1-inch-wide exposed perimeter flange for units installed in unit masonry, pre-cast, or cast-in-place concrete, ceramic tile, or wood paneling.
 - a. For installation in masonry, concrete, ceramic tile, or wood paneling: 1-inch-wide exposed perimeter flange and adjustable metal masonry anchors.
 - b. For installation in gypsum wallboard or plaster: perforated flanges with wallboard bead.
 - c. For installation in full-bed plaster applications: galvanized, expanded metal lath and exposed casing bead, welded to perimeter of frame.
7. Flush Panel Doors: 14-gauge sheet steel, with concealed spring hinges or concealed continuous piano hinge set to open 175 degrees; factory-applied prime paint.
 - a. Fire-Rated Units: Insulated flush panel doors, with continuous piano hinge and self-closing mechanism.
8. Locking Devices: Flush, screwdriver-operated cam locks.
9. Locking Devices: Where indicated on the drawings or where access panels are installed in locations accessible to the public, provide 5-pin or 5-disc type cylinder locks, individually keyed; provide 2 keys.

2.2 PLUMBING EQUIPMENT NAMEPLATE DATA

- A. For each piece of power operated Plumbing equipment, provide a permanent operational data nameplate indicating manufacturer, product name, model number, serial number, capacity, operating and power characteristics, labels of tested compliance's, and similar essential data. Locate nameplates in an accessible location.

2.3 CONCRETE EQUIPMENT BASES/HOUSEKEEPING PADS

- A. Provide concrete equipment bases and housekeeping pads for various pieces of floor mounted Plumbing equipment.. Concrete equipment bases/housekeeping pads shall generally conform to the shape of the piece of equipment it serves with a minimum 4" margin around the equipment and supports.
- B. Form concrete equipment bases and housekeeping pads using framing lumber or steel channel with form release agent. Chamfer top edges and corners. Trowel tops and sides of each base/pad to a smooth finish, equal to that of the floors.
- C. Concrete equipment bases and housekeeping pads shall be made of a minimum 28 day, 4000 psi concrete conforming to American Concrete Institute Standard Building Code for Reinforced Concrete (ACI 318-99) and the latest applicable recommendations of the ACI standard practice manual. Concrete shall be composed of cement conforming to ASTM C 150 Type I, aggregate conforming to ASTM C33, and potable water. All exposed exterior concrete shall contain 5 to 7 percent air entrainment.
- D. Unless otherwise specified or shown on the structural drawings, reinforce equipment bases and housekeeping pads with No. 4 reinforcing bars conforming to ASTM A 615 or 6x6 – W2.9 x W2.9 welded wire mesh conforming to ASTM A185. Reinforcing bars shall be placed 24" on center with a minimum of two bars each direction.
- E. Provide galvanized anchor bolts for all equipment placed on concrete equipment bases and housekeeping pads or on concrete slabs. Anchor bolts size, number and placement shall be as recommended by the Manufacturer of the equipment.

- F. Concrete equipment bases and housekeeping pads shall have minimum heights in accordance with the following table:

Equipment	Minimum Height
Water Heaters, Water Softeners and Equipment Less than or equal to 20 tons and Other Equipment Not Listed – Note 1	3-1/2"

NOTES:

1. Height of equipment bases applies to equipment installed on slab-on-grade. For equipment installed on floors above grade and/or roof, reference the drawings.

2.4 GROUT

- A. Provide nonshrink, nonmetallic grout conforming to ASTM C 1107, Grade B, in premixed and factory-packaged containers.
- B. Grout shall have post-hardening, volume-adjusting, dry, non-staining, non-corrosive, non-gaseous, hydraulic-cement characteristics and shall be as recommended by manufacturer for interior and exterior applications.
- C. Grout shall have 5,000 psi, 28-day compressive strength design mix.

2.5 PENETRATIONS

- A. Sleeves:
 1. Steel Sleeves: Schedule 40 galvanized, welded steel pipe, ASTM A-53 grade A or 12 gauge (0.1084 inches) welded galvanized steel formed to a true circle concentric to the pipe.
 2. Sheet-Metal Sleeves: 10 gauge (0.1382 inches), galvanized steel, round tube closed with welded longitudinal joint.
- B. Frames for rectangular openings attached to forms and of a maximum dimension established by the Architect. For sleeve cross-section rectangle perimeter less than 50 inches and no side greater than 16 inches, provide 18 gauge (0.052 inches) welded galvanized steel. For sleeve cross-section rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, provide 10 gauge (0.1382 inches) welded galvanized steel. Notify the General Contractor or Architect before installing any box openings not shown on the Architectural or Structural Drawings.
- C. Box Frames: Frames for rectangular openings shall be of welded 12 gauge steel attached to forms and of a maximum dimension established by the Architect. Contractor shall notify the General Contractor or Architect before installing any box openings not shown on the Architectural or Structural Drawings.

2.6 DRIP PANS

- A. Drip pans for pipes in protected areas shall be 20 gauge galvanized steel with 2" lapped and soldered joints. Drip pan shall have a depth of 2" and a width of 6" in addition to the diameter of the associated pipe. Provide 3/4" galvanized pipe with male NPT outlet at low point of drip pan.
- B. Drip pan supports shall be 1/4" X 2" galvanized bar stock welded to the drip pan without holes.

2.7 LEAK DETECTION SYSTEM

- A. Leak detection system with Rope style leak sensor and controller capable of connecting to a building automation system with audible and visual alarms for leak detection and cable failure in all drip pans unless otherwise noted on drawings. Provide with factory 24V DC power supply with power plug, sensing cables, and accessories.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. RLE Technologies #LD1000

2.8 MISCELLANEOUS METALS

- A. Steel plates, shapes, bars, and bar grating: ASTM A 36.
- B. Cold-Formed Steel Tubing: ASTM A 500.
- C. Hot-Rolled Steel Tubing: ASTM A 501.
- D. Steel Pipe: ASTM A 53, Schedule 40, welded.
- E. Fasteners: Zinc-coated, type, grade, and class as required.

2.9 MISCELLANEOUS LUMBER

- A. Framing Materials: Standard Grade, light-framing-size lumber of any species. Number 3 Common or Standard Grade boards complying with WCLIB or AWPA rules, or Number 3 boards complying with SPIB rules. Lumber shall be preservative treated in accordance with AWPB LP-2, and kiln dried to a moisture content of not more than 19 percent.
- B. Construction Panels: Plywood panels; APA C-D PLUGGED INT, with exterior glue; thickness as indicated, or if not indicated, not less than 15/32 inches.

2.10 JOINT SEALERS

- A. General: Joint sealers, joint fillers, and other related materials compatible with each other and with joint substrates under conditions of service and application.
- B. Colors: As selected by the Architect from manufacturer's standard colors.
- C. Elastomeric Joint Sealers: Provide the following types:
 1. One-part, nonacid-curing, silicone sealant complying with ASTM C 920, Type S, Grade NS, Class 25, for uses in non-traffic areas for masonry, glass, aluminum, and other substrates recommended by the sealant manufacturer. Provide one of the following:
 - a. "Dow Corning 790," Dow Corning Corp.
 - b. "Silglaze II SCS 2801," General Electric Co.
 - c. "Silpruf SCS 2000," General Electric Co.
 - d. "864," Pecora Corp.
 - e. "Rhodia 5C," Rhone-Poulenc, Inc.
 - f. "Spectrem 1," Tremco, Inc.
 - g. "Spectrem 2," Tremco, Inc.
 - h. "Dow Corning 795," Dow Corning Corp.
 - i. "Rhodia 7B," Rhone-Poulenc, Inc.
 - j. "Rhodia 7S," Rhone-Poulenc, Inc.
 - k. "Omniseal," Sonneborn Building Products Div.
 2. One-part, mildew-resistant, silicone sealant complying with ASTM C 920, Type S, Grade NS, Class 25, for uses in non-traffic areas for glass, aluminum, metal or porcelain plumbing fixtures and nonporous joint substrates; formulated with fungicide; intended for sealing interior joints with nonporous substrates; and subject to in-service exposure to conditions of high humidity and temperature extremes. Provide one of the following:
 - a. "Dow Corning 786," Dow Corning Corp.
 - b. "Sanitary 1700," General Electric Co.
 - c. "898 Silicone Sanitary Sealant," Pecora Corp.

- D. Acrylic-Emulsion Sealants: One-part, nonsag, mildew-resistant, paintable complying with ASTM C 834 recommended for exposed applications on interior and protected exterior locations involving joint movement of not more than plus or minus 5 percent. Provide one of the following:
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. "Chem-Calk 600," Bostik Construction Products Div.
 - b. "AC-20," Pecora Corp.
 - c. "Sonolac," Sonneborn Building Products Div.
 - d. "Tremflex 834," Tremco, Inc.

2.11 ACOUSTICAL SEALANTS

- A. General: Penetrations by pipes through surfaces that are around and between noise critical spaces shall be sleeved, packed and sealed airtight with foam rod, non-hardening sealant and/or packing material as described herein.
- B. Foam Rod: Foam backer rod shall be closed cell polyethylene suitable for use as a backing for non-hardening sealant.
- C. Non-Hardening Sealant: Sealant for penetrations shall be non-hardening polysulphide type. Permanently flexible, approved firestop putty may be used in lieu of the sealant on foam rod in noise critical walls that are also fire rated.
- D. Packing Material: Mineral fiber; non-combustible; resistant to water, mildew and vermin. Expanding resilient foams manufactured for this purpose are an acceptable alternative only if the material density is at least 15 pcf (40 kg/m³).

2.12 FIRE STOPPING

- A. Sealants and accessories shall have fire-resistance ratings indicated, as established by testing identical assemblies in accordance with UL 2079 or ASTM E 814, or other NRTL acceptable to AHJ. Manufactured by:
 - 1. Hilti
 - 2. RectorSeal
 - 3. Specified Technologies Inc.,
 - 4. United States Gypsum Company
 - 5. 3M Corp.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Install access doors and sealants in accordance with manufacturer's installation instructions.

3.2 INSTALLATION OF ACCESS DOORS

- A. Set frames accurately in position and securely attached to supports, with face panels plumb and level in relation to adjacent finish surfaces.
- B. Adjust hardware and panels after installation for proper operation.

3.3 ERECTION OF METAL SUPPORTS AND ANCHORAGE

- A. Cut, fit, and place miscellaneous metal fabrications accurately in location, alignment, and elevation to support and anchor Plumbing materials and equipment.

- B. Field Welding: Comply with AWS "Structural Welding Code."

3.4 ERECTION OF WOOD SUPPORTS AND ANCHORAGE

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorage accurately in location, alignment, and elevation to support and anchor Plumbing materials and equipment.
- B. Select fastener sizes that will not penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

3.5 PREPARATION FOR JOINT SEALERS

- A. Surface Cleaning for Joint Sealers: Clean surfaces of joints immediately before applying joint sealers to comply with recommendations of joint sealer manufacturer.
- B. Apply joint sealer primer to substrates as recommended by joint sealer manufacturer. Protect adjacent areas from spillage and migration of primers, using masking tape. Remove tape immediately after tooling without disturbing joint seal.

3.6 APPLICATION OF JOINT SEALERS

- A. General: Comply with joint sealer manufacturers' printed application instructions applicable to products and applications indicated, except where more stringent requirements apply.
 - 1. Comply with recommendations of ASTM C 962 for use of elastomeric joint sealants.
 - 2. Comply with recommendations of ASTM C 790 for use of acrylic-emulsion joint sealants.
- B. Tooling: Immediately after sealant application and prior to time shinning or curing begins, tool sealants to form smooth, uniform beads; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

3.7 PENETRATIONS:

- A. New Construction:
 - 1. Coordinate with Divisions 03 and 04 for installation of sleeves and sleeve seals integrally in cast-in-place, precast, and masonry walls and horizontal slabs where indicated on the Drawings or as required to support piping or ductwork penetrations.
- B. Construction in Existing Facilities:
 - 1. Saw cut or core drill existing walls and slabs to install sleeves and sleeve seals in existing facilities. Do not cut or drill any walls or slabs without first coordinating with, and receiving approval from, the Architect, Owner, or both. Seal sleeves and sleeve seals into concrete walls or slabs with a waterproof non-shrink grout acceptable to the Architect.
- C. Provide sleeves and/or box frames for openings in all concrete and masonry construction and fire or smoke partitions, for all mechanical work that passes through such construction; Coordinate with other trades and Divisions to dimension and lay out all such openings.
- D. The General Contractor will provide only those openings specifically indicated on the Architectural or Structural Drawings as being provided under the General Contractor's work.

- E. The cutting of new or existing construction shall not be permitted except by written approval of the Architect.
- F. Floor sleeves shall be fitted with means for attachment to forms and shall be of length to extend at least two inches above the floor level.
- G. Cut sleeves to length for mounting flush with both surfaces of walls.
- H. Extend sleeves installed in floors 2 inches above finished floor level.
- I. Seal space outside of sleeves with grout for penetrations of concrete and masonry.
- J. Seal space outside of sleeves with approved joint compound for penetrations of gypsum board assemblies.
- K. All openings sleeved through underground exterior walls shall be sealed with mechanical sleeve seals as specified in Division 22 Section "Basic Piping Materials and Methods".

3.8 DRIP PANS

- A. Provide drip pans in locations indicated on drawings.
- B. Provide drip pans for piping directly above a two hour rated ceiling of an elevator machine room.
- C. Provide drip pans, only with written approval obtained prior to installation, installed beneath piping above electrical rooms, telecom rooms, data rooms, servers or any other protected area not clearly indicated by drawings.
- D. Provide drip pan supports every 4'-0". Provide ¼" galvanized threaded rods through bar stock on each side of the drip pan and attached with 2 nuts per rod. Attach rods to structure with MSS SP-58 compliant components.
- E. Connect ¾" type "L" copper indirect drain line to drip pan outlet. Route and discharge to receptor with air gap outside of the protected area.
- F. Install leak detection rope in a zig-zag pattern covering entire length and width of the drip pan. Secure rope to pan per manufacturers recommendations.
- G. Mount leak detection controller on wall adjacent to exit of the room above which the drip pan is located unless otherwise indicated on drawings indicated on drawings.
- H. Coordinate disconnect and power supply for leak detection system and 120V dedicated receptacle adjacent to controller with Division 26. Power wiring and receptacles are specified in Division 26 Section "Common Work Results for Electrical" Disconnects are specified in Division 26 Section "Enclosed Switches and Circuit Breakers"
- I. Coordinate interlock of "Water Present" alarm and "Cable Fault alarm with Building Automation System. Refer to Division 23 Section "Direct Digital Controls for HVAC" for integration with building automation system and low voltage power wiring.

3.9 ACOUSTICAL PENETRATIONS

- A. General: There shall be no direct contact of piping with shaft walls, floor slabs and/or partition. All openings around pipes in the structure surrounding the plumbing equipment and surrounding noise-critical spaces shall be sealed, packed with caulking for the full depth of the penetration, as described herein. This includes all slab penetrations and penetrations of noise critical walls.

B. Domestic Water, Sewer, Drain and Vent Piping

1. Where a pipe passes through a wall, ceiling or floor slab of a noise critical space, a steel sleeve shall be cast or grouted into the structure. The internal diameter of the sleeve shall be 2 inches larger than the external diameter of the pipe passing through it. After all of the piping is installed in that area, the Contractor shall check the clearance and correct it, if necessary, to within 1/2 inch. Pack the void full depth with packing material sealed at both ends, 1 inch deep, with non-hardening sealant backed by foam rod.

C. Compressed Air Piping

1. Compressed air pipes may be sleeved and sealed as described above, or may be grouted and caulked into the structure as follows: before grout has set, rake a groove around the pipe on each side of the wall or slab; groove shall be 1/2 inch wide and 1/2 inch deep. After grout has set, fill groove full depth with sealant.

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 15056 (220515) - BASIC PIPING MATERIALS AND METHODS

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section specifies piping materials and installation methods common to more than one Section of Division 22 and includes joining materials, piping specialties and basic piping installation instructions.
- B. Related Sections: The following sections contain requirements that relate to this Section:
 - 1. Division 22 Section "Common Work Results for Plumbing," for materials and methods for sleeve materials.

1.2 DEFINITIONS

- A. Lead Free: Refers to the wetted surface of pipe, fittings and fixtures in potable water systems that have a weighted average lead content $\leq 0.25\%$ per Safe Drinking Water Act as amended January 4th 2011 Section 1417.

1.3 SUBMITTALS

- A. Refer to Division 1 and Division 22 Section "General Plumbing Requirements" for administrative and procedural requirements for submittals.
- B. Product Data: Submit product data on the following items:
 - 1. Escutcheons
 - 2. Dielectric Unions
 - 3. Dielectric Waterway Fittings
 - 4. Dielectric Flanges and Flange Kits
 - 5. Mechanical Sleeve Seals
 - 6. Wall Pipes
 - 7. Strainers
- C. Quality Control Submittals:
 - 1. Submit welders' certificates specified in Quality Assurance below.
- D. Submit certification that specialties and fittings for domestic water distribution comply with NSF 61 Annex G and / or NSF 372.
- E. Submit a schedule of dissimilar metal joints and dielectric waterway fittings, unions, flanges or flange kits. Include joint type materials, connection method and proposed dielectric waterway fittings, unions and flanges to isolate dissimilar metals. Include minimum and maximum torque requirements for flange connections to valves. Refer to the individual piping system specification sections in Division 22 for specifications for piping materials and fittings relative to that particular system and additional requirements.
- F. Submit certification that fittings and specialties are manufactured in plants located in the United States or certified that they comply with applicable ANSI and ASTM standards.

1.4 QUALITY ASSURANCE

- A. Welder's Qualifications: All welders shall be qualified in accordance with ASME Boiler and Pressure Vessel Code, Section IX, Welding and Brazing Qualifications.

- B. Welding procedures and testing shall comply with ANSI Standard B31.9 - Standard Code for Building Services Piping and The American Welding Society, Welding Handbook.
- C. Soldering and Brazing procedures shall conform to ANSI B9.1 Standard Safety Code for Plumbing Refrigeration.
- D. Pipe specialties and fittings shall be manufactured in plants located in the United States or certified to meet the specified ASTM and ANSI standards.
- E. Comply with NSF 61 Annex G and / or NSF 372 for wetted surfaces of specialties and fittings containing no more than 0.25% lead by weight for domestic water distribution.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide piping materials and specialties from one of the following:
 - 1. Pipe Escutcheons:
 - a. AWI Manufacturing.
 - b. Keeney Manufacturing Company
 - c. Wal-Rich Corp.
 - d. Jones Stephens Corp.
 - 2. Dielectric Waterway Fittings:
 - a. Elster Perfection Corporation.
 - b. Grinnell Mechanical Products; Tyco Fire Products LP
 - c. Precision Plumbing Products, Inc.
 - 3. Dielectric Unions:
 - a. JOMAR International
 - b. Smith Cooper International
 - c. Watts Regulator Co.
 - d. Zurn Industries
 - 4. Dielectric Flanges and Flange Kits:
 - a. Calpico, Inc.
 - b. FMC Technologies
 - c. Pipeline Seal & Insulator, Inc.
 - d. Tampa Rubber and Gasket Co., inc.
 - e. Watts Industries Inc.; Water Products Div.
 - f. Zurn Industries, Inc.; Wilkins Div.
 - 5. Strainers – 2” and smaller:
 - a. Apollo
 - b. Hammond
 - c. Milwaukee
 - d. NIBCO
 - 6. Strainers – 2-1/2” and larger:
 - a. Metraflex Co.
 - b. Watts Regulator Co.
 - c. Zurn Industries, Inc.; Wikins Div.
 - 7. Mechanical Sleeve Seals:
 - a. Advance Products & Systems
 - b. Calpico, Inc.
 - c. GPT Industries/Link Seal
 - d. Metraflex Co.
 - e. Proco Products, Inc.
 - 8. Wall Pipes

- a. Josam Mfg. Co.
- b. Smith (Jay R) Mfg. Co.
- c. Tyler Pipe/Wade Div.; Subs. of Tyler Corp.
- d. Watts Industries, Inc.
- e. Zurn Industries, Inc.; Hydromechanics Div.

2.2 PIPE AND FITTINGS

- A. Refer to the individual piping system specification sections in Division 22 for specifications on piping and fittings relative to that particular system.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.3 JOINING MATERIALS

- A. Refer to individual Division 22 Piping Sections for special joining materials not listed below.
- B. Welding Materials: AWS D10.12; Comply with Section II, Part C, ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded.
- C. Brazing Materials: AWS A5.8; Comply with SFA-5.8, Section II, ASME Boiler and Pressure Vessel Code for brazing filler metal materials appropriate for the materials being joined.
- D. Soldering Materials: ASTM B32; Refer to individual piping system specifications for solder appropriate for each respective system.
- E. Gaskets for Flanged Joints: ASME B16.21; Gasket material shall be full-faced for cast-iron flanges and raised-face for steel flanges. Select materials to suit the service of the piping system in which installed and which conform to their respective ANSI Standard (A21.11, B16.20, or B16.21). Provide materials that will not be detrimentally affected by the chemical and thermal conditions of the fluid being carried.

2.4 PIPING SPECIALTIES

- A. Escutcheons: Chrome-plated, stamped steel, hinged, split-ring escutcheon, with set screw. Inside diameter shall closely fit pipe outside diameter, or outside of pipe insulation where pipe is insulated. Outside diameter shall completely cover the opening in floors, walls, or ceilings.
- B. Unions:
 - 1. Malleable-iron, Class 150 for low pressure service and class 300 for high pressure service; hexagonal stock, with ball-and-socket joints, metal-to-metal bronze seating surfaces; female threaded ends.
 - 2. Bronze, Class 125, with lead free cast bronze body meeting ASTM B584, for low pressure service and class 250 for high pressure service; hexagonal stock, with ball-and-socket joints, metal-to-metal bronze seating surfaces; solder or female threaded ends.
- C. Dielectric Unions: Factory-fabricated with lead free cast bronze body meeting ASTM B584 and galvanized steel body with plastic dielectric gasket, class 125 for low pressure service and class 250 for high pressure service, and appropriate end connections for the pipe materials in which installed (screwed or soldered) to effectively isolate dissimilar metals, prevent galvanic action, and stop corrosion.
- D. Dielectric Waterway Fittings: Electroplated steel or brass nipple, with an inert and non-corrosive, thermoplastic lining.
- E. Dielectric Flanges and Flange Kits:

1. Full faced gasket with same outside diameter and bolt hole arrangement as the flange. Pressure rating of 200psi for low pressure service and 400 psi for high pressure service at a continuous operating temperature of 180F.
 2. Steel washers, thermoplastic washers and bolt isolation sleeves or thermoplastic combination washers and bolt sleeves.
 3. Lead free cast bronze meeting ASTM B584, class 125 solder type or cast iron class 125 threaded type for low pressure service and bronze class 250 solder type or cast iron class 250 threaded type for high pressure service.
- F. Y-Type Strainers: Provide strainers full line size of connecting piping, with ends matching piping system materials. Screens for 4" and smaller shall be Type 304 stainless steel mesh with 0.062" perforations and screens for 5" and larger shall be Type 304 stainless steel, with 0.125" perforations.
1. For low pressure applications, cast iron strainers shall have 125 psi working pressure rating and cast bronze strainers shall have 150 psi working pressure rating. For high pressure applications, cast iron strainers shall have 250 psi working pressure rating and cast bronze strainers shall have 300 psi working pressure rating.
 2. Solder Ends, 2" and Smaller: Lead free cast bronze body meeting ASTM B584, screwed screen retainer with centered blowdown fitted with pipe plug.
 3. [Threaded Ends, 2" and Smaller: Cast bronze body, screwed screen retainer with centered blowdown fitted with pipe plug.]
 4. [Threaded Ends, 2" and Smaller: Cast-iron body, screwed screen retainer with centered blowdown fitted with pipe plug.][Threaded Ends, 2-1/2" and Larger: Cast-iron body, with FDA fused epoxy coating, bolted screen retainer with off-center blowdown fitted with pipe plug.]
 5. Flanged Ends, 2-1/2" and Larger: Cast-iron body, with FDA fused epoxy coating, bolted screen retainer with off-center blowdown fitted with pipe plug.
- G. Sleeves:
1. Sleeve: Refer to Division 22 Section "Common Work Results for Plumbing" for sleeve materials.
- H. Mechanical Sleeve Seals: Modular Plumbing type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between pipe and sleeve, connected with bolts and pressure plates which cause rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.5 WALL PIPES

- A. Cast-iron sleeve with integral clamping flange with clamping ring, bolts, and nuts for membrane flashing.
1. Underdeck Clamp: Clamping ring with setscrews.

2.6 WALL SLEEVES

1. Steel sleeve of schedule 40 pipe meeting ASTM A53B with 2" wide metal plate meeting ASTM A36 welded all around. Hot dip galvanized inside and out.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Install in accordance with manufacturer's installation instructions.

3.2 PREPARATION

- A. Ream ends of pipes and tubes, and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris for both inside and outside of piping and fittings before assembly.

3.3 INSTALLATIONS

- A. General Locations and Arrangements: Drawings (plans, schematics, and diagrams) indicate the general location and arrangement of the piping systems. Location and arrangement of piping layout take into consideration pipe sizing and friction loss, expansion, pump sizing, and other design considerations. So far as practical, install piping as indicated. Refer to individual system specifications for requirements for coordination drawing submittals.
- B. Conceal all pipe installations in walls, pipe chases, utility spaces, above ceilings, below grade or floors, unless indicated otherwise.
- C. Install piping free of sags and bends and with ample space between piping to permit proper insulation applications.
- D. Install exposed piping at right angles or parallel to building walls. Diagonal runs are not permitted, unless expressly indicated on the Drawings.
- E. Install horizontal piping as high as possible allowing for specified slope and coordination with other components. Install vertical piping tight to columns or walls. Provide space to permit insulation applications, with 1" clearance outside the insulation. Allow sufficient space above removable ceiling panels to allow for panel removal.
- F. Locate groups of pipes parallel to each other, spaced to permit applying full insulation and servicing of valves.
- G. Support piping from structure. Do not support piping from ceilings, equipment, ductwork, conduit and other non-structural elements.
- H. Install drains at low points in mains, risers, and branch lines consisting of a tee fitting, 3/4" ball valve, and short 3/4" threaded nipple and cap.
- I. Verify final equipment locations for roughing in.

3.4 PIPING PROTECTION

- A. Protect piping during construction period, to avoid clogging with dirt and debris, and to prevent damage from traffic and construction work.
- B. Place plugs in ends of uncompleted piping at end of day or whenever work stops.

3.5 PENETRATIONS

- A. Plumbing penetrations occur when piping penetrate concrete slabs, concrete or masonry walls, or fire / smoke rated floor and wall assemblies.
- B. Above Grade Concrete or Masonry Penetrations
 - 1. Provide sleeves for pipes passing through above grade concrete or masonry walls, concrete floor or roof slabs. Sleeves are not required for core drilled holes in existing masonry walls, concrete floors or roofs. Provide sleeves as follows:
 - a. Provide schedule 40 galvanized steel pipe for sleeves smaller than 6 inches in diameter.
 - b. Provide galvanized sheet metal for sleeves 6 inches in diameter and larger, thickness shall be 10 gauge (0.1382 inches).
 - c. Provide welded galvanized sheet metal for rectangular sleeves with the following minimum metal thickness:

- 1) For sleeve cross-section rectangle perimeter less than 50 inches and no side greater than 16 inches, thickness shall be 18 gauge (0.052 inches).
 - 2) For sleeve cross-section rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, thickness shall be 10 gauge (0.1382 inches).
- d. Schedule 40 PVC pipe sleeves are acceptable for use in areas without return air plenums.
2. Extend pipe insulation for insulated pipe through floor, wall and roof penetrations, including fire rated walls and floors. The vapor barrier shall be maintained. Size sleeve for a minimum of 1" annular clear space between inside of sleeve and outside of insulation.
 3. Seal elevated floor, exterior wall and roof penetrations watertight and weathertight with non-shrink, non-hardening commercial sealant. Pack with mineral wool and seal both ends with minimum of ½" of sealant.
- C. Underground, Exterior-Wall Penetrations: Provide galvanized steel wall sleeve. Wall sleeve is not required for existing concrete walls with core drilled penetrations. Size wall sleeves to allow for 1-inch or larger, if required by the mechanical sleeve seal manufacturer) annular clear space between pipe and sleeve. Provide mechanical sleeve seal.
1. Use type and number of sealing elements recommended by manufacturer for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
 2. Verify sleeve and mechanical sleeve seal installations for damage and faulty work. Verify watertight integrity of sleeves and mechanical sleeve seals installed below grade to seal against hydrostatic water pressure. If sleeve and or sleeve seal are not watertight, provide new wall sleeve and mechanical sleeve seal.
- D. Elevated Floor Penetrations of Waterproof Membrane:
1. Provide cast-iron wall pipes for sleeves, extend top of wall pipe minimum 1" above finish floor. Size wall pipe for minimum ½" annular space between pipe and wall pipe.
 2. Extend pipe insulation for insulated pipe through wall pipe. The vapor barrier shall be maintained. Size wall pipe for a minimum of 1" annular clear space between inside of sleeve and outside of insulation.
 3. Pack with mineral wool and seal both ends with minimum of ½" of waterproof sealant. Refer to Division 07 Section "Joint Sealants" for materials and installation.
 4. Secure waterproof membrane flashing between clamping flange and clamping ring. Comply with requirements for flashing specified in Division 7 Section "Sheet Metal Flashing and Trim."
 5. Extend bottom of wall pipe below floor slab as required and secure underdeck clamp to hold wall pipe rigidly in place.
- E. Interior Foundation Penetrations: Provide sleeves for horizontal pipe passing through or under foundation. Sleeves shall be cast iron soil pipe two nominal pipe sizes larger than the pipe served.
- F. Concrete Slab on Grade Penetrations:
1. Provide schedule 40 PVC pipe sleeves for vertical pressure pipe passing through concrete slab on grade. Sleeves shall be one nominal pipe size larger than the pipe served and two pipe sizes larger than pipe served for ductile iron pipes with restraining rods. Seal water-tight with silicone caulk.
 2. Provide ½" thick cellular foam insulation around perimeter of non-pressure pipe passing thru concrete slab on grade. Insulation shall extend to 2" above and below the concrete slab.
- G. Interior Penetrations of Non-Fire-Rated Walls: Seal annular space between sleeve and pipe or duct, using joint sealant appropriate for size, depth, and location of joint. Pack with mineral wool and seal both ends with minimum of ½" of sealant. Refer to Division 07 Section "Joint Sealants" for materials and installation.
1. Extend pipe insulation for insulated pipe through sleeve. The vapor barrier shall be maintained. Size sleeve for a minimum of 1" annular clear space between inside of sleeve and outside of insulation.

- H. Exterior Wall Penetrations: Seal annular space between sleeve and pipe or duct, using joint sealant appropriate for size, depth, and location of joint. Pack with mineral wool and seal both ends with minimum of 1/2" of waterproof sealant. Refer to Division 07 Section "Joint Sealants" for materials and installation.
 - 1. Extend pipe insulation for insulated pipe through sleeve. The vapor barrier shall be maintained. Size sleeve for a minimum of 1" annular clear space between inside of sleeve and outside of insulation.
- I. Fire / Smoke Rated Floor and Wall Assemblies: Seal around penetrations of fire rated assemblies to maintain fire resistance rating of fire-rated assemblies. Coordinate fire ratings and locations with the architectural drawings. Install sealants in compliance with the manufacturer's UL listing. Refer to Division 22 Section "Common Work Results for Plumbing" for firestoppings and materials.
- J. Acoustical Barrier Penetrations: Where a pipe passes through a wall, ceiling or floor slab of a noise critical space, a steel sleeve shall be cast or grouted into the structure. Refer to Section "Basic Mechanical Materials and Methods" for noise critical spaces. The internal diameter of the sleeve shall be a minimum of 2 inches larger than the external diameter of the pipe. After the piping is installed, the Contractor shall check the clearance and correct it to within 1/2-inch. Contractor shall pack the void full depth with glass/mineral fiber insulation and seal at both ends, 1-inch deep, with sealant backed by foam rod.
 - 1. Penetration of sound isolating ceilings by sprinkler pipes and heads shall be sleeved and sealed and shall have no rigid connections between them.

3.6 FITTINGS AND SPECIALTIES

- A. Use fittings for all changes in direction and all branch connections.
- B. Remake leaking joints using new materials.
- C. Install components with pressure rating equal to or greater than system operating pressure.
- D. Install strainers on the supply side of each control valve, pressure reducing or regulating valve, solenoid valve, mixing valve, backflow preventer and elsewhere as indicated.
- E. Install unions at the final connection to each piece of equipment adjacent to each isolation valve or valve assembly for connections 2" and smaller. Install unions where indicated elsewhere on the drawings.
- F. Install flanges at the final connection to each piece of equipment, adjacent to each isolation valve or valve assembly in piping 2-1/2" and larger. Install flanges at each valve 2-1/2" and larger.
- G. Install dielectric unions for piping 2" and smaller to connect piping materials of dissimilar metals in dry piping systems (gas, compressed air, vacuum) for copper or brass connected to carbon steel, cast or ductile iron.
- H. Install dielectric flanges for piping 2-1/2" and larger to connect piping materials of dissimilar metals in dry piping systems (gas, compressed air, vacuum) for copper or brass connected to carbon steel, cast or ductile iron.
- I. Install dielectric unions for piping 2" and smaller to connect piping materials of dissimilar metals in wet piping systems (water) (except do not install dielectric unions in concealed spaces, instead, install dielectric waterway fittings) for copper or brass connected to carbon steel, cast or ductile iron.
- J. Install dielectric flanges for piping 2-1/2" and larger to connect piping materials of dissimilar metals in wet piping systems (water) (except do not install dielectric unions in concealed spaces, instead, install dielectric waterway fittings) for copper or brass connected to carbon steel, cast or ductile iron.

- K. Install dielectric waterway fittings for piping 2" and smaller for copper or brass pipe connections to carbon steel equipment connections.
- L. Install dielectric flanges for piping 2-1/2" and larger for copper or brass pipe connections to carbon steel equipment connections, steel, ductile iron or cast iron valves and fittings.
- M. Dielectric Flange Installation:
 1. Provide brass nipples between the equipment connection and dielectric flange for screwed connections. Provide an iron flange for the equipment side and a bronze flange for the copper or brass piping side of the joint.
 2. Provide a bronze flange for the copper or brass piping connection to a cast iron, ductile iron or steel flange.
 3. Provide full face gasket with pressure rating equal to system served.
 4. At each bolt provide, steel washers, thermoplastic washers and bolt isolation sleeves or thermoplastic combination washers and bolt sleeves.

3.7 JOINTS

- A. Steel Pipe Joints:
 1. Pipe 2" and Smaller: Thread pipe with tapered pipe threads in accordance with ANSI B2.1. Cut threads full and clean using sharp dies. Ream threaded ends to remove burrs and restore full inside diameter. Apply pipe joint lubricant or sealant suitable for the service for which the pipe is intended on the male threads at each joint and tighten joint to leave not more than 3 threads exposed.
 2. Pipe Larger Than 2":
 - a. Weld pipe joints (except for exterior water service pipe) in accordance with ASME Code for Pressure Piping, B31.
 - b. Weld pipe joints of exterior water service pipe in accordance with AWWA C206.
 - c. Install flanges on all valves, apparatus, and equipment. Weld pipe flanges to pipe ends in accordance with ASME B31.9 Code for Building Services Piping. Clean flange faces and install gaskets. Tighten bolts to torque specified by manufacturer of flange and flange bolts, to provide uniform compression of gaskets.
- B. Non-ferrous Pipe Joints:
 1. Brazed And Soldered Joints: For copper tube and fitting joints, braze joints in accordance with ANSI B31.9 - Standard Code for Building Services Piping and ANSI B9.1 - Standard Safety Code for Plumbing Refrigeration.
 2. Thoroughly clean tube surface and inside surface of the cup of the fittings, using very fine emory cloth, prior to making soldered or brazed joints. Wipe tube and fittings clean and apply flux. Flux shall not be used as the sole means for cleaning tube and fitting surfaces.
- C. Joints for other piping materials are specified within the respective piping system Sections.

3.8 FLEXIBLE CONNECTORS

- A. Install flexible connectors for piping system connections on equipment side of shutoff valves for all Plumbing equipment, pumps, and where indicated on Drawings.
 1. Install stainless steel connectors for domestic water copper equipment connections 2" and smaller.
 2. Install bronze connectors for non-domestic water copper equipment connections 2" and smaller.
 3. Install flanged stainless steel connectors for flanged equipment connections 2-1/2" and larger.
- B. Install connectors according to manufacturer's recommendations.

3.9 PIPE FIELD QUALITY CONTROL

- A. Testing: Refer to individual piping system specification sections.
- B. Inspection Report Form: Refer to the inspection report form at the end of this section for inspection data to be completed for each piping system. Submit completed forms to the Owner and Engineer.

SECTION 15125 (220516) - EXPANSION FITTINGS AND LOOPS FOR PLUMBING EQUIPMENT

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Flexible expansion loops
 - 2. Flexible ball pipe joints
 - 3. Piped expansion loops
- B. Related Sections: The following sections contain requirements that relate to this Section:
 - 1. Division 22 Section "Hangers and Supports for Plumbing Piping", for pipe anchors and alignment guides.
 - 2. Division 22 Section "Sanitary Drainage and Vent Piping and Specialties" for shielded transition couplings.

1.2 DEFINITIONS

- A. Pipe sizes used in this Specification are nominal pipe size (NPS).
- B. Lead Free: Refers to the wetted surface of pipe, fittings and fixtures in potable water systems that have a weighted average lead content $\leq 0.25\%$ per Safe Drinking Water Act as amended January 4th, 2011 Section 1417.

1.3 SUBMITTALS

- A. General: Submit the following in accordance with Conditions of Contract and Division 01 Specification Sections.
 - 1. Product data for each type of pipe expansion joints specified. Submit expansion compensation schedule showing manufacturer's figure number, size, location, connections, material and displacement for each required expansion joint.
 - 2. Assembly-type shop drawings for each type of expansion compensation product, indicating dimensions, weights, required clearances, and methods of assembly of components. Detail fabrication of pipe anchors, hangers, special pipe support assemblies and their attachment to the building structure. Submit calculations of pipe expansion forces at anchor points for structural engineer review.
 - 3. Shop drawings for field-fabricated expansion loops indicating location, dimensions, pipe sizes, calculations for compression or tension required, and location. Detail fabrication of pipe anchors, hangers, special pipe support assemblies and their attachment to the building structure. Submit calculations of pipe expansion forces at anchor points for structural engineer review.
 - 4. Maintenance data for expansion joints for inclusion in Operating and Maintenance Manuals specified in Division 1 and Division 22 Section "General Plumbing Requirements."
 - 5. Submit certification that expansion joints for domestic water distribution for drinking or cooking comply with NSF 61 Annex G and / or NSF 372.
 - 6. Submit American Gas Association certification for expansion joints used for natural gas distribution systems.

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with the provisions of the following codes:

1. ASME B31.9 "Building Services Piping" for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label.
 2. ASME Boiler and Pressure Vessel Code, Section IX, "Welding and Brazing Qualifications" for Qualifications for Welding Processes and Operators.
- B. Comply with NSF 61 Annex G and / or NSF 372 for wetted surfaces of specialties and fittings containing no more than 0.25% lead by weight for domestic water distribution for drinking or cooking.
- C. Expansion joints shall be manufactured in plants located in the United States or certified to meet the specified ASTM and ANSI standards.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Flexible Expansion Loops:
 - a. Flex-Hose Co. Inc.
 - b. Flexicraft Industries
 - c. Keflex HVAC Products, Flex-Weld, Inc.
 - d. Metraflex Co.
 - e. Twin City Hose
 2. Packless Rubber Expansion Joints:
 - a. Flexider USA
 - b. Garlock Mechanical Packing Div., Colt Industries
 - c. Holz Rubber
 - d. Keflex HVAC Products Div., Flex-Weld, Inc.
 - e. MG Piping Products Co.
 - f. Mason Industries, Inc.
 - g. Metraflex Co.
 - h. Vibration Mountings and Controls, Subsidiary of ARX.
 3. Flexible Ball Pipe Joints:
 - a. Advanced Thermal Systems, Inc.
 - b. Barco Div., Marison Industries.

2.2 PIPE EXPANSION JOINTS, GENERAL

- A. Pipe expansion joints shall provide 200 percent absorption capacity of piping expansion between anchors.
- B. Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
- C. Fittings: Materials of construction and end fitting type shall be consistent with pipe material and equipment / pipe connection fittings. Copper fittings shall not be attached to stainless steel hose.

2.3 FLEXIBLE EXPANSION LOOPS

- A. Expansion Compensators for domestic distribution water systems: Flexible loops shall consist of two lead free copper 90 degree elbows and one lead free copper 180 degree return assembly, such that the piping does not change direction and maintains course along a single axis. Provide with support nut at the bottom of the 180 degree return assembly for proper positioning, drain plug, and lead free bronze flexible hose and braid. Provide copper sweat ends for 2" and smaller and lead free bronze 150# flanges for 2-1/2" and larger. Units shall be minimum cold working pressure 150 psi. [Units shall be listed and labeled for UPC.]

- B. Expansion Compensators for stainless steel domestic distribution water systems: Flexible loops shall consist of two stainless steel 90 degree elbows and one stainless steel 180 degree return assembly, such that the piping does not change direction and maintains course along a single axis. Provide with support nut at the bottom of the 180 degree return assembly for proper positioning, drain plug, and stainless steel flexible hose and braid. Provide threaded ends for 2" and smaller and 150# flanges for 2-1/2" and larger. Units shall be cold working pressure 150 psi.
- C. Expansion Compensators for natural gas distribution systems: Flexible loops shall consist of two carbon steel 90 degree elbows and one carbon steel 180 degree return assembly, such that the piping does not change direction and maintains course along a single axis. Provide with support nut at the bottom of the 180 degree return assembly for proper positioning, drain plug, and stainless steel hose and braid. Provide threaded ends for 2" and smaller and steel 150# flanges for 2-1/2" and larger. Units shall be cold working pressure 150 psi. Unit shall be specifically designed for natural gas systems and bear the AGA stamp.
- D. Expansion Compensators for steel pressure or sanitary vent systems: Flexible loops shall consist of two carbon steel 90 degree elbows and one carbon steel 180 degree return assembly, such that the piping does not change direction and maintains course along a single axis. Provide with support nut at the bottom of the 180 degree return assembly for proper positioning, drain plug, and stainless steel hose and braid. Provide threaded ends for 2" and smaller and steel 150# flanges for 2-1/2" and larger for steel pressure systems. Provide with plain ends for all sizes connecting to cast iron sanitary vent systems. Units shall be minimum cold working pressure 150 psi.
- E. Expansion Compensators for gravity drainage systems: Flexible loops shall consist of two stainless steel 90 degree elbows and one stainless steel 180 degree return assembly, such that the piping does not change direction and maintains course along a single access. The 180 degree return assembly shall consist of two 90 degree elbows with brass cleanout plugs and shall be connected by 150# flanges. Provide with stainless steel hose, braid, and internal liner. Provide with plain ends for all sizes. Units shall be specifically designed for use in gravity drainage systems and be IAPMO listed.
- F. Rubber Expansion Joints: Fabric-reinforced EPDM rubber with full-faced integral flanges, external control rods and shall be internally reinforced with steel retaining rings over entire surface of flanges, drilled to match flange bolt holes.

2.4 FLEXIBLE BALL PIPE JOINTS

- A. Joints shall be designed for 360 degree rotation and with minimum of 30 degree angular deflection for sizes 6 inches and smaller; 15 degree for sizes 8 inches and larger.
- B. Joints shall be carbon steel and shall comply with Section II of ASME Boiler and Pressure Vessel Code and ASME B31.9 "Building Service Piping" for materials and design of pressure containing parts and bolting. Packing shall be asbestos composition.
 - 1. Each assembly shall be factory tested with steam at working pressure of piping system for zero leaks before shipment.

2.5 EXPANSION LOOPS

- A. Provide pipe expansion loop constructed of main pipe material. Acceptable methods include use of elbows in a U or Z shape as defined by ASHRAE or ASME; or a detailed stress analysis may be utilized to define areas of expansion.

2.6 ALIGNMENT GUIDES AND ANCHORS

- A. Provide alignment guides and anchors as specified in specification Division 22 Section "Hangers and Supports for Plumbing Piping".

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Install products in accordance with manufacturer's instructions.
- B. Install expansion joints and expansion loops where indicated on the drawings and where required for adequate expansion of installed piping system.
- C. Install expansion loops in all piping crossing building expansion joints. Expansion loops shall be sized to meet or exceed building expansion as defined in the structural documents. Expansion loops shall be capable of moving in all planes. Provide hangers and supports per manufacturer's instructions.
- D. Anchor piping to ensure proper direction of expansion and contraction
- E. Align joints to avoid end loading and torsional stress.

3.2 EXPANSION COMPENSATION FOR RISERS AND TERMINALS

- A. Install connection between piping mains and risers with at least 5 pipe fittings including tee in main. Install connections between piping risers and terminal units with at least 4 pipe fittings including tee in riser.

3.3 FLEXIBLE EXPANSION LOOPS

- A. Install loops at locations indicated on plans. Amount of expansion shall be as indicated on plans. Support loop as required by manufacturer and to prevent binding or sagging per Division 22 Section "Hangers and Supports for Plumbing Piping".
- B. Where required by manufacturer provide hanger or support for 180 degree return fitting.
- C. Flexible hose expansion loops shall impart no thrust loads to system support, anchors or building structure.

3.4 EXPANSION LOOPS

- A. Fabricate expansion loops to dimensions indicated. For thermal expansion loops subject loop to cold spring tension or compression necessary to absorb 50 percent of the total compression or tension during anticipated change in temperature.
- B. Expansion loop locations and dimensions shall be based on routing shown on plans. If routing is modified, coordinate locations with engineer.
- C. Fabricate expansion loops to dimensions indicated on plans.
- D. For thermal expansion loops, install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature. After installation remove temporary space holders as required.
- E. Provide hangers and supports in accordance with Division 22 Section "Hangers and Supports for Plumbing Piping". For expansion loops with horizontal and vertical components, support for the horizontal legs shall be designed for full weight of the pipe with maximum load variation of 25%.
- F. Provide alignment guides at locations indicated on plans and as required for piping expansion. At a minimum, install alignment guides on both sides of expansion loop, spaced at twice the height of the U or Z loop (height defined as perpendicular distance of piping from primary pipe direction) or as required by

the expansion joint manufacturer. Alignment shall be sufficient to allow for proper installation of expansion joints to prevent binding or torsional stress on joint.

- G. Provide anchors at locations indicated on plans and as required for piping expansion. At a minimum install anchors on both sides of straight pipe length incorporating expansion loop.
- H. For gravity drainage systems and vent systems, connect plain end expansion compensators to hubless cast iron with shielded transition couplings. Shielded transition couplings are specified in Division 22 Section "Sanitary Drainage and Vent Piping and Specialties".

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 15135 (220519) - METERS AND GAUGES FOR PLUMBING PIPING

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes the following types of meters and gauges:
 - 1. Temperature gauges and fittings.
 - 2. Pressure gauges and fittings.

1.2 SUBMITTALS

- A. General: Submit the following in accordance with conditions of Contract and Division 1 Specification Sections.
 - 1. Product data for each type of meter and gauge. Include scale range, ratings, and calibrated performance curves, certified where indicated. Submit meter and gauge schedule showing manufacturer's figure number, scale range, location, and accessories for each meter and gauge.
 - 2. Product certificates signed by manufacturers of meters and gauges certifying accuracy under specified operating conditions and products' compliance with specified requirements.
 - 3. Maintenance data for each type of meter and gauge for inclusion in Operating and Maintenance Manuals specified in Division 1 and Division 22 Section "General Plumbing Requirements."

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Glass Tube Industrial Thermometers:
 - a. H. O. Trerice Co.
 - b. Marshalltown Instruments, Inc.
 - c. Miljoco Corporation
 - d. Weiss Instruments, Inc.
 - e. Weksler Instruments Corp.
 - f. Winters Instruments
 - 2. Thermometer Wells: Same as for thermometers.
 - 3. Pressure Gauges:
 - a. Ametek, U.S. Gauge Div.
 - b. Ashcroft Dresser Industries Instrument Div.
 - c. Ernst Gage Co.
 - d. H. O. Trerice Co.
 - e. Marsh Instrument Co., Unit of General Signal.
 - f. Marshalltown Instruments, Inc.
 - g. Miljoco Corporation
 - h. Weiss Instruments, Inc.
 - i. Weksler Instruments Corp.
 - j. WIKA Instruments Corp.
 - k. Winters Instruments
 - 4. Pressure Gauge Accessories: Same manufacturers as for pressure gauges.

2.2 THERMOMETERS, GENERAL

- A. Accuracy: Plus or minus 1 percent of range span or plus or minus one scale division to maximum of 1.5 percent of range span.
- B. Scale range: Temperature ranges for services listed as follows:
 - 1. Domestic Hot Water: 30 to 240 deg with 2-degree scale divisions (0 to 115 deg C with 1-degree scale divisions).
 - 2. Domestic Cold Water: 0 to 100 deg F with 2-degree scale divisions (minus 18 to 38 deg C with 1-degree scale divisions).

2.3 GLASS TUBE INDUSTRIAL THERMOMETERS

- A. Case: Die cast, aluminum finished, in baked epoxy enamel, glass front, spring secured, 9 inches long.
- B. Adjustable Joint: Finished to match case, 180-degree adjustment in vertical plane, 360-degree adjustment in horizontal plane, with locking device.
- C. Tube: Non-red color reading, non-toxic organic spirit-filled glass tube, magnifying lens.
- D. Scale: Satin-faced, nonreflective aluminum, with permanently etched markings.
- E. Stem: Copper-plated steel, aluminum or brass, for separable socket, length to suit installation.

2.4 THERMOMETER WELLS

- A. Thermometer Wells: Brass or stainless steel, pressure rated to match piping system design pressure; with 2-inch extension for insulated piping and threaded cap nut with chain permanently fastened to well and cap.

2.5 PRESSURE GAUGES

- A. Type: General use, ASME B40.1, Grade A, phosphor bronze bourdon-tube type, bottom connection.
- B. Case: Cast aluminum or stainless steel case, glass lens, 4-1/2-inches diameter.
- C. Connector: Brass, 1/4-inch NPS.
- D. Scale: White coated aluminum, with permanently etched markings.
- E. Accuracy: Plus or minus 1 percent of range span.
- F. Range: Conform to the following:
 - 1. Vacuum: 30 inches Hg to 15 psi.
 - 2. All fluids: 2 times operating pressure.
- G. Liquid-Filled: Provide liquid filled gauges where specified in Part 3 of this section.

2.6 PRESSURE GAUGE ACCESSORIES

- A. Snubber: 1/4-inch NPS brass bushing with corrosion-resistant porous metal disc. Disc material shall be suitable for fluid served and rated pressure.

PART 3 - EXECUTION

3.1 THERMOMETERS INSTALLATION

- A. Install in the following locations and elsewhere as indicated:
 - 1. At outlet of each domestic water heater.
- B. Remote-Reading Dial Thermometers: Install in control panels, with tubing connecting panel and thermometer bulb supported to prevent kinks. Use minimum tubing length.
- C. Thermometer Wells: Install in piping tee where thermometers are indicated, in vertical position. Fill well with oil or graphite and secure cap.

3.2 INSTALLATION OF PRESSURE GAUGES

- A. Install in the following locations, and elsewhere as indicated:
 - 1. Provide liquid-filled gauge at suction and discharge of each pump.
 - 2. At discharge of each pressure-reducing valve.
 - 3. At building water service entrance.
- B. Pressure Gauge Needle Valves: Install in piping tee with snubber.

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 15100 (220523) - GENERAL DUTY VALVES FOR PLUMBING PIPING

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes general duty valves common to most plumbing water distribution piping systems.
 - 1. Special purpose valves are specified in individual piping system specifications.

1.2 DEFINITIONS

- A. **Lead Free:** Refers to the wetted surface of pipe, fittings and fixtures in potable water systems that have a weighted average lead content $\leq 0.25\%$ per Safe Drinking Water Act as amended January 4th, 2011 Section 1417.

1.3 SUBMITTALS

- A. **General:** Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections.
 - 1. Product data, including body material, valve design, pressure and temperature classification, end connection details, seating materials, trim material and arrangement, dimensions and required clearances, and installation instructions.
- B. Submit certification that valves for domestic water distribution comply with NSF 61 Annex G and / or NSF 372.

1.4 QUALITY ASSURANCE

- A. **Single Source Responsibility:** Provide products specified in this section from the same manufacturer where products are available and conform to the specification requirements.
- B. **American Society of Mechanical Engineers (ASME) Compliance:** Comply with ASME B31.9 for building services piping and ASME B31.1 for power piping.
- C. **Manufacturers Standardization Society of the Valve and Fittings Industry (MSS) Compliance:** Comply with the MSS Standard Practices below:
 - 1. MSS SP 67 “Butterfly Valves”
 - 2. MSS SP 70 “Gray Iron Gate Valves, Flanged and Threaded Ends”
 - 3. MSS SP 71 “Gray Iron Swing Check Valves, Flanged and Threaded Ends”
 - 4. MSS SP 72 “Ball Valves with Flanged or Butt Welding Ends”
 - 5. MSS SP 80 “Bronze Gate, Globe, Angle and Check Valves”
 - 6. MSS SP 85 “Gray Iron Globe and Angle Valves, Flanged and Threaded Ends”
 - 7. MSS SP 110 “Ball Valves, Threaded, Socket Welding, Solder Joint, Grooved and Flared Ends”
 - 8. MSS SP 125 “Check Valves: Gray Iron and Ductile Iron, In-Line, Spring Loaded, Center-Guided”
 - 9. MSS SP 139 “Copper Alloy Gate, Globe, Angle and Check Valves for Low Pressure/Low Temperature Plumbing Applications”
- D. Valves shall be manufactured in plants located in the United States or certified that they comply with applicable ANSI, ASTM and MSS standards.
- E. Comply with NSF 61 Annex G and / or NSF 372 for wetted surfaces of valves containing no more than 0.25% lead by weight compliance for valves for domestic water distribution.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide products from one of the manufacturers listed in valve schedule.

2.2 VALVE FEATURES, GENERAL

- A. Valve Design: Rising stem or rising outside screw and yoke stems.
 - 1. Non-rising stem valves may be used where headroom prevents full extension of rising stems.
- B. Pressure and Temperature Ratings: As scheduled and required to suit system pressures and temperatures.
- C. Sizes: Same size as upstream pipe, unless otherwise indicated.
- D. Operators: Provide the following special operator features:
 - 1. Handwheels, fastened to valve stem, for valves other than quarter turn.
 - 2. Lever handles, on quarter-turn valves 6-inch and smaller.
 - 3. Chain-wheel operators, for valves 2-1/2-inch and larger, installed 72 inches or higher above finished floor elevation. Extend chains to an elevation of 5'-0" above finished floor elevation.
 - 4. Gear drive operators, on quarter-turn valves 8-inch and larger.
- E. Extended Stems: Where insulation is indicated or specified, provide extended stems arranged to receive insulation.
- F. End Connections: As indicated in the valve specifications.
 - 1. Threads: Comply with ANSI B1.20.1.
 - 2. Flanges: Comply with ANSI B16.1 for cast iron, ANSI B16.5 for steel, and ANSI B16.24 for bronze valves.
 - 3. Solder-Joint: Comply with ANSI B16.18.
 - a. Caution: Where soldered end connections are used, use solder having a melting point below 840 deg F for gate, globe, and check valves; below 421 deg F for ball valves.

2.3 GATE VALVES

- A. Gate Valves, 2-Inch and Smaller: Meeting MSS SP-80; Class 125, 200-psi CWP, body, solid wedge and bonnet of ASTM B 584 lead free cast bronze; brass packing gland and stem of ASTM B283 naval brass; with solder ends, non-asbestos composition packing, and malleable iron handwheel.
- B. Gate Valves, 2-1/2-Inch and Larger: Meeting MSS SP-70 and lead free with FDA epoxy coating; Class 125, 200-psi CWP, iron body, lead free bronze mounted, with body and bonnet conforming to ASTM A 126 Class B; with lead free brass stem, with flanged ends, non-asbestos composition packing, and two-piece packing gland assembly.
- C. Gate Valves, 2-1/2-Inch and Larger: Meeting MSS SP-70 and lead free with FDA epoxy coating; Class 250, 500-psi CWP, iron body, lead free bronze mounted, with body and bonnet conforming to ASTM A 126 Class B; with lead free brass or steel stem, with flanged ends, non-asbestos composition packing, and two-piece packing gland assembly.

2.4 BALL VALVES

- A. Ball Valves, 2 Inch and Smaller: Meeting MSS SP 110, Class 150, 600-psi CWP; two-piece construction; with ASTM B 584 cast lead free bronze, regular port, blowout-proof stem and chrome-plated lead free brass ball, with replaceable "Teflon" or "TFE" seats and seals, solder ends and vinyl-covered steel handle.
- B. Cast Iron Body Ball Valves, 2-1/2" and larger: Meeting MSS SP 72, 200 CWP, lead free with FDA epoxy coating, maximum operating temperature of 140F; two piece cast iron body meeting ASTM A126 Class B with flanged ends, 304 stainless steel full port ball and shaft, ductile iron handle, FDA epoxy coating, PTFE gasket, stem seal and seat.

2.5 GLOBE VALVES

- A. Globe Valves, 2-Inch and Smaller: Meeting MSS SP-80; Class 125, 300-psi CWP; body, disc and screwed bonnet of ASTM B 584 lead free cast bronze; brass replaceable composition disc and stem of ASTM B 283 alloy C46400 naval brass, brass packing gland, with solder ends, non-asbestos composition packing, and malleable iron handwheel.
- B. Globe Valves, 2-1/2-Inch and Larger: Meeting MSS SP-85; Class 125, 200-psi CWP; iron body and bolted bonnet conforming to ASTM A 126, Class B; with FDA epoxy coating, outside screw and yoke, lead free bronze mounted, lead free bronze shaft, flanged ends, and non-asbestos composition packing, and two-piece backing gland assembly.

2.6 CHECK VALVES

- A. Swing Check Valves, 2-Inch and Smaller: Meeting MSS SP-80; Class 125, 200-psi CWP, body and cap of ASTM B 584 cast lead free bronze; with horizontal swing, Y-pattern, disc and disc holder of ASTM B 283 alloy C46400 naval brass; solder ends. Provide valves capable of being reground while the valve remains in the line.
- B. Lift Check Valves, 2-Inch and Smaller: Meeting MSS SP-139; 250-psi CWP, body, disc holder and cap of ASTM B 584 cast lead free bronze; horizontal or angle pattern, lift-type valve, with stainless steel spring, renewable "Teflon" disc and solder ends. Provide valves capable of being refitted and ground while the valve remains in the line.

PART 3 - EXECUTION

3.1 INSTALLATIONS

- A. Install valves in accordance with manufacturer's installation instructions.
- B. Locate valves for easy access and provide separate support where necessary. Provide access doors and fire rated access doors as required.
- C. Install valves and unions for each fixture and item of equipment arranged to allow equipment removal without system shutdown. Unions are not required on flanged devices.
- D. Install three-valve bypass around each pressure reducing valve using throttling-type valves.
- E. Install valves in horizontal piping with stem at or above the center of the pipe.
- F. Install valves in a position to allow full stem movement.
- G. Installation of Check Valves: Install for proper direction of flow as follows:

- H. Swing Check Valves: Horizontal position with hinge pin level.
- I. Lift Check Valve: With stem upright and plumb.

3.2 VALVE ENDS SELECTION

- A. Select valves with the following ends or types of pipe/tube connections:
 1. Copper Tube Size, 2-Inch and Smaller: Solder ends.
 2. Copper Tube Sizes 2-1/2 Inch and Larger: flanged end.

3.3 VALVE PRESSURE/TEMPERATURE CLASSIFICATION SCHEDULES

- A. Domestic Hot and Cold Water Service

<u>VALVE TYPE</u>	<u>2" AND SMALLER</u>	<u>2-1/2" AND LARGER</u>
Ball	150	200
Gate	125	125
Globe	125	125
Check	125	125

- B. Domestic High Pressure Hot and Cold Water Service

<u>VALVE TYPE</u>	<u>2" AND SMALLER</u>	<u>2-1/2" AND LARGER</u>
Ball	150	N/A
Gate	N/A	250

3.4 VALVE SCHEDULE

- A. Gate Valves - 2 inch and smaller:

<u>MANUFACTURER</u>	<u>SOLDER NRS</u>
Apollo	102S-LF
Hammond	UP-668
Milwaukee	UP668
NIBCO	S-113-LF

- B. Gate Valves - 2-1/2 inch and larger:

<u>MANUFACTURER</u>	<u>OS&Y RS</u>	<u>NRS</u>
Apollo	611F-LFA	610F-LFA

- C. Gate Valves - 2-1/2 inch and larger – Class 250:

<u>MANUFACTURER</u>	<u>OS&Y RS</u>	<u>NRS</u>
Apollo	611F-LFA	620F-LFA

D. Ball Valves – 2 inch and smaller:

<u>MANUFACTURER</u>	<u>SOLDER ENDS</u>
Apollo (Conbraco)	70-LF-200
Hammond	UP8511
Milwaukee	UPBA-150
NIBCO	N/A

E. Ball Valves (full port) – 2 inch and smaller:

<u>MANUFACTURER</u>	<u>SOLDER ENDS</u>	<u>THREADED ENDS</u>
Apollo (Conbraco)	77C-LF-200	77C-LF-100
Hammond	UP8311A	UP8301A
Milwaukee	UPBA-450	UPBA-400
NIBCO	S-585-80-LF	T-585-80-LF

F. Ball Valves (full port – SS Ball) – 2 inch and smaller:

<u>MANUFACTURER</u>	<u>SOLDER ENDS</u>	<u>THREADED ENDS</u>
Apollo (Conbraco)	77C-LF-240	77C-LF-140
Hammond	UP8313A	UP8303A
Milwaukee	UPBA-450S	UPBA-400S
NIBCO	S-585-66-LF	T-585-66-LF

G. Globe Valves - 2-1/2 inch and larger:

<u>MANUFACTURER</u>	<u>STRAIGHT BODY</u>	<u>ANGLE BODY</u>
Apollo	711F-LFA	N/A

H. Globe Valves – 2 inch and smaller:

<u>MANUFACTURER</u>	<u>SOLDER ENDS</u>
Apollo	120S-LF
Hammond	UP-418
Milwaukee	UP1502
NIBCO	S113

I. Swing Check Valves – 2 inch and smaller:

<u>MANUFACTURER</u>	<u>SOLDER ENDS</u>	<u>THREADED ENDS</u>
Apollo	161S-LF	161T-LF
Milwaukee	UP1509	UP509

NIBCO S-413-Y-LF T-413-Y-LF

J. Swing Check Valves - 2-1/2 inch and larger – Class 125:

MANUFACTURER Flanged Ends

Apollo 910F-LFA

K. Swing Check Valves - 2-1/2 inch and larger – Class 250:

MANUFACTURER Flanged Ends

Apollo 920F-LFA

3.5 APPLICATION SCHEDULE

- A. General Application: Use gate, ball, and butterfly valves for shutoff duty; globe, ball, and butterfly for throttling duty. Refer to piping system Specification Sections for specific valve applications and arrangements.
- B. Domestic Water Systems: Use the following valve types:
 - 1. Gate Valves, 2" and smaller: Class 125, with cast bronze body.
 - 2. Gate Valves, 2-1/2": Class 125 with cast-iron body.
 - 3. Ball Valves, 2" and Smaller: Class 150, 600-psi CWP, with stem extension if installed in insulated pipe..
 - 4. Ball Valves, 2-1/2" and larger: 200-psi CWP cast iron body.
 - 5. Globe Valves, 2" and smaller: Class 125, with cast bronze body and bronze or teflon disc.
 - 6. Globe Valves, 2-1/2" and larger: Class 125, with cast iron body and bronze or teflon disc.
 - 7. Swing Check, 2-1/2" and smaller: Class 125, cast bronze, with rubber seat.
 - 8. Check Valves, 2-1/2" and larger: Class 125, swing or wafer type as indicated.

3.6 FIELD QUALITY CONTROL

- A. Tests: After piping systems have been tested and put into service, but before final adjusting and balancing, inspect valves for leaks. Adjust or replace packing to stop leaks; replace valves if leak persists.

3.7 ADJUSTING AND CLEANING

- A. Cleaning: Clean mill scale, grease, and protective coatings from exterior of valves and prepare valves to receive finish painting or insulation.
- B. Inspect valves for leaks after piping systems have been tested and put into service, but before final adjusting and balancing. Adjust or replace packing, as required, on valves with leaks. Replace valve if leak persists.

END OF SECTION

SECTION 15141 (220529) - HANGERS AND SUPPORTS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Support and attachment components.
- B. Horizontal-piping hangers and supports.
- C. Shields
- D. Vertical piping clamps
- E. Pipe alignment guides.
- F. Pipe anchors.
- G. Pre-engineered roof supports
- H. Anchors and fasteners.
- I. Miscellaneous materials.
- J. Related Sections: The following sections contain requirements that relate to this Section:
 - 1. Division 22 Section "Plumbing Insulation", for high density insulation for protecting insulation vapor barrier and materials and methods for piping hanger installations.
 - 2. Division 22 "Water Distribution Piping and Specialties", for pipe hanger types and spacing for horizontal and vertical domestic water distribution and heat traced piping of sizes and materials indicated.
 - 3. Division 22 "Sanitary Drainage & Vent Piping and Specialties", for pipe hanger types and spacing for heat traced and cold sanitary piping of sizes and materials indicated.

1.2 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate sizes and arrangement of supports and bases with the actual equipment and components to be installed.
 - 2. Coordinate the work with other trades to provide additional framing and materials required for installation.
 - 3. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.
 - 4. Coordinate the arrangement of supports with ductwork, piping, equipment and other potential conflicts installed under other sections or by others.
 - 5. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.
- B. Sequencing:
 - 1. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured.

1.3 SUBMITTALS

- A. Product Data : Provide manufacturer's standard catalog pages and data sheets for each type of hanger and support. Include a hanger and support schedule showing manufacturer's figure number, size, location, and features for each hanger and support. Submit style and type to Structural Engineer for approval prior to installation.
- B. Product Certificates: Signed by the manufacturer of hangers and supports certifying the products meet the specified requirements.
- C. Welder Certificates: Signed by Contractor certifying that welders comply with requirements specified under "Quality Assurance" Article.
- D. Maintenance Data: For inclusion in Operating and Maintenance manual specified in Division 01 and Division 22 Section "General Plumbing Requirements."
- E. Shop Drawings: Include details for fabricated hangers and supports where materials or methods other than those indicated are proposed for substitution. Include dimensions, weights, required clearances, and method of assembly.
 - 1. Application of protective inserts, and shields at pipe hangers for each type of insulation and hanger.
- F. Installer's Qualifications: Include evidence of compliance with specified requirements.
- G. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

1.4 QUALITY ASSURANCE

- A. Comply with applicable building code.
- B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.
- C. Installer Qualifications for Field-Welding:
 - 1. Qualify welding processes and welding operators in accordance with AWS D1.1 "Structural Welding Code - Steel."
 - 2. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.
 - 3. Qualify welding processes and welding operators in accordance with ASME BPVC Section IX, "Welding and Brazing Qualifications."
- D. Flame/Smoke Ratings: Provide hangers and supports with flame-spread index of 25 or less, and smoke-developed index of 50 or less, as tested by UL 723 or ASTM E84 (NFPA 255) method.
- E. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

1.6 DEFINITIONS

- A. Terminology used in this Section is defined in MSS SP-90.

PART 2 - PRODUCTS AND MATERIALS

2.1 SUPPORT AND ATTACHMENT COMPONENTS

A. General Requirements:

1. Comply with MSS SP-58.
2. Provide all required hangers, supports, anchors, fasteners, fittings, accessories, and hardware as necessary for the complete installation of work.
3. Provide products listed, classified, and labeled as suitable for the purpose intended, where applicable.
4. Where support and attachment component types and sizes are not indicated, select in accordance with manufacturer's application criteria as required for the load to be supported. Include consideration for vibration, equipment operation, and shock loads where applicable.
5. Do not use wire, chain, perforated pipe strap, or wood for permanent supports unless specifically indicated or permitted.
6. Materials: Products and materials listed in this specification are based on indoor, dry locations. Use corrosion resistant materials suitable for the environment where installed.
 - a. Indoor Dry Locations: Painted carbon steel, galvanized steel or zinc-plated steel. Where supports will be field painted in exposed locations, provide carbon steel.
 - b. Indoor Damp or Wet Locations: Galvanized steel or type 304 stainless steel.
 - c. Natatorium or other treated pool environments: Type 316 stainless steel.
 - d. Outdoor Locations: Galvanized steel or type 304 stainless steel.
 - e. Dielectrics Barriers: Provide dielectric barriers between metallic supports and metallic piping and associated items of dissimilar type. Acceptable barriers include rubber, or copper-plated coatings where attachments are in direct contact with copper.
 - f. Zinc-Plated Steel: Electroplated in accordance with ASTM B633.
 - g. Galvanized Steel: Hot-dip galvanized after fabrication in accordance with ASTM A123/A123M or ASTM A153/A153M.
 - h. Stainless Steel: Type 304 or 316 in accordance with ASTM A240.

B. Metal Channel (Strut) Framing Systems:

1. Manufacturers:
 - a. Cooper B-Line.
 - b. Ferguson Enterprises/FNW.
 - c. PHD Manufacturing.
 - d. Thomas & Betts Corporation.
 - e. Unistrut, a brand of Atkore International Inc.
 - f. Source Limitations: Furnish channels (struts) and associated fittings, accessories, and hardware produced by a single manufacturer.
2. Factory-fabricated continuous-slot metal channel (strut) and associated fittings, accessories, and hardware required for field-assembly of supports.
3. Comply with MSS SP-69, Type 59, MSS SP-89, and MFMA-4. Welds shall comply with AWS D1.1.
4. Channel Material:
 - a. Indoor Dry Locations: Galvanized steel or zinc-plated steel.
 - b. Indoor Damp or Wet Locations: Galvanized steel or type 304 stainless steel.
 - c. Outdoor Locations: Galvanized steel or type 304 stainless steel.
 - d. Natatorium or other treated pool environments: Type 316 stainless steel.
 - e. All nuts, brackets, and clamps shall have the same finish as the channel.
5. Minimum Channel Thickness: Steel sheet, 14 gage, 0.0747 inch.
6. Minimum Channel Dimensions: 1-5/8 inch width by 13/16 inch height with factory-punched attachment holes.
7. Provide plastic galvanic isolators for connecting bare copper pipe for use with pre-engineered support strut system where indicated.

- C. Hanger Rods:
1. Material:
 - a. Indoor Dry Locations: Zinc-plated steel.
 - b. Indoor Damp or Wet Locations or Outdoor Locations: Zinc-plated steel or type 304 stainless steel.
 - c. Natatorium or other treated pool environments: Type 316 stainless steel.
 2. Threaded both ends or continuously threaded.
 3. Minimum Size: Reference piping specification sections for rod thicknesses.
 4. Threaded Rods: Threaded rods are not allowed for floor supports except when the maximum length of the rod is less than 12". Threaded rod sizes shall be the same size diameter as specified for pipe hanger rods based upon pipe size being supported. Refer to system piping specification sections for rod size requirements.
- D. Wire Rope Pipe Hanging Systems:
1. Manufacturers:
 - a. ASC Engineered Solutions.
 - b. Gripple.
 2. General: Wire rope hanger system shall have a minimum 5 to 1 safety factor based upon the applied working load being supported.
 3. Source Limitations: Furnish associated fittings, accessories, and hardware produced by a single manufacturer.
 4. Cast-in-place Concrete Insert: Pressed steel body with sintered steel wedge, 302 stainless steel spring and UV stabilized homopolymer polypropylene end cap. Model: Gripple Spider Hanging Kit.
 5. Cable Stud: Carbon steel, zinc-coated, designed for attachment to concrete inserts. Model: ASC Engineered SolutionsC120.
 6. Cable Coupling: Carbon steel, zinc-coated, designed for attachment to threaded rods. Model: ASC Engineered SolutionsC130.
 7. Cable Eyelet: Carbon steel, zinc-coated, designed to be directly attached to structural supports via anchors or fasteners. Model: ASC Engineered SolutionsC150.
 8. Cable Toggle: Carbon steel, zinc-coated, with toggle designed for insertion into 1/2 inch hole through steel deck hat channel and provides anchor when pulled in tension. Model: ASC Engineered SolutionsC160.
 9. Swivel Toggle Insert: Single assembly attached to wire rope cable, manufactured from plated carbon steel toggle, pins, and shackles; swivel insert engineered to be compatible with concrete insert.
 10. Wire Rope: High tensile steel wire rope, to ASTM A1023, Class A zinc coating; minimum 7 by 7 cross-sectional thread construction; having a tensile strength of 256,000 psi; No.3 wire size minimum.
 11. Adjustable Fastener: Mild steel (type UG2), bright zinc plated, one-channel body; encasing a series of Type 302 stainless-steel springs with serrated self-locking grade 40 chrome steel balls, adjustable by means of an integrated mechanism, capable of accommodating load of 500 lb. Model: Gripple No. 2, 3 or 4 UniGrip.

2.2 HORIZONTAL PIPING HANGERS AND SUPPORTS

- A. MANUFACTURERS
1. ASC Engineered Solutions.
 2. Cooper B-Line, Inc.
 3. Elite Components
 4. ERICO/Michigan Hanger Co./Caddy
 5. Ferguson/FNW.
 6. Halfen-DEHA.
 7. Hilti.
 8. National Pipe Hanger Corporation.

9. PHD Manufacturing.
 10. Power-Strut.
 11. Unistrut.
- B. Single Hangers:
1. Split Ring: Carbon steel, adjustable swivel, split ring type.
 2. Split Ring 2 inch and smaller: Copper alloy, split ring type.
 3. Clevis Hanger: Carbon steel, adjustable, clevis type.
 4. Roll Support Hanger: Adjustable steel yoke, cast iron roll.
- C. Trapeze and Strut-mounted Supports:
1. Two-piece clamp: Designed for use with channel strut, held in place at channel shoulder when clamp attachment nut is tightened.
 2. Roll Support: Adjustable cast iron roll attached to metal channel strut framing system with brackets and nuts.
- D. Hangers and strut-mounted supports with pre-manufactured polymer inserts:
1. Manufacturers:
 - a. ASC Engineered Solutions.
 - b. Holdrite.
 - c. Klo-Shure.
 2. Strut-mounted pipe clamps and clevis hangers with pre-manufactured polymer inserts designed to receive butted insulation internally. Inserts shall support piping independent of insulation to avoid crushing. Installed system shall provide equal thermal and vapor barrier performance as systems with continuous unbroken insulation. Metal shields are not required with clevis hangers of this type.
- E. Spring Hangers:
1. Reference Section “Vibration Isolation for Plumbing Piping and Equipment” for spring isolation hangers.
- F. Wall Supports:
1. Two-hole strap, galvanized steel or copper to suit pipe material. Provide rigid insulation between strap and pipe to maintain continuous insulation and vapor barrier where required.
 2. Welded steel bracket reinforced with angle or strut. Support pipe from bracket using horizontal pipe hanger or support appropriate for the pipe type.
- G. Floor Supports:
1. Pipe Saddle: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
 2. Roller Support: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support.
- H. Pre-Insulated Supports:
1. Manufacturers:
 - a. Aeroflex USA, Inc.
 - b. Armacell.
 - c. Buckaroos, Inc.
 - d. Cooper B-Line, Inc.
 - e. Pipe Shields, Inc.
 2. General Construction and Requirements:
 - a. Flexible elastomeric insulation with integral high-density pipe support insert shall conform to ASTM C534, Type I.
 - b. Surface Burning Characteristics: Assembly shall have a flame spread index/smoke developed index of 25/50, maximum, when tested in accordance with ASTM E84 or UL 723.
 - c. Waterproof calcium silicate insulation shall conform to ASTM C795.

- d. Rigid phenolic foam insulation shall conform to ASTM C1126, Type III.
- e. Insulation inserts shall be surrounded by a 360 degree jacket or shield.
- 3. Pipe insulation protection shields to be provided at the hanger points and guide locations on pipes requiring insulation as indicated on drawings.

2.3 SHIELDS

A. Insulation Protection Shield:

- 1. Sheet metal construction, meeting SP-58 Type 40, of 18 gauge for 5-1/2” inside dimension and smaller, 16 gauge for 6-1/2” to 10-3/4” inside dimension 14 gauge for 11-3/4” to 17” inside dimension, and 12 gauge for 18” to 28” inside dimension.
- 2. Shield shall cover half of the circumference of the pipe and shall be of length indicated by manufacturer for pipe size and thickness of insulation.
- 3. Lengths for pipes greater than 2 inches: Minimum 8 inch long section at each support. .
- 4. For pipes 2 inch and smaller using fiberglass or flexible elastomeric insulation without pre-insulated supports, provide insulation protection shields installed between hanger and pipe which meets the following minimum length requirements:

Pipe Size (NPS)	Insulation Thickness (inches)	Minimum Shield Length, (in)					
		Hanger Spacing, (ft)					
		5	6	7	8	9	10
≤ 1	0.5	5	6	8	-	-	-
	1	3	5	5	-	-	-
	1.5	3	5	5	-	-	-
	2	3	3	3	-	-	-
≤ 2	3	3	3	3	-	-	-
	0.5	8	8	11	11	12	14
	1	5	6	8	9	11	11
	1.5	5	6	8	8	9	9
	2	5	5	6	6	8	8
	3	5	5	6	6	6	8

- B. 360° Insulation Protection Shield: Shield shall cover all of the circumference of the pipe with two half circumference sections held together with bolts and nuts and shall be of length indicated by manufacturer for pipe size and thickness of insulation.

C. Plastic Shields:

- 1. Manufacturers:
 - a. Armacell.
 - b. Eaton.
 - c. Hydra-Zorb.
 - d. PHD Manufacturing.
 - e. Zsi Foster.
- 2. Polymer-based, snap-on or clip-on design, with non-adhesive surface and lip to allow lateral movement of piping without damaging insulation, field-paintable.

2.4 VERTICAL-PIPING SUPPORTS

A. Manufacturers:

- 1. ASC Engineered Solutions.
- 2. Cooper B-Line, Inc.
- 3. Halfen-DEHA.
- 4. Hilti.
- 5. ERICO/Michigan Hanger Co.
- 6. National Pipe Hanger Corporation.
- 7. PHD Manufacturing.

- 8. Power-Strut.
 - 9. Unistrut.
- B. Components shall be factory fabricated of materials, design, and manufacturer complying with MSS SP-58.
- 1. Components shall have galvanized coatings where installed for piping and equipment that will not have factory applied or field-applied finish.
 - 2. Pipe attachments shall be copper-plated or have nonmetallic coating for electrolytic protection where attachments are in direct contact with copper tubing.
 - 3. Components as listed below shall be made of 304 stainless steel where installed in corrosive environments and/or where indicated on the drawings.
- C. Riser Clamps with pre-manufactured polymer insert:
- 1. Manufacturers:
 - a. Hydra-Zorb; Titan Riser Clamp.
 - b. National Pipe Hanger.
 - c. Pipe Hangers, Inc.
- D. Riser clamp with pre-manufactured polymer inserts designed to withstand vertical loading and receive butted insulation internally. Inserts shall support piping independent of insulation to avoid crushing. Installed system shall provide equal thermal and vapor barrier performance as systems with continuous unbroken insulation.

2.5 PIPE ALIGNMENT GUIDES

- A. Factory fabricated, constructed of cast semi-steel or heavy fabricated steel when applied to steel pipe and copper when applied to copper. Guide shall consist of bolted two-section outer cylinder and base with two-section guiding spider that bolts tightly to pipe. Length of guides shall be as recommended by manufacturer to allow indicated travel.
- 1. Pipe Diameter 8 inches and Smaller: Spider or sleeve type.
 - 2. Pipe Diameter 10 inches and Larger: Roller type.
 - 3. Pipe Diameter 18 to 30 inches: 1 inch U-bolt.

2.6 PIPE ANCHORS

- A. Pre-Insulated Anchors: Galvanized steel or stainless steel assembly with high density insulation insert and no metal-to-metal contact.
- B. Anchor Clamps: Assembly with multi-piece clamp, constructed of compatible material with piping or with dielectric barrier.

2.7 PRE-ENGINEERED ROOF PIPE SUPPORTS

- A. Manufacturers:
- 1. Airtec.
 - 2. ASC Engineered Solutions.
 - 3. Cooper B-Line, Inc.
 - 4. Elite Components.
 - 5. ERICO/Michigan Hanger Co./Caddy.
 - 6. Ferguson/FNW.
 - 7. Miro.
 - 8. PHP Systems/Design.
 - 9. PHD Manufacturing.
 - 10. Roof Top Blox.

11. Unistrut, a brand of Atkore International Inc.
12. Zsi Foster.

B. General: Pre-engineered devices with embedded pipe support fixtures as specified.

C. Pedestals: Steel pedestals with thermoplastic or rubber base with the following dimensions:

1. Up to 12 inch strut length support: 18 inch x 18 inch.
2. Up to 16 inch strut length support: 24 inch x 18 inch.
3. Up to 24 inch strut length support: 30 inch x 18 inch.
4. Thickness: Minimum 3/16 inch thick.

D. Block Bases: Closed-cell polyethylene blocks with the following dimensions.

1. Length: Nominal 10 inch, 12 inch, 16 inch, or 24 inch
2. Width: Nominal 4 inches.

E. Attachment/Support Fixtures: As recommended by manufacturer, same type as indicated for equivalent indoor hangers and supports.

F. Mounting Height: Provide minimum clearance of 6 inches under supported component to top of roofing.

2.8 ANCHORS AND FASTENERS

A. Manufacturers:

1. Hilti, Inc.
2. Illinois Tool Works, Inc.
3. Phillips.
4. Powers Fasteners, Inc.
5. Rawl.
6. Simpson Strong-Tie Company Inc.

B. Unless otherwise indicated and where not otherwise restricted, use the anchor and fastener types indicated for the specified applications.

1. Concrete: Use preset concrete inserts or expansion anchors.
2. Solid or Grout-Filled Masonry: Use expansion anchors.
3. Hollow Masonry: Use toggle bolts.
4. Hollow Stud Walls: Use toggle bolts.
5. Steel: Use beam clamps.
6. Sheet Metal: Use sheet metal screws.
7. Wood: Use wood screws.
8. Plastic and lead anchors are not permitted.
9. Hammer-driven anchors and fasteners are permitted only as follows:
 - a. Nails are permitted for attachment of nonmetallic boxes to wood frame construction.
 - b. Staples are permitted for attachment of nonmetallic-sheathed cable to wood frame construction.

E. Preset Concrete Inserts: Continuous metal channel (strut) and spot inserts specifically designed to be cast in concrete ceilings, walls, and floors.

1. Comply with MFMA-4.
2. Channel Material: Use galvanized steel.
3. Minimum Channel Thickness: Steel sheet, 12 gauge, 0.1046 inch minimum base metal thickness.
4. Spot Inserts: Carbon steel with zinc plating or galvanized steel body and base plate, with protective sleeve for anchor rod insert, sized to accommodate anchor rod dimensions.
5. Manufacturers:
 - a. Same as manufacturer of metal channel (strut) framing system.

b. DeWalt “Bang-It” concrete inserts.

F. Post-Installed Concrete and Masonry Expansion Anchors:

1. Evaluated and recognized by ICC Evaluation Service, LLC (ICC-ES) for compliance with applicable building code.
2. Self-drilling, drilled flush or shell type. Size inserts to suit threaded rods.

G. Beam Clamps: MSS SP-58 C-Type or adjustable, Types 19 through 23, 25 or 27 through 30 based on required load.

1. Material: ASTM A36/A36M carbon steel or ASTM A181/A181M forged steel.
2. Provide clamps with hardened steel cup-point set screws and lock-nuts for anchoring in place.

H. Vibration Isolation Anchors: Reference Division 22 Section “Vibration Isolation for Plumbing Piping and Equipment” for vibration isolation anchors.

2.9 MISCELLANEOUS MATERIALS

A. Steel Plates, Shapes, and Bars: ASTM A 36.

B. Malleable Iron: ASTM A47

I. Cement Grout: Portland cement (ASTM C 150, Type I or Type III) and clean uniformly graded, natural sand (ASTM C 404, Size No. 2). Mix ratio shall be 1.0 part cement to 3.0 parts sand, by volume, with minimum amount of water required for placement and hydration.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that field measurements are as indicated.
- B. Verify that mounting surfaces are ready to receive support and attachment components.
- C. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION, GENERAL

- A. Install hangers and supports in accordance with manufacturer’s installation instructions.
- B. Install anchors and fasteners in accordance with ICC Evaluation Services, LLC (ICC-ES) evaluation report conditions of use where applicable.
- C. Provide independent support from building structure. Do not provide support from piping, ductwork, conduit, or other systems.
- D. Unless specifically indicated or approved by Architect, do not provide support from suspended ceiling support system or ceiling grid.
- E. Unless specifically indicated or approved by Architect, do not provide support from roof deck.
- F. Do not penetrate or otherwise notch or cut structural members without approval of Structural Engineer.

- G. Provide thermal insulated pipe supports complete with hangers and accessories. Install thermal insulated pipe supports during the installation of the piping system.

3.3 INSTALLATION OF HANGERS AND SUPPORTS

- A. Install in accordance with ASME B31.9, ASTM F708, or MSS SP-58 unless indicated otherwise.
- B. If type of hanger or support for a particular situation is not indicated, select appropriate type using MSS SP-58 recommendations.
- C. Space attachments within maximum piping span length specified in Division 22 piping sections.
- D. Install hangers to provide minimum 1/2 inch space between finished covering and adjacent work.
- E. Install hangers, supports, clamps and attachments to support piping properly from building structure.
- F. Do not attach to ceilings, equipment, ductwork, conduit and other non-structural elements such as floor and roof decking.
- G. Hanger and clamps sizing:
 - 1. Cold Piping: Provide pipe hangers sized for the pipe outside diameter plus insulation thickness.
 - 2. Hot Piping: Provide pipe hangers sized for the pipe outside diameter.
 - 3. Vertical Piping: Provide clamps sized for the pipe outside diameter and extend clamp through insulation.
 - 4. Refer to Division 22 Section "Plumbing Insulation" for definition of hot and cold piping and required insulation thickness.
- H. Where several pipes can be installed in parallel and at the same elevation, Contractor has option to provide metal channel strut framing. Install supports with maximum spacing specified within Division 22 piping sections.
 - 1. Space strut framing at the required distance for the smallest pipe size or install intermediate supports for smaller diameter pipe as specified above for individual pipe hangers.
 - 2. Where strut systems are attached to walls, install anchor bolts per manufacturer's recommendations.
 - a. Uninsulated Copper Pipe: Install with plastic galvanic isolators
 - b. Insulated Tube or Pipe: Install with 360° insulation protection shields or pre-engineered thermal hanger-shield inserts as specified in Division 22 Section "Plumbing Insulation".
- I. Install building attachments within concrete or to structural steel.
 - 1. Install additional attachments at concentrated loads, including valves, flanges, guides, strainers, expansion joints, and at changes in direction of piping as specified in Division 22 piping sections.
 - 2. Install concrete inserts before concrete is placed; fasten insert to forms. Where concrete with compressive strength less than 2,500 psi is indicated, install reinforcing bars through openings at top of inserts.
- J. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories. Provide two nuts on threaded supports to securely fasten the support.
- K. Install appropriate types of hangers and supports to allow controlled movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends and similar units.
- L. Load Distribution: Install hangers and supports so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.

- M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes, and so that maximum pipe deflections allowed by ASME B31.9 Building Services Piping Code is not exceeded.
- N. Insulated Piping: Comply with the following installation requirements.
1. Riser Clamps: Attach riser clamps to piping with riser clamps projecting through insulation. Do not use riser clamps to support horizontal, insulated piping. Seal insulation for hot piping and protect vapor barrier for cold piping as specified in Division 22 Section "Plumbing Insulation".
 - a. Contractor's Option: Provide riser clamps with pre-manufactured polymer insert for cold piping 2-1/2 inches and larger.
 2. Insulation Protection Shield: Install insulation protection shield with high density insulation insert where vapor barrier is indicated, sized for the insulation thickness used as specified in Division 22 Section "Plumbing Insulation". Do not use polymer-based shields for hot piping.
 - a. Exception for horizontal cold-piping with fiberglass or flexible elastomeric insulation 2 inch and smaller: Rest fiberglass insulated pipe on hanger shield with length specified for pipe size and insulation thickness to prevent puncture or other damage.
 3. Contractor's Option: Provide pre-engineered thermal hanger inserts for piping insulated with flexible elastomeric insulation at pipe supports for piping 2-1/2 inches and larger.
 4. Contractor's Option: Provide strut-mounted pipe clamps and clevis hangers with pre-manufactured polymer inserts.
- O. Strut Framing Systems: Channel strut systems can be used at the Contractors option in lieu of individual hangers for horizontal pipes. Arrange for grouping of parallel runs of horizontal piping. Space channel strut systems at the required distance for the smallest pipe supported. Provide channel gauge and hanger rods per the manufacturer's recommendations for the piping supported. Where strut systems are attached to walls, install anchor bolts per manufacturer's recommendations.
1. Uninsulated Copper Pipe: Install with plastic galvanic isolators
 2. Insulated Tube or Pipe: Install with 360 degree insulation protection shields or pre-engineered thermal hanger-shield inserts as specified in Division 22 Section "Plumbing Insulation".
- P. Vertical Piping Risers:
1. Reference Section "Vibration Isolation for Plumbing Piping and Equipment" for piping riser supports.
- Q. Wire Rope Hanging Systems:
1. Install in accordance with manufacturer's instructions.
 2. Supported load shall not exceed manufacturer's recommended load rating.
 3. Applications for Pipe Supports:
 - a. 3 inch and smaller.
 - b. Wire rope hanging system is not allowed for steam or steam condensate piping.
 4. Do not support pipe by wrapping the rope around the pipe.
 5. Provide appropriate hanger or support compatible with the wire rope hanging system adjustable fastener as specified in Division 22 piping sections.
 6. Install cast-in-place concrete inserts in elevated concrete slabs.
 7. Install bream clamps for attachment to structural beams as required.
- R. Expansion Anchors: Use in existing concrete, masonry or in pre-cast concrete construction.
- S. Pre-Engineered Roof Pipe Supports: Set supports on an 18" X 18" x 3/16" thick roof walkway material compatible with the roof material.

3.4 INSTALLATION OF PIPE ALIGNMENT GUIDES

- A. Install pipe alignment guides on piping that adjoins expansion joints, as required by expansion joint manufacturer, and elsewhere as indicated on plans and specification sections to eliminate binding and

torsional stress on piping systems. Install guides per ASME B31.9 unless noted otherwise. Install pipe insulation at guide to not interfere with movement of pipe within the guide.

- B. Install guide to accommodate 1/2 the thermal movement at the adjacent expansion joint.
- C. Anchor to building substrate.

3.5 INSTALLATION OF ANCHORS

- A. Install anchors at proper locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.

3.6 EQUIPMENT SUPPORTS

- A. Use metal fabricated supports or supports assembled from metal channel (strut) to support equipment as required.
- B. Use metal channel (strut) secured to studs to support equipment surface-mounted on hollow stud walls.
- C. Use metal channel (strut) to support surface-mounted equipment in wet or damp locations to provide space between equipment and mounting surface.
- D. Securely fasten floor-mounted equipment. Do not install equipment such that it relies on its own weight for support.
- E. Preset Concrete Inserts and Expansion Anchors: Use manufacturer provided closure strips to inhibit concrete seepage during concrete pour.
 - 1. Where concrete slabs form finished ceiling, locate anchors flush with slab surface.
- F. Secure fasteners according to manufacturer's recommended torque settings.
- G. Remove temporary supports.
- H. Fabricate structural steel stands to suspend equipment from structure above or support equipment above floor.
- I. Grouting: Place grout under supports for piping and equipment.

3.7 METAL FABRICATION

- A. Cut, drill, and fit miscellaneous metal fabrications for pipe anchors and equipment supports. Install and align fabricated anchors in indicated locations.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1 for procedures of manual shielded metal-arc welding, appearance and quality of welds made, methods used in correcting welding work, and the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Finish welds at exposed connections so that no roughness shows after finishing, and so that contours welded surfaces to match adjacent contours.

3.8 FIELD QUALITY CONTROL

- A. Examine support and attachment components for damage and defects.
- B. Hanger Adjustment: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- C. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.
- D. For galvanized surfaces clean welds, bolted connections and abraded areas and apply galvanizing repair paint to comply with ASTM A 780.
- E. Correct deficiencies and replace damaged or defective support and attachment components.

3.9 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Provide the following acceptable hangers and supports for each type of piping system. Hangers and supports may be single type or strut-mounted:
- C. Single Hangers:
 - 1. All pipe sizes 1-1/2 inch and less:
 - a. Band hanger.
 - b. Swivel split ring.
 - c. Clevis hanger.
 - 2. Cold and Hot pipe sizes 2 to 4 inches: Clevis hanger.
 - 3. Cold and Hot pipe sizes 6 inches and greater: Roll support hanger.
 - 4. All drainage pipe sizes: Clevis hanger.
- D. Trapezes and Strut-mounted Supports:
 - 1. All pipe sizes less than 6 inches: Two-piece clamp.
 - 2. Pipe sizes 6 inches and greater: Roll support.
- E. Wall Supports:
 - 1. Pipe sizes 3 inches and less:
 - a. Two-hole strap mounted to wall.
 - b. Welded steel bracket with reinforced angle or strut.
 - 2. Pipe sizes 4 inch and greater:
 - c. U-bolt
 - d. Welded steel bracket with reinforced angle or strut.
- F. Floor Supports:
 - 1. Pipe sizes 4 inch and less: Pipe saddle.
 - 2. Pipe sizes 6 inch and greater: Roll support.

PAGE INTENTIONALLY LEFT BLANK

SECTION 15445 (220548) - SEISMIC CONTROLS FOR PLUMBING SYSTEMS

PART 1 - GENERAL REQUIREMENTS

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 RELATED SECTIONS INCLUDE THE FOLLOWING:

- A. Division 20 Section "Seismic Controls for MEP/F/T Systems" for general requirement and related documents that apply to this section.

1.3 DEFINITIONS

- A. The IBC: International Building Code.
- B. ICC-ES: ICC-Evaluation Service.
- C. OSHPD: Office of Statewide Health Planning and Development for the State of California.

1.4 SUMMARY

- A. Seismic bracing, restraints, and controls for all plumbing systems specified herein shall be designed and installed as required by Division 20 Section "Seismic Controls for MEP/F/T Systems".

1.5 SUBMITTALS

- A. Provide submittals as required by Division 20 Section "Seismic Controls for MEP/F/T Systems" for all plumbing systems specified herein.

PART 2 - PRODUCTS AND MATERIALS

2.1 NOT USED

PART 3 - EXECUTION

3.1 NOT USED

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 15201 (220550) - VIBRATION ISOLATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. It is the intent of this specification to provide vibration isolation supports for Plumbing equipment as scheduled at the end of this Section.
- B. This work shall include all materials and labor required for the installation of the vibration isolation devices.
- C. Vibration isolators shall be selected by the weight distribution to produce reasonably uniform deflection. Deflections shall be as noted on the equipment schedule included at the end of this Section.
- D. All vibration isolation equipment shall be furnished by one manufacturer unless specifically approved otherwise in writing by the Engineer.
- E. All vibration isolation devices shall be treated for corrosion resistance using galvanization for exterior applications and painting for interior applications.
- F. Related Sections:
 - 1. Division 22 Section "Common Work Results for Plumbing" for materials and methods for concrete equipment pads.
 - 2. Division 22 Section "Basic Piping Material and Methods," for materials and methods for flexible connectors.
 - 3. Division 22 Section "Hangers and Supports for Plumbing Piping," for materials and methods for hangers and supports.
 - 4. Division 22 Section "Domestic Booster Pumps," for materials and methods for domestic booster pumps.
 - 5. Division 22 Section "Gas and Vacuum Systems for Health Care Facilities" for materials and methods for medical air compressors and vacuum pumps.
 - 6. Division 22 Section "Gas and Vacuum Systems for Laboratories" for materials and methods for laboratory air compressors and vacuum pumps.
 - 7. Division 22 Section "General Service Compressed Air Systems" for materials and methods for air compressors.

1.2 WORK INCLUDED

- A. Provide complete vibration isolation systems as shown or specified and in accordance with the requirements of the Contract Documents. System shall be complete with:
 - 1. Foundations, vibration isolation, and supports for rigidly supported equipment.
 - 2. Vibration Isolation

1.3 RELATED WORK SPECIFIED ELSEWHERE

1.4 CONTRACTOR'S RESPONSIBILITY

- A. Consult all other Section to determine the extent of work specified elsewhere but related to this Section. This work shall be properly coordinated to produce an installation satisfactory to the Owner. The Contractor shall be responsible for verifying the completeness of the isolation installation and the overall suitability of the equipment to meet the intent of this specification. Any additional equipment needed to

meet the intent of this specification, even if not specifically mentioned herein or in the Contract Documents, shall be provided by the Contractor without claim for additional payment.

- B. Performance or waiving of inspection, testing or surveillance for any portion of the Work shall not relieve the Contractor of the responsibility to conform strictly to the Contract Documents. The Contractor shall not construe performance or waiving of inspection, testing or surveillance by the Owner or Architects to relieve the Contractor from total responsibility to perform in strict accordance with the Contract Documents.

1.5 MANUFACTURER'S RESPONSIBILITIES

- A. Manufacturer of vibration isolation equipment shall have the following responsibilities:
 1. Determine vibration isolation for all equipment and systems in accordance with the local governing code.
 2. Provide piping and equipment isolation systems as scheduled or specified.
 3. Guarantee specified isolation system deflection.
 4. Provide installation instructions, drawings and field supervision to assure proper installation and performance.
 5. The vibration isolation systems shall be guaranteed to have deflection indicated on the schedule on the drawings. Mounting sizes shall be determined by the mounting manufacturer, and the sizes shall be installed in accordance with the manufacturer's instructions.
 6. The vibration isolator vendor shall ensure that all equipment to be isolated has sufficient support structure to distribute equipment loads onto isolators. Where additional support structure is required, this shall be provided by vibration isolator vendor.

1.6 SUBMITTALS

- A. Submittal data shall show type, size, and deflection of each isolator proposed. Include clearly outlined procedures for installing and adjusting the isolators.
- B. Submit a vibration isolation system schedule indicating the following:
 1. Manufacturer, type, model number, size
 2. Height when uncompressed and static deflection of each isolation element
 3. Spring constant of each isolation element
 4. Estimated imposed load on each isolation element
 5. Spring o.d., free operating, and solid heights
 6. Design of supplementary bases.
 7. Layout of isolator hangers, mounts, and other elements shown on an outline of the isolated equipment, including complete details of attachment to load-bearing structure or supplementary framing.
 8. Piping isolators shown and identified on piping layout drawings.
 9. All concrete foundations and supports (and required reinforcing and forms) will be furnished and installed by another trade. However, this trade shall furnish shop drawings showing adequate concrete reinforcing steel details and templates for all concrete foundations and supports, and all required hanger bolts and other appurtenances necessary for the proper installation of the Contractor's equipment. Although another trade will complete all concrete work, all such work shall be shown in detail on the shop drawings, prepared by this trade which drawings shall be submitted showing the complete details of all foundations including necessary concrete and steel work, vibration isolation devices, etc.

1.7 QUALITY ASSURANCE

- A. It is the objective of this Specification to provide for the control of vibration due to the operation of machinery or equipment, and/or due to interconnected piping or conduit.

- B. The installation of all vibration isolation systems shall be under the supervision of the manufacturer's representative.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. All vibration isolation equipment and materials shall be provided by a single manufacturer. The following manufacturers are approved provided systems are in compliance with the specified design and performance requirements:
 1. Amber Booth.
 2. Kinetics Noise Control.
 3. Mason Industries, Inc.
 4. Vibration Eliminator Co., Inc.
 5. Vibration Mounting and Controls.

2.2 GENERAL

- A. All equipment provided for vibration isolation shall be new and manufactured specifically for the purpose intended.

2.3 VIBRATION ISOLATORS

A. GENERAL

1. The static deflection of isolators shall be as given in the equipment schedule and specified below. The isolator schedule shall take precedence.
2. Vibration isolator sizes and layout shall be determined by the vibration isolator supplier.
3. All vibration isolators shall have either known undeflected heights or calibration markings so that, after adjustment, the amount of deflection can be verified, thus determining that the load is within the proper range of the device and that the correct degree of vibration isolation is being provided according to the design.
4. All isolators shall operate in the linear portion of their load versus deflection curve. Load versus deflection curves shall be furnished by the manufacturer, and must be linear over a deflection range of not less than 50% above the design deflection.
5. The theoretical vertical natural frequency for each support point, based upon load per isolator and isolator stiffness, shall not differ from the design objectives for the equipment as a whole by more than $\pm 10\%$.
6. All neoprene mountings shall have a Shore hardness of 30 to 60 ± 5 , or as specified herein, after minimum aging of 20 days or corresponding over-aging.
7. Housed or caged spring isolators are not acceptable.
8. Where steel spring isolation systems are described in the specifications, the mounting assemblies shall utilize bare springs with the spring diameter not less than 0.8 of the loaded operating height of the spring. Each spring isolator shall be designed and installed so that the ends of the spring remain parallel during and after the spring installation. All isolators shall operate in the linear portion of their load versus deflection curve and have 50% excess capacity without becoming coil bound.
9. All mounting systems exposed to weather and other corrosive environments shall be protected with factory corrosion resistance. All metal parts of mountings (except springs and hardware) shall be hot dip galvanized. Springs shall be cadmium plated and neoprene coated. Nuts and bolts shall be cadmium plated.

B. ISOLATOR TYPE WP

1. Type WP (Waffle Pads) shall be 5/16 inch thick neoprene pads ribbed or waffled on both sides. The pads shall be manufactured with bridge bearing quality neoprene, and selected for a maximum

durometer of 50 and designed for 15% strain. Where required, steel load-spreading plates shall be incorporated between the equipment and the neoprene pad.

2. If the isolator is bolted to the structure, a neoprene vibration isolation washer and sleeve (Uniroyal Type 620/660 or as approved) shall be installed under the bolt head between the steel washer and the base plate.
3. (Type WP: Mason Industries Type W or as approved.)

C. ISOLATOR TYPE MWP

1. Type MWP (Metal and Waffle Sandwich Pads) shall consist of two 5/16 inch thick ribbed or waffle neoprene pads sandwiching a 16 gauge stainless steel shim plate. The pad shall be manufactured with bridge bearing quality neoprene, and selected for a maximum durometer of 50 and designed for 15% strain.
2. If the isolator is bolted to the structure, a neoprene vibration isolation washer and sleeve (Uniroyal Type 620/660, or as approved) shall be installed under the bolt head between the steel washer and the base plate.
3. (Type MWP: Mason Industries Type WSW or as approved.)

D. ISOLATOR TYPE DDNM

1. Type DDNM (Double Deflection Neoprene Mounts) shall be laterally stable, double deflecting, molded neoprene isolators. All metal surfaces shall be covered with neoprene. The top and bottom surfaces shall be ribbed and bolt holes shall be provided in the base. The mounts shall have leveling bolts rigidly secured to the equipment.
2. The isolator shall be manufactured with bridge bearing quality neoprene, and selected for a maximum durometer of 50 and designed for 15% strain. DDNM mounts shall be selected for a static deflection of 3/8 inch unless otherwise specified.
3. (Type DDNM: Mason Industries Type ND or as approved.)

E. ISOLATOR TYPE DDNH

1. Type DDNH (Double Deflection Neoprene Hangers) shall consist of a molded neoprene isolating element in a steel hanger box. A neoprene sleeve shall be provided where the lower hanger rod passes through the steel hanger box, such that the hanger rod cannot contact the steel hanger. The diameter of the clear hole in the hanger box shall be at least 3/4 inch larger than the diameter of the hanger rod and permit the hanger rod to swing through a 30 degree arc. When installed, the hanger box shall be allowed to rotate through a full 360 degrees without encountering any obstructions.
2. The isolator shall be manufactured with bridge bearing quality neoprene, and selected for a maximum durometer of 50 and designed for 15% strain. Unless otherwise specified, the static deflection of DDNH hangers shall be 0.3 inches.
3. (Type DDNH: Mason Industries Type HD or as approved.)

F. ISOLATOR TYPE SPNM

1. Type SPNM (Spring and Neoprene Mounts) shall have a free-standing and laterally stable steel spring without any housing. Springs shall be designed so that the ratio of the horizontal to vertical spring constant is between one and two. The spring diameter shall be not less than 80% of the compressed height of the spring at rated load. Loaded springs shall have a minimum additional travel to solid equal to 50% of the specified static deflection.
2. Unless otherwise specified, the minimum static deflection of SPNM isolators for equipment mounted on grade slabs shall be 1 inch, and the minimum static deflection for equipment mounted above grade level shall be 2 inches.
3. Two Type WP isolation pads sandwiching a 16 gauge stainless or galvanized steel separator plate shall be bonded to the isolator baseplate.
4. Unless otherwise specified, isolators need not be bolted to the floor for indoor installations. If the base plates are bolted to the structure, a neoprene vibration isolation washer and sleeve (Uniroyal Type 620/660 or as approved) shall be installed under the bolt head between the steel washer and the base plate.
5. (Type SPNM: Mason Industries Type SLFH or as approved.)

G. ISOLATOR TYPE SPNH

1. Type SPNH (Spring and Neoprene Hangers) shall consist of a steel spring in series with a neoprene isolating element. The spring shall have a minimum additional travel to solid equal to 50% of the specified deflection. The neoprene element shall have a static deflection of not less than 0.3 inches with a strain not exceeding 15%.
2. Unless otherwise specified, the static deflection of SPNH hangers shall be 2 inches.
3. Spring diameter and hanger box hole size shall be large enough to permit the hanger rod to swing through a 30 degree arc. A neoprene sleeve shall be provided where the lower hanger rod passes through the steel hanger box, such that the hanger rod cannot contact the steel hanger. The diameter of the clear hole in the hanger box shall be at least 3/4 inch larger than the diameter of the hanger rod. When installed, the spring element shall not be cocked, and the hanger box shall be allowed to rotate through a full 360 degree arc without encountering any obstructions.
4. (Type SPNH: Mason Industries Type 30N or as approved.)

H. BASE TYPE CIB

1. Inertia base Type CIB (Concrete Inertia Base) shall have an integral rectangular structural steel form into which concrete is poured.
2. Perimeter members shall be beams of depth equal to 10% of the longest span of the base, but not more than 12 inches nor less than 6 inches deep. Forms shall include motor slide base and all reinforcing steel. Where anchor bolt locations fall in concrete, the reinforcing steel shall include drilled members with sleeves welded below the steel to accept the anchor bolts. Height saving steel brackets shall be used in all mounting locations.
3. When the concrete base is "T" shaped, isolators shall be located under the projections as well as under the main body in order to prevent cantilever distortion.
4. The structural perimeter frame, mounting templates, height saving brackets, and spring system shall be provided as an assembly by the vibration control vendor.
5. (Base Type CIB: Mason Industries Type KSL or as approved)

I. NEOPRENE MOUNTING SLEEVES

1. Neoprene mounting sleeves for hold-down applications of equipment with vibration isolators shall be Uniroyal Type 620/660 or as approved.

J. PIPE FLEXIBLE CONNECTORS

1. Refer to Section "Basic Piping Materials and Methods" for requirements for flexible pipe connectors.

PART 3 - EXECUTION

3.1 GENERAL

- A. All equipment, piping, etc. shall be mounted on or suspended from approved foundations and supports, all as specified herein, or as shown on the drawings.
- B. All floor-mounted equipment shall be erected on concrete equipment pads over the complete floor area of the equipment, unless otherwise specified herein. Refer to Section "Basic Piping Materials and Methods" for concrete equipment pad requirements. These pads shall be integrally keyed to structural slab. Wherever vibration eliminating devices and/or concrete inertia blocks are specified, these items shall, in all cases, be mounted on concrete equipment pads unless otherwise specified herein.
- C. Furnish and install neoprene mounting sleeves for hold-down bolts to prevent any metal to metal contact.
- D. All equipment shall be provided with lateral restraining isolators as required to limit horizontal motion to 1/4" maximum, under all operating conditions. Lateral restraining isolators shall have the same static deflection as the vertical isolators for the equipment being isolated.

- E. Unless otherwise indicated, all equipment mounted on vibration isolators shall have a minimum operating clearance of 2 inches between the bottom of the equipment or inertia base (and height-saving bracket) and the concrete equipment pad (or bolt heads) beneath the equipment. The clearance shall be checked by the Contractor to ensure that no material has been left to short-circuit the vibration isolators. There shall be a minimum 4 inch clearance between isolated equipment and the walls, ceiling, floors, columns and any other equipment not installed on vibration isolators.
- F. Piping or plumbing equipment shall be supported from building structure, not hung from or supported on other equipment, pipes, or ductwork.
- G. Equipment connected to water or other fluid piping shall be erected on isolators or isolated foundations at correct operating heights prior to connection of piping, and blocked-up with temporary shims to final operating height. When the system is assembled and fluid is added, the isolators shall be adjusted to allow removal of the shims.
- H. All plumbing equipment not specifically identified in this specification that contains rotating or vibrating elements, and any associated electrical apparatus installed by this division that contains transformers or inductors shall be installed on Type DDNM neoprene isolators as appropriate.
- I. All wiring connections to plumbing equipment on isolators shall be made with a minimum 18 inch long flexible conduit in a "U" shaped loop.
- J. Elastomeric isolators that will be exposed to temperatures below 32 degrees F shall be fabricated from natural rubber instead of neoprene.
- K. Springs shall be designed and installed so that ends of springs remain parallel and all springs installed with adjustment bolts.
- L. Springs shall be sized to be non-resonant with equipment forcing frequencies or support structure natural frequencies.
- M. Refer to Vibration Isolation Schedule at the end of this Section.

3.2 DOMESTIC BOOSTER PUMPS

- A. Packaged domestic booster pumps installed on slab on grade shall be bolted and grouted thru their factory provided equipment frames to equipment pads and be provided with vibration isolators as scheduled in the table at the end of this section.
- B. Packaged domestic booster pumps installed on suspended slabs shall be bolted and grouted thru their factory provided equipment frames to a spring supported concrete inertia base and be provided with vibration isolators as scheduled in the table at the end of this section. Provide concrete inertia base with thickness as scheduled in the table at the end of this section and provide with a 2" minimum operating clearance between the base and equipment pads.

3.3 AIR COMPRESSORS AND VACUUM PUMPS

- A. Base-mounted air compressors and vacuum pumps shall be bolted and grouted to Base Type CIB with the inertia base supported on Type SPNM isolators as scheduled in the table at the end of this section.
- B. Packaged air compressors and vacuum pumps installed on slab on grade shall be bolted and grouted thru their factory provided equipment frames to equipment pads and be provided with vibration isolators as scheduled in the table at the end of this section.

- C. Packaged air compressors and vacuum pumps installed on suspended slabs shall be bolted and grouted thru their factory provided equipment frames to Base Type CIB with the inertia base and be provided with vibration isolators as scheduled in the table at the end of this section.
- D. Tank mounted air compressors and vacuum pumps installed on slab on grade shall be bolted and grouted to equipment pads and be provided with vibration isolators as scheduled in the table at the end of this section.
- E. Tank mounted compressors and vacuum pumps installed on suspended slabs shall be bolted and grouted thru their factory provided equipment frames to Base Type CIB with the inertia base and be provided with vibration isolators as scheduled in the table at the end of this section.

3.4 SUPPORT OF PIPING

- A. The following water and condensate piping shall be resiliently supported:
 1. Piping within 50 feet of connected rotating equipment.
 2. Piping installed below or adjacent to noise sensitive areas.
- B. Pipes connected to equipment installed on spring vibration isolators shall be suspended or supported by Type SPNM or Type SPNH isolators. Provide vibration isolation anchors and guides as specified elsewhere in this section. The first isolator both upstream and downstream of equipment on springs shall have a static deflection equal to 1.5 times that of the equipment isolators, up to a maximum of 2 inches. The static deflection of the remaining pipe isolators shall be 1 inch.
- C. Piping that is connected only to machinery installed on neoprene isolators shall be either supported from the floor on Type DDNM mounts or suspended from the structure on Type DDNH hangers.
- D. Where a pipe run connects multiple items of equipment in the mechanical room the pipe isolators for the entire run shall be chosen to suit the connected equipment of greatest static deflection.
- E. Resilient diagonal mountings or other approved devices shall be provided as required to limit piping motion due to equipment startup or shut down, to a maximum of 1/8".
- F. Water piping hanger rod isolators shall contain a steel spring in series with a 1/4" acoustical neoprene pad within a steel box retainer. The hanger rod isolator assembly shall be rigidly supported from the spring sub-assembly and shall not contact the steel box retainer. Clearances in the isolator design shall be capable of accepting a 15 degree misalignment in any direction from the vertical.
- G. The steel spring element of the assembly shall be designed to have a minimum surge frequency of 340 HZ and a minimum deflection of 3/4".
- H. Hanger rod isolators for steam and condensate piping including steam pressure reducing valve stations shall be supported by means of neoprene-in-shear mountings providing a minimum static deflection of 1/2".
- I. Where supplementary steel is required to support piping, the supplementary steel shall be sized so that maximum deflection between supports does not exceed 0.08" and shall be resiliently supported from the building structure with mountings as described above. Supported piping from the supplementary steel shall be rigidly suspended or supported.
- J. Pre-compressed type hanger rod isolators shall be provided for all water piping greater than 12" diameter and all supplementary steel supports. The pre-compression shall be factory set at 75% of rated deflection.
- K. Where isolated water piping 8" and larger is supported directly below exposed steel beams, attachment to the beam shall be made by means of welded channel beam attachments located directly under the web of

the beam. For piping 6" and smaller, beam clamps may be used in lieu of welding subject to approval of beam clamp selection.

3.5 PIPING ANCHORS, GUIDES AND SUPPORTS

- A. General: Pipe riser guides, anchors and supports including piping anchors in mechanical equipment rooms or occupied spaces shall be isolated from the building structure such that there shall be no direct metal to metal contact of the piping with the building structure.
- B. Piping Anchors and Guides
 - 1. The all directional pipe anchor isolation mountings shall consist of a telescoping arrangement of two sizes of steel tubing separated by a minimum of 1/2" thick heavy duty neoprene and canvas duct isolation pad. Vertical restraints shall be provided by similar material arranged to prevent vertical travel in either direction. The allowable load on the isolation material shall not exceed 500 psi.
 - 2. Steel guides shall be welded to the pipe at a maximum spacing of 90°. The outside diameter of the opposing guide bars shall be smaller than the inside diameter of the pipe riser clamp in accordance with standard field construction practice. Each end of the pipe guide shall be rigidly attached to an all directional pipe anchor isolation mounting which in turn, shall be rigidly fastened to the steel framing within the shaft.
 - 3. Low temperature piping guides shall be constructed with a 360 degree 10 gauge metal sleeve around the piping. The thermal insulation requirements for the piping shall be provided between the piping and the sleeve. Heavy duty neoprene and canvas duct isolation pad of thickness equal to thermal insulation requirements shall space the metal sleeve away from the piping with urethane or other suitable thermal insulation provided in the voids between the pipe-sleeve and isolation pan material. The metal sleeve outside diameter shall be smaller than the pipe riser clamp inside diameter in accordance with standard field construction practice. The pipe riser clamp shall be rigidly attached to the steel framing within the shaft.
- C. Piping Supports:
 - 1. Piping supports within shafts shall be provided with suitable bearing plates and two layers 1/4" thick ribbed or waffled neoprene pad loaded for 50 psi maximum. The isolation pads shall be separated with 1/4" steel plate. The isolation pads shall be Type WP or approved equal.
 - 2. Piping isolation supports at the base of risers shall be two layers of 1/2" thick heavy duty neoprene and canvas duct isolation pad separated by 1/4" thick steel plate. Suitable bearing plates sized to provide a pad loading of 500 psi maximum shall be provided. The stanchion between the pipe and isolation support shall be welded to the pipe and welded or bolted to the isolation support. The isolation support shall be bolted to the floor slab with resilient sleeves and washers. All pipe support resilient materials shall be HL Mason Industries, Inc., or as approved.

3.6 FLEXIBLE PIPING CONNECTORS

- A. Flexible piping connectors shall be installed to connect piping diameter 2" or greater to reciprocating or rotating equipment.

3.7 PIPE RISER SUPPORTS

- A. Where pipes rise in a vertical chase and are supported from a structure with type SPNH or DDNH isolators and require lateral bracing, neoprene riser guides shall be mounted around the pipe to limit lateral movement and to prevent direct contact with the supporting structure.
- B. Support vertical pipe risers subjected to thermal expansion and/or contraction with spring isolators and central anchors designed to ensure loading within design limits at support points. Perform design calculations for sizing the riser supports incorporating the initial load, initial deflection, change in deflection, final load and change in load at support locations. Design calculations must include anchor loads when installed, cold filled and at operating temperature and pipe stress at end connections and branch

locations. Design system for an initial spring deflection of at least 4 times the thermal movement. Design must be stamped and signed by a licensed professional engineer.

3.8 WIRING

- A. All wiring connections to plumbing equipment on vibration isolators (either spring or neoprene type) shall be made with a minimum 18 inch long flexible conduit in a “U” shaped loop. This Contractor shall coordinate wiring connections with the Electrical Contractor.

3.9 FIELD QUALITY

- A. Contractor shall work in accord with best trade practices, shall fabricate and install all items in accordance with manufacturer's recommendations and Architect's directions, and shall consult with trades doing adjoining work in order to provide an installation of first class quality.

3.10 ADJUSTMENT AND TESTING

- A. Site Access: During installation of equipment, Contractor shall arrange for access as necessary for inspection of isolation and noise control equipment by Architect and the Contractor’s representatives.
- B. Contractor’s Vibration Isolation Report: The vibration isolation vendor shall inspect and approve the installation of the vibration isolators and shall submit a report to the Architect which verifies that all of the isolation equipment has been properly installed and that the installation is in full conformance with the specification. The report shall record the vibration isolator identification and model or type. For isolators containing steel springs the report shall also record the size and uncompressed height, design static deflection and measured static deflection of the isolators provided.
- C. Consultant’s Inspection: Upon completing installation and adjustment for suitable operation of all work specified under this section, the Contractor shall notify the Architect in writing. The letter shall certify that all work specified under this section is complete, operational and adjusted in every respect, and that all work is ready for the completion checkout. The notification letter shall be accompanied by the vibration isolation report.

3.11 GUARANTEE

- A. If, in the actual installation, any equipment fails to meet the vibration control requirements specified herein, that equipment shall be corrected or replaced without claim for additional payment, inclusive of all labor and material costs. Such corrective measures shall be done within a time schedule specified by the Owner.

3.12 SCHEDULE OF VIBRATION ISOLATORS

EQUIPMENT	BASE TYPE	ISOLATOR TYPE	STATIC DEFLECTION
Base-mounted pumps (less than 50 HP) (Slab-On-Grade)	Equipment Pad		
Base-mounted pumps (50 HP or greater) (Slab-On-Grade)	Inertia Base CIB	SPNM	0.75"
Base-mounted pumps (3 hp or greater) (Suspended Slab)	Inertia Base CIB	SPNM	2"
Base-mounted pumps (less than 3 hp) (Suspended Slab)	Equipment Pad	DDNM	.4"
In-Line Pumps ½ HP & Larger		SPNH	1.75"
Domestic Booster Pumps (Slab on Grade)	Equipment Pad	MWP	0.25
Domestic Booster Pumps (Suspended Slab)	Inertia Base CIB	SPNM	2"
Air Compressors and Vacuum Pumps (Tank Mtd.) (Slab on Grade)	Equipment Pad	MWP	0.25"
Air Compressors and Vacuum Pumps (Tank Mtd.) (Suspended Slab)	Equipment Pad	SPNM	0.75"
Air Compressors and Vacuum Pumps (Packaged) (Slab on Grade)	Equipment Pad	MWP	0.25"
Air Compressors and Vacuum Pumps (Packaged) (Suspended Slab)	Inertia Base CIB	SPNM	0.75"
Air Compressors and Vacuum Pumps (Base Mtd)	Inertia Base CIB	SPNM	0.75"
Piping		Isolation as per specification.	

END OF SECTION

SECTION 15191 (220553) - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. Extent of Plumbing work to be identified as required by this Section is indicated on drawings and/or specified in other Division 22 Sections.
- B. Types of identification devices specified in this Section include the following:
 - 1. Painted Identification Materials
 - 2. Plastic Pipe Markers
 - 3. Plastic Tape
 - 4. Underground-Type Plastic Line Marker
 - 5. Valve Tags
 - 6. Valve Schedule Frames
 - 7. Engraved Plastic-Laminate Signs
 - 8. Plastic Equipment Markers
 - 9. Plasticized Tags

1.2 CODES AND STANDARDS:

- A. ANSI Standards: Comply with ANSI A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.

1.3 SUBMITTALS

- A. Product Data: Submit manufacturer's technical product data and installation instructions for each identification material and device required.
- B. Samples: Submit samples of each color, lettering style and other graphic representation required for each identification material or system.
- C. Schedules: Submit valve schedule for each piping system, typewritten and reproduced on 8-1/2" x 11" bond paper. Tabulate valve number, piping system, system abbreviation (as shown on tag), location of valve (room or space), and variations for identification (if any). Mark valves which are intended for emergency shut-off and similar special uses, by special "flags", in margin of schedule. In addition to mounted copies, furnish extra copies for Maintenance Manuals as specified in Division 1.
- D. Maintenance Data: Include product data and schedules in Maintenance Manuals as specified in Division 1 and Section "General Plumbing Requirements."

PART 2 - PRODUCTS AND MATERIALS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide plumbing identification materials of one of the following:
 - 1. Allen Systems, Inc.
 - 2. Brady (W.H.) Co.; Signmark Div.
 - 3. Industrial Safety Supply Co., Inc.
 - 4. Seton Name Plate Corp.

2.2 PLUMBING IDENTIFICATION MATERIALS

- A. General: Provide manufacturer's standard products of categories and types required for each application as referenced in other Division 22 sections. Where more than single type is specified for application, selection is Installer's option, but provide single selection for each product category.

2.3 PAINTED IDENTIFICATION MATERIALS

- A. Stencils: Standard fiberboard stencils, prepared for required applications with letter sizes generally complying with recommendations of ANSI A13.1 for piping and similar applications. Minimum letter height shall be 1-1/4" high letters for ductwork and 3/4" high letters for access door signs and similar operational instructions.
- B. Stencil Paint: Stencil paint shall be exterior type, oil based, alkyd enamel; black, except as otherwise indicated; either brushing grade or pressurized spray-can form and grade.
- C. Identification Paint: Identification paint shall be oil based, alkyd enamel of colors indicated or, if not otherwise indicated for piping systems, comply with ANSI A13.1 for colors.

2.4 PLASTIC PIPE MARKERS

- A. Snap-On Type: Provide manufacturer's standard pre-printed, semi-rigid snap-on, color-coded pipe markers, complying with ANSI A13.1
- B. Pressure-Sensitive Type: Provide manufacturer's standard pre-printed, permanent adhesive, color-coded, pressure-sensitive vinyl pipe markers, complying with ANSI A13.1
- C. Insulation: Furnish 1" thick molded fiberglass insulation with jacket for each plastic pipe marker to be installed on uninsulated pipes subjected to fluid temperatures of 125 degrees F (52 degrees C) or greater. Cut length to extend 2" beyond each end of plastic pipe marker.
- D. Small Pipes: For external diameters less than 6" (including insulation if any), provide full-band pipe markers, extending 360 degrees around pipe at each location, fastened by one of the following methods:
 - 1. Snap-on application of pre-tensioned semi-rigid plastic pipe marker.
 - 2. Adhesive lap joint in pipe marker overlap.
 - 3. Laminated or bonded application of pipe marker to pipe (or insulation).
 - 4. Taped to pipe (or insulation) with color-coded plastic adhesive tape, not less than 3/4" wide; full circle at both ends of pipe marker, tape lapped 1-1/2".
- E. Large Pipes: For external diameters of 6" and larger (including insulation if any), provide either full-band or strip-type pipe markers, but not narrower than 3 times letter height (and of required length), fastened by one of the following methods:
 - 1. Laminated or bonded application of pipe marker to pipe (or insulation).
 - 2. Taped to pipe (or insulation) with color-coded plastic adhesive tape, not less than 1-1/2" wide; full circle at both ends of pipe marker, tape lapped 3".
 - 3. Strapped-to-pipe (or insulation) application of semi-rigid type, with manufacturer's standard stainless steel bands.
- F. Arrows: Print each pipe marker with arrows indicating direction of flow, either integrally with piping system service lettering (to accommodate both directions), or as a separate unit of plastic.
- G. Lettering: Manufacturer's standard pre-printed nomenclature which best describes piping system in each instance, as selected by Architect/Engineer in cases of variance with names as shown or specified.

- H. Lettering: Comply with piping system nomenclature as specified, scheduled, or shown, and abbreviate only as necessary for each application length.

2.5 PLASTIC TAPE

- A. General: Provide manufacturer's standard color-coded pressure-sensitive (self-adhesive) vinyl tape, not less than 3 mils thick.
- B. Width: Provide 1-1/2" wide tape markers on pipes with outside diameters (including insulation, if any) of less than 6", 2-1/2" wide tape for larger pipes.
- C. Color: Comply with ANSI A13.1, except where another color selection is indicated.

2.6 UNDERGROUND-TYPE PLASTIC LINE MARKER

- A. General: Manufacturer's standard permanent, bright-colored, continuous-printed plastic tape, intended for direct-burial service; not less than 6" wide x 4 mils thick. Provide tape with printing which most accurately indicates the type of service of buried pipe.
 - 1. Provide multi-ply tape consisting of solid aluminum foil core between 2-layers of plastic tape.

2.7 VALVE TAGS

- A. Brass Valve Tags: Provide 19-gauge polished brass valve tags with stamp-engraved piping system abbreviation in 1/4" high letters and sequenced valve numbers 1/2" high, and with 5/32" hole for fastener.
 - 1. Provide 1-1/2" diameter tags, except as otherwise indicated.
 - 2. Fill tag engraving with black enamel.
- B. Plastic Laminate Valve Tags: Provide manufacturer's standard 3/32" thick engraved plastic laminate valve tags, with piping system abbreviation in 1/4" high letters and sequenced valve numbers 1/2" high, and with 5/32" hole for fastener.
 - 1. Provide 1-1/2" sq. black tags with white lettering, except as otherwise indicated.
- C. Plastic Valve Tags: Provide manufacturer's standard solid plastic valve tags with printed enamel lettering, with piping system abbreviation in approximately 3/16" high letters and sequenced valve numbers approximately 3/8" high, and with 5/32" hole for fastener.
 - 1. Provide 1-1/8" sq. white tags with black lettering.
- D. Valve Tag Fasteners: Provide manufacturer's standard solid brass chain (wire link or beaded type), or solid brass S-hooks of the sizes required for proper attachment of tags to valves, and manufactured specifically for that purpose.

2.8 ACCESS PANEL MARKERS

- A. Access Panel Markers: Provide manufacturer's standard 1/16" thick engraved plastic laminate access panel markers, with abbreviations and numbers corresponding to concealed valve. Include 1/8" center hole to allow attachment.

2.9 VALVE SCHEDULE FRAMES

- A. General: For each page of valve schedule, provide glazed display frame, with screws for removable mounting on masonry walls. Provide frames of finished hardwood or extruded aluminum, with SSB-grade sheet glass.

2.10 ENGRAVED PLASTIC-LAMINATE SIGNS

- A. General: Provide engraving stock melamine plastic laminate, complying with ASTM D 709, in the sizes and thickness indicated, engraved with engraver's standard letter style of the sizes and wording indicated, black with white core (letter color) except as otherwise indicated, punched for plumbing fastening except where adhesive mounting is necessary because of substrate.
- B. Thickness: 1/16" for units up to 20 sq. in. or 8" length; 1/8" for larger units.
- C. Fasteners: Self-tapping stainless steel screws, except contact-type permanent adhesive where screws cannot or should not penetrate the substrate.

2.11 PLASTIC EQUIPMENT MARKERS

- A. General: Provide manufacturer's standard laminated plastic, color coded equipment markers. Conform to the following color code:
 - 1. Green: Cooling equipment and components.
 - 2. Yellow: Heating equipment and components.
 - 3. Yellow/Green: Combination cooling and heating equipment and components.
 - 4. Brown: Energy reclamation equipment and components.
 - 5. Blue: Equipment and components that do not meet any of the above criteria.
 - 6. For hazardous equipment, provide colors and designs recommended by ANSI A13.1.
- B. Nomenclature: Include the following, matching terminology on schedules as closely as possible:
 - 1. Name and plan number.
 - 2. Equipment service.
 - 3. Design capacity.
 - 4. Other design parameters such as pressure drop, entering and leaving conditions, rpm, etc.
- C. Size: Provide 2-1/2" x 4" markers for control devices, dampers, and valves; and 4-1/2" x 6" for equipment.

2.12 PLASTICIZED TAGS

- A. General: Manufacturer's standard pre-printed or partially pre-printed accident-prevention tags, of plasticized card stock with matt finish suitable for writing. Tags shall be minimum 3-1/4" x 5-5/8" in size, provided with brass grommets and wire fasteners, and with appropriate pre-printed wording including large-size primary wording (as examples; DANGER, CAUTION, DO NOT OPERATE).

2.13 LETTERING AND GRAPHICS

- A. General: Coordinate names, abbreviations and other designations used in plumbing identification work, with corresponding designations shown, specified or scheduled. Provide numbers, lettering and wording as indicated or, if not otherwise indicated, as recommended by manufacturers or as required for proper identification and operation/maintenance of plumbing systems and equipment.
 - 1. Multiple Systems: Where multiple systems of same generic name are shown and specified, provide identification which indicates individual system number as well as service (as examples; Boiler No. 3, Air Supply No. 1H, Standpipe F12).

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

- A. Coordination: Where identification is to be applied to surfaces which require insulation, painting or other covering or finish, including valve tags in finished plumbing spaces, install identification after completion of covering and painting. Install identification prior to installation of acoustical ceilings and similar removable concealment.

3.2 PIPING SYSTEM IDENTIFICATION

- A. General: Install pipe markers of one of the following types on each system indicated to receive identification, and include arrows to show normal direction of flow:
 - 1. Plastic pipe markers, with application system as indicated under "Materials" in this section. Install on pipe insulation segment where required for hot non-insulated pipes.
- B. Application: Provide piping system identification for the following systems:
 - 1. Domestic cold water piping.
 - 2. Domestic hot water piping.
 - 3. Domestic hot water recirculating piping.
 - 4. Non potable water piping
 - 5. Lawn irrigation piping.
 - 6. Sanitary and waste piping.
 - 7. Storm water piping.
 - 8. Vent piping.
 - 9. Insulated and non-insulated storm water piping.
 - 10. Compressed air piping.
 - 11. Natural gas piping.
- C. Location: Install pipe markers and color bands in the following locations where piping is exposed to view, concealed only by a removable ceiling system, installed in machine rooms, installed in accessible maintenance spaces (shafts, tunnels, plenums) and exterior non-concealed locations.
 - 1. Within 5 feet of each valve and control device.
 - 2. Within 5 feet of each branch, excluding take-offs less than 25 feet in length for fixtures; mark flow direction of each pipe at branch connection.
 - 3. Within 5 feet where pipes pass through walls, floors or ceilings or enter non-accessible enclosures. Provide identification on each side of wall, floor or ceiling.
 - 4. At access doors, manholes and similar access points which permit view of concealed piping.
 - 5. Within 5 feet of major equipment items and other points of origination and termination.
 - 6. Spaced intermediately at maximum spacing of 50' along each piping run, except reduce spacing to 25' in congested areas of piping and equipment where there are more than two piping systems or pieces of equipment.

3.3 UNDERGROUND PIPING IDENTIFICATION

- A. General: During back-filling/top-soiling of each exterior underground piping systems, install continuous underground-type plastic line marker, located directly over buried line at 6" to 8" below finished grade. Where multiple small lines are buried in common trench and do not exceed overall width of 16", install single line marker. For tile fields and similar installations, mark only edge pipe lines of field.

3.4 VALVE IDENTIFICATION

- A. General: Provide valve tag on every valve, cock and control device in each piping system; exclude check valves, valves within factory-fabricated equipment units, plumbing fixture faucets, convenience and lawn-

watering hose bibbs, and shut-off valves at plumbing fixtures and similar rough-in connections of end-use fixtures and units.

- B. List each tagged valve in valve schedule for each piping system. Mount valve schedule frames and schedules in machine rooms where indicated or, if not otherwise indicated, where directed by Architect/Engineer.
 - 1. Where more than one major machine room is shown for project, install mounted valve schedule in each major machine room, and repeat only main valves which are to be operated in conjunction with operations of more than single machine room.

3.5 PLUMBING EQUIPMENT IDENTIFICATION

- A. General: Install engraved plastic laminate sign or plastic equipment marker on or near each major item of plumbing equipment and each operational device, as specified herein if not otherwise specified for each item or device. Provide signs for the following general categories of equipment and operational devices:
 - 1. Main control and operating valves, including safety devices and hazardous units such as gas outlets.
 - 2. Meters, gauges, thermometers and similar units.
 - 3. Pumps
 - 4. Heat exchangers
 - 5. Water heaters, tanks and pressure vessels.
 - 6. Strainers, water treatment systems and similar equipment.
- B. Optional Sign Types: Where lettering larger than 1" height is needed for proper identification, because of distance from normal location of required identification, stenciled signs may be provided in lieu of engraved plastic, at Installer's option.
- C. Lettering Size: Minimum 1/4" high lettering for name of unit where viewing distance is less than 2'-0", 1/2" high for distances up to 6'-0", and proportionately larger lettering for greater distances. Provide secondary lettering of 2/3 to 3/4 of size of the principal lettering.
- D. Text of Signs: In addition to name of identified unit, provide lettering to distinguish between multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.
 - 1. Optional Use of Plasticized Tags: At Installer's option, where equipment to be identified is concealed above acoustical ceilings or similar concealment, plasticized tags may be installed within concealed space to reduce amount of text in exposed sign (outside concealment).
 - 2. Operational valves and similar minor equipment items located in non-occupied spaces (including machine rooms) may, at Installer's option, be identified by installation of plasticized tags in lieu of engraved plastic signs.

END OF SECTION

SECTION 15251 (220700) - PLUMBING INSULATION

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. Extent of Plumbing insulation required by this Section is indicated on drawings and schedules, and by requirements of this Section.
- B. Types of Plumbing insulation specified in this Section include the following:
 - 1. Piping Systems Insulation:
 - a. Fiberglass
 - b. Flexible Elastomeric
 - 2. Equipment Insulation:
 - a. Fiberglass
 - b. Flexible Elastomeric

1.2 QUALITY ASSURANCE

- A. Flame/Smoke Ratings: Provide composite Plumbing insulation (insulation, jackets, coverings, sealers, mastics and adhesives) with flame-spread index of 25 or less, and smoke-developed index of 50 or less, as tested by UL 723 or ASTM E 84 (NFPA 255) method.
 - 1. Exception: Outdoor Plumbing insulation may have flame spread index of 75 and smoke developed index of 150.
 - 2. Exception: Industrial Plumbing insulation that will not affect life safety egress of building may have flame spread index of 75 and smoke developed index of 150.
- B. Related Sections: The following sections contain requirements that relate to this Section:
 - 1. Division 22 Section "Hangers and Supports for Plumbing Piping," for insulation shields for protecting insulation vapor barrier and materials and methods for piping installations.

1.3 SUBMITTALS

- A. Product Data: Submit manufacturer's technical product data and installation instructions for each type of Plumbing insulation. Submit schedule showing manufacturer's product number, k-value, thickness, and furnished accessories for each Plumbing system requiring insulation.
- B. Maintenance Data: Submit maintenance data and replacement material lists for each type of Plumbing insulation. Include this data and product data in maintenance manual.

PART 2 - PRODUCTS AND MATERIALS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide products of one of the following:
 - 1. CertainTeed Corp.
 - 2. Knauf Insulation
 - 3. Johns Manville
 - 4. Owens Corning

2.2 PIPING INSULATION MATERIALS

- A. Fiberglass Piping Insulation: ASTM C 547, Class 1 unless otherwise indicated.
- B. Flexible Elastomeric Piping Insulation: ASTM C534, Type I.
- C. Jackets for Piping Insulation: ASTM C1136, Type I for piping with temperatures below ambient, Type II for piping with temperatures above ambient. Type I may be used for all piping at Installers option.
 - 1. PVC: One-piece, pre-molded PVC cover conforming to ASTM D1784, Johns Manville Zeston 2000 PVC or approved equivalent. Factory supplied, pre-cut insulation blanket inserts for use with PVC fitting covers are acceptable.
- D. Staples, Bands, Wires, and Cement: As recommended by insulation manufacturer for applications indicated.
- E. Adhesives, Sealers, and Protective Finishes: As recommended by insulation manufacturer for applications indicated.
- F. Insulation Diameters: Comply with ASTM C585 for inner and outer diameters of rigid thermal insulation.
- G. Pipe, Valve and Fitting Covers: Comply with ASTM C450 for fabrication of fitting covers for pipe, valves and fittings.
- H. High Density Insulation Billets:
 - 1. Cellular Glass: ASTM C552.

2.3 EQUIPMENT INSULATION MATERIALS

- A. Rigid Fiberglass Equipment Insulation: ASTM C612, Class 2.
- B. Flexible Fiberglass Equipment Insulation: ASTM C553, Type I, Class B-4.
- C. Flexible Elastomeric Equipment Insulation: ASTM C534, TYPE II.
- D. Jacketing Material for Equipment Insulation: Provide pre-sized glass cloth jacketing material, not less than 7.8 ounces per square yard, or metal jacket at Installer's option, except as otherwise indicated.
- E. Equipment Insulation Compounds: Provide adhesives, cements, sealers, mastics and protective finishes as recommended by insulation manufacturer for applications indicated.
- F. Equipment Insulation Accessories: Provide staples, bands, wire, wire netting, tape, corner angles, anchors and stud pins as recommended by insulation manufacturer for applications indicated.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Install in accordance with manufacturer's installation instructions.

3.2 PLUMBING PIPING SYSTEM INSULATION

- A. Insulation Omitted: Omit insulation on the following:
 - 1. Chrome-plated exposed piping
 - 2. Water Hammer Arrestors

3. Balancing and flow valves
4. Drain lines from water coolers
5. Exterior condensate drain piping
6. Buried piping
7. Pre-insulated equipment.

B. Cold Piping:

1. Application Requirements: Insulate the following cold plumbing piping systems:
 - a. Potable cold water piping.
 - b. Non-potable cold water piping
 - c. Plumbing vents within 6 lineal feet of roof outlet.
 - d. Condensate piping inside the building.
2. Insulate each piping system specified above with one of the following types and thicknesses of insulation:
 - a. Fiberglass: 1" thickness.

C. Hot Piping:

1. Application Requirements: Insulate the following hot plumbing piping systems:
 - a. Potable hot water piping.
 - b. Potable hot water recirculation piping.
 - c. Hot drain piping (where indicated).
2. Insulate hot water piping systems up to 140F specified above with one of the following types and thicknesses of insulation:
 - a. Fiberglass: 1" thick for pipe sizes up to and including 3/4", 1-1/2" thick for pipe sizes 1" and larger.
 - b. Calcium Silicate: 1-1/2" thick for pipe sizes up to and including 3/4", 2-1/2" thick for pipe sizes 1" and larger.

D. P-traps:

1. Insulate P-traps receiving chilled water waste and P-traps of water coolers as described below:
 - a. Flexible Elastomeric: 1/2" thick for pipe sizes up to and including 2", 1" thick for pipe sizes 2" to 6" (largest size permitted).
2. Insulate P-traps receiving hot water waste above 140F as described below:
 - a. Fiberglass: 1" thickness.
 - b. Flexible Elastomeric (high temp formula up to 300F): 1" thickness.

E. Piping Inside Masonry Wall Units:

1. Insulate cold, hot and hot water recirculation piping installed inside of masonry walls where the piping needs to be insulated as the wall is constructed as described below:
 - a. Flexible Elastomeric: 1/2" thick for pipe sizes up to and including 2", 1" thick for pipe sizes 2" to 6" (largest size permitted).

F. Exterior piping:

1. Encase exterior piping insulation with aluminum weather-proof jackets.
2. Insulate exterior cold water, hot water, hot water recirculation and non-potable water piping as previously described.
3. Insulate and heat trace exterior [sanitary p-traps,] [sanitary,] [grease waste,] [storm,] and [overflow storm] piping as described below. Refer to Division 22 Section "Heat Tracing for Plumbing Piping" for heat trace system material and installation requirements.
 - a. Fiberglass: 1" thickness.
 - b. Flexible Elastomeric: 1" thickness.

G. Interior piping with heat trace:

1. Insulate and heat trace grease waste piping and grease waste P-traps as described below. Refer to Division 22 Section "Heat Tracing for Plumbing Piping" for heat trace system material and installation requirements.
 - a. Fiberglass: 2" thickness.
 - b. Flexible Elastomeric: 2" thickness.

3.3 INSTALLATION OF PIPING INSULATION

- A. General: Install insulation products in accordance with manufacturer's written instructions, and in accordance with recognized industry practices to ensure that insulation serves its intended purpose.
- B. Maintain continuous thermal and vapor-retarder integrity throughout entire installation unless otherwise indicated.
- C. Install insulation on pipe systems subsequent to installation of heat tracing, painting, testing, and acceptance of tests.
- D. Install insulation materials with smooth and even surfaces. Insulate each continuous run of piping with full-length units of insulation, with a single cut piece to complete run. Do not use cut pieces or scraps abutting each other.
- E. Clean and dry pipe surfaces prior to insulating.
 - 1.
- F. Pipe insulation:
 1. Insulate all cold piping to prevent moisture condensation on exterior surfaces.
 2. Provide high density insulation material under supports or pre-insulated supports. Refer to Division 22 Section "Hangers and Supports for Plumbing Piping" for pre-insulated supports.
 3. Protect insulation with shields to prevent puncture or other damage. Refer to division 22 Section "Hangers & Supports for Plumbing Piping" for insulation shields.
 4. High density insulation material shall extend a minimum 2 inches past the pipe shield on each side.
 5. Butt insulation to hanger or riser clamp for vertical pipe. Butt pipe insulation tightly at insulation joints.
 6. For hot pipes, apply 3" wide vapor barrier tape or band over the butt joints.
 7. For cold pipes, apply wet coat of vapor barrier lap cement on joint and seal with 3 inch wide vapor barrier tape or band and coat all taped seams and staple penetrations with vapor barrier coating to prevent moisture ingress.
- G. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
 1. Install insulation over fittings, valves (except balancing and flow control valves), strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Butt tightly against adjoining pieces and bond with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.

5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket except for flexible elastomeric, install fitted PVC cover over elbows, tees, strainers, valves (except balancing and flow control valves), flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
 9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.
- H. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- I. Install removable insulation covers at locations indicated. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
 3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
- J. Extend piping insulation without interruption through walls, floors and similar piping penetrations, except where otherwise indicated.

3.4 INSTALLATION OF EQUIPMENT INSULATION

- A. General: Install equipment thermal insulation products in accordance with manufacturer's written instructions, and in compliance with recognized industry practices to ensure that insulation serves intended purpose.
- B. Install insulation materials with smooth and even surfaces and on clean and dry surfaces. Redo poorly fitted joints. Do not use mastic or joint sealer as filler for gapping joints and excessive voids resulting from poor workmanship.

- C. Maintain integrity of vapor-barrier on equipment insulation and protect it to prevent puncture and other damage.
- D. Do not apply insulation to equipment, breechings, or stacks while hot.
- E. Apply insulation using the staggered joint method for both single and double layer construction, where feasible. Apply each layer of insulation separately.
- F. Coat insulated surfaces with layer of insulating cement, troweled in workmanlike manner, leaving a smooth continuous surface. Fill in scored block, seams, chipped edges and depressions, and cover over wire netting and joints with cement of sufficient thickness to remove surface irregularities.
- G. Cover insulated surfaces with all-service jacketing neatly fitted and firmly secured. Lap seams at least 2". Apply over vapor barrier where applicable.
- H.
- I. Provide removable insulation sections to cover parts of equipment which must be opened periodically for maintenance; include metal vessel covers, fasteners, flanges, frames and accessories.

3.5 PROTECTION AND REPLACEMENT

- A. Replace damaged insulation which cannot be repaired satisfactorily, including units with vapor barrier damage and moisture saturated units.
- B. Protection: Insulation Installer shall advise Contractor of required protection for insulation work during remainder of construction period, to avoid damage and deterioration.

END OF SECTION

SECTION 15411 (221100) - WATER DISTRIBUTION PIPING AND SPECIALTIES

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes domestic cold water, hot water, and hot water recirculation piping, fittings, and specialties within the building to a point 5 feet outside the building.

- B. Related Sections: The following sections contain requirements that relate to this Section:
 - 1. Division 22 Section "General Plumbing Requirements," for trenching and backfilling materials and methods for underground piping installations.
 - 2. Division 2 Section "Water Service Systems," for water service piping beginning from 5'-0" outside the building.
 - 3. Division 7 Section "Joint Sealers," for materials and methods for sealing pipe penetrations through basement and foundation walls, and fire and smoke barriers.
 - 4. Division 22 Section "Identification, for Plumbing Piping and Equipment" for labeling and identification of water distribution piping.
 - 5. Division 22 Section "Common Work Results for Plumbing," for materials and methods for fire barrier penetrations, wall penetrations and equipment pads.
 - 6. Division 22 Section "Basic Piping Material and Methods," for materials and methods for strainers, flexible connectors, unions, dielectric unions, dielectric flanges, and mechanical sleeve seals.
 - 7. Division 22 Section "General Duty Valves for Plumbing Piping," for materials and methods for installing water distribution piping valves.
 - 8. Division 22 Section "Hangers and Supports for Plumbing Piping," for insulation shields, materials, and methods for hanging and supporting water distribution piping.
 - 9. Division 22 Section "Plumbing Insulation," for materials and methods for insulating water distribution piping.
 - 10. Division 22 Section "Sanitary Drainage and Vent Piping and Specialties," for material and methods for trap primer outlet piping.

- C. Products installed but not furnished under this Section include water meters that will be provided by the utility company to the site and ready for installation. Following is the name and address of the utility company:

1.2 DEFINITIONS

- A. Water Distribution Pipe: A pipe within the building or on the premises that conveys water from the water service pipe or meter to the points of usage.

- B. Water Service Pipe: The pipe from the water main or other source of potable water supply to the water distribution pipe of the building served.

- C. Pipe sizes used in this Specification are nominal pipe size (NPS).

- D. Lead Free: Refers to the wetted surface of pipe, fittings and fixtures in potable water systems that have a weighted average lead content $\leq 0.25\%$ per Safe Drinking Water Act as amended January 4th, 2011 Section 1417.

1.3 SUBMITTALS

- A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specifications Sections.
 - 1. Product data for each piping specialty and valve specified.
 - 2. Maintenance data for each piping specialty and valve specified for inclusion in Maintenance Manual specified in Division 1 and Division 22 Section "General Plumbing Requirements."
 - 3. Submit certification that specialties and fittings for domestic water distribution for drinking or cooking comply with NSF 61 Annex G and / or NSF 372. The following specialties need not comply:
 - a. Hose bibbs
 - b. Wall, yard, and roof hydrants
 - c. Backflow preventers isolating irrigation or mechanical make-up systems
 - d. Emergency mixing valves
 - e. Trap primers

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with the provisions of the following codes:
- B. Comply with NSF 61 Annex G and / or NSF 372 for wetted surfaces of specialties and fittings containing no more than 0.25% lead by weight for domestic water distribution for drinking or cooking.
- C. Pipe, fittings, and specialties shall be manufactured in the United States or be certified to meet ASTM and ANSI standards.

1.5 SPARE PARTS

- A. Maintenance Stock: Furnish one valve key for each key-operated wall hydrant, hose bibb, fixture supply, or faucet installed.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Automatic Flow Control Valves:
 - a. Calefi
 - b. Flow Design, Inc., Autoflow Div.
 - c. Victaulic Company
 - 2. Hose Bibbs with Vacuum Breaker:
 - a. Chicago Faucet Co.
 - b. Eljer, A Household International Company
 - c. T & S Brass & Bronze Works, Inc.
 - 3. Hose Bibbs:
 - a. Lee Brass Co.
 - b. Mansfield Plumbing Products
 - c. Mifab Manufacturing, Inc.
 - d. Nibco, Inc.
 - e. Prier, Inc.

- f. Watts Regulator Co.
- g. Woodford Mfg. Co.
- 4. Wall/Yard Hydrants:
 - a. Josam Co.
 - b. Mifab Manufacturing, Inc.
 - c. Smith (Jay R.) Mfg. Co.
 - d. Prier, Inc.
 - e. Tyler Pipe/Wade Div.; Subs. of Tyler Corp.
 - f. Watts Drainage
 - g. Woodford Mfg. Co.
 - h. Zurn Industries Inc., Hydromechanics Div.
- 5. Backflow Preventers:
 - a. Cla-Val Co.
 - b. Conbraco Industries, Inc.
 - c. Febco
 - d. Hersey Products, Inc.
 - e. Mifab Manufacturing, Inc./Beeco
 - f. Watts Regulator Co.
 - g. Zurn Industries Inc. Wilkins Regulator Div.
- 6. Relief Valves:
 - a. Cash (A. W.) Valve Mfg. Corp.
 - b. Conbraco Industries, Inc.
 - c. Watts Regulator Co.
 - d. Zurn Industries, Inc. Wilkins Regulator Div.
- 7. Piston Type Water Hammer Arresters:
 - a. Amtrol, Inc.
 - b. Josam Co.
 - c. Precision Plumbing Products, Inc.
 - d. PROFLO
 - e. Sioux Chief Manufacturing Co.
 - f. Tyler Pipe/Wade Div.; Subs. of Tyler Corp.
 - g. Watts Regulator Co.
 - h. Zurn Industries, Inc. Wilkins Regulator Div.
- 8. Point of Use Thermostatic Mixing Valves
 - a. Acorn Engineering Co.
 - b. Cash Acme
 - c. Leonard Valve Co.
 - d. Powers Process Controls
- 9. Emergency Mixing Valves
 - a. Acorn Engineering Co.
 - b. Bradley
 - c. Haws Corp.
 - d. Lawler Manufacturing Co., Inc.
 - e. Leonard Valve Co.
 - f. Stingray Systems
- 10. Trap Primers and Distribution Units
 - a. Mifab Manufacturing, Inc.
 - b. Precision Plumbing Products, Inc.
 - c. PROFLO
 - d. Sioux Chief
- 11. Plumbing Pipe Support Brackets
 - a. Holdrite
 - b. PROFLO
 - c. Sioux Chief
- 12. Sanitary Roof Hydrants
 - a. Hoepfner Perfected Products

- b. Jay R. Smith Mtg Co.
- c. Mapa
- d. Woodford Mfg. Co.

2.2 PIPE AND TUBE MATERIALS, GENERAL

- A. Pipe and Tube: Refer to Part 3, Articles "Above Ground Water Distribution Pipe and Fittings" or "Below Ground Water Distribution Pipe and Fittings", for identification of systems where the materials listed below are used.
- B. Copper Tube: ASTM B88, Type L Water Tube, drawn temper.
- C. Copper Tube: ASTM B88, Type K Water Tube, annealed temper.
- D. PVC Plastic Service Pipe: AWWA C900, Class 100 Polyvinyl Chloride (PVC) water pipe, with belled-end fittings.
- E. Brass Pipe: Chrome Plated Schedule 40 ASTM B43 iron pipe size (IPS.)

2.3 FITTINGS

- A. Wrought Copper Solder-Joint Fittings: ANSI B16.22, streamlined pattern.
- B. Galvanized Malleable Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern, for threaded joints. Threads shall conform to ASME B1.20.1.
- C. Ductile or Gray-Iron Flanged Fittings: AWWA C110 Class 125 with AWWA C116 epoxy coating inside and outside.
- D. Brass Fittings: Chrome plated ANSI B16, Class 125 with threaded connections.
- E. Bronze Flanges: ANSI B16.24, Class 150, raised ground face, bolt holes spot faced.
- F. PVC to Ductile Iron Adapter Flanges: EBBA Iron, Inc. Series 2000PV or approved equivalent.

2.4 JOINING MATERIALS

- A. Solder Filler Metal: ASTM B32 Alloy Sb-5, 95-5 Tin-Antimony.
- B. Brazing Filler Metals: AWS A5.8, BAg Silver.
- C. Gasket Material: Thickness, material, and type suitable for fluid to be handled and design temperatures and pressures.

2.5 GENERAL-DUTY VALVES

- A. General-duty valves (i.e., gate, globe, check, ball, and butterfly valves) are specified in Division 22 Section "General Duty Valves for Plumbing Piping." Special duty valves are specified below by their generic name; refer to Part 3, Article "Valve Applications" for specific uses and applications for each valve specified.

2.6 SPECIAL DUTY VALVES

- A. Automatic Flow Control Valves: 400 PSI WOG, flow regulator, with series 300 stainless steel body, series 300 stainless steel automatic pre-set flow balancing cartridge, union connection body, and threaded-end connections.

2.7 PIPING SPECIALTIES

- A. Hose Connections: Hose connections shall have garden hose thread outlets conforming to ASME B1.20.7.
- B. Hose Bibbs: Bronze body with chrome- or nickel-plated finish, with renewable composition disc, wheel handle, 1/2- or 3/4-inch solder inlet, hose outlet.
- C. Recessed Nonfreeze Wall Hydrants: Cast-bronze box, with chrome-plated face, tee handle key, vacuum breaker, hinged locking cover, 3/4-inch inlet, and hose outlet. Bronze casing shall be length to suit wall thickness.
- D. Roof Hydrants: As specified on the drawings.
- E. Backflow Preventers: Comply with requirements of ASSE Standard 1013 and as specified on the drawings.
- F. Relief Valves: Sizes for relief valves shall be in accordance with ASME Boiler and Pressure Vessel Codes for indicated capacity of the appliance for which installed.
 - 1. Combined Pressure-Temperature Relief Valves: Bronze body, test lever, thermostat, complying with ANSI Z21.22 listing requirements for temperature discharge capacity. Temperature relief valves shall be factory set at 210 deg F, and pressure relief at 150 psi.
- G. Piston Type Water Hammer Arresters: Piston type, with casing of type "L" copper tube and spun copper ends, nylon piston with two EPDM "O"rings pressure lubricated with FDA approved silicone, pressure rated for 250 psi, tested and certified in accordance with PDI Standard WH-201.
- H. Point of Use Thermostatic Mixing Valves:
 - 1. Lead free bronze or brass body meeting ASTM B584 with non-corrosive parts, tamper resistant temperature adjustment, checks, stops, other components as scheduled and meeting ASSE 1070. Valve shall be designed to fail to the cold side of the system. Maximum pressure drop shall not be exceeded for the scheduled flow rate.
- I. Emergency Mixing Valves:
 - 1. Bronze body construction meeting ASTM B584, non-corrosive parts, tamper resistant temperature adjustment, union inlets. Valve shall be designed to fail to the cold side of the system with full cold water flow. Maximum pressure drop shall not be exceeded for the scheduled flow rate.
- J. Trap Primers: Brass construction, line pressure operation, capacity to prime number of traps as indicated with distribution units complying with requirements of ASSE Standard 1018.
- K. Pipe Support Brackets:
 - 1. Sheet Stud Bracket: 20 gauge copper with nominal copper tube holes of 1/2" on 2" centers and holes of 3/4" or 1" on 4" centers.
 - 2. Pipe Mounted Bracket: 20 gauge copper or plastic bracket with clamps for securing copper water tube and stainless steel hose clamp for securing bracket to vertical waste and vent pipe in wall.
 - 3. Carrier Bracket: 20 gauge copper bracket with 1" hole for supporting rough-in for flush valve copper tube and bolt slot for attaching to chair carrier.

PART 3 - EXECUTION

1.1 INSTALLATION, GENERAL

- A. Install piping, valves and specialties in accordance with manufacturer's installation instructions.

3.2 PREPARATION FOUNDATION FOR BELOW GROUND WATER DISTRIBUTION PIPE AND FITTINGS

- A. PVC Service Pipe: Support pipe in trench with sand bags level and true to prevent sand, gravel or debris from interfering with the solvent cement process. After pressure testing is complete, gradually install bedding to prevent pipe deflection and then install subbase. Refer to Section “General Plumbing Requirements” for bedding and subbase materials, excavation, trenching, backfill and compaction requirements and refer to ASTM D2321 “Underground Installation of Thermoplastic Pipe for Sewers and Gravity-flow Applications” for additional requirements.
- B. Copper Tube: Provide 6” thick sand pipe bed underneath and around sides of pipe, up to middle half of the pipe. Support pipe in trench with sand bags level and true at fittings to prevent sand, gravel or debris from interfering with the brazing process. After pressure testing is complete, install bedding at fittings and install subbase. Refer to Section “General Plumbing Requirements” for bedding and subbase materials, excavation, trenching, backfill and compaction requirements.

3.3 ABOVE GROUND WATER DISTRIBUTION PIPE AND FITTINGS

- A. Install Type L, drawn copper tube with wrought copper fittings and solder joints for pipe sizes 8 inches and smaller, within the building.
- B. Install chrome plated brass pipe and fittings for exposed water piping within the building where indicated on the drawings.
- C. Install ductile or gray-iron epoxy coated fittings for 3” and larger at water service entrance riser and only upstream of the backflow preventer.

3.4 BELOW GROUND WATER DISTRIBUTION PIPE AND FITTINGS

- A. Install Type K, soft annealed copper tube and brazed joints for pipe sizes 2 inches and smaller, with minimum number of joints, inside and outside building.
- B. Install AWWA C900 PVC service pipe with belled-end joints from 5’-0” outside the building.

3.5 PIPING INSTALLATION

- A. General Locations and Arrangements: Drawings (plans, schematics, and diagrams) indicate the general location and arrangement of the piping systems. Location and arrangement of piping layout take into consideration pipe sizing and friction loss, expansion, pump sizing, and other design considerations. So far as practical, install piping as indicated.
- B. Use fittings for all changes in direction and branch connections.
- C. Install piping at right angles or parallel to building walls. Diagonal runs are not permitted, unless expressly indicated.
- D. Install piping free of sags or bends and with ample space between piping to permit proper insulation applications.
- E. Conceal all pipe installations in walls, pipe chases, utility spaces, above ceilings, below grade or floors, unless indicated to be exposed to view.
- F. Install horizontal piping as high as possible allowing for proper slope and coordination with other components. Install vertical piping tight to columns or walls. Provide space to permit insulation

applications, with 1-inch clearance outside the insulation. Allow sufficient space above removable ceiling panels to allow for panel removal.

- G. Locate groups of pipes parallel to each other, spaced to permit applying full insulation and servicing of valves.
- H. Install drains at low points in mains, risers, and branch lines consisting of a tee fitting, 3/4-inch ball valve, and short 3/4-inch threaded nipple and cap.
- I. Fire Barrier Penetrations: Where pipes pass through fire-rated walls, partitions, ceilings, and floors, maintain the fire-rated integrity. Refer to Division 22 Section "Common Work Results for Plumbing" for special sealers and materials.
- J. Exterior Wall Penetrations: Seal pipe penetrations through exterior wall constructions with sleeves packing, and sealant. Refer to Division 22 Section "Basic Piping Materials and Methods" for additional information.
- K. Underground Exterior Wall Penetrations: Seal pipe penetrations through underground exterior walls with sleeves and mechanical sleeve seals. Refer to Division 22 Section "Basic Piping Materials and Methods" for additional information.
- L. Elevated Floor Penetrations of Waterproof Membrane, Interior Penetrations of Non-Fire Rated Walls and Concrete Slab on Grade Penetrations: Provide sleeves and seal pipes that pass through waterproof floors, non-fire rated walls, partitions and ceilings or concrete slab on grade. Refer to Division 22 Section "Basic Piping Materials and Methods" for special sealers and materials.

3.6 HANGERS AND SUPPORTS

- A. General: Hanger, support, insulation protection shield and anchor components and installation procedures conforming to MSS SP-58 and SP-69 are specified in Division 22 Section "Hangers and Supports for Plumbing Piping". Conform to the table below for maximum spacing of supports.
- B. Pipe Attachments: Install the following:
 - 1. Adjustable steel clevis hangers, MSS SP-69 Type 1, for individual horizontal runs.
 - 2. Riser clamps, MSS SP-69 Type 8, for individual vertical runs. Provide copper coated riser clamps when in contact with copper tube.
 - 3. Insulation protection shields and high density insulation at each hanger for insulated pipe as specified in Division 22 Sections "Supports and Anchors" and "Plumbing Insulation".
 - 4. Copper coated extension split ring pipe clamp, MSS SP-69 Type 12, for individual vertical exposed runs of copper tube 2" and smaller on walls and for securing 1-1/4" to 2" copper tube inside walls and chases for battery fixtures. Secure clamp to the copper tube.
 - a. Seal each joint with insulation and split ring pipe to maintain the insulation barrier. Refer to Section "Plumbing Insulation" for requirement for maintenance of the vapor barrier and vapor barrier seal method.
 - 5. Extension split ring pipe clamp, MSS SP-69 Type 12, for individual vertical exposed runs of stainless steel tube 2" and smaller on walls or for securing tube inside walls for connection to faucets.
 - 6. Support copper tube in chases and walls at plumbing fixtures with plastic or copper brackets secured to structure and U-bolts sized to bare on the pipe.
 - 7. Engineered strut support system may be provided, at the contractor's option, in lieu of individual hangers for horizontal pipes as specified in Division 22 "Hangers and Supports for Plumbing Piping". Provide two piece straps for uninsulated pipe secured to the bare pipe and provide plastic galvanic isolators for bare copper tube. Provide two piece straps and 360° insulation protection shields sized for the insulation thickness used for the pipe for all insulated pipes.
 - 8. Secure copper tube rough-in for individual fixtures with sheet stud brackets attached to the wall studs or pipe mounting brackets attached to the fixture waste & vent pipe at each plumbing fixture.

9. Secure 1" and smaller copper water tubing in stud walls at stud penetrations with tube suspension clamps.
 - a. Cut hole through non-supporting studs with a minimum 1/8" clearance around each uninsulated copper tube or insulated copper tube.
 - b. Seal each joint of insulation and tube suspension clamp to maintain the insulation barrier. Refer to Division 22 "Plumbing Insulation" for requirement for maintenance of the vapor barrier similar to insulation butted against insulation inserts and vapor barrier seal method.
 10. Provide roll hangers for individual horizontal runs 100 feet or longer.
- C. Install hangers with maximum horizontal spacing and minimum rod diameters, to comply with MSS-58, locally enforced codes, this specification, and authorities having jurisdiction requirements, whichever are most stringent. Install hangers for horizontal piping with the following maximum spacing and minimum rod diameters:

<u>Nom. Pipe Size - In.</u>	<u>Steel Pipe Max. Span - Ft.</u>	<u>Copper Tube Max. Span - Ft.</u>	<u>Min. Rod Dia. - In.</u>
Up to 1-1/4	12	6	3/8
1-1/2 to 2	12	10	3/8
2-1/2 to 4	12	10	3/8

1. Support vertical steel pipe at each floor and in intervals not to exceed 15 feet.
 2. Support vertical copper tube at each floor and in intervals not to exceed 10 feet.
- D. Support water piping within 12" of each elbow or tee and for water piping 2-1/2" and larger at each valve or strainer.
- E. Support water piping above the floor with pipe supports attached to the floor with anchor bolts where indicated on the drawings. Conform to the table above for maximum spacing of supports.

3.7 PIPE AND TUBE JOINT CONSTRUCTION

- A. Soldered Joints: Comply with the procedures contained in the AWS "Soldering Manual."
- B. Brazed Joints: Comply with the procedures contained in the AWS "Brazing Manual."
1. CAUTION: Remove stems, seats, and packing of valves and accessible internal parts of piping specialties before soldering and brazing.
 2. Fill the tubing and fittings during brazing with an inert gas (nitrogen or carbon dioxide) to prevent formation of scale.
 3. Heat joints to proper and uniform temperature.
- C. Threaded Joints: Conform to ASME B1.20.1, tapered pipe threads for field-cut threads. Join pipe fittings and valves as follows:
1. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
 2. Align threads at point of assembly.
 3. Apply appropriate tape or thread compound to the external pipe threads (except where dry seal threading is specified).
 4. Assemble joint wrench tight. Wrench on valve shall be on the valve end into which the pipe is being threaded.
 - a. Damaged Threads: Do not use pipe with corroded or damaged threads. If a weld opens during cutting or threading operations, that portion of pipe shall not be used.

- D. Flanged Joints: Align flange surfaces parallel. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly with a torque wrench.
- E. Joints Containing Dissimilar Metals: Provide dielectric unions for 2" and smaller and dielectric flanges for piping 2-1/2" and larger. Provide dielectric waterway fittings for 2" and smaller in concealed locations. Dielectric unions, waterway fittings and flanges are specified in Section "Basic Piping Materials and Methods".
- F. Joints at Valve Assemblies or Connections to Equipment: Provide unions downstream of shutoff valves at valve assemblies or equipment connections. Unions are not required at flanged connections. Unions are specified in Division 22 section "Basic Piping Materials and Methods".

3.8 VALVE APPLICATIONS

- A. General-Duty Valve Applications: The Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
 1. Shut-off duty: Use gate, ball, and butterfly valves.
 2. Throttling duty: Use globe, ball, and butterfly valves.

3.9 INSTALLATION OF VALVES

- A. Sectional Valves: Install sectional valves on each branch and riser, close to main, where branch or riser serves 2 or more plumbing fixtures or equipment connections, and elsewhere as indicated. For sectional valves 2 inches and smaller, use gate or ball valves; for sectional valves 2-1/2 inches and larger, use ball, gate or butterfly valves.
- B. Shutoff Valves: Install shutoff valves on inlet of each plumbing equipment item, on each supply to each plumbing fixture, and elsewhere as indicated. For shutoff valves 2 inches and smaller, use gate or ball valves; for shutoff valves 2-1/2 inches and larger, use ball, gate or butterfly valves.
- C. Drain Valves: Install drain valves on each plumbing equipment item, located to drain equipment completely for service or repair. Install drain valves at the base of each riser, at low points of horizontal runs, and elsewhere as required to drain distribution piping system completely. For drain valves 2 inches and smaller, use gate or ball valves; for drain valves 2-1/2 inches and larger, use ball, gate or butterfly valves.
- D. Check Valves: Install swing check valves on discharge side of each pump and elsewhere as indicated.
- E. Hose Bibbs: Install on exposed piping where indicated with vacuum breaker.
- F. Wall Hydrants: Install where indicated with vacuum breaker.
- G. Emergency Mixing Valves: Install where indicated on the plans with hot and cold water branch lines connecting to the mains without any shutoff valves. No other fixtures shall connect to the branch lines feeding the emergency mixing valve. Install ball valves with locking handles at the emergency mixing valve as indicated on the plans.
- H. Point-of-Use Thermostatic Mixing Valve: Install valve complying with ASSE 1070 on all public lavatories and handwashing sink locations. Install valve to be accessible by maintenance staff. Set temperature limit to 110F for dual temperature faucet or 100F for single temperature faucet."

3.10 INSTALLATION OF FLOW CONTROL VALVES

- A. Install automatic flow control valves in each hot water recirculating loop, and elsewhere as indicated. Install a shutoff valve and strainer upstream and a union, check valve and shutoff valve downstream of each flow control or automatic flow control valve.
- B. Set flow control valve flow rate as follows:
 - 1. Preliminary Procedures For Hot Water Return System Balancing:
 - a. Before operating the system perform these steps:
 - 1) Open valves at recirculation pump and flow control valves to full open position.
 - 2) Remove and clean all strainers.
 - 3) Check recirculation pump rotation.
 - 4) Set water heater temperature as indicated on the drawings.
 - 2. Procedures For Hot Water Return System Balancing
 - a. Refer to the drawings for required flow rate for each flow control valve.
 - b. Provide required instrumentation to obtain proper measurements. Instruments shall be properly maintained and protected against damage.
 - c. Apply instrument as recommended by the manufacturer.
 - d. Take readings with the eye at the level of the indicated value to prevent parallax.
 - e. Mark flow control valve setting with memory stop. Mark with paint or other suitable, permanent identification materials.
 - f. Retest, adjust, and balance systems subsequent to significant system modifications, and resubmit test results.
- C. Reports: Prepare hot water return system balancing reports signed and submit to the Architect upon completion of the project. Include the following information:
 - a. Valve tag number and description of location
 - b. Valve body size
 - c. Differential pressure reading from instrument in psi
 - d. Actual flow rate derived from the manufacturer's charts and tables for the valve size and measured differential pressure.

3.11 TRAP PRIMERS

- A. Install trap primers where indicated and where required by local authorities having jurisdiction.
- B. Connect trap primer supply line to the top of domestic cold water line no larger than 1-1/2" in diameter.
- C. Provide trap primer distribution units for trap primers serving more than one trap.
- D. Install trap primer distribution level to insure even water distribution unit to each circuit.
- E. Where applicable, adjust the trap primer for proper flow.
- F. Install trap primers a minimum of 12 inches above finished floor for every 20 feet of horizontal outlet piping to floor drains served.
- G. Install trap primers in an accessible location.
- H. Refer to Division 22 Section "Sanitary Drainage and Vent Piping and Specialties" for trap primer outlet pipe requirements.

3.12 INSTALLATION OF PIPING SPECIALTIES

- A. Install backflow preventers at each connection to mechanical equipment and systems and in compliance with the plumbing code and authority having jurisdiction. Locate in same room as equipment being connected. Install air gap fitting and pipe relief outlet drain without valves to nearest floor drain.
- B. Install pressure reducing valves with inlet and outlet shutoff valves and balance cock bypass. Install pressure gauge on valve outlet.

3.13 EQUIPMENT CONNECTIONS

- A. Piping Runouts to Fixtures: Provide hot and cold water piping runouts to fixtures of sizes indicated, but in no case smaller than required by plumbing code.

3.14 FIELD QUALITY CONTROL

- A. Inspections: Inspect water distribution piping as follows:
 - 1. Do not enclose, cover, or put into operation water distribution piping system until it has been inspected and approved by the authority having jurisdiction.
 - 2. During the progress of the installation, notify the plumbing official having jurisdiction at least 24 hours prior to the time such inspection must be made. Perform tests specified below in the presence of the plumbing official.
 - a. Rough-in Inspection: Arrange for inspection of the piping system before concealed or closed in after system is roughed in and prior to setting fixtures.
 - b. Final Inspection: Arrange for a final inspection by the plumbing official to observe the tests specified below and to ensure compliance with the requirements of the plumbing code.
 - c. Reinspections: Whenever the plumbing official finds that the piping system will not pass the test or inspection, make the required corrections and arrange for reinspection by the plumbing official.
 - d. Reports: Prepare inspection reports signed by the plumbing official and turn over to the Architect upon completion of the project.
- B. Piping System Test: Test water distribution systems in accordance with the procedures of the authority having jurisdiction, or in the absence of a published procedure, as follows:
 - 1. Test for leaks and defects all new water distribution piping systems and parts of existing systems that have been altered, extended or repaired. If testing is performed in segments, submit a separate report for each test, complete with a diagram of the portion of the system tested.
 - 2. Leave uncovered and unconcealed all new, altered, extended, or replaced water distribution piping until it has been tested and approved. Expose all such work for testing that has been covered or concealed before it has been tested and approved.
 - 3. Cap and subject the piping system to a static water pressure of 50 psig above the operating pressure without exceeding the pressure rating of the piping system materials. Isolate the test source and allow to stand for 4 hours. Leaks and loss in test pressure constitute defects that must be repaired.
 - 4. Repair all leaks and defects with new materials and retest system or portion thereof until satisfactory results are obtained.
 - 5. Reports: Prepare inspection reports and required corrective action signed by the plumbing official and turn over to the Architect upon completion of the project.

3.15 ADJUSTING AND CLEANING

- A. Clean and disinfect water distribution piping as follows:
 - 1. Purge all new water distribution piping systems and parts of existing systems that have been altered, extended, or repaired prior to use.

2. Use the purging and disinfecting procedure proscribed by the authority having jurisdiction or, in case a method is not proscribed by that authority, the procedure described in either AWWA C651, or AWWA C652, or as described below:
 - a. Flush the piping system with clean, potable water until dirty water does not appear at the points of outlet.
 - b. Fill the system or part thereof with a water/chlorine solution containing at least 50 parts per million of chlorine. Isolate (valve off) the system or part thereof and allow to stand for 24 hours.
 - c. Drain the system or part thereof of the previous solution and refill with a water/chlorine solution containing at least 200 parts per million of chlorine and isolate and allow to stand for 3 hours.
 - d. Following the allowed standing time, flush the system with clean, potable water until chlorine residual is lowered to incoming city water level.
 - e. Submit water samples in sterile bottles to the authority having jurisdiction. Repeat the procedure if the biological examination made by the authority shows evidence of contamination.
3. Reports: Prepare disinfection reports signed by the authority having jurisdiction and turn over to the Architect upon completion of the project.

3.16 COMMISSIONING

- A. Fill the system. Check compression tanks to determine that they are not air bound and that the system is completely full of water.
- B. Before operating the system, perform these steps:
 1. Close drain valve, hydrants, and hose bibbs.
 2. Open valves to full open position.
 3. Remove and clean strainers.
 4. Check pumps for proper direction of rotation. Correct improper wiring.
 5. Lubricate pump motors and bearings.

END OF SECTION

SECTION 15412 (221123) - DOMESTIC WATER PUMPS

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes the following types of plumbing pumps:
 - 1. Packaged domestic booster pumps
- B. Related Sections: The following sections contain requirements that relate to this Section:
 - 1. Division 22 Section "Coordination" for basic requirements for electrical components that are an integral part of packaged system components.
 - 2. Division 22 Section, "Basic Piping Materials and Methods" for rubber flexible connectors.
 - 3. Division 22 Section "Vibration Isolation for Plumbing Piping and Equipment" for inertia pads, isolation pads, spring supports, and spring hangers.
 - 4. Division 26 Section "Common Work Results for Electrical" required electrical devices.
 - 5. Division 26 Sections "Enclosed Switches and Circuit Breakers" for field-installed disconnects.

1.2 SUBMITTALS

- A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections.
 - 1. Product data including standard performance curves, weights (shipping, installed, and operating), furnished specialties, and accessories, plus installation and start-up instructions.
 - 2. Shop drawings showing layout and connections for plumbing pumps. Include setting drawings with templates, and directions for installation of foundation bolts, anchor bolts, and other anchorages.
 - 3. Wiring diagrams detailing wiring for power, signal, and control systems; differentiating between manufacturer-installed wiring and field-installed wiring.
 - 4. Maintenance data for plumbing pumps, for inclusion in Operating and Maintenance Manuals specified in Division 1 and Division 22 Section "General Plumbing Requirements."
 - 5. Submit certification that pumps, valves, fittings and specialties comply with NSF 61 Annex G.

1.3 QUALITY ASSURANCE

- A. Hydraulic Institute Compliance: Design, manufacture, and install plumbing pumps in accordance with "Hydraulic Institute Standards."
- B. National Electrical Code Compliance: Components shall comply with NFPA 70 "National Electrical Code."
- C. UL Compliance: Plumbing pumps shall be listed and labeled by UL and comply UL Standard 778 "Motor Operated Water Pumps."
- D. UL Compliance: Control panels shall be listed and labeled by UL and comply with Standard 508A "Control Panels".
- E. NEMA Compliance: Electric motors and components shall be listed and labeled NEMA.
- F. Single-Source Responsibility: Obtain plumbing pumps of the same type from a single manufacturer.
- G. Design Criteria: The Drawings indicate sizes, profiles, connections, and dimensional requirements of plumbing pumps and are based on the specific manufacturer types and models indicated. Pumps having equal performance characteristics by other manufacturers may be considered, provided that deviations in

dimensions and profiles do not change the design concept or intended performance as judged by the Architect. The burden of proof for equality of plumbing pumps is on the proposer.

- H. Comply with NSF 61 Annex G (pending) for wetted surfaces of valves, fittings and specialties containing no more than 0.25% lead by weight compliance for valves for domestic water service.
- I. Valves, pumps and fittings shall be manufactured in plants located in the United States or certified that they comply with applicable ANSI, ASTM and MSS standards.

1.4 SPARE PARTS

- A. Furnish spare parts described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Mechanical Seals: One mechanical seal for each pump.

1.5 WARRANTY

- A. Warranty on Pumps: Provide written warranty, signed by manufacturer, agreeing to replace/repair, within warranty period, pumps with inadequate or defective materials and workmanship, including leakage, breakage, improper assembly, or failure to perform as required; provided manufacturer's instructions for handling, installing, protecting, and maintaining units have been adhered to during warranty period. Replacement includes both parts and labor for removal and reinstallation.
 - 1. Warranty Period: One year from date of substantial completion.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide one of the following:
 - 1. Packaged Domestic Booster Pumps – Variable Speed Multistage
 - a. Armstrong
 - b. Bell & Gossett, ITT
 - c. Canariss Corp.
 - d. Delta P Carver
 - e. Grundfos Pumps, Corp.
 - f. QuantumFlo, Inc.
 - 2. Aquastats:
 - a. Dayton
 - b. Honeywell
 - c. Penn
 - d. White-Rodgers

2.2 PUMPS, GENERAL

- A. Pumps and circulators: factory assembled and factory tested.
- B. Preparation for shipping: After assembly and testing, clean flanges and exposed machined metal surfaces and treat with an anticorrosion compound. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.
- C. Motors: Conform to NEMA standards; single, multiple, or variable speed with type of enclosure and electrical characteristics as indicated; have built-in thermal-overload protection and grease-lubricated ball bearings. Select motors that are nonoverloading within the full range of the pump performance curve.

- D. Apply factory finish paint to assembled, tested units prior to shipping.

2.3 PACKAGED DOMESTIC BOOSTER PUMPS – VARIABLE SPEED MULTISTAGE

- A. Packaged, constant pressure type with triplex vertical multiple stage centrifugal pumps, control panel, motors, variable frequency drives, gauges, ball type isolation valves, dielectric isolators, remote accumulator tank, thermal bleed aquastat and solenoid valve and accessories. The packaged system, including all items listed below, shall be factory assembled on a fabricated steel base plate with structural steel framework. The completed package shall be factory tested, adjusted and certified for the specified flow conditions, and shipped as an integral unit ready for plumbing and electrical connections.
- B. Pumps: Provide multiple stage vertical multiple stage centrifugal type with close-coupled motors, cast iron suction / discharge chamber, motor stool and pump shaft couplings, mechanical seals, 304 stainless steel and impellers, chambers, straps, suction interconnector and neck rings, 431 stainless steel pump shaft and 316 stainless steel bearings, neck rings retainers, split cones, split cone nuts, wear and lock rings.
- C. Motors: Provide variable speed, totally enclosed fan cooled type, operate at 3500 rpm and shall not overload at any point of the pump curve.
- D. Piping: Suction and discharge headers shall be 316 stainless steel with ANSI class 150 pressure rating and flanges welded to the headers. Peak velocity in headers shall not exceed 8 feet per second. Furnish with the following valves:
 - a. Lead Free Ball Valves, 2 Inch and Smaller: Meeting MSS SP-110, Class150, 600-psi CWP; two-piece construction; with ASTM B 584 cast lead free bronze, full port, blowout-proof stem and chrome-plated lead free brass ball, with replaceable "Teflon" or "TFE" seats and seals, solder ends and vinyl-covered steel handle.
 - b. Lead Free Lift Check Valves, 2-Inch and Smaller: Meeting MSS SP-80; Class 125, 300-psi CWP, body, disc holder and cap of ASTM B 584 cast lead free bronze; horizontal or angle pattern, lift-type valve, with stainless steel spring, renewable "Teflon" disc and solder ends. Provide valves capable of being refitted and ground while the valve remains in the line.
 - c. Butterfly Valves, 2-1/2-Inch and Larger: MSS SP-67; 200-psi CWP; lug-type body constructed of cast-iron conforming to ASTM A 126, Class B or ductile iron conforming to ASTM A 536. Provide valves with field replaceable EPDM sleeve/seat, aluminum-bronze disc, 416 stainless steel stem, and EPDM O-ring stem seals. Provide lever operators, (10 position minimum), with lock and stops with locks for sizes 2-1/2 through 6 inches and gear operators with position indicator for sizes 8 inch and larger. Drill and tap valves on dead-end service or requiring additional body strength. Valves must be rated for dead end service at 150 psi with no downstream flange required.
 - d. Cast Iron Body Ball Valves, 2-1/2" and larger: 200 CWP, maximum operating temperature of 140F; two piece cast iron body meeting ASTM A126 Class B with flanged ends, 304 stainless steel full port ball and shaft, ductile iron handle, PTFE gasket, stem seal and seat.
 - e. Wafer Check Valves: Class 150, stainless steel body; with replaceable stainless steel seat, and non-slam design lapped and balanced twin stainless steel flappers and stainless steel trim and torsion spring. Provide valves designed to open and close at approximately one foot differential pressure.
- E. Accumulator Tank: Provide tank size as scheduled on the drawings with a minimum pressure rating of 125psig; FDA approved elastomer bladder, tank bottom connection and air charge valve. Tank shall be complete with check valves, isolation valves and pressure reducing valve for remote installation.
- F. Controls and Instruments: Control panel shall be mounted on the pump package and shall include a NEMA 1 enclosure, through door fusible disconnect, disconnect for each pump, overload relays and indicator lights, 120V control circuit transformer with primary and secondary fuse protection, low suction pressure limit switch, suction and discharge header pressure sensors, programmable logic controller and variable speed drives. Touchscreen operator interface for monitoring and adjustment of the programmable

controller variables with virtual on-off-automatic selector switch for each pump, low pressure alarm, high system pressure alarm, pump running indicators and hour meter for each pump. Controls shall be arranged for termination of 1 incoming power feeder. Control panel shall have a unit short circuit current rating equal to or greater than the available short circuit current as indicated on the electrical drawings.

1. Programmable Logic Controller (PLC): Designed specifically for the control of pumps with variable speed drives capable of receiving two analog pressure inputs, analog flow input, automatic pump alternating and On-line field modified data entries for staging pumps, with software memory stored in non-volatile EPROM memory, furnish with user interface keypad with LED display.
2. Variable Frequency Drive: The variable speed drives (VFD) shall be adjustable frequency type which employs a pulse width modulated inverter. The drive shall include built in diagnostics. Diagnostics shall be annunciated through the alpha numeric keypad. The drive shall be listed UL, ETL and/or CSA. To insure safety of the equipment, the VFD shall include these protective features and options:
 - a. NEMA 1 enclosure.
 - b. Static instantaneous over-current and over-voltage trip.
 - c. Static over-speed (over-frequency) protection.
 - d. Line or fuse loss and under-voltage protection.
 - e. Power unit over-temperature protection.
 - f. Motor inverse time overload protection.
 - g. Input fused disconnect or circuit breaker.
 - h. Total voltage harmonic distortion from the VFD shall be less than 5% to meet IEEE requirements.
 - i. Speed meter.
 - j. Automatic restart after power failure or minor drive fault. The drive shall attempt a minimum of two restarts before a complete drive shut-down.
 - k. Power on light.
 - l. Manual speed potentiometer or control capability through the keypad.
 - m. Hand/Off/Automatic Switch or Manual/Automatic Switch with start/stop pushbutton.
 - n. Test switch
 - o. VFD fault light and reset.
 - p. Output to the PLC and integral LED display
 - q. The VFD shall be microprocessor based and utilize digital input for all parameter adjustments. The VFD shall include a digital display for monitoring system parameters and for first fault indication, and digital input programming capability on the main logic board.
 - r. The VFD shall operate on a frequency range of 1 to 66 Hz with resolution of 0.1% of base speed with analog input or 0.025% with digital input and have accuracy within 0.05% of set point. VFD shall operate in environment of 0 to 40 degrees C, 3,300 feet altitude and 95% non-condensing humidity without derating.
 - s. All control circuit voltages shall be physically and electrically isolated from power circuit voltages.
 - t. All VFD's shall be tested/run in the equivalent of NEMA 1 enclosure and burned in at rated ambient (40° C) with a fully loaded motor.
 - u. Configured for mounting on top of motor or outside of control panel.
3. Pressure Sensors: NEMA 4 water tight enclosure with pressure rating of 2,000psi, stainless steel wetted parts, 0.25" male NPT connection, calibration from 0 to 150 psi with 4-20mA DC signal at 24 VDC. Refer to the floor plans for location of remote pressure sensor.
4. Sequence of Operation: The domestic water booster pump shall be in automatic mode per the design conditions shown on the booster pump schedule. The pump shall modulate its speed to maintain the discharge head pressure setpoint, as determined by the internal control algorithm, simulating the performance of a system utilizing a remote differential pressure sensor. The pumps shall run in a lead/lag operation based on user defined run-time setpoint. When the flow capacity of the lead pump is exceeded, the lag pump shall start after an adjustable time delay. If the capacity of the lead pump and lag pump is exceeded, the second lag pump (and the N+1 sequencing shall continue based on the number of pumps in the system) shall start.
 - a. When a single pump operates at minimum flow rate, the pump speed shall be reduced to the minimum discharge header pressure as scheduled. When required flow increases, the pump

- speed shall increase linearly to the discharge pressure as scheduled at full flow, simulating the performance of a system utilizing a remote differential pressure sensor.
 - b. When the lead pump is stopped because of required zero flow, the pump speed shall increase linearly to the discharge pressure as scheduled to charge the tank, then stop.
- 5. Safeties:
 - a. Low Suction Pressure
 - 1) When the suction pressure drops below the low suction pressure alarm point as determined by the integral suction pressure sensor, the pumps shall be disabled and an audible alarm shall be sent to the BMS or local building alarm system.
 - b. High Discharge Pressure
 - 1) When the discharge pressure rises above the high discharge pressure alarm point as determined by the integral discharge pressure sensor, the pumps shall be disabled and an audible alarm shall be sent to the BMS or local building alarm system
 - c. High Flow Shutdown
 - 1) When the discharge flow, as calculated by the control system, rises above the high flow alarm point, the pumps shall be disabled and an audible alarm shall be sent to the BMS or local building alarm system.
- 6. Control Wire: Domestic booster pump manufacturer shall furnish the appropriate type and amount of wire for interlock of the remote sensors with the domestic booster pump control panel.
- G. Startup Services: Domestic booster pump manufacturer shall provide factory start-up and check out of the booster pump. The Contractor shall provide the Owner's Representative with certification of proper installation and system operation.

2.4 AQUASTATS:

- A. Remote sensing bulb type, non-modulating, single pole double pole throw with surface mount sensing bulb and mounting bracket, adjustable direct reading scale for set point with adjustable differential.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install pumps in accordance with manufacturer's installation instructions.
- B. General: Comply with the manufacturer's written installation and alignment instructions.
- C. Install pumps in locations and arrange to provide access for periodic maintenance, including removal of motors, impellers, couplings, and accessories.
- D. Support pumps and piping separately so that the weight of the piping system does not rest on the pump.
- E. Suspend inline pumps with althread hanger rod and vibration isolation hangers of sufficient size to support the weight of the pump independent from the piping system.

3.2 EXAMINATION

- A. Examine areas, equipment foundations, and conditions with Installer present, for compliance with requirements for installation and other conditions affecting performance of plumbing pumps. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Examine rough-in for plumbing piping systems to verify actual locations of piping connections prior to installation.

3.3 CONCRETE EQUIPMENT BASES

- A. Refer to Division 22 Section “Basic Mechanical Materials and Methods” for concrete equipment bases.
 - 1. Form concrete equipment bases by using framing lumber with form release compounds. Chamfer top edge and corners of pad.
 - 2. Install reinforcing bars, tied to frame, and place anchor bolts and sleeves using manufacturer's installation template.
 - 3. Place concrete and allow to cure before installation of pumps.

3.4 ALIGNMENT

- A. Align pump and motor shafts and piping connections after setting on foundations, after grout has been set and foundations bolts have been tightened, and after piping connections have been made.
 - 1. Adjust alignment of pump and motor shafts for angular and parallel alignment by one of the two methods specified in the Hydraulic Institute "Centrifugal Pumps - Instructions for Installation, Operation and Maintenance."
- B. After alignment is correct, tighten the foundation bolts evenly but not too firmly. Fill the base plate completely with nonshrink, nonmetallic grout, with metal blocks and shims or wedges in place. After grout has cured, fully tighten foundation bolts.
 - 1. Alignment tolerances shall meet manufacturers recommendations.

3.5 CONNECTIONS

- A. General: Install valves that are same size as the piping connecting the pump.
- B. Install suction and discharge pipe sizes equal to or greater than the diameter of the pump nozzles.
- C. Install a nonslam check valve and shutoff valve on the discharge side of pumps.
- D. Install a gate valve and strainer on the suction side of inline pumps.
- E. Install pressure gauges on the suction and discharge of each pump at the integral pressure gauge tapings provided.
- F. Install pressure gauge connector plugs in suction and discharge piping around pump. Pressure gauge connector plugs are specified in Division 22 Section "Meters and Gauges for Plumbing Piping."
- G. Install surface mounted aquastat on bare metal pipe, fastened securely to pipe upstream of circulator pump when indicated on the drawings.
- H. Interlock aquastat and or timer with hot water recirculation pump motor. Electrical wiring and connections are specified in Division 26 section “Common Work Results for Electrical”.
- I. Electrical wiring and connections are specified in Division 26 section “Common Work Results for Electrical”.
- J. Install domestic booster pump remote sensors as recommended by the manufacturer. Coordinate interlock of the sensors and domestic booster pump. Install control wire furnished with the domestic booster pump for interlock with the sensors. Electrical wiring and connections are specified in Division 26 section “Common Work Results for Electrical”.
- K. Install flexible connectors at the header inlet and outlet of domestic booster pump, refer to Division 22 Section “Basic piping Materials and Methods”.

- L. Provide equipment pad and vibration isolators, refer to Division 22 Section “Vibration Isolation for Plumbing Piping and Equipment”.
 1. Extend equipment pads to 2” beyond elbows, shutoff valves and flexible connectors. Anchor elbows and shutoff valves to equipment pad.
 2. Extend equipment pad to 2” beyond base elbows. Anchor elbows to equipment pad. Install flexible connectors and shutoff valves in the vertical. Anchor shutoff valves to the structure.
- M. Provide concrete inertia base and vibration isolators, refer to Division 22 Section “Vibration Isolation for Plumbing Piping and Equipment”.
 1. Provide an equipment pad, separate from the inertia pad, to 2” beyond elbows, shutoff valves and flexible connectors. Anchor base elbows and shutoff valves to equipment pad.
 2. Provide an equipment pad, separate from the inertia pad, to 2” beyond elbows. Anchor elbows to equipment pad. Install flexible connectors and shutoff valves in the vertical. Anchor shutoff valve to the structure.
- N. Coordinate interlock of high flow rate, low suction pressure and high discharge pressure level alarms with the building automation system. Alarm wiring and alarm interlock with the building automation system are specified in Division 23 Section “Direct-Digital Control for HVAC”.

3.6 FIELD QUALITY CONTROL

- A. Check suction lines connections for tightness to avoid drawing air into the pump.

3.7 STARTUP

- A. Final Checks Before Start-Up: Perform the following preventative maintenance operations and checks before start-up:
 1. Lubricate oil-lubricated bearings.
 2. Remove grease-lubricated bearing covers and flush the bearings with kerosene and thoroughly clean. Fill with new lubricant in accordance with the manufacturer's recommendations.
 3. Disconnect coupling and check motor for proper rotation. Rotation shall match direction of rotation marked on pump casing.
 4. Check that pump is free to rotate by hand. For pumps handling hot liquids, pump shall be free to rotate with the pump hot and cold. If the pump is bound or even drags slightly, do not operate the pump until the cause of the trouble is determined and corrected.
- B. Starting procedure for pumps with shutoff power not exceeding the safe motor power:
 1. Prime the pump, opening the suction valve, closing the drains, and prepare the pump for operation.
 2. Open the valve in the cooling water supply to the bearings where applicable.
 3. Open the sealing liquid supply valve if the pump is so fitted.
 4. Open the warm-up valve of a pump handling hot liquids if the pump is not normally kept at operating temperature.
 5. Open the recirculating line valve if the pump should not be operated against dead shutoff.
 6. Start motor.
 7. Open the discharge valve slowly.
 8. Observe the leakage from the stuffing boxes and adjust the sealing liquid valve for proper flow to ensure the lubrication of the packing. Do not tighten the gland immediately, but let the packing run in before reducing the leakage through the stuffing boxes.
 9. Check the general mechanical operation of the pump and motor.
 10. Close the recirculating line valve once there is sufficient flow through the pump to prevent overheating.
- C. If the pump is to be started against a closed check valve with the discharge gate valve open, the steps are the same except that the discharge gate valve is opened some time before the motor is started.

D. Start Up Services for Booster Pump:

1. Certification: Prepare certificates for factory compliance of the installation and completion of factory training signed by the factory-authorized service representative and turn over to the Architect upon completion of the project.

END OF SECTION

SECTION 15420 (221300) - SANITARY DRAINAGE AND VENT PIPING AND SPECIALTIES

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes building sanitary drainage and vent piping systems, including drains and drainage specialties.
- B. Related Sections: The following sections contain requirements that relate to this Section:
 - 1. Division 22 Section "General Plumbing Requirements," for trenching and backfilling materials and methods for underground piping installations.
 - 2. Division 22 Section "Plumbing Identification," for labeling and identification of drainage and vent piping.
 - 3. Division 22 Section "Common Work Results for Plumbing," for materials and methods for fire barrier penetrations, wall and floor penetrations and equipment pads
 - 4. Division 22 Section "Basic Piping Material and Methods," for materials and methods for mechanical sleeve seals.
 - 5. Division 22 Section "Hangers and Supports for Plumbing Piping," for materials and methods for hanging and supporting drainage and vent piping.
 - 6. Division 22 Section "Plumbing Insulation," for materials and methods for insulating drainage piping.
 - 7. Division 22 Section "Water Distribution Piping and Specialties," for material and methods for trap primers and trap primer inlet piping.
 - 8. Division 22 Section "Condensate Pumps for HVAC Equipment," for material and methods for condensate pumps.

1.2 DEFINITIONS

- A. Sanitary Building Drain: That part of the lowest piping of a drainage system which receives the discharge from soil, waste, and other drainage pipes inside the walls of the building and conveys it to the building sewer.
- B. Sanitary Building Sewer: That part of the drainage system which extends from the end of the building drain and conveys its discharge to a public sewer, private sewer, individual sewage disposal system, or other point of disposal.
- C. Drainage System: Includes all the piping within a public or private premises which conveys sewage or other liquid wastes to a point of disposal. It does not include the mains of public sewer systems or a private or public sewage treatment or disposal plant.
- D. Vent System: A pipe or pipes installed to provide a flow of air to or from a drainage system, or to provide a circulation of air within such system to protect trap seals from siphonage and back pressure.

1.3 SUBMITTALS

- A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specifications Sections.
- B. Product data for the following products:
 - 1. Drainage piping
 - 2. Drainage piping specialties

3. Floor drains
4. Interceptors

C. Test reports specified in Part 3 of this Section.

1.4 QUALITY ASSURANCE

- A. Comply with the installation requirements for CPVC pipe and CPVC CTS tube per the Lubrizol “FlowGuard Gold and CORZAN Design and Installation Manual” and the installed manufacturer’s installation manual.
- B. Regulatory Requirements: Comply with the provisions of the following codes:
 1. 2019 California Building Code
 2. 2019 California Plumbing Code

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Drainage Piping Specialties, including backwater valves, expansion joints, cleanouts, floor drains, cast-iron trench drains and vandal-proof vent caps:
 - a. Jay R. Smith Mfg. Co.
 - b. Josam Mfg. Co.
 - c. Mifab Manufacturing Co.
 - d. Sioux Chief Manufacturing Co. Inc.
 - e. Tyler Pipe/Wade Div.; Subs. of Tyler Corp.
 - f. Watts Industries, Inc.
 - g. Zurn Industries, Inc.; Hydromechanics Div.
 2. Freeze-proof vent caps:
 - a. F.J. Moore Mfg. Co.
 3. Heavy Duty Hubless Couplings
 - a. Anaco Husky HD-2000
 - b. Clamp-All 80in. lb.
 - c. Ideal Tridon “HD”
 - d. Mission Rubber Company, “Heavy Weight”
 - e. ProFlo “HD”
 4. Cast Iron Soil Pipe and Fittings
 - a. AB & I Foundry
 - b. Charlotte Pipe and Foundry Company
 - c. Tyler Pipe / Soil Pipe Division
 5. Shielded Transition Couplings
 - a. FERNCO, “Proflex 3000 Series”
 - b. Mission Rubber Company, “Band Seal Specialty Couplings”
 6. Underground Shielded Adapter Couplings
 - a. FERNCO, “1056 Series with SR73 Shear Ring”
 - b. Mission Rubber Company, “MR56 Series”
 7. Trap Seals
 - a. Green Drain, Inc.
 - b. Jay R. Smith Mfg. Co.
 - c. Mifab Manufacturing, Inc.
 - d. Proset Systems “Trap Guard”
 - e. Rector Seal, Inc.
 - f. Zurn Industries, Inc.; Hydromechanics Div.

8. Hubless Couplings:
 - a. Anaco
 - b. Ideal Tridon
 - c. Mission Rubber Company
 - d. ProFlo "PFNH"
 - e. Tyler Pipe / Soil Pipe Division
9. Plastic Gravity Sand/Oil Separators
 - a. Green Turtle, Inc.
 - b. Mifab Manufacturing, Inc.
 - c. Striem
 - d. Xerxes Corp.
10. PVC DWV Expansion Joints
 - a. Charlotte Pipe and Foundry Company #133
 - b. Spears Manufacturing Company #S119
11. Heavy Duty Hubless Couplings for Below Slab
 - a. Anaco Husky HD-4000
 - b. Clamp-All 125in. lb.
12. "Flowguard Gold" CPVC Water Distribution Tube and Fittings
 - a. Bow Industrial Corp.
 - b. Cresline Plastics Co., Inc. (pipe only)
 - c. Genova Products, Inc.
 - d. NIBCO Inc. (fittings only)

2.2 ABOVE GROUND DRAINAGE AND VENT PIPE AND FITTINGS

- A. Cast-Iron Soil Pipe: CISPI 301 and ASTM A888, no-hub pipe and fittings and bearing the trademark of CISPI and NSF.
 1. Couplings and compression gaskets, NSF certified: ASTM C564 and CISPI 310.
 2. Heavy duty couplings and compression gaskets: ASTM C1540 and meeting FM 1680.
- B. Copper Tube: ASTM B306, Type DWV, hard drawn for pipe, and cast copper alloy solder joint drainage fittings (DWV) meeting ASME / ANSI B16.23.
 1. Solder Filler Materials: ASTM B32, 95-5 tin-antimony solder.
- C. Copper Tube: ASTM B88, Type M, hard drawn for pipe and wrought copper fittings with soldered joints.
 1. Solder Filler Materials: ASTM B32, 95-5 tin-antimony solder.
- D. PVC DWV Pipe and Fittings: Schedule 40 pipe meeting ASTM D1785 and ASTM D2665 with "solid wall" PVC meeting ASTM D1784 with cell class 12454-B.
 1. Fittings: DWV pattern meeting ASTM D2665 with solvent cement socket joints.
 2. Solvent: ASTM D2564.
- E. PVC Pressure Pipe and Fittings: Schedule 40 pipe meeting ASTM D1785 with "solid wall" PVC meeting ASTM D1784 with cell class 12454.
 1. Solvent: ASTM D2564.
 2. Fittings: Schedule 40 meeting ASTM D2467 with solvent cement socket joints.
- F. "Flowguard Gold" CPVC Water Distribution Tube (1/2" to 2"): ASTM D2846, Copper Tube Size (CTS), pipe with a cell class of 24448 as identified in ASTM 1784. NSF 14 certified and NSF 61 listed. Meeting ASTM E84 for 25 / 50 flame / smoke rating.
 1. Solvent Cements for Joining CPVC Piping and Tubing: ASTM F493.
- G. Shielded Transition Couplings: ASTM C1460 with neoprene adapter gasket with stainless steel Shield and hose clamps.

2.3 UNDERGROUND BUILDING DRAIN AND VENT PIPE AND FITTINGS

- A. Cast-Iron Soil Pipe: ASTM A74, Service weight, hub-and-spigot soil pipe and fittings. Pipe and fittings shall have a heavy coating of coal tar varnish or asphaltum on both inside and outside surfaces and bearing the trademark of CISPI and NSF.
 - 1. Neoprene Compression Gaskets: ASTM C564.
- B. Cast-Iron Soil Pipe: CISPI 301 and ASTM A888, hubless pipe and fittings and bearing the trademark of CISPI and NSF.
 - 1. Heavy-Duty couplings and compression gaskets: ASTM C564, ASTM C1540 and FM 1680.
- C. PVC DWV Pipe and Fittings: Schedule 40 pipe meeting ASTM D1785 and ASTM D2665 with “solid wall” PVC meeting ASTM D1784 with cell class 12454-B.
 - 1. Fittings: DWV pattern meeting ASTM D2665 with solvent cement socket joints.
 - 2. Solvent: ASTM D2564.
- D. PVC Pressure Pipe and Fittings: Schedule 40 pipe meeting ASTM D1785 with “solid wall” PVC meeting ASTM D1784 with cell class 12454.
 - 1. Solvent: ASTM D2564.
 - 2. Fittings: Schedule 40 meeting ASTM D2467 with solvent cement socket joints.
- E. Underground Shielded Adapter Couplings: ASTM C1173 with neoprene adapter gasket with stainless steel shield and stainless steel hose clamps.

2.4 DRAINAGE PIPING SPECIALTIES

- A. Cleanout Plugs: As specified on the drawings.
- B. Floor Cleanouts: As specified on the drawings.
- C. Wall Cleanouts: As specified on the drawings.
- D. Floor Drains: As specified on the drawings.
- E. Freeze-Proof Vent Caps: Construct of galvanized iron, copper, or lead-coated copper, sized to provide 1 inch air space between outside of vent pipe and inside of flashing collar extension.
- F. Vandal-Proof Vent Caps: Cast-iron body full size of vent pipe, with caulked type base connection for cast-iron pipes, threaded base for steel pipes.

2.5 PVC DWV EXPANSION JOINTS

- A. Schedule 40 PVC DWV meeting ASTM D2665 with socket connections and telescoping expansion joint with EPDM O-ring seal.

2.6 INTERCEPTORS

- A. Interceptor type designations, flow rates, and capacities are indicated on the drawings.
- B. Gravity Sand/Oil Interceptor: Reinforced precast concrete construction by local manufacturer or a plastic sand/oil interceptor acceptable to the local authorities having jurisdiction.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Install pipe and specialties in accordance with manufacturer's installation instructions.

3.2 PREPARATION FOUNDATION FOR UNDERGROUND SANITARY BUILDING DRAINS

A. Pipe Beds:

1. PVC and ABS Pipe: Support pipe in trench with sand bags level and true to prevent sand, gravel or debris from interfering with the solvent cement process. After pressure testing is complete, gradually install bedding to maintain continuous pipe slope and prevent pipe deflection and then install subbase. Refer to Section "General Plumbing Requirements" for bedding and subbase materials, excavation, trenching, backfill and compaction requirements and refer to ASTM D2321 "Underground Installation of Thermoplastic Pipe for Sewers and Gravity-flow Applications" for additional requirements.
2. Cast Iron Soil Pipe: Shape bottom of trench to fit bottom of pipe for 90-degrees (bottom 1/4 of the circumference). Fill unevenness with tamped sand bedding. At each pipe joint dig bell holes to relieve the bell of the pipe of all loads, and to ensure continuous bearing of the pipe barrel on the foundation and maintain continuous pipe slope. For piping with rock trench bottoms, provide sand pipe bed 6" underneath and around sides of pipe, including fittings. After pressure testing is complete, install subbase. Refer to Section "General Plumbing Requirements" for bedding and subbase materials, excavation, trenching, backfill and compaction requirements.

3.3 PIPE APPLICATIONS - ABOVE GROUND, WITHIN BUILDING

- A. Install hubless, cast-iron soil pipe and fittings for 15" and smaller soil, waste, and vent pipe.
- B. Install Type DWV copper tube with cast copper alloy solder joint drainage fittings (DWV) fittings, copper sweat X screwed with solder joints, for waste connections from urinals, lavatories, sinks, water coolers, and kitchen equipment to cast iron drainage piping.
- C. Install Type M copper tube with wrought copper fittings with solder joints, 1" and smaller, with 3/4" minimum size and install Type DWV copper tube with cast copper alloy solder joint drainage fittings (DWV) fittings for 1-1/4" and larger for waste connections from kitchen equipment and terminate over floor receptors with air gap.
- D. Condensate drain piping and pumped condensate drain piping inside the building: Provide 3/4" minimum size or as indicated on the drawings. Slope gravity drainage condensate piping from mechanical equipment at 1/8" per foot minimum slope. Discharge to floor receptor with air gap.
 1. Install galvanized schedule 40 steel pipe and malleable iron fittings.
 2. Install Type M copper tube with wrought copper fittings with solder joints, 1" and smaller and install Type DWV copper tube with cast copper alloy solder joint drainage fittings (DWV) fittings for 1-1/4" and larger. Provide galvanic isolators as specified in Division 22 "Basic Piping Materials and Methods".
 3. Install PVC pressure pipe and fittings for 1" and smaller and install "solid wall" PVC Type DWV pipe and fittings for 1-1/4" and larger. Except no plastic pipe shall be installed in return air plenums.
 4. Install CPVC CTS pipe and fittings, 2" and smaller.
- E. Condensate drain piping outside the building: Provide 3/4" minimum size or as indicated on the drawings. Slope condensate piping at 1/8" per foot minimum slope to discharge point. Discharge to roof receptors or roof drains with air gap.
 1. Install galvanized schedule 40 steel pipe and malleable iron fittings.

2. Install Type M copper tube with wrought copper fittings with solder joints, 1" and smaller, and install Type DWV copper tube with cast copper alloy solder joint drainage fittings (DWV) fittings for 1-1/4" and larger. Provide galvanic isolators as specified in Division 22 "Basic Piping Material and Methods".
 3. Install PVC pressure pipe and fittings for 1" and smaller and install "solid wall" PVC Type DWV pipe and fittings for 1-1/4" and larger.
- F. Install PVC Type DWV Plastic pipe and fittings for drainage and vent pipe, except install no plastic pipe in return air plenums.
 - G. Install PVC pressure pipe and fittings for sump pump discharge, except install no plastic pipe in return air plenums.
 - H. Install type "L" copper tube with wrought copper fittings with solder joints for sump pump discharge pipe.
 - I. Install 1/2" type L copper tube for trap primer outlet piping.

3.4 PIPE APPLICATIONS - BELOW GROUND, WITHIN BUILDING

- A. Install hub-and-spigot, service weight, cast-iron, soil pipe and fittings with gasketed joints for 15 inch and smaller for soil, waste, and vent pipe.
- B. Install hubless, cast-iron soil pipe and fittings 15" and smaller for soil, waste and vent pipe.
- C. Install PVC Type DWV Plastic pipe and fittings for drainage and vent pipe for 24" and smaller. Install fabricated fittings for 16 inch and larger.
- D. Install PVC pressure pipe and fittings for sump pump discharge.
- E. Install type "K" soft copper tube with wrought copper fittings with solder joints for sump pump discharge pipe, 2" and smaller.
- F. Install 1/2" type K soft copper tube for trap primer outlet piping.

3.5 PIPE AND TUBE JOINT CONSTRUCTION

- A. Copper Tubing: Solder joints in accordance with the procedures specified in AWS "Soldering Manual."
- B. Cast-Iron Soil Pipe: Make hubless joints in accordance with the Cast-Iron Soil Pipe & Fittings Handbook, Chapter IV. Install Couplings as followings:
 1. Install hubless couplings complying with CISPI 310 on soil, waste and vent piping.
 2. Install hubless couplings complying with CISPI 310 on and soil and waste piping 3" and smaller and all vent piping.
 3. Install heavy duty hubless couplings on soil or waste stacks, soil and waste piping connections to soil or waste stacks and all soil and waste piping 4" and larger.
 4. Install No-Hub fitting restraints on joints 5" and larger at:
 - a. Changes of direction from vertical to horizontal
 - b. 4" branch connections, including tees, wyes and wye combination fittings to soil and waste piping 5" and larger
 - c. Horizontal changes of direction 22-1/2 degrees and greater
 - d. Changes in diameter of two pipe sizes or greater.
- C. Install heavy duty hubless couplings on hubless soil, waste and vent piping below floor.
- D. PVC DWV Pipe: Joining and installation of PVC drainage pipe and fittings shall conform to ASTM D2665.

- E. ABS to PVC Transition Joints: When joining ABS to PVC components (such as an ABS building drain to PVC sewer pipe) make joints using solvent cements conforming to ASTM D3138.
- F. Cast Iron to PVC Above Grade: Join cast iron to PVC with shielded transition couplings.
- G. Cast Iron to PVC Below Grade: Join cast iron to PVC with underground shielded adapter couplings.

3.6 INSTALLATION

- A. General Locations and Arrangements: Drawings (plans, schematics, and diagrams) indicate the general location and arrangement of the piping systems. Location and arrangement of piping layout take into consideration pipe sizing, slope, expansion, and other design considerations. So far as practical, install piping as indicated.
- B. Use fittings for all changes in direction and all branch connections.
- C. Install piping at right angles or parallel to building walls. Diagonal runs are not permitted, unless expressly indicated.
- D. Install piping free of sags or bends and with ample space between piping to permit proper insulation applications.
- E. Conceal all pipe installations in walls, pipe chases, utility spaces, above ceilings, below grade or floors, unless indicated to be exposed to view.
- F. Install horizontal piping as high as possible allowing for proper slope and coordination with other components. Install vertical piping tight to columns or walls. Provide space to permit insulation applications, with 1-inch clearance outside the insulation. Allow sufficient space above removable ceiling panels to allow for panel removal.
- G. Paint exposed copper drain lines serving kitchen equipment with a minimum of two coats of chromium-based paint.
- H. Exterior Wall Penetrations: Seal pipe penetrations through exterior walls using sleeves and sealer. Refer to Division 22 Section "Basic Piping Material and Methods" for special sealers and materials.
- I. Underground Exterior Wall Penetrations: Seal pipe penetrations through underground exterior walls using sleeves and mechanical sleeve sealers. Refer to Division 22 Section "Basic Piping Material and Methods" for additional information.
- J. Fire Barrier Penetrations: Where pipes pass through fire rated walls, partitions, ceilings and floors, maintain the fire rated integrity. Refer to Division 22 Section "Basic Piping Material and Methods" for special sealers and materials.
- K. Foundation Penetrations: Where pipes pass through foundation walls above strip footings or under strip footings, protect pipes from building load with cast iron soil pipe sleeves two pipe sizes larger than the pipe. Sleeves installed under the strip footing shall be encased in concrete.
- L. Elevated Floor Penetrations of Waterproof Membrane, Interior Penetrations of Non-Fire Rated Walls and Concrete Slab on Grade Penetrations: Provide sleeves and seal pipes that pass through waterproof floors, non-fire rated walls, partitions and ceilings or concrete slab on grade. Refer to Division 22 Section "Common Work Results for Plumbing" for special sealers and materials.
- M. Make changes in direction for drainage and vent piping using appropriate 45 degree wyes, combination wye and eighth bend, or long sweep, quarter, sixth, eighth, or sixteenth bends. Sanitary tees or quarter

bends may be used on vertical stacks of drainage lines where the change in direction of flow is from horizontal to vertical, except use long-turn pattern combination wye and eighth bends where two fixtures are installed back to back and have a common drain. Straight tees, elbows, and crosses may be used on vent lines. Double wyes or double wye combinations shall not be used in the horizontal. No change in direction of flow greater than 90 degrees shall be made. Where different sizes of drainage pipes and fittings are connected, use proper sized standard increasers and reducers. Reduction of the size of drainage piping in the direction of flow is prohibited.

- N. Install underground building drains to conform with the plumbing code, and in accordance with the Cast Iron Soil Pipe Institute Engineering Manual. Lay underground building drains beginning at low point of systems, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install required gaskets in accordance with manufacturer's recommendations for use of lubricants, cements, and other special installation requirements. Maintain swab or drag in line and pull past each joint as it is completed.
- O. Install drainage piping pitched down at a minimum slope of 1/4 inch per foot (2 percent) for piping 3 inch and smaller, and 1/8 inch per foot (1 percent) for piping 4 inch and larger. Install vent piping pitched to drain back by gravity to the sanitary drainage piping system.
- P. Install condensate drains pitched down at a minimum slope of 1 to 10 for piping 3 inches and smaller.
- Q. Extend building drain to connect to service piping, of size and in location indicated for service entrance to building. Sewer service piping is specified in a separate section of Division 2.

3.7 HANGERS AND SUPPORTS

- A. General: Hanger, support, insulation protection shields, and anchor components and installation procedures conforming to MSS SP-58 and SP-69 are specified in Division 22 Section "Hangers and Supports for Plumbing Piping". Conform to the table below for maximum spacing of supports.
- B. Install the following pipe attachments:
 - 1. Adjustable clevis hangers, MSS SP-69 Type 1, for individual horizontal runs.
 - 2. Riser clamps, MSS SP-69 Type 8, for individual vertical runs.
 - 3. Insulation protection shields and high density insulation at each hanger for insulated pipe as specified in Division 22 Sections "Hangers and Supports for Plumbing Piping" and "Plumbing Insulation".
 - a. Install high density insulation on insulated pipe.
 - 4. Provide vinyl coated hangers and riser clamps for use with PVC pipe and CPVC CTS tube.
 - 1. Provide roll hangers for individual horizontal runs 100 feet or longer.
 - 2. Provide ceiling flanges attached to the floor, all thread rod and split ring pipe clamps for indirect drains and condensate drains supported from the floor 2" and smaller.
- C. Install hangers with maximum horizontal spacing and minimum rod diameters, to comply with MSS-58, locally enforced codes, this specification, and authorities having jurisdiction requirements, whichever are most stringent. Install hangers for horizontal piping with the following maximum spacing and minimum rod diameters:

<u>Nom. Pipe Size – In.</u>	<u>Steel Pipe Max. Span – Ft.</u>	<u>Copper Tube Max. Span – Ft.</u>	<u>Min. Rod Dia. - In.</u>
Up to 1-1/4	12	6	3/8
1-1/2 to 2	12	10	3/8
2-1/2 to 4	12	10	3/8
5	12	10	1/2
6	12	10	1/2
8	12	10	1/2

10 to 12	12	10	5/8
14 to 15	12	N/A	3/4

<u>Nom. Pipe Size In Inches.</u>	<u>CTS CPVC Tube Max. Span - Ft.</u>	<u>CPVC Tube Min. Rod Dia. - In.</u>
1/2	3	3/8
3/4	3	3/8
1	3	3/8
1-1/4	4	3/8
1-1/2	4	3/8
2	4	3/8

1. Support all sizes of horizontal cast iron piping every five feet, except up to ten feet where ten foot sections are installed. Support all sizes of hubless horizontal cast iron piping every other joint, unless over four feet, then support each joint. Provide support adjacent to joint, not to exceed 18". Provide support at each horizontal branch.
2. Support all sizes of vertical cast iron piping every ten feet.
3. Support all sizes of horizontal of PVC piping every four feet.
4. Support vertical PVC / CPVC pipe and tube every six feet, at base of each floor, and provide mid-story guides.
5. Support piping within 12" of each elbow or tee.
6. Support each P-trap.

D. Support condensate piping located on roof with pre-engineered roof supports, pre-engineered roof supports are specified in Division 22 Section "Hangers and Supports for Plumbing Piping". Conform to the table above for maximum spacing of supports. Adjust pipe support to maintain minimum pipe slope.

E. Bracing:

1. Provide horizontal bracing for pipe 4" and larger at intervals not to exceed 40'.

3.8 INSTALLATION OF PIPING SPECIALTIES

A. Above Ground Cleanouts: Install in above ground piping and building drain piping as indicated, and:

1. as required by plumbing code;
2. at each change in direction of piping greater than 45 degrees;
3. at minimum intervals of 50' for piping 4" and smaller and 100' for larger piping;
4. at base of each vertical soil and waste stack.

B. Cleanout Covers: Install floor and wall cleanout covers for concealed piping, types as indicated.

C. Floor Cleanouts: Install in below floor building drain piping as indicated, and:

1. as required by plumbing code;
2. at each change in direction of piping greater than 45 degrees;
3. Install in below floor building drain piping at minimum intervals of 50' for piping 4" and smaller and 75' for larger piping;
4. Install floor cleanouts in waterproof floors with waterproof membrane securely flashed with cleanout body flashing clamp so that no leakage occurs between cleanout body and adjoining flooring. Maintain integrity of waterproof membranes, where penetrated.

D. Exterior Cleanouts: Install exterior cleanouts embedded in a 18" x 18" x 8" block of concrete, flush with finished grade.

3.9 INSTALLATION OF FLOOR DRAINS, FLOOR SINKS AND FLOOR TROUGHS

- A. Install floor drains, floor sinks, shower linear trench drains and floor troughs in locations indicated.
- B. Install floor drains, trench drains and shower linear trench drains at low points of surface areas to be drained, or as indicated. Set tops of drains flush with finished floor. Set floor sinks and floor troughs flush with the level finish floor.
- C. Refer to architectural documents for floor slope requirements and set floor drain elevation to match. Where architectural documents do not indicate the requirements, set the floor drain elevation depressed below the finished slab elevation as listed below to provide proper slope to drain:

<u>DEPRESSION IN INCHES</u>	<u>RADIUS OF AREA DRAINED - FEET</u>
1/2	5
3/4	10
1	15
1-1/4	20
1-1/2	25

- D. Provide P-traps for drains connected to the sanitary sewer.
- E. Install floor drains, floor sinks, shower linear trench drains, and floor troughs in waterproof floors with waterproof membrane securely flashed with drain flashing clamp so that no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes, where penetrated.
- F. Position drains so that they are level, accessible and easy to maintain.

3.10 INSTALLATION OF TRAP PRIMERS

- A. Install trap primer outlet piping with 1/32" per foot slope towards drain trap where possible.
- B. Connect trap primer outlet piping only to factory installed taps on the drain body or P-trap assembly or provide an auxiliary inlet fitting with factory installed trap primer tap.
- C. Install trap primer outlet piping in elevated slabs or slabs on grade below concrete reinforcing bars. Wrap with 1/2" thick flexible unicellular insulation, attach to the reinforcing bars with plastic ties and spacers every five feet to eliminate galvanic corrosion. Refer to Division 22 Section "Plumbing Insulation" for flexible unicellular insulation.
- D. Where proper trap primer outlet piping slope can be maintained and the trap primer outlet line would not be subject to freezing, trap primer outlet lines may be installed as follows:
 - 1. Install below elevated floor slabs.
 - 2. Install in the sub grade of slab on grade.
- E. Install sleeves and caulk at penetrations through building floor for watertight installation. In an elevated floor slab installation, bracket the piping to bottom of floor once the slab is poured.
- F. Refer to Division 22 Section "Water Distribution Piping and Specialties" for trap primer and trap primer inlet pipe requirements.

3.11 INSTALLATION TRAP SEALS:

- A. Install trap seals in accordance with manufacturer's written instructions and in locations indicated.

- B. Make watertight seal using an adhesive type caulk along bottom of trap seal, if required by the manufacturer.
- C. Employ a test plug for testing and remove before normal floor drain use. Clean inside of drain tailpiece and install trap seal after testing.
- D. Do not touch elastomeric plug or allow contact with primer or solvent cement.

3.12 CONNECTIONS

- A. Piping Runouts to Fixtures: Provide drainage and vent piping runouts to plumbing fixtures and drains, with approved trap, of sizes indicated; but in no case smaller than required by the plumbing code.
- B. Locate piping runouts as close as possible to bottom of floor slab supporting fixtures or drains.

3.13 FIELD QUALITY CONTROL

- A. Inspections
 1. Do not enclose, cover, or put into operation drainage and vent piping system until it has been inspected and approved by the authority having jurisdiction.
 2. During the progress of the installation, notify the plumbing official having jurisdiction, at least 24 hours prior to the time such inspection must be made. Perform tests specified below in the presence of the plumbing official.
 - a. Rough-in Inspection: Arrange for inspection of the piping system before concealed or closed-in after system is roughed-in, and prior to setting fixtures.
 - b. Final Inspection: Arrange for a final inspection by the plumbing official to observe the tests specified below and to ensure compliance with the requirements of the plumbing code.
 - c. Reinspections: Whenever the piping system fails to pass the test or inspection, make the required corrections, and arrange for reinspected by the plumbing official.
 - d. Reports: Prepare inspection reports, signed by the plumbing official.
- B. Piping System Test: Test drainage and vent system in accordance with the procedures of the authority having jurisdiction, or in the absence of a published procedure, as follows:
 1. Test for leaks and defects all new drainage and vent piping systems and parts of existing systems, which have been altered, extended or repaired. If testing is performed in segments, submit a separate report for each test, complete with a diagram of the portion of the system tested.
 2. Leave uncovered and unconcealed all new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose all such work for testing, that has been covered or concealed before it has been tested and approved.
 3. Rough Plumbing Test Procedure: Except for outside leaders and perforated or open jointed drain tile, test the piping of plumbing drainage and venting systems upon completion of the rough piping installation. Tightly close all openings in the piping system, and fill with water to the point of overflow, but not less than 10 feet head of water. Water level shall not drop during the period from 15 minutes before the inspection starts, through completion of the inspection. Inspect all joints for leaks.
 4. Final Plumbing Test Procedure: After the plumbing fixtures have been set and their traps filled with water, their connections shall be tested and proved gas and water-tight. Tightly close all openings, initially except vents thru the roof, in the system and fill the system with smoke from one or more smoke machines designed for smoke testing of plumbing systems. When smoke appears at a vent thru the roof, seal the vent thru roof with a test plug. Pressurize the system with 1" water column of smoke for 15 minutes. Use a "U" tube or manometer inserted in the trap of a water closet to measure this pressure. Visually verify all joints for leaks.
 5. Repair all leaks and defects using new materials and retest system or portion thereof until satisfactory results are obtained.

6. Reports: Prepare inspection reports and required corrective action signed by the plumbing official and turn over to the Architect upon completion of the project.

3.14 ADJUSTING AND CLEANING

- A. Clean interior of piping system. Remove dirt and debris as work progresses.
- B. Clean drain strainers, domes, and traps. Remove dirt and debris.

3.15 PROTECTION

- A. Protect drains during remainder of construction period, to avoid clogging with dirt and debris, and to prevent damage from traffic and construction work.
- B. Place plugs in ends of uncompleted piping at end of day or whenever work stops.
- C. Exposed PVC Piping: Protect plumbing vents exposed to sunlight with 2 coats of a water based latex paint.

END OF SECTION

SECTION 15452 (221328) - CONDENSATE PUMPS FOR HVAC EQUIPMENT

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes the following types of plumbing pumps:
 - 1. Condensate pumps for HVAC equipment
- B. Related Sections: The following sections contain requirements that relate to this Section:
 - 1. Division 22 Section "Coordination" for basic requirements for electrical components that are an integral part of packaged system components.
 - 2. Division 22 Section "Sanitary Drainage and Vent Piping and Specialties" for condensate pipe material and installation requirements.
 - 3. Division 23 Section "Direct-Digital Control for HVAC" for interlock with HVAC equipment and interlock of alarms with building automation system and alarm wiring.
 - 4. Division 26 Section "Common Work Results for Electrical" required electrical devices.
 - 5. Division 26 Sections "Enclosed Switches and Circuit Breakers" for field-installed disconnects.

1.2 SUBMITTALS

- A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections.
 - 1. Product data including standard performance curves, weights (shipping, installed, and operating), furnished specialties, and accessories, plus installation and start-up instructions.
 - 2. Wiring diagrams detailing wiring for power, signal, and control systems; differentiating between manufacturer-installed wiring and field-installed wiring.
 - 3. Maintenance data for condensate pumps, for inclusion in Operating and Maintenance Manuals specified in Division 1 and Division 22 Section "General Plumbing Requirements."

1.3 QUALITY ASSURANCE

- A. Hydraulic Institute Compliance: Design, manufacture, and install condensate pumps in accordance with "Hydraulic Institute Standards."
- B. National Electrical Code Compliance: Components shall comply with NFPA 70 "National Electrical Code."
- C. UL Compliance: Plenum rated condensate pumps shall be listed and labeled by UL and comply with Standard 2043 "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air Handling Spaces".
- D. NEMA Compliance: Electric motors and components shall be listed and labeled NEMA.
- E. Single-Source Responsibility: Obtain plumbing pumps of the same type from a single manufacturer.
- F. Design Criteria: The Drawings indicate capacity, connections, and power requirements of condensate pumps and are based on the specific manufacturer types and models indicated. Pumps having equal performance characteristics by other manufacturers may be considered, provided that deviations in dimensions and profiles do not change the design concept or intended performance as judged by the Architect. The burden of proof for equality of plumbing pumps is on the proposer.

1.4 WARRANTY

- A. Warranty on Pumps: Provide written warranty, signed by manufacturer, agreeing to replace/repair, within warranty period, pumps with inadequate or defective materials and workmanship, including leakage, breakage, improper assembly, or failure to perform as required; provided manufacturer's instructions for handling, installing, protecting, and maintaining units have been adhered to during warranty period. Replacement includes both parts and labor for removal and reinstallation.
 - 1. Warranty Period: One year from date of substantial completion.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide one of the following:
 - 1. Non-Plenum Rated HVAC Condensate Pump:
 - a. Little Giant
 - b. Liberty Pumps
 - 2. Plenum Rated HVAC Condensate Pump:
 - a. Little Giant with no substitutions

2.2 PUMPS, GENERAL

- A. Condensate Pumps: Factory assembled and factory tested.
- B. Preparation for shipping: Provide suitable packaging to protect pump from damage during shipping.

2.3 CONDENSATE PUMPS OR HVAC EQUIPMENT

- A. General Description: Pumps shall be direct connected, single stage type with body and reservoir of a material suitable for plenum or non-plenum installation as scheduled on plans, normally open safety overflow switch with two dry contacts, integral check valve and power cord with ground.
- B. Non-plenum rated: Reservoir and body shall be either ABS or PE plastic.
- C. Plenum rated: Reservoir and body shall be all polypropylene and meet UL 2043.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's installation instructions.
- B. Install pumps in locations and arrange to provide access for periodic maintenance.
- C. Support pumps and piping separately so that the weight of the piping system does not rest on the pump.

3.2 EXAMINATION

- A. Examine areas, equipment foundations, and conditions with Installer present, for compliance with requirements for installation and other conditions affecting performance of plumbing pumps. Do not proceed with installation until unsatisfactory conditions have been corrected.

- B. Examine rough-in for plumbing piping systems to verify actual locations of piping connections prior to installation.

3.3 CONNECTIONS

- A. Piping between the HVAC unit and the pump shall be the greater of the discharge port size on the HVAC equipment or 3/4" pipe size or as shown on plans, whichever is larger. Discharge piping from the condensate pump shall be equal to or greater than the diameter of the pump nozzle, minimum 3/4", or as shown plans, whichever is larger. Condensate pump discharge pipe material is specified in Division 22 Section "Sanitary Drainage and Vent Piping and Specialties".
- B. Electrical wiring and connections are specified in Division 26 section "Common Work Results for Electrical".
- C. Coordinate interlock of condensate pump safety overflow switch with unit served to disable unit if safety overflow switch closes as noted on plans and schedules. HVAC interlock wiring and alarm interlock with the building automation system are specified in Division 23 Section "Direct-Digital Control for HVAC".

3.4 STARTUP

- A. Final Checks Before Start-Up: Perform the following preventative maintenance operations and checks before start-up:
 - 1. Ensure pump is connected to the condensate discharge system.
 - 2. Verify all power wiring is in place and power is provided to pump.
- B. Testing procedure for condensate pumps:
 - 1. Pour water into the pump reservoir until the water sensing switch is activated.
 - 2. Verify water is pumped out of the reservoir and that there are no leaks in the condensate piping or at the connection point to the pump.
 - 3. Verify integral check valve is operating properly, replace with new if found to be defective.

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 15430 (221400) - STORM DRAINAGE PIPING AND SPECIALTIES

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes building storm drainage piping systems, including drains and drainage specialties.
- B. Related Sections: The following sections contain requirements that relate to this Section:
 - 1. Division 22 Section "General Plumbing Requirements," for trenching and backfilling materials and methods for underground piping installations.
 - 2. Division 22 Section "Identification for Plumbing Piping and Equipment," for labeling and identification of drainage piping.
 - 3. Division 22 Section "Common Work Results for Plumbing," for materials and methods for fire barrier penetrations, wall and floor penetrations and equipment pads
 - 4. Division 22 Section "Basic Piping Material and Methods," for materials and methods for mechanical sleeve seals.
 - 5. Division 22 Section "Hangers and Supports for Plumbing Piping," for materials and methods for hanging and supporting drainage piping.
 - 6. Division 22 Section "Plumbing Insulation," for materials and methods for insulating drainage piping.

1.2 DEFINITIONS

- A. Storm Building Drain: That part of the lowest piping of a drainage system which receives the discharge from storm drainage pipes inside the walls of the building and conveys it to the building sewer.
- B. Storm Building Sewer: That part of the drainage system which extends from the end of the building drain and conveys its discharge to a public sewer or private sewer or other point of disposal.
- C. Drainage System: Includes all the piping within a public or private premises which conveys storm water or other liquid wastes to a point of disposal. It does not include the mains of public sewer systems or a private or public sewage treatment or disposal plant.

1.3 SUBMITTALS

- A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specifications Sections.
- B. Product data for the following products:
 - 1. Drainage piping
 - 2. Drainage piping specialties
 - 3. Area drains
 - 4. Roof drains
 - 5. Hubless fitting restraints
 - 6. Interceptors
- C. Test reports specified in Part 3 of this Section.

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with the provisions of the following codes:

1. 2019 California Building Code
 2. 2019 California Plumbing Code
- B. Comply with the installation requirements for PVC gasketed sewer pipe per the Uni-Bell PVC Pipe Association "Installation Guide for Solid Wall PVC Sewer Pipe". Comply with the installation requirements for gasketed fittings per the Uni-Bell PVC Pipe Association "Installation Guide for PVC Fittings and Laterals for Solid Wall PVC Sewer Pipe".
- C. Obtain installation training from the PVC gasketed sewer pipe manufacturer for all workers that will be installing or handling the PVC gasketed sewer pipe piping systems. Submit certification letter along with each workers certificate of completion to engineer of record within 30-days of mobilization. Include copy of certification letter with closeout documents.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Drainage Piping Specialties, including backwater valves, expansion joints, cleanouts, area/roof drains, cast-iron trench drains and downspout nozzles:
 - a. Josam Mfg. Co.
 - b. Sioux Chief Manufacturing Co. Inc.
 - c. Smith (Jay R) Mfg. Co.
 - d. Tyler Pipe/Wade Div.; Subs. of Tyler Corp.
 - e. Watts Industries, Inc.
 - f. Zurn Industries, Inc.; Hydromechanics Div.
 - g. [Mifab Manufacturing, Inc.]
 2. Heavy Duty Hubless Couplings
 - a. Anaco Husky HD-2000
 - b. Clamp-All 80in. lb.
 - c. Ideal Tridon "HD"
 - d. Mission Rubber Company "Heavyweight"
 - e. ProFlo "HD"
 3. Downspout Boots
 - a. Construction Castings Company
 - b. Flockart
 - c. Higgins Foundry
 - d. Neenah Foundry Company
 4. Cast Iron Soil Pipe and Fittings
 - a. AB & I Foundry
 - b. Charlotte Pipe and Foundry Company
 - c. Tyler Pipe / Soil Pipe Division
 5. Shielded Transition Couplings
 - a. FERNCO, "Proflex 3000 Series"
 - b. Mission Rubber Company, "Band Seal Specialty Couplings"
 6. Underground Shielded Adapter Couplings
 - a. FERNCO, "1056 Series with SR73 Shear Ring"
 - b. Mission Rubber Company, "MR56 Series"
 7. PVC DWV Fittings 16" and Larger
 - a. Plastic Trends, Inc.
 8. Hubless Fitting Restraints
 - a. Holdrite
 9. Plastic Hydromechanical Sand/Oil Separators:
 - a. CANPLAS
 - b. Green Turtle, Inc.

- c. Mifab Manufacturing, Inc.
- d. Striem
- 10. Plastic Gravity Sand/Oil Separators
 - a. Green Turtle, Inc.
 - b. Mifab Manufacturing, Inc.
 - c. Striem
 - d. Xerxes Corp.
- 11. PVC DWV Expansion Joints
 - a. Charlotte Pipe and Foundry Company #133
 - b. Spears Manufacturing Company #S119
- 1. Heavy Duty Hubless Couplings for Below Slab
 - a. Anaco Husky HD-4000
 - b. Clamp-All 125in. lb.

2.2 ABOVE GROUND DRAINAGE PIPE AND FITTINGS

- A. Cast-Iron Soil Pipe: CISPI 301 and ASTM A888, hubless pipe and fittings, and bearing the trademark of CISPI and NSF.
 - 1. Heavy duty couplings and compression gaskets: ASTM C564, ASTM C1540 and meeting FM 1680.
- B. Copper Tube: ASTM B306, Type DWV, hard drawn for pipe, and cast-bronze, drainage pattern fittings with soldered joints.
 - 1. Solder Filler Materials: ASTM B32, 95-5 tin-antimony solder.
- C. PVC DWV Pipe and Fittings: Schedule 40 pipe meeting ASTM D1785 and ASTM D2665 with “solid wall” PVC meeting ASTM D1784 with cell class 12454-B.
 - 1. Fittings: DWV pattern meeting ASTM D2665 with solvent cement socket joints. Fittings 16” and larger shall be fabricated type.
 - 2. Solvent: ASTM D2564.
- D. PVC Pressure Pipe and Fittings: Schedule 40 pipe meeting ASTM D1785 with “solid wall” PVC meeting ASTM D1784 with cell class 12454.
 - 1. Solvent: ASTM D2564.
- E. Steel Pipe: ASTM A53, Type E or S, schedule 40, Grade B, galvanized, threaded ends.
 - 1. Galvanized Malleable Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern, for threaded joints. Threads shall conform to ASME B1.20.1.
- F. Shielded Transition Couplings: ASTM C1460 with neoprene adapter gasket with stainless steel Shield and hose clamps.

2.3 UNDERGROUND BUILDING DRAIN PIPE AND FITTINGS

- A. Cast-Iron Soil Pipe: ASTM A74, Service weight, hub-and-spigot soil pipe and fittings, and bearing the trademark of CISPI and NSF. Pipe and fittings shall have a heavy coating of coal tar varnish or asphaltum on both inside and outside surfaces.
 - 1. Neoprene Compression Gaskets: ASTM C564.
- B. Cast-Iron Soil Pipe: CISPI 301 and ASTM A888, hubless pipe and fittings and bearing the trademark of CISPI and NSF.]
 - 1. Heavy-Duty couplings and compression gaskets: ASTM C564, ASTM C1540 and FM 1680.

- C. PVC DWV Pipe and Fittings: Schedule 40 pipe meeting ASTM D1785 and ASTM D2665 with “solid wall” PVC meeting ASTM D1784 with cell class 12454-B.
 - 1. Fittings: DWV pattern meeting ASTM D2665 with solvent cement socket joints.
 - 2. Solvent: ASTM D2564.
- D. PVC Pressure Pipe and Fittings: Schedule 40 pipe meeting ASTM D1785 with “solid wall” PVC meeting ASTM D1784 with cell class 12454.
 - 1. Solvent: ASTM D2564.
- E. PVC Gasketed Sewer Pipe: SDR 26 pipe meeting ASTM F679 with “solid wall” PVC meeting ASTM D1784 and with integral bell type gasketed joints meeting ASTM D3212 with beveled male pipe ends and insertion depth markers.
 - 1. Gasketed Fittings: Drainage pattern type meeting ASTM D3034 with integral bell type gasketed joints meeting ASTM D3212 with beveled male pipe ends.
- F. Underground Shielded Adapter Couplings: ASTM C1173 with neoprene adapter gasket with stainless steel shield and stainless steel hose clamps.

2.4 DRAINAGE PIPING SPECIALTIES

- A. Expansion Joints: Cast-iron body with adjustable bronze sleeve, bronze bolts with wing nuts.
- B. Cleanout Plugs: As specified on the drawings.
- C. Floor Cleanouts: As specified on the drawings.
- D. Wall Cleanouts: As specified on the drawings.
- E. Area drains: As specified on the drawings.
- F. Roof Drains: As specified on the drawings.
- G. PVC DWV Expansion Joints: Schedule 40 PVC DWV meeting ASTM D2665 with socket connections and telescoping expansion joint with EPDM O-ring seal.

2.5 HUBLESS FITTING RESTRAINTS

- A. Pre-engineered kits of galvanized steel pipe straps with stainless steel band clamps and tee bolts, meeting requirements of the CISPI Installation Handbook.

2.6 SAND/OIL INTERCEPTORS

- A. Interceptor type designations, flow rates, and capacities are indicated on the Drawings.
- B. Hydromechanical Sand/Oil Interceptor: As scheduled on the drawings
- C. Gravity Sand/Oil Interceptor: Reinforced precast concrete construction by local manufacturer or a plastic sand/oil interceptor acceptable to the local authorities having jurisdiction.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Install pipe and specialties in accordance with manufacturer’s installation instructions.

3.2 PREPARATION FOUNDATION FOR UNDERGROUND BUILDING DRAINS

A. Pipe Beds:

1. PVC and ABS Pipe: Support pipe in trench with sand bags level and true to prevent sand, gravel or debris from interfering with the solvent cement process. After pressure testing is complete, gradually install bedding to maintain continuous pipe slope and prevent pipe deflection and then install subbase. Refer to Section "General Plumbing Requirements" for bedding and subbase materials, excavation, trenching, backfill and compaction requirements and refer to ASTM D2321 "Underground Installation of Thermoplastic Pipe for Sewers and Gravity-flow Applications" for additional requirements.
2. Cast Iron Soil Pipe: Shape bottom of trench to fit bottom of pipe for 90-degrees (bottom 1/4 of the circumference). Fill unevenness with tamped sand bedding. At each pipe joint dig bell holes to relieve the bell of the pipe of all loads, and to ensure continuous bearing of the pipe barrel on the foundation and maintain continuous pipe slope. For piping with rock trench bottoms, provide sand pipe bed 6" underneath and around sides of pipe, including fittings. After pressure testing is complete, install subbase. Refer to Section "General Plumbing Requirements" for bedding and subbase materials, excavation, trenching, backfill and compaction requirements.

3.3 PIPE APPLICATIONS - ABOVE GROUND, WITHIN BUILDING

- A. Install hubless, cast-iron soil pipe and fittings 15" and smaller for storm pipe.
- B. Install Type DWV copper tube with cast bronze Type DWV fittings 15" and smaller for storm pipe where indicated on the drawings.
- C. Install PVC pressure pipe and fittings for sump pump discharge, except no plastic pipe shall be installed in return air plenums.
- D. Install PVC Type DWV Plastic pipe and fittings for 24 inch and smaller storm pipe. Install fabricated fittings for 16 inch and larger.
- E. Install galvanized schedule 40 steel pipe and malleable iron fittings for sump pump discharge pipe.

3.4 PIPE APPLICATIONS - BELOW GROUND, WITHIN BUILDING

- A. Install hub-and-spigot, service weight, cast-iron, soil pipe and fittings with gasketed joints for 15 inch and smaller storm pipe.
- B. Install hubless, cast-iron soil pipe and fittings 15" and smaller for storm pipe.
- C. Install PVC Type DWV Plastic pipe and fittings for 24 inch and smaller storm pipe. Install fabricated fittings for 16 inch and larger.
- D. Install PVC gasketed sewer pipe and gasketed fittings for 27" and larger storm pipe.
- E. Install PVC pressure pipe and fittings for sump pump discharge.

3.5 PIPE AND TUBE JOINT CONSTRUCTION

- A. Copper Tubing: Solder joints in accordance with the procedures specified in AWS "Soldering Manual."
- B. Cast-Iron Soil Pipe: Make hubless joints in accordance with the Cast-Iron Soil Pipe & Fittings Handbook, Chapter IV. Install Couplings as followings:
 1. Install heavy duty hubless couplings on storm drainage piping, including connections to roof drains.
 2. Install Hubless fitting restraints on joints 5" and larger at:

- a. Changes of direction from vertical to horizontal
 - b. 4" branch connections, including tees, wyes and wye combination fittings to storm drainage piping 5" and larger
 - c. Horizontal changes of direction 22-1/2 degrees and greater
- C. Install heavy duty hubless couplings on hubless storm piping ping below floor.
 - D. PVC DWV Pipe: Joining and installation of PVC drainage pipe and fittings shall conform to ASTM D2665.
 - E. ABS to PVC Transition Joints: When joining ABS to PVC components (such as an ABS building drain to PVC sewer pipe) make joints using solvent cements conforming to ASTM D3138.
 - F. Cast Iron to PVC Above Grade: Join cast iron to PVC with shielded transition couplings.
 - G. Cast Iron to PVC Below Grade: Join cast iron to PVC with underground shielded adapter couplings.
 - H. Gasketed Fittings: Install fittings per the Uni-Bell PVC Pipe Association "Installation Guide for PVC Fittings and Laterals for Solid Wall PVC Sewer Pipe".

3.6 INSTALLATION

- A. General Locations and Arrangements: Drawings (plans, schematics, and diagrams) indicate the general location and arrangement of the piping systems. Location and arrangement of piping layout take into consideration pipe sizing, slope, expansion, and other design considerations. So far as practical, install piping as indicated.
- B. Use fittings for all changes in direction and all branch connections.
- C. Install piping at right angles or parallel to building walls. Diagonal runs are not permitted, unless expressly indicated.
- D. Install piping free of sags or bends and with ample space between piping to permit proper insulation applications.
- E. Conceal all pipe installations in walls, pipe chases, utility spaces, above ceilings, below grade or floors, unless indicated to be exposed to view.
- F. Install horizontal piping as high as possible allowing for proper slope and coordination with other components. Install vertical piping tight to columns or walls. Provide space to permit insulation applications, with 1-inch clearance outside the insulation. Allow sufficient space above removable ceiling panels to allow for panel removal.
- G. Exterior Wall Penetrations: Seal pipe penetrations through exterior walls using sleeves and sealer. Refer to Division 22 Section "Basic Piping Materials and Methods" for special sealers and materials.
- H. Underground Exterior Wall Penetrations: Seal pipe penetrations through underground exterior walls using sleeves and mechanical sleeve sealers. Refer to Division 22 Section "Basic Piping Material and Methods" for additional information.
- I. Fire Barrier Penetrations: Where pipes pass through fire rated walls, partitions, ceilings and floors, maintain the fire rated integrity. Refer to Division 22 Section "Common Work Results for Plumbing" for special sealers and materials.
- J. Elevated Floor Penetrations of Waterproof Membrane, Interior Penetrations of Non-Fire Rated Walls and Concrete Slab on Grade Penetrations: Provide sleeves and seal pipes that pass through waterproof floors,

non-fire rated walls, partitions and ceilings or concrete slab on grade. Refer to Division 22 Section "Common Work Results for Plumbing" for special sealers and materials.

- K. Foundation Penetrations: Where pipes pass through foundation walls above strip footings or under strip footings, protect pipes from building load with cast iron soil pipe sleeves two pipe sizes larger than the pipe. Sleeves installed under the strip footing shall be encased in concrete.
- L. Make changes in direction for drainage piping using appropriate 45 degree wyes, combination wye and eighth bend, or long sweep, quarter, sixth, eighth, or sixteenth bends. Sanitary tees or quarter bends may be used on vertical stacks of drainage lines where the change in direction of flow is from horizontal to vertical, except use long-turn pattern combination wye and eighth bends where two fixtures are installed back to back and have a common drain. No change in direction of flow greater than 90 degrees shall be made. Where different sizes of drainage pipes and fittings are connected, use proper sized standard increasers and reducers. Reduction of the size of drainage piping in the direction of flow is prohibited.
- M. Install underground building drains to conform with the plumbing code, and in accordance with the Cast Iron Soil Pipe Institute Engineering Manual. Lay underground building drains beginning at low point of systems, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install required gaskets in accordance with manufacturer's recommendations for use of lubricants, cements, and other special installation requirements. Maintain swab or drag in line and pull past each joint as it is completed.
- N. Install drainage piping pitched down at a minimum slope of 1/4 inch per foot (2 percent) for piping 3 inch and smaller, and 1/8 inch per foot (1 percent) for piping 4 inch and larger.
- O. Extend building drain to connect to service piping, of size and in location indicated for service entrance to building. Storm service piping is specified in a separate section of Division 2.

3.7 HANGERS AND SUPPORTS

- A. General: Hanger, support, insulation protection shields, and anchor components and installation procedures conforming to MSS SP-58 and SP-69 are specified in Division 22 Section "Hangers and Supports for Plumbing Piping". Conform to the table below for maximum spacing of supports.
- B. Install the following pipe attachments:
 - 1. Adjustable clevis hangers, MSS SP-69 Type 1, for individual horizontal runs.
 - 2. Riser clamps, MSS SP-69 Type 8, for individual vertical runs.
 - 3. Insulation protection shields and high density insulation at each hanger for insulated pipe as specified in Division 22 Sections "Hangers and Supports for Plumbing Piping" and "Plumbing Insulation".
 - a. Install high density insulation on insulated pipe.
 - 4. Provide vinyl coated hangers and riser clamps for use with PVC pipe.
 - 5. Provide roll hangers for individual horizontal runs 100 feet or longer.
- C. Install hangers with maximum horizontal spacing and minimum rod diameters, to comply with MSS-58, locally enforced codes, this specification, and authorities having jurisdiction requirements, whichever are most stringent. Install hangers for horizontal piping with the following maximum spacing and minimum rod diameters:

Nom. Pipe Size	Steel Pipe Max. Span	Copper Tube Max. Span.	Min. Rod Dia. - Inches
<u>In Inches</u>	<u>In Feet</u>	<u>In Feet</u>	
Up to 1-1/4	12	6	3/8
1-1/2 to 2	12	10	3/8

2-1/2 to 3	12	10	3/8
4	12	10	3/8
5	12	10	1/2
6	12	10	1/2
8	12	10	1/2
10 to 12	12	10	5/8
14	12	N/A	3/4
16	12	N/A	7/8

1. Support all sizes of hubless horizontal cast iron piping every five feet, except up to ten feet where ten foot sections are installed. Support all sizes of hubless horizontal cast iron piping every other joint, unless over four feet, then support each joint. Provide support adjacent to joint, not to exceed 18". Provide sway brace on horizontal piping at not more than 40' intervals to prevent horizontal movement. Provide support at each horizontal branch.
2. Support all sizes of vertical cast iron piping every ten feet.
3. Support all sizes of vertical steel piping every other floor, not to exceed twenty-five feet.
4. Support all sizes of horizontal of PVC piping every four feet.
5. Support all sizes of vertical of PVC piping every floor, but not to exceed ten feet. For sizes 2 inches and smaller, provide guide midway between required vertical supports.
6. Support vertical PVC pipe and tube every six feet, at base of each floor, and provide mid-story guides.
7. Support piping within 12" of each elbow or tee.

D. Bracing:

1. Provide horizontal bracing for pipe 4" and larger at intervals not to exceed 40'.

E. Bracing for above floor base of stacks 4" and larger and higher than three stories:

1. Secure horizontal base of stack to structure with riser clamp within at the fitting changing direction of flow from vertical to horizontal. Provide rods of size equal to cast iron pipe size scheduled above in pipe hanger schedule.

3.8 INSTALLATION OF PIPING SPECIALTIES

- A. Install backwater valves in storm building drain piping as indicated, and as required by the plumbing code. For interior installation, provide cleanout cover flush to floor centered over backwater valve cover and of adequate size to remove valve cover for service.
- B. Provide PVC DWV expansion joints every 30' on straight vertical PVC waste or sanitary stacks receiving hot water waste. Install expansion joint at middle travel for equal expansion and contraction travel. Provide riser clamps within 18" of each end of expansion joint. Install expansion joint per manufacturer's installation instructions.
- C. Install expansion joints on stacks or horizontal piping as indicated, and as required by the plumbing code.
- D. Above Ground Cleanouts: Install in above ground piping and building drain piping as indicated, and:
 1. as required by plumbing code;
 2. at each change in direction of piping greater than 45 degrees;
 3. at minimum intervals of 50' for piping 4" and smaller and 100' for larger piping;
 4. at base of each vertical soil, waste, or storm water stack.
- E. Cleanout Covers: Install floor and wall cleanout covers for concealed piping, types as indicated.
- F. Floor Cleanouts: Install in below floor building drain piping as indicated and:
 1. as required by plumbing code;

2. at each change in direction of piping greater than 45 degrees;
3. Install in below floor building drain piping at minimum intervals of 50' for piping 4" and smaller and 75' for larger piping;
4. Install floor cleanouts in waterproof floors with waterproof membrane securely flashed with cleanout body flashing clamp so that no leakage occurs between cleanout body and adjoining flooring. Maintain integrity of waterproof membranes, where penetrated.

G. Exterior Cleanouts: Install exterior cleanouts embedded in a 18" x 18" x 8" block of concrete, flush with finished grade.

3.9 INSTALLATION OF AREA DRAINS

- A. Install area drains in locations indicated.
- B. Install area drains at low points of surface areas to be drained, or as indicated. Set tops of drains flush with finished floor.
- C. Refer to architectural documents for floor slope requirements and set area drain elevation to match. Where architectural documents do not indicate the requirements, set the area drain elevation depressed below the finished slab elevation as listed below to provide proper slope to drain:

DEPRESSION IN INCHES RADIUS OF AREA DRAINED - FEET

1/2	5
3/4	10
1	15
1-1/4	20
1-1/2	25

- D. Provide P-traps for drains connected to combined sanitary and storm sewer.
- E. Install area drains in waterproof floors with waterproof membrane securely flashed with drain flashing clamp so that no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes, where penetrated.
- F. Position drains so that they are level, accessible and easy to maintain.

3.10 INSTALLATION OF ROOF DRAINS

- A. Install roof drains at low points of roof areas with the roof membrane securely flashed with drain flashing clamp so that no leakage occurs between drain and roof membrane.
- B. Install drain flashing collar or flange so that no leakage occurs between roof drain and adjoining roofing. Maintain integrity of waterproof membranes, where penetrated.
- C. Position roof drains so that they are accessible and easy to maintain.

3.11 FIELD QUALITY CONTROL

- A. Inspections
 1. Do not enclose, cover, or put into operation the storm drainage piping system until it has been inspected and approved by the authority having jurisdiction.
 2. During the progress of the installation, notify the plumbing official having jurisdiction, at least 24 hours prior to the time such inspection must be made. Perform tests specified below in the presence of the plumbing official.

- a. Rough-in Inspection: Arrange for inspection of the storm drainage piping system before concealed or closed-in after system is roughed-in.
 - b. Final Inspection: Arrange for a final inspection by the plumbing official to observe the tests specified below and to ensure compliance with the requirements of the plumbing code.
 - c. Reinspections: Whenever the piping system fails to pass the test or inspection, make the required corrections, and arrange for reinspected by the plumbing official.
 - d. Reports: Prepare inspection reports, signed by the plumbing official.
- B. Piping System Test: Test storm drainage system in accordance with the procedures of the authority having jurisdiction, or in the absence of a published procedure, as follows:
- 1. Test for leaks and defects all new storm drainage piping systems and parts of existing systems, which have been altered, extended or repaired. If testing is performed in segments, submit a separate report for each test, complete with a diagram of the portion of the system tested.
 - 2. Leave uncovered and unconcealed all new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose all such work for testing, that has been covered or concealed before it has been tested and approved.
 - 3. Rough Plumbing Test Procedure: Except for outside leaders and perforated or open jointed drain tile, test the piping of storm drainage piping systems upon completion of the rough piping installation. Tightly close all openings in the piping system, and fill with water to the point of overflow, but not less than 10 feet head of water. Water level shall not drop during the period from 15 minutes before the inspection starts, through completion of the inspection. Inspect all joints for leaks.
 - 4. Repair all leaks and defects using new materials and retest system or portion thereof until satisfactory results are obtained.
 - 5. Reports: Prepare inspection reports and required corrective action signed by the plumbing official and turn over to the Architect upon completion of the project.

3.12 ADJUSTING AND CLEANING

- A. Clean interior of piping system. Remove dirt and debris as work progresses.
- B. Clean drain strainers and domes. Remove dirt and debris.

3.13 PROTECTION

- A. Protect drains during remainder of construction period, to avoid clogging with dirt and debris, and to prevent damage from traffic and construction work.
- B. Place plugs in ends of uncompleted piping at end of day or whenever work stops.
- C. Exposed PVC Piping: Protect storm drainage piping exposed to sunlight with 2 coats of a water based latex paint.

END OF SECTION

SECTION 15481 (221500) - GENERAL SERVICE COMPRESSED AIR SYSTEMS

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes piping, equipment, and related accessories, for general building, compressed air systems operating at 200 psig and below.
- B. Related Sections: The following Sections contain requirements that relate to this Section:
 - 1. Division 22 Section "Coordination" for basic requirements for electrical components that are an integral part of packaged system components.
 - 2. Division 22 Section, "Common Work Results for Plumbing" for materials and methods for fire barrier penetrations, wall and floor penetrations and concrete equipment pads.
 - 3. Division 22 Section "Basic Piping Materials and Methods" for flexible metal braid connectors, pipe joining materials, specialties, unions, dielectric unions, dielectric flanges, dielectric flange kits and basic installation requirements.
 - 4. Division 22 Section "Meters and Gauges for Plumbing Piping" for thermometers, pressure gauges, and fittings.
 - 5. Division 22 Section "Hangers and Supports for Plumbing Piping" for equipment and piping hangers and supports.
 - 6. Division 22 Section "Vibration Isolation for Plumbing Piping and Equipment" for inertia pads, isolation pads, spring supports, and spring hangers.
 - 7. Division 22 Section "Seismic Controls for Plumbing Piping and Equipment" for field-installed seismic restraint devices used for equipment and piping systems.
 - 8. Division 26 Section "Common Work Results for Electrical" required electrical devices.
 - 9. Division 26 Sections "Enclosed Switches and Circuit Breakers" for field-installed disconnects.

1.2 DEFINITIONS

- A. Low-Pressure Compressed Air Systems: ASME B31.9 "Building Services Piping" for systems operating at pressure of 125 psig or less, and temperature 200 deg F or less.

1.3 SUBMITTALS

- A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections.
- B. Product data including rated capacities of selected models, weights (shipping, installed, and operating), furnished specialties, and accessories for all equipment; indicating dimensions, required clearances, and methods of assembly of components, and piping and wiring connections.
- C. Wiring diagrams from manufacturers detailing electrical requirements for electrical power supply wiring to equipment. Include ladder-type wiring diagrams for interlock and control wiring required for final installation. Differentiate between portions of wiring that are factory-installed and portions that are field-installed.
- D. Certificates of shop inspection and data report as required by provisions of the ASME Boiler and Pressure Vessel Code.
- E. Coordination drawings for compressed air systems in accordance with Division 22 Section "General Plumbing Requirements."

- F. Maintenance data for inclusion in Operating and Maintenance Manual specified in Division 1 and Division 22 Section "General Plumbing Requirements."

1.4 QUALITY ASSURANCE

- A. Electrical Component Standard: NFPA 70 "National Electrical Code."
- B. Listing and Labeling: Provide equipment that is listed and labeled.
 - 1. Terms "Listed" and "Labeled": As defined in the National Electrical Code, Article 100.
 - 2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7.
 - 3. Furnish control panels manufactured in accordance with UL 508A.
- C. ASME Code Compliance: Provide system components complying with the following:
 - 1. Receiver Tanks: Comply with ASME Boiler and Pressure Vessel Code, Section VIII, Pressure Vessels, and bear the appropriate code symbols.
 - 2. Safety Valves: ASME Boiler and Pressure Vessel Code, Section VIII, Pressure Vessels, National Board certified, bear the appropriate labeling, and have been factory-sealed after testing.
 - 3. Low-Pressure Systems Piping: ASME B31.9, Building Services Piping.
- D. Aluminum Tubing Systems:
 - 1. All Aluminum tubing system components shall be of one manufacturer, be date and origin stamped for quality assurance and traceability.
 - 2. Aluminum Tubing system mechanical piping shall conform to local code approval and/or as listed by ANSI-B-31.1, B-31.3, B-39.1, ASME, UL/ULC, IAPMO or ICC.
 - a. Components shall be capable of providing system rigidity to accommodate hanging and support in accordance with ANSI B31.1 and ANSI B31.9.
 - 3. Aluminum tubing system product manufacturer shall be ISO certified.
 - 4. Aluminum tubing system grooving and cutting tools shall be of an approved manufacturer by the grooved fittings manufacturer. Verify tolerances of and maintain grooving tool components for duration of grooving processes. Replace grooving tool components that are found out of tolerance with new as required.
 - 5. Obtain training from the Aluminum Tubing system manufacturer for all workers that will be installing or handling the Aluminum Tubing system.
- E. Pipe, pipe fittings and pipe specialties shall be manufactured in plants located in the United States or certified to meet the specified ASTM and ANSI standards.
- F. Design Concepts: The Drawings indicate capacities, sizes, and dimensional requirements of system components and are based on the specific types, manufacturers, and models indicated. Components having equal performance characteristics by other manufacturers may be considered provided that deviations in dimensions, operation, and other characteristics are minor and do not change the design concept or intended performance as judged by the Architect. The burden of proof of equality of products is on the proposer. Refer to Division 1.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Quincy Compressor Div.; Coltec Industries, Inc.
 - 2. Aftercoolers, Air Cooled:
 - a. Arrow Pneumatics, Inc.
 - b. Curtis-Toledo, Inc.

- c. Hankison Div.; Hansen, Inc.
- d. Ingersoll-Rand Co.
- e. Saylor-Beall Manufacturing Co.
- f. Van Air Systems, Inc.
- g. Zeks Air Drier Corp.
- 3. Air Dryers:
 - a. Zeks Air Drier Corp.
- 4. Air Filters:
 - a. Deltech Engineering, L.P.
 - b. Hankison Div.; Hansen, Inc.
 - c. Ingersoll-Rand Co.
 - d. Ultrafilter, Inc.
 - e. Zurn Industries
- 5. Air Regulators & Lubricators:
 - a. Arrow Pneumatics, Inc.
 - b. Champion Pneumatic Machinery Co., Inc.
 - c. Wilkerson.
- 6. Automatic Drain Valves:
 - a. Arrow Pneumatics, Inc.
 - b. Deltech Engineering, L.P.
 - c. Ingersoll-Rand Co.
 - d. Zurn Industries
- 7. Quick Connect/Disconnect Hose Couplings:
 - a. Aeroquip Corp.; Industrial Connectors Div.
 - b. Bowes Manufacturing, Inc.
 - c. Amflo Products Div.; Bridge Products Inc.
 - d. Foster Manufacturing Co., Inc.
 - e. Hansen Coupling Div.; Tuthill Corp.
 - f. Milton Industries, Inc.
 - g. OBAC Corp.
 - h. Schrader Automotive, Inc.
 - i. Snap-Tite, Inc.
- 8. Ball Valves – 2” and smaller:

<u>MANUFACTURER</u>	<u>THREADED ENDS</u>	<u>SOLDER ENDS</u>
Apollo	77C-100	77C-200
Hammond	8301A	8311A
Milwaukee	BA-400	BA-450
Nibco	T-585-70	S-585-70
- 9. Ball Valves – 2” to 4”:

<u>MANUFACTURER</u>	<u>THREADED ENDS</u>	<u>SOLDER ENDS</u>

 Hammond IR1124

Milwaukee F2974
Nibco F-918-B

12. Aluminum Tube Systems
 - a. AIRPipe USA
 - b. Applied Systems Technologies, "INFINITY" for 2-1/2" and smaller, "ELEVATION" for 3" and larger
 - c. Atlas-Copco "AIRNet"
 - d. Ingersol-Rand "SimplAir"
 - e. Transair

2.2 PIPE AND TUBE MATERIALS

- A. Aluminum Tube: ASTM B241, Aluminum 6063-T5 (through the full wall thickness), rigid grade, blue in color, T5 thermal hardness treatment, powder coated.

2.3 PIPE AND TUBE FITTINGS

- A. Aluminum Tube System Fittings:
 1. 2-1/2" and smaller: Polyamide with fiberglass reinforcement meeting UL94HB with compression joints with nitrile rubber O-ring seals.
 2. 3" and larger: Aluminum body with compression joints with nitrile rubber O-ring seals.
 3. 2" and smaller rated at maximum pressure of 232 psi at 188F.
 4. 2-1/2" and larger rated at maximum pressure of 188 psi at 158F.

2.4 VALVES

- A. Ball Valves, 2 Inch and Smaller: MSS SP-110, Class 150 saturated steam pressure, 600-psi CWP; two-piece construction; with bronze body conforming to ASTM B 584, full port, chrome-plated brass ball, replaceable PTFE (Teflon) seats and seals, blowout-proof stem, and vinyl-covered steel handle. Provide solder ends for use with copper tubing or threaded ends for use with steel piping. Provide Class 150 valves meeting the above where system pressure requires. Provide with side vented ball where required.
- B. Ball Valves, 2-1/2 Inch to 4 Inch: MSS SP-110, Class 150, 600-psi CWP; 3-piece construction; with bronze body conforming to ASTM B 584, full port, chrome-plated brass ball, replaceable PTFE (Teflon) seats and seals, blowout proof stem, and vinyl-covered steel handle. Provide solder ends for use with copper tubing or threaded ends for use with steel piping.
- C. Swing Check Valves, 2-Inch and Smaller: MSS SP-80; Class 125, 200-psi CWP, cast-bronze body and cap conforming to ASTM B 62; with horizontal swing, Y-pattern, and PTFE (Teflon) disc; and having threaded or solder ends. Provide valves capable of being reground while the valve remains in the line. Provide Class 150, 300-psi CWP, valves meeting the above specifications, with threaded end connections, where system pressure requires or where Class 125 valves are not available.
- D. Swing Check Valves, 2-1/2-Inch and Larger: MSS SP-71; Class 125 200-psi CWP, cast iron body and bolted cap conforming to ASTM A 126, Class B; with horizontal swing, bronze disc or ductile iron disc with bronze disc face ring, and bronze seat ring; and flanged ends. Provide valves capable of being refitted while the valve remains in the line.

2.5 JOINING MATERIALS

- A. Aluminum Tubing System: Nitrile rubber O-ring seals.

2.6 ROTARY SCREW AIR COMPRESSORS

- A. General: Provide factory-assembled and tested, packaged, single-stage, heavy-duty, asymmetrical, rotary screw air compressors as indicated, of capacities and having electrical characteristics as indicated.
- B. Bearings: Separate axial and thrust anti-friction bearings.
- C. Coupling: Nonlubricated flexible type.
- D. Cooling/Lubrication System: Unit-mounted, air-cooled exchanger package, prepiped to unit with air pressure circulation system, with coolant stop valve, full flow coolant filter, and thermal bypass valve.
- E. Air Filter: Dry type, with maintenance indicator and cleanable replaceable filter element.
- F. Air/Coolant Receiver and Separation System: 150-psig-rated tank with ASME safety valve; coolant level gauge; multistage, air coolant separator element; minimum pressure valve; blowdown valve; discharge check valve; and coolant stop valve, full flow coolant filter, and thermal bypass valve.
- G. Capacity Control: Capacity modulation between 0 and 100 percent air delivery, with operating pressures between 50 and 125 psig using manufacturer's standard control. Control inlet butterfly valve by diaphragm and pressure regulator to hold a constant pressure. When air demand is zero, unload compressor by use of pressure switch and blowdown valve.
- H. Control Panel: Include air receiver pressure gauge, discharge line pressure gauge, air filter maintenance indicator, hourmeter, compressor discharge air and coolant temperature gauge, control transformer, start-stop switches, and numbered wiring terminal strip.
 - 1. Provide automatic alternator to switch lead compressor at each start, for duplex air compressor units.
- I. Motor Starter: Full-voltage, magnetic starter with NEMA 12 enclosure. Factory mount starter on compressor package and wire to motor and control panel.
- J. Receiver Tank: ASME stamped.
- K. Prepipe entire unit at factory.
- L. Oil-Flooded, Rotary Screw Air Compressors: Oil-cooled and oil-flooded lubricated screws.
- M. Electronic Demand Expander with Fail/ Open control and three-valve bypass. Unit shall be communication ready with ability to remote monitor. Accuracy shall be +/- 2 PSI with an operating range of 80-125 PSIG.
- N. Disconnect: Disconnect is provided under Division 26.

2.7 AFTERCOOLERS

- A. Aftercoolers, Air Cooled: Tubular, rated at 250 psig and leak-tested at 350-psig minimum air pressure, in capacities indicated. Size units to cool compressed air in compressor-rated capacities to 10 deg F above summertime maximum ambient temperature.

2.8 AIR DRYERS

- A. Air Dryers, Refrigerated Type: Provide with capacities and characteristics as indicated on the drawings. Equip with drain connection.

2.9 ACCESSORIES

- A. General: Provide accessories having working pressure rating not less than system pressure at location where used, and compatible with equipment and piping system used.
- B. Intercoolers: Air-cooled, fixed-bundle, tubular intercoolers, rated at 250 psig and leak-tested at 350-psig minimum air pressure, in capacities indicated. Size units to cool compressed air in compressor-rated capacities to 10 deg F above summertime maximum ambient temperature.
- C. Separators: Conical shaped, centrifugal air-line separators in sizes and capacities indicated. Equip with water-removal trap and drain. Size units for maximum pressure drop through units of 3 psig from air inlet to outlet.
- D. Receivers: ASME stamped, cylindrical, vertical or horizontal installation as indicated, galvanized steel; with safety valves in sizes, working pressures and temperatures indicated, and with drain connection.
 - 1. Pressure rating: Not less than maximum discharge pressure.
- E. Safety Valves: ASME Boiler and Pressure Vessel Code, Section VIII, Pressure Vessels construction, National Board certified, labeled, and factory-sealed; constructed of bronze body with poppet safety valve for compressed air service.
 - 1. Pressure Settings: Higher than discharge pressure and same or lower than receiver pressure rating.
- F. Pressure Regulators: Bronze body, direct-acting, spring-loaded, manual pressure setting adjustment, and rated for 250-psig inlet pressure except where otherwise indicated.
 - 1. Type: Diaphragm-operated.
 - 2. Type: Pilot-operated.
- G. Pressure Regulators (Reducing Valves): Aluminum alloy or plastic body, diaphragm-operated, direct-acting, spring-loaded, manual pressure setting adjustment, and rated for 250-psig inlet pressure except where otherwise indicated.
- H. Air-Line Lubricators: Sizes and capacities indicated; equip with drip chamber and sight dome for observing oil drop entering air stream; with oil feed adjustment screw, and quick-release collar for easy bowl removal.
 - 1. Provide with automatic feed device for supplying oil to lubricator.
- I. Filters: Capacities and types indicated on the drawings. Equip with cartridges capable of removing particles, water and oil aerosols, and with warning light to indicate when selected maximum pressure drop has been exceeded with characteristics indicated on the drawings.
- J. Automatic Drain Valves: Electronic controlled corrosion-resistant metal body and internal parts, rated for 200-psig minimum working pressure, capable of automatic discharge of collected condensate.
- K. Hose, Clamps, and Couplings: Provide compatible hose, hose clamps, and hose couplings, suitable for compressed air service, of nominal diameter, and rated for 300-psig minimum working pressure except where otherwise indicated.
 - 1. Quick Connect/Disconnect Hose Couplings: One-way, automatic shutoff, brass body, with O-ring or gasket seal, and stainless steel or nickel-plated steel operating parts. Select socket end with threaded inlet that is considered the fixed end and has a one-way valve.
 - a. Plug End: Flow-sensor bleeder, check-valve type, with serrated outlet for hose.
 - b. Plug End: Straight-through type, with serrated outlet for hose.
 - 2. Quick Connect/Disconnect Hose Couplings: Straight through, brass body, with stainless-steel or nickel-plated steel operating parts. Select socket end with O-ring or gasket seal, and without valve. Select socket and plug ends with serrated outlets for hose.

3. Hose Coupling: Two-piece, threaded, brass or stainless steel, O-ring or gasket seal, swivel coupling, with serrated ends, 300-psig minimum working pressure.
4. Hose Adapter: One-piece, brass or stainless-steel fitting, with serrated ends.
5. Hose: Reinforced, single- or double-braid, neoprene-covered hose, for compressed air service.
6. Hose Clamps: Stainless steel, clamps, bands, or wire.

PART 3 - EXECUTION

1.1 INSTALLATION, GENERAL

- A. Install air compressors, air dryers, accessories, piping, valves and specialties in accordance with manufacturer's installation instructions.

3.1 CONCRETE EQUIPMENT BASES

- A. Refer to Division 22 Section "Common Work Results for Plumbing" for concrete equipment bases.
 1. Form concrete equipment bases by using framing lumber with form release compounds. Chamfer top edge and corners of pad.
 2. Install reinforcing bars, tied to frame, and place anchor bolts and sleeves using manufacturer's installation template.
 3. Place concrete and allow to cure before installation of pumps.

3.2 EQUIPMENT INSTALLATION

- A. Install air compressors on concrete bases. Set and connect units in accordance with manufacturers' written installation instructions. Install units plumb and level, firmly anchored, in locations indicated, and maintain manufacturers' recommended clearances. Orient so equipment controls and devices needing servicing are accessible. For indirect drain material and installation.
- B. Install seismic restrains for equipment as indicated refer to Division 22 Section "Seismic Controls for Plumbing Piping and Equipment".
- C. Install flexible connectors where indicated on the drawings. Refer to Division 22 "Basic Piping Material and Methods" for installation.
- D. Install indirect drains on air compressor accumulator tank drain valve, air dryer condensate drain and each automatic air drain valve and route to nearest floor drain. Refer to Division 22 Section "Sanitary Drainage and Vent Piping and Specialties".
- E. Provide equipment pad and vibration isolation, refer to Division 22 Section "Vibration Isolation For Plumbing Piping & Equipment".

3.3 PIPING APPLICATIONS

- A. 6 inches and smaller: Aluminum tube with compression fittings.

3.4 JOINT CONSTRUCTION

- A. Aluminum Tubing Systems: Install per manufacturers' published installation instructions.

3.5 VALVE APPLICATIONS

- A. General-Duty Valve Applications: The Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
 - 1. Shut-off duty - 2" and smaller: Use 2-piece ball valves.
 - a. Provide side vented ball valves only at individual equipment connections and air drops to relieve air downstream of ball valve when closed for equipment repair or removal.
 - 2. Shut-off duty - 2-1/2" and larger: Use 3-piece ball valves.
 - 3. Valves for aluminum tubing systems: Provide valves specified herein with threaded by Aluminum Tube compression adapters as required.

3.6 INSTALLATION OF VALVES

- A. Sectional Valves: Install sectional valves on each branch and riser, close to main, and elsewhere as indicated.
- B. Shutoff Valves: Install shutoff valves on outlet of each compressed air equipment item, on each supply to each compressed air outlet, and elsewhere as indicated.
- C. Locate valves for easy access and provide separate support where necessary. Provide access doors and fire rated access doors as required.
- D. Install valves and unions for each fixture and item of equipment arranged to allow equipment removal without system shutdown. Unions are not required on flanged devices.
- E. Install three-valve bypass around each pressure reducing valve using throttling-type valves.
- F. Install valves in horizontal piping with stem at or above the center of the pipe.
- G. Install valves in a position to allow full handle rotation.
- H. Installation of Check Valves: Install for proper direction of flow as follows:
 - 1. Swing Check Valves: Horizontal position with hinge pin level.

3.7 PIPING INSTALLATION, GENERAL

- A. Install air and drain piping with 1/8-inch-per-foot slope downward in direction of air flow.
- B. Install eccentric reducers where pipe is reduced in size in the direction of flow, with bottoms of both pipes and reducer flush.
- C. Connect branch air piping to mains from top of main. Provide drain leg and drain trap at end of each main, each branch, and each low point in piping system.
- D. Install horizontal piping as high as possible. Install vertical piping tight to columns or walls. Provide space to permit insulation applications, with 1 inch clearance outside the insulation. Allow sufficient space above removable ceiling panels to allow for panel removal.
- E. Install piping specialties in accordance with Division 22 Section "Basic Piping Materials and Methods."
- F. Install supports and anchors in accordance with Division 22 Section "Hangers and Supports for Plumbing Piping."
 - 1. Spacing: Do not exceed 10'-0" spacing between pipe hangers.

- G. Install valves in accordance with Division 22 Section "General Duty Valves for Plumbing Piping."
- H. Install thermometers and pressure gauges in accordance with Division 22 Section "Meters and Gauges for Plumbing Piping."
- I. Fire Barrier Penetrations: Where pipes pass through fire-rated walls, partitions, ceilings, and floors, maintain the fire-rated integrity. Refer to Division 22 Section "Common Work Results for Plumbing" for special sealers and materials.
- J. Exterior Wall Penetrations: Seal pipe penetrations through exterior wall constructions with sleeves packing, and sealant. Refer to Division 22 Section "Basic Piping Materials and Methods" for additional information.
- K. Underground Exterior Wall Penetrations: Seal pipe penetrations through underground exterior walls with sleeves and mechanical sleeve seals. Refer to Division 22 Section "Basic Piping Materials and Methods" for additional information.
- L. Elevated Floor Penetrations of Waterproof Membrane, Interior Penetrations of Non-Fire Rated Walls and Concrete Slab on Grade Penetrations: Provide sleeves and seal pipes that pass through waterproof floors, non-fire rated walls, partitions and ceilings or concrete slab on grade. Refer to Division 22 Section "Common Work Results for Plumbing" for special sealers and materials.
- M. Joints Containing Dissimilar Metals: Provide dielectric unions for 2" and smaller and dielectric flanges for piping 2-1/2" and larger. Dielectric unions and flanges are specified in Section "Basic Piping Materials and Methods".
- N. Joints at Valve Assemblies: Provide unions downstream of shutoff valves at valve assemblies. Unions are not required at flanged connections. Unions are specified in Division 22 section "Basic Piping Materials and Methods".

3.8 HANGERS AND SUPPORTS

- A. General: Hanger, support, insulation protection shield, and anchor components and installation procedures conforming to MSS SP-58 and SP-69 are specified in Division 22 Section "Hangers and Supports for Plumbing Piping." Conform to the table below for maximum spacing of supports.
- B. Pipe Attachments: Install the following:
 1. Adjustable band hangers, MSS SP-69 Type 7, for steel pipe for individual horizontal runs and for copper tube for horizontal runs.
 2. Steel riser clamps, MSS SP-69 Type 8, for individual vertical runs of steel pipe.
 3. Plastic coated adjustable band hangers with, MSS SP-69 Type 7, for copper tube for horizontal runs.
 4. Plastic coated steel riser clamps, MSS SP-69 Type 8, for individual vertical runs of copper tube.
 5. Extension split ring pipe clamp, MSS SP-69 Type 12, for individual vertical exposed runs of steel pipe 2" and smaller on walls or for securing steel pipe inside walls.
 6. Copper coated extension split ring pipe clamp, MSS SP-69 Type 12, for individual vertical exposed runs of copper tube 2" and smaller on walls or for securing copper tube inside walls.
 7. Provide roll hangers for individual horizontal runs 100 feet or longer.
 8. Aluminum tubing system fixing clips, clamps, and hangers.
- C. Install hangers for horizontal piping with the following maximum spacing and minimum rod sizes:

<u>Nom. Pipe Size - In.</u>	<u>Steel Pipe Max. Span - Ft.</u>	<u>Copper Tube Max. Span - Ft.</u>	<u>Min. Rod Dia. - In.</u>
Up to 1-1/4	12	6	3/8
1-1/2 to 2	12	10	3/8

2-1/2 to 4	12	10	3/8
5	12	10	1/2
6	12	10	1/2

<u>Nom. Pipe Size - In.</u>	<u>Aluminum Tube Max. Span - Ft.</u>	<u>Min. Rod Dia. - In.</u>
Up to 3/4	5	3/8
1	6	3/8
1-1/4	7	3/8
1-1/2	8	3/8
2	8	3/8
2-1/2	9	1/2
3	10	1/2
3-1/2	11	1/2
4	12	5/8
6	13	3/4

1. Support vertical aluminum tube at each floor and in intervals not to exceed 10 feet.

D. Support piping within 12” of each elbow or tee and for piping 2-1/2” and larger at each valve or strainer.

E. Support piping above the floor with pipe supports attached to the floor with anchor bolts where indicated on the drawings. Conform to the table above for maximum spacing of supports.

F. Provide vibration isolation for piping connected to rotating equipment. Vibration isolators are specified in Division 22 specification Section “Vibration Isolation for Plumbing Piping and Equipment”.

3.9 CONNECTIONS

A. Install piping adjacent to equipment to allow servicing and maintenance.

B. Connect air piping to units with shutoff valves and unions.

- Where air piping connections are dissimilar metals, install dielectric waterway fittings or dielectric unions for joints 2” and smaller and dielectric flanges for joints 2-1/2” and larger. Dielectric waterway fittings, unions and flanges are specified in Division 22 Section "Basic Piping Materials and Methods."
- Install thermometers on compressor discharge piping, on receiver tanks, and where indicated.
- Install pressure gauges on compressor discharge piping, on receiver tanks, and where indicated.

C. Install safety valves in receiver tanks, in quantity and size to relieve capacity not less than that of connected compressor.

D. Install automatic drain valves on intercoolers, aftercoolers, separators, receivers, dryers, filters and other locations indicated. Discharge condensate over nearest floor drain.

E. Install flexible connectors where indicated in accordance with Division 22 Section "Basic Piping Materials and Methods".

F. Securely attach hose reels to the structure as specified in Division 22 Section "Hangers and Supports for Plumbing Piping."

G. Electrical Connections:

- Power wiring is specified in Division 26 Section “Common Work Results for Electrical”

2. Field-installed disconnects are specified in Division 26 Sections "Enclosed Switches and Circuit Breakers".
3. Grounding: Connect unit components to ground in accordance with the National Electrical Code.

3.10 FIELD QUALITY CONTROL

- A. General: Provide the services of a factory-authorized service representative to test and inspect unit installation, provide startup service, and to demonstrate and train Owner's maintenance personnel as specified below.
 1. Test and adjust operating and safety controls. Replace damaged and malfunctioning controls and equipment.
- B. Aluminum Tubing Systems:
 1. Installing contractor shall schedule training session with the Aluminum Tubing systems manufacturer for all workers that will be installing or handling the grooved or press to connect piping systems. Submit certification letter along with list of attendees to engineer of record within 30-days of mobilization. Include copy of certification letter with closeout documents.
 2. Aluminum Tubing systems manufacturer shall provide certification training to contractor without cost and without additional cost to Owner.
 3. Installing contractor shall visually inspect couplings and repair or replace any Aluminum Tubing systems misaligned couplings and couplings with gaps prior to calling for inspection as defined in Division 22 Section "General Plumbing Requirements."
 4. Aluminum Tubing systems manufacturer's representative shall make periodic visits to the jobsite during construction to ensure the installing contractor is following the latest published manufacturer's field installation instructions and best practice procedures provided during the training session.

3.11 STARTUP

- A. Preparation: Perform the following final checks before startup:
 1. Complete tests of piping systems.
 2. Check for piping connection leaks.
 3. Check lubricating oil for lubricated-type equipment.
 4. Check V-belts for proper tension.
 5. Check that compressor inlet filters and piping are clear.
 6. Check equipment vibration-control supports and flexible pipe connectors, and that equipment is properly attached to substrate.
 7. Check for proper seismic restraints.
 8. Check that safety valves have correct setting; greater than compressor discharge pressure, but not greater than pressure rating of system components.
 9. Test operation of equipment safety controls and devices.
 10. Drain receiver tanks.
 11. Check for adequate room ventilation.
- B. Starting Procedures: Follow the manufacturer's written procedures. If no procedures are prescribed by the manufacturer, proceed as follows:
 1. Energize circuits.
 2. Start and run equipment through complete sequence of operations.
 3. Check for excessive vibration and noise. Correct problems.
 4. Check air pressures.
 5. Manually operate safety valves.
 6. Adjust operating controls including pressure settings.

3.12 TRAINING

- A. General: At a time mutually agreed upon between the Owner and Contractor, provide the services of a factory trained and authorized representative to train Owner's designated personnel for a minimum of four hours on the operation and maintenance of the equipment provided under this section.
- B. Content: Training shall include but not be limited to:
 - 1. Overview of the system and/or equipment as it relates to the facility as a whole.
 - 2. Operation and maintenance procedures and schedules related to startup and shutdown, troubleshooting, servicing, preventive maintenance and appropriate operator intervention.
 - 3. Review data included in the operation and maintenance manuals. Refer to Division 1 Section "Operating and Maintenance Data."
- C. Certification: Contractor shall submit to the Engineer a certification letter stating that the Owner's designated representative has been trained as specified herein. Letter shall include date, time, attendees and subject of training. The certification letter shall be signed by the Contractor and the Owner's representative indicating agreement that the training has been provided.
- D. Schedule: Schedule training with Owner with at least 7 days' advance notice.

END OF SECTION

SECTION 15460 (223300) - ELECTRIC DOMESTIC WATER HEATERS

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes electric water heaters.
- B. Related Sections: The following Sections contain requirements that relate to this Section:
 - 1. Division 22 Section "Common Work Results for Plumbing" for concrete equipment pads.
 - 2. Division 22 Section "Basic Piping Materials and Methods" for pipe joining materials, unions, dielectric unions, dielectric flanges, dielectric flange kits and basic installation requirements.
 - 3. Division 22 Section "Meters and Gauges for Plumbing Piping." for thermometers and their installation requirements.
 - 4. Division 26 Section "Common Work Results for Electrical" required electrical devices.
 - 5. Division 26 Section "Enclosed Switches and Circuit Breakers" for field-installed disconnects.

1.2 SUBMITTALS

- A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections.
 - 1. Product data including rated capacities of selected models, weights (shipping, installed, and operating), furnished specialties, and accessories, and indicating dimensions, required clearances, and methods of assembly of components, and piping and wiring connections.
 - 2. Wiring diagrams from manufacturers detailing electrical requirements for electrical power supply wiring to water heaters. Include ladder-type wiring diagrams for interlock and control wiring required for final installation of water heaters and controls. Differentiate between portions of wiring that are factory installed and portions that are to be field installed.
 - 3. Maintenance data for inclusion in Operating and Maintenance Manual specified in Division 1 and Division 22 Section "General Plumbing Requirements."

1.3 QUALITY ASSURANCE

- A. UL Standards: Provide water heaters complying with the following:
 - 1. UL 174, "Household Electric Storage Tank Water Heaters."
 - 2. UL 1453, "Electric Booster and Commercial Storage Tank Water Heaters."
- B. Electrical Component Standard: Provide components complying with NFPA 70 "National Electrical Code."
- C. Listing and Labeling: Provide water heaters that are listed and labeled.
 - 1. The terms "listed" and "labeled" shall be as defined in the National Electrical Code, Article 100.
 - 2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7.
- D. ASHRAE Standards: Provide water heaters with performance efficiencies not less than prescribed in ASHRAE 90.1b, "Energy Conservation in New Building Design."
- E. Design Concept: The drawings indicate types and capacities of water heaters and are based on specific descriptions and manufacturers indicated. Water heaters having equal performance characteristics by other manufacturers may be considered provided that deviations in capacities, dimensions, operation, or other

characteristics are minor and do not change the design concept or intended performance as judged by the Architect. Burden of proof for equality of water heaters is on the proposer.

1.4 WARRANTY

- A. Special Project Warranty: Submit a written warranty, executed by manufacturer, agreeing to repair or replace water heater units that fail in materials or workmanship within the specified warranty period. Failures include, but are not limited to, controls, tanks, and coils. This warranty shall be in addition to, and not a limitation of, other rights the Owner may have against the Contractor under the Contract Documents.
1. Point-of-Use Storage Electric Water Heaters:
 - a. Tank: Six years
 - b. Controls and Other Components: Six years
 2. Point-of-Use Tankless Electric Water Heaters:
 - a. Leaks: Five years
 - b. Controls and Other Components: One year
 3. Commercial Electric Water Heaters:
 - a. Tank: Three years
 - b. Controls and Other Components: One year

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Point-of-Use Storage Electric Water Heaters:
 - a. Bradford-White Corp.
 - b. In-Sink-Erator, Div.; Emerson Electric Co.
 - c. Lochinvar Water Heater Corp.
 - d. Rheem Mfg.
 - e. Ruud Mfg. Div.; Rheem Mfg.
 - f. A.O. Smith Water Products Co. Div.; A.O. Smith Corp.
 - g. State Industries, Inc.
 2. Point-of-Use Tankless Electric Water Heaters:
 - a. Chronomite Laboratories, Inc.
 - b. Eemax, Inc.
 - c. Keltech Inc.
 - d. PVI Industries, Inc.
 - e. Steibel Eltron
 3. Commercial Electric Water Heaters:
 - a. Bock Waters Heaters, Inc]
 - b. Bradford-White Corp.
 - c. Hubbel Water Heater
 - d. Lochinvar Water Heater Corp.
 - e. Rheem Mfg.
 - f. Ruud Mfg. Div of Rheem Mfg.
 - g. A.O. Smith Water Products Co. Div.; A.O. Smith Corp.
 - h. State Industries, Inc.
 - i. HTP Comfort Solutions, LLC
 4. Thermal Expansion Tanks
 - a. Armstrong Pumps, Inc.
 - b. Amtrol, Inc.
 - c. Bell & Gosset, ITT
 - d. Elbi
 - e. TACO, Inc.

- f. Watts
- g. Wessels Tank Co.
- 5. Pressure Relief Valves
 - a. Apollo #16LF-202
 - b. Cash ACME #FW
 - c. Watts #LF53
 - d. Wilkins #P1520XL
- 6. Vacuum Relief Valves
 - a. Apollo #37
 - b. Cash ACME #VR-801
 - c. Watts #N36
 - d. Wilkins #VR-10
- 7. Water Heater Drain Pans
 - a. Holdrite
 - b. Killarney Metals
 - c. Oatey

2.2 POINT-OF-USE STORAGE ELECTRIC WATER HEATERS

- A. Description: Automatic, electric, storage type; with 150-psig-rated storage tank, integral controls, and relief valve.
- B. Insulation: Fiberglass or polyurethane foam, surrounding tank.
- C. Jacket: Steel, with baked-on enamel finish.
- D. Tank: 150-psig rated, glass-lined steel, with anode rod.
- E. Heating Element: Single, screw-in, immersion type.
- F. Controls: Adjustable thermostat temperature control.
- G. Safety Controls: Automatic, high-temperature-limit cutoff.
- H. Temperature and Pressure Relief Valve: Lead free brass body meeting ANSI Z21.22, 3/4-inch size.

2.3 POINT-OF-USE TANKLESS ELECTRIC WATER HEATERS

- A. Description: Automatic, electric, wall-mounting, tankless type; with integral controls.
- B. Insulation: Manufacturer's standard.
- C. Jacket: Aluminum or steel with baked-on enamel finish, or plastic.
- D. Heating Element: Resistance heating.
- E. Controls: Adjustable thermostat temperature control. Flow control fitting in inlet piping.
- F. Safety Controls: Automatic, high-temperature-limit cutoff.

2.4 ELECTRIC WATER HEATERS

- A. Description: Automatic, commercial, electric; with vertical, 150-psig-rated storage tank, integral controls, drain valve, and relief valve.

- B. Insulation: Fiberglass or polyurethane foam, surrounding tank.
- C. Jacket: Steel, with baked-on enamel finish.
- D. Tank: Glass-lined steel with anode rods and drain valve.
- E. Heating Elements: Screw-in or flanged bolt-in immersion type, in multiples as described on the drawings.
- F. Controls: Adjustable surface mounted thermostats.
- G. Controls: Adjustable immersion thermostats.
- H. Safety Controls: Automatic, high-temperature-limit cutoff.
- I. Temperature and Pressure Relief Valve: Lead free brass body meeting ANSI Z21.22.

2.5 THERMAL EXPANSION TANKS

- A. ASME Thermal Expansion Tanks: Provide size and number as indicated; construct of welded carbon steel ASME labeled for 150 psig working pressure, 200 deg F maximum operating temperature. Separate air charge from system water to maintain design expansion capacity, by means of a FDA approved butyl rubber diaphragm securely sealed into tank. Provide taps for pressure gauge and air charging fitting, and drain fitting. Support vertical tanks with steel legs or base. Tank, with taps and supports, shall be constructed, tested, and labeled in accordance with ASME Pressure Vessel Code, Section VIII, Division 1.
- B. Thermal Expansion Tanks: Provide size and number as indicated; construct of welded carbon steel listed for 150 psig working pressure, 200 deg F maximum operating temperature. Separate air charge from system water to maintain design expansion capacity, by means of a FDA approved butyl rubber diaphragm securely sealed into tank. Provide taps for pressure gauge and air charging fitting, and drain fitting. Support vertical tanks with steel legs or base.

2.6 VACUUM RELIEF VALVES

- A. Lead free brass body meeting ANSI Z21.22 with silicon disc. Valve shall open at 0.5 inches HG vacuum and be rated for 200 psig working pressure and 250 F operating temperature.

2.7 PRESSURE RELIEF VALVES

- A. Pressure Relief Valve: 1/2" lead free brass body meeting ANSI Z21.22 with screwed ends, stainless steel spring and factory set to relieve at 100 psig.

2.8 WATER HEATER DRAIN PANS

- A. Galvanized steel or aluminum with outside diameter minimum 2" greater than water heater diameter, with 3/4" screwed drain outlet.

PART 3 - EXECUTION

3.1 WATER HEATER INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. General: Install water heaters on concrete equipment bases. Set and connect units in accordance with manufacturer's written instructions. Install units plumb and level, firmly anchored in locations indicated,

and maintain manufacturer's recommended clearances. Orient so controls and devices needing servicing are accessible.

- C. Install thermometers on water heater outlet piping. Thermometers and their installation requirements, are specified in Division 22 Section "Meters and Gauges for Plumbing Piping."
- D. Install temperature and pressure relief valve furnished with water heater. The temperature shall be normally set to relieve at 210F and the pressure relief shall be equal to the tank pressure rating. Install line size relief valve discharge line to discharge to an approved receptor with air gap.
- E. Vacuum Relief Valve: Install in cold water supply to each water heater downstream of the shutoff and check valves.
- F. Water Heater Drain Pan: Install under water heater on wall or ceiling supports or resting on elevated floor slabs. Install drain pan drain line to discharge to an approved receptor with air gap.
- G. Install pressure relief valve on cold water supply to water heater downstream of shutoff and check valves. The pressure relief shall be factory set to 100 psig. Install line size relief valve discharge line to discharge to an approved receptor with air gap.

3.2 CONCRETE EQUIPMENT BASES

- A. Construct concrete equipment bases in accordance with Division 22 Section "Common Work Results for Plumbing" for concrete and setting of equipment.

3.3 EXPANSION TANK INSTALLATION

- A. Install in-line expansion tanks in the vertical position. Install in-line expansion tank in the horizontal position when allowed by manufacturer and provided with required supports.
- B. Install stand mounted expansion tanks on concrete equipment bases.
- C. Charge expansion tank bladder with air to a pressure equal to the domestic water static pressure.

3.4 CONNECTIONS

- A. Piping installation requirements are specified in other Sections of Division 22. The Drawings indicate general arrangement of piping, fittings, and specialties. The following are specific connection requirements:
 - 1. Install piping adjacent to equipment arranged to allow servicing and maintenance.
 - 2. Connect hot and cold water piping to units with shutoff valves and unions. Connect hot water circulating piping to unit with shutoff valve, check valve, and union. Extend relief valve discharge to closest floor drain.
 - a. Where water heater piping connections are dissimilar metals, install dielectric waterway fittings or dielectric unions for joints 2" and smaller and install dielectric flanges for joints 2-1/2" and larger. Dielectric waterway fittings, unions and flanges are specified in Division 22 Section "Basic Piping Materials and Methods."
 - b. Install vacuum relief valve in cold water inlet piping.
 - 3. Install drain as indirect waste to spill into open drain or over floor drain.
 - a. Install drain valve at low point in water piping, for water heaters not having tank drain.
 - 4. Install heat traps at inlet and outlet of each water heater storage tank. Heat trap shall be made of elbows and piping. Heat trap shall turn down to 12" below the outlet or inlet, run 12" horizontal and turn up to the cold water to the heater or hot water from the heater. Where multiple tanks are connected with a manifold, a single heat trap may be provided at the connection of the cold water supply to the cold water manifold together.

- B. Electrical Connections:
 - 1. Power wiring is specified in Division 26 Section "Common Work Results for Electrical"
 - 2. Field-installed disconnects are specified in Division 26 Sections "Enclosed Switches and Circuit Breakers".
 - 3. Grounding: Connect unit components to ground in accordance with the National Electrical Code.

3.5 FIELD QUALITY CONTROL

- A. General: Provide the services of a factory-authorized service representative to test and inspect unit installation, provide start-up service, and demonstrate operation of equipment as specified below.
 - 1. Test and adjust operating and safety controls. Replace damaged and malfunctioning controls and equipment.

3.6 STARTUP

- A. Perform the following before start-up final checks:
 - 1. Fill water heaters with water.
 - 2. Piping systems test complete.
 - 3. Check for piping connections leaks.
 - 4. Test operation of safety controls and devices.
- B. Perform the following start-up procedures:
 - 1. Energize circuits.
 - 2. Adjust operating controls.
 - 3. Adjust hot water outlet temperature setting.

3.7 TRAINING

- A. General: At a time mutually agreed upon between the Owner and Contractor, provide the services of a factory trained and authorized representative to train Owner's designated personnel for a minimum of two hours on the operation and maintenance of the equipment provided under this section.
- B. Content: Training shall include but not be limited to:
 - 1. Overview of the system and/or equipment as it relates to the facility as a whole.
 - 2. Operation and maintenance procedures and schedules related to startup and shutdown, troubleshooting, servicing, preventive maintenance and appropriate operator intervention.
 - 3. Review data included in the operation and maintenance manuals. Refer to Division 1 Section "Operating and Maintenance Data."
- C. Certification: Contractor shall submit to the Engineer a certification letter stating that the Owner's designated representative has been trained as specified herein. Letter shall include date, time, attendees and subject of training. The certification letter shall be signed by the Contractor and the Owner's representative indicating agreement that the training has been provided.
- D. Schedule: Schedule training with Owner with at least 7 days' advance notice.

END OF SECTION

SECTION 15440 (224000) - PLUMBING FIXTURES

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes plumbing fixtures and trim, fittings, and accessories, appliances, appurtenances, equipment, and supports associated with plumbing fixtures.
- B. Related Sections: The following Sections contain requirements that relate to this Section:
 - 1. Division 22 Section "General Duty Valves for Plumbing Piping" for valves used as supply stops.

1.2 DEFINITIONS

- A. Accessible: Describes a plumbing fixture, building, facility, or portion thereof that can be approached, entered, and used by physically handicapped people.
- B. Accessory: Device that adds effectiveness, convenience, or improved appearance to a fixture but is not essential to its operation.
- C. Appliance: Device or machine designed and intended to perform a specific function.
- D. Appurtenance: Device or assembly designed to perform some useful function when attached to or used with a fixture.
- E. Equipment: Device used with plumbing fixtures or plumbing systems to perform a certain function for plumbing fixtures but that is not part of the fixture.
- F. Fitting: Fitting installed on or attached to a fixture to control the flow of water into or out of the fixture.
- G. Fixture: Installed receptor connected to the water distribution system, that receives and makes available potable water and discharges the used liquid or liquid-borne wastes directly or indirectly into the drainage system. The term "Fixture" means the actual receptor, except when used in a general application where terms "Fixture" and "Plumbing Fixture" include associated trim, fittings, accessories, appliances, appurtenances, support, and equipment.
- H. Roughing-In: Installation of piping and support for the fixture prior to the actual installation of the fixture.
- I. Support: Device normally concealed in building construction, for supporting and securing plumbing fixtures to walls and structural members. Supports for urinals, lavatories, and sinks are made in types suitable for fixture construction and the mounting required. Categories of supports are:
 - 1. Carrier: Floor-mounted support for wall-mounted water closet, and support fixed to wall construction for wall-hung fixture.
 - 2. Chair Carrier: Support for wall-hung fixture, having steel pipe uprights that transfer weight to the floor.
 - 3. Chair Carrier, Heavy Duty: Support for wall-hung fixture, having rectangular steel uprights that transfer weight to the floor.
 - 4. Reinforcement: Wood blocking or steel plate built into wall construction, for securing fixture to wall.
- J. Trim: Hardware and miscellaneous parts, specific to a fixture and normally supplied with it required to complete fixture assembly and installation.

- K. Lead Free: Refers to the wetted surface of pipe, fittings and fixtures in potable water systems that have a weighted average lead content $\leq 0.25\%$ per Safe Drinking Water Act as amended January 4th 2011 Section 1417.

1.3 SUBMITTALS

- A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections.
 - 1. Product data for each type of plumbing fixture specified, including fixture and trim, fittings, accessories, appliances, appurtenances, equipment, supports, construction details, dimensions of components, and finishes.
 - 2. Wiring diagrams for field-installed wiring of electrically operated units.
 - 3. Maintenance data for inclusion in Operating and Maintenance Manual specified in Division 1 and Division 22 Section "General Plumbing Requirements."
- B. Submit third party certification that faucets and trim for domestic water distribution for drinking or cooking comply with NSF 61 Annex G and / or NSF 372. The following faucets and trim need not comply:
 - 1. Electronic faucets
 - 2. Service sink faucets
 - 3. Flush valves
 - 4. Shower valves and heads

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements: Comply with requirements of ICC Standard A117.1, "Accessible and Usable Buildings and Facilities" and "2010 ADA Standards for Accessible Design" with respect to plumbing fixtures for individuals with disabilities.
- B. Listing and Labeling: Provide electrically operated fixtures specified in this Section that are listed and labeled.
 - 1. The terms "listed" and "labeled" shall be as defined in the National Electrical Code, Article 100.
 - 2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7.
- C. Comply with NSF 61 Annex G and / or NSF 372 for wetted surfaces of faucets and trim containing no more than 0.25% lead by weight for domestic water distribution for drinking or cooking.
- D. Design Concept: The drawings indicate types of plumbing fixtures and are based on the specific descriptions, manufacturers, models, and numbers indicated. Plumbing fixtures having equal performance characteristics by other manufacturers may be considered provided that deviations in dimensions, operation, color or finish, or other characteristics are minor and do not change the design concept or intended performance as judged by the Architect. Burden of proof for equality of plumbing fixtures is on the proposer.

1.5 SPARE PARTS

- A. Deliver spare parts to Owner. Furnish spare parts described below matching products installed, packaged with protective covering for storage, and identified with labels clearly describing contents.
- B. Faucet Washers and O-rings: Furnish quantity of identical units not less than 10 percent of amount of each installed.
- C. Faucet Cartridges and O-rings: Furnish quantity of identical units not less than 5 percent of amount of each installed.

- D. Flushometer Repair Kits: Furnish quantity of identical units not less than 10 percent of amount of each flushometer installed.
- E. Provide individual metal boxes or a hinged-top wood or metal box having separate compartments for each type and size of above extra materials.
- F. Toilet Seats: Furnish quantity of identical units not less than 5 percent of amount of each type toilet seat installed.
- G. Filter Cartridges: Furnish quantity of identical filter cartridges not less than 50 percent of amount of each type and size installed.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products in each category, by one of the following listed for that category:
 - 1. Water Closets:
 - a. American Standard, Inc.
 - b. Gerber Plumbing Fixture Corp.
 - c. Kohler Co.
 - d. Sloan Valve Co.
 - e. TOTO KIKI USA, Inc.
 - f. Zurn Plumbing Products Group
 - 2. Urinals:
 - a. American Standard, Inc.
 - b. Gerber Plumbing Fixture Corp.
 - c. Kohler Co.
 - d. Sloan Valve Co.
 - e. TOTO KIKI USA, Inc.
 - f. Zurn Plumbing Products Group
 - 3. Lavatories:
 - a. Acorn Engineering Co.
 - b. American Standard, Inc.
 - c. Gerber Plumbing Fixture Corp.
 - d. Kohler Co.
 - e. PROFLO
 - f. Sloan Valve Co.
 - g. TOTO KIKI USA, Inc.
 - h. Zurn Plumbing Products Group
 - 4. Sinks:
 - a. American Standard, Inc.
 - b. Elkay Manufacturing Co.
 - c. Franke
 - d. Just Manufacturing Co.
 - e. Kohler Co.
 - 5. Service Sinks:
 - a. American Standard, Inc.
 - b. Just Manufacturing Co.
 - c. Kohler Co.
 - 6. Mop Basins:
 - a. Acorn Engineering Co.
 - b. Fiat Products.
 - c. Florestone Products Co., Inc.

- d. Stern-Williams Co., Inc.
- 7. Water Coolers:
 - a. Acorn / Aqua
 - b. Elkay Manufacturing Co.
 - c. Halsey Taylor; A Household International Co.
 - d. Haws Drinking Faucet Co.
- 8. Outlet Boxes:
 - a. Guy Gray Manufacturing Co., Inc.
 - b. Symmons Industries, Inc.
 - c. Oatey Co.
- 9. Emergency Equipment:
 - a. Bradley Corp.
 - b. Chicago Faucet Co.
 - c. ENCON Safety Products
 - d. Guardian Equipment.
 - e. Haws Drinking Faucet Co.
 - f. Speakman Co.
 - g. Stingray Systems
 - h. Water Saver Faucet Co.
- 10. Toilet Seats:
 - a. Bemis Mfg. Co.
 - b. Beneke Div.; Sanderson Plumbing Products, Inc.
 - c. Church Seat Co.
 - d. Kohler Co.
 - e. Olsonite Corp.
 - f. Sperzel Industries, Inc.
- 11. Flushometers – Piston Type:
 - a. American Standard, Inc
 - b. Sloan Valve Co.
 - c. Zurn Industries, Inc.; Flush Valve Operations.
- 12. Commercial/Industrial Cast-Brass Faucets:
 - a. Chicago Faucet Co.
 - b. Delta-Commercial
 - c. Speakman Co.
 - d. T & S Brass and Bronze Works, Inc.
 - e. Zurn Industries, LTD. “Aqua Spec”
- 13. Sensor-Operated Faucets and Devices:
 - a. Sloan Valve Co.
 - b. Zurn Industries, LTD. “Aqua Spec”
- 14. Stop Valves & Supplies:
 - a. Brass Craft Subsidiary; Masco Co.
 - b. Engineered Brass Company
 - c. McGuire Manufacturing Co., Inc.
 - d. PROFLO
 - e. Watts Brass and Tubular
 - f. Zurn Industries
- 15. P-traps, Drains & Miscellaneous Fittings:
 - a. Brass Craft Subsidiary; Masco Co.
 - b. Dearborn Brass
 - c. Engineered Brass Company
 - d. McGuire Manufacturing Co., Inc.
 - e. PROFLO
 - f. Watts Brass and Tubular
 - g. Zurn Industries
- 16. Supports:
 - a. Josam Co.

- b. Smith (Jay R.) Mfg. Co.
 - c. Wade Div.; Tyler Pipe.
 - d. Watts Drainage Products
 - e. Zurn Industries, Inc.; Hydromechanics Div.
 - f. Mifab Manufacturing, Inc.
17. Insulation Kits
- a. Brocar
 - b. McGuire
 - c. Plumberex
 - d. PROFLO
 - e. Trap-Wrap
 - f. Truebro, Inc.

2.2 PLUMBING FIXTURES, GENERAL

- A. Provide plumbing fixtures and trim, fittings, other components, and supports as specified on the drawings and below:

2.3 FAUCETS

- A. Faucets General: As described on the drawings.
 - 1. Electronic faucets shall be of the same manufacturer as the water closet and urinal flush valves.

2.4 STOP VALVES & SUPPLIES

- A. Supplies General: As described on the drawings.
 - 1. Exposed piping and parts shall be polished chrome plated.

2.5 P-TRAPS, DRAINS AND MISCELLANEOUS FITTINGS:

- A. Fittings General: As described on the drawings, except as listed below.
 - 1. Exposed piping and fittings shall be polished chrome plated.
 - 2. Fittings installed concealed inside a plumbing fixture or within wall construction may be without chrome plate finish.
 - 3. Fitting and faucet bodies for domestic water distribution shall be of lead free brass or lead free cast bronze.
- B. Sink Continuous Wastes: Polished chrome-plated, tubular brass, 1-1/2 inches, 17 gauge, with brass nuts on slip inlets, and of configurations indicated.
- C. Scullery sink Continuous Wastes: Polished chrome-plated, tubular brass, 2 inches, 17 gauge, with brass nuts on slip inlets, and of configurations indicated.
- D. Escutcheons: Wall flange with set screw.
- E. Escutcheons:
- F. Deep Pattern Escutcheons: Wall flange with set screw or sheet steel wall flange with friction clips, of depth adequate to conceal protruding roughing-in fittings.

2.6 FLUSHOMETERS

- A. Provide flushometers compatible with fixtures, with features and of consumption indicated As described on the drawings.

1. Exposed metal parts shall be polished chrome plated.
2. Flush valves installed within wall construction may be without chrome plate finish.

2.7 TOILET SEATS

- A. General: As described on the drawings.

2.8 PLUMBING FIXTURE SUPPORTS

- A. Supports: ASME A112.6.1M, categories and types as required for wall-hanging fixtures specified, and wall reinforcement.
- B. Support categories are:
 1. Carriers: Supports for wall-hanging water closets and fixtures supported from wall construction. Water closet carriers shall have an additional faceplate and coupling when used for wide pipe spaces. Provide tiling frame or setting gauge with carriers for wall-hanging water closets.
 2. Chair Carriers: Supports with steel pipe uprights for wall-hanging fixtures. Urinal chair carriers shall have bearing plates.
 3. Chair Carriers, Heavy Duty: Supports with rectangular steel uprights for wall-hanging fixtures.
 4. Reinforcement: 2-inch by 4-inch wood blocking between studs or 1/4-inch by 6-inch steel plates attached to studs, in wall construction, to secure floor-mounted and special fixtures to wall.
- C. Support Types: Provide support of category specified, of type having features required to match fixture.
- D. Provide supports specified as part of fixture description, in lieu of category and type requirements above.

2.9 INSULATION KITS

- A. Insulation kits for lavatory and sink waste and supplies of vinyl plastic with reusable fasteners and openings for access to supply stop handles.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Install fixtures, trim and supports in accordance with manufacturer's installation instructions.

3.2 APPLICATION

- A. Install plumbing fixtures and specified components, in accordance with designations and locations indicated on Drawings.
- B. Install supports for plumbing fixtures in accordance with categories indicated, and of type required:
 1. Carriers for following fixtures:
 - a. Wall hanging lavatories
 - b. Wall hanging electric water coolers and drinking fountains.
 - c. Wall-hanging fixtures supported from wall construction.
 2. Chair carriers for the following fixtures:
 - a. Wall-hanging urinals.
 - b. Wall-hanging lavatories and sinks.
 - c. Wall-hanging drinking fountains and electric water coolers.
 3. Heavy-duty chair carriers for the following fixtures:
 - a. Accessible lavatories.
 - b. Fixtures where specified.

4. Reinforcement for the following fixtures:
 - a. Floor-mounted lavatories required to be secured to wall.
 - b. Floor-mounted sinks required to be secured to wall.
 - c. Recessed, box-mounted electric water coolers.
 - d. Wall mounted and mop sink faucets.
 - e. Urinal flush valve solid pipe ring supports.

3.3 INSTALLATION OF PLUMBING FIXTURES

- A. Install plumbing fixtures level and plumb, in accordance with fixture manufacturers' written installation instructions, roughing-in drawings, and referenced standards.
- B. Install floor-mounted, floor-outlet water closets with closet flanges and gasket seals.
- C. Install wall-hanging, back-outlet urinals with gasket seals.
- D. Fasten wall-hanging plumbing fixtures securely to supports attached to building substrate when supports are specified, and to building wall construction where no support is indicated.
- E. Fasten floor-mounted fixtures and special fixtures having holes for securing fixture to wall construction, to reinforcement built into walls.
- F. Fasten wall-mounted fittings to reinforcement built into walls.
- G. Fasten counter-mounting-type plumbing fixtures to casework.
- H. Secure supplies behind wall or within wall pipe space, providing rigid installation.
- I. Set mop basins in leveling bed of cement grout.
- J. Install stop valve in an accessible location in each water supply to each fixture.
- K. Install trap on fixture outlet except for fixtures having integral trap.
- L. Install escutcheons at each wall, floor, and ceiling penetration in exposed finished locations and within cabinets and millwork. Use deep pattern escutcheons where required to conceal protruding pipe fittings.
- M. Seal fixtures to walls, floors, and counters using a sanitary-type, one-part, mildew-resistant, silicone sealant in accordance with sealing requirements specified in Division 7 Section "Joint Sealers." Match sealant color to fixture color.
- N. Install insulation kits on ADA compliant sink and lavatory waste, continuous wastes, hot and cold water supplies where indicated on the drawings and as required by the ADA.

3.4 CONNECTIONS

- A. Piping installation requirements are specified in other sections of Division 22. The Drawings indicate general arrangement of piping, fittings, and specialties. The following are specific connection requirements:
 1. Install piping connections between plumbing fixtures and piping systems and plumbing equipment specified in other sections of Division 22.
 2. Install piping connections indicated between appliances and equipment specified in other sections, direct connected to plumbing piping systems.

3.5 FIELD QUALITY CONTROL

- A. Inspect each installed fixture for damage. Replace damaged fixtures and components.
- B. Test fixtures to demonstrate proper operation upon completion of installation and after units are water pressurized. Replace malfunctioning fixtures and components, then retest. Repeat procedure until all units operate properly.

3.6 ADJUSTING AND CLEANING

- A. Operate and adjust faucets and controls. Replace damaged and malfunctioning fixtures, fittings, and controls.
- B. Adjust water pressure at electric water coolers, and faucets, shower valves, and flushometers having controls, to provide proper flow and stream.
- C. Replace washers of leaking and dripping faucets and stops.
- D. Clean fixtures, fittings, and spout and drain strainers with manufacturers' recommended cleaning methods and materials.
- E. Adjust faucet wrist blade handles perpendicular to the spout while in the closed position.
- F. Review the data in Operating and Maintenance Manuals. Refer to Division 1 Section "Project Closeout."
- G. Set each shower valve temperature limit stop to 110°F. Perform work after the shower head is installed and the domestic water heater is in operation. Allow the hot water to run for 5 minutes minimum or until temperature reaches equilibrium. Allow cold to run for 5 minutes minimum or until temperature reaches equilibrium. Provide the architect a report and schedule indicating the hot, cold and mixed maximum water temperature at each shower.

3.7 FIXTURE SCHEDULE

- A. Provide plumbing fixtures as specified on the drawings.
- B. Install rough-in for plumbing fixtures as scheduled on the drawings.

3.8 MOUNTING HEIGHTS SCHEDULE:

- A. Refer to the architectural drawings for plumbing fixture mounting heights. Unless indicated otherwise, install plumbing fixtures with the mounting heights as listed below with final approval by the Architect:

FIXTURE	MOUNTING HEIGHT
Lavatory or Sink	
Standard Height	31" floor to rim
ADA Accessible	34" floor to rim
Child Height	24" floor to rim
Urinal	
Standard Height	24" floor to rim
ADA Accessible	17" floor to rim
Child Height	14" floor to rim
Water Closet	
Standard	15" floor to rim
ADA Accessible	17" to 19" floor to top of seat

Child Height	10" floor to rim
Water Cooler or Drinking Fountain	
Standard Height	41" floor to spout
ADA Accessible	36" floor to spout
Child height	30" floor to spout
Shower Valves	
Standard Height	48" men and 42" women floor to centerline
ADA Accessible	38" minimum to 48" maximum floor to centerline
Shower heads	
Standard Height	6'-6" men, 6'-0" women floor to centerline
Ice Maker Outlet Boxes	24" floor to center of box
Janitor's Sink Faucet Fittings	42" floor to centerline
Hose Bibbs	36" AFF to centerline
Non Freeze Wall Hydrant	18" AFG to centerline

END OF DIVISION 23 TABLE OF CONTENTS

PAGE INTENTIONALLY LEFT BLANK

SECTION 15010 (230010) - GENERAL MECHANICAL REQUIREMENTS

PART 1 - GENERAL REQUIREMENTS

1.1 DESCRIPTION OF WORK

- A. This Division requires the furnishing and installing of complete functioning systems, and each element thereof, as specified or indicated on the Drawings and Specifications or reasonably inferred; including every article, device or accessory (whether or not specifically called for by item) reasonably necessary to facilitate each system's functioning as indicated by the design and the equipment specified. Elements of the work include materials, labor, supervision, supplies, equipment, transportation, and utilities.
- B. Division 23 of the Specifications and Drawings numbered with prefixes M, MP or ME, or MEP generally describe these systems, but the scope of the Mechanical work includes all such work indicated in the Contract Documents: Instructions to Bidders; Proposal Form; General Conditions; Supplementary General Conditions; Architectural, Structural, Mechanical, Plumbing and Electrical Drawings and Specifications; and Addenda.
- C. The Drawings have been prepared diagrammatically intended to convey the scope of work, indicating the intended general arrangement of the equipment, fixtures, ductwork, piping, etc. without showing all the exact details as to elevations, offsets, control lines, and other installation requirements. The Contractor shall use the Drawings as a guide when laying out the work and shall verify that materials and equipment will fit into the designated spaces, and which, when installed per manufacturers requirements, will ensure a complete, coordinated, satisfactory and properly operating system.

1.2 QUALITY ASSURANCE

- A. All work under this Division shall be executed in a thorough professional manner by competent and experienced workmen licensed to perform the Work specified.
- B. All work shall be installed in strict conformance with manufacturers' requirements, recommendations, and installation instructions. Equipment and materials shall be installed in a neat and professional manner and shall be aligned, leveled, and adjusted for satisfactory operation.
- C. Material and equipment shall be new, shall be of the best quality and design, shall be current model of the manufacturer, shall be free from defects and imperfections and shall have markings or a nameplate identifying the manufacturer and providing sufficient reference to establish quality, size and capacity. Material and equipment of the same type shall be made by the same manufacturer whenever practicable.
- D. Unless specified otherwise, manufactured items shall have been installed and used, without modification, renovation, or repair for not less than one year prior to date of bidding for this project.

1.3 CODES, REFERENCES AND STANDARDS

- A. Execute Work in accordance with the National Fire Protection Association and all Local, State, and National codes, ordinances and regulations in force governing the particular class of Work involved. Obtain timely inspections by the constituted authorities, and upon final completion of the Work obtain and deliver to the Owner executed final certificates of acceptance from the Authority Having Jurisdiction.
- B. Any conflict between these Specifications and accompanying Drawings and the applicable Local, State and Federal codes, ordinances and regulations shall be reported to the Architect in sufficient time, prior to the

opening of Bids, to prepare the Supplementary Drawings and Specification Addenda required to resolve the conflict.

- C. The governing codes are minimum requirements. Where these Drawings and Specifications exceed the code requirements, these Drawings and Specification shall prevail.
- D. All material, manufacturing methods, handling, dimensions, method or installation and test procedure shall conform to but not be limited to the following industry standards and codes:

BOCA	Building Officials Code Administration
CEC	California Energy Code
CMC	California Mechanical Code
UBC	Uniform Building Code
UPC	Uniform Plumbing Code
IBC	International Building Code
IPC	International Plumbing Code
IFC	International Fire Code
IFGC	International Fuel Gas Code
ADA	American Disabilities Act
ADC	Air Diffusion Council
AMCA	Air Movement and Control Association, Inc.
ANSI	American National Standards Institute
AHRI	Air Conditioning, Heating and Refrigeration Institute
ASHRAE	American Society of Heating Refrigerating and Air Conditioning Engineers
ASME	American Society of Mechanical Engineers
ASSE	American Society of Sanitary Engineering
ASTM	American Society of Testing Materials
AWS	American Welding Society
AWWA	American Water Works Association
CISPI	Cast Iron Soil Pipe Institute
ETL	Electrical Testing Laboratories
HI	Hydraulic Institute
MSS	Manufacturer's Standardization Society of the Valve and Fitting Industry
NBFU	National Board of Fire Underwriters
NEC	National Electrical Code
NFPA	National Fire Protection Association
NEMA	National Electrical Manufacturers' Association
OSHA	Occupational Safety and Health Act
PDI	Plumbing and Drainage Institute
SMACNA	Sheet Metal and Air Conditioning Contractors National Association, Inc.
UL	Underwriter's Laboratories

- E. Contractor shall comply with rules and regulations of public utilities and municipal departments affected by connections of services.
- F. All mechanical work shall be performed in compliance with applicable safety regulations, including OSHA regulations. Safety lights, guards, shoring and warning signs required for the performance of the mechanical work shall be provided by the Contractor.

1.4 DEFINITIONS

A. General:

- 1. Furnish: The term "furnish" is used to mean "supply and deliver to the project site, ready for unloading, unpacking, assembly, installation and similar operations."

2. Install: The term “install” is used to describe operations at the project site including the actual “unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations.”
 3. Provide: The term “provide” means “to furnish and install, complete and ready for the intended use. When ‘furnish’, ‘install’, ‘perform’, or ‘provide’ is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of Contractor, “provide” is implied.
 - 4.
 5. Furnished by Owner or Furnished by Others: The item will be furnished by the Owner or Others. It is to be installed and connected under the requirements of this Division, complete and ready for operation, including items incidental to the Work, including services necessary for proper installation and operation. The installation shall be included under the guarantee required by this Division.
 6. Engineer: Where referenced in this Division, “Engineer” is the Engineer of Record and the Design Professional for the Work under this Division, and is a Consultant to, and an authorized representative of, the Architect, as defined in the General and/or Supplementary Conditions. When used in this Division, it means increased involvement by, and obligations to, the Engineer, in addition to involvement by, and obligations to, the “Architect”.
 7. AHJ: The local code and/or inspection agency (Authority) Having Jurisdiction over the Work.
 8. CMATT: Certified Acceptance Mechanical Test Technician. A professional certified to perform acceptance tests and complete the documentation required for nonresidential acceptance tests as required by the California Building Energy Efficiency Standards. Technician shall be certified by an authorized mechanical acceptance test technician certification provider.
 9. NRTL: Nationally Recognized Testing Laboratory, as defined and listed by OSHA in 29 CFR 1910.7 (e.g., UL, ETL, CSA, etc.), and acceptable to the Authority having Jurisdiction (AHJ) over this project. Nationally Recognized Testing Laboratories and standards listed are used only to represent the characteristics required and are not intended to restrict the use of other listed Manufacturers and models that meet the specified criteria.
 10. Substitution: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor. Substitutions include Value Engineering proposals.
 - a. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
 - b. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.
 11. Value Engineering: A systematic method to improve the “value” of goods and services by using an examination of function. Value, as defined, is the ratio of function to cost. Value can therefore be increased by either improving the function or reducing the cost. The goal of VE is to achieve the desired function at the lowest overall cost consistent with required performance.
- B. The terms "approved equal", “equivalent”, or "equal" are used synonymously and shall mean “accepted by or acceptable to the Engineer as equivalent to the item or manufacturer specified”. The term "approved" shall mean labeled, listed, or both, by an NRTL, and acceptable to the AHJ over this project.
- C. The following definitions apply to excavation operations:
1. Additional Excavation: Where excavation has reached required subgrade elevations, if unsuitable bearing materials are encountered, continue excavation until suitable bearing materials are reached. The Contract Sum may be adjusted by an appropriate Contract Modification.
 2. Bedding: Bedding as used in this section refers to the compacted sand or pea gravel installed in the bottom of a trench to immediately support and cover a pipe or duct.
 3. Subbase: as used in this Section refers to the compacted soil layer used in pavement systems between the subgrade and the pavement base course material.
 4. Subgrade: as used in this Section refers to the compacted soil immediately below the slab or pavement system.

5. Unauthorized excavation consists of removal of materials beyond indicated subgrade elevations or dimensions without specific direction from the Architect.

1.5 COORDINATION

- A. The Contractor shall visit the site and ascertain the conditions to be encountered while installing the Work under this Division, verify all dimensions and locations before purchasing equipment or commencing work, and make due provision for same in the bid. Failure to comply with this requirement shall not be considered justification for omission, alteration, incorrect or faulty installation of Work under this Division or for additional compensation for Work covered by this Division.
- B. The Contractor shall refer to Drawings of the other disciplines and to relevant equipment drawings and shop drawings to determine the extent of clear spaces. The Contractor shall make offsets required to clear equipment, beams and other structural members; and to facilitate concealing piping and ductwork in the manner anticipated in the design.
- C. The Contractor shall confirm and coordinate the final location and routing of all mechanical, electrical, plumbing, fire protection, control and audio-visual systems with all architectural features, structural components, and other trades. The contractor shall locate equipment, components, ductwork, piping, conduit, and related accessories to maintain the desired ceiling heights as indicated on the architectural drawings. The contractor shall inform the architect of any areas where conflicts may prevent the indicated ceiling height from being maintained. The contractor shall not proceed with any installation in such areas until the architect has given written approval to proceed or has provided modified contract drawings or written instructions to resolve the apparent conflict.
- D. The Contractor shall provide materials with trim which will fit properly the types of ceiling, wall, or floor finishes actually installed.
- E. The Contractor shall maintain a foreman on the jobsite at all times to coordinate the work with other contractors and subcontractors so that various components of the mechanical systems will be installed at the proper time, will fit the available space, and will allow proper service access to the equipment. Carry on the Work in such a manner that the Work of the other contractors and trades will not be handicapped, hindered, or delayed at any time.
- F. Work of this Division shall progress according to the "Construction Schedule" as established by the Prime Contractor and their subcontractors and as approved by the Architect. Cooperate in establishing these schedules and perform the Work under this Division, in a timely manner in conformance with the construction schedule so as to ensure successful achievement of schedule dates.

1.6 MEASUREMENTS AND LAYOUTS

- A. The drawings are schematic in nature, but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the building. Figured dimensions shall be taken in preference to scale dimensions. Determine exact locations by job measurements, by checking the requirements of other trades, and by reviewing the Contract Documents. The Contractor will be held responsible for errors which could have been avoided by proper checking and inspection.

1.7 SUBMITTALS

- A. Refer to Division 01 and General Conditions for submittal requirements in addition to requirements specified herein.
- B. Submittals and shop drawings shall not contain the firm name, logo, seal, or signature of the Engineer. They shall not be copies of the work product of the Engineer. If the Contractor desires to use

elements of such product, the license agreement for transfer of information obtained from the Engineer must be used.

- C. Assemble and submit for review manufacturer product literature for material and equipment to be furnished and/or installed under this Division. Literature shall include shop drawings, manufacturer product data, performance sheets, samples, and other submittals required by this Division as noted in each individual Section. Provide the number of submittals required by Division 01; if hard-copy sets are provided, submit a minimum of seven (7) sets. General product catalog data not specifically noted to be part of the specified product will be rejected and returned without review.
- D. Separate submittals according to individual specification sections. Only resubmit those sections requested for resubmittal.
- E. Provide submittals in sufficient detail so as to demonstrate compliance with these Contract Documents and the design concept. Highlight, mark, list or indicate the materials, performance criteria and accessories that are being proposed. Illegible submittals will be rejected and returned without review.
- F. Refer to individual Sections for additional submittal requirements.
- G. Transmit submittals as early as required to support the project schedule. Allow two weeks for Engineer review time, plus to/from mailing time via the Architect, plus a duplication of this time for resubmittal if required. Transmit submittals as soon as possible after Notice to Proceed and before Mechanical construction starts.
- H. Before transmitting submittals and material lists, verify that the equipment submitted is mutually compatible with and suitable for the intended use. Verify that the equipment will fit the available space and maintain manufacturer recommended service clearances. If the size of equipment furnished makes necessary any change in location, or configuration, submit a shop drawing showing the proposed layout.
- I. Submittals shall contain the following information:
 - 1. The project name.
 - 2. The applicable specification section and paragraph.
 - 3. Equipment identification acronym as used on the drawings.
 - 4. The submittal date.
 - 5. The Contractor's stamp, which shall certify that the stamped drawings have been checked by the Contractor, comply with the Drawings and Specifications, and have been coordinated with other trades.
 - 6. Submittals not so identified will be returned to the Contractor without action.
- J. Refer to Division 01 for acceptance of electronic submittals for this project. For electronic submittals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 01. Contractor shall notify the Architect and Engineer that the submittals have been posted. If electronic submittal procedures are not defined in Division 01, Contractor shall include the website, user name and password information needed to access the submittals. For submittals sent by e-mail, Contractor shall copy the Architect and Engineer's designated representatives. Contractor shall allow for the Engineer review time as specified above in the construction schedule. Contractor shall submit only the documents required to purchase the materials and/or equipment in the submittal.
- K. The checking and subsequent acceptance by the Engineer and/or Architect of submittals shall not relieve responsibility from the Contractor for (1) deviations from Drawings and Specifications; (2) errors in dimensions, details, sizes of equipment, or quantities; (3) omissions of components or fittings; and (4) not coordinating items with actual building conditions and adjacent work. Contractor shall request and secure written acceptance from the Engineer and Architect prior to implementing any deviation.
- L. Provide welders' qualification certificates.

1.8 ELECTRONIC DRAWING FILES

- A. In preparation of shop drawings or record drawings, Contractor may, at their option, obtain electronic drawing files in AutoCAD or DXF format from the Engineer for a shipping and handling fee of \$200 for a drawing set up to 12 sheets and \$15 per sheet for each additional sheet. Contact the Architect for Architect's written authorization. Contractor shall request and complete the Electronic File Release Agreement form from the Engineer. Send the form along with a check made payable to Henderson Engineers, Inc. Contractor shall indicate the desired shipping method and drawing format on the attached form. In addition to payment, Architect's written authorization and Engineer's release agreement form must be received before electronic drawing files will be sent.

1.9 SUBSTITUTIONS

- A. Refer to Division 01 and General Conditions for Substitutions in addition to requirements specified herein.
- B. Materials, products, equipment, and systems described in the Bidding Documents establish a standard of required function, dimension, appearance and quality to be met by the proposed substitution.
- C. The base bid shall include only the products from manufacturers specifically named in the drawings and specifications.
- D. Request for Substitution:
 - 1. Complete and send the Substitution Request Form attached at the end of this section for each material, product, equipment, or system that is proposed to be substituted.
 - 2. The burden of proof of the merit of the proposed substitution is upon the proposer.
 - 3. Unless stated otherwise in writing to the Engineer by the Contractor, Contractor warrants to the Engineer, Architect, and Owner the following:
 - a. Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.
 - b. Proposed substitution is consistent with the Contract Documents and will produce indicated results, including functional clearances, maintenance service, and sourcing of replacement parts.
 - c. Proposed substitution has received necessary approvals of authorities having jurisdiction.
 - d. Same warranty will be furnished for proposed substitution as for specified Work.
 - e. If accepted substitution fails to perform as required, Contractor shall replace substitute material or system with that originally specified and bear costs incurred thereby.
 - f. Coordination, installation and changes in the Work as necessary for accepted substitution will be complete in all respects.
- E. Substitution Consideration:
 - 1. No substitutions will be considered unless the Substitution Request Form is completed and attached with the appropriate substitution documentation.
 - 2. No substitutions will be considered prior to receipt of Bids unless written request for approval to bid has been received by the Engineer at least ten (10) calendar days prior to the date for receipt of Bids.
 - 3. If the proposed substitution is approved prior to receipt of Bids, such approval will be stated in an Addendum. Bidders shall not rely upon approvals made in any other manner. Verbal approval will not be given.
 - 4. No substitutions will be considered after the Contract is awarded unless specifically provided in the Contract Documents.

1.10 OPERATION AND MAINTENANCE MANUALS

- A. Refer to Division 01 and General Conditions for Operation and Maintenance Manuals in addition to requirements specified herein.

- B. Submit manuals prior to requesting the final punch list and before all requests for Substantial Completion.
- C. Instruct the Owner's permanent personnel in the proper operation of, startup and shutdown procedures and maintenance of the equipment and components of the systems installed under this Division.
- D. Prior to Substantial Completion of the project, furnish to the Architect, for Engineer's review, and for the Owner's use, four (4) copies of Operation and Maintenance Manuals in labeled, hard-back three-ring binders, with cover, binding label, tabbed dividers and plastic insert folders for Record Drawings. Include local contacts, complete with address and telephone number, for equipment, apparatus, and system components furnished and installed under this Division of the specifications.
- E. Each manual shall contain data listed in each individual Section.
- F. Refer to Division 01 for acceptance of electronic manuals for this project. For electronic manuals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 01. Contractor shall notify the Architect and Engineer that the manuals have been posted. If electronic manual procedures are not defined in Division 01, Contractor shall include the website, user name and password information needed to access the manuals. For manuals sent by e-mail, Contractor shall copy the Architect and Engineer's designated representative.

1.11 SPARE PARTS

- A. Provide to the Owner the spare parts specified in the individual sections in Division 23 of this specification.

1.12 RECORD DRAWINGS

- A. Refer to Division 01 and General Conditions for Record Drawings in addition to requirements specified herein.
- B. A set of work prints of the Contract Documents shall be kept on the jobsite during construction for the purpose of noting changes. During the course of construction, the Contractor shall indicate on these Documents changes made from the original Contract Documents. Particular attention shall be paid to those items which need to be located for servicing. Underground utilities shall be located by dimension from column lines.
- C. At the completion of the project, the Contractor shall obtain, at their expense, reproducible copies of the final drawings and incorporate changes noted on the jobsite work prints onto these drawings. These changes shall be done by a skilled drafter. Each sheet shall be marked "Record Drawing", along with the date. These drawings shall be delivered to the Architect/Engineer.

1.13 TRAINING

- A. Provide training as indicated in each specific section. Schedule training with the Owner at least 7 days in advance. Video record the training sessions in format as agreed to with the Owner. Provide three copies of each session to the Owner and obtain written receipt from the Owner.

1.14 PAINTING

- A. Exposed ductwork and ferrous surfaces, including pipe, pipe hangers, equipment stands and supports [and exposed insulated piping] shall be painted by the Contractor using materials and methods as specified under Division 09 of the Specifications; colors shall be as selected by the Architect.
- B. Factory finishes, shop priming and special finishes are specified in the individual equipment specification sections.

- C. Where factory finishes are provided and no additional field painting is specified, marred or damaged surfaces shall be touched up or refinished so as to leave a smooth, uniform finish.

1.15 DELIVERY, STORAGE AND HANDLING

- A. Refer to Division 01 and General Conditions for Delivery, Storage and Handling in addition to requirements specified herein.
- B. Equipment and material shall be delivered to the job site in their original containers with labels intact, fully identified with manufacturer's name, model, model number, type, size, capacity and Underwriter's Laboratories, Inc. labels and other pertinent information necessary to identify the item.
- C. Deliver, receive, handle and store equipment and materials at the job site in the designated area and in such a manner as to prevent equipment and materials from damage and loss. Store equipment and materials delivered to the site on pallets and cover with waterproof, tear resistant tarp or plastic or as required to keep equipment and materials dry. Follow manufacturer's recommendations, and at all times, take every precaution to properly protect equipment and material from damage, to include the erection of temporary shelters to adequately protect equipment and material stored at the Site. Equipment and/or material which become rusted or damaged shall be replaced or restored by the Contractor to a condition acceptable to the Architect.
- D. The Contractor shall be responsible for the safe storage of their own tools, material and equipment.

1.16 GUARANTEES AND WARRANTIES

- A. Refer to Division 01 and General Conditions for Guarantees and Warranties in addition to requirements specified herein.
- B. Each system and element thereof shall be warranted against defects due to faulty workmanship, design or material for a period of 12 months from date of Substantial Completion, unless specific items are noted to carry a longer warranty in the Construction Documents or manufacturer's standard warranty. The Contractor shall remedy defects occurring within a period of one year from the date of Substantial Completion or as stated in the General Conditions.
- C. The following additional items shall be guaranteed:
 - 1. Piping shall be free from obstructions, holes or breaks of any nature.
 - 2. Insulation shall be effective.
 - 3. Proper circulation of fluid in each piping system.
- D. The above guarantees shall include both labor and material; and repairs or replacements shall be made without additional cost to the Owner.
- E. The remedial work shall be performed promptly, upon written notice from the Architect or Owner.
- F. At the time of Substantial Completion, deliver to the Owner warranties with terms extending beyond the one year guarantee period, each warranty instrument being addressed to the Owner and stating the commencement date and term.

1.17 TEMPORARY FACILITIES

- A. Refer to Division 01 and General Conditions for Temporary Facilities requirements in addition to requirements specified herein.
- B. Temporary Utilities: The types of services required include, but are not limited to, water, sewerage, surface drainage and gas. When connecting to existing franchised utilities for required services, comply with

service companies' recommendations on materials and methods, or engage service companies to install services. Locate and relocate services (as necessary) to minimize interference with construction operations.

1. Provide the necessary backflow prevention devices where connecting to the potable water system. Protect water service from freezing by draining system or by providing adequate heat. Where non-potable water is used, mark each outlet with health hazard warning signs.
2. Sewer Sediment: Maintain sewers and temporary connecting sewers in a clean, non-clogged condition during construction period.

C. Construction Facilities: Provide facilities reasonably required to perform construction operations properly and adequately.

1. Enclosures: When temporary enclosures are required to ensure adequate workmanship, weather protection and ambient conditions required for the work, provide fire-retardant treated lumber and plywood; provide tarpaulins with UL label and flame spread of 15 or less; provide translucent type (nylon reinforced polyethylene) where daylighting of enclosed space would be beneficial for workmanship, and reduce use of temporary lighting.
2. Heating: Provide heat, as necessary, to protect work, materials and equipment from damage due to dampness and cold. In areas where building is occupied, maintain a temperature not less than 65 degrees Fahrenheit. Use steam, hot water, or gas from piped distribution system where available. Where steam, hot water or piped gas are not available, heat with self-contained LP gas or fuel oil heaters, bearing UL, FM or other approval labels appropriate for application. Vent fuel-burning heaters, and equip units with individual-space thermostatic controls. Use electric-resistance space heaters only where no other, more energy-efficient, type of heater is available and allowable.

1.18 PROJECT CONDITIONS

A. Environmental Conditions: Apply joint sealers under temperature and humidity conditions within the limits permitted by the joint sealer manufacturer. Do not apply joint sealers to wet substrates.

PART 2 - PRODUCTS AND MATERIALS

2.1 NOT USED

A. -

PART 3 - EXECUTION

3.1 PERMITS

A. Secure and pay for permits required in connection with the installation of the Mechanical Work. Arrange with the various utility companies for the installation and connection of required utilities for this facility and pay charges associated therewith including connection charges and inspection fees, except where these services or fees are designated to be provided by others.

3.2 ACCEPTANCE TESTING REQUIREMENTS

A. Perform acceptance test procedures in accordance with the specifications listed in the Reference Joint Appendices for the Building Energy Efficiency Standards of California. Reference the Non-Residential Certificate of Compliance (NRCC) forms on the drawings for the systems which shall be tested.

B. Submit Non-Residential Certificate of Acceptance (NRCA) forms for each system for which the CMATT is responsible.

3.3 EXISTING UTILITIES

- A. Schedule and coordinate with the Utility Company, Owner and with the Engineer connection to, or relocation of, or discontinuation of normal utility services from existing utility lines. Premium time required for any such work shall be included in the bid.
- B. Existing utilities damaged due to the operations of utility work for this project shall be repaired to the satisfaction of the Owner or Utility Company without additional cost.
- C. Utilities shall not be left disconnected at the end of a work day or over a weekend unless authorized by representatives of the Owner or Engineer.
- D. Repairs and restoration of utilities shall be made before workmen leave the project at the end of the workday in which the interruption takes place.
- E. Contractor shall include in their bid the cost of furnishing temporary facilities to provide services during interruption of normal utility service.

3.4 EXCAVATION AND BACKFILLING

- A. Refer to Division 01, Division 02, and Division 31, Geotechnical Soils Report and General Conditions for Excavation and Backfilling in addition to the requirements specified herein.
- B. Perform excavation of every description, of whatever substance encountered and to the depth required in connection with the installation of the work under this Division. Excavation and Trenching shall be in conformance with applicable Division and section of the General Specifications.
- C. Roads, alleys, streets and sidewalks damaged during this work shall be restored to the satisfaction of Authorities Having Jurisdiction.
- D. Trenches close to walks or columns shall not be excavated without prior consultation with the Architect.
- E. Erect barricades around excavations and trenches for safety. Provide an adequate number of amber lights on or near the work and keep them burning from dusk to dawn. Contractor shall be held responsible for any damage that any parties may sustain due to neglecting the necessary precautions when performing the work.
- F. Slope sides of excavations and trenches to comply with Geotechnical Report, local, state and federal codes and ordinances. Shore and brace as required for stability of excavation.
- G. Shoring and Bracing: Establish requirements for trench shoring and bracing to comply with local, state and federal codes and authorities. Maintain shoring and bracing in excavations and trenches regardless of time period excavations and trenches will be open.
 - 1. Remove shoring and bracing when no longer required. Where sheeting is allowed to remain, cut top of sheeting at an elevation of 30 inches below finished grade elevation.
- H. Install sediment and erosion control measures in accordance with local codes and ordinances.
- I. Dewatering of Excavation and Trenches: Prevent surface water and subsurface or ground water from flowing into excavations and trenches.
 - 1. Do not allow water to accumulate in excavation or trenches. Remove water to prevent softening of bearing materials. Provide and maintain dewatering system components necessary to convey water away from excavations and trenches.
 - 2. Establish and maintain temporary drainage ditches and other diversions outside excavation and trench limits to convey surface water to collecting or run-off areas.

3. Do not use trench excavations as temporary drainage ditches. In no case shall sewers be used as drains for such water.
- J. Material Storage: Stockpile satisfactory excavated materials where directed, until required for backfill or fill. Place, grade, and shape stockpiles for proper drainage.
1. Locate and retain soil materials away from edge of excavations and trenches. Do not store within drip-line of trees indicated to remain.
 2. Remove and legally dispose of excess excavated materials and materials not acceptable for use as backfill or fill.
- K. Excavation for Underground Tanks, Basins, and Mechanical Structures: Conform to elevations and dimensions shown within a tolerance of plus or minus 0.10 foot; plus a sufficient distance to permit placing and removal of concrete formwork, installation of services, other construction, and for inspection.
1. Excavate, by hand, areas within drip-line of large trees. Protect the root system from damage and dry-out. Maintain moist conditions for root system and cover exposed roots with burlap. Paint root cuts of 1 inch in diameter and larger with emulsified asphalt tree paint.
 2. Take care not to disturb bottom of excavation. Excavate by hand to final grade just before concrete reinforcement is placed.
- L. Trenching: Excavate trenches as follows:
1. Excavate trenches to the uniform width, sufficiently wide to provide ample working room and a minimum of 6 to 9 inches clearance on both sides of pipe and equipment.
 2. Excavate trenches to depth indicated or required to establish indicated slope and invert elevations. Beyond building perimeter, excavate trenches to an elevation below frost line.
 3. Limit the length of open trench to that in which pipe can be installed, tested, and the trench backfilled within the same day.
 4. Where rock is encountered, carry excavation below required elevation and backfill with a layer of sand or pea gravel prior to installation of pipe. Provide a minimum of 6 inches of sand or pea gravel cushion between rock bearing surface and pipe.
 5. Excavate trenches for piping and equipment with bottoms of trench to accurate elevations for support of pipe and equipment bedding on undisturbed soil.
- M. Cold Weather Protection: Protect excavation and trench bottoms against freezing when atmospheric temperature is less than 35°F.

3.5 CUTTING AND PATCHING

- A. Cut walls, floors, ceilings, and other portions of the facility as required to install work under this Division.
- B. Obtain permission from the Architect prior to cutting. Do not cut or disturb structural members without prior approval from the Architect and Structural Engineer.
- C. For post-tension slabs, x-ray slab and closely coordinate all core drill locations with Architect and Structural Engineer prior to performing any work. Obtain approval from Architect and Structural Engineer for all core drills and penetrations at least four days prior to performing work.
- D. Penetrations shall be made as small as possible while maintaining required clearances between the building element penetrated and the system component.
- E. Patch around openings to match adjacent construction, including fire ratings, if applicable.
- F. Repair and refinish areas disturbed by work to the condition of adjoining surfaces in a manner satisfactory to the Architect.

3.6 CLEANING

- A. Dirt and refuse resulting from the performance of the work shall be removed from the premises as required to prevent accumulation. The Mechanical Contractor shall cooperate in maintaining reasonably clean premises at all times.
- B. Immediately prior to the final inspection, the Mechanical Contractor shall clean material and equipment installed under the Mechanical Contract. Dirt, dust, plaster, stains, and foreign matter shall be removed from surfaces including components internal to equipment. Damaged finishes shall be touched-up and restored to their original condition.

3.7 SUBSTANTIAL COMPLETION REVIEW

- A. Prior to requesting inspection for "CERTIFICATE OF SUBSTANTIAL COMPLETION", the Contractor shall complete the following items:
 - 1. Submit complete Operation and Maintenance Manuals.
 - 2. Submit complete Record Drawings.
 - 3. Perform special inspections as required in each individual Section.
 - 4. Start-up testing of systems.
 - 5. Removal of temporary facilities from the site.
 - 6. Comply with requirements for Substantial Completion in the "General Conditions".
- B. The Contractor shall request in writing a review for Substantial Completion. The Contractor shall give the Architect/Engineer at least seven (7) days notice prior to the review.
- C. The Contractor's written request shall state that the Contractor has complied with the requirements for Substantial Completion.
- D. Upon receipt of a request for review, the Architect/Engineer will either proceed with the review or advise the Contractor of unfulfilled requirements.
- E. If the Contractor requests a site visit for Substantial Completion review prior to completing the above mentioned items, the Contractor shall reimburse the Architect/Engineer for time and expenses incurred for the visit.
- F. Upon completion of the review, the Architect/Engineer will prepare a "final list" of outstanding items to be completed or corrected for final acceptance.
- G. Omissions on the "final list" shall not relieve the Contractor from the requirements of the Contract Documents.
- H. Prior to requesting a final review, the Contractor shall submit a copy of the final list of items to be completed or corrected. The Contractor shall state in writing that each item has been completed, resolved for acceptance or the reason it has not been completed.

END OF SECTION

SUBSTITUTION REQUEST FORM

To Project Engineer: _____ Request # (GC Determined): _____

Project Name: _____

Project No/Phase: _____ Date: _____

Specification Title: _____

Section Number: _____ Page: _____ Article/Paragraph: _____

Proposed Substitution: _____

Manufacturer: _____ Model No.: _____

Address: _____ Phone: _____

History: New product 1-4 years old 5-10 years old More than 10 years old

Differences between proposed substitution and specified Work: _____

Point-by-point comparative data attached – REQUIRED BY ENGINEER

Comparative data may include but not be limited to performance, certifications, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements. Include all information necessary for an evaluation.

Supporting Data Attached: Drawings Product Data Samples
 Tests Reports Other: _____

Reason for not providing specified item: _____

Similar Installation:

Project: _____ Architect: _____

Address: _____ Owner: _____

_____ Date Installed: _____

Proposed substitution affects other parts of Work: No Yes; explain: _____

Substitution Certification Statement:

Unless stated otherwise in writing to the Engineer by the Contractor, Contractor warrants to the Engineer, Architect, and Owner that the:

- ▲ A. Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.
- B. Proposed substitution is consistent with the Contract Documents and will produce indicated results.
- C. Proposed substitution does not affect dimensions and functional clearances.
- D. Proposed substitution has received necessary approvals of authorities having jurisdiction.
- E. Same warranty will be furnished for proposed substitution as for specified Work.
- F. Same maintenance service and source of replacement parts, as applicable, is available.
- G. Proposed substitution will not adversely affect other trades or delay construction schedule.
- H. Coordination, installation, and changes in the Work as necessary for accepted substitution will be complete in all respects.

Submitting Contractor Date Company

Manufacturer's Certification of Equal Quality:

I _____ represent the manufacturer of the Proposed Substitution item and hereby certify and warrant to Architect, Engineer, and Owner that the function and quality of the Proposed Substitution meets or exceeds the Specified Item.

SECTION 15030 (230015) - ELECTRICAL COORDINATION FOR MECHANICAL EQUIPMENT

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section specifies the basic requirements for electrical components which are an integral part of packaged mechanical equipment. These components include, but are not limited to factory furnished motors, starters, and disconnect switches furnished as an integral part of packaged mechanical equipment.
- B. Specific electrical requirements (i.e. horsepower and electrical characteristics) for mechanical equipment are scheduled on the Drawings.
- C. System shall be complete and operational with power and control wiring provided to meet the design intent shown on the drawings and specified within the specification sections.

1.2 SUBMITTALS

- A. No separate submittal is required. Submit product data for motors, starters, and other electrical components with submittal data required for the equipment for which it serves, as required by the individual equipment specification Sections.

1.3 QUALITY ASSURANCE

- A. Electrical components and materials shall be UL labeled.
- B. All electrical equipment provided and the wiring and installation of electrical equipment shall be in accordance with the requirements of this Section and Division 26.

PART 2 - PRODUCTS AND MATERIALS

2.1 GENERAL

- A. The Contractors shall provide all motors, starters, disconnects, wire, conduit, etc. as specified in the Construction Documents. If, however, the Division 23 Contractor furnishes a piece of equipment requiring a different motor, starter, disconnect, wire size, etc. than what is shown and/or intended on the Construction Documents, this Contractor shall coordinate the requirements with any other Contractor and shall be responsible for any additional cost incurred by any other Contractor that is associated with installing the different equipment and related accessories for proper working condition.
- B. Refer to Division 26, "COMMON WORK RESULTS FOR ELECTRICAL" for specification of motor connections.
- C. Refer to Division 26, "ENCLOSED CONTROLLERS" for specification of motor starters.

- D. Refer to Division 26, "ENCLOSED SWITCHES AND CIRCUIT BREAKERS" for specification of disconnect switches and enclosed circuit breakers.

PART 3 - EXECUTION

3.1 CONTRACTOR COORDINATION

- A. Unless otherwise indicated, all motors, equipment, controls, etc. shall be furnished, set in place and wired in accordance with Table 1. Any items not listed but shown on the drawings shall be considered part of the Contract Documents and brought to the attention of the Architect.
- B. The General Contractor is the central authority governing the total responsibility of all trade contractors. Therefore, deviations and clarifications of this schedule are permitted provided the General Contractor assumes responsibility to coordinate the trade contractors different than as indicated herein. If deviations or clarifications to this schedule are implemented, submit a record copy to the Engineer.

TABLE 1: ELECTRICAL REQUIREMENTS FOR MECHANICAL EQUIPMENT

ITEM	FURN	SET	POWER CONTROL	
	BY	BY	WIRING	WIRING
Equipment motors	DIV23m	DIV23m	DIV26	---
Factory furnished motor starters contactors and disconnects	DIV23m	DIV23m	DIV26	DIV23t
Overload heaters DIV23m	DIV26	---	---	---
Loose motor starters, disconnect switches, thermal overloads and heaters.	DIV26	DIV26	DIV26	DIV23t
Variable speed drives	DIV23m	DIV23m	DIV26	DIV23t
Manual operating multi-speed switches	DIV23m	DIV26	DIV26	DIV23t
Control relays	DIV23t	DIV23t	DIV26	DIV23t
Thermostats (low voltage)	DIV23t	DIV23t	---	DIV23t
Thermostats (line voltage)	DIV23m	DIV23m	DIV26	---
Time switches (for mechanical equipment)	DIV23t	DIV23t	DIV26	DIV23t
Control power transformers	DIV23t	DIV23t	DIV26	DIV23t
Control power transformers furnished with equipment	DIV23m	DIV23m	DIV26	DIV23t
Temperature control panels (housing controllers)	DIV23t	DIV23t	DIV26	DIV23t
Building controllers, advanced application controllers, and application specific controllers	DIV23t	DIV23t	DIV23t	DIV23t
Motor and solenoid operated valves	DIV23t	DIV23m	DIV23t	DIV23t

SECTION 15050 (230500) - COMMON WORK RESULTS FOR HVAC

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

- A. This Section includes limited scope general construction materials and methods for application with mechanical installations as follows:
1. Access panels and doors in walls, ceilings, and floors for access to mechanical materials and equipment.
 2. Mechanical equipment nameplate data.
 3. Concrete for bases and housekeeping pads.
 4. Non-shrink grout for equipment installations.
 5. Sleeves for mechanical penetrations.
 6. Drip Pans.
 7. Miscellaneous metals for support of mechanical materials and equipment.
 8. Wood grounds, nailers, blocking, fasteners, and anchorage for support of mechanical materials and equipment.
 9. Joint sealers for sealing around mechanical materials and equipment.
 10. Sealing penetrations through noise critical spaces.
 11. Firestopping
- B. Related Sections: The following sections contain requirements that relate to this Section:
1. Division 07 Section "Penetration Firestopping" for material and methods for firestopping systems.
 2. Division 23 Section "Basic Piping Materials and Methods," for materials and methods for mechanical sleeve seals.
 3. Division 23 Section "Direct Digital Controls for HVAC" for integration with building automation system of leak detection system "Water Present" alarm.
 4. Division 26 Section "Common Work Results for Electrical" required electrical devices.
 5. Division 26 Sections "Enclosed Switches and Circuit Breakers" for field-installed disconnects.

1.2 SUBMITTALS

- A. General: Submit the following in accordance with Division 01 and Division 23 Section General Mechanical Requirements.
1. Product data for the following products:
 - a. Access panels and doors.
 - b. Joint sealers.
 - c. Through and membrane-penetration firestopping systems.
 2. Shop drawings detailing fabrication and installation for metal fabrications, and wood supports and anchorage for mechanical materials and equipment.
 3. Welder certificates, signed by Contractor, certifying that welders comply with requirements specified under "Quality Assurance" article of this Section.
 4. Schedules indicating proposed methods and sequence of operations for selective demolition prior to commencement of Work. Include coordination for shut-off of utility services and details for dust and noise control.
 - a. Coordinate sequencing with construction phasing and Owner occupancy specified in Division 01 Section "Summary of Work."

5. Through and Membrane Penetration Firestopping Systems Product Schedule: Submit a schedule for each piping system penetration that includes UL listing, location, wall or floor rating and installation drawing for each penetration fire stop system.
 - a. Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping condition, submit illustration, with modifications marked, approved by penetration firestopping manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

1.3 QUALITY ASSURANCE

- A. Qualify welding processes and welding operators in accordance with AWS D1.1 "Structural Welding Code - Steel."
 1. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.
- B. Fire-Resistance Ratings: Where a fire-resistance classification is indicated, provide access door assembly with panel door, frame, hinge, and latch from manufacturer listed in the UL "Building Materials Directory" for rating shown.
 1. Provide UL Label on each fire-rated access door.
- C. Through and Membrane Penetration Firestopping Systems Installer Qualifications: A firm experienced in installing penetration firestopping systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its penetration firestopping system products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.

1.4 NOISE CRITICAL SPACES

- A. Many areas of the building, referred to as "noise-critical spaces", require special attention (special acoustical provisions and restrictions). The table below designates the noise-critical spaces; noise levels due to equipment, ductwork, grilles, registers, terminal devices, diffusers, etc., shall permit attaining sound pressure levels in all 8 octave bands in occupied spaces conforming to RC levels per ASHRAE handbook as indicated.

<u>Space</u>	<u>RC Levels</u>
A/V Spaces	25
Meeting/Banquet Rooms	30
Conference Rooms	30

PART 2 - PRODUCTS AND MATERIALS

2.1 ACCESS TO EQUIPMENT

- A. Manufacturers:
 1. Bar-Co., Inc.
 2. Elmdor Stoneman.
 3. JL Industries
 4. Jay R. Smith Mfg. Co.
 5. Karp Associates, Inc.
 6. Milcor

7. Nystrom Building Products
8. Wade
9. Zurn

B. Access Doors:

1. Steel Access Doors and Frames: Factory-fabricated and assembled units, complete with attachment devices and fasteners ready for installation. Joints and seams shall be continuously welded steel, with welds ground smooth and flush with adjacent surfaces.
2. Frames: 16-gauge steel, with a 1-inch-wide exposed perimeter flange for units installed in unit masonry, pre-cast, or cast-in-place concrete, ceramic tile, or wood paneling.
 - a. For installation in masonry, concrete, ceramic tile, or wood paneling: 1-inch-wide exposed perimeter flange and adjustable metal masonry anchors.
 - b. For installation in gypsum wallboard or plaster: perforated flanges with wallboard bead.
 - c. For installation in full-bed plaster applications: galvanized, expanded metal lath and exposed casing bead, welded to perimeter of frame.
3. Flush Panel Doors: 14-gauge sheet steel, with concealed spring hinges or concealed continuous piano hinge set to open 175 degrees; factory-applied prime paint.
4. Locking Devices: Flush, screwdriver-operated cam locks.

2.2 MECHANICAL EQUIPMENT NAMEPLATE DATA

- A. For each piece of power operated mechanical equipment, provide a permanent operational data nameplate indicating manufacturer, product name, model number, serial number, capacity, operating and power characteristics, labels of tested compliance's, and similar essential data. Locate nameplates in an accessible location.

2.3 CONCRETE EQUIPMENT BASES/HOUSEKEEPING PADS

- A. Provide concrete equipment bases and housekeeping pads for various pieces of floor mounted mechanical equipment. Concrete equipment bases/housekeeping pads shall generally conform to the shape of the piece of equipment it serves with a minimum 4" margin around the equipment and supports.
- B. Form concrete equipment bases and housekeeping pads using framing lumber or steel channel with form release agent. Chamfer top edges and corners. Trowel tops and sides of each base/pad to a smooth finish, equal to that of the floors.
- C. Concrete equipment bases and housekeeping pads shall be made of a minimum 28 day, 4000 psi concrete conforming to American Concrete Institute Standard Building Code for Reinforced Concrete (ACI 318-99) and the latest applicable recommendations of the ACI standard practice manual. Concrete shall be composed of cement conforming to ASTM C 150 Type I, aggregate conforming to ASTM C33, and potable water. All exposed exterior concrete shall contain 5 to 7 percent air entrainment.
- D. Unless otherwise specified or shown on the structural drawings, reinforce equipment bases and housekeeping pads with No. 4 reinforcing bars conforming to ASTM A 615 or 6x6 – W2.9 x W2.9 welded wire mesh conforming to ASTM A185. Reinforcing bars shall be placed 24" on center with a minimum of two bars each direction.
- E. Provide galvanized anchor bolts for all equipment placed on concrete equipment bases and housekeeping pads or on concrete slabs. Anchor bolts size, number and placement shall be as recommended by the Manufacturer of the equipment.
- F. Concrete equipment bases and housekeeping pads shall have height as specified on the drawings or minimum height if not specified in accordance with the following table:

Equipment	Minimum Height
Furnaces, Exterior Equipment Less than or equal to 20 tons and Other Equipment Not Listed	3-1/2"

NOTES:

1. Height of equipment bases applies to equipment installed on slab-on-grade. For equipment installed on floors above grade and/or roof, reference the drawings.

2.4 GROUT

- A. Provide nonshrink, nonmetallic grout conforming to ASTM C 1107, Grade B, in premixed and factory-packaged containers.
- B. Grout shall have post-hardening, volume-adjusting, dry, non-staining, non-corrosive, non-gaseous, hydraulic-cement characteristics and shall be as recommended by manufacturer for interior and exterior applications.
- C. Grout shall have 5,000 psi, 28-day compressive strength design mix.

2.5 PENETRATIONS

- A. Sleeves:
 1. Steel Sleeves: Schedule 40 galvanized, welded steel pipe, ASTM A-53 grade A or 12 gauge (0.1084 inches) welded galvanized steel formed to a true circle concentric to the pipe.
 2. Sheet-Metal Sleeves: 10 gauge (0.1382 inches), galvanized steel, round tube closed with welded longitudinal joint.
- B. Frames for rectangular openings attached to forms and of a maximum dimension established by the Architect. For sleeve cross-section rectangle perimeter less than 50 inches and no side greater than 16 inches, provide 18 gauge (0.052 inches) welded galvanized steel. For sleeve cross-section rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, provide 10 gauge (0.1382 inches) welded galvanized steel. Notify the General Contractor or Architect before installing any box openings not shown on the Architectural or Structural Drawings.

2.6 MISCELLANEOUS METALS

- A. Steel plates, shapes, bars, and bar grating: ASTM A 36.
- B. Cold-Formed Steel Tubing: ASTM A 500.
- C. Hot-Rolled Steel Tubing: ASTM A 501.
- D. Steel Pipe: ASTM A 53, Schedule 40, welded.
- E. Fasteners: Zinc-coated, type, grade, and class as required.

2.7 MISCELLANEOUS LUMBER

- A. Framing Materials: Standard Grade, light-framing-size lumber of any species. Number 3 Common or Standard Grade boards complying with WCLIB or AWPA rules, or Number 3 boards complying with SPIB

rules. Lumber shall be preservative treated in accordance with AWPB LP-2, and kiln dried to a moisture content of not more than 19 percent.

- B. Construction Panels: Plywood panels; APA C-D PLUGGED INT, with exterior glue; thickness as indicated, or if not indicated, not less than 15/32 inches.

2.8 JOINT SEALERS

- A. General: Joint sealers, joint fillers, and other related materials compatible with each other and with joint substrates under conditions of service and application.
- B. Colors: As selected by the Architect from manufacturer's standard colors.
- C. Nonacid Curing Sealer: One-part, nonacid-curing, silicone sealant complying with ASTM C920, Type S, Grade NS, Class 25, for uses in non-traffic areas for masonry, glass, aluminum, and other substrates recommended by the sealant manufacturer.
 - 1. Manufacturers:
 - a. Dow Corning, Dowsil 790.
 - b. Dow Corning, Dowsil 795.
 - c. GE, Silglaze II SCS 2350.
 - d. GE, Silpruf SCS 2000.
 - e. Owens Corning, Energy Complete.
 - f. Pecora, 864 NST.
 - g. Tremco, Spectrem 1.
 - h. Tremco, Spectrem 2.
- D. High Humidity Sealer: One-part, mildew-resistant, silicone sealant complying with ASTM C920, Type S, Grade NS, Class 25, for uses in non-traffic areas for glass, aluminum, and nonporous joint substrates; formulated with fungicide; intended for sealing interior joints with nonporous substrates; and subject to in-service exposure to conditions of high humidity and temperature extremes.
 - 1. Manufacturers:
 - a. Dow Corning, Dowsil 786.
 - b. GE, Momentum SCS1700.
 - c. Pecora, 898 Silicone NST.
- E. Hybrid Joint Sealer: One-part, non-sag, paintable complying with ASTM C920, Type S, Grade NS, Class 50, recommended for exposed applications on interior and exterior locations involving joint movement of not more than plus or minus 50 percent.
 - 1. Manufacturers:
 - a. BASF, MasterSeal NP 100.
 - b. Pecora, DyanTrol I-XL.
 - c. Tremco, Dymonic FC.
- F. Acrylic Latex Joint Sealer: One-part, non-sag, mildew-resistant, paintable acrylic latex or siliconized acrylic latex, complying with ASTM C834, Type OP, Grade NF, recommended for exposed applications on interior and protected exterior locations involving joint movement of not more than plus or minus 5 percent.
 - 1. Manufacturers:
 - a. Pecora, AC-20
 - b. Sherwin Williams 950A
 - c. Tremco, Tremflex 834

2.9 ACOUSTICAL SEALANTS

- A. General: Penetrations by ducts, pipes and conduit through surfaces that are around and between noise critical spaces shall be sleeved, packed and sealed airtight with foam rod, non-hardening sealant and/or packing material as described herein.
- B. Foam Rod: Foam backer rod shall be closed cell polyethylene suitable for use as a backing for non-hardening sealant.
- C. Non-Hardening Sealant: Sealant for penetrations shall be non-hardening. Permanently flexible, approved firestop putty may be used in lieu of the sealant on foam rod in noise critical walls that are also fire rated.
- D. Packing Material: Mineral fiber; non-combustible; resistant to water, mildew and vermin. Expanding resilient foams manufactured for this purpose are an acceptable alternative only if the material density is at least 15 pcf (40 kg/m³).
- E. Acoustical Joint Sealant: Manufacturer's standard non-sag, paintable, non-staining latex sealant complying with ASTM C834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E90. Meeting ASTM E84 for a smoke flame spread index of less than 25 / 50.
- F. Manufacturers:
 - 1. Pecora, AC-20 FTR.
 - 2. Pecora, AIS-919.
 - 3. USG, SHEETROCK Acoustical Sealant.

2.10 FIRESTOPPING

- A. Sealants and accessories shall have fire-resistance ratings indicated, as established by testing identical assemblies in accordance with UL 2079 or ASTM E814, or other NRTL acceptable to AHJ.
- B. Manufacturers:
 - 1. 3M Corp., Fire Barrier Sealant.
 - 2. Hilti.
 - 3. Owens Corning, Firestopping Insulation.
 - 4. Pecora, AC-20 FTR.
 - 5. RectorSeal.
 - 6. Specified Technologies Inc., Firestop.
 - 7. USG SHEETROCK Firecode Compound.
 - 8. Tremco, Tremstop Fyre-Sil.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Install products in accordance with manufacturer's instructions.

3.2 INSTALLATION OF ACCESS DOORS

- A. Provide access doors for all concealed equipment and duct and piping accessories that require service where indicated or as required, except where above lay-in ceilings. Refer to Section "Identification for HVAC Piping and Equipment" for labeling of access doors.
- B. Access doors shall be adequately sized for the devices served with a minimum size of 18 inches x 18 inches, furnished by the respective Contractor or Subcontractor and installed by the General Contractor.
- C. Access doors must be of the proper construction for type of construction where installed.
- D. The exact location of all access doors shall be verified with the Architect prior to installation.
- E. Set frames accurately in position and securely attached to supports, with face panels plumb and level in relation to adjacent finish surfaces.
- F. Adjust hardware and panels after installation for proper operation.

3.3 ERECTION OF METAL SUPPORTS AND ANCHORAGE

- A. Cut, fit, and place miscellaneous metal fabrications accurately in location, alignment, and elevation to support and anchor mechanical materials and equipment.
- B. Field Welding: Comply with AWS "Structural Welding Code."

3.4 ERECTION OF WOOD SUPPORTS AND ANCHORAGE

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorage accurately in location, alignment, and elevation to support and anchor mechanical materials and equipment.
- B. Select fastener sizes that will not penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

3.5 PREPARATION FOR JOINT SEALERS

- A. Surface Cleaning for Joint Sealers: Clean surfaces of joints immediately before applying joint sealers to comply with recommendations of joint sealer manufacturer.
- B. Apply joint sealer primer to substrates as recommended by joint sealer manufacturer. Protect adjacent areas from spillage and migration of primers, using masking tape. Remove tape immediately after tooling without disturbing joint seal.

3.6 APPLICATION OF JOINT SEALERS

- A. General: Comply with joint sealer manufacturers' printed application instructions applicable to products and applications indicated, except where more stringent requirements apply.
 - 1. Comply with recommendations of ASTM C 962 for use of elastomeric joint sealants.

2. Comply with recommendations of ASTM C 790 for use of acrylic-emulsion joint sealants.

- B. Tooling: Immediately after sealant application and prior to time shinning or curing begins, tool sealants to form smooth, uniform beads; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

3.7 PENETRATIONS:

A. New Construction:

1. Coordinate with Divisions 03 and 04 for installation of sleeves and sleeve seals integrally in cast-in-place, precast, and masonry walls and horizontal slabs where indicated on the Drawings or as required to support piping or ductwork penetrations.

B. Construction in Existing Facilities:

1. Saw cut or core drill existing walls and slabs to install sleeves and sleeve seals in existing facilities. Do not cut or drill any walls or slabs without first coordinating with, and receiving approval from, the Architect, Owner, or both. Seal sleeves and sleeve seals into concrete walls or slabs with a waterproof non-shrink grout acceptable to the Architect.

C. Provide sleeves and/or box frames for openings in all concrete and masonry construction and fire or smoke partitions, for all mechanical work that passes through such construction; Coordinate with other trades and Divisions to dimension and lay out all such openings.

D. The General Contractor will provide only those openings specifically indicated on the Architectural or Structural Drawings as being provided under the General Contractor's work.

E. The cutting of new or existing construction shall not be permitted except by written approval of the Architect.

F. Floor sleeves shall be fitted with means for attachment to forms and shall be of length to extend at least two inches above the floor level.

G. All sleeves shall be of ample size to allow for movement of conduit, duct or pipe and insulation through the sleeves without damage to the insulation.

H. Cut sleeves to length for mounting flush with both surfaces of walls.

I. Extend sleeves installed in floors 2 inches above finished floor level.

J. Seal space outside of sleeves with grout for penetrations of concrete and masonry.

K. Seal space outside of sleeves with approved joint compound for penetrations of gypsum board assemblies.

L. All circular and oval openings sleeved through underground exterior walls shall be sealed with mechanical sleeve seals as specified in Division 23 Section "Basic Piping Materials and Methods". All rectangular openings through underground exterior walls shall be flanged and flashed with non-corrosive material on each side and the gap sealed with weatherproof sealant.

3.8 DRIP PANS

- A. Provide drip pans in locations indicated on drawings.
- B. Provide drip pans under piping or equipment that is installed in spaces that have sensitive electronics/electrical equipment such as electrical, IT/AV, telecom, data equipment, elevator machinery rooms, etc. Obtain approval from the Architect prior to installation.
- C. Provide drip pans for piping directly above a two hour rated ceiling of an elevator machine room.
- D. Provide drip pans, only with written approval obtained prior to installation, installed beneath piping above electrical rooms, telecom rooms, data rooms, servers or any other protected area not clearly indicated by drawings.
- E. Provide drip pan supports every 4'-0".

3.9 ACOUSTICAL PENETRATIONS

- A. General: There shall be no direct contact of Sheet Metal or piping with shaft walls, floor slabs and/or partitions. All openings around pipes and ducts in the structure surrounding the mechanical equipment and surrounding noise-critical spaces shall be sealed, packed with caulking for the full depth of the penetration, as described herein.. This includes all slab penetrations and penetrations of noise critical walls.
- B. Duct Penetrations: Where each duct passes through a wall, floor or ceiling of a noise critical space, there shall be a clear annular space of 1 inch between the duct and structure. After all of the ductwork is installed, the Contractor shall check the clearance, pack the voids full depth with packing material and caulk both ends with non-hardening sealant backed by foam rod or permanently flexible firestop material. Where there is not sufficient access space to pack around all sides of a duct (for example, at the underside of a slab), place a short stub duct in the wall, pack and caulk around it and then attach the inlet and outlet ducts to each end.
- C. HVAC Piping:
 - 1. Provide a steel sleeve cast or grouted into the structure. The internal diameter of the sleeve shall be 2 inches larger than the external diameter of the pipe passing through it. After all of the piping is installed in that area, verify the specified clearance and correct it, if necessary, to within 1/2 inch. Pack the void full depth with packing material sealed at both ends, 1 inch deep, with non-hardening sealant backed by foam rod.
 - 2. Provide factory fabricated split seal clamp around the pipe filled with closed-cell neoprene sponge insulation, thickness as required to match adjacent insulation, minimum 3/4 inch. Cast or grout the sleeve into the structure. Provide fiberglass insulation if the pipe is subject to temperatures greater than 225 degrees F. Provide Mason Industries Type SWS or approved equal.

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 15055 (230510) - BASIC PIPING MATERIALS AND METHODS

PART 1 - GENERAL REQUIREMENTS

1.1 SECTION INCLUDES

- A. Joining materials.
- B. Escutcheons.
- C. Mechanical sleeve seals.
- D. Pipe roof curbs.

1.2 SUBMITTALS

- A. Refer to Division 01 and Division 23 Section “General Mechanical Requirements” for administrative and procedural requirements for submittals.
- B. Product Data, including, rated capacities of selected models, weights (shipping, installed, and operating), furnished specialties and accessories, and installation instructions.
- C. Piping Schedule: Submit a piping schedule that states the material being proposed for each piping system application in the project including manufacturer’s catalog information, pipe materials, sizes, fittings, Type, Grade, Schedule, applicable ASTM standard, and connection method(s).
- D. Submit certification that fittings and specialties are manufactured in plants located in the United States or certified that they comply with applicable ANSI and ASTM standards.
- E. Manufacturer's Installation Instructions: Indicate hanging and support methods and joining procedures.
- F. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.
- G. Shop Drawings: Include detailed fabrication of pipe anchors, hangers, special pipe support assemblies, alignment guides, expansion joints and loops, and their attachment to the building structure.
- H. Coordination Drawings: Include piping layout, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Suspended ceiling components.
 - 2. Other building services.
 - 3. Structural members.
- I. As-built drawings for each piping system in electronic and PDF format.
- J. Refer to the individual piping system specification sections in Division 23 for additional requirements.

1.3 QUALITY ASSURANCE

- A. Comply with ASME B31.9 - Building Services Piping, most recent edition.
- B. Soldering and Brazing procedures shall conform to ANSI B9.1 Safety Code for Mechanical Refrigeration.

- C. Pipe specialties and fittings shall be manufactured in plants located in the United States or certified to meet the specified ASTM, ASME, and ANSI standards.
- D. Refer to the individual piping system specification sections in Division 23 for additional requirements.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
- B. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.
- C. Refer to the individual piping system specification sections in Division 23 for additional requirements.

PART 2 - PRODUCTS AND MATERIALS

2.1 PIPE AND FITTINGS

- A. Refer to the individual piping system specification sections in Division 23 for specifications on piping and fittings relative to that particular system.

2.2 JOINING MATERIALS

- A. Refer to individual Division 23 Piping Sections for special joining materials not listed below.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.
- C. Brazing Filler Metals: Comply with SFA-5.8, Section II, ASME BPVC for brazing filler metal materials appropriate for the materials being joined.
 - 1. AWS A5.8, Classification BAg-5:
 - a. Silver (Ag) 44.0 – 46.0 percent.
 - b. Zinc (Z) 23.0 – 27.0 percent.
 - c. Copper (Cu) 29.0 – 31.0 percent.
 - 2. AWS A5.8, Classification BCuP-5:
 - a. Phosphorus (P) 4.8 - 5.2 percent.
 - b. Silver (Ag) 14.5 - 15.5 percent.
 - c. Copper (Cu) remainder.
- D. Soldering Filler Metals: ASTM B32, 95-5 Tin-Antimony and water flushable flux in accordance with ASTM B813.

2.3 ESCUTCHEONS

- A. Manufacturers:
 - 1. AWI Manufacturing.
 - 2. Keeney Manufacturing Company.
 - 3. Wal-Rich Corp.
 - 4. Jones Stephens Corp.
 - 5. Approved equal.
- B. Chrome-plated, stamped-steel, hinged, split-ring escutcheon, with set screw. Inside diameter shall closely fit pipe outside diameter, or outside of pipe insulation where pipe is insulated. Outside diameter shall completely cover the opening in floors, walls, or ceilings.

2.4 MECHANICAL SLEEVE SEALS

- A. Manufacturers:
 - 1. Thunderline/Link Seal.
 - 2. Calpico, Inc.
 - 3. Metraflex Co.
 - 4. Approved equal.
- B. Sleeves: Refer to Division 23 Section “Common Work Results for HVAC” for sleeve materials.
- C. Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between pipe and sleeve, connected with bolts and pressure plates which cause rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.5 PIPE ROOF CURBS

- A. Manufacturers:
 - 1. AES Industries.
 - 2. Custom Curb, Inc.
 - 3. Pate Company.
 - 4. Thybar.
- B. Provide factory-fabricated, pipe roof curbs with the following features:
 - 1. Factory installed treated wood nailer.
 - 2. Welded, 18 gauge galvanized steel shell, base plate and flashing.
 - 3. 1-1/2 inch thick, 3 pound rigid insulation.
 - 4. Fully mitered 3-inch raised cant.
 - 5. Cover of weather-resistant, weather-proof material.
 - 6. Pipe collar of weather-resistant material with stainless steel pipe clamps.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Ream ends of pipes and tubes, and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris for both inside and outside of piping and fittings before assembly.

3.2 INSTALLATION, GENERAL

- A. Install products in accordance with manufacturer’s instructions.
- B. Drawings (plans, schematics, and diagrams) indicate the general location and arrangement of the piping systems. Location and arrangement of piping layout take into consideration pipe sizing and friction loss, expansion, pump sizing, and other design considerations. So far as practical, install piping as indicated. Refer to individual system specifications for requirements for coordination drawing submittals.
- C. Conceal all pipe installations in walls, pipe chases, utility spaces, above ceilings, below grade or floors, unless indicated to be exposed to view.
- D. Install piping free of sags and bends and with ample space between piping to permit proper insulation applications.

- E. Install exposed piping at right angles or parallel to building walls. Diagonal runs are not permitted, unless expressly indicated on the Drawings.
- F. Install horizontal piping as high as possible allowing for specified slope and coordination with other components. Install vertical piping tight to columns or walls. Provide space to permit insulation applications, with 1 inch clearance outside the insulation. Allow sufficient space above removable ceiling panels to allow for panel removal.
- G. Locate groups of pipes parallel to each other, spaced to permit applying full insulation and servicing of valves.
- H. Support piping from structure. Do not support piping from ceilings, equipment, ductwork, conduit and other non-structural elements.
- I. Install drains at low points in mains, risers, and branch lines consisting of a tee fitting, 3/4 inch ball valve, and short 3/4 inch threaded nipple and cap.
- J. Verify final equipment locations for roughing in.
- K. Use fittings for all changes in direction and all branch connections.
- L. Remake leaking joints using new materials.
- M. Install components with pressure rating equal to or greater than system operating pressure.
- N. Piping Protection:
 - 1. Protect piping during construction period, to avoid clogging with dirt and debris, and to prevent damage from traffic and construction work.
 - 2. Place plugs in ends of uncompleted piping at end of day or whenever work stops.

3.3 PENETRATIONS

- A. Mechanical penetrations occur when piping or ductwork penetrate concrete slabs, concrete or masonry walls, or fire / smoke rated floor and wall assemblies. Reference Division 23 Section "Common Work Results for HVAC" for additional penetration requirements.
- B. Above Grade Concrete or Masonry Penetrations:
 - 1. Provide sleeves for pipes passing through above grade concrete or masonry walls, concrete floor or roof slabs. Sleeves are not required for core drilled holes in existing masonry walls, concrete floors or roofs.
 - a. Provide Schedule 40 galvanized steel pipe for sleeves smaller than 6 inches in diameter.
 - b. Provide galvanized sheet metal for sleeves 6 inches in diameter and larger, thickness shall be 10 gauge (0.1382 inches).
 - c. Provide welded galvanized sheet metal for rectangular sleeves with the following minimum metal thickness:
 - 1) For sleeve cross-section rectangle perimeter less than 50 inches and no side greater than 16 inches, thickness shall be 18 gauge (0.052 inches).
 - 2) For sleeve cross-section rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, thickness shall be 10 gauge (0.1382 inches).
 - d. Schedule 40 PVC pipe sleeves are acceptable for use in areas without return air plenums.
 - 2. Extend pipe insulation for insulated pipe through floor, wall and roof penetrations, including fire rated walls and floors. The vapor barrier shall be maintained. Size sleeve for a minimum of 1 inch annular clear space between inside of sleeve and outside of insulation.

3. Seal elevated floor, exterior wall and roof penetrations watertight and weathertight with non-shrink, non-hardening commercial sealant. Pack with mineral wool and seal both ends with minimum of 1/2 inch of sealant.

C. Above Ground, Exterior Wall Penetrations:

1. Seal annular space between sleeve and pipe or duct, using joint sealant appropriate for size, depth, and location of joint. Pack with mineral wool and seal both ends with minimum of 1/2 inch of waterproof sealant. Refer to Division 07 Section "Joint Sealants" for materials and installation.
2. Extend pipe insulation for insulated pipe through sleeve. The vapor barrier shall be maintained. Size sleeve for a minimum of 1 inch annular clear space between inside of sleeve and outside of insulation.

D. Interior Penetrations of Non-Fire-Rated Walls:

1. Seal annular space between sleeve and pipe or duct, using joint sealant appropriate for size, depth, and location of joint. Pack with mineral wool and seal both ends with minimum of 1/2 inch of sealant. Refer to Division 07 Section "Joint Sealants" for materials and installation.
2. Extend pipe insulation for insulated pipe through sleeve. The vapor barrier shall be maintained. Size sleeve for a minimum of 1 inch annular clear space between inside of sleeve and outside of insulation.

E. Acoustical Barrier Penetrations:

1. Where a pipe passes through a wall, ceiling or floor slab of a noise critical space, a steel sleeve shall be cast or grouted into the structure. Refer to Section "Common Work Results for HVAC" for noise critical spaces. The internal diameter of the sleeve shall be minimum of 2 inches larger than the external diameter of the pipe. After the piping is installed, the Contractor shall check the clearance and correct it to within 1/2-inch. Contractor shall pack the void full depth with glass/mineral fiber insulation and seal at both ends, 1-inch deep, with sealant backed by foam rod.
2. Penetration of sound isolating ceilings by sprinkler pipes and heads shall be sleeved and sealed and shall have no rigid connections between them.

3.4 PIPE JOINT CONSTRUCTION

A. Brazed and Soldered Joints:

1. Soldered Joints: Comply with the procedures contained in the AWS "Soldering Manual."
2. Brazed Joints: Comply with the procedures contained in the AWS "Brazing Manual."
3. **WARNING:** Some filler metals contain compounds which produce highly toxic fumes when heated. Avoid breathing fumes. Provide adequate ventilation.
4. **CAUTION:** Remove stems, seats, and packing of valves and accessible internal parts at piping specialties before brazing.
 1. Thoroughly clean tube surface and inside surface of the cup of the fittings, using very fine emery cloth, prior to making joint.
 2. Wipe tube and fittings clean and apply flux. Flux shall not be used as the sole means for cleaning tube and fitting surfaces.
 5. Copper-to-copper joints shall be made using BCuP-5 brazing filler metal without flux.
 6. Dissimilar metals such as copper and brass shall be jointed using an appropriate flux with either BCuP-5 or BAg-5 brazing filler metal. Apply flux sparingly to the clean tube only and in a manner to avoid leaving any excess inside the completed joint.
 7. Continuously purge the pipe and fittings during brazing with an inert gas (i.e., dry nitrogen or carbon dioxide) to prevent formation of scale. Maintain purge until the joint is cool to the touch.
 8. Heat joints using oxy-acetylene torch. Heat to proper and uniform temperature.
 9. Provide temporary cap or cover on completed joints with open ends to prevent entry of contaminating materials.

B. Mechanical Refrigerant Pipe Joints: Flared compression fittings may be used for refrigerant lines 3/4 inch and smaller.

3.5 PIPE FIELD QUALITY CONTROL

- A. Testing: Refer to individual piping system specification sections.

END OF SECTION

SECTION 15170 (230513) - COMMON MOTOR REQUIREMENT FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. General construction and requirements.
- B. Applications.
- C. Single phase electric motors.
- D. Three phase electric motors.
- E. Electronically Commutated Motors (ECM).
- F. Capacitors.

1.2 REFERENCE STANDARDS

- A. ABMA STD 9 – Load Ratings and Fatigue Life for Ball Bearings; most recent edition.
- B. IEEE 112 – IEEE Standard Test Procedure for Polyphase Induction Motors and Generators; most recent edition.
- C. NEMA MG 1 – Motors and Generators; most recent edition.
- D. NFPA 70 – National Electrical Code; most recent edition adopted by the Authority Having Jurisdiction, including all applicable amendments and supplements.

1.3 SUBMITTALS

- A. Conform with the submittal procedures in Division 01.
- B. Product Data: Provide wiring diagrams with electrical characteristics and connection requirements. Provide nameplate data and ratings, mounting arrangements, size and location of winding termination lugs, overload relays, conduit entry, grounding lug, and coatings.
- C. Test Reports: Indicate test results verifying nominal efficiency and power factor for three phase motors larger than 1/2 horsepower.
- D. Manufacturer's Installation Instructions: Indicate setting, mechanical connections, lubrication, and wiring instructions.
- E. Operation Data: Include instructions for safe operating procedures.
- F. Maintenance Data: Include assembly drawings, bearing data including replacement sizes, and lubrication instructions.

1.4 QUALITY ASSURANCE

- A. Comply with NFPA 70.

- B. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.5 DELIVERY STORAGE AND HANDLING.

- A. Protect motors stored on site from weather and moisture by maintaining factory covers and suitable weather-proof covering. For extended outdoor storage, remove motors from equipment and store separately.

1.6 WARRANTY

- A. Provide five year manufacturer warranty for motors larger than 20 horsepower.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. Baldor Electric Company.
- B. General Electric.
- C. Gould.
- D. Marathon.
- E. Regal-Beloit Corporation (Century).
- F. Westinghouse

2.2 GENERAL CONSTRUCTION AND REQUIREMENTS

- A. Electrical Service: All motors shall be supplied in accordance with the following voltage and phase unless noted otherwise on the Drawings.
 - 1. Motors 1/2 HP and Smaller: 115 volts, single phase, 60 Hz.
 - 2. Motors 3/4 HP and Larger: Voltage as scheduled, three phase, 60 Hz.
- B. Construction:
 - 1. Open drip-proof except where noted otherwise.
 - 2. Design for continuous operation in 104 degrees F environment.
 - 3. Design for temperature rise in accordance with NEMA MG 1 limits for insulation class, service factor, and motor enclosure type.
 - 4. Motors with frame sizes 254T and larger: Energy Efficient Type.
- C. Explosion-Proof Motors: UL approved and labeled for hazard classification, with over temperature protection.
- D. Visible Nameplate: Indicating motor horsepower, voltage, phase, cycles, RPM, full load amps, locked rotor amps, frame size, manufacturer's name and model number, service factor, power factor, efficiency.
- E. Wiring Terminations:
 - 1. Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to NFPA 70, threaded for conduit.
 - 2. For fractional horsepower motors where connection is made directly, provide flexible conduit connection in end frame. Maximum length of flexible conduit shall be five feet.

2.3 APPLICATIONS

- A. Exception: Motors less than 250 Watts, for intermittent service may be the equipment manufacturer's standard and need not comply with these specifications.
- B. Single phase motors for shaft mounted fans or blowers: Permanent split capacitor type.
- C. Single phase motors for fans, pumps, blowers and air compressors: Capacitor start type.
- D. Single phase motors for fans less than 1 hp and greater than 1/12 hp: Electronically commutated type.
- E. Motors located in exterior locations, air cooled condensers: Totally enclosed fan cooled type.
- F. Motors located outdoors in wet airstreams, including but not limited to cooling towers, evaporative condensers, and sprayed coils: Totally enclosed weatherproof epoxy-sealed type.

2.4 SINGLE PHASE POWER - PERMANENT-SPLIT CAPACITOR MOTORS

- A. Starting Torque: Exceeding one fourth of full load torque.
- B. Starting Current: Up to six times full load current.
- C. Multiple Speed: Through tapped windings.
- D. Open Drip-proof or Enclosed Air Over Enclosure: Class A (50 degrees C temperature rise) insulation, minimum 1.0 Service Factor, prelubricated sleeve or ball bearings, automatic reset overload protector.

2.5 SINGLE PHASE POWER - CAPACITOR START MOTORS

- A. Starting Torque: Three times full load torque.
- B. Starting Current: Less than five times full load current.
- C. Pull-up Torque: Up to 350 percent of full load torque.
- D. Breakdown Torque: Approximately 250 percent of full load torque.
- E. Motors: Capacitor in series with starting winding; provide capacitor-start/capacitor-run motors with two capacitors in parallel with run capacitor remaining in circuit at operating speeds.
- F. Drip-proof Enclosure: Class A (50 degrees C temperature rise) insulation, NEMA Service Factor, prelubricated ball bearings.
- G. Enclosed Motors: Class A (50 degrees C temperature rise) insulation, 1.0 Service Factor, prelubricated ball bearings.

2.6 THREE PHASE POWER - SQUIRREL CAGE MOTORS

- A. Starting Torque: Between 1 and 1-1/2 times full load torque.
- B. Starting Current: Six times full load current.
- C. Power Output, Locked Rotor Torque, Breakdown or Pull Out Torque: NEMA Design B characteristics.
- D. Design, Construction, Testing, and Performance: Conform to NEMA MG 1 for Design B motors.

- E. Insulation System: NEMA Class B or better.
- F. Drip-proof Enclosure: NEMA Service Factor.
- G. All motors controlled by variable frequency controllers shall have a 1.15 Service Factor.
- H. Testing Procedure: In accordance with IEEE 112. Load test motors to determine free from electrical or mechanical defects in compliance with performance data.
- I. Motor Frames: NEMA Standard T-Frames of steel, aluminum, or cast iron with end brackets of cast iron or aluminum with steel inserts.
- J. Thermistor System (Motor Frame Sizes 254T and Larger): Three PTC thermistors imbedded in motor windings and epoxy encapsulated solid state control relay for wiring into motor starter; refer to Division 26 - Motor Controlling Equipment.
- K. Bearings: Grease lubricated anti-friction ball bearings with housings equipped with plugged provision for relubrication, rated for minimum AFBMA 9, L-10 life of 20,000 hours. Calculate bearing load with NEMA minimum V-belt pulley with belt center line at end of NEMA standard shaft extension. Stamp bearing sizes on nameplate.
- L. Sound Power Levels: To NEMA MG 1.
- M. All totally enclosed motors shall be fan cooled type. Non-ventilated type motors are not acceptable.
- N. Motors controlled by variable frequency drives:
 - 1. Rated for voltage peaks and minimum rise times in accordance with NEMA MG1, Part 31.
 - 2. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
 - 3. Inverter-Duty Motors: Class B temperature rise; Class F insulation.
 - 4. Grounding: Provide shaft grounding system equal to AEGIS SGR Bearing Protection Ring, Inpro/Seal Current Diverter Ring (CDR) or approved equal. Install system in accordance with manufacturer's recommendations.
 - 5. Motor Overload Relay: When a single drive is used to supply power to multiple motors, provide a solid state 3-phase adjustable overload relay between the drive and each motor.
 - a. Relay shall have manual reset.
 - b. Provide alarm contact with automatic reset overloads.
- O. Part Winding Start, Where Indicated: Use part of winding to reduce locked rotor starting current to approximately 60 percent of full winding locked rotor current while providing approximately 50 percent of full winding locked rotor torque.
- P. Weatherproof Epoxy Sealed Motors: Epoxy seal windings using vacuum and pressure with rotor and starter surfaces protected with epoxy enamel; bearings double shielded with waterproof non-washing grease.
- Q. Nominal Efficiency: Motors shall have minimum NEMA premium efficiency at full load and rated voltage when tested in accordance with IEEE 112.
- R. Nominal Power Factor: As scheduled at full load and rated voltage when tested in accordance with IEEE 112.

2.7 ELECTRONICALLY COMMUTATED MOTORS (ECM)

- A. Minimum efficiency: 70 percent when rated in accordance with NEMA Standard MG 1 at full load rating conditions.
- B. Motor shall be permanently lubricated with heavy-duty ball bearings to match the equipment load and prewired to the specific voltage and phase.
- C. Internal motor circuitry shall convert AC power supplied to the equipment to DC power to operate the motor.
- D. Motor shall be speed controllable down to 20% of full speed (80% turndown). Speed shall be controlled by either a potentiometer dial mounted on the motor or by a 0-10 VDC signal.

2.8 CAPACITORS

- A. Furnish capacitors for power factor correction as specified herein on motors furnished under Division 23 that are not connected to variable frequency drives. KVAR size shall be as required to correct motor power factor to 90 percent or better and shall be installed on all motors 1 horsepower and larger, that have an uncorrected power factor of less than 85 percent at rated load.
- B. Features:
 - 1. Individual unit cells.
 - 2. All welded steel housing.
 - 3. Each capacitor internally fused.
 - 4. Non-flammable synthetic liquid impregnated.
 - 5. Craft tissue insulation.
 - 6. Aluminum foil electrodes.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install products in accordance with manufacturer's instructions.
- B. Install securely on firm foundation.
- C. Check line voltage and phase and ensure agreement with nameplate.
- D. Install motor overload relays in a common enclosure adjacent to the variable frequency drive

3.2 NEMA OPEN MOTOR SERVICE FACTOR SCHEDULE

HP	3600 RPM	1800 RPM	1200 RPM	900 RPM
1/6-1/3	1.35	1.35	1.35	1.35
1/2	1.25	1.25	1.25	1.15
3/4	1.25	1.25	1.15	1.15
1	1.25	1.15	1.15	1.15
1.5-150	1.15	1.15	1.15	1.15

3.3 PERFORMANCE SCHEDULE: THREE PHASE - OPEN DRIP-PROOF

HP	RPM(Sync)	NEMA Frame	Minimum Percent Efficiency	Minimum Power Factor
1	1200	145T	80	72
1-1/2	1200	182T	84	73
2	1200	184T	85.5	75
3	1200	213T	86.5	60
5	1200	215T	87.5	65
7-1/2	1200	254T	88.5	73
10	1200	256T	90.2	74
15	1200	284T	90.2	77
1	1800	143T	82.5	84
1-1/2	1800	145T	84	85
2	1800	145T	84	85
3	1800	182T	86.5	86
5	1800	184T	87.5	87
7-1/2	1800	213T	88.5	86
10	1800	215T	89.5	85
15	1800	256T	91	85
1-1/2	3600	143T	82.5	85
2	3600	145T	84	87
3	3600	145T	84	85
5	3600	182T	85.5	86
7-1/2	3600	184T	87.5	88
10	3600	213T	88.5	86
15	3600	215T	89.5	89

3.4 PERFORMANCE SCHEDULE: THREE PHASE-ENERGY EFFICIENT, TOTALLY ENCLOSED, FAN COOLED

HP	RPM(Sync)	NEMA Frame	Minimum Percent Efficiency	Minimum Power Factor
----	-----------	------------	----------------------------	----------------------

1	1200	145T	80	72
1-1/2	1200	182T	85.5	65
2	1200	184T	86.5	68
3	1200	213T	87.5	63
5	1200	215T	87.5	66
7-1/2	1200	254T	89.5	68
10	1200	256T	89.5	75

PAGE INTENTIONALLY LEFT BLANK

SECTION 15140 (230529) - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Support and attachment components.
- B. Horizontal piping hangers and supports.
- C. Saddles and shields.
- D. Vertical piping clamps.
- E. Pre-engineered roof pipe supports.
- F. Pre-engineered roof equipment supports.
- G. Anchors and fasteners.
- H. Miscellaneous materials.

1.2 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate sizes and arrangement of supports and bases with the actual equipment and components to be installed.
 - 2. Coordinate the work with other trades to provide additional framing and materials required for installation.
 - 3. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.
 - 4. Coordinate the arrangement of supports with ductwork, piping, equipment and other potential conflicts installed under other sections or by others.
 - 5. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.
- B. Sequencing:
 - 1. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured.

1.3 SUBMITTALS

- A. Product Data: Provide manufacturer's standard catalog pages and data sheets for each type of hanger and support. Include a hanger and support schedule showing manufacturer's figure number, size, location, and features for each hanger and support. Submit style and type to Structural Engineer for approval prior to installation.
- B. Product Certificates: Signed by the manufacturer of hangers and supports certifying the products meet the specified requirements.
- C. Welder Certificates: Signed by Contractor certifying that welders comply with requirements specified under "Quality Assurance" Article.

- D. Maintenance Data: For inclusion in Operating and Maintenance manual specified in Division 01 and Division 23 Section "General Mechanical Requirements."
- E. Shop Drawings: Include details for fabricated hangers and supports where materials or methods other than those indicated are proposed for substitution. Include dimensions, weights, required clearances, and method of assembly.
 - 1. Application of protective inserts, saddles, and shields at pipe hangers for each type of insulation and hanger.
- F. Installer's Qualifications: Include evidence of compliance with specified requirements.
- G. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

1.4 QUALITY ASSURANCE

- A. Comply with applicable building code.
- B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.
- C. Installer Qualifications for Field-Welding:
 - 1. Qualify welding processes and welding operators in accordance with AWS D1.1 "Structural Welding Code - Steel."
 - 2. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.
 - 3. Qualify welding processes and welding operators in accordance with ASME BPVC Section IX, "Welding and Brazing Qualifications."
- D. Flame/Smoke Ratings: Provide hangers and supports with flame-spread index of 25 or less, and smoke-developed index of 50 or less, as tested by UL 723 or ASTM E84 (NFPA 255) method.
- E. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 - PRODUCTS AND MATERIALS

1.1 SUPPORT AND ATTACHMENT COMPONENTS

- A. General Requirements:
 - 1. Comply with MSS SP-58.
 - 2. Provide all required hangers, supports, anchors, fasteners, fittings, accessories, and hardware as necessary for the complete installation of work.
 - 3. Provide products listed, classified, and labeled as suitable for the purpose intended, where applicable.
 - 4. Where support and attachment component types and sizes are not indicated, select in accordance with manufacturer's application criteria as required for the load to be supported. Include consideration for vibration, equipment operation, and shock loads where applicable.
 - 5. Do not use wire, chain, perforated pipe strap, or wood for permanent supports unless specifically indicated or permitted.

6. Materials: Products and materials listed in this specification are based on indoor, dry locations. Use corrosion resistant materials suitable for the environment where installed.
 - a. Indoor Dry Locations: Carbon steel, galvanized steel, zinc-plated steel or approved equivalent where installed for piping and equipment that will not have a factory-applied or field-applied finish, unless otherwise indicated.
 - b. Outdoor Locations: Type 304 stainless steel, galvanized steel, aluminum, or approved equivalent.
 - c. Dielectrics Barriers: Provide dielectric barriers between metallic supports and metallic piping and associated items of dissimilar type. Acceptable barriers include rubber, or copper-plated coatings where attachments are in direct contact with copper.
 - d. Zinc-Plated Steel: Electroplated in accordance with ASTM B633.
 - e. Galvanized Steel: Hot-dip galvanized after fabrication in accordance with ASTM A123/A123M or ASTM A153/A153M.
 - f. Stainless Steel: Type 304 in accordance with ASTM A240.

B. Metal Channel (Strut) Framing Systems:

1. Manufacturers:
 - a. Cooper B-Line.
 - b. Ferguson Enterprises/FNW.
 - c. PHD Manufacturing.
 - d. Thomas & Betts Corporation.
 - e. Unistrut, a brand of Atkore International Inc.
 - f. Source Limitations: Furnish channels (struts) and associated fittings, accessories, and hardware produced by a single manufacturer.
2. Factory-fabricated continuous-slot metal channel (strut) and associated fittings, accessories, and hardware required for field-assembly of supports.
3. Comply with MSS SP-69, Type 59, MSS SP-89, and MFMA-4. Welds shall comply with AWS D1.1.
4. Channel Material:
 - a. Indoor Dry Locations: Use painted steel, zinc-plated steel, or galvanized steel.
 - b. Outdoor Locations: Use stainless steel, aluminum, or galvanized steel.
 - c. All nuts, brackets, and clamps shall have the same finish as the channel.
5. Minimum Channel Thickness: Steel sheet, 14 gage, 0.0747 inch.
6. Minimum Channel Dimensions: 1-5/8 inch width by 13/16 inch height with factory-punched attachment holes.
7. Provide plastic galvanic isolators for connecting bare copper pipe for use with pre-engineered support strut system where indicated.

C. Hanger Rods:

1. Threaded zinc-plated steel, threaded both ends or continuously threaded, unless otherwise indicated.
2. Minimum Size: Reference piping specification sections for rod thicknesses.
3. Threaded Rods: Threaded rods are not allowed for floor supports except when the maximum length of the rod is less than 12". Threaded rod sizes shall be the same size diameter as specified for pipe hanger rods based upon pipe size being supported. Refer to system piping specification sections for rod size requirements.

D. Wire Rope Pipe Hanging Systems:

1. Manufacturers:
 - a. Anvil International.
 - b. Gripple.
2. General: Wire rope hanger system shall have a minimum 5 to 1 safety factor based upon the applied working load being supported.
3. Source Limitations: Furnish associated fittings, accessories, and hardware produced by a single manufacturer.

4. Cast-in-place Concrete Insert: Pressed steel body with sintered steel wedge, 302 stainless steel spring and UV stabilized homopolymer polypropylene end cap. Model: Gripple Spider Hanging Kit.
5. Cable Stud: Carbon steel, zinc-coated, designed for attachment to concrete inserts. Model: Anvil C120.
6. Cable Coupling: Carbon steel, zinc-coated, designed for attachment to threaded rods. Model: Anvil C130.
7. Cable Eyelet: Carbon steel, zinc-coated, designed to be directly attached to structural supports via anchors or fasteners. Model: Anvil C150.
8. Cable Toggle: Carbon steel, zinc-coated, with toggle designed for insertion into 1/2 inch hole through steel deck hat channel and provides anchor when pulled in tension. Model: Anvil C150.
9. Swivel Toggle Insert: Single assembly attached to wire rope cable, manufactured from plated carbon steel toggle, pins, and shackles; swivel insert engineered to be compatible with concrete insert.
10. Wire Rope: High tensile steel wire rope, to ASTM A1023, Class A zinc coating; minimum 7 by 7 cross-sectional thread construction; having a tensile strength of 256,000 psi; No.3 wire size minimum.
11. Adjustable Fastener: Mild steel (type UG2), bright zinc plated, one-channel body; encasing a series of Type 302 stainless-steel springs with serrated self-locking grade 40 chrome steel balls, adjustable by means of an integrated mechanism, capable of accommodating load of 500 lb. Model: Gripple No. 2, 3 or 4 UniGrip.

2.2 HORIZONTAL PIPING HANGERS AND SUPPORTS

A. Manufacturers:

1. Armacell.
2. Anvil International.
3. Cooper B-Line, Inc.
4. Elite Components.
5. ERICO/Michigan Hanger Co./Caddy
6. Ferguson/FNW.
7. Halfen-DEHA.
8. Hilti.
9. National Pipe Hanger Corporation.
10. PHD Manufacturing.
11. Power-Strut.
12. Unistrut.

B. Single Hangers:

1. Band Hanger: Carbon steel, adjustable band, adjustable swivel.
2. Split Ring: Carbon steel, adjustable swivel, split ring type.
3. Clevis Hanger: Carbon steel, adjustable, clevis type.
4. Roll Support Hanger: Adjustable steel yoke, cast iron roll.

C. Trapeze and Strut-mounted Supports:

1. Two-piece clamp: Designed for use with channel strut, held in place at channel shoulder when clamp attachment nut is tightened.
2. Roll Support: Adjustable cast iron roll attached to metal channel strut framing system with brackets and nuts.

D. Hangers and strut-mounted supports with pre-manufactured polymer inserts:

1. Manufacturers:
 - a. Anvil International.
 - b. Holdrite.
 - c. Klo-Shure.

2. Strut-mounted pipe clamps and clevis hangers with pre-manufactured polymer inserts designed to receive butted insulation internally. Inserts shall support piping independent of insulation to avoid crushing. Installed system shall provide equal thermal and vapor barrier performance as systems with continuous unbroken insulation. Metal shields are not required with clevis hangers of this type.

E. Spring Hangers:

1. Reference Section “Vibration Isolation for HVAC Piping and Equipment” for spring isolation hangers.

F. Wall Supports:

1. Two-hole strap, galvanized steel or copper to suit pipe material. Provide rigid insulation between strap and pipe to maintain continuous insulation and vapor barrier where required.
2. Welded steel bracket reinforced with angle or strut. Support pipe from bracket using horizontal pipe hanger or support appropriate for the pipe type.

G. Floor and space lid Supports:

1. Pipe Saddle: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
2. Roller Support: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support.

H. Pre-Insulated Supports:

1. Manufacturers:
 - a. Aeroflex USA, Inc.
 - b. Armacell.
 - c. Buckaroos, Inc.
 - d. Cooper B-Line, Inc.
2. General Construction and Requirements:
 - a. Flexible elastomeric insulation with integral high-density pipe support insert shall conform to ASTM C534, Type I.
 - b. Surface Burning Characteristics: Assembly shall have a flame spread index/smoke developed index of 25/50, maximum, when tested in accordance with ASTM E84 or UL 723.
 - c. Waterproof calcium silicate insulation shall conform to ASTM C795.
 - d. Rigid phenolic foam insulation shall conform to ASTM C1126, Type III.
 - e. Insulation inserts shall be surrounded by a 360 degree jacket or shield.
3. Pipe insulation protection shields to be provided at the hanger points and guide locations on pipes requiring insulation as indicated on drawings.

2.3 SADDLES AND SHIELDS

A. Pipe Covering Protection Saddles:

1. Manufacturers: Same as hanger and Supports.
2. Meet MSS SP-58 Type 39A or B, 100-psi average compressive strength, with center rib for pipes 12 inches and larger. Saddles shall cover approximately one sixth of the circumference of the pipe and shall be 12 inches long.

B. Insulation Protection Shield:

1. Sheet metal construction, meeting MSS SP-58 Type 40, of 18 gauge for 5-1/2 inches inside dimension and smaller, 16 gauge for 6-1/2 inches to 10-3/4 inches inside dimension, 14 gauge for 11-3/4 inches to 17 inches inside dimension, and 12 gauge for 18 inches to 28 inches inside dimension.
2. Shield shall cover half of the circumference of the pipe and shall be of length indicated by manufacturer for pipe size and thickness of insulation.
3. Lengths for pipes greater than 2 inches: Minimum 8 inch long section at each support.

4. For pipes 2 inch and smaller without pre-insulated supports, provide insulation protection shields installed between hanger and pipe which meets the following minimum length requirements:

Pipe Size (NPS)	Insulation Thickness (inches)	Minimum Shield Length, (in)					
		5	6	7	8	9	10
≤ 1	0.5	5	6	8	-	-	-
	1	3	5	5	-	-	-
	1.5	3	5	5	-	-	-
	2	3	3	3	-	-	-
	3	3	3	3	-	-	-
≤ 2	0.5	8	8	11	11	12	14
	1	5	6	8	9	11	11
	1.5	5	6	8	8	9	9
	2	5	5	6	6	8	8
	3	5	5	6	6	6	8

C. 360 Degree Insulation Protection Shield:

1. Shield shall cover all of the circumference of the pipe with two half circumference sections held together with bolts and nuts and shall be of length indicated by manufacturer for pipe size and thickness of insulation.

D. Plastic Saddles and Shields:

1. Manufacturers:
 - a. Armacell.
 - b. Eaton.
 - c. Hydra-Zorb.
 - d. PHD Manufacturing.
 - e. Zsi Foster.
2. Polymer-based, snap-on or clip-on design, with non-adhesive surface and lip to allow lateral movement of piping without damaging insulation, field-paintable.

2.4 VERTICAL-PIPING SUPPORTS

A. Manufacturers:

1. Armacell.
2. Anvil International.
3. Cooper B-Line, Inc.
4. Halfen-DEHA.
5. Hilti.
6. ERICO/Michigan Hanger Co.
7. National Pipe Hanger Corporation.
8. PHD Manufacturing.
9. Power-Strut.
10. Unistrut.

B. Components shall be factory fabricated of materials, design, and manufacturer complying with MSS SP-58.

1. Components shall have galvanized coatings where installed for piping and equipment that will not have factory applied or field-applied finish.
2. Pipe attachments shall be copper-plated or have nonmetallic coating for electrolytic protection where attachments are in direct contact with copper tubing.
3. Components as listed below shall be made of 304 stainless steel where installed in corrosive environments and/or where indicated on the drawings.

C. Riser Clamps with pre-manufactured polymer insert:

1. Manufacturers:
 - a. Hydra-Zorb; Titan Riser Clamp.
 - b. National Pipe Hanger.
 - c. Approved equal.
2. Riser clamp with pre-manufactured polymer inserts designed to withstand vertical loading and receive butted insulation internally. Inserts shall support piping independent of insulation to avoid crushing. Installed system shall provide equal thermal and vapor barrier performance as systems with continuous unbroken insulation.

2.5 PRE-ENGINEERED ROOF PIPE SUPPORTS

- A. Manufacturers:
 1. Airtec.
 2. Anvil International.
 3. Cooper B-Line, Inc.
 4. Elite Components.
 5. ERICO/Michigan Hanger Co./Caddy.
 6. Ferguson/FNW.
 7. Miro.
 8. PHP Systems/Design.
 9. PHD Manufacturing.
 10. Roof Top Blox.
 11. Unistrut, a brand of Atkore International Inc.
 12. Zsi Foster.
- B. General: Pre-engineered devices with embedded pipe support fixtures as specified.
- C. Pedestals: Steel pedestals with thermoplastic or rubber base with the following dimensions:
 1. Up to 12 inch strut length support: 18 inch x 18 inch.
 2. Up to 16 inch strut length support: 24 inch x 18 inch.
 3. Up to 24 inch strut length support: 30 inch x 18 inch.
 4. Thickness: Minimum 3/16 inch thick.
- D. Block Bases: Closed-cell polyethylene blocks with the following dimensions.
 1. Length: Nominal 10 inch, 12 inch, 16 inch, or 24 inch
 2. Width: Nominal 4 inches.
- E. Attachment/Support Fixtures: As recommended by manufacturer, same type as indicated for equivalent indoor hangers and supports.
- F. Mounting Height: Provide minimum clearance of 6 inches under supported component to top of roofing.

2.6 PRE-ENGINEERED ROOF EQUIPMENT SUPPORTS

- A. Reference Section "Vibration Isolation for HVAC" for vibration isolated pre-engineered roof equipment supports.
- B. Manufacturers: Subject to compliance with requirements, provide roof equipment supports from the equipment manufacturer or from one of the following:
 1. AES Industries.
 2. Caldyn, California Dynamics Corp.
 3. Custom Curb, Inc.
 4. Kinetics Noise Control.
 5. Mason Industries, Inc.

6. Pate Company.
7. Thybar.
8. Vibration Eliminator Co., Inc.
9. Vibration Mounting and Controls (VMC Group).
10. Vibro-Acoustics.

C. Single Rail Equipment Supports:

1. Construction:
 - a. Base plate with fully mitered raised cant and step to match roof insulation thickness.
 - b. Welded, minimum 18 gauge galvanized steel shell, internally reinforced to load bearing factors of equipment being supported.
 - c. Factory installed treated wood nailer.
 - d. 4 inch, minimum 18 gauge nailer jacket with counterflashing where equipment will not fully cover the equipment support.

D. Roof Curbs:

1. Construction:
 - a. Comply with NRCA standards.
 - b. Base plate with fully mitered raised cant and step to match roof insulation thickness.
 - c. Welded, minimum 18 gauge galvanized steel shell, internally reinforced to load bearing factors of equipment being supported.
 - d. Minimum 1-1/2 inch thick, 3 pound density rigid insulation internal to shell to maintain continuous roof insulation.
 - e. Factory installed treated wood nailer and drain nipple.
 - f. Sloped to match roof structure to enable level installation.

2.7 ANCHORS AND FASTENERS

A. Manufacturers:

1. Hilti, Inc.
2. Illinois Tool Works, Inc.
3. Phillips.
4. Powers Fasteners, Inc.
5. Rawl.
6. Simpson Strong-Tie Company Inc.

B. Unless otherwise indicated and where not otherwise restricted, use the anchor and fastener types indicated for the specified applications.

1. Concrete: Use preset concrete inserts or expansion anchors.
2. Solid or Grout-Filled Masonry: Use expansion anchors.
3. Hollow Masonry: Use toggle bolts.
4. Hollow Stud Walls: Use toggle bolts.
5. Steel: Use beam clamps.
6. Sheet Metal: Use sheet metal screws.
7. Wood: Use wood screws.
8. Plastic and lead anchors are not permitted.
9. Hammer-driven anchors and fasteners are permitted only as follows:
 - a. Nails are permitted for attachment of nonmetallic boxes to wood frame construction.
 - b. Staples are permitted for attachment of nonmetallic-sheathed cable to wood frame construction.

C. Preset Concrete Inserts: Continuous metal channel (strut) and spot inserts specifically designed to be cast in concrete ceilings, walls, and floors.

1. Comply with MFMA-4.

2. Channel Material: Use galvanized steel.
 3. Minimum Channel Thickness: Steel sheet, 12 gage, 0.1046 inch minimum base metal thickness.
 4. Spot Inserts: Carbon steel with zinc plating or galvanized steel body and base plate, with protective sleeve for anchor rod insert, sized to accommodate anchor rod dimensions.
 5. Manufacturers:
 - a. Same as manufacturer of metal channel (strut) framing system.
 - b. DeWalt “Bang-It” concrete inserts.
- D. Post-Installed Concrete and Masonry Expansion Anchors:
1. Evaluated and recognized by ICC Evaluation Service, LLC (ICC-ES) for compliance with applicable building code.
 2. Self-drilling, drilled flush or shell type. Size inserts to suit threaded rods.
- E. Beam Clamps: MSS SP-58 C-Type or adjustable, Types 19 through 23, 25 or 27 through 30 based on required load.
1. Material: ASTM A36/A36M carbon steel or ASTM A181/A181M forged steel.
 1. Provide clamps with hardened steel cup-point set screws and lock-nuts for anchoring in place.
- F. Vibration Isolation Anchors: Reference Section “Vibration Isolation for HVAC Piping and Equipment” for vibration isolation anchors.
- 2.8 MISCELLANEOUS MATERIALS
- A. Steel Plates, Shapes, and Bars: ASTM A 36.
 - B. Malleable Iron: ASTM A47
 - C. Cement Grout: Portland cement (ASTM C 150, Type I or Type III) and clean uniformly graded, natural sand (ASTM C 404, Size No. 2). Mix ratio shall be 1.0 part cement to 3.0 parts sand, by volume, with minimum amount of water required for placement and hydration.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that field measurements are as indicated.
- B. Verify that mounting surfaces are ready to receive support and attachment components.
- C. Verify that conditions are satisfactory for installation prior to starting work.

3.2 INSTALLATION, GENERAL

- A. Install products in accordance with manufacturer’s instructions.
- B. Provide hangers and supports according to the Pipe Hanger and Support Schedule below.
- C. Install anchors and fasteners in accordance with ICC Evaluation Services, LLC (ICC-ES) evaluation report conditions of use where applicable.
- D. Provide independent support from building structure. Do not provide support from piping, ductwork, conduit, or other systems.

- E. Unless specifically indicated or approved by Architect, do not provide support from suspended ceiling support system or ceiling grid.
- F. Unless specifically indicated or approved by Architect, do not provide support from roof deck.
- G. Do not penetrate or otherwise notch or cut structural members without approval of Structural Engineer.
- H. Provide thermal insulated pipe supports complete with hangers and accessories. Install thermal insulated pipe supports during the installation of the piping system.

3.3 INSTALLATION OF HANGERS AND SUPPORTS

- A. Install in accordance with ASME B31.9, ASTM F708, or MSS SP-58 unless indicated otherwise.
- B. If type of hanger or support for a particular situation is not indicated, select appropriate type using MSS SP-58 recommendations.
- C. Space attachments within maximum piping span length specified in Division 23 piping sections.
- D. Install hangers to provide minimum 1/2 inch space between finished covering and adjacent work.
- E. Install hangers, supports, clamps and attachments to support piping properly from building structure.
- F. Do not attach to ceilings, equipment, ductwork, conduit and other non-structural elements such as floor and roof decking.
- G. Hanger and clamps sizing:
 1. Cold Piping: Provide pipe hangers sized for the pipe outside diameter plus insulation thickness.
 2. Hot Piping: Provide pipe hangers sized for the pipe outside diameter.
 3. Vertical Piping: Provide clamps sized for the pipe outside diameter and extend clamp through insulation.
 4. Refer to Section 230700 for definition of hot and cold piping and required insulation thickness.
- H. Where several pipes can be installed in parallel and at the same elevation, Contractor has option to provide metal channel strut framing. Install supports with maximum spacing specified within Division 23 piping sections.
 1. Space strut framing at the required distance for the smallest pipe size or install intermediate supports for smaller diameter pipe as specified above for individual pipe hangers.
 2. Where strut systems are attached to walls, install anchor bolts per manufacturer's recommendations.
 - a. Uninsulated Copper Pipe: Install with plastic galvanic isolators
 - b. Insulated Tube or Pipe: Install with 360° insulation protection shields or pre-engineered thermal hanger-shield inserts as specified in Division 23 Section "HVAC Insulation".
- I. Install building attachments within concrete or to structural steel.
 1. Install additional attachments at concentrated loads, including valves, flanges, guides, strainers, expansion joints, and at changes in direction of piping as specified in Division 23 piping sections.
 2. Install concrete inserts before concrete is placed; fasten insert to forms. Where concrete with compressive strength less than 2,500 psi is indicated, install reinforcing bars through openings at top of inserts.
- J. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories. Provide two nuts on threaded supports to securely fasten the support.

- K. Install appropriate types of hangers and supports to allow controlled movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends and similar units.
- L. Load Distribution: Install hangers and supports so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.
- M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes, and so that maximum pipe deflections allowed by ASME B31.9 Building Services Piping Code is not exceeded.
- N. Insulated Piping: Comply with the following installation requirements.
 - 1. Riser Clamps: Attach riser clamps, including spacers (if any), to piping with riser clamps projecting through insulation. Do not use riser clamps to support horizontal, insulated piping. Seal insulation for hot piping and protect vapor barrier for cold piping as specified in Division 23 Section "HVAC Insulation".
 - 2. Pipe Covering Protection Saddles: Install pipe covering protection saddles where insulation without vapor barrier is indicated. Fill interior voids with segments of insulation that match adjoining pipe insulation.
 - 3. Insulation Protection Shield: Install insulation protection shield with high density insulation insert where vapor barrier is indicated, sized for the insulation thickness used as specified in Division 23 Section "HVAC Insulation". Do not use polymer-based shields for hot piping.
 - a. Exception for horizontal cold piping with fiberglass, cellular glass, flexible elastomeric, or polyisocyanurate insulation 2 inch and smaller: Rest fiberglass insulated pipe on hanger shield with length specified for pipe size and insulation thickness to prevent puncture or other damage.
 - 4. Contractor's Option: Provide pre-engineered thermal hanger inserts for piping insulated with flexible elastomeric insulation at pipe supports for piping 2-1/2 inches and larger.
 - 5. Contractor's Option: Provide strut-mounted pipe clamps and clevis hangers with pre-manufactured polymer inserts.
- O. Strut Framing Systems: Channel strut systems can be used at the Contractors option in lieu of individual hangers for horizontal pipes. Arrange for grouping of parallel runs of horizontal piping. Space channel strut systems at the required distance for the smallest pipe supported. Provide channel gauge and hanger rods per the manufacturer's recommendations for the piping supported. Where strut systems are attached to walls, install anchor bolts per manufacturer's recommendations.
 - 1. Uninsulated Copper Pipe: Install with plastic galvanic isolators
 - 2. Insulated Tube or Pipe: Install with 360 degree insulation protection shields or pre-engineered thermal hanger-shield inserts as specified in Division 23 Section "HVAC Insulation".
- P. Vertical Piping Risers:
 - 1. Reference Section "Vibration Isolation for HVAC Piping and Equipment" for piping riser supports.
- Q. Wire Rope Hanging Systems:
 - 1. Install in accordance with manufacturer's instructions.
 - 2. Supported load shall not exceed manufacturer's recommended load rating.
 - 3. Applications for Pipe Supports:
 - a. 3 inch and smaller.
 - b. Wire rope hanging system is not allowed for steam or steam condensate piping.
 - 4. Do not support pipe by wrapping the rope around the pipe.
 - 5. Provide appropriate hanger or support compatible with the wire rope hanging system adjustable fastener as specified in the Pipe Hanger and Support Schedule.
 - 6. Install cast-in-place concrete inserts in elevated concrete slabs.
 - 7. Install bream clamps for attachment to structural beams as required.

3.4 INSTALLATION OF PRE-ENGINEERED ROOF PIPE SUPPORTS

- A. Install pre-engineered roof pipe supports to rest on the roofing membrane without attachment to the roof structure or penetration through the roofing assembly.
- B. Install pre-engineered roof pipe supports anchored to the roof structure.
 - 1. Install supports to meet the specified design criteria.
 - a. Building Design Risk Category: II.
 - 2. Coordinate with the pre-engineered roof pipe support manufacturer to anchor the pipe supports directly to the roof structure in accordance with the manufacturer's installation instructions or provide intermediate pipe supports engineered to meet the design criteria.
 - 3. Submit design and installation requirements as a Deferred Submittal.
- C. Refer to Section "Seismic Controls for Mechanical" for seismic bracing requirements.

3.5 INSTALLATION OF ROOF EQUIPMENT SUPPORTS

- A. Attach roof equipment support to the roof structure according to the manufacturer's installation instructions.
- B. Provide multiple single rail equipment supports to uniformly support the equipment.
- C. Provide rigid backing material (e.g., insulation, wood, etc.) to maintain cant slope.
- D. Install supports to maintain continuous insulation on roof.
- E. Provide vibration isolators between roof equipment support and equipment according to Division 23 Section "Vibration Isolation for HVAC."
- F. If vibration isolation is not required or units are internally isolated, attach equipment directly to pre-engineered roof equipment support using one of the following:
 - 1. Single Rail Equipment Supports: Secure each equipment support leg to the rail with a minimum of 4 points of connection per leg.
 - 2. Roof Curbs:
 - a. Secure each corner of the equipment to the curb nailer using a minimum of 4 lag screws, located along the length of the equipment.
 - b. Secure equipment to the curb using hold-down brackets. Provide minimum 6 inch long, 14 gauge galvanized steel brackets sized to wrap around top of curb and under equipment base rail with sufficient horizontal offset to cover overlap gap between the equipment rail and curb. Secure bracket to equipment and curb nailer using a minimum of 8 points of connection per bracket. Provide one bracket at each corner along the length of the unit.
- G. Refer to Section "Seismic Controls for Mechanical" for seismic bracing requirements.

3.6 EQUIPMENT SUPPORT AND ATTACHMENT

- A. Use metal fabricated supports or supports assembled from metal channel (strut) to support equipment as required.
- B. Use metal channel (strut) secured to studs to support equipment surface-mounted on hollow stud walls.
- C. Use metal channel (strut) to support surface-mounted equipment in wet or damp locations to provide space between equipment and mounting surface.

- D. Securely fasten floor-mounted equipment. Do not install equipment such that it relies on its own weight for support.
- E. Preset Concrete Inserts and Expansion Anchors: Use manufacturer provided closure strips to inhibit concrete seepage during concrete pour.
 - 1. Where concrete slabs form finished ceiling, locate anchors flush with slab surface.
- F. Secure fasteners according to manufacturer's recommended torque settings.
- G. Remove temporary supports.
- H. Fabricate structural steel supports to suspend equipment from structure above or support equipment from floor.
- I. Grouting: Place grout under supports for piping and equipment.

3.7 METAL FABRICATION

- A. Cut, drill, and fit miscellaneous metal fabrications for pipe anchors and equipment supports. Install and align fabricated anchors in indicated locations.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1 for procedures of manual shielded metal-arc welding, appearance and quality of welds made, methods used in correcting welding work, and the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Finish welds at exposed connections so that no roughness shows after finishing, and so that contours welded surfaces to match adjacent contours.

3.8 FIELD QUALITY CONTROL

- A. Inspect support and attachment components for damage and defects.
- B. Hanger Adjustment: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- C. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.
- D. Touch-Up Painting: Immediately after erection of anchors and supports, clean field welds and abraded areas of shop paint and paint exposed areas with same material as used for shop painting to comply with SSPC-PA-1 requirements for touch-up of field-painted surfaces. Comply with Division 09 Section "Painting."
 - 1. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- E. For galvanized surfaces clean welds, bolted connections and abraded areas and apply galvanizing repair paint to comply with ASTM A 780.
- F. Correct deficiencies and replace damaged or defective support and attachment components.

3.9 PIPE HANGER AND SUPPORT SCHEDULE

- A. Provide the following acceptable hangers and supports for each type of piping system. Hangers and supports may be single type or strut-mounted:
- B. Single Hangers:
 - 1. All pipe sizes 1-1/2 inch and less:
 - a. Band hanger.
 - b. Swivel split ring.
 - c. Clevis hanger.
 - 2. Cold and Hot pipe sizes 2 to 4 inches: Clevis hanger.
 - 3. Cold and Hot pipe sizes 6 inches and greater: Roll support hanger.
- C. Trapezes and Strut-mounted Supports:
 - 1. All pipe sizes less than 6 inches: Two-piece clamp.
 - 2. Pipe sizes 6 inches and greater: Roll support.
- D. Wall Supports:
 - 1. Pipe sizes 3 inches and less:
 - a. Two-hole strap mounted to wall.
 - b. Welded steel bracket with reinforced angle or strut.
 - 2. Pipe sizes 4 inch and greater:
 - a. Welded steel bracket with reinforced angle or strut.
- E. Floor Supports:
 - 1. Pipe sizes 4 inch and less: Pipe saddle.
 - 2. Pipe sizes 6 inch and greater: Roll support.

END OF SECTION

SECTION 15520 (230548) - SEISMIC CONTROLS FOR MECHANICAL SYSTEMS

PART 1 - GENERAL REQUIREMENTS

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 RELATED SECTIONS INCLUDE THE FOLLOWING:

- A. Division 20 Section "Seismic Controls for MEP/F/T Systems" for general requirement and related documents that apply to this section.

1.3 DEFINITIONS

- A. The IBC: International Building Code.
- B. ICC-ES: ICC-Evaluation Service.
- C. OSHPD: Office of Statewide Health Planning and Development for the State of California.

1.4 SUMMARY

- A. Seismic bracing, restraints, and controls for all mechanical systems specified herein shall be designed and installed as required by Division 20 Section "Seismic Controls for MEP/F/T Systems".

1.5 SUBMITTALS

- A. Provide submittals as required by Division 20 Section "Seismic Controls for MEP/F/T Systems" for all mechanical systems specified herein.

PART 2 - PRODUCTS AND MATERIALS

Not Used

PART 3 - EXECUTION

Not Used

PAGE INTENTIONALLY LEFT BLANK

SECTION 15200 (230550) - VIBRATION ISOLATION FOR HVAC

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Vibration isolation requirements.
- B. Vibration-isolated equipment support bases.
- C. Vibration isolators.

1.2 COORDINATION

A. Contractor's Responsibility:

1. Verify the completeness of the isolation installation and the overall suitability of the equipment to meet the intent of this specification. Any additional equipment needed to meet the intent of this specification, even if not specifically mentioned herein or in the Contract Documents, shall be supplied by the Contractor without claim for additional payment.
2. Performance or waiving of inspection, testing or surveillance for any portion of the Work shall not relieve the Contractor of the responsibility to conform strictly with the Contract Documents. The Contractor shall not construe performance or waiving of inspection, testing or surveillance by the Owner or Architects to relieve the Contractor from total responsibility to perform in strict accordance with the Contract Documents.
3. Coordinate selection and arrangement of vibration isolation components with the actual equipment to be installed.
4. Coordinate the work with other trades to provide additional framing and materials required for installation.
5. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.
6. Sequencing:
 - a. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured.

B. Manufacturer's Responsibility:

1. Determine vibration isolation types for all equipment and systems in accordance with the local governing code.
2. Calculate the static deflection requirements for all equipment and systems to provide uniform deflection based on distributed operating weight of actual installed equipment.
3. Select the vibration isolation systems to provide static deflection indicated on the Vibration Isolation Schedule and as specified below. Determine the mounting sizes and layout.
4. Guarantee specified isolation system deflection.
5. Provide installation instructions, drawings and field supervision to ensure proper installation and performance.
6. Verify that all equipment to be isolated has sufficient support structure to distribute equipment loads onto isolators.

1.3 SUBMITTALS

- A. Product Data: Provide manufacturer's standard catalog pages and data sheets for products, including materials, fabrication details, dimensions, and finishes.
 - 1. Vibration Isolators: Include rated load capacities and deflections; include information on color coding or other identification method for spring element load capacities. Include clearly outlined procedures for installing and adjusting the isolators.
- B. Shop Drawings:
 - 1. Include dimensioned plan views and sections indicating proposed arrangement of vibration isolators on each piece of isolated equipment. Indicate equipment weights and static deflections.
 - 2. Vibration-Isolated Equipment Support Bases: Include base weights, including concrete fill where applicable. Indicate equipment mounting provisions.
 - 3. Piping isolators shown and identified on piping layout drawings.
 - 4. Concrete foundations, supports, and required reinforcing and forms. These appurtenances shall be provided by another trade. This trade shall furnish the shop drawings, including the following:
 - a. Concrete reinforcing steel details and templates for all foundations and supports.
 - b. Required hanger bolts.
 - c. All other appurtenances necessary for proper installation of equipment.
- C. Vibration Isolation System Schedule: Include the following for each isolation element:
 - 1. Manufacturer, isolator type, model number, size.
 - 2. Height when uncompressed and static deflection.
 - 3. Spring constant.
 - 4. Spring outside diameter, free operating, and solid heights.
 - 5. Design of supplementary bases.
 - 6. Details of attachment to load-bearing structure or supplementary framing.
- D. Post-Installation Inspection Report:
 - 1. Vibration isolation vendor notice of inspection of all vibration isolators.
 - 2. Vibration isolation vendor notice of approval that all vibration isolators have been properly installed and conform to the specification.
 - 3. Itemized list of deficiencies.
 - 4. Vibration Isolation System Schedule.
 - 5. For each isolator containing steel springs, record the following:
 - a. Size.
 - b. Uncompressed height.
 - c. Design static deflection.
 - d. Measured static deflection.

1.4 QUALITY ASSURANCE

- A. All vibration isolation equipment shall be furnished by one manufacturer unless specifically approved otherwise in writing by the Engineer.
- B. All vibration isolation equipment and materials shall be new and manufactured specifically for the purpose intended.
- C. Maintain at the project site a copy of each reference document that prescribes execution requirements.
- D. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 - PRODUCTS AND MATERIALS

2.1 MANUFACTURERS

- A. BRD Noise and Vibration Control.
- B. Caldyn, California Dynamics Corp.
- C. Kinetics Noise Control.
- D. Mason Industries, Inc.
- E. Vibration Eliminator Co., Inc.
- F. Vibration Mounting and Controls.
- G. Vibro-Acoustics.

2.2 VIBRATION ISOLATION REQUIREMENTS

- A. Construct vibration isolators out of resilient materials resistant to oil, ozone, and oxidant.
- B. Select vibration isolators to provide the static deflection as specified in Part 2 "Products" unless otherwise specified for the application listed in Part 3 "Execution."
- C. Where a pipe run connects multiple equipment, select the pipe isolators for the entire run to suit the connected equipment of greatest static deflection.
- D. Vibration isolators shall have either known undeflected heights or calibration markings so that the amount of deflection can be verified after adjustment to determine that the load is within the proper range of the device and that the correct degree of vibration isolation is provided according to the design.
- E. Vibration isolators shall provide uniform deflection and stability under all operating loads.
- F. Isolators for fans shall be sized so that thrust restraints (which would act against turning moment caused by static pressure) are not required.
- G. Lateral restraining isolators shall have the same static deflection as the vertical isolators for the equipment being isolated.
- H. The theoretical vertical natural frequency for each support point based upon load per isolator and isolator stiffness shall not differ from the design objectives for the equipment as a whole by more than plus/minus 10 percent.

- I. All elastomeric mountings shall have a Shore hardness of 30 to 60 plus/minus 5 after minimum aging of 20 days or corresponding over-aging, or as specified herein.
- J. Elastomeric isolators that will be exposed to temperatures below 32 degrees F shall be fabricated of natural rubber instead of neoprene.
- K. Equipment mounted on vibration isolated bases shall have minimum operating clearance of 1 inch between the base and floor or support beneath unless noted otherwise.
- L. Vibration Isolator Assemblies with Steel Springs:
 - 1. Housed or caged spring isolators are not acceptable.
 - 2. Assemblies shall use bare springs, color coded or otherwise identify springs to indicate load capacity.
 - 3. Spring diameter shall not be less than 0.8 of the loaded operating height of the spring.
 - 4. The ratio of the horizontal to vertical spring constant shall be between 1 and 2.
 - 5. Springs shall be sized to be non-resonant with equipment forcing frequencies or support structure natural frequencies.
 - 6. Assembly shall be designed and installed so that the ends of the spring remain parallel during and after the spring installation.
 - 7. Springs shall operate in the linear portion of their load versus deflection curve over a deflection range of not less than 50 percent above the design deflection.

2.3 VIBRATION ISOLATED EQUIPMENT SUPPORT BASES

- A. Pre-Engineered Roof Equipment Support (Type RES):
 - 1. Reference Section “Hangers and Supports for HVAC Piping and Equipment” for specification of non-vibration isolated, pre-engineered roof equipment supports.
- B. Structural Rails (Type SR):
 - 1. Assembly: Structural steel channels furnished with double-deflection neoprene mountings or spring isolators.
 - 2. Base: All metal mounting parts shall be covered with neoprene to avoid corrosion and metal-to-metal contact.
 - 3. Selection: Channel length and isolator type with deflection as required for proper isolation of equipment.
 - 4. Type SR: Mason Industries Type RND or approved equal.
- C. Vibration Isolation Roof Curb (Type CMB):
 - 1. Description: Engineered, structural steel frame mounted directly to the structure with an upper floating section on adjustable steel springs. The upper frame shall provide continuous support for the equipment.
 - 2. Steel springs shall rest on minimum 1/4 inch thick elastomeric pads and have a minimum static deflection of 2 inches.
 - 3. All-directional elastomeric snubber bushings shall be minimum 1/4 inch thick.
 - 4. Weatherproofing: Continuous galvanized flexible counterflashing nailed over the lower curb’s waterproofing and joined at the corners by elastomeric bellows.
 - 5. Access Ports: Provided for all spring locations with removable waterproof covers to allow for adjustment or replacement of springs.
 - 6. Lower curbs shall have provision for 2 inches insulation.
 - 7. Type CMB: Mason Industries Type RSC or approved equal.

2.4 VIBRATION ISOLATORS

- A. Ribbed Neoprene “Waffle” Pads (Type WP):
1. Assembly: Single ribbed or crossed double ribbed elastomer in-shear pads, in one or more layers separated and bonded to a minimum 1/4 inch thick galvanized steel shim plate as required to provide selected deflection.
 2. Thickness: Each layer 5/16 inch thick.
 3. Selection: Maximum durometer of 50 and designed for 15 percent strain, static deflection of 0.05 inches.
 4. Type WP: Mason Industries Type W, Type WSW, or approved equal.
- B. Constrained Steel Spring Neoprene Mounts (Type CSNM):
1. Assembly: Single or multiple free-standing and laterally stable steel springs assembled into a factory-fabricated housing with integral leveling device and stops to limit vertical movement of the isolated equipment during a temporary weight reduction. Include rigid blocking to support equipment during rigging to maintain identical installed and operating heights of the isolator. Housing shall maintain a minimum clearance of 1 inch around restraining bolts and the spring so as not to interfere with the spring operation.
 - a. Leveling Device: Rigidly connected to equipment or frame. Limit stops shall provide minimum 1/4 inch clearance between housing and isolator base plate under normal operation.
 - b. Equipment Wind Loading Applications: Provide tapped hole in top and bottom plates for bolting to equipment and the roof or supporting structure with a neoprene mounting sleeve.
 2. Base: Minimum 1/4 inch thick neoprene pad under housing.
 3. Selection: Minimum static deflection of 2 inches unless specified otherwise.
 4. Type CSNM: Mason Industries Type SLR or approved equal.
- C. Neoprene Bushing (Type NR):
1. Assembly: Neoprene restraint, rubber-in-shear bushings for lightweight, suspended equipment supported from structure with all-thread rod and angle iron or Unistrut.
 2. Selection: Maximum durometer of 50 and designed for 15 percent strain, static deflection of 0.15 inches.
 3. Type NR: Mason Industries Type HMIB or approved equal.
- D. Double Deflection Neoprene Hangers ((Type DDNH)
1. Assembly: Steel hanger box containing a laterally stable, double deflecting, neoprene isolator . Neoprene isolator shall prevent contact between the lower hanger rod and hanger box and short-circuiting the isolating function.
 - a. Housing: Bottom opening sized to allow hanger rod to swing through a 30 degree arc.
 2. Selection: Maximum durometer of 50 and designed for 15 percent strain, static deflection of 0.4 inches.
 3. Type DDNH: Mason Industries Type HD or approved equal.
- E. Spring and Neoprene Hanger (Type SPNH)
1. Assembly: Steel hanger box containing a laterally stable, double deflecting, neoprene isolator in series with a steel spring.
 - a. Housing: Include a neoprene bushing to prevent contact between the lower hanger rod and hanger box and short-circuiting the isolating function. Bottom opening sized to allow hanger rod to swing through a 30 degree arc.
 2. Selection:
 - a. Neoprene isolator: Maximum durometer of 50 and designed for 15 percent strain, static deflection of 0.4 inches unless specified otherwise.
 - b. Spring isolator: Minimum static deflection of 2 inches unless specified otherwise.
 3. Type SPNH: Mason Industries Type 30N or approved equal.

- F. Neoprene Mounting Sleeves, Grommets, and Bushings: Designed to prevent steel-to-steel contact within vibration isolators.
- G. Flexible Connectors:
 - 1. Duct: Refer to Section “Air Duct Accessories.”

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that mounting surfaces are ready to receive vibration isolation and associated attachments.

3.2 INSTALLATION - GENERAL

- A. Install in accordance with manufacturer’s instructions.
- B. External spring isolators are not required if unit is provided with internal spring isolation. If external spring isolators are provided, internal spring isolation shall not be approved.
- C. Mount or suspend all equipment, piping, ductwork, etc. from approved foundations and supports as specified herein or as shown on the drawings.
- D. Secure fasteners according to manufacturer’s recommended torque settings.
- E. Support piping, ductwork, conduit, and mechanical equipment building structure. Do not support from other equipment, piping, or ductwork.
- F. Install isolators to prevent short-circuiting of the isolation.
- G. All wiring connections to mechanical equipment on isolators shall have a minimum 18 inch long flexible conduit in a “U” shaped loop. Coordinate with Division 26.
- H. Flexible Connectors: Install flexible connectors sized to match equipment connections and to provide sufficient slack for vibration isolation as required.
- I. Equipment connected to water or other fluid piping shall be erected on isolators or isolated foundations at correct operating heights prior to connection of piping. Block-up equipment with temporary shims to final operating height. When the system is assembled full load is applied, adjust the isolators shall be adjusted to allow shim removal.
- J. Refer to Division 23 Section “Seismic Controls for Mechanical” for seismic bracing requirements.
- K. Refer to Division 23 Section “Common Work Results for HVAC” for noise critical spaces.

3.3 INSTALLATION OF VIBRATION ISOLATED EQUIPMENT SUPPORT BASES

- A. All floor-mounted equipment shall be erected on housekeeping pads. Refer to Section “Common Work Results for HVAC” for concrete housekeeping pad requirements.

- B. Maintain minimum 4 inches clearance between isolated equipment and the walls, ceiling, floors, columns, and any other equipment not installed on vibration isolators.
- C. Set steel bases for one inch clearance between housekeeping pad and base.
- D. Set concrete inertia bases for 2 inches clearance between housekeeping pad and base.
- E. Adjust equipment to be level.
- F. Verify no material is left to short-circuit the isolator.
- G. For equipment support bases installed on the roof, coordinate with the pre-engineered roof equipment support manufacturer to determine the quantity and size of hold-down brackets, isolators, and fasteners, with installation instructions, for each equipment to meet the following criteria:
 - 1. Building Design Risk Category: II].
 - 2. Design Wind Speed: 93 mph.
- H. Type CMB:
 - 1. Attach roof equipment support to the roof structure according to the manufacturer's installation instructions.
 - 2. Provide flexible duct connector using a foam rubber gasket to seal against the unit bottom.
 - 3. Provide rigid backing material (e.g., insulation, wood, etc.) to maintain cant slope on roof equipment support bases.
 - 4. Install roof equipment support bases to maintain continuous insulation on roof.

3.4 INSTALLATION OF VIBRATION ISOLATORS

- A. Neoprene Mounting Sleeves, Grommets, and Bushings: Install on vibration isolators to prevent any metal to metal contact.
- B. Spring Isolators:
 - 1. On closed spring isolators, adjust so side stabilizers are clear under normal operating conditions.
 - 2. Install springs so that the ends of springs remain parallel and all springs are installed with adjustment bolts.
 - 3. Locate isolation hangers at the top of hanger rods.
 - 4. Type SPNH and DDNH: Install the hanger box to allow it to rotate a full 360 degrees without encountering any obstruction.

3.5 EQUIPMENT ISOLATION

- A. Fan Coil Units Units:
 - 1. Units that are furnished with internal structural frames and external lugs (both of suitable strength and rigidity), or without any severe overhangs, do not require an additional structural frame installed beneath the unit.
 - 2. Support condensate drain pipes from the isolated air handling unit frame.
 - 3. Suspended: Type SPNH isolation with 2 inch static deflection.
- B. Packaged Rooftop Units:
 - 1. Roof-mounted, up to 20 ft span: Type CMB with 0.75 inch static deflection.
 - 2. Roof-mounted, span of 20 ft or more: Type CMB with 2 inch static deflection.
- C. Air-Cooled Condensers and Condensing Units:

1. Slab-on-Grade: Housekeeping pad base, Type WP isolation continuous along support.
2. Suspended Slab: Housekeeping pad base, Type CSNM isolation with 0.75 inch static deflection.
3. Roof-mounted: Type RES base, Type CSNM isolation with 2 inch static deflection.

D. VAV Terminal Units:

1. Fan-Powered: Flexible duct connectors with Type SPNH isolation with 1 inch static deflection.
2. All other Types: Flexible duct connectors.

E. Fans

1. Suspended:
 - a. Fans 1 hp and less: Type NR isolation with 0.15 inch static deflection.
 - b. Fans greater than 1 hp: Type SPNH isolation with 2 inch static deflection.
2. Roof-mounted:
 - a. Curb mounting: Type RES curb base, with closed cell sponge gasket for sealing, continuous along support sealed to curb top rail.
 - b. Rail mounting:
 - 1) Fans 10 hp and less: Type RES rail base, Type DDNM with 0.75 inch static deflection.
 - 2) Fans greater than 10 hp: Type RES rail base, Type SPNM with 2 inch static deflection.

F. Unit Heaters: Type SPNH isolation with 2 inch static deflection.

G. All other equipment not specifically identified in this specification that contains rotating or vibrating elements and any associated electrical apparatus installed by this division that contains transformers or inductors shall be installed on Type DDNM or RNM neoprene isolators as appropriate.

3.6 PIPING ISOLATION

A. Provide isolation supports on the following HVAC pipe:

1. Piping within 50 feet of connected rotating equipment.
2. Piping installed below or adjacent to noise sensitive areas:
 - a. Refer to Section "Common Work Results for HVAC" for definition of noise sensitive areas.
 - b. In noise sensitive areas, isolate all 2 inch and smaller HVAC piping from the structure with sponge neoprene, felt, or glass/mineral fiber sleeves between the pipe and pipe clamp or with Type WP pads between the clamp and the structure. The sleeve shall be not less than 1/8-inch in thickness when compressed.

B. Pipes connected to equipment installed on spring vibration isolators: Type SPNM or SPNH.

1. The first isolator both upstream and downstream of equipment on springs shall have a static deflection equal to 1.5 times that of the equipment isolators, up to a maximum of 2 inches. The static deflection of the remaining pipe isolators shall be 1 inch.

C. Provide resilient diagonal mountings or other approved devices as required to limit piping motion due to equipment startup or shut down to a maximum of 1/8 inch.

D. Vertical Piping Riser Supports:

1. Do not exceed pipe stresses allowed by ASME B31.9.
2. Provide multiple supports along riser so that each isolator support is loaded for 50 psi maximum. Provide tapped hole in top of support for rigid attachment of pipe riser clamp to support.
3. Riser Supports: Pipe clamp on top of Type DP or Type WP.
4. Risers Subject to Thermal Expansion:

- a. Support vertical pipe risers subjected to thermal expansion and/or contraction with spring isolators, anchors, and guides designed to ensure loading within design limits at support points. Perform design calculations for sizing the riser supports incorporating the initial load, initial deflection, change in deflection, final load and change in load at support locations. Design calculations must include anchor loads when installed, cold filled and at operating temperature and pipe stress at end connections and branch locations. Design system for an initial spring deflection of at least 4 times the thermal movement. Design must be stamped and signed by a licensed professional engineer.
- b. Spring Isolators: Type SPNH, DDNH, or PRSA.

3.7 DUCT ISOLATION

- A. Connect ducts to equipment, fans, fan casings, and fan plenums with flexible connectors.

3.8 FIELD QUALITY CONTROL

- A. Arrange for inspection of all isolation and noise control equipment by the vibration isolation vendor and submit post-installation inspection report.
- B. The installation of all vibration isolation systems shall be under the supervision of the manufacturer's representative.
- C. Guarantee: If, in the actual installation, any equipment fails to meet the vibration control requirements specified herein, that equipment shall be corrected or replaced without claim for additional payment, inclusive of all labor and material costs. Such corrective measures shall be done within a time schedule specified by the Owner.

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 15190 (230553) - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Nameplates.
- B. Tags.
- C. Adhesive-backed duct markers.
- D. Stencils.
- E. Ceiling tacks.
- F. Engraved plastic-laminate signs.

1.2 SUBMITTALS

- A. Custom Signage: Submit list of wording, symbols, letter size, and color coding for mechanical identification.
- B. Product Data: Submit manufacturer's technical product data for each product required.
- C. Manufacturer's Installation Instructions: Indicate special procedures and installation for each product required.

1.3 SPARE PARTS

- A. Furnish minimum of 5 percent extra stock of each mechanical identification material required for each system that uses the identification material.
- B. Where stenciled markers are provided, clean and retain stencils after completion of stenciling and include used stencils in extra stock along with stenciling paints and applicators.

PART 2 - PRODUCTS AND MATERIALS

2.1 ACCEPTABLE MANUFACTURERS

- A. Advanced Graphic Engraving, LLC.
- B. Brady Corporation.
- C. Brimar Industries, Inc.

- D. Craftmark.
- E. Industrial Safety Supply Co., Inc.
- F. Kolbi Pipe Marker Co.
- G. MIFAB, Inc.
- H. Seton Identification Products, a Tricor Direct Company..

2.2 IDENTIFICATION APPLICATIONS AND REQUIREMENTS

- A. General:
 1. Provide manufacturer's standard products of categories and types required for each application as referenced in other Division 23 sections. Where more than a single type is specified for application, selection is the installer's option, but provide single selection for each product category.
 2. Lettering: Coordinate names, abbreviations, and other designations used in mechanical identification work with the corresponding designations shown on the drawings, scheduled, and specified. If not otherwise indicated, provide numbering, lettering, and wording as recommended by the manufacturer or as required for proper identification, operation, and maintenance of mechanical systems and equipment.
 3. Where multiple systems of same generic name are shown and specified, provide identification which indicates individual system number as well as service (e.g., Boiler No. 3, Air Supply No. 1H, etc.).
- B. Air Terminal Units: Tags, stencils, or engraved plastic laminate signs.
- C. Automatic Controls: Tags, use the same naming convention coordinated with the building automation system.
- D. Control Panels: Nameplates.
- E. Dampers: Ceiling tacks where located above lay-in ceiling. Do not use ceiling tacks in a gyp ceiling.
- F. Ductwork: Adhesive-backed duct markers. Stencils are only acceptable for concealed ductwork, exterior ductwork, or in mechanical rooms.
- G. Fans: Nameplates, stencils, or engraved plastic laminate signs.\
- H. Fan Coil Units: Nameplates, stencils, or engraved plastic laminate signs.
- I. Instrumentation: Tags.
- J. Major Control Components including Variable Frequency Drives: Nameplates or engraved plastic laminate signs.
- K. Relays: Tags.
- L. Rooftop Units: Nameplates, stencils, or engraved plastic laminate signs.
- M. Small-sized Equipment: Tags.

- N. Thermostats: Nameplates.
- A. Drop Box diffusers: Tags, stencils, or engraved plastic laminate signs on bottom of the drop box diffuser with related RTU #. Drop box tag shall be large enough to be readable from floor.
- O. General Signs: Engraved plastic laminate signs.

2.3 NAMEPLATES

- A. Nomenclature: Include the following, matching terminology on schedules as closely as possible:
 - 1. Name and mark number.
 - 2. Equipment service.
 - 3. Design capacity.
 - 4. Other design parameters such as pressure drop, entering and leaving conditions, rpm, etc.
- B. Size: 2-1/2 inch x 4 inch for control panels and components, 4-1/2 inch x 6 inch for equipment.
- C. Letter Color: White.
- D. Letter Height: 1/4 inch.
- E. Background Color:
 - 1. Cooling equipment: Green.
 - 2. Heating equipment: Yellow.
 - 3. Combination cooling and heating equipment: Yellow/Green.
 - 4. Energy reclamation equipment: Brown.
 - 5. Hazardous equipment: Colors and designs recommended by ASME.
 - 6. Equipment and components that do not meet any of the above criteria: Blue.
- F. Plastic: Conform to ASTM D709.

2.4 TAGS

- A. Plastic Laminate Tags: Laminated three-layer plastic, minimum 3/32 inch thick, with engraved black letters on light contrasting background color. Tag size minimum 1-1/2 inch diameter and 5/32 inch hole for fastener.
- B. Solid Plastic Tags: Solid plastic, minimum 3/32 inch thick, with printed black letters on white color. Tag size minimum 1-1/2 inch diameter and 5/32 inch hole for fastener.
- C. Metal Tags: Provide 19-gauge polished brass with stamped letters. Tag size minimum 1-1/2 inch diameter with smooth edges and 5/32 inch hole for fastener. Fill tag engraving with black enamel paint.
- A. Accident Prevention Tags: Pre-printed or partially pre-printed, of plasticized card stock with matte finish suitable for writing, minimum 3-1/4 inch x 5-5/8 inch size, with brass grommet in hole for fastener. Order with appropriate pre-printed wording (e.g., DANGER, CAUTION, DO NOT OPERATE, etc.).
- D. Tag Fasteners: Solid brass chain (wire link or beaded type), or solid brass S-hooks of the size required for proper attachment of tags to valves, manufactured specifically for that purpose.

- E. Letter Height:
 - 1. System Abbreviation: Minimum 1/4 inch.
 - 2. Valve Number: Minimum 1/2 inch.

2.5 ADHESIVE-BACKED DUCT MARKERS

- A. Material: High gloss acrylic adhesive-backed vinyl film 0.0032 inch; printed with UV and chemical resistant inks.
- B. Style: Individual label.
- C. Nomenclature: Include air handling unit identification number, duct size, service, and arrows indicating direction of flow.
- D. Specialty Exhaust: Identify the specialty using the system terminology (e.g., Grease, Dishwasher, Dryer, Fume Hood, etc.).
- E. Color: Yellow background with black lettering or blue background with white lettering.
 - 1. Hazardous Exhaust: Use colors and designs recommended by ASME A13.1.

2.6 STENCILS

- A. Stencils: With clean cut symbols and letters of following size, complying with ASME A13.1:
 - 1. 3/4 to 1-1/4 inch Outside Diameter of Insulation or Pipe: 8 inch long color field, 1/2 inch high letters.
 - 2. 1-1/2 to 2 inch Outside Diameter of Insulation or Pipe: 8 inch long color field, 3/4 inch high letters.
 - 3. 2-1/2 to 6 inch Outside Diameter of Insulation or Pipe: 12 inch long color field, 1-1/4 inch high letters.
 - 4. 8 to 10 inch Outside Diameter of Insulation or Pipe: 24 inch long color field, 2-1/2 inch high letters.
 - 5. Over 10 inch Outside Diameter of Insulation or Pipe: 32 inch long color field, 3-1/2 inch high letters.
 - 6. Ductwork and Equipment: 2-1/2 inch high letters.
 - 7. Access Doors: 3/4 inch high letters.
 - 8. Operational Instructions: 3/4 inch high letters.
 - 9. Provide arrows indicating direction of flow.
- B. Stencil Paint: Oil based, alkyd enamel, either brushing grade or pressurized spray-can form and grade, black color, except for piping. For piping systems use colors conforming to ASME A13.1.

2.7 CEILING TACKS

- A. Description: Steel with 3/4 inch diameter color coded head.
- B. Color:
 - 1. HVAC Equipment: Yellow.

2.8 ENGRAVED PLASTIC-LAMINATE SIGNS

- A. General: Engraving stock melamine plastic laminate, engraved with manufacturer's standard letter style, black with white core letter color except as otherwise indicated, punched for mechanical fastening except where adhesive mounting is necessary because of substrate.

- B. Thickness: 1/16 inch thick for units up to 20 square inches, or 8 inches in length; 1/8 inch thick for larger units.
- C. Fasteners: Self-tapping stainless steel screws, except contact-type permanent adhesive where screws cannot or should not penetrate the substrate.
- D. Nomenclature: When used to identify equipment, match terminology on schedules, including the following:
 - 1. Name and mark number.
 - 2. Equipment service.
 - 3. Design capacity.
- E. Access Panel Markers: Laminated three-layer plastic, minimum 1/16 inch thick and 1/8 inch hole for fastener, with abbreviations and numbers corresponding to concealed valve.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Degrease and clean surfaces to receive adhesive for identification materials.
- B. Prepare surfaces in accordance with Division 09 for stencil painting.

3.2 GENERAL INSTALLATION

- A. Coordination: Where identification is to be applied to surfaces which require insulation, painting or other covering or finish, including valve tags in finished mechanical spaces, install identification after completion of covering and painting. Install identification prior to installation of acoustical ceilings and similar removable concealment.
- B. Install products in accordance with manufacturer's instructions.
- C. Install nameplates with corrosive-resistant mechanical fasteners, or adhesive. Apply with sufficient adhesive to ensure permanent adhesion and seal with clear lacquer.
- D. Install tags on piping 3/4 inch diameter and smaller.
- E. Install in clear view and align with axis of piping.
- F. Apply stencil painting in accordance with Division 09.
- G. Identify service, flow direction, and pressure.

3.3 DUCTWORK IDENTIFICATION

- A. Install identification on the most obviously visible portion of the duct from the point of access.

- B. Location: Install ductwork identification where ductwork is exposed to view, concealed by a removable ceiling system, located in accessible maintenance spaces (shafts, tunnels, plenums, etc), and exterior non-concealed locations as follows:
 - 1. Within 5 feet of each control damper or balancing damper, excluding balancing dampers installed in duct take-offs to individual grilles, registers, or diffusers that are less than 25 feet in lengths and installed in the same space as the air device.
 - 2. Within 5 feet of each branch duct, excluding branch ducts that are less than 25 feet in length and located in the same space as the main duct.
 - 3. Within 5 feet of each side of a penetration of a wall, floor, ceiling, structure, or enclosure.
 - 4. Spaced intermittently at a maximum spacing of 50 feet along each duct run. Reduce spacing to 25 feet in congested areas when there are more than two types of duct systems or pieces of equipment.
 - 5. Within 5 feet of equipment outlets and other points of origin or termination.
 - 6. Install marker on the most obviously visible portion of the duct from point of access.

3.4 ACCESS DOOR IDENTIFICATION

- A. Provide identification on each access door, indicating purpose of access, maintenance and operating instructions, and appropriate safety and procedural information.
- B. Where access doors are concealed above a removeable ceiling system or similar concealment, tags may be used in lieu of specified identification.

3.5 CEILING TACK INSTALLATION

- A. Locate ceiling tacks to locate dampers above lay-in panel ceilings. Locate in corner of panel closest to equipment.

3.6 EQUIPMENT IDENTIFICATION

- A. Install nameplates and engraved plastic laminate signs for identification of equipment. Provide additional signs and lettering as follows:
 - 1. To distinguish between multiple units in close proximity.
 - 2. To inform operator of operational requirements.
 - 3. To indicate safety and emergency precautions.
 - 4. To warn of hazards and improper operations.
- B. Adjust lettering size based on viewing distance from normal location of identification:
 - 1. Less than 2 feet: Minimum 1/4 inch.
 - 2. Up to 6 feet: Minimum 1/2 inch.
 - 3. Greater than 6 feet: Proportionally increase letter size based on recommendations above.
 - 4. Provide secondary lettering 2/3 to 3/4 of size of principal lettering.
 - 5. Stencils may be used in lieu of nameplates when lettering greater than 1 inch is needed for proper identification because of distance from normal location of required identification.
- C. Where equipment to be identified is concealed above acoustical ceilings or similar removeable concealment, equipment tags may be installed in the concealed space to reduce the amount of text in exposed sign.

END OF SECTION

SECTION 15990 (230593) - TESTING, ADJUSTING AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. General testing, adjustment, and balancing requirements.
- B. Pre-testing, adjustment, and balancing of existing air systems.
- C. Testing, adjustment, and balancing of air systems.
- D. Testing, adjustment, and balancing of domestic water systems.
- E. Sound and vibration measurement of equipment operating conditions.
- F. This section excludes:
 - 1. Specifications for materials for patching mechanical systems.
 - 2. Specifications for materials and installation of adjusting and balancing devices. If devices must be added to achieve proper adjusting and balancing, refer to the respective system sections for materials and installation requirements.
 - 3. Requirements and procedures for piping and ductwork systems leakage tests.

1.2 DEFINITIONS

- A. TAB: Testing, adjusting, and balancing.
- B. Test: To determine quantitative performance of equipment.
- C. Adjust: To regulate the specified fluid flow rate and air patterns at the terminal equipment (e.g., reduce fan speed, throttling).
- D. Balance: To proportion flows within the distribution system (submains, branches, and terminals) according to specified design quantities.
- E. Procedure: Standardized approach and execution of sequence of work operations to yield reproducible results.
- F. Report forms: Data sheets arranged for collecting test data in logical order for submission and review. Data should also form the permanent record to be used as the basis for required future testing, adjusting, and balancing.
- G. Terminal: The point where the controlled fluid enters or leaves the distribution system. Examples include inlets and outlets on water terminals, inlets and outlets from air terminal units, and inlets and outlets on air terminals such as registers, grilles, diffusers, louvers, and hoods.
- H. Main: Duct or pipe containing the major or entire fluid flow of the system.

- I. Submain: Duct or pipe containing part of the system capacity and serving two or more branch mains.
- J. Branch main: Duct or pipe serving two or more terminals.
- K. Branch: Duct or pipe serving a single terminal.

1.3 SUBMITTALS

- A. Qualifications:
 - 1. Submit qualifications of TAB agency.
 - 2. Submit qualifications of TAB supervisor.
- B. TAB Plan: Submit a written plan indicating the testing, adjusting, and balancing standard to be followed and the specific approach for each system and component.
- C. Sample Forms: Submit sample forms if they are other than the standard forms available from the certification association followed for the project.
- D. Control System Coordination Reports: Communicate in writing to the controls installer all setpoint and parameter changes made or problems and discrepancies identified during TAB that affect, or could affect, the control system setup and operation.
- E. Preconstruction Test Report:
 - 1. Submit preconstruction test report of existing systems as indicated on the drawings. Submit report prior to start of construction on the affected systems for review and comment by the engineer. Reference Part 3 for test procedures.
 - 2. Report format shall follow Draft Report procedures specified above.
 - 3. Report shall include all information requested by the procedures for each system covered by the scope of work. Information omitted or missed during the initial or subsequent pretests shall be documented via additional site visits at no additional cost to the owner.
- F. Progress Reports.
- G. Certified TAB Reports:
 - 1. General:
 - a. Submit within two weeks after completion of testing, adjusting, and balancing.
 - b. Revise TAB plan to reflect actual procedures and submit as part of final report.
 - c. Indicate deficiencies in systems that would prevent proper testing, adjusting, and balancing of systems and equipment to achieve specified performance.
 - 2. Draft Report: Submit draft copies of report for review prior to final acceptance of Project. Draft reports may be hand written, but must be complete, factual, accurate, and legible. Organize and format draft reports in the same manner specified for the final reports. Submit 2 complete sets of draft reports. Only 1 complete set of draft reports will be returned.
 - 3. Final Report: Upon verification and approval of draft reports, prepare final reports, type written, and organized and formatted as specified below. Submit 2 complete sets of final reports. The final report shall be certified proof of the following:
 - a. The systems have been tested, adjusted, and balanced in accordance with the referenced standards.
 - b. The report reflects an accurate representation of how the systems have been installed.
 - c. The report reflects a true representation of how the systems are operating at the completion of the testing, adjusting, and balancing procedures.
 - d. The report is an accurate record of all final quantities measured to establish normal operating values of the systems.

4. Report Format: Provide reports in soft cover, letter size, 3-ring binder manuals, complete with index page and indexing tabs, and cover identification at front and side. Include set of reduced size drawings indicating air outlets, equipment, and thermostat locations identified to correspond with report forms. Divide the report into the following divisions:
 - a. General Information and Summary
 - 1) Include project name, location, altitude, and date.
 - 2) Identify TAB agency, contractor, owner, architect, and engineer.
 - 3) Include addresses, contact names, and telephone numbers.
 - 4) Include certification sheet containing the seal, name, address, telephone number, and signature of the certified TAB Supervisor.
 - 5) Include actual instrument list, with manufacturer name, serial number, and date of calibration.
 - b. Air Systems
 - c. Temperature Control Systems
 5. Report Forms: Standard forms prepared by the TAB certification standard being followed for each respective item and system to be tested, adjusted, and balanced. If not specified, follow ASHRAE 111.
 6. Units of Measure: Report data in I-P (inch-pound) units only.
- H. Project Record Documents: Provide drawings that record actual locations of flow measuring stations and balancing devices.

1.4 QUALITY ASSURANCE

- A. Comply with ASHRAE Standard 111, Practices for Measurement, Testing, Adjusting, and Balancing of Building Heating, Ventilation, Air-Conditioning, and Refrigeration Systems.
- B. Comply with ASHRAE Handbook, HVAC Applications Volume, Chapter “Testing, Adjusting, and Balancing”, most current edition.
- C. TAB Agency Qualifications:
 1. Act as the single source of responsibility for TAB of the HVAC systems.
 2. Staff the project at all times by qualified personnel.
 3. Have a minimum of 5 years documented experience on projects with TAB requirements similar to those required for the project.
 4. Certified by one of the following Certification Associations:
 - a. AABC (NSTSB): Associated Air Balance Council, National Standards for Total System Balance.
 - b. NEBB: National Environmental Balancing Bureau, Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems.
 - c. TABB: Testing, Adjusting, and Balancing Bureau, SMACNA TAB Procedural Guide.
- D. TAB Supervisor and Technician Qualifications:
 1. Certified by the same organization as TAB agency.
 2. TAB Supervisor shall be a professional engineer licensed in the state in which the project is located.

PART 2 - PRODUCTS AND MATERIALS – NOT USED

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS

- A. Begin work after systems to be tested, adjusted, or balanced are fully operational, duct systems are sealed, piping systems have been tested for leaks, and equipment is operational. Complete work prior to Substantial Completion of the project.
- B. Test, adjust, and balance the air systems before hydronic, steam, and refrigerant systems.
- C. Coordinate with Division 22 drawings for testing, adjusting, and balancing scope of work.
- D. Coordinate the efforts of factory-authorized service representatives for systems and equipment, HVAC controls installers, and other mechanics to operate HVAC systems and equipment to support and assist TAB activities.
- E. Submit progress reports at least once a week to the General Contractor to communicate status of work so that the TAB work is completed in a timely manner.
- F. Notice of Tests: Provide seven days advance notice for each test. Include scheduled test dates and times.
- G. Where HVAC systems and/or components interface with life safety systems, including fire and smoke detection, alarm, and control, coordinate scheduling and testing and inspection procedures with the authorities having jurisdiction.
- H. All required instrumentation shall be calibrated to tolerances specified in the referenced standards within a period of six months prior to starting the project.

3.2 EXAMINATION

- A. Verify that systems are complete and operable before commencing work. Ensure the following conditions:
 - 1. Systems are started and operating in a safe and normal condition.
 - 2. Temperature control systems are installed complete and operable.
 - 3. Proper thermal overload protection is in place for electrical equipment.
 - 4. Motors and bearings are lubricated.
 - 5. Final filters are clean and in place. If required, install temporary media in addition to final filters.
 - 6. Duct systems are clean of debris.
 - 7. Fans are rotating correctly and belts have tension.
 - 8. Fire, smoke, fire/smoke, and volume dampers are in place and open.
 - 9. Air coil fins are cleaned and combed.
 - 10. Volume dampers are installed at locations needed for balancing the air systems.
 - 11. Access doors are closed and duct end caps are in place.
 - 12. Air outlets are installed and connected.
 - 13. Visually inspect duct systems to ensure they are sealed and leakage is minimized.
 - 14. Domestic water systems are flushed, filled, and vented.
 - 15. Domestic water systems are tested for leaks.
 - 16. Test ports, gauge cocks, thermometer wells, flow-control devices, and balancing valves are properly installed and that their location is accessible.

17. Pumps are rotating correctly.
18. Proper strainer baskets are clean and in place.
19. Service and balance valves are open.
20. Expansion tanks are not air bound and have appropriate charge.
21. Air vents are operating freely.

B. Submit field reports. Report defects and deficiencies that will or could prevent proper system balance.

C. Beginning of work means acceptance of existing conditions.

3.3 PREPARATION

A. Pre-Balancing Conference: Prior to beginning of the testing, adjusting, and balancing procedures, schedule and conduct a coordination meeting with all installers whose work will be tested, adjusted, or balanced.

B. Furnish all instruments required for testing, adjusting, and balancing operations.

1. Verify all instruments have been calibrated.
2. Furnish instruments as recommended by the manufacturer for the TAB application.
3. Furnish instruments that are best suited to the function being measured.
4. Furnish instruments with minimum scale and maximum subdivisions and with scale ranges proper for the value being measured.

C. Furnish additional balancing devices as required for TAB to the appropriate contractor for installation.

D. Obtain copies of approved shop drawings of air handling equipment, terminal outlets, and temperature control diagrams.

E. Obtain manufacturer's fan and terminal device outlet factors and recommended procedures for testing. Prepare a summation of required outlet volumes to permit a crosscheck with required fan volumes.

F. Determine best locations in main and branch ductwork for most accurate duct traverses.

G. Prepare schematic diagrams of system "as-built" ductwork and piping layouts to facilitate reporting.

3.4 ADJUSTMENT TOLERANCES

A. Air Handling Systems: Balance main ducts and equipment to within plus or minus 5 percent of design airflow.

B. Air Outlets and Inlets: Balance branch ducts and terminal devices to within plus or minus 10 percent of design airflow.

3.5 RECORDING AND ADJUSTING

A. Record data regarding design conditions from contract documents and installed conditions from shop drawings including equipment identification number, model number, location, area served, manufacturer, model number, serial number, motor nameplate horsepower and rpm, fan rpm, capacity and electrical voltage, amps and phases.

B. For all systems measure and record the ambient conditions at the time of testing and balancing. Include the following:

1. Dry bulb temperature.
 2. Relative humidity.
 3. Cloud cover.
 4. Wind speed.
 5. Time.
- C. Field Logs: Maintain written logs including:
1. Running log of events and issues.
 2. Discrepancies, deficient or uncompleted work by others.
 3. Contract interpretation requests.
 4. Lists of completed tests.
- D. Ensure recorded data represents actual measured or observed conditions.
- E. Permanently mark settings of valves, dampers, and other adjustment devices allowing settings to be restored. Set and lock memory stops.
- F. Mark on drawings the locations where traverse and other critical measurements were taken and cross reference the location in the final report.
- G. After adjustment, take measurements to verify balance has not been disrupted or that such disruption has been rectified.
- H. Cut insulation around ductwork and piping for installation of test probes to the minimum extent necessary to allow adequate performance of procedures.
- I. Patch and seal insulation, vapor barrier, ductwork, and housings, using materials identical to those removed.
- J. Seal ducts and piping and test and repair leaks.
- K. Leave systems in proper working order, replacing belt guards, closing access doors, closing doors to electrical switch boxes, and restoring thermostats to specified settings.
- L. At final inspection, recheck random selections of data recorded in report. Recheck points or areas as selected and witnessed by the Owner.
- M. Check and adjust systems approximately six months after final acceptance and submit report.
- N. When averaging values, take a sufficient quantity of readings which will result in a repeatability error of less than 5 percent. When measuring a single point, repeat readings until 2 consecutive values are obtained.
- O. Take all readings at eye level of the indicated value to prevent parallax.
- P. Use pulsation dampeners where necessary to eliminate error involved in estimating average of rapidly fluctuation readings.
- Q. Take measurements in the system where best suited for the task.
- R. Retest, adjust, and balance systems subsequent to significant system modifications, and resubmit test results.

3.6 PRE-TESTING, ADJUSTMENT, AND BALANCING OF EXISTING AIR SYSTEMS

- A. Perform preconstruction inspection and testing of existing systems as noted on the plans. Submit test report to engineer for approval. Construction on or demolition of the pre-tested systems shall not proceed until the engineer has reviewed and approved the preconstruction test report.
- B. TAB Contractor:
 - 1. Measure and record the operating speed, airflow, and total and external static pressure of each fan system. Provide individual pressure drop readings across all coils, filter banks, dampers and other internal fan system components
 - 2. Measure motor voltage and amperage. Compare the values to motor nameplate information.
 - 3. Check the condition of filters.
 - 4. Check the condition of coils.
 - 5. Check the operation of the drain pan and condensate-drain trap.
 - 6. Check bearings and other lubricated parts for proper lubrication.
 - 7. For variable air volume systems: Open automatic air dampers to full design position to simulate a design day. Measure and record the operating speed and airflow of each fan system for full load conditions.
 - 8. Report on the results of the measurements taken and any deficiencies.
- C. Mechanical Contractor:
 - 1. Check the refrigerant charge.
 - 2. Report on the operating condition of the equipment and any deficiencies.

3.7 AIR SYSTEM TESTING, ADJUSTMENT, AND BALANCING PROCEDURE

- A. Check filters for cleanliness.
- B. Check dampers (both volume and fire) for correct and locked position, and temperature control for completeness of installation before starting fans.
- C. Verify volume dampers are installed at locations needed for balancing the air systems.
- D. Prepare report test sheets for both fans and outlets. Obtain manufacturer's outlet factors and recommended procedures for testing. Prepare a summation of required outlet volumes to permit a crosscheck with required fan volumes.
- E. Determine best locations in main and branch ductwork for most accurate duct traverses.
- F. Place outlet dampers in the full open position.
- G. Prepare schematic diagrams of system "as-built" ductwork and piping layouts to facilitate reporting.
- H. Lubricate all motors and bearings.
- I. Check fan belt tension.
- J. Check fan rotation.

- K. Energize fan motors and adjust air handling and distribution systems to provide required or design supply, return, and exhaust air quantities at site altitude. Replace fan and motor pulleys as required to achieve design conditions.
- L. Make air quantity measurements in ducts by Pitot tube traverse of entire cross sectional area of duct.
- M. Measure air quantities at air inlets and outlets.
- N. Adjust distribution system to obtain uniform space temperatures free from objectionable drafts and noise.
- O. Use volume control devices to regulate air quantities only to extent that adjustments do not create objectionable air motion or sound levels. Affect volume control by duct internal devices such as dampers and splitters.
- P. Vary total system air quantities by adjustment of fan speeds. Provide drive changes required. Vary branch air quantities by damper regulation.
- Q. Provide system schematic with required and actual air quantities recorded at each outlet or inlet.
- R. Measure static air pressure conditions on air supply units, including filter and coil pressure drops, and total pressure across the fan. Make allowances for 50 percent loading of filters.
- S. Adjust outside air automatic dampers, outside air, return air, and exhaust dampers for design conditions.
- T. Measure temperature conditions across outside air, return air, and exhaust dampers to check leakage.
- U. Where modulating dampers are provided, take measurements and balance at design conditions. Balance variable volume systems at design air flow rate and at minimum air flow rate.
- V. Measure building static pressure and adjust supply, return, and exhaust air systems to provide required relationship to maintain building pressure setpoint.
- W. Multi-Zone units with Mixing Dampers: Check for motorized damper leakage. Adjust air quantities with mixing dampers set first at design cooling, then at design heating.
- X. For variable air volume boxes, set volume controller to air flow setting indicated. Confirm connections properly made and confirm proper operation for automatic variable air volume temperature control.
- Y. Procedure for establishing minimum and absolute minimum outdoor air damper position on air handling units:
 1. Open the minimum outdoor air damper and return air damper fully. Close the economizer air damper.
 2. Operate supply fan at design speed and measure the outdoor airflow.
 3. If the outdoor airflow is above the scheduled minimum ventilation airflow, adjust the damper linkage on the minimum outdoor air damper so that outdoor airflow equals the scheduled minimum ventilation airflow with damper fully stroked.
 4. If outdoor airflow is below the scheduled minimum ventilation airflow, adjust the damper linkage on the return air damper so that outdoor airflow equals the schedule minimum ventilation airflow with the damper fully stroked.
 5. Convey the measured setpoint and/or damper position to the BAS installer and note on air balance report.

6. Repeat this procedure to determine damper position for absolute minimum ventilation.

3.8 DOMESTIC WATER SYSTEM TESTING, ADJUSTMENT, AND BALANCING PROCEDURE

A. Before balancing the system perform these steps:

1. Open valves to full open position.
2. Examine plumbing system and equipment installations to verify that indicated balancing devices, such as test ports, gauge cocks, thermometer wells, flow-control devices and balancing valves and fittings are properly installed, and that their locations are accessible and appropriate for effective balancing and for efficient system and equipment operation.
3. Remove and clean all strainers.
4. Check pump rotation.
5. Check expansion tanks to determine that they are not air bound and that the system is completely full of water.
6. Lubricate all motors and bearings.

END OF SECTION

PAGE INTENTIONALLY LEFT BLANK

SECTION 15250 (230700) - HVAC INSULATION

PART 1 - GENERAL

1.1 SECTION INCLUDES

- A. Piping Insulation.
- B. External Ductwork Insulation.

1.2 RELATED REQUIREMENTS

- A. Division 23 Section "Hangers & Supports for HVAC Piping & Equipment," for insulation shields, pipe saddles, and high-density insulation inserts.
- B. Division 23 Section "Metal Ducts" for duct liner insulation.

1.3 DEFINITIONS

- A. Cold Pipe: Piping that carries fluid with a minimum operating temperature less than 60 degrees F.
- B. Hot Pipe: Piping that carries fluid with a minimum operating temperature greater than 105 degrees F.
- C. Cold Duct: Ductwork that carries airflow with a minimum operating temperature less than [65 degrees F] temperature.
- D. Hot Duct: Ductwork that carries airflow with a minimum operating temperature greater than [75 degrees F] temperature.
- E. Exposed: Insulation that is visible from the occupied space.
- F. Exposed to Weather: Insulation that is exposed to potential damage caused by weather, including sunlight, moisture, wind, and solar radiation.
- G. Exterior: Locations outside of or within the building envelope (walls, roof, floors, etc) as defined by the architectural drawings and specifications.
- H. Unconditioned Spaces: An enclosed space within a building that is not provided with mechanical heating or cooling.

1.4 SUBMITTALS

- A. Product Data: Submit technical product data, thermal characteristics, and materials for each type of mechanical insulation.

- B. Insulation Schedule: Include product name, conductivity k-value, thickness, and furnished accessories for each service.
- C. Maintenance Data: Submit maintenance data and replacement material lists for each type of mechanical insulation. Include this data and product data in maintenance manual.
- D. Manufacturer's Instructions: Include installation instructions for storage, handling, protection, examination, preparation, and installation of the product.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualification: Company specializing in manufacturing the products specified in this section with not less than three years of documented experience.
- B. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- C. Flame/Smoke Ratings: Provide composite mechanical insulation (insulation, jackets, coverings, sealers, mastics and adhesives) with flame-spread index of 25 or less and smoke-developed index of 50 or less, as tested by UL 723 or ASTM E84 (NFPA 255) method.
 - 1. Exception: Exterior mechanical insulation may have flame spread index of 75 and smoke developed index of 150.
 - 2. Exception: Industrial mechanical insulation that will not affect life safety egress of building may have flame spread index of 75 and smoke developed index of 150.
 - 3. Exception: Polyisocyanurate insulation that is not installed in a return air plenum may have a flame spread index of 25 and smoke developed index of 450.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Accept materials on site, labeled with manufacturer's identification, product density, and thickness.
- B. Protect insulation from weather and construction traffic, dirt, water, chemical, and mechanical damage; store in original wrapping.

1.7 FIELD CONDITIONS

- A. Maintain ambient conditions required by manufacturers of each product.
- B. Maintain temperature before, during, and after installation for minimum of 24 hours.

PART 2 - PRODUCTS

2.1 PIPING INSULATION MATERIALS

- A. Mineral Fiber (rock, slag, or glass):
 - 1. Manufacturers:
 - a. CertainTeed Corp.
 - b. Johns Manville.
 - c. Knauf Insulation.

- d. Owens Corning.
 - 2. Insulation: ASTM C547, Type I or II, rigid mineral fiber, pre-formed for the application.
 - a. K-value: ASTM C518 or C177, maximum 0.24 at 75 degrees F.
 - b. Minimum Service Temperature: 0 degrees F
 - c. Maximum Service Temperature: 850 degrees F for Type I, 1200 degrees F for Type II.
 - d. Density: Between 3 to 6 pounds per cubic foot for Type I, between 6 to 8 pounds per cubic foot for Type II.
 - 3. Factory Applied Jacket: ASTM C1136, Type I.
 - a. All-Service Jacket (ASJ): Paper/Foil/Scrim, water vapor permeance of 0.02 perms and self-sealing lap.
 - b. Poly ASJ: Paper/Foil/Scrim with polymer coating, water vapor permeance of 0.01 perms and self-sealing lap.
 - c. Color: White.
- B. Cellular Glass:
- 1. Manufacturers:
 - a. Owens Corning.
 - 2. Insulation: ASTM C552, Type II, Grade 6, rigid closed glass cells pre-formed for the application.
 - a. K-value: ASTM C518 or C177, maximum 0.34 at 75 degrees F.
 - b. Minimum Service Temperature: Minus 450 degrees F.
 - c. Maximum Service Temperature: 800 degrees F.
 - d. Density: Minimum 6.12 pounds per cubic feet.
- C. Polyisocyanurate:
- 1. Manufacturers:
 - a. Dyplast Products.
 - b. Johns Manville.
 - c. Approved equal.
 - 2. Insulation: ASTM C591, Grade 2, Type IV for ASTM E84 25/50 compliance, Type I for ASTM E84 25/450 compliance; rigid molded, pre-formed for the application.
 - a. K-value: ASTM C518 or C177, maximum 0.2 at 75 degrees F.
 - b. Minimum Service Temperature: Minus 297 degrees F
 - c. Maximum Service Temperature: 300 degrees F.
 - d. Density: Maximum 6 pounds per cubic feet.
- D. Flexible Elastomeric:
- 1. Manufacturers:
 - a. Aeroflex USA, Inc.
 - b. Armacell LLC.
 - c. K-Flex USA.
 - 2. Insulation: ASTM C534, Grade I, flexible elastomeric cellular rubber insulation, pre-formed for the application.
 - a. K-value: ASTM C518 or C177, maximum 0.28 at 75 degrees F.
 - b. Minimum Service Temperature: Minus 297 degrees F
 - c. Maximum Service Temperature: 220 degrees F for Grade I, 300 degrees F for Grade II.
 - 3. Factory Applied Jacket:
 - a. Polymeric Coating: Multi-ply, polymeric blend coating, 16 mils thick, designed to prevent damage to underlying insulation from sunlight, installation, and physical abuse, with water vapor permeance of 0.03 perms. Reference Piping Jacket Schedule in Part 3 of this specification for application of this jacket.
- E. Field-Applied Jacket:
- 1. Canvas: UL listed 6 oz/sq yd plain weave cotton fabric treated with dilute fire retardant lagging adhesive.

2. Semi-rigid PVC: One-piece, pre-molded PVC cover conforming to ASTM D1784, including factory-furnished, pre-cut insulation blanket inserts for fittings.
 - a. Outdoor Applications: Provide minimum 30 mils thickness and UV protection.
 - b. Manufacturers:
 - 1) Johns Manville Zeston PVC Jacketing and 2000 Series Fitting Covers
 - 2) Proto Corp LoSmoke PVC Jacketing and Pro Fitting Covers.
 - 3) Or approved equal.
3. Rigid Aluminum Shell: One-piece, pre-formed cover conforming to ASTM C1729 with weather-proof construction. Shell shall have the following minimum thickness based on the outer insulation diameter:

Outer Insulation Diameter (in)	Minimum Aluminum Jacket Thickness, (in)		
	Non-Rigid Insulation	Rigid Insulation	Finish
≤ 8	0.016	0.016	Stucco
< 12	0.020	0.016	Stucco
≤ 24	0.024	0.016	Stucco

Note 1: Use corrugated finish for non-rigid insulation. Use stucco finish for rigid insulation.

- a. Banding:
 - 1) For piping less than or equal to 8 inches, provide 0.020 inch thick, 3/4 inch wide aluminum bands.
 - 2) For piping larger than 8 inches, provide 0.020 inch thick, 3/4 inch wide stainless steel bands.
 4. Multilayer Laminate Vapor Barrier Cladding: UV-resistant multi-ply outer layer and cold weather acrylic adhesive. Provide VentureClad Plus 1579 CW, Polyguard Zero-Perm, or approved equal.
 5. Rubberized Asphalt Vapor Barrier Cladding: UV-resistant aluminum outer layer, multi-ply cross-laminated polyethylene film, and rubberized asphalt formulated for use on faced insulated duct and piping applications. Provide Polyguard Products, Inc. Alumaguard 60 mils thick cladding, Alumaguard Low Temp (LT) 35 mils thick cladding, or approved equal.
- F. Pipe Insulation Accessories: Provide staples, bands, wires, cement, and other appurtenances as recommended by insulation manufacturer for applications indicated.
- G. Adhesives, Sealers, Mastics, and Protective Finishes: As recommended by insulation manufacturer for applications indicated.
1. Lagging Adhesive: Comply with MIL-A-3316C, Class 1, Grade A. Provide Foster 30-36, Childers CP-50AHV2, or equal.
 2. Weather Barrier Breather Mastic: Permeance shall be 1.0 perms or less at 62 mils dry per ASTM E96, Procedure B. Provide Foster 46-50, Childers CP-10/11 or equal.
 3. Solvent-Based Vapor Barrier Mastic: Comply with MIL-PRF-19565C, Type II, with water vapor permeance 0.05 perms or less at 35 mils dry per ASTM F 1249.
 4. Water-Based Vapor Barrier Mastic: Comply with MIL-PRF-19565C, Type II, with water vapor permeance in accordance with ASTM C755 for insulation application. Provide Foster 30-80, Childers CP-38, or equal.

Table: Recommended Maximum Permeance of Water Vapor Retarders (Note 1)

Insulation Application	Insulation Permeability, Less than 4.0 perm-in. (Note 2)	Insulation Permeability, 4.0 or greater perm-in. (Note 2)
	Vapor Retarder perms	
Pipe and vessels (33 F to ambient)	0.05	0.05
Pipe and vessels (-40 F to 32 F)	0.02	0.02
Ducts (40 F to ambient)	1.0	0.03

Notes:

1. Water vapor permeance of the vapor retarder in perms when tested in accordance with Test Methods E96.

5. Water vapor permeability of the insulation material when tested in accordance with Test Methods E96.
- H. Insulation Diameters: Comply with ASTM C585 for inner and outer diameters of rigid thermal insulation.
- I. Pipe, Valve and Fitting Covers: Comply with ASTM C450 for fabrication of fitting covers for pipe, valves and fittings.
- J. High Density Insulation Billets:
1. Flexible elastomeric: ASTM C534, Type 1.
 2. Polystyrene: ASTM C578, Type XIII.
 3. Phenolic: ASTM C1126, Type III, Grade 1.

2.2 EXTERNAL DUCTWORK INSULATION MATERIALS

- A. Flexible Mineral Fiber (rock, slag, or glass):
1. Manufacturers:
 - a. CertainTeed Corp.
 - b. Johns Manville.
 - c. Knauf Insulation.
 - d. Owens Corning.
 2. Insulation: ASTM C553, Type I or II, flexible mineral fiber blanket.
 - a. K-value: ASTM C518 or C177, maximum 0.31 at 75 degrees F.
 - b. Minimum Service Temperature: Minus 20 degrees F
 - c. Maximum Service Temperature: 450 degrees.
 - d. Density:
 - 1) 1.5 pounds per cubic foot.
 3. Factory Applied Vapor Barrier Jacket: ASTM C1136, Type II.
 - a. Foil Scrim Kraft (FSK): Kraft paper with glass fiber yarn and bonded to aluminized film, water vapor permeance of 0.02 perms and 2 inch stapling tab.
 - b. Polypropylene Scrim Kraft (PSK): Kraft paper with glass fiber yarn and bonded to metalized polypropylene, water vapor permeance of 0.02 perms and 2 inch stapling tab.
 - c. Color: Black.
- B. Rigid Mineral Fiber (rock, slag, or glass):
1. Manufacturers:
 - a. Johns Manville.
 - b. Knauf Insulation.
 - c. Owens Corning.
 2. Insulation: ASTM C612, Type IA or IB, rigid mineral fiber board.
 - a. K-value: ASTM C518 or C177, maximum 0.25 at 75 degrees F.
 - b. Minimum Service Temperature: 0 degrees F
 - c. Maximum Service Temperature: 450 degrees.
 - d. Density:
 - 1) 3.0 pounds per cubic foot.
 3. Factory Applied Vapor Barrier Jacket: ASTM C1136, Type II.
 - a. All-Service Jacket (ASJ): Paper/Foil/Scrim, water vapor permeance of 0.02 perms.
 - b. Foil Scrim Kraft (FSK): Kraft paper with glass fiber yarn and bonded to aluminized film, water vapor permeance of 0.02 perms.
 - c. Polypropylene Scrim Polyester (PSP): Polyester paper with glass fiber yarn and bonded to polypropylene, water vapor permeance of 0.02 perms.
 - d. Color: White.
- C. Cellular Glass:

1. Manufacturers:
 - a. Owens Corning.
 2. Insulation: ASTM C552, Type I, Grade 6, rigid closed glass cells, block form.
 - a. K-value: ASTM C518 or C177, maximum 0.31 at 75 degrees F.
 - b. Minimum Service Temperature: Minus 450 degrees F.
 - c. Maximum Service Temperature: 800 degrees F.
 - d. Density: Minimum 6 pounds per cubic feet.
- D. Polyisocyanurate:
1. Manufacturers:
 - a. Dyplast Products.
 - b. Johns Manville.
 - c. Approved equal.
 2. Insulation: ASTM C591, Grade 2, Type IV for ASTM E84 25/50 compliance, Type I for ASTM E84 25/450 compliance; rigid board.
 - a. K-value: ASTM C518 or C177, maximum 0.2 at 75 degrees F.
 - b. Minimum Service Temperature: Minus 297 degrees F
 - c. Maximum Service Temperature: 300 degrees F.
 - d. Density: Maximum 6 pounds per cubic feet.
- E. Flexible Elastomeric:
1. Manufacturers:
 - a. Aeroflex USA, Inc.
 - b. Armacell LLC.
 - c. K-Flex USA.
 2. Insulation: ASTM C534, Grade 1, flexible elastomeric cellular rubber insulation, sheet form.
 - a. K-value: ASTM C518 or C177, maximum 0.28 at 75 degrees F.
 - b. Minimum Service Temperature: Minus 40 degrees F
 - c. Maximum Service Temperature: 180 degrees F.
 3. Factory Applied Jacket:
 - a. Flexible Metal Cladding: Metallic factory-laminated cladding, 17.5 mils thick, designed to prevent damage to underlying insulation from sunlight, installation, and physical abuse, with water vapor permeance of 0.00 perms. Provide ArmaTuff or equal. Reference Duct Jacket Schedule in Part 3 of this specification for application of this jacket.
- F. Field-Applied Jacket:
1. Canvas: UL listed 6 oz/sq yd plain weave cotton fabric treated with dilute fire retardant lagging adhesive.
 2. Aluminum: ASTM B209, 3003 alloy, H-14 temper, with 3-mil thick polyfilm moisture barrier to interior surface.
 - a. Thickness: 0.032 inch sheet.
 - b. Finish: Smooth or Stucco. Reference Part 3 for jacket applications.
 - c. Joining: Longitudinal slip joints and 2 inch laps.
 - d. Fittings: 0.032 inch thick die shaped fitting covers with factory attached protective liner.
 - e. Metal Jacket Bands: 3/8 inch wide; 0.015 inch thick aluminum or 0.010 inch thick stainless steel.
 3. Multilayer Laminate Vapor Barrier Cladding: UV-resistant multi-ply outer layer and cold weather acrylic adhesive. Provide VentureClad Plus 1579 CW, Polyguard Zero-Perm, or approved equal.
 4. Rubberized Asphalt Vapor Barrier Cladding: UV-resistant aluminum outer layer, multi-ply cross-laminated polyethylene film, and rubberized asphalt formulated for use on faced insulation. Provide Polyguard Products, Inc. Alumaguard 60 mils thick cladding, Alumaguard Low Temp (LT) 35 mils thick cladding, or approved equal.

- G. Ductwork Insulation Accessories: Provide staples, bands, wires, tape, pins with insulation retaining washers, anchors, corner angles and other appurtenances as recommended by insulation manufacturer for applications indicated.
- H. Adhesives, Sealers, Mastics, and Protective Finishes: Provide cements, adhesives, coatings, sealers, mastics, protective finishes, and similar compounds as recommended by insulation manufacturer for applications indicated.
 - 1. Mineral Fiber Lagging Adhesive: Comply with ASTM C916, Type 2 or MIL-A-3316C, Class 2, Grade A. Provide Foster 85-60, Childers CP-127, or equal water-based adhesive.
 - 2. Vapor Barrier Tape: Kraft paper reinforced with glass fiber yarn and bonded to aluminized film, with pressure sensitive rubber-based adhesive.
 - 3. Water-Based Vapor Barrier Mastic: Comply with MIL-PRF-19565C, Type II, with water vapor permeance 0.05 perms or less at 47 mils dry per ASTM E96. Provide Fosters 30-80, Childers CP-38, Design Polymerics 3040, or equal.
 - 4. Solvent-Based Vapor Barrier Mastic: Comply with MIL-PRF-19565C, Type II, with water vapor permeance 0.05 perms or less at 35 mils dry per ASTM F 1249.
 - 5. Tie Wire: Annealed steel, 16 gauge, 0.0508 inch diameter.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Test piping and ductwork for design pressure, liquid tightness, and continuity prior to applying insulation materials.
- B. Verify that surfaces are clean and dry, with foreign material removed.

3.2 PROTECTION AND REPLACEMENT

- A. Provide all required protection for insulation (installed and uninstalled) throughout the duration of construction to avoid exposure to plaster, dust, dirt, paint, moisture, deterioration, and physical damage.
- B. Repair existing mechanical insulation that is damaged during this construction period. Use insulation of same type and thickness as existing insulation. Install new jacket lapping and sealed over existing.
- C. Replace damaged insulation which cannot be repaired satisfactorily at no additional expense to the Owner, including insulation with vapor barrier damage and insulation that has been exposed to moisture during shipping, storage, or installation. Drying the insulation is not acceptable. Dry surfaces prior to installation of new insulation that replaces the damaged or wet insulation.

3.3 INSTALLATION, GENERAL

- A. Install in accordance with manufacturer's instructions.
- B. Install in accordance with NAIMA National Insulation Standards.

3.4 PIPING SYSTEM INSULATION INSTALLATION

- A. Maintain continuous thermal and vapor-retarder integrity throughout entire installation and protect it from puncture and other damage.

- B. Install insulation on pipe systems subsequent to installation of heat tracing, painting, testing, and acceptance of tests.
- C. Install insulation materials with smooth and even surfaces. Insulate each continuous run of piping with full-length units of insulation, with a single cut piece to complete run. Do not use cut pieces or scraps abutting each other.
- D. Exposed Piping: Locate insulation and cover seams in least visible locations.
- E. Cold Pipe Insulation:
 - 1. Insulate entire system, including fittings, valves, unions, flanges, strainers, flexible connections, pump bodies, and expansion joints.
 - 2. Provide vapor barrier jacket according to the Piping Jacket Schedule.
 - 3. Provide high density insulation material under supports or pre-insulated supports.
 - 4. Protect insulation with shields to prevent puncture or other damage. Refer to Section "Hangers & Supports for HVAC Piping & Equipment" for pre-insulated supports and insulation shields.
 - 5. High density insulation material shall extend a minimum 2 inches past the pipe shield on each side.
 - 6. Secure all-service jacket with self-sealing longitudinal laps.
 - 7. Butt pipe insulation tightly at insulation joints. Apply wet coat of vapor barrier lap cement on joint and seal with 3 inch wide vapor barrier tape or band and coat all taped seams and staple penetrations with vapor barrier coating to prevent moisture ingress.
- F. Insulation of Fittings, Valves, Strainers, Flanges, and Unions:
 - 1. Insulate fittings, joints, and valves with molded insulation of like material, vapor barrier coating, and thickness as adjacent pipe. Provide pre-formed insulation pieces, segmented insulation, or sectional pipe insulation for the application. Provide the same insulation jacket as adjoining pipe.
 - 2. Sectional pipe insulation: Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Hold sectional cuts in place with tie wire or bands. Wire and bands shall be compatible with insulation and jacket.
 - 3. Segmented pipe insulation: Cover segmented insulated surfaces with a layer of finishing cement and finish with a coating or mastic. Reinforce the mastic with fabric-reinforcing mesh. Trowel the coating or mastic to a smooth and well-shaped contour.
 - 4. Butt each insulation piece tightly against adjoining piece of insulation. Bond pieces together according to Cold Pipe or Hot Pipe installation instructions.
 - 5. When removeable covers are made from sectional block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, around the insulated device with tie wire. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
 - 6. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation. PVC fitting covers with end caps are also acceptable. Tape PVC covers to adjoining insulation facing using PVC tape.
 - 7. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.
- G. Extend piping insulation without interruption through walls, floors and similar piping penetrations, except where otherwise indicated. Maintain vapor barrier through the penetration.
- H. Exterior Piping and Piping Exposed to Weather:
 - 1. General: Provide piping jacket around insulation as scheduled in the Piping Jacket Schedule. Jacket material shall be approved by the jacket manufacturer for use with the specific insulation material that it covers. Locate longitudinal seams of outer shell (aluminum, flexible elastomeric, or cladding as applicable) at bottom of pipe. Provide insulation shields so that the piping supports cannot puncture, cut or break the jacket.

2. Paintable Coating: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
3. Polymeric Coating: Provide insulation shields so that the piping supports do not puncture, cut or break the jacket.
4. Rigid aluminum shell: Space attachment bands 12 inches on center and directly centered over end joints.
5. Multilayer Laminate Vapor Barrier Cladding: Install cladding only when ambient temperature is above 50 degrees F. Provide low-temp products for installation in low ambient temperatures down to 10 degrees F.
6. Rubberized Asphalt Vapor Barrier Cladding: Install cladding for use in ambient temperatures as low as minus 10 degrees F.

3.5 PIPING SYSTEM INSULATION SCHEDULE

- A. Reference Pipe Insulation Thickness Schedule at the end of this specification for thickness requirements based on insulation conductivity.
- B. Do not apply insulation to piping that operates outside of the minimum and maximum service temperature range.
- C. Exterior Piping: Insulate all exterior HVAC piping with one of the following:
 1. Cellular glass.
 2. Flexible elastomeric, use high temperature formula for systems with operating temperatures above 220 F. (not acceptable for steam, steam condensate or hot water piping systems with temperatures above 300 F).
- D. Variable Refrigerant Flow (VRF) Piping:
 1. Service:
 - a. All refrigerant piping in cooling only, heat pump, or heat recovery VRF systems.
 2. Acceptable Insulation:
 - a. Flexible elastomeric.
- E. Warm Temperature Piping (105 degrees to 140 degrees F (40 to 94 degrees C)):
 1. Service:
 - a. Refrigerant hot gas lines between the compressor and condensing unit.
 - b. Refrigerant liquid lines between the condensing unit and expansion valve.
 2. Insulate each piping system specified above with one of the following types of insulation.
 - a. Mineral fiber.
 - b. Cellular glass.
 - c. Polyisocyanurate.
 - d. Flexible elastomeric.

3.6 PIPE INSULATION THICKNESS SCHEDULE

- A. California Building Efficiency Standards (Title 24 – Part 6) Requirements, Pipe Insulation

	Minimum Pipe Insulation Thickness						
	Insulation Conductivity		Nominal Pipe or Tube Size (in.)				
Fluid Operating Temp. Range (°F) And Usage	Conductivity, Btu·in./(hr·ft ² ·°F)	Mean Rating Temp., °F.	<1	1 to <1-1/2	1-1/2 to <4	4 to <8	≥8
			Insulation Thickness, in.				

>350°F	0.32–0.34	250	4.5	5.0	5.0	5.0	5.0
251°F–350°F	0.29–0.32	200	3.0	4.0	4.5	4.5	4.5
201°F–250°F	0.27–0.30	150	2.5	2.5	2.5	3.0	3.0
141°F–200°F	0.25–0.29	125	1.5	1.5	2.0	2.0	2.0
105°F–140°F	0.22–0.28	100	1.0	1.5	1.5	1.5	1.5
40°F–60°F	0.21–0.27	75	0.5	0.5	1.0	1.0	1.0
<40°F	0.20–0.26	50	1.0	1.5	1.5	1.5	1.5

Notes:

- a. For insulation outside the stated conductivity range for the applicable fluid temperature range, the minimum thickness (T) shall be determined as follows: $T = r[(1 + t/r)^{(K/k)} - 1]$ where
 - 1) T = minimum insulation thickness (in.),
 - 2) r = actual outside radius of pipe (in.),
 - 3) t = insulation thickness listed in this table for applicable fluid temperature and pipe size,
 - 4) K = conductivity of alternate material at mean rating temperature indicated for the applicable fluid temperature (Btu-in./hr-ft²-°F), determined in accordance with ASTM C335; and
 - 5) k = the lower value of the conductivity range listed in this table for the applicable fluid temperature.
- b. Insulation thicknesses are based on energy efficiency considerations only. Add insulation where noted on the drawings.
- c. For piping that shall be installed below grade, reference Division 23 section “Underground Hydronic and Steam Piping.”
- d. The table is based on steel pipe. Non-metallic pipes schedule 80 thickness or less shall use the table values. For other non-metallic pipes having thermal resistance greater than that of steel pipe, reduced thicknesses are permitted if documentation is provided showing that the pipe with the proposed insulation has no more heat transfer per foot than a steel pipe of the same size with the insulation thickness shown on the table.

3.7 PIPING JACKET SCHEDULE

- A. Exposed piping:
 1. All-service jacket.
 2. Semi-rigid PVC.
- B. Piping within return air plenums:
 1. All-service jacket.
- C. Exterior piping and piping exposed to weather:
 1. Paintable coating (flexible elastomeric insulation only.)
 2. Polymeric Coating (flexible elastomeric insulation only).
 3. Semi-rigid PVC for outdoor application (flexible elastomeric insulation on refrigerant piping only).
 4. Rigid aluminum shell.
 5. Multilayer laminate vapor barrier cladding.
 6. Rubberized asphalt vapor barrier cladding.

3.8 DUCTWORK INSULATION SYSTEM INSTALLATION

- A. Maintain continuous thermal and vapor-barrier integrity throughout entire installation and protect it from puncture and other damage.

- B. Install insulation on duct systems subsequent to painting, testing, and acceptance of tests.
- C. Install insulation materials with smooth and even surfaces.
- D. Clean and dry ductwork prior to insulating. Butt insulation joints firmly together to ensure complete and tight fit over surfaces to be covered.
- E. Install insulation without sag on underside of duct. Where rectangular ducts are 24 inches in width or greater, secure external insulation to the bottom of the duct with mechanical fasteners, spaced on 18 inches on center (maximum). Fasteners shall include 2-inch square self-sticking galvanized carbon-steel base plates with minimum 0.106-inch diameter zinc-coated, low carbon steel, fully annealed shank spindle, length to suit depth of insulation. Secure insulation to spindles with self-locking washers incorporating a spring steel insert to ensure permanent cap retention. Lift duct off trapeze hangers and insert spacers to avoid insulation compression.
- F. Stop and point insulation around access doors and damper operators to allow operation without disturbing wrapping.
- G. Corner Angles: Except for oven and hood exhaust duct insulation, install corner angles on external corners of insulation on ductwork in exposed finished spaces before covering with jacketing.
- H. Lined Ductwork: At interface of lined and wrapped ductwork, overlap lined ductwork by 2 feet (minimum) with wrapped insulation.
- I. Cold Ducts:
 1. Insulate entire system, including fittings, joints, flanges, expansion joints, and air duct accessories.
 2. Provide vapor barrier jacket according to the Ductwork Jacket Schedule.
 3. Seal joints with vapor barrier mastic.
 4. Continue insulation, including vapor barrier, through walls, sleeves, hangers, and other duct penetrations.
 5. Seal vapor barrier penetrations by mechanical fasteners with vapor barrier adhesive.
 6. Where cold ducts are installed in mechanical rooms or non-conditioned spaces (excludes return air plenums), prevent condensation from forming on the duct supports by providing one or more of the following:
 - a. Install thermal break such as rigid board insulation between the support and duct.
 - b. Wrap support that is in contact with the duct with external duct wrap insulation to prevent condensation. Wrap shall extend a minimum of 12 inches from point of contact of the support with the duct. Tape joints to provide a thermal and vapor barrier. Coat all taped joints, punctures and seams with 4 inch wide coating of vapor barrier mastic.
 - c. If a support device similar to Unistrut is used, foam fill or stuff tube.
- J. Hot Ducts:
 1. Insulate entire system, including fittings, joints, flanges, expansion joints, and air duct accessories.
 2. Provide jackets with or without vapor barrier according to the Ductwork Jacket Schedule.
 3. Secure joints with staples, tape, or wires.
 4. Insulate fittings and joints. Where service access is required, bevel and seal ends of insulation.
